erty, however, when he gained it, and attempted, with more or less success, to establish the authority of the proprietor, with the assistance of Philip Calvert, an illegitimate son, it is said, of the first Lord Baltimore, as secretary. On the other hand, Captain Fuller, on the part of the Commissioners, asserted their jurisdiction, called a meeting of the General Assembly, enacted laws, and assumed the control of the affairs of the colony in the name of the Protector. The Puritans on the Severn and the Patuxent recognized and obeyed one government; the Catholics about St. Mary's recognized and obeyed the other.

Meanwhile the questions at issue were under consideration and debate in England. Cromwell referred them to the Council of State, and the Council of State handed them over to the Commissioners of Trade. It was two years before any conclusion was reached; but in November, 1657, an agreement was entered into, in England, between Lord Baltimore and the agents, Bennett and Mathews. This, in March following, was first modified and then ratified in Maryland by Fendall on the one side, and Fuller and his council on the other, and the leading men among both Catholics and Puritans, as the representatives of the people at large. It was provided that all past offences be condoned; that there never should be, with the assent of Lord Baltimore, any interference with the liberty of conscience; that from those then resident in the colony no oath of fidelity to his lordship should be required, but simply a promise of submission to his authority, which was again paramount as Lord Proprietor; that land warrants should be granted, and acts of past assemblies held to be legal, without regard to the differences and disturbances of recent years.

Settlement of disputes between Virginia and Maryland.

When Bennett resigned the office of Governor of Virginia, in 1655, to take that of agent in England, Edward Digges, who was also a member of the Parliamentary party, was chosen by the Assembly to take his place. He remained in office, however, only a year, when he also went to England as agent, where his influence proved to be potent in bringing about the final settlement of affairs in Maryland. Mathews succeeded him as governor, and continued in that office, it is supposed, till his death, in 1659, though he seems to have been in England in 1657, when his signature appears to the agreement between Lord Baltimore and the Virginia agents.

Edward Digges chosen governor of Virginia.

Succeeded by Mathews.

For an interval of several years the colony has no history except in the quiet enactment of laws which show, in their aim at regulating the ordinary conduct of the citizens, that no great affairs of state engaged their attention. Thus the keeping of the Sabbath was enjoined by law; a penalty was pronounced upon those

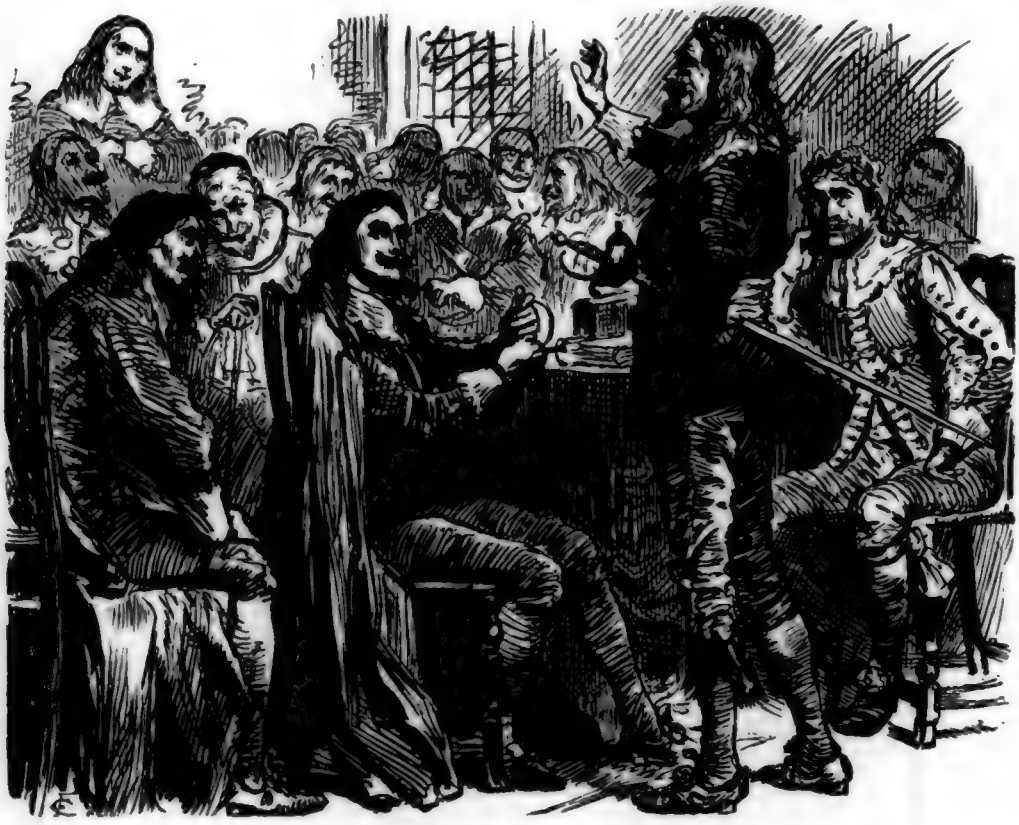
Legislative acts.

who invented or spread untruthful reports; attorneys at law were expelled from the courts and prohibited from taking fees; the weight and dimensions of a hogshead of tobacco were limited by statute, and an export duty upon that staple levied when in foreign bottoms or shipped to foreign ports; the food, the clothing, and the good treatment of servants were cared for; servitude as a legal penalty was abolished; the right of suffrage was secured to all who paid taxes; the Indians were protected in the possession of their lands, and the kidnapping of their children was prohibited.[1] Such legislation marked a period of tranquillity and progress.

Decline of Puritanism.

Puritanism, which had never made any very deep impression in Virginia, gradually lost its influence and control after the death of Cromwell. A cause that was declining in its stronghold at home, could hardly gain in the colony where it had little strength of its own. During the year in which England was preparing itself for the restoration of the King by putting aside the new Protector, Richard Cromwell, the assembling and dispersion of the old House of Commons and the election of a new one, and the march of Monk from Edinburgh to London, Virginia was without a governor. From the death of Mathews, in the spring of 1659, till the spring of 1660, the people awaited events at home.

Sir William Berkeley recalled.



In March the General Assembly, after declaring that as the state in England had no acknowledged head, and that the government of the colony vested in itself, elected Sir William Berkeley governor, afterward confirmed by a commission from the King. Though this was in some sense a triumph of his party, the address of the old royalist was cautious and conciliatory. "I do, therefore," he said, "in the presence of God and you, make this safe protestation for us all, — that if any supreme settled power appears, I will immediately lay down my commission, but will live most submissively obedient to any power God shall set over me, as the experience of eight years has shewed I have done." He candidly confessed that he had unwillingly surrendered to the Parliament, — "God pardon me!" he said, as he recalled it, — and that he "would not voluntarily have made choice" of those who had been set over him "for his supremes;" but he wished to make "this truth apparent," that he had lived like a good citizen "under all these mutable governments of divers natures and constitutions." That he would not have held office under the Commonwealth, and would not now if it continued, was the tenor of his speech; but he left his hearers to infer the unexpressed hope, which doubtless a considerable majority of them shared, that the house of his "ever honored master" would

[1] Hening's *Statutes, passim.*

soon regain the throne. Two months later this wish was fulfilled, and the news of the restoration of the King was welcomed generally in Virginia, as it was received with joy by the Governor himself.

Address to Charles II.

When the new commission was sent by Charles II. to Sir William Berkeley, the faithful cavalier in reply sent a delighted letter, saying that he had only held office during the interregnum, as one who had leaped "over the fold to save your Majesty's flock, when your Majesty's enemies of that fold had barred up the lawful entrance into it and enclosed the wolves of schism and rebellion." The Assembly also voted an address to Charles; and referred in bitter terms to the Commonwealth that had governed them so well, as "that

Berkeley's Address to the Assembly.

execrable power that so bloodily massacred the late King Charles the First of ever blessed and glorious memory" — a memory that should now be kept alive in the colony, as they decreed, by an annual fast upon the thirtieth of January, the anniversary of his execution. Perhaps the Puritans of the Assembly were reconciled to these proceedings by the personal consideration that was otherwise accorded them. Bennett, the late Puritan Governor, was first named in the Council of State, and Clayborne, who had been secretary under Bennett, Digges, and Mathews, was continued in that office by Berkeley.

A considerable change in the character of the government of the colony was, however, soon made apparent. The new Assembly of 1661, which was almost exclusively royalist, empowered the Governor and Council to levy taxes for three years, dispensing, thereby, with the necessity of calling the House together oftener, except in case of some unusual emergency. At the same session the right of prorogation was granted, and as a consequence there was for the next fifteen years no popular election. Hitherto, the representatives had been paid by the counties that elected them; but the Assembly, which had provided for its own permanence, fixed also the rate of remuneration of its members at about two hundred and fifty pounds of tobacco a day, or about nine dollars. The salary of the Governor, which was in the same tobacco currency, was not less exorbitant according to the money value of the time, and was equal to the whole annual expenditure of the colony of Connecticut.[1] The virtual monopoly of the trade with the Indians was also given him by prohibiting any traffic in furs except under his commission. The colonial laws generally, were from time to time revised, and on the third revision in 1662, under the direction of Francis Morrison and Henry Randolph, it was ordered that all those which "might keep in memory our forced deviation from his Majesty's obedience" should be erased from the statutes. The laws relating to the Indians, however, aimed more than any laws had hitherto done to secure their well-being. Encroachment upon, or even purchase of their lands was forbidden. None were to be sold as slaves, though they could be indented as servants for a limited period, as the English themselves were; and while they were generally to be responsible to the law, they were to be under its protection.[2]

Character of the new government.

Legislation upon the slavery of the blacks had no such humane purpose. The common law of England, that the children of mixed parentage should follow the condition of the father, was reversed and the maxim of the Roman law adopted, that the children should be bond or free according to the condition of the mother — *partus sequitur ventrem.* All of mixed blood, therefore, — and the hybrid race began to be manifest from the first introduction of African women — were born slaves for life. If there were any exception, it was in the case of the offspring of free white women and slave fathers, and that may seem in our time too improbable to be noticed. But it should be considered that the antipathy to the African, — no deeper naturally than that which always exists between different races — has been intensified by two centuries of servitude. It exercised but little influence two hundred years ago, when whites

Laws relating to negro slaves.

[1] Bancroft.

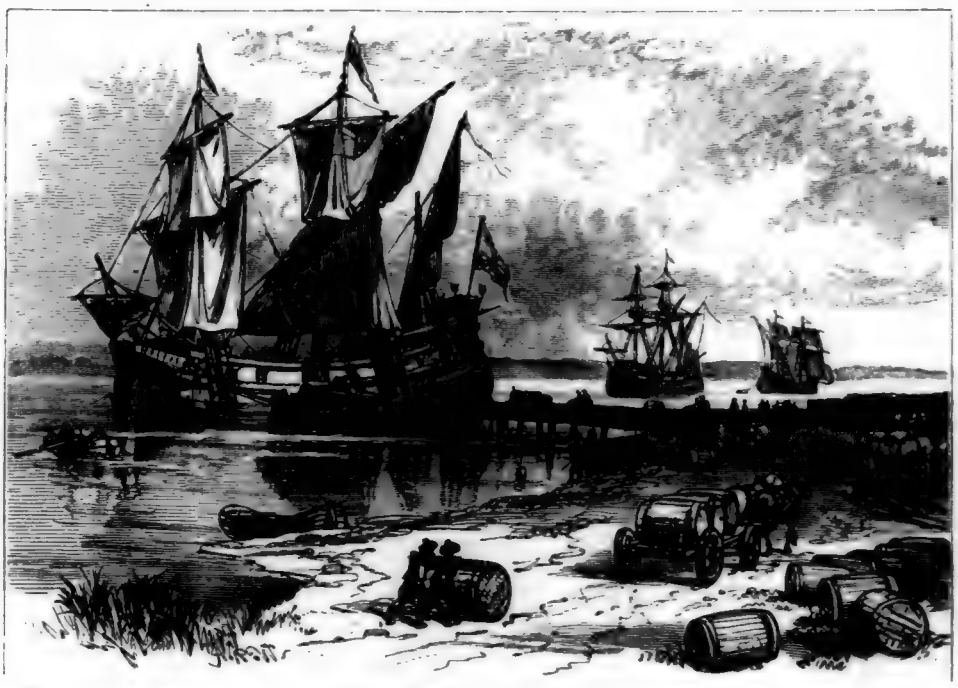
[2] Hening's *Statutes.*

as well as blacks were slaves in Virginia, and where the larger proportion of these white slaves were from the lowest dregs of English society, — from the gutters, the jails, and the brothels, — and were hardly more than half civilized. That the women of this large class of the population should intermarry with negroes was not merely possible; it was common enough to become in Maryland the subject of legislation. It was provided in that colony, in 1663, that any free-born English woman who should marry a slave should serve his master during the life of her husband, and that all her issue should be "slaves as their fathers were." [1]

The spirit, if not the letter of the law, however, in regard to black mothers, was undoubtedly the same then in the two colonies as it was in later times in all the slave-holding portion of the country. Servitude was the penalty for any admixture of African blood on the mother's side. Literally the sins of the fathers were heavily visited upon the children, while it soon ceased to be a question whether there could be any serious immorality in a relation which legislators were careful, without condemning, to turn into a source of so much worldly wealth.

By the revised code it was provided that the Church of England be the established church of the colony. But there was at the same time some pretence of toleration. It was declared that no man was to be "molested or disquieted in the exercise of his religion, so he be content with a quiet and peaceable enjoying it;" yet the oaths of obedience and supremacy — those parts of which relating to the establishment the Puritans could not conscientiously take — were exacted, and the non-conformist was not permitted to teach even in private.[2] In 1662 a fine of two thousand pounds of tobacco was imposed upon all "schismatical persons" who, "out of their averseness to the orthodox established religion, or out of the new-fangled conceits of their own heretical inventions," refused to have their children baptized; and those attending meetings of Separatists were heavily fined for the first and second offence, and banished on its repetition a third time. Such penalties had long been enforced against the Friends, whose presence in Virginia had been no more tolerable to the Puritans than it was now to the Established Church. Many of these persecuted people were driven into North Carolina, for the laws were enforced against them with much more severity than against any other class of dissenters.

Religious intolerance.



Much uneasiness and alarm was aroused when the news arrived

[1] *A Sketch of the Laws Relating to Slavery in the Several States in the United States.* By George M. Stroud, 1827.

[2] Anderson's *History of the Colonial Church.*

that the first Parliament of the restored king had made the Navigation Act more than ever obnoxious to the interests of the colonies, and that it was to be rigidly enforced. This was a grievance about which Royalist and Puritan were of one mind. Sir William Berkeley went to England in May, 1661, to represent how seriously the prosperity of the colony was hindered by the enforcement of such a law against its trade. He remained in England more than a year, Francis Morrison acting as governor in his absence; but his mission, so far as the Navigation Act was concerned, was fruitless, though he was more fortunate in the advancement of his own interests, for he obtained a grant for himself and others of that part of Virginia territory afterward known as North Carolina.

The Navigation Act.

Tobacco Ships in the James.

The interests of the colony, nevertheless, were stronger than acts of Parliament, for its prosperity depended largely upon free trade in the one great staple, tobacco. Even without interference from Parliament, there was enough to contend with, for the supply of that staple usually exceeded the demand. To regulate its production — to force by penalties the raising of more corn and less tobacco — was from the beginning of these settlements the constant aim of legislation in Virginia and Maryland; but the attempt to set aside the natural law of political economy by statute was as futile here as the attempt to prevent the trade to foreign ports when the tobacco was ready for shipment. Equally futile was it to expect

Trade in and cultivation of tobacco.

to create by legislative act towns into which the people should gather. The people were planters, and, with their servants and slaves, were scattered on the great plantations along the banks of the James and other rivers. The planters with these large grants of land were comparatively few; the slaves and servants many. To live in towns and to be supported by diversified industry was impossible to such a people, for slaves can be devoted only to unskilled labor. To raise tobacco, therefore, to be shipped directly from the river-bank — usually the water-front of the plantation — was the chief employment and support of the colonial planters, and it was equally difficult to limit production by local laws or to confine the foreign trade to an English channel.

Northern and Southern interests.

The last especially, it was found impossible to do, so long as the Dutch Colony of New Netherland offered every facility for a contraband commerce which English law could not reach, and in which both English and Dutch vessels could so easily engage. The grant to the Duke of York of the territory of the Dutch was not merely a royal gift to the brother of the King. It was meant to add to the revenues of the King himself, by making it possible to enforce the Navigation Act, and to control the tobacco trade of Virginia. That the Dutch province on the Hudson should belong to the English was sure in the end, whatever might be the ulterior purposes of Charles, to be a benefit to New England. To the people of Virginia, it was of no territorial advantage, but a direct interference with their freedom of trade and an immediate injury to their prosperity. It was the inevitable antagonism of free and slave labor.

A plot discovered among Cromwellian soldiers.

The severity of the laws in the early years of the restored royal government, and perhaps, the evident intent of the colonial Assembly to grasp at irresponsible power, caused much discontent among the people. In 1663, after the return of Berkeley from England, a plot was discovered to overthrow the government. But as it seems to have been confined to some of Cromwell's soldiers who had been sent out and sold as servants — a disposition of prisoners to which both parties resorted — it had its origin, probably, in a general political and religious discontent, rather than in any special complaint of particular laws. It was suppressed, however, without much difficulty, though it was thought to be serious enough to warrant the execution by hanging of four of the ring-leaders, and for setting apart the 13th of September, the day fixed for the insurrection, as a day of annual thanksgiving.

Governor's Island and the Battery.

CHAPTER X.

THE LATTER YEARS OF NEW NETHERLAND.

NEW AMSTERDAM INVADED BY INDIANS. — DESTRUCTION OF PAVONIA. — MASSACRE AND DEVASTATION ELSEWHERE. — JUDICIOUS POLICY OF THE DIRECTOR. — CONTRAST IN FRENCH AND DUTCH TREATMENT OF THE NATIVES. — THE RESULT. — THE ESOPUS WAR. — STUYVESANT'S DETERMINATION TO ESTABLISH RELIGIOUS UNIFORMITY. — PERSECUTION OF THE LUTHERANS AND QUAKERS. — INDIFFERENCE OF THE DUTCH TO RELIGIOUS CONTROVERSY. — STUYVESANT REBUKED BY THE AMSTERDAM CHAMBER. — CRUEL PUNISHMENT OF A QUAKER. — BANISHMENT OF JOHN BOWNE AND HIS TRIUMPHANT RETURN FROM HOLLAND. — GROWTH OF NEW NETHERLAND.

A MORE prudent ruler than Stuyvesant would have hesitated to take between six or seven hundred men from New Amsterdam, even for so important a purpose as the reduction of New Sweden. However confident he might feel that the New Englanders would be faithful to the terms of the recent treaty of peace, he would have known how little reliance could be placed upon any promise of friendship from the Indians. It needed only the smallest pretext at any time to arouse the savages, eager for plunder and thirsty for blood, to carry desolation and death into the villages and farms of the whites; and the more certain they were that their victims would be defenceless, the shriller would be their war-cry and the louder their boasts of their own prowess and bravery. When Stuyvesant sailed for the South River with so large

a proportion of the fighting men of New Netherland, it does not seem to have occurred to him how imminent a danger he left behind.

New Amsterdam surprised by Indians.

While he was busy before Fort Christina, New Amsterdam was aroused one September morning to find its streets swarming with nearly two thousand naked warriors, gathered of several tribes from far up the North River, from the extremity of Long Island, and from the mainland of Connecticut. All day they roamed through the town, breaking into houses on the pretence of seeking for northern Indians, and hinting at redress for the death of a squaw whom Van Dyck, the late Attorney-general, had shot at his farm on Staten Island, for stealing fruit from his garden. Persuasion was wiser than resistance against so large a body, many of whom were well armed, and the frightened burghers with their wives and children submitted for hours to insolence and outrage they did not dare, or thought it more prudent not to resist.

The invaders agreed at last to leave the town at sunset, to paddle over to Nutten (Governor's) Island, and there await the result of a conference to be held between their chiefs and the magistrates. But a conflict could only be delayed, not avoided, even if the savages meant anything more by their promise than to gain time for the advantage of confusion in a night attack. Either the Indians grew bolder or the Dutch less prudent, for a fight was begun by one side or the other, and there was an end then of all talk of peaceful negotiation.

Van Dyck was brought down with an arrow in the breast; Captain Van der Grist was cloven to the ground with an axe. Shouts of alarm and cries of murder rung through the streets, and the timid and the feeble ran to put themselves under the protection of the stronger and bolder, or to hide themselves in some place of safety. The military, who had been prudently ordered to the fort to be ready for an emergency, marched to the rescue of the citizens. An organized attack was too much for the savages; they were driven to their canoes, but their defence was so desperate that they left three dead warriors upon the beach. In the assault, two of the Dutch were killed and three others wounded. Mobs are dispersed now with results quite as serious; it was a respectable Indian fight in the seventeenth century that counted even less than half a dozen dead.

The fleet of canoes pulled out into the stream. They did not go to Nutten Island, and were lost to sight in the darkness, though over the water came out of the night their yells of vengeance and defiance. The people of New Amsterdam, relieved from the terrible fear of an immediate massacre, watched anxiously along the shore, straining their eyes and ears to catch any sign of the purpose of the enemy. They had not long to wait.

Over Pavonia and Hoboken sprung a sudden light. Along the beach of Manhattan Island the pitying people gathered, dreading what next the night might bring forth, watching the forked flames as they shot into the reddening sky, listening helplessly for the mingled shrieks of agony and despair, the whoop of savage hate and fury, the crackling of the fire as it leaped from house to house, the moans and cries of terror from maddened beasts. Pavonia in a little while was a heap of burning coals and ashes; not a house was spared; save in a single family not a man was left alive; the cattle were all dead, the crops destroyed; with a rare mercy only the women and children were spared and carried off as prisoners.

Pavonia destroyed.

Destruction of Pavonia.

It would be easy to see from the shores of Staten Island, over whose beautiful hills were scattered many pleasant boweries, the burning village of Pavonia. But the cause of the fire may not have been known. When its work was done, the savages, drunk with success and blood, sprung to their canoes and paddled across the Bay straight for the Island. In the farm-houses on the peaceful hill-sides slept ninety people, men, women, and children. The paddles of between sixty and seventy canoes broke the silence of the night; the alarm was given in time for many to escape; others were too late or lost their lives in a vain attempt at defence. Twenty-three were killed, and the morning sun rose upon the new silence of death and desolation, upon ruined homes, on desolate hearth-

Raids upon Staten Island, and elsewhere.

stones, on dead cattle lying among the trampled grain, where the night before smiled peace, and plenty, and content.

For three days bands of exultant savages harried the villages and farms about the Bay and along the river. At Gravesend lived a Lady Moody, — an English lady whom religious intolerance had driven out of Massachusetts more than a dozen years before, and to whom Kieft had made a grant of lands for the bravery of her followers in defending themselves against the Indians in the war of that period. Her house was now again attacked, though discrimination usually was made in favor of the English, for it was the Swannekins — the Dutch — who in the other English towns were threatened with massacre; a new settlement at Esopus, on the North River, was so sore beset that its people abandoned all their possessions and fled to New Amsterdam to escape from death; on all Manhattan Island no farm was safe, and their owners sought refuge in the town; consternation and ruin spread with this savage outbreak over all New Netherland; many plantations with their buildings, crops, and cattle were destroyed; three hundred of the people were reduced to want; one hundred were killed; one hundred and fifty were taken prisoners.

A summons was sent to Stuyvesant to hasten back from the South River to the defence of New Netherland. Prompt and energetic in action, though often unwise and rash in judgment, he was always ready to meet an emergency. His very presence inspired confidence in the panic-stricken people. All who had not already sought refuge in the town he ordered to leave their farms till peace could be restored. The citizens were enrolled in a military organization; new defences were added to the fortifications of New Amsterdam; military detachments were sent out to meet and drive off the Indians wherever they appeared most formidable, and effectual measures were taken to meet the additional expense incurred by all these measures.

But when some of the more rash and hot-headed of the colonists urged that war be declared against the tribes who had brought such calamities upon the colony, the Director counselled moderation. He advised that friendly relations be cultivated with the savages, while the settlers should keep nearer together in villages, with a block-house, capable of defence, to fly to in the event of an attack. It was better, he thought, to subdue the Indians if possible, by kindly treatment, rather than exasperate them by declaring a war of extermination, which the Dutch were not strong enough to bring to a successful issue. So judicious was the course he pursued that in a few months the unfriendly tribes again made promises of lasting peace, and the prisoners taken in the recent raids were all released, though heavy ransoms were paid for them in gunpowder and lead.

The savages pacified.

At Rensselaerswyck they did not wait for the suggestion of this policy from Stuyvesant, and escaped, therefore, the calamity which fell upon other parts of New Netherland. When the tidings of the atrocities committed by the Indians in the neighborhood of New Amsterdam reached the Patroon, his people looked at once to their own safety. By timely gifts and promises they induced the Mohawks to renew the old treaty of amity and peace which for many years had been advantageous to the whole province of New Netherland and profitable especially to themselves. It may have been because theirs was the frontier settlement that the people of Van Rensselaer's manor had always aimed to maintain friendly relations with the powerful tribes who occupied that vast region on the west as yet almost unknown to the white men. But whether the policy was one of choice or of necessity, they determined to keep on good terms with the savages for the sake of trade, and the result justified at least their worldly wisdom.

The French and the Indians.

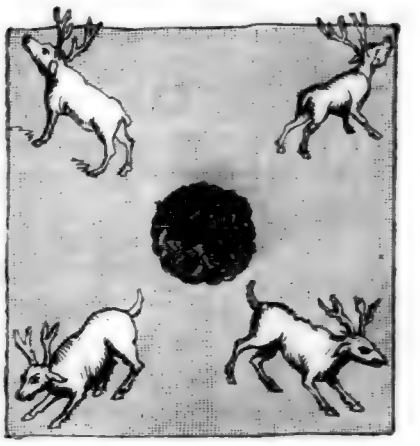
Where the Dutch had succeeded in gaining and in keeping the good-will of the Indians, the French, with a far higher purpose to the same end, had signally failed. For years the missionaries of the French, sometimes singly, sometimes in companionship, had sought the Iroquois in their remotest villages in friendly contest for their friendship with the Dutch. The desire to bring these benighted heathen within the pale of the church took precedence of any political or commercial aim with the government of Canada. It was not that trade and territorial acquisitions were esteemed by them as of little value; that treaties were not made to secure both; that well-appointed expeditions were not sent out to gain a foot-hold within the territory of the present State of New York; but that it was above all and before all made almost a reason of state that the cross should mark every advancing step of the white man, and that the subjugation of the savages should be the triumph of the Church.

But the trader was received as the missionary of peace and good will where the servant of religion provoked only strife. The Five Nations, whose domain was south of the St. Lawrence, extending from the Hudson to Lake Erie, and whose most powerful tribe was the Mohawk,[1] were in almost perpetual hostility with the French of Canada through all the years that New Netherland was a Dutch province. More than one of the gentle and devoted Jesuits died deaths of torture or privation in return for their zeal for the salvation of the souls of their unrelenting enemies. In the little box in which Father Jogues carried the simple furniture for an altar in the wilderness

[1] Gallatin's *Synopsis of the Indian Tribes, Coll. Am. Ant. Soc.*, vol. ii.

the savages believed the "black gown" concealed an Evil Spirit. To save themselves from the dire disasters that would come with its release, they tore the flesh from his arms in strips before they could be merciful enough to end his torments with death.[1] But they were slow to detect the devil in the brandy, the gunpowder, and the lead which the Dutch trader brought, and they welcomed him as a friend.

Fate of Father Jogues.



Portrait and Signature of Father Jogues.

The trader and his wares the Indians understood; the crucifix and the missal appealed only to their superstitions and their fears. At times the enthusiastic missionaries were persuaded that the light of the gospel had penetrated into the dark recesses of those savage souls. No such pious aspiration disturbed the minds of the dealers in peltries. The Dutch were careful to cultivate the friendship of the Mohawks, to be kind to them in the way of strong waters and fire-arms, and the colony on their borders on the upper Hudson increased in wealth and strength. But the handful of Frenchmen who at length, in 1655, clustered about the bark chapel of the Fathers Chaumonot and Dablon, near the Salt Springs of Onondaga, were glad in less than three years to escape with their lives, leaving all their possessions behind them, while the Indians, who had come to massacre them, lay in a drunken sleep.[2]

[1] Father Jogues was treacherously murdered, in 1646, by the Mohawks in the Mohawk Valley, called thenceforth in the annals of the Jesuits "The Mission of the Martyrs." An interesting sketch of the singularly devoted and romantic life of this Father is given by J. G. Shea in his edition of the *Novum Belgium*, written by Jogues, in 1644. He was the first European, probably, to explore Lake George, which he named Saint Sacrament in commemoration of the festival of *Corpus Christi*, the day on which he reached it. The Indian name was Andiatarocte.

[2] Le Moyne, a Jesuit Father, discovered the Salt Springs of Onondaga in 1654, and on a visit to New Amsterdam four years later told the Dominie Megapolensis of a spring at the source of a little lake which the Indians did not dare to drink, because, they said, there was a devil at the bottom of it. The Father tasted it and found it as salt as the water of

The conflict between Stuyvesant and the authorities at Rensselaerwyck had little intermission till in the latter years of his administration the supremacy of the company was acknowledged in the payment of a fixed subsidy in wheat by the Patroons. But the Director always had reason to be grateful to them for their steady adherence to that policy which preserved friendly relations with the Five Nations. In 1658 trouble again broke out with the river Indians, which might have been far more disastrous had not the Mohawks remained neutral.

Totem or Tribe-mark of the Five Nations (from La Hontan).

The Director had persuaded the people of Esopus, when they returned to their farms, after the massacre of three years before, to find mutual protection in a compact village surrounded with defences. The confidence that very precaution gave may, perhaps, have made them careless of provoking the hostility of the savages. A band of these, who had been engaged to assist in the harvest, were fired upon by the villagers, for no greater offence than being noisy and offensive in a drunken revel for which the Dutch themselves had supplied the means. Retaliation followed, and the whites, as usual, suffered in the devastation of their farms and in loss of life. The Esopus war.

This Esopus war, as it was called, continued intermittently till 1664, and might have been ruinous to the settlements along the banks of the Hudson had not the Mohawks been persuaded to continue faithful to the peaceful and friendly relations which had been so long maintained. Even without the aid of that tribe the Esopus Indians were a formidable enemy. In the course of the war some of those who had been taken prisoners by the Dutch were sent to the plantations of Curaçoa as slaves. The wrong was one not to be forgotten nor forgiven. In June, 1663, the village of Wiltwyck or Wildwyck — as Esopus was then named — was almost totally destroyed. Although the ostensible cause of this particular attack was the building of a new Ronduit, a little fort, at the neighboring village, — thence known ever since as Rondout, — in every blow that fell from the tomahawks of the savages was the memory of the slaves, their brothers, across the sea.

It was at high noon, while Stuyvesant was conferring, in the open

the sea. The Dominie repeated this in a letter to the Classis in Amsterdam, but adding "whether this be true or whether it be a Jesuit lie, I do not determine." — *O'Callaghan.*

fields outside the town, with the chiefs who had agreed to meet him on pretence of making a treaty, that the warriors, scattering themselves through the village apparently in friendly mood, suddenly fell upon the unsuspecting people. The houses were plundered and set on fire; some were killed, and some were seized and carried off as prisoners; men at work in the fields, hurrying in at the sight of the burning houses, to protect their wives and children, were shot down from within their own doorways. When, after a fierce and desperate fight, the savages were driven off, they left behind them a heap of ruins in which were the charred bodies of twenty-one of the murdered villagers, but they carried away more than twice that number of women and children as prisoners. It was, however, the last event of the war; the Indians were vigorously pursued and punished; and in the course of the next few months a treaty was concluded, the last ever made between the Dutch and the Indians.

New Amsterdam in the middle of the Seventeenth Century (from Vischer's Map in Asher's New Netherland).

But notwithstanding these Indian wars and massacres, from which no colony was altogether free, New Netherland slowly grew and prospered. At New Amsterdam Stuyvesant yielded, when longer resistance was useless, to fresh innovations upon the prerogatives of the Director-general, though none of them took much from his power, or added much to the power of the people. Whatever gain there was to popular government came not through any such well-defined purpose as existed in New England, of deriving the right of governing from the will of the governed; but only that the privileges belonging to citizenship in the fatherland should be preserved in the new home. So far as popular freedom existed in Holland it was to be maintained in the New Netherland; but wherever a limit or a barrier had been set

Progress of New Netherland.

up at home it was also to be set up in the colony. The burgher government, which was wrested from the unwilling hands of the company, was limited subsequently, by a division of burghers into Great and Small, giving certain exclusive privileges to those who were rich enough to buy admission into the first rank, and denying those privileges to the poor. It was the system of Amsterdam, and was therefore adopted by the colonists, though peculiarly burdensome to the people of a new country; it was not long, however, before it was modified by an experience of its inevitable evils.

The policy of the Director.

But whatever concessions Stuyvesant made to the popular will and to the rights of the people he made upon compulsion, not convincement. It was his most firm conviction that the powers that be are ordained of God. He governed in that belief, and his temper was not one to mitigate the severity of a rule that appealed to such authority. Naturally he was as intolerant of any approach to religious freedom as he was jealous of any encroachment upon the authority and privileges of the company whose vicegerent he was. As a rigid and zealous Calvinist he was impatient and scornful of any other doctrinal belief, or any other form of ecclesiastical government. No Boston Puritan could be more positive than he that there was but one road to the Heavenly Kingdom, though he was equally sure that the road the Puritan had chosen was the wrong one.

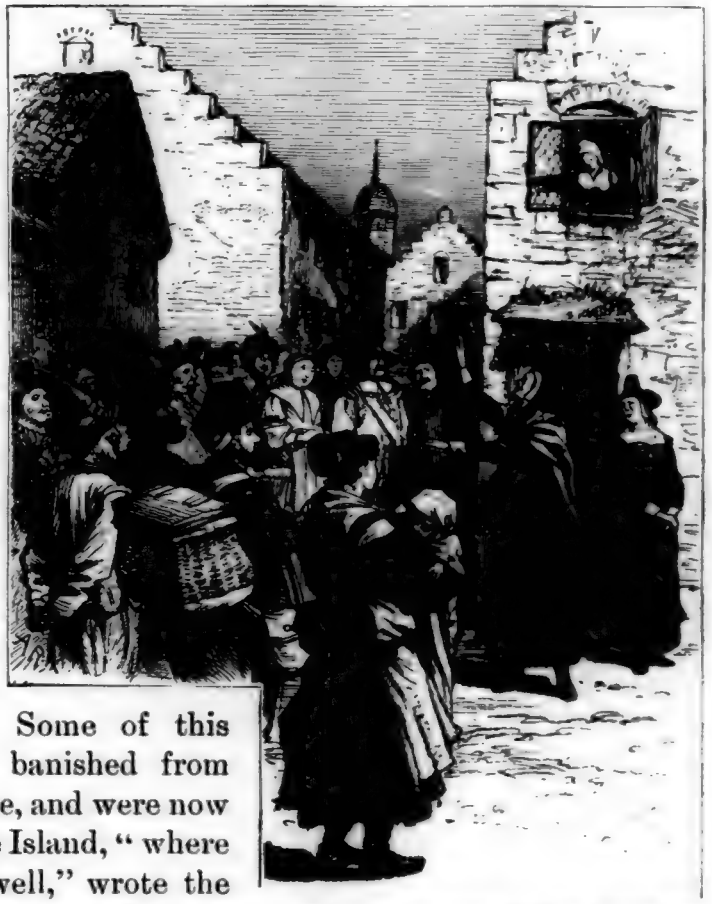
Persecution of the Lutherans.

For the Lutherans — the Dutch non-conformists of New Netherland, — the Director had little mercy. Aided by the Dominies Megapolensis and Drisius, he determined upon their suppression so soon as they asserted their difference of faith. The right they asked for, of public worship among themselves, he denied, not only because such worship was not in accordance with that sounder belief and better rule which belonged to the Reformed Church, but also because if the door were once opened to one set of schismatics it would be hard to close it upon others. The Independents of the English towns would be only too glad to avail themselves of a new pretext for insubordination. In religious as in civil affairs there should be, the Director determined, uniformity and obedience to the established order.

The duty of this uniformity and obedience he enforced upon the Lutherans, so soon as they were numerous enough to attract attention, by proclamations. He refused to grant them a meeting-house of their own in New Amsterdam. When the more zealous among them preferred the dictates of their own consciences to the commands of the Director, he punished them by fines and imprisonments. When they sent to Holland for a minister of their own persuasion, he was soon made to see that a proper discharge of his duties was impossible, and he was driven out of the colony.

This policy, however, was the policy of Stuyvesant himself, and his allies, the New Amsterdam clergymen, rather than of the West India Company. In this, as on so many other occasions, the Director-general ran before he was sent. The Amsterdam Directors were governed by that spirit which had made Holland an asylum for all, of whatever faith and whatever country, who were sufferers and exiles for their religious convictions. Stuyvesant was rebuked by his superiors for his want of charity as well as for his want of judgment. There might be, they thought, a "needless preciseness" as to the formulary of baptism, which was the essential point of difference between the Calvinists and the Lutherans, and the Directors hinted that the Company would feel constrained to permit the Lutherans to have a church of their own, if the harsh measures toward them should be continued.

Disapproval of the Amsterdam Chamber.



That zeal for religion which so absorbed the New Englanders had far less power over the Dutch. Stuyvesant and his clerical advisers were earnest enough and strong enough to prevent the Lutherans from having a place of their own for public worship, so long as New Netherland was a Dutch colony. But the fervor of the Director and the clergymen seems to have had as little support in popular sympathy as it had from the Company's Directors in Holland. The people at large were not much disposed to the rigid method of enforcing uniformity of belief and religious observance in which Stuyvesant was inclined to follow the example of the New England Puritans. This difference between them and their New England neighbors was one of race rather than the result of a more humane disposition or a wider intelligence; but to that difference it was due, no doubt, that there were fewer heretics among them. A novel doctrine loses much of its attractiveness if no penalty is attached to entertaining it, and the preacher of that doctrine is sure to avoid a people among whom he cannot command even attention enough to be controverted.

The outward observances of religious duty could hardly have been of paramount interest among a people who did not build on all Long Island, for the first thirty years of its occupation, a single church, or settle among them a single minister of their own faith. For that long period they were content to depend, for such spiritual comfort and instruction as they required, upon occasional visits to New Amsterdam, or occasional services in the rural districts from her clergymen. Whether such a state of things showed contentment or indifference, in either case it was plain that this was stony ground for the sowing of the seed of new doctrine. It was not so much, probably, that the Director feared the people might be led away from a faith they professed so coldly, as from a sincere

Dutch indifference to novel religious doctrines.

disapproval of what he believed to be error, that he visited heretics with punishment.

The prohibition of public worship, meant at first for the Lutherans only, was extended to others. At Flushing, among the English, in 1656, were a few Anabaptists. A poor shoemaker, from Rhode Island, one William Wickendam, felt himself called upon to expound the Word, and to give new baptism to his disciples in the river. William Hallett, the sheriff, permitted his house to be used for the conventicles of these people, where Wickendam preached and administered the sacraments. Stuyvesant commanded that the ordinance be enforced against them, and both the sheriff and the shoemaker were fined and banished, though Wickendam, because of his poverty, was permitted to go without payment of the fine.

Quaker Women preaching in New Amsterdam.

The next year a ship arrived at New Amsterdam, having on board several of the "cursed sect of heretics" — as they were called in the Massachusetts statute — of Quakers. Some of this company had been banished from Boston the year before, and were now on their way to Rhode Island, "where all kinds of scum dwell," wrote the Dominies Megapolensis and Drisius, "for it is nothing else than a sink of New England."[1] Among them were two women, whose names, "after the flesh," as they said, were Dorothy Waugh and Mary Witherhead. Both were of that number who, the autumn before, had been first imprisoned in Boston, and then compelled to reëmbark for Barbadoes; both, no doubt, had listened with stern approval to Mary Prince, as from the window of the Boston jail she bore her testimony against Governor Endicott, as he passed by in the street, crying unto

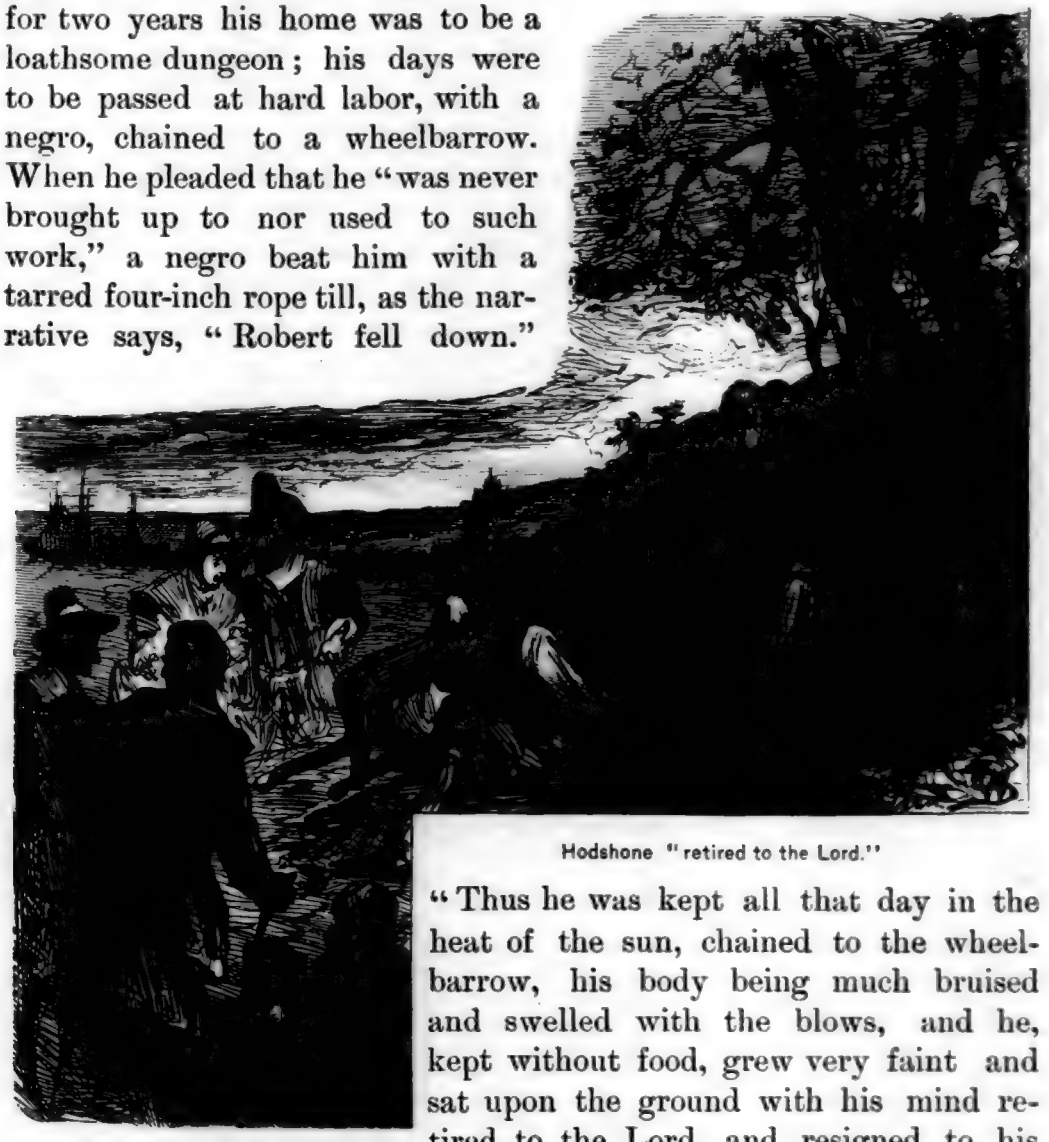
The Quakers in New Netherland.

[1] Letter to the Classis in Holland, cited by Brodhead.

him, "Woe unto thee, thou art an oppressor"[1] When they landed at New Amsterdam they emulated the example of that zealous woman. They asked neither for a place of public worship nor for permission to preach, but going from street to street, through the town, they announced the new doctrine, and declaimed against the steeple-houses, the hireling priesthood, and their pernicious teachings. To many of the gaping, and probably amused crowd of Dutchmen who followed them, they spoke in an unknown tongue, and upon questions which gave them little concern, even if they could have understood the preachers. But the preaching nevertheless was a defiance of authority and law which the Dutch Director was as little disposed as any Puritan governor to brook. The women were seized, and thrown into separate prisons — "miry dungeons" they are called — infested with vermin. After eight days' endurance of this punishment, their hands were tied behind them, and they were sent back to their ship to finish their voyage to Rhode Island.[2]

Persecution of Robert Hodshone.

With another of the company, Robert Hodgson (or Hodshone), it fared still worse. He proposed to remain in New Netherland, and was welcomed at Heemstede by a few of his own way of thinking, with whom he soon held a meeting. He was arrested and word sent to Stuyvesant, who ordered him to be brought to New Amsterdam. His knife and his Bible, the latter with him the more dangerous weapon, were taken away from him. Tied to the tail of a cart in which rode two young women, one with a baby at her breast, offenders like himself, and under a guard of soldiers, he was driven, pinioned, in the night-time and through the woods, "whereby he was much torn and abused," to the city. On his arrival the gentle Friend was led by a rope, like some dangerous criminal, to the prison, "a filthy place full of vermin."



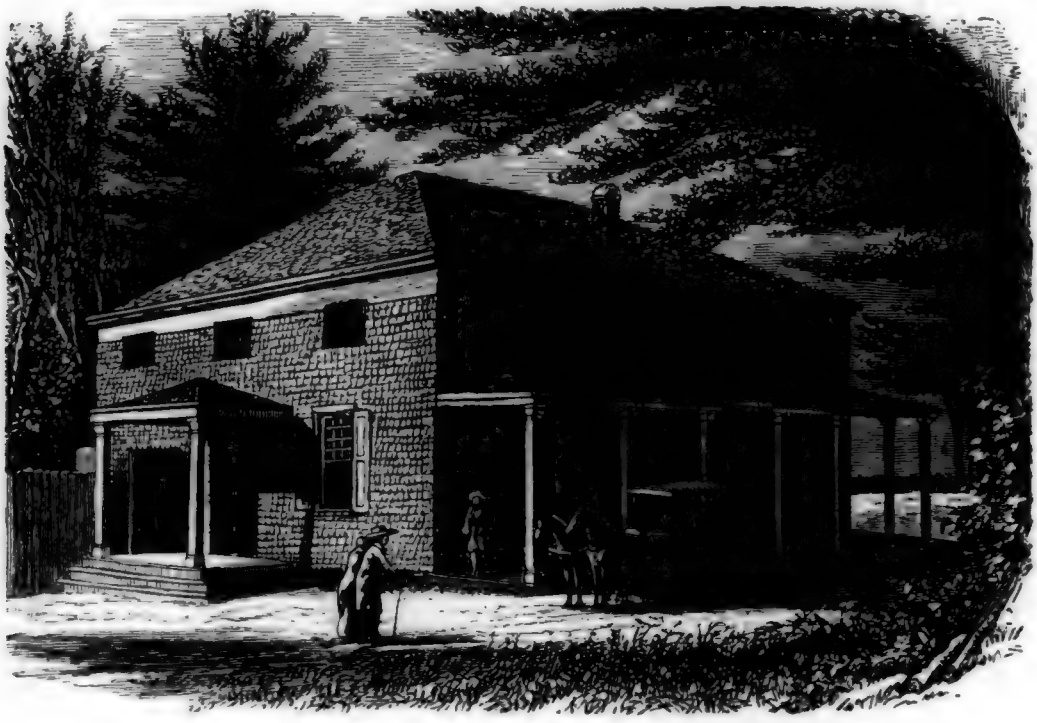
What was done with the young women does not appear, but not being preachers they were probably dismissed without further punishment. Hodshone's principal accuser seems to have been Captain Willett, again apparently an influential adviser of Stuyvesant, though three years before he was appointed to the command, with Standish, of the Plymouth troops in the proposed invasion of New Netherland. He "had much incensed the governor" against the prisoner, it is said, though it is easy to conceive that Stuyvesant's rage would need no prompting in an encounter with one of that sect who feared no wrath but the divine wrath, and respected no authority but the authority of

[1] Hutchinson's *History of Massachusetts.*

[2] Notwithstanding her sentence of banishment from Massachusetts, Dorothy Waugh went back to Boston, where she and Sarah Gibbons were imprisoned and whipped for speaking in the meeting-house after the lecture.

God. A prisoner who would not even remove his hat in the presence of the court would seem to such a judge as the Director as hardly deserving of other consideration than that hat and head should come off together.

The forms of law were of little moment with an offender of this kind. No defence was permitted him, and his sentence was read to him only in Dutch. Its meaning, however, was not long left in doubt; he was to pay a fine of six hundred guilders; for two years his home was to be a loathsome dungeon; his days were to be passed at hard labor, with a negro, chained to a wheelbarrow. When he pleaded that he "was never brought up to nor used to such work," a negro beat him with a tarred four-inch rope till, as the narrative says, "Robert fell down."



Hodshone "retired to the Lord."

"Thus he was kept all that day in the heat of the sun, chained to the wheelbarrow, his body being much bruised and swelled with the blows, and he, kept without food, grew very faint and sat upon the ground with his mind retired to the Lord, and resigned to his will, whereby he found himself supported."

So "retired to the Lord," so resigned and so supported, he endured such punishment for three days, — the dungeon at night, the barrow and its chains, the negro and his tarred rope, by day. Again he was taken before the Director, less able than ever to work, as little disposed as ever to submission. "What law have I broken?" he

demanded. He should work, he was told, or be whipped every day. Again he was chained to the barrow and threatened with even worse punishment if he dared to speak to any one. But the threats did not move him; "he did not forbear to speak to some that came to him, so as he thought meet and convenient." The worse punishment followed. Hung up by the hands, his feet tied to a log, his bare back was torn with rods till he became almost insensible to torture. A country-woman was permitted to enter his prison to wash and dress his wounds and nurse him back to life; others interceded with the authorities on his behalf, for many even among the Dutch were moved with pity. Some would gladly have paid his fine, but he refused

Friends' Meeting-house in Flushing.

mercy on such terms, lest it should be construed into an acknowledgment on his part of conscious wrong.

When sentence was first pronounced upon him it was displeasing to many of the Dutch, as "did appear by the shaking of their heads." More scandalous and inhuman it seemed to many of them when, after the cruel and repeated punishment of one whose sole offence was obedience to his own conscience, he was again led out, still chained to his barrow, to labor upon the public highway. Some openly expressed their sympathy, at least for his sufferings if not for the cause for which he suffered. Among those who exerted themselves on his behalf was the widow Anna Bayard, a sister of the Director. She was full of compassion, perhaps of indignation, and at her prayers and expostula-

tions her stern brother relented. Hodshone was released at length, and the fine remitted, but he was banished from the colony.[1]

Intercession of Madam Bayard.

To the interference of the good Mrs. Bayard the Friends owed more, probably, than the release of a single one of their number from the severe treatment of the Director. No others of that sect were subjected to such cruel persecution as had been visited upon Hodshone, though meetings were held, and the obnoxious doctrines preached, at Jamaica, Flushing, Heemstede, and Brooklyn, from the first appearance of Friends in New Netherland. Neither imprisonment, fines, nor an act forbidding all persons to entertain a Quaker for a single night under a penalty of fifty pounds, could abate the zeal or enforce the silence of these people. If no house was open to them, they assembled in the woods for worship after their manner. They were willing to endure whatever should be inflicted upon them, for conscience' sake; but happily after the release of Hodshone, they seemed no more obnoxious to the Director than other dissenters. In 1663, even the comparatively mild persecution of enforcing the law against those who most persistently defied it ceased.

Banishment of John Bowne.

One John Bowne, of Flushing, had in that year become a convert to the doctrines of Friends and had opened his house for their meetings. There was, perhaps, something more than usually exasperating in the quiet and patient firmness with which the sturdy English farmer endured three months' imprisonment, and refused to pay a fine, for the council ordered that he should be sent out of the province by the first ship ready for sea. He went as a prisoner to Holland, Stuyvesant writing to the Directors in Amsterdam that if others did not take warning by his banishment they would be even more severely dealt with.

Bowne defended himself before the Amsterdam chamber with complete success. So far from approving what Stuyvesant proposed to do, the Directors rebuked him for his previous course. Though they preferred that there should be neither Quakers nor any other dissenters in the colony, they doubted the wisdom of attempting to suppress them by vigorous measures. It was poor policy, they thought, in a commercial colony to repel men by persecution for opinion's sake. "Let every one," they said, "remain free as long as he is modest, moderate, his political conduct irreproachable, and as long as he does not offend others or oppose the government." This "maxim of moderation" had been the rule of the magistrates of Amsterdam. "Tread thus in their steps," they exhorted the Director, "and we doubt not you will be blessed." Stuyvesant had the grace to accept this wise

[1] Sewall's *History of the Quakers: An Abstract of the Sufferings of the People called Quakers for the Testimony of a Good Conscience.* London, 1733.

and humane counsel. The Friends were not again molested. Bowne returned to New Amsterdam, and, when they met, the Director "seemed ashamed of what he had done." [1]

But these religious persecutions had little to do with the material progress of New Netherland. They neither helped nor hindered it, and they were rather individual than national — less the outgrowth of the character of the people than indications only that Stuyvesant was as earnest and passionate on the religious as on other sides of his nature. If the ordinary Dutchman cared little what his neighbors might think or do about the affairs of the life to come, it was because he was not prone to trouble himself very much about affairs of any

Bowne's House.

kind. His temperament led him to live, so long as he lived in this world at all, a quiet, not over-anxious nor over-active life, and to accept without question and without much thought the teachings of established authority. If he was more tolerant than his English neighbor of differences of opinion on sacred as well as civil subjects, more merciful in punishment when punishment seemed to be called for, it was not so much that he was more just, but that he was less susceptible. It came to pass therefore, that his own province of New Netherland was indebted for whatever progress it made very much to the English, whose restless energy, much more than any diplomatic policy, urged them to "keep crowding the Dutch."

[1] *Alb. Rec.*, cited by O'Callaghan and Brodhead.

It was not till 1661 that any serious efforts were made to extend the border settlement at Fort Orange. In that year the "Great Flat" stretching from the fort to the Mohawk country was conveyed to Arendt Van Curler, one of the earliest settlers of Rensselaerswyck, and the commissary and secretary of the first Patroon. But it was three years later before the first settlement was made upon the tract at Schaenhechstede, now Schenectady. Gradual growth of the colony.

In the same year of this purchase by Van Curler, Melyn finally parted with his manor of Staten Island, the whole of which became the property of the West India Company. A new village — still called New Dorp — soon sprung up a few miles south of the Narrows; grants of land were made in other parts of the island to some of the French Waldenses who were among the earlier emigrants, and to Huguenots from Rochelle, whose descendants have clung tenaciously from generation to generation to the soil which their fathers first cultivated. In 1656, Jamaica — a corruption of the Indian name, Jimeco — was settled by Englishmen, though the Dutch name was given it of Rust-dorp, or Quiet Village. Westchester was reluctantly recognized as Oost-dorp, or East village, for this also was settled by Englishmen, between whom and Stuyvesant there was frequent conflict. One Thomas Pell was the first English purchaser of land within the boundaries of the present Westchester County; the tract he bought of the Indians included the spot where Ann Hutchinson and her family sought a last refuge from Puritan persecution and became the victims of an indiscriminate savage ferocity. New Haerlem was large enough in 1660 to be entitled to a village government. The next year two new towns, New Utrecht and Boswyck — now Bushwick — were incorporated on Long Island, on the south side of the bay; and on the other side, the first municipality in the present State of New Jersey was established at Bergen. Gradually the number of farms was enlarged, and agriculture became a more important element in the industry of the province. Among a people with whom beer was a necessary of life breweries were never wanting; but to those other manufactures had from time to time been added, especially of brick and delft. In 1660 New Amsterdam contained three hundred and fifty houses, which was an increase of two hundred in four years.

It was about this period that the trade in African slaves began to assume some activity. A free trade in slaves was among the privileges which the colonists had long thought the Company should grant them, for only with such laborers was it deemed possible that agriculture could flourish. A promise of aid of this sort had more than once been given, but the number of negroes in the province, till after the middle of the seventeenth century, was probably small. In 1648, an attempt

was made to encourage an exchange of colonial products with Brazil for slaves, apparently with small result. In 1652, permission was granted for direct importation from the African coast; but two ships only seem to have availed themselves of this privilege. It was not, indeed, till two years later that the trade became established, and the slaves after that date were brought chiefly, if not entirely, from Curaçoa, — the principal Dutch depot for this traffic in the West Indies. The importations to New Netherland were chiefly in the interest of the Company, though some share in them was granted to the municipality of New Amsterdam. Those brought on account of the Company were sold on arrival at public auction for beaver-currency, or its equivalent in provisions, with the proviso that they should not be exported from the colony. Stuyvesant was among the few who had the privilege — limited, perhaps, to official persons — of importing slaves for his own use. Director Beck of Curaçoa, writes him in August, 1659, that he had purchased for him two boys and a girl, who, according to the bill of lading, were shipped on the *Spera Mundi*, "all dry and well conditioned, and marked with the annexed mark." In February of the next year Beck writes again that he hopes soon to send him some "lusty fellows." Four or five years later, ships counted their living freight by hundreds. Though the Dutch were the first to bring the African slave to this continent,[1] and the trade was thus successfully established in their colony,[2] slavery was earlier made an important element of their social system by the English in Virginia.

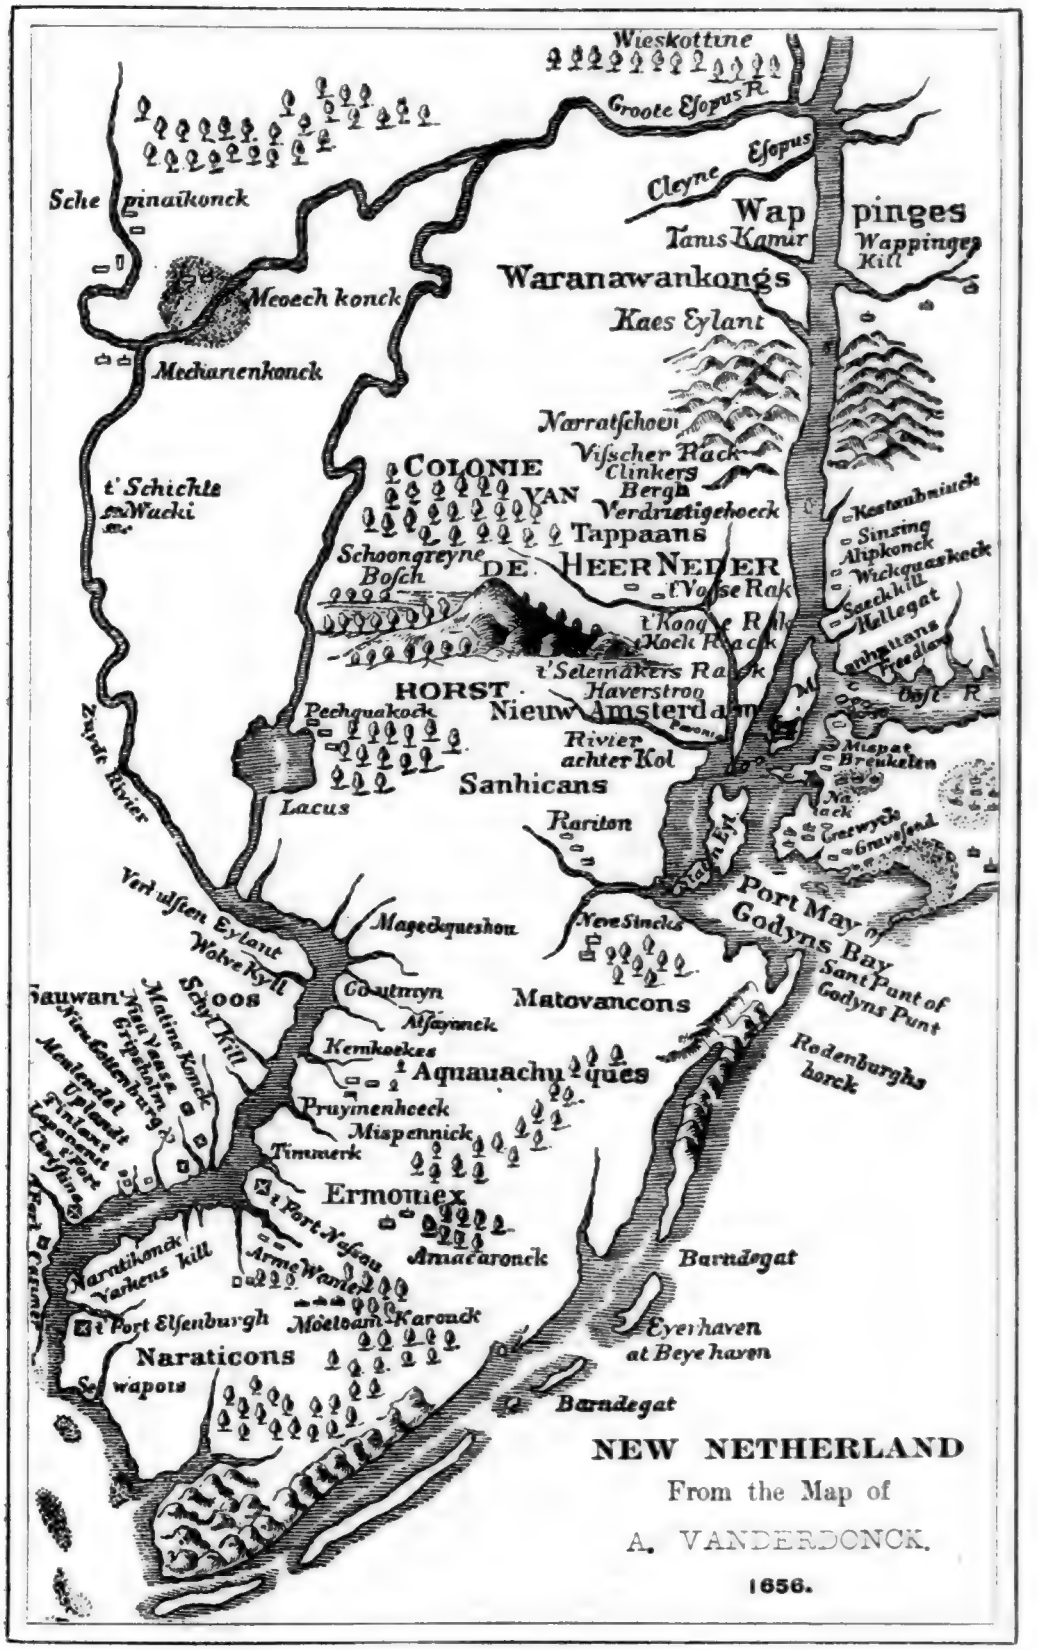
CHAPTER XI.

THE SURRENDER OF NEW NETHERLAND.

ENCROACHMENTS OF THE ENGLISH. — THE SOUTH RIVER COLONY. — LORD BALTIMORE'S CLAIM, AND CONTROVERSY WITH MARYLAND. — A NEW PATENT GRANTED TO CONNECTICUT. — DISSATISFACTION OF NEW HAVEN. — OTHER ENGLISH TOWNS ACCEPT THE PROTECTION OF CONNECTICUT. — CONFEDERACY OF LONG ISLAND TOWNS UNDER JOHN SCOTT. — HIS ATTEMPTS TO COERCE THE DUTCH. — NEW NETHERLAND AND PART OF NEW ENGLAND GRANTED TO THE DUKE OF YORK. — THE NICOLLS COMMISSION. — NEW NETHERLAND INVADED. — ITS SURRENDER. — NICOLLS PROCLAIMED GOVERNOR. — CHANGE OF NAMES. — NEW AMSTEL TAKEN BY THE ENGLISH.

THESE later years of Dutch rule in America were anxious years to Stuyvesant. Notwithstanding the growing prosperity of his own province he watched with jealous eyes the encroachments and increasing influence and power of the English, even if he had not actual prevision of their ultimate supremacy over all New Netherland. Massachusetts, who claimed that her patent extended indefinitely westward, proposed to settle a colony on the upper waters of the Hudson, and claimed the right of navigation upon that river to reach her alleged possessions. The right was denied on the ground of priority of discovery, but the claim was none the less a source of anxiety to the Director. By the treaty of Hartford a large proportion of Long Island was ceded to the English, and both there and in Westchester they were pressing hard upon the Dutch, with no very strict observance of boundary lines. "Place no confidence," wrote the Director to the Amsterdam Chamber in 1660, "in the weakness of the English government and its indisposition to interfere in affairs here. New England does not care much about its troubles, and does not want its aid. Her people are fully convinced that their power overbalances ours tenfold; and it is to be apprehended that they may make further attempts, at this opportunity, without fearing or caring for home interference." Nor was there much in the relations of the mother countries to lead him to hope that in colonial affairs the interests of his colony would be protected. Holland was not left long in doubt as to how much reliance there



Encroachments of the English.

might be upon the acts of the restored king, Charles II., for the fulfilment of the promises of an exiled prince.

Affairs on the South River.

On the South River the Director was beset by never-ceasing perplexity and anxiety, relieved by no perspective of general prosperity. No increase of population, no extension of agriculture, no growth of manufacturing industry cheered the company and encouraged to fresh exertions on behalf of that colony. The absence of all healthful energy and enterprise in that portion of New Netherland was due to conditions under which all such energy and enterprise were well-nigh impossible. A wilderness lay between it and the capital of the colony, and none of the advantages which might come from nearness to the seat of power could influence its affairs. It was only the province of a province, governed or misgoverned by the deputy of a deputy, claimed now by one nation, now by another, a bone of contention gnawed by each in turn. Half of the community had almost always been in the wretched position of a subjugated people. The strength and vitality without which the work of the pioneer must be an irremediable failure were paralyzed by contention, dependence, and uncertainty.

Not the least of the difficulties which Stuyvesant had to meet in the management of the affairs of this portion of his government was that which confronted him everywhere in fending off the English. The enterprising New Englanders pitied, no doubt, the distresses and hardships which beset the people on the South River, so far as they came from natural causes. But they were not unmindful, nevertheless, of the good chances for trade which those distresses opened to them. Beeckman, whom the Director-general had appointed as governor of the company's colony, purchased of the Indians the territory south of the Boomtjes (Bombay) Hook to Cape Henlopen, and established at Horekill a trading-post, putting in it a small garrison, near the spot where De Vries and Godyn had planted their colony of Swaanendael a quarter of a century before. This gave to the Dutch a valid claim to the whole river from the capes to the Schuylkill; but the New Englanders gave no heed to the few Dutch soldiers who guarded, or attempted to guard, the passage of the Delaware, and defied the laws which prohibited their trading along its banks. Where ships of all nations now ride safely at anchor off the quaint little village of Lewes, under the lee of the Delaware breakwater, awaiting orders for the great staples of American commerce, or seeking a refuge from the storms outside the capes of Henlopen and May, more than two centuries ago the little vessels of New England lingered for wind and tide with their cargoes of peltries gathered along the shores of the Delaware, and laughed at the handful of Dutch soldiers

1656.

on the Horekill, who were powerless to resent this infringement on the territorial and commercial rights of the West India Company.

Trouble from another direction was even more threatening. The rendition of the fugitives to Virginia and Maryland was demanded by Stuyvesant as Director-general, and a controversy was provoked which came near producing a quite unlooked-for result. These people who had fled, not only from legal obligations, which they considered unjust and oppressive, but from trials and afflictions which were the natural consequences of their settlement in a new country, must, nevertheless, have represented that country as one worth possessing. The English from the southward began quietly and gradually to encroach upon the Dutch boundaries, and in reply to Stuyvesant's demand that the fugitives should be compelled to return to the jurisdiction from which they had fled, Lord Baltimore renewed his claim, that the whole South River region was included within his patent, the northern boundary of which was the fortieth parallel. Contest with Maryland.

A delegation from Maryland, at the head of which was Colonel Nathaniel Utie, appeared at New Amstel, with a summons from Governor Fendall for the surrender of the province. The official gentlemen had reason enough to be alarmed at such a summons, for there were not more than twenty-five soldiers at their command in the whole province, and two thirds of these were stationed at Horekill; but possibly the people had little share in these apprehensions. Worn out with sickness and sullen with discontent, they were in a state of mind to listen to Utie, whose instructions were to "insinuate unto the people there seated" that they should have "good conditions," and "have protection in their lives, liberties, and estates."[1] Alrichs, in his letter to Stuyvesant, on the arrival of the Maryland delegation, says "the citizens are few in number, and unwilling to fight, because, as they say, the city has not kept its conditions, but curtailed them,"[2] and he reports Utie as saying: "We [that is the Dutch] ought to take hold of this opportunity, as our men had chiefly deserted us, and they who are yet remaining will be of little or no aid; therefore it is our intention to take hold of this occasion, as we will not let it pass by, convinced as we are of your weakness."

There was no hope in resistance, and the Dutch wisely resorted to protracted negotiation, which they carried on with great skill. Alrichs and Beeckman replied courteously — much to Stuyvesant's disgust when he heard of it — but firmly to the Maryland envoys, representing that the right of the Dutch to the South River was founded

[1] Proceedings of Council of Maryland; in Hazard's *Annals*, p. 257.

[2] *Albany Records*, cited by Hazard.

on priority of discovery and occupation; that such "procedures and treatment by Christians and Protestant brethren "appeared" unexpected and strange;" that they were contrary to the peace and harmony existing between the republic of England and the States General; that such a question should be submitted to their respective rulers; and, finally, that they ought to have three weeks to communicate with the Director-general at New Amsterdam. Utie acceded to the latter proposition and returned to Maryland to await the event.

Stuyvesant's anger when he received the tidings from Alrichs and Beeckman was more than usually intemperate. "I did see," he says, "with no less regret than surprise . . . . the frivolous conclusion of Nathaniel Utie, and your not less frivolous answer, and further proceedings with him on such a frivolous fabricated instructions . . . . much more so yet, that you permitted the aforesaid Utie to sow his seditious and mutinous seed among the community, ... who rather deserved to have been apprehended as a spy and conducted hither, than to have obtained an audience upon such a frivolous fabricated instruction without a commission." There was no limit to the absurdities into which his ungovernable temper would not hurry the Director. He must have known that Utie's instructions were from Governor Fendall of Maryland; that the mission was undertaken by order of Lord Baltimore himself; that there was ample power behind it, — five hundred men, it was soon reported, being ready to move upon the Dutch; and, on the other side, he well knew that the whole force on which Alrichs and Beeckman had to rely consisted of five and twenty men, two thirds of whom were at a distance of seventy miles, and that the colony generally, if they did not welcome a change of government, would look upon it with the coolest indifference. But Stuyvesant's anger was not merely absurd; it became outrageous when, to punish the governors of the South River for conduct which under the circumstances was altogether judicious, he insulted them by sending his secretary, Cornelius Van Ruyven, and Captain Martin Kregier, to take charge of affairs.

But, as usual, however unreasonable Stuyvesant was in temper, he was rational in action. On the same day that he so berated his subordinates who received Utie, he wrote to the governor of Maryland, and appointed two commissioners, Augustine Heermans and Resolved Waldron, as bearers of the letter, and with power to enter into negotiation upon the subject of Utie's mission. He was not so blinded by anger as not to see that the only course open to him was precisely that for adopting which he so blamed Alrichs and Beeckman. They knew that if the claim presented on behalf of Lord Baltimore could be defeated at all, it could only be by an appeal, not to arms, but to

reason and argument. Stuyvesant knew they were right, and, while he humiliated them with reproaches he justified their conduct by resorting, as they had done, to pretexts for delay and offers of negotiation. Though he made a show of armed defence by sending sixty soldiers to the South River with Captain Kregier, his real reliance was upon his ambassadors, Heermans and Waldron, who were to push on to Maryland, armed only with his letter of remonstrance.

The negotiation with the governor and council of that province was conducted, on the part of the Dutch commissioners, with a good deal of ability and tact. The invasion of the rights of the Company, they contended, was contrary to the law of nations and to treaties existing between England and the States General; that the colony of the city of Amsterdam, which Maryland specially claimed had intruded upon Lord Baltimore's patent, was a colony

Arguments of the commissioners.

The Maryland and New Netherland Ambassadors.

within the jurisdiction of New Netherland, and that the West India Company had planted the colony in the South River region from thirteen to fifteen years before any grant of lands along that coast was made to Lord Baltimore; and while they professed a strong desire to live in peace and amity with their neighbors, they firmly avowed the determination to submit to no wrong.

In the course of the discussion the Baltimore patent was shown to the commissioners, who at once detected and fastened upon that clause which limited the grant to lands "*hactenus inculta*" (hitherto

uncultivated), and inhabited only by the Indians. On this point the Dutch commissioners immediately presented a supplementary declaration, confining themselves to the single argument that the South River region was distinctly excluded from Lord Baltimore's patent by its own terms, inasmuch as when the grant was made that country no longer belonged to the Indians, but had been bought of them by the Dutch, who were in possession of it, and had been for years, at the date of Lord Baltimore's patent.

To this presentation of the case there seems to have been no answer. It was unanswerable, indeed, as between the contending parties, if the assumption of the Dutch was admitted, —that early and long occupation carried with it the title to the country. But one party chose to ignore, and the other did not know or unaccountably forgot, that if by possession something more than mere military tenure was meant, there was still a third nationality whose right was better than any that could be given by royal patent or company's charter.

It perhaps occurred to the Dutch commissioners that the English might make use of the fact that the Swedes had so long maintained jurisdiction over the South River as an argument against the claim of the West India Company; for they allude in their first declaration to the Swedes as "Dutch Swedes," who in common with the Dutch had settled in several places on that river, and when Governor Fendall of Maryland asked what was meant by "Dutch Swedes," the commissioners answered that "they had been partners and associates residing for a time under jurisdiction of the Company, or rather connived at, but who became more insolent, so as at length, in a traitorous manner, they surprised Fort New Amstel, before called Fort Casimir, by which director-general and council in New Netherland were compelled to cleanse that neighborhood of such a vile gang."

This ingenious misrepresentation of the order of events of more than twenty years on the South River seems to have been accepted as true by the English. Either they did not know or did not choose to assert that the "vile gang" was still the larger though now a subject portion of the people of the province, and that during the long administration of John Printz at least, so far from being "connived at" as associates and partners under the jurisdiction of the Company, they were the masters of the Dutch, whose presence they had hardly tolerated. The commissioners were as careful to present all the argument in their own favor as they were to anticipate any possible rejoinder on the other side. While they thus ignored the Swedes, whose jurisdiction could be used as a strong point against them, they reminded the English of that Sir Edmund Plowden who called himself earl palatine of New Albion, and claimed that New Albion was granted

to him by James II., and extended from the North River to Virginia. The title of Lord Baltimore to the Delaware was, they said, no better than this of Plowden, who "in former time would make us believe he hath unto, when it afterward did prove and was found out, he only subreptiff and obreptiff hath something obtained to that purpose which was invalid." It was a shrewd reminder to the Maryland people that their own rights were not undisputed, and that among rival claimants possession was the better title.[1]

Swedish Soldier of the Seventeenth Century.

The difficulties of the question, and the able presentation of it by Stuyvesant's ambassadors, quite confounded the Maryland magistrates. The subject was referred to Lord Baltimore, then in England, for further consideration. The consideration was not wanting, but no adjustment of the conflicting claims was ever reached. In 1660 we hear of Captain James Neal, the attorney of Baltimore, demanding of the College of XIX at Amsterdam the cession of New Amstel, and of the reply of the college that "they will use all the means God and nature have given to protect the inhabitants." Two years later Beeckman writes to Stuyvesant that he hears of the arrival of the son of Lord Baltimore in Maryland, and that "nothing further is mentioned there of any intentions upon this district."

Apprehension of trouble from that quarter, nevertheless, increased in the Amsterdam Chamber. In less than a year from the time of Beeckman's hopeful letter, the Company transferred all their posses-

[1] The Plowden patent has been the cause of a good deal of controversy. The truth about it seems to be that Sir Edmund Plowden asked for a grant from King Charles of the country from Virginia to the North River, to be called New Albion, but the request was refused by the king, and a worthless patent was obtained from the viceroy of Ireland, who had no authority to give it. *A Description of the Province of New Albion, etc., etc., etc.*, by Beauchamp Plantagenet (a supposed assumed name for Plowden). Hazard's *Annals*. Note by Henry C. Murphy in his translation of the *Vertoogh*, in *N. Y. Hist. Soc. Coll.*, Second Series, vol. ii.

sion on the South River to the city of Amsterdam; and the reason given is that the colony may be protected, without expense to the Company, against encroachments from the English on the south. For, from the English on that side, the Directors declare, as little favor is to be expected as from the English on the north, and that these "are continuing in their usurpations." It was the shadow of the coming event. In less than a year thereafter New Amsterdam became New York, and New Amstel, Newcastle, and the Dutch, except for a brief subsequent interval, ceased to contend with England for colonial power in North America.

Transfer of the colony to the city.

But these later years of Dutch possession on the South River were not otherwise years of prosperity or of peace. Alrichs died while the controversy was going on between Stuyvesant's commissioners and the magistrates of Maryland, and was succeeded by D'Hinoyossa. The administration of this new governor of the Colony of the City was marked by little else than quarrels with Beeckman and intrigues against him. "He feels himself again pretty high," Beeckman writes of his rival, "and is strutting forward in full pride. He is boasting that he will recover all the effects of the deceased Alrichs, and sings already another tune." This was when D'Hinoyossa was appointed Director, and the antagonism it shows between the two men had from that moment no abatement. A struggle for supremacy in the colony left little time to look after its real interests; industry was crippled by constant fear of Indian hostilities; idleness and the want of a good example in the rulers led to general immorality and lawlessness.[1]

Last years of the Dutch colony on the Delaware.

D'Hinoyossa, probably, as well as fear of the English, had something to do with the transfer of the South River to the city of Amsterdam. The governor had sometime before gone secretly to Holland, and when he returned it was as sole governor where hitherto he had held only a divided command. But his triumph over Beeckman was short-lived.

At the north events were hurrying on the inevitable conclusion. After the restoration of Charles II., John Winthrop the younger was sent by the general court of Hartford as the agent of that colony to England, with instructions to procure a new charter from the king, whom Connecticut had hastened to acknowledge. Mr. Winthrop was successful. The boundaries of the

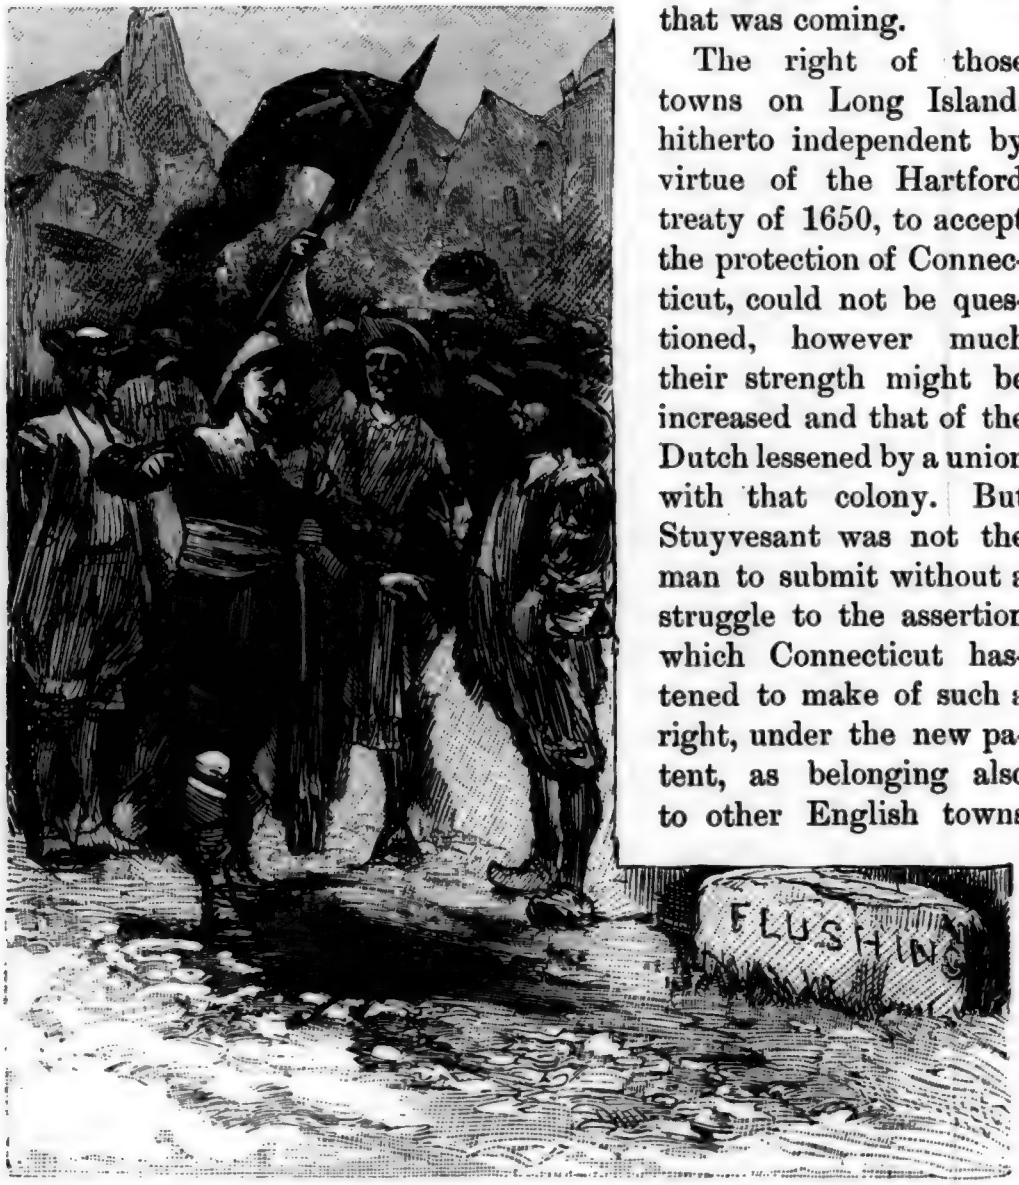
A new patent granted to Connecticut.

[1] There could have been little respect for either law or justice where the wife of the Swedish priest eloped with a young man, and when the priest broke into the young man's room in search of the woman, was compelled by the authorities, because he took an inventory "of a few old stockings," to assume all the debts which his wife's paramour had left behind him. The priest sought consolation by marrying himself immediately to another woman, though this was pronounced illegal till he had obtained a divorce.

original patent, conveyed by the Earl of Warwick to Lord Say and Seal and others, which the colony had afterward purchased of Fenwick, were confirmed in April, 1662, by new letters patent with enlarged privileges. It gave to the patentees one hundred and twenty miles from the Narragansett River along the coast "toward the southwest, west and by south," and from that line westward in its full breadth to the Pacific, or, as it was then called, the South Sea, with all the islands along the included coasts of both oceans.[1]

Dissatisfaction of New Haven.

New Haven and other English towns along the Sound and on Long Island, which had hitherto been independent, were thus brought under the jurisdiction of Connecticut. Some of them submitted cheerfully; those, especially, near the boundary line of New Netherland gladly welcomed the protection of such a union. But these were the weaker towns. New Haven, strong and self-reliant, protested with vehemence against this disregard of her rights by purchase and settlement. Her legislature called the act "the great sin of Connecticut," as one "contrary to righteousness, amity, and peace." The magistrates of that colony were accused of bad faith in the measures they took to procure the new patent; of treachery in the course they pursued in arousing discontent and animosity among the people, that New Haven might be disorganized and become the prey of Connecticut. Whether the charges were true or not, the assertion of jurisdiction was the source of perpetual trouble for the two years that the controversy lasted; it was so easy to evade the payment of taxes within the boundaries of New Haven by the plea that allegiance was due to the new government only.



Consanguinity and common interests were sure to heal such political dissensions among the English in the end. It was quite otherwise with the Dutch. The new patent covered not only Long Island but all Northern New Netherland. Stuyvesant saw and comprehended the situation. Years before he had conceded the line of the Hartford treaty to these encroaching English. Even within that line

[1] At the time of Winthrop's presentation of the petition of Connecticut for a new charter, Lord Say and Seal held the privy seal, and the Earl of Manchester, another warm friend of the colony, was chamberlain of the royal household. Both, says Trumbull (*History of Connecticut*) were instrumental in forwarding Winthrop's purpose. It is also said that Winthrop presented to the king an extraordinary ring, given by Charles I. to Winthrop's grandfather, which the king was glad to recover. There is another tradition that the king, Charles II., gave his miniature to Winthrop. The miniature, however, — now in the possession of Miss Elizabeth W. Winthrop, a descendant of the governor, — is undoubtedly the portrait, not of Charles, but of the Chevalier St. George, the "Old Pretender," who was not born till twenty-six years after this visit of Winthrop to England. Such traditions are to be received with caution. That about the ring may have as little foundation as the story of the portrait. Adam Winthrop, John's grandfather, was a plain country gentleman, unconnected with the court, who died before Charles I. became king.

there were English towns which he could only with the greatest difficulty hold in subjection to Dutch rule. That difficulty now was immensely increased by the assertion of English title to the whole of Long Island and the North River region by a new patent from the English king. The Dutch could hardly fail to see the end that was coming.

Embarrassment of Governor Stuyvesant.

The right of those towns on Long Island, hitherto independent by virtue of the Hartford treaty of 1650, to accept the protection of Connecticut, could not be questioned, however much their strength might be increased and that of the Dutch lessened by a union with that colony. But Stuyvesant was not the man to submit without a struggle to the assertion which Connecticut hastened to make of such a right, under the new patent, as belonging also to other English towns

The English Agitators re-naming the Towns.

within the boundaries of New Netherland. For two years he carried on a hopeless struggle, cheered sometimes by temporary success, but on the whole gradually and certainly losing ground. A visit to Boston and a conference with the commissioners of the united New England colonies availed him nothing; he was defeated by that old policy

of delay with which the New Englanders had always met the Dutch in any attempt at negotiation. He sent commissioners to Hartford only to be baffled by a similar result.

English proceedings in New Netherland under the Connecticut patent.

Meanwhile, within the limits of his own province the English were steadily aggressive. One Captain John Talcott was sent from Connecticut, in the autumn of 1663, to Westchester to encourage the people in their hostility to Dutch rule. He bettered his instructions by fostering discontent in all the English towns on the west end of Long Island. Two months later Anthony Waters and John Coe, at the head of a considerable force, marched from town to town, changed the names of several of them, calling Flushing Newark, Newtown or Middelburgh Hastings, Jamaica Crafford, and Oyster Bay Folestone; deposed the magistrates and appointed new ones; and proclaiming Charles II. king, declared these places to be part of his dominions. The Director was glad now to accept the compromise which his commissioners had rejected in Hartford only a few weeks before, — that there should be mutual forbearance, the Dutch and English towns to be free respectively from interference from either government.

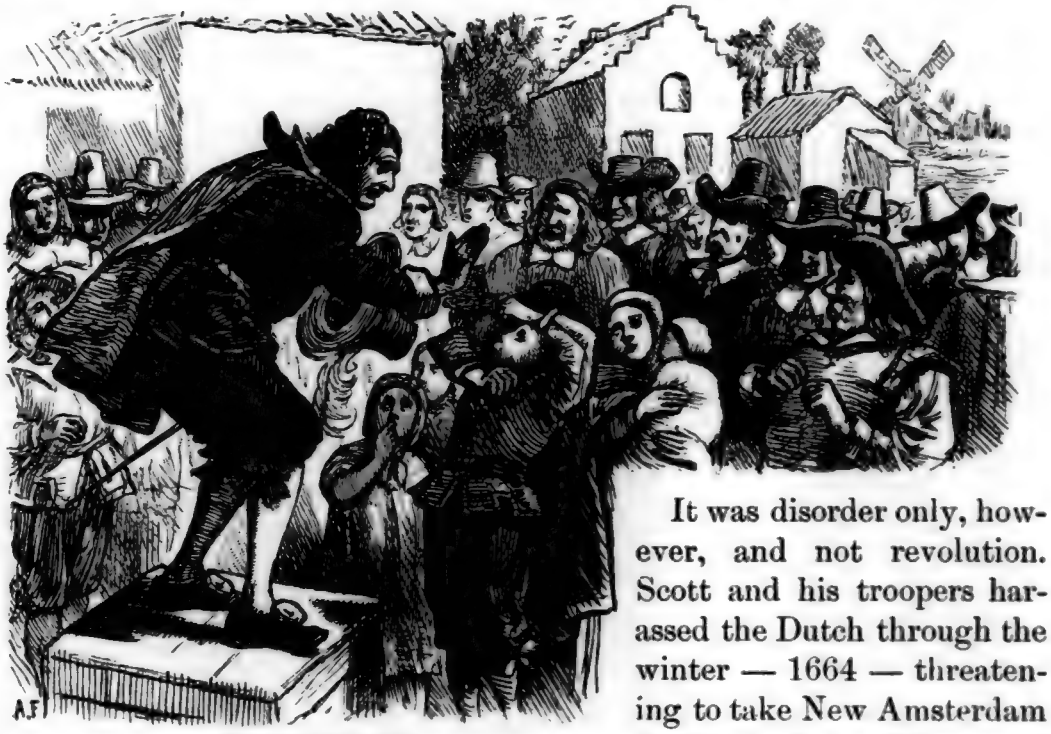
It was a virtual surrender on the part of Stuyvesant, but he had no alternative. The treasury was empty; help from the Company there was none till it was too late; an assembly of the people could devise no remedy with which to arrest the encroachments of the English. And it was while the Director was thus made almost desperate with troubles from without, destroying the integrity and threatening the existence of his colony, that he was called upon to defend the settlements on the North River from the renewed attacks of the Esopus Indians.

Attempted revolt of John Scott.

In the earlier differences between New Netherland and the New England colonies, one John Scott had been conspicuous on Long Island in efforts to unite his countrymen of the English towns against the Dutch, and had been punished by imprisonment. He claimed to have purchased of the Indians large tracts of country, and returning to England at the restoration he petitioned the king to bestow upon him the government of the whole of Long Island. He was not without a valid claim to the royal favor, for he had served in the army under Charles the First, and his father had spent his fortune, and at last laid down his life, in the cause of that unhappy king. The Committee of Foreign Plantations, to whom his petition was referred, gave him a commission to return to America, arming him with large powers, but in conjunction with George Baxter, another well-known opponent of the Dutch, and Samuel Maverick of Boston.

The commissioners were instructed not merely to examine into English titles upon Long Island; they were ordered to look into the question of the "intrusion" of the Dutch; their power, commerce, government; their disregard of English law, especially of the Navigation Act, that early protective policy which proposed to shut out all foreigners from trade with the English colonies; and finally of the means whereby this people could be brought most readily to submission, or failing that, to expulsion. As Scott bore royal letters of commendation to the colonial governors, such instructions if carried out would be almost tantamount to a declaration of war.

On his arrival, Scott was joined in a commission, with Talcott and others from Connecticut, to annex all Long Island to that province. To accept such an office seems hardly compatible with the instructions from the Committee of Plantations; but as he needed force to back his pretensions, he was ready, perhaps, to accept aid from any quarter.



Confederacy of English towns.

Circumstances favored him. The towns on the western side of the Island, within the boundaries of New Netherland, had become, by the agreement between Stuyvesant and the magistrates at Hartford, free from allegiance either to Connecticut or the Dutch. But the people were divided among themselves. They were glad to be no longer counted as Dutch colonies; but the Baptists, Quakers, and other dissenters among them, dreaded coming under the Puritan rule of New England. "Wee ware put," they wrote to Scott, "uppon proclaiming the King by Capt. John Youngs, who came with a trumpet to Heemstede, and sounded in our ears that Conecticot would do great things for us." But the promise had been redeemed by nothing but "if so bees and doubtinghs." On the other hand the Dutch authorities threatened, some actually abused them, and they appealed, therefore, to Scott to come to their aid.

He came, and came with the unexpected announcement that the king had granted all Long Island to his brother the Duke of York. It was welcome news to the English, and harmonized all differences. Heemstede, Gravesend, Flushing, Newtown, and Jamaica, at once united for their mutual protection, choosing John Scott as their president, until the Duke of York or the king should establish a permanent government. At the head of a force of a hundred and fifty men, President Scott took the field to reduce the Dutch towns to obedience to the English king. At Breukelen he addressed the people, telling them they were no longer Dutch subjects. He was asked to wait upon the Director-general. "Let Stuyvesant come here with a hundred men," he answered; "I shall wait for him and run a sword through his body."[1] Perhaps he meant it, for turning round he gave a blow to a lad —

[1] O'Callaghan's *New Netherland*.

knocked off his hat, probably — for refusing to uncover to the English flag. "He had better strike men, not boys," shouted one of the crowd. The remark, however just, was ill-timed, and four of Scott's men immediately fell upon the new offender and put him to flight. The "usurper," as he was soon called, marched from town to town, everywhere proclaiming Charles II. as the rightful sovereign of New Netherland, and creating disorder wherever he went.

Scott at Breukelen.

It was disorder only, however, and not revolution. Scott and his troopers harassed the Dutch through the winter — 1664 — threatening to take New Amsterdam in the spring. Stuyvesant called a meeting of delegates, for such a threat was more serious than any lawlessness in the outlying villages. The Stadt-Huys and the fort of the capital in possession of the English, a Director-general and his council overawed or imprisoned in the name of Charles II., would be actual revolution. The emergency was met with promptness and energy. Money was raised and measures taken for defence, though there was hot dispute whether the city was bound to do more than take care of itself, leaving the rest of the province to the protection of the Company. Scott's career, at any rate, was checked. A conference was held between him and the Director, and affairs, it was agreed, should be restored to the old order: the English towns to remain under such government as they should deem fit, the Dutch to be unmolested for a twelve-month, while the question of jurisdiction and boundaries should be referred to the home governments.

For a brief period it seemed to the Dutch that better days were coming. In the spring the war with the Esopus Indians was brought

to a successful end, and Stuyvesant made with them that treaty of peace and amity which proved to be his last. The commissioners, who had been sent the autumn before to Holland, returned with assurances of protection from the States-General, and letters to the English towns enjoining them to return to their allegiance to the Dutch.

Scott imprisoned at Hartford.

But it was a deceitful lull in the storm. The magistrates at Hartford imprisoned Scott, but it was for asserting his own authority and disregarding theirs, not for high crimes and misdemeanors in the peaceful province of an unoffending neighbor. The letters of their High Mightinesses of the States-General to their English subjects were disregarded, — in some instances were not even opened. The copies that were sent to Hartford were pronounced to be forgeries, as a convenient way of paying no heed to them. Winthrop openly visited the English towns to induce them to submit to the rule of Connecticut, and in an interview with Stuyvesant and the burghers of New Amsterdam firmly maintained that under the new charter all Long Island belonged to her. By virtue of that charter, Pell bought of the Indians all the country lying between Westchester and the North River, including Spuyten-Duyvil Creek, which the Dutch had purchased fifteen years before.

Portrait of the Duke of York, afterwards James II.

Grant of territory to the Duke of York by the king.

The overwhelming calamity was already certain. In March the king granted to his brother, the Duke of York and Albany, a large portion of the province of Maine, and the country from the west side of the Connecticut River to the east side of Delaware Bay. This grant included Martha's Vineyard, Nantucket, all Long Island, and the whole of the territory of New Netherland. The next month a fleet of four ships, with a force of three or four hundred men, under the command of Colonel Richard Nicolls, as the lieutenant-governor of the Duke, sailed for New England. With Nicolls were joined as commissioners, Sir Robert Carr, Sir George Cartwright, and Samuel Maverick, with extraordinary

powers for settling all difficulties in the New England colonies, as well as to take possession of the Dutch province and reduce its inhabitants to obedience.

A rumor of the coming of this fleet, and its purpose, reached New Amsterdam in July. Captain Willett was the first to hear it, and he hastened to inform Stuyvesant, who proposed at once the most energetic measures for defence. The fortifications were to be repaired and enlarged; money was to be raised, ammunition to be brought from New Amstel, provisions to be stored, and the city put in a condition to withstand a siege. But before those preparations could be made, dispatches came from the Company's directors in Holland. It was, they said, to reduce the New England colonies to obedience and uniformity in state and church, that the fleet was sent; New Netherland had nothing to fear. Willett, who had done so much to arouse alarm, now did all he could to quell it. Stuyvesant, with restored tranquillity, left the city for Fort Orange, on some official business.

Purpose of commissioners sent by the duke.

The Directors of the Company were so far right, that the commissioners had almost plenary powers bestowed upon them in regard to all the affairs of the New England colonies. The English government had no doubt taken care that this should be well known in Amsterdam. But Nicolls and his associates were also enjoined to reduce New Netherland; and though this was not known in Amsterdam, the commissioners, on their arrival in Boston, were anxious to have it understood that this part of their mission was of primary importance. The conquest of New Netherland would be the easier, if the Dutch were kept carefully ignorant of such a purpose. When New England was gratified by that conquest, it would be time to develop the ulterior purposes in regard to those colonies. This astute policy was entirely successful so far as New Netherland was concerned. She was not in the least prepared to meet the impending calamity. The dispatches from Amsterdam allayed all fears and put aside all precautionary measures.

Signature of Nicolls.

On the arrival of the commissioners in Boston, late in July, they made known their designs against New Netherland to the governments of Massachusetts and Connecticut, and asked for their coöperation. Connecticut was ready to render at once every aid in her power; but the Governor of Massachusetts, who probably knew that the commissioners had a private letter of royal instructions as well as the public letter which they presented, was less disposed to lend

assistance.[1] Her people had never, like those of the other New England colonies, been eager for the conquest of the Dutch province, and if the Governor knew the character of the private instructions to the commissioners he knew that Massachusetts had more to dread than to hope from their visit.

An English fleet in the bay of New Amsterdam.

There was a delay of nearly a month after the arrival of the fleet at Boston before the expedition sailed for New Amsterdam. Some preparation for a resistance that would, at least, have delayed the catastrophe, might in that interval have been made had not the assurances of the Company's Directors removed all sense of danger. The flag-ship was sailing up the bay before Stuyvesant, who had been recalled by a hasty message, could reach the city from Fort Orange; he had been at home only three days before the whole squadron was at anchor in Nyack Bay, just below the Narrows on the Long Island side. The block-house on the opposite shore of Staten Island was at once seized by the English; the harbor was effectually blockaded; the people of the neighborhood were forbidden to carry supplies to New Amsterdam; and proclamation was widely made that none should be molested who submitted quietly and acknowledged allegiance to the king of England.

Stuyvesant's resistance to the summons for surrender.

Stuyvesant met the emergency with his usual energy. Every third man was ordered out to work upon the defences of the city; additional guns were mounted; a requisition was made upon Fort Orange for help, and all the soldiers were called in from the outlying posts. But the requisition on Fort Orange was disregarded: the farmers on Long Island refused to come in to the defence of the city, on the plea that their own homes were in danger. The Director was left with only about a hundred soldiers and the panic-stricken citizens of New Amsterdam to rely upon. From the outset it was evident that there could be no effectual resistance.

Nevertheless, on Friday, the 29th of August, a deputation was sent to Nicolls, demanding his purpose, and by what authority he made this invasion. The next day came a formal summons for the surrender of the town and all the forts belonging to it, with a proclamation promising protection of life and property to all who would submit "to his majesty's government, as his good subjects ought to do."

It was with great reluctance that Stuyvesant consented that this answer of the English commander should be made public. It would "discourage the people," he said; but the principal burghers and other magistrates, and the officers of the guard had already met, and had shown themselves to be utterly destitute of any manly courage.

[1] Palfrey's *History of New England*, vol. ii., p. 583.

The most spirited resolution to which they could bring themselves was, that they would make some pretence of defence, in the hope that the enemy would think it worth while to propose more favorable conditions. But protection to life and property were already offered by the proclamation; what could be expected, if this were known, from a populace ready to surrender even without that promise? The Director

Stuyvesant and the English Letter.

was compelled to yield to the public clamor and give up the dispatches, but he must not, he said, be held "answerable for the calamitous consequences."

This conclusion had been reached on Monday, when Governor Winthrop — who had joined the fleet with a reinforcement of Connecticut volunteers — came up the bay under a flag of truce and presented

another letter from Nicolls. Stuyvesant read it in the presence of the council and the burgomasters. The terms it offered were still more favorable. Trade with Holland in Dutch vessels would not be interfered with; emigrants from the mother-country could come and settle in New Netherland as hitherto; the colony would be under English jurisdiction, instead of that of the Company, but otherwise the condition of the Dutch colonists would hardly be interfered with. Those who favored surrender were all the more anxious that the people should see this second letter; Stuyvesant all the more dreaded the effect it would have upon them. The debate was hot and furious, till Stuyvesant in a rage ended it by tearing the letter in pieces and scattering the fragments upon the floor, — "dilacerated" it, exclaimed the indignant and baffled burgomasters.

Conflict between the Director and the people.

Hitherto there had been some show of labor upon the fortifications, but now they were abandoned, and an exasperated mob surged about the Stadt-Huys. They demanded to see the Governor; to offer resistance to such a force as threatened them would be, they said, "as idle as to gape before an oven." When Stuyvesant appeared he was greeted with shouts of "The letter! the letter!" Reproaches and curses were showered upon him and the Company. Defeated and helpless he returned to the council chamber; the fragments of the "dilacerated" document were gathered up and put together, and a copy delivered to the burgomasters to do with it what they would.

The question of surrender was, nevertheless, still in the hands of the Director. He sent to Nicolls a long answer, defiant, didactic, and argumentative. He defended the rights of the Dutch to the country by discovery, settlement, and possession; he protested against this infringement of the treaty between England and the States-General; he urged the agreement between himself and Scott which was to stand good for a twelvemonth: he feared no threats, and he trusted in God, who could as well preserve with a small force as with a great army.

Nicolls, nevertheless, though he may have been quite as pious as the Director, had great reliance on superiority of force. A company of regular cavalry and the Connecticut militia were already encamped on Long Island just below Breukelen; these he ordered should be reinforced with all the troops of two of the ships, in readiness for an attack by land and in the rear, while the two other frigates were to sail up in front and bring their broadsides to bear upon the town.

Preparations for the assault of the city.

Standing on the walls of the fort, by the side of a gun, the gunner ready with his lighted match, Stuyvesant watched the ships as they

came up the harbor, and then swung to their anchors in the channel between Nutten (Governor's) Island and the fort. Had he ordered the gunner to fire, the ships would at once have bombarded the city. He gave no such order. Perhaps his own prudence restrained him, for though a violent man, his good judgment — as we have sometimes seen — often controlled his anger; perhaps he was restrained by the Dominies Megapolensis, father and son, who begged him not to be the first to shed human blood in such a contest. At any rate he gave no order, and no shot was fired. The city was quietly put under the guns of the two ships, and Stuyvesant left the fort with a hundred of the garrison to be prepared to resist a landing. The Directors of the West India Company afterward reproached him that he permitted himself to be influenced by the two clergymen and "other chicken-hearted persons," and allowed himself "to be led in from the bulwarks between two preachers" while the hostile frigates passed the fort and the mouths of twenty pieces of cannon. But he did, no doubt, the best he could; he alone could not serve the twenty guns; and not another man, save he, in fort or city, seems to have thought of resistance.

Again he wrote to Nicolls, and again declared he should stand an assault, but sending at the same time a deputation of magistrates to come, if possible, to some agreement with the English commander. Nicolls would listen to no proposal but that of surrender; he should come, he said, the next day with ships and soldiers, and he would be a bold man who came on board unless the white flag was hung out from the fort.

When this answer was known the utmost panic spread through the town. The Director was beset with weeping women and children; in the City Hall a tumultuous assembly met, and a remonstrance was adopted, signed by all the principal citizens — among them Stuyvesant's son — begging that the terms offered by the English might be at once accepted. The fort, they said, could not stand a three days' siege; the offer of the enemy was generous; their conduct had been forbearing; unless now there should be an immediate surrender they could foresee nothing but "misery, sorrow, conflagration, the dishonor of women, murder of children in their cradles, the absolute ruin and destruction of about fifteen hundred innocent souls." Still Stuyvesant declared "he had rather be carried a corpse to his grave" than yield.

Stuyvesant beset by popular tumult.

The situation was, in truth, desperate. The town on the north was defended only by an embankment three feet high, surmounted by a fence of rotten palisades; this was overlooked by the hills outside within gunshot range commanding all the houses; and on both sides

the town was open to the rivers. The fort itself a council of war declared was untenable; there was not powder enough to last a day; there was no store of provisions for a lengthened siege. Moreover and worse than all, the garrison was mutinous. "Now we hope," they cried, "to pepper those devilish traders who have so long salted us; we know where booty is to be found, and where the young women live who wear gold chains!"

Nicolls came as he said he would, yielding nothing of his conditions, except that he promised the fort and city should be restored "in case the difference of the limits of this province be agreed upon betwixt his majesty of England and the high and mighty States-General," — a promise most safe to make. The terms of surrender, which were merciful to the Dutch — the protection of life and property, a guaranty of religious liberty, freedom of trade, of emigration, of the public debt, of the laws of inheritance and contracts, and of a representative government — were agreed upon on Saturday by a board of commissioners. On Monday the articles were ratified by the Director-general.

The surrender of New Amsterdam.

And on Monday morning, the 8th of September, 1664, there marched out of Fort Amsterdam on the Beaver Street side, at the head of the poltroons who knew where the young women lived who wore gold chains, the stern old wooden-legged soldier who would rather have been carried out a corpse to his grave. As they went on board ship in the East River for Holland, six columns of English soldiers filed through the streets of the city; English soldiers mounted guard at the Stadt Huys and at the city gates, while over the fort floated the English flag which a corporal's guard had hoisted as Stuyvesant passed out from beneath the shadow of the walls he would have so gladly defended. The obedient burgomasters proclaimed Nicolls as Governor; Fort Amsterdam was named Fort James; New Amsterdam was changed to New York; twelve days later Fort Orange surrendered without resistance to Sir George Cartwright, and the name of Albany, the duke's second title, was given to it.

Signature of Sir George Cartwright.

New Amstel was still to be reduced, and in the course of the month Sir Robert Carr sailed with three ships and a body of troops for the Delaware. This display of force only was necessary. On Sunday, the first day of October, Fort Casimir surrendered, and though there was no resistance and almost no parley, there was less consideration shown to the Dutch than there had been in New Am-

New Amstel taken.

THE SURRENDER OF NEW AMSTERDAM.

sterdam. Arms and amunition, live stock, stores, provisions, and their crops were taken from the people. Some were permitted to return to Holland; others were seized as prisoners of war and sold into bondage in Virginia. D'Hinoyossa, the Governor, was sent back to Holland, but his estate — consisting in part, if not wholly, of one hundred and fifty acres of meadow-land on the Delaware near the fort, and of an island called Swarton Natton of about three hundred acres at the mouth of Christina Creek — was confiscated to the use of Carr. Beeckman and others went back to New York, where he is afterward heard of as an alderman of the city. Many, both Dutch and Swedes, remained in the colony, and the Swedes, especially in and about Newcastle and Wilmington, long preserved their national characteristics in language, habits, and religion, though faithful in their allegiance to the English, as they had been peaceful citizens before when finally brought under the rule of the Dutch.

CHAPTER XII.

THE CAROLINAS.

THE CAROLINA PATENTS OF 1663 AND 1665. — THE PATENTEES. — EARLIER GRANTS AND PROJECTED SETTLEMENTS. — FIRST SETTLERS ON ALBEMARLE SOUND. — NEW ENGLAND MEN AT THE MOUTH OF CAPE FEAR RIVER. — THE COLONY UNDER YEAMANS. — ORGANIZATION OF THE ALBEMARLE COLONY. — LOCKE'S "FUNDAMENTAL CONSTITUTIONS." — INDEPENDENT LEGISLATION AT ALBEMARLE. — GOVERNORS AND PROGRESS OF THE CAPE FEAR SETTLEMENT. — JOSEPH WEST. — DISSENSIONS IN THE NORTH UNDER CARTERET AND MILLER. — THE PASQUOTANK INSURRECTION. — GOVERNOR SOTHEL.

BY the capture of New Netherland, that "New English Nation" which Raleigh had hoped to see, stretched for the first time in an unbroken line along the Atlantic coast, from James River, in Virginia, to Nova Scotia. And nearly half a century had passed away, after Raleigh was led to the scaffold, before a permanent colony was planted in the more southern region, where his first attempts had so unhappily failed.

First grant of Carolina. 1663.

Only the year before the King bestowed upon the Duke of York that munificent gift of a province which not only was not his to give, but did not even belong to England, either by right of possession or by right of discovery, the same generous monarch granted to some other gentlemen about the court a patent of a wide tract of country south of Virginia. The grant extended from about the thirtieth to the thirty-sixth parallel of latitude, — or from the St. John's River, in Florida, to nearly the present southern boundary of Virginia, — and from the Atlantic to that vague South Sea, still thought to be within reach of a moderate journey. One of its early governors wrote of this region that "it was indeed the very Center of the habitable Part of the *Northern* Hemisphere . . . . lying parallel with the Land of *Canaan* . . . . not being pestered with the violent Heats of the more Southern colonies, or the extream and violent Colds of the more Northern Settlements."[1] And another of its earliest historians says that from its latitude and situation Carolina must needs be "a delicious country, being placed in that girdle

[1] *Description of that Fertile and Pleasant Province of Carolina*, etc., etc. By John Archdale. [London, 1707.] In Carroll's *S. C. Hist. Coll.*, vol. ii.

of the world which affords wine, oil, fruit, grain, and silk, with other rich commodities, besides a sweet air, moderate climate, and fertile soil . . . . blessings that spin out the thread of life to its utmost extent, and crown our days with the sweets of health and plenty." [1] There is something of that love of hyperbole which belongs to the writers of that period in these descriptions, — something of an evident desire to attract emigration by means not unknown in later times. Much may be pardoned to these influences, even as we pardon the want of strict scientific accuracy in the author of the history we quote from, who, in the list of "Insects" of Carolina, gives the first place to alligators and rattlesnakes.

The first charter was dated (old style) the 24th of March, 1663; two years later this was amended by a second, — June 30, 1665, — which extended the boundaries a degree southward, and a half degree further north.

The Second Charter. 1665.

Portrait of Shaftesbury.

The patentees on whom the king thus bestowed a territory including all of the present States of North and South Carolina and Georgia, with its indefinite Western boundary of the South Sea, were Clarendon, then Lord Chancellor; Monk, the Duke of Albemarle, the leader in the Restoration; the Earl of Craven; Lord Berkeley; Lord Ashley (later the Earl of Shaftesbury) Sir George Carteret; Sir John Colleton; and Sir William Berkeley, of Virginia, Lord Berkeley's younger brother. Shaftesbury was the leader in this enterprise, and he was chiefly responsible for all that the proprietors did, or left undone. Home affairs occupied his associates; but they never entirely diverted him from the affairs of the colony. Almost every document connected with it shows traces of his influence, and he hoped to find in it an opportunity for carrying out those political ideas which were otherwise impracticable in his time.

The patentees.

[1] *The History of Carolina, containing the Exact Description and Natural History of that Country*, etc., etc. By John Lawson, Gent., Surveyor General of North Carolina. [London, 1714.]

Earlier grants and projected settlements.

The territory thus defined as Carolina had not been altogether neglected while colonies were planted in other places. As early as 1630, the attorney-general of England under Charles I., Sir Robert Heath, had secured a grant of almost the same region, under the name of the Province of Carolana, on condition that he should "in a reasonable time" colonize it,[1] "and Christianize the native Indians." But neither he, nor Lord Maltravers (afterwards the Earl of Arundel), to whom Heath transferred his title, succeeded in making any permanent settlements. This claim, and another by the heirs of Sir Richard Granfield, were revived when the grant of 1663 was made to Clarendon and his associates, but the patents were recalled, on the ground that their terms had never been fulfilled.[2]

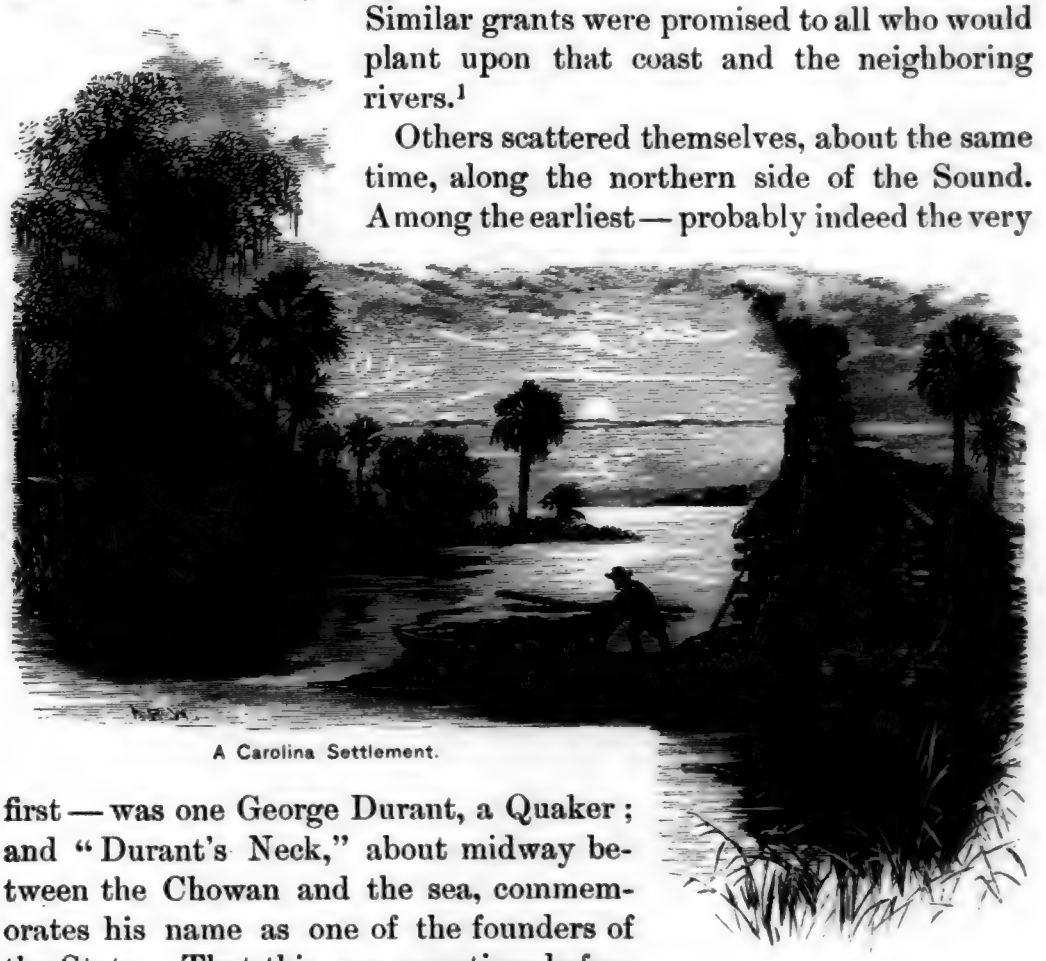
Companies of adventurers had, at different times, scattered themselves along the coast and on the banks of rivers not far distant from the parent colony of Virginia. Some of these were in pursuit of Indian trade; others were restless spirits to whom even the lax discipline of Jamestown and its neighborhood was irksome; and some, perhaps, were of those whose religious beliefs exposed them to annoyance, if not persecution, in a region where the Established Church was formally maintained. As early as 1609 there were outlying plantations about the Nansemond River, and doubtless many unrecorded expeditions, if not settlements, were made in the territory to the south of this district, in the twenty years following, before the grant was made to Heath. In the winter of 1621–2 John Pory, sometime Secretary of Virginia, a great traveller, and the friend of Hakluyt,[3] explored as far as the Chowan, where he found "a very fruitful and pleasant country, yielding two harvests in a year, and much silk grass."[4]

In 1643, the Virginia Assembly, without regard to Heath's patent, made trading grants to a company which purposed to traffic along the Roanoke; though perhaps their design included only the upper part of the stream, which was outside the patent, for they described it as the river lying southwest of the Appomattox.[5] Later attempts and grants of the same kind are also obscurely mentioned; but there is no record of their results, and it seems probable that nothing more

[1] See vol. i., p. 487, note.

[2] Letter of the Lords Proprietors to Sir William Berkeley, in Chalmers' *Annals*.

[3] Pory visited Plymouth in 1622, and Bradford says of him, "Himselfe after his returne (to England) did this poore plantation much credite amongst those of no mean ranck." He was a scholar, and a man of a good deal of influence among the early adventurers, but became at last a penniless and rather disreputable vagabond. See a sketch of him in Neill's *History of The Virginia Company*.



[4] Smith's *History of Virginia*.

[5] Hening's *Virginia Statutes*, i., 552.

than a fair knowledge of the upper part of North Carolina was gained through all of them until 1653. In July of that year, Roger Green, a clergyman, and a party from the Nansemond region, penetrated to Albemarle Sound, and a grant of land was made by Virginia to Green himself of a thousand acres. Similar grants were promised to all who would plant upon that coast and the neighboring rivers.[1]

Settlements of Green and Durant.

Others scattered themselves, about the same time, along the northern side of the Sound. Among the earliest — probably indeed the very first — was one George Durant, a Quaker; and "Durant's Neck," about midway between the Chowan and the sea, commemorates his name as one of the founders of the State. That this was sometime before 1662 is shown by the records of the Court of Chancery of North Carolina.

A Carolina Settlement.

A suit was tried in 1697 between the heirs of George Durant and the heir of one Edward Catchmaid, for possession of the lands first occupied by Durant. Catchmaid, who was entrusted by Durant to procure for him a grant of these lands from Governor Berkeley of Virginia, treacherously took out the patent in his own name. The deed of restitution which he was compelled to make, and which was produced in evidence on the trial, bore the date of March, 1662 (new style, 1663). Catchmaid must therefore have been in the country for some time previous to that date; and the record further shows that when he came it was by Durant's

Probable date of the Chowan settlement.

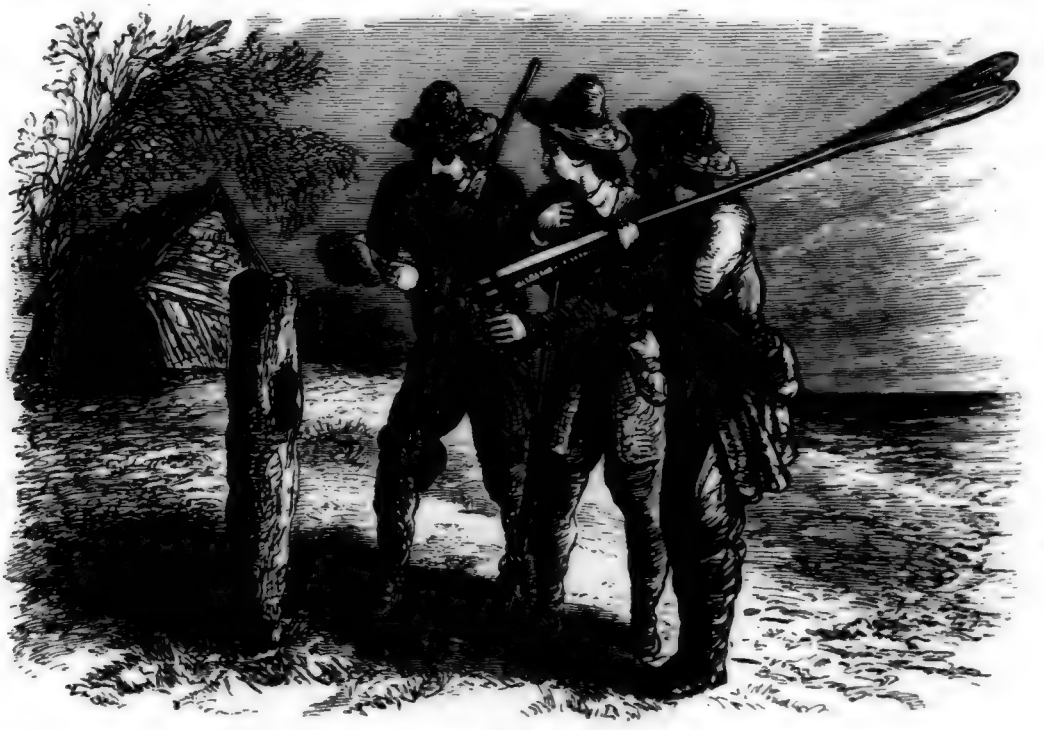
[1] Hening's *Virginia Statutes*, i., 380.

invitation, who was then in the occupation of lands, having "come in with the first seaters," and "did for the space of two years bestow much labor and cost in finding out the said country."[1] By "first seaters" were evidently meant the first in the province of Carolina,—not merely the first in that particular neighborhood; and it is to them, probably, that Lawson refers when he says: "A second settlement [second, that is, after Raleigh's time] of this country was made about fifty years ago, in that part we now call Albemarl County, and chiefly in Chuwon precinct, by several substantial planters from Virginia and other plantations." Lawson's visit was in 1700.

Explorations and settlement by New Englanders.

There were probably few bays or rivers along the coast, from the Bay of Fundy to Florida, unexplored by the New Englanders, where there was any promise of profitable trade with the Indians. The colonist followed the trader wherever unclaimed lands were open to occupation. These energetic pioneers explored the sounds and rivers south of Virginia in pursuit of Indian traffic, contrasted the salubrity of the climate and the fertility of the soil with that region of rocks where they had made their homes, and where winter reigns for more than half the year. In 1660 or 1661, a company of these men purchased of the natives and settled upon a tract of land at the mouth of Cape Fear River. Their first purpose was apparently the raising of stock, as the country seemed peculiarly fitted to grazing, and they brought a number of neat cattle and swine to be allowed to feed at large under the care of herdsmen. But they aimed at something more than this nomadic occupation, and a company was formed, in which a number of adventurers in London were enlisted, to found a permanent colony. Discouraged, however, either by the want of immediate success, or for want of time to carry out their plans, or for some less creditable reason, the settlement was soon abandoned.

Abandonment of the New England settlement.



On this point there is sufficient evidence. In 1663, some persons from Barbadoes were on the coast in search of a suitable place for the planting of a colony. They visited the spot where the New Englanders had been, and their report is that they found "a writing left in a post at the point of Cape Fear river by those New England men that left cattle with the Indians there, the contents whereof tended not only to the disparagement of the land about the said river, but also to the great discouragement of all such as should hereafter come into those parts to settle."[2] So, also, the London associates of this New England Company declared, at a meeting held in August, 1663, "that at the pres-

[1] Hawks's *History of North Carolina*, vol. ii., p. 132.

[2] Lawson's *History of Carolina*.

ent the undertaking of the plantation of the said Charles River lieth under some obloquy, that hath given a check to it; some that were sent from New England thither, in order to the carrying on the said settlement, being come back again without so much as sitting down upon it; and for the better justification of themselves in their return, have spread a reproach both upon the harbour and upon the soil of the river itself." [1]

Was there sufficient ground for this "reproach both upon the harbor and the soil?" The explorers from Barbadoes, at least, did not think so. "In answer to that scandalous writing," as they called it, found affixed to the post, they affirm, "that we have seen, facing both sides the river and branches of Cape Fair aforesaid, as good

Finding the Message of the New England Men.

land, and as well timbered, as any we have seen in any other part of the world, sufficient to accommodate thousands of our English nation, and lying commodiously by the said river's side." It was a quite sufficient answer, as the future showed.

It is not impossible, however, that justification was sought for to cover up the real reason for failure. Lawson, in commenting upon the report of the Barbadoes men, — which he preserved in his history, — gives as a reason why the New Englanders "did not only take off themselves, but also their stocks of cattle,"

Reasons for its failure.

[1] *Hutchinson Papers* in *Mass. Hist. Soc. Coll.*, vol. i., 3d series.

that there were "irregular practices of some of that colony against the Indians, by sending away some of their children (as I have been told) under pretence of instructing them in learning and the principles of the Christian religion, which so disgusted the Indians, that though they had then no guns, yet they never gave over till they had entirely rid themselves of the English by their bows and arrows." Perhaps this was the "obloquy" to which the London associates referred.

The New England Company, nevertheless, asserted their right to the lands in question by virtue of their purchase from the Indians. Their friends in London, at the meeting in August, 1663, just referred to, presented their views upon this claim for the consideration of the new patentees. The New England colonies, they said, have ever had "full liberty to choose their own govenours among themselves; to make and confirm laws with themselves; with immunity also wholly from all taxes, charges, and impositions whatsoever, more than what is laid upon themselves by themselves." But unless these privileges were "preserved entire to them," it was "feared that all thoughts of further proceeding in the said river will be wholly laid aside by them."[1]

Action of the Carolina proprietors.

A month later, — September, 1663, — the Proprietors wrote to Governor Berkeley, informing him that they had received their charter from the King. They empowered him to appoint a governor, or governors, for the people who, they understood, were already settled on both banks of the Chowan. In response to "a paper from persons that desired to settle near Cape Fear," — by which they meant the New England Company, — the only proposals they have to make with special reference to that company relate to the allotment of land, declaring it to be "our resolution and desire that you persuade or compel those persons to be satisfied with such proportions as we allot to others."[2]

Character of their projected government.

The character of the government had already been decided at the first meeting of the Proprietors in the preceding May. There was to be full liberty of conscience; the governor and assembly were to be chosen by popular election; and duties from customs were not to be enforced.[3] In the proposals sent with this letter to Berkeley in September, these conditions were repeated. This repetition was intended, doubtless, for the instruction and assurance of emigrants from New England, or anywhere else, who should choose to avail themselves of such an offer. But that they were not a concession to the demand of the New England claimants is manifest, as

[1] *Hutchinson Papers*, as above.

[2] Letter from the Lords Proprietors to Sir William Berkeley. Chalmers' *Annals*.

their remonstrance to the Proprietors could not at the time of this meeting in May have been received, — was not, probably, even written.[1]

Nothing more is heard of the New England Company. If any influence was exerted from that region upon the new province, it was through individual citizens, who chose to make it their home. Of these there were many in the early settlement of North Carolina, — more, however, probably upon the Chowan than the Cape Fear River. "Make everything easy to the people of New England," wrote the Proprietors to Sir John Yeamans, in 1665, "from which the greatest emigrations are expected, as the southern colonies are already drained." [2]

Landing of Yeamans.

Yeamans came with a colony of several hundred persons, and landed at Cape Fear River on the 29th of May, 1664.[3] The party

[1] The abortive attempt to settle a New England colony at the mouth of Cape Fear River, and its influence upon the character of the constitution of the new province, have been a source of much controversy and misunderstanding. The mistake in regard to it seems to have originated with Chalmers, who, assuming that the "proposals" sent to Berkeley in September were made "at the desire of the New England people," overlooked the fact that they were simply a repetition of the form of government decided upon by the proprietors at their first meeting in May. Their charter then was only a little more than a month old, and no protest in regard to it could at that time have reached England from America.

[2] Chalmers.

sent from Barbadoes to explore the coast of Carolina, — whose indignation was so aroused by the warning put up by the New England herdsmen on the Cape Fear River, — had bought of the Indians a tract of thirty-two miles square, and the proprietors were asked to confirm the purchase by a grant. Though this was refused, the terms granted to the colonists were satisfactory. Their settlement, which was "up the river, about twenty or thirty miles"[1] they called Charles-town. The province or county of which Yeamans was appointed Governor, was named Clarendon, and extended from Cape Fear to the St. John's, in Florida.

The colony under Yeamans.

Meanwhile Sir William Berkeley, in accordance with the instructions given by the Proprietors in their letter of September, 1663, established a government on the Chowan. He appointed a governor — William Drummond — and a council of six, who, with an assembly chosen by the people, were to enact laws, subject to the approval of the proprietors; possessions of lands were confirmed, and new grants were made, with an allowance of three years for the payment of quit-rents. In 1666, however, the Assembly protested against the payment of these quit-rents, and prayed that the tenure of lands should be the same as that established in Virginia. The petition was granted with regard to those who then held possession, but the rule was enforced upon all subsequent entries.[2] An Assembly was probably convened as early as 1663,[3] though Albemarle County was not included within the boundaries of Carolina till after the issue of the second charter, in 1665.

Organization of the Chowan Colony.

Portrait of Locke.

In the elaboration of a Constitution for the new province Lord Shaftesbury called to his aid the great philosopher and statesman, John Locke. It was not till 1669 that the first of these "Fundamental Con-

[1] *A Brief Description*, etc. It was, Hawks says, "in Brunswick county, at or near the junction of Old Town Creek with the Cape Fear."

[2] Chalmers' *Annals*.

[3] Hawks.

stitutions" was finished. By it the eight Lords Proprietors were constituted supreme rulers, the eldest to be Palatine of the province, and upon his death the eldest of the survivors to succeed him. The seven other offices, of admiral, chamberlain, chancellor, constable, chief justice, high steward, and treasurer, were to be divided among the others, the eldest always to have choice of a vacant place. To the proprietor was given the privilege, until the year 1701, to relinquish or dispose of his proprietorship to any other person. All his rights were hereditary in the male line; in default of direct male heirs, male descendants through the female line succeeded, and after them "heirs general;" in default of any heirs, the surviving proprietors filled the place by election from the next of the orders of hereditary nobility. Of these orders there were two — Landgraves and Cassiques, each Landgrave possessing four baronies, and each Cassique two. The domains of the Proprietors, on the other hand, were called seigniories; and eight seigniories and eight baronies, with twenty-four "colonies" which could be owned by "the people," made up a county. Each seigniory, barony, and colony contained twelve thousand acres; each county, therefore, consisted of 480,000 acres, of which twenty-four parts (or three fifths) were to be owned by the people, and sixteen parts (or two fifths) by the hereditary nobility — "that so in setting out and planting the lands," say the constitutions, "the balance of the government may be preserved." There would thus be, of course, just as many Landgraves as counties, and only twice as many Cassiques; but every member of both these classes of nobles was to be, "by right of his dignity," a member of the parliament, whereas every "colony" was not to have a member — only every "precinct" which was still another division formed for convenience of six colonies. There were but four popular members to a county, therefore; and the further restriction was made, that "no man should be chosen a member who had less than five hundred acres of freehold within the precinct;" while only those who had fifty or more acres of freehold could take part in electing him. The parliament thus chosen was to sit "all together in one room, and have every member one vote."

John Locke's "Fundamental Constitutions."

Officers and orders of nobility.

Divisions of the country.

The Parliament.

The privileges thus given to the hereditary nobility were further hedged about with provisions absolutely prohibiting the entrance of others into the titled class. The highest dignity attainable under them was the lordship of a manor, which must consist of not less than three thousand, or more than twelve thousand acres; and even such a freehold could only constitute a manor "by the grant of the Palatine's court." Under the nobility

Lords of manors and leet-men.

and lords of manors were "leet-men," and these were "under the jurisdiction of the respective lords of the said seigniory, barony or manor, without appeal from him." "All the children of leet-men shall be leet-men, and so to all generations."

The Courts.

There were to be eight supreme courts, — the highest consisting of the Palatine and the other proprietors, the others each of a proprietor, six councillors, and a college of twelve assistants chosen by the Palatine's court, and by Parliament from the nobility. Nobles could only be tried by the chief justice's court. The Palatine's court had a veto power over all parliamentary measures; and each of the other courts had its special controlling functions, — the chancellor's having power over land grants, treaties, etc.; the chief justice's over all civil and criminal appeals; the constable's over military matters; the admiral's over matters of marine; the treasurer's over finance; the high-steward's over public works, etc.; the chamberlain's over "all ceremonies, precedency, heraldry, reception of public messengers, pedigrees, the registry of all births, burials, and marriages," and also over the regulation of "all fashions, habits, badges, games, and sports!" The happy province was to be governed even down to the amusements of its children, and the fashion of its women's gowns. Finally, the proprietors, and the forty-two councillors of the other courts, were to constitute a "Grand Council," or final court of appeal, in case of any dissensions among the rest.[1]

Other provisions of the Constitutions

Of the hundred lesser offices, or of the detailed regulation of civil, military, and judicial affairs, it is not necessary to speak; yet some minor provisions still remain to be cited, without which no sketch of the Constitutions could be complete. Lands, for instance, could not be subdivided even at the death of the Proprietor, but must descend entire. Proprietors need not live in Carolina to exercise their rights, but might, in carefully prescribed ways, appoint their deputies, who could not, however, confirm laws, or appoint Landgraves or Cassiques. A singular regulation prescribed that "to avoid multiplicity of laws," all statutes should, "at the end of an hundred years after their enacting," become null and void, and to avoid "multiplicity of comments," the publication of any commentary on the "Fundamental Constitutions" was prohibited. In trials by jury a majority was to decide. It was forbidden to take pay for pleading in courts of law. "Absolute power and authority over his negro slaves, of what opinion or religion whatsoever," was given to every freeman.

Finally there were some remarkable provisions as to religion and

[1] Grahame, *History of the United States* (ii., 87), says the functions of this body were like those of the Scotch "Lords of the Articles."

the liberty of conscience. They were singularly contradictory; for, against the wishes of Locke,[1] some of the chief proprietors inserted, in the second draft of the Constitutions, an article making the Church of England alone entitled to maintenance, and pronouncing it the "only true and orthodox" religion. Yet fortunately his own provision was also left as he had written it; and had the form of his scheme of government been left unchanged, this would undoubtedly have been the only reference to religious matters to be found in it. "In the terms of communion of every church or profession," he wrote, "these following shall be three; without which no agreement or assembly of men, under pretence of religion, shall be accounted a church or profession within these rules: —

Religion.

"1. That there is a GOD.

"2. That GOD is publicly to be worshipped.

"3. That it is lawful and the duty of every man, being thereunto called by those that govern, to bear witness to truth; and that every church or profession shall, in their terms of communion, set down the external way whereby they witness a truth as in the presence of GOD, whether it be by laying hands on or kissing the Bible, as in the Church of England, or by holding up the hand, or any other sensible way. . . . . No person above seventeen years of age shall have any benefit or protection of the law," etc., "who is not a member of some church or profession."

Even earlier in the Constitutions it had been prescribed that "no man shall be permitted to be a freeman of Carolina, or to have any estate or habitation within it, that doth not acknowledge a GOD, and that GOD is publicly and solemnly to be worshipped." Locke returns to this with frequent insistance; yet this one point granted, he concedes, in a long subsequent article, that all other distinctions form no justification for the interference of the state; and prescribes further that no man shall interfere with or "use any reproachful, reviling or abusive language against the religion of any church or profession — that being the certain way of disturbing the peace, and of hindering the conversion of any to the truth."

It is a significant commentary on this complicated piece of political machinery, that while it was assuming definite shape, the people of Albemarle had taken the matter of law-making for the new country into their own hands. All unconscious that they were to be only "leet-men," or at best "lords of manors," amid a magnificent prospective population of seigniors, landgraves, and cassiques; and ignorant of the vast system of councils, courts-

Legislation of the Albemarle people.

[1] Locke's *Works*, folio ed., vol. iii., p. 676, note, as cited by Grahame, ii., 89, and as quoted in note to Carroll, ii., 384.

leet and courts-baron which was to regulate their lives, amusements, and dress down to the smallest detail, these practical pioneers had quietly drawn up such simple regulations as their situation seemed to need.

Since Berkeley's visit to the Albemarle region it had received several additions, and now there were settlements all the way along the north shore of the Sound. The original Virginian plantations had been supplemented by several made by New-Englanders, and as far east as the Pasquotank River a colony of Bermuda people had taken up lands. Drummond had been succeeded in October, 1667, in the governorship by Samuel Stephens, and the proprietors in England, pending the completion of their great scheme, had authorized a temporary government of a council of twelve, half of them to be chosen by an assembly of the settlers.

Character of the Albemarle laws

It was such an assembly which now sent to London the simple code which it believed to have become necessary for the increasing population — or perhaps it should rather be said, needful to secure its further increase. Exemption from taxation for a year was secured to every new settler; but, to guard against a monopoly of lands by absentees, it was declared necessary to live in the country two years before such land-grant should form a complete title. The traffic with the neighboring Indians was reserved to the people of the district; stringent means were to be used against the participation of traders from outside. In addition to these inducements to emigration, the proposed laws gave to the country the very questionable advantage of forming a virtual asylum for runaway debtors; no debt contracted outside of Albemarle could be sued for within five years, nor could any colonist accept a power of attorney to demand such a debt from another. A tax of thirty pounds of tobacco on every lawsuit, while it provided for the expenses of the Governor and Council, was also intended to check the litigation so likely to arise in a new country where titles to land were a source of frequent dispute.

Laws concerning marriage.

Marriage was declared to be only a civil contract. Parties appearing before "the governor, or any member of the council, or a few of their neighbors, and declaring their mutual consent, were declared to be man and wife." It has been conjectured that such a law was deemed expedient in the scarcity of clergymen, in a widely scattered community. Perhaps it was also meant to encourage matrimony and the emigration of women. A contemporary pamphlet, written in the interest of the proprietors, holds out as an inducement to such an emigration, that, "if any Maid or single Woman have a desire to go over, they will think themselves in the Golden Age, when Men paid

a Dowry for their Wives; for if they be but Civil, and under 50 years of Age, some honest Man or other will purchase them for their Wives."[1] This sufficient constitution continued, with all its faults, to regulate Northern Carolina for more than forty years, till in 1715 it was deliberately reënacted by the people.

The Duke of Albemarle was the first Palatine under the Constitutions, and at his death the office passed to Lord Berkeley. But the "Fundamental Constitutions" never became the law of the land. From the time they were first adopted by the Proprietors, in 1669, till they were finally rejected by the Assembly of South Carolina, in 1698, they were four times amended, till their articles were reduced from one hundred and twenty to forty-one. Their onerous and impracticable provisions were so ill adapted to the condition of colonists in a new country, that hardly was respect enough paid to them even to attempt their serious enforcement.

Fate of the "Fundamental Constitutions."

Portrait of George Monk, Duke of Albemarle.

The Proprietors had made, meanwhile, their first direct attempt to plant in the province a colony of their own. Albemarle was an off-shoot of Virginia; Cape Fear of Barbadoes; the new settlement was to be supplied directly from England, and furnished with means by the lords themselves.

In July, 1669, Captain William Sayle, who had already made explorations of the coast in the proprietaries' service, was commissioned governor of that part of Carolina "lying south and west of Cape Carteret" or Cape Romain,[2] a region which had been especially excepted from the jurisdiction of Yeamans. In 1670 Sayle and Joseph West, a commercial agent of the proprietaries, set sail from England with two ships loaded with emigrants and stores.

William Sayle governor, 1669.

They sailed in January. But they touched first at some port in Ireland before they were fairly off on their long voyage for Carolina

[1] *A Brief Description of the Province of Carolina on the Coasts of Florida*, etc., London, 1666.

[2] Romain was its earliest name; then it became Carteret; now it is Romain again.

by way of Barbadoes. It was months before they reached Port Royal, to which they were ordered, no doubt because it was the best known point on that coast. Whether they did more than enter that beautiful bay is not certain, though some of the early writers think they attempted a settlement. It is more probable that they thought a port so accessible from the sea was less desirable for an infant colony than a place more difficult of approach. At any rate, they did not remain at Port Royal, but before the year was out, Sayle, who knew the coast, sailed up the present harbor of Charleston, and landed his people about three miles above the mouth of the Ashley River. The place they named Charles-town.

Death of Sayle. — Yeamans governor.

Sayle before long fell a victim to the climate, and Sir John Yeamans, who had been made a landgrave, succeeded him as governor by virtue of that rank, though West would have been preferred by the people. For several years the colony was in a languishing condition; nor did the Proprietaries conceal their discontent at the steady drain it kept up upon their treasury, while the possibility of its becoming self-sustaining seemed to grow no nearer. New emigrants were sent out, but, like the first settlers, they appear to have been of the class least likely to make successful pioneers. The climate discouraged Europeans from the only kinds of planting which could have proved profitable, and the hard labor of clearing and tilling was in great part done by negro slaves, a few of whom had been sent from Barbadoes, or brought thence by Yeamans and his companions to Cape Fear.[1] There was a small number of industrious and experienced men from the northern colonies,[2] and apparently there were a few English emigrants of more spirit and persistency than the rest; but the great majority was made up from the broken-down and vicious class which was drawn upon so largely by all the proprietary colonies.

Languishing condition of the colony.

The proprietors, not without grumbling, continued for some time to respond to the calls for supplies, for which no return was made in colonial products. But no provision could be made for the proper distribution of what was sent, and supplies were furnished to idle and industrious alike; the founders of the colony found themselves supporting a majority of useless paupers, where they had relied upon returns which the minority of hard-workers was not strong enough to secure. By the beginning of 1674 a heavy debt — some thousands of pounds — had accumulated on account of the plantation. Sir John Yeamans — who appears to have taken advantage of his position to direct what little export trade there was toward Barbadoes, where he could turn it to his own profit — was

[1] Hewit, in Carroll's *Hist. Coll.* [2] Chalmers.

removed, and, much to the general satisfaction, Joseph West was appointed governor in his place.

Yeamans, broken in health by the climate, but with a large fortune acquired during the years of his administration, retired again to Barbadoes, and the popular and prudent West soon changed the condition of affairs for the better. Emigrants were now willing to go to the province "at their own expense. Men of estate ventured where they were assured of fair dealing," says one of the older historians, and all accounts concur in representing the confidence in the new Governor as giving an immediate impetus to the settlement and progress of the place, while his management seems also to have checked for the time the complaints of the proprietaries. The colonists, it is true, did not pay the large indebtedness already contracted, nor even the Governor's salary, as they promised when his

West governor, 1674.

View of Charleston Harbor.

administration began. But this latter point was settled, in 1677, by the Proprietors' assignment to West of all their stock, unused supplies, and overdue debts in the province, thus giving him a new motive for the improvement of the colony. For themselves, they doubtless considered it a favorable state of things if even the drain on their treasury was stopped. The idea of large profits must have been given up by this time even by the most sanguine "seignior" among them, while the more fortunate landgraves and cassiques, some few of whom had been appointed, must have rejoiced that their barren honors had been so cheaply purchased.

Improvement in the Colony's affairs.

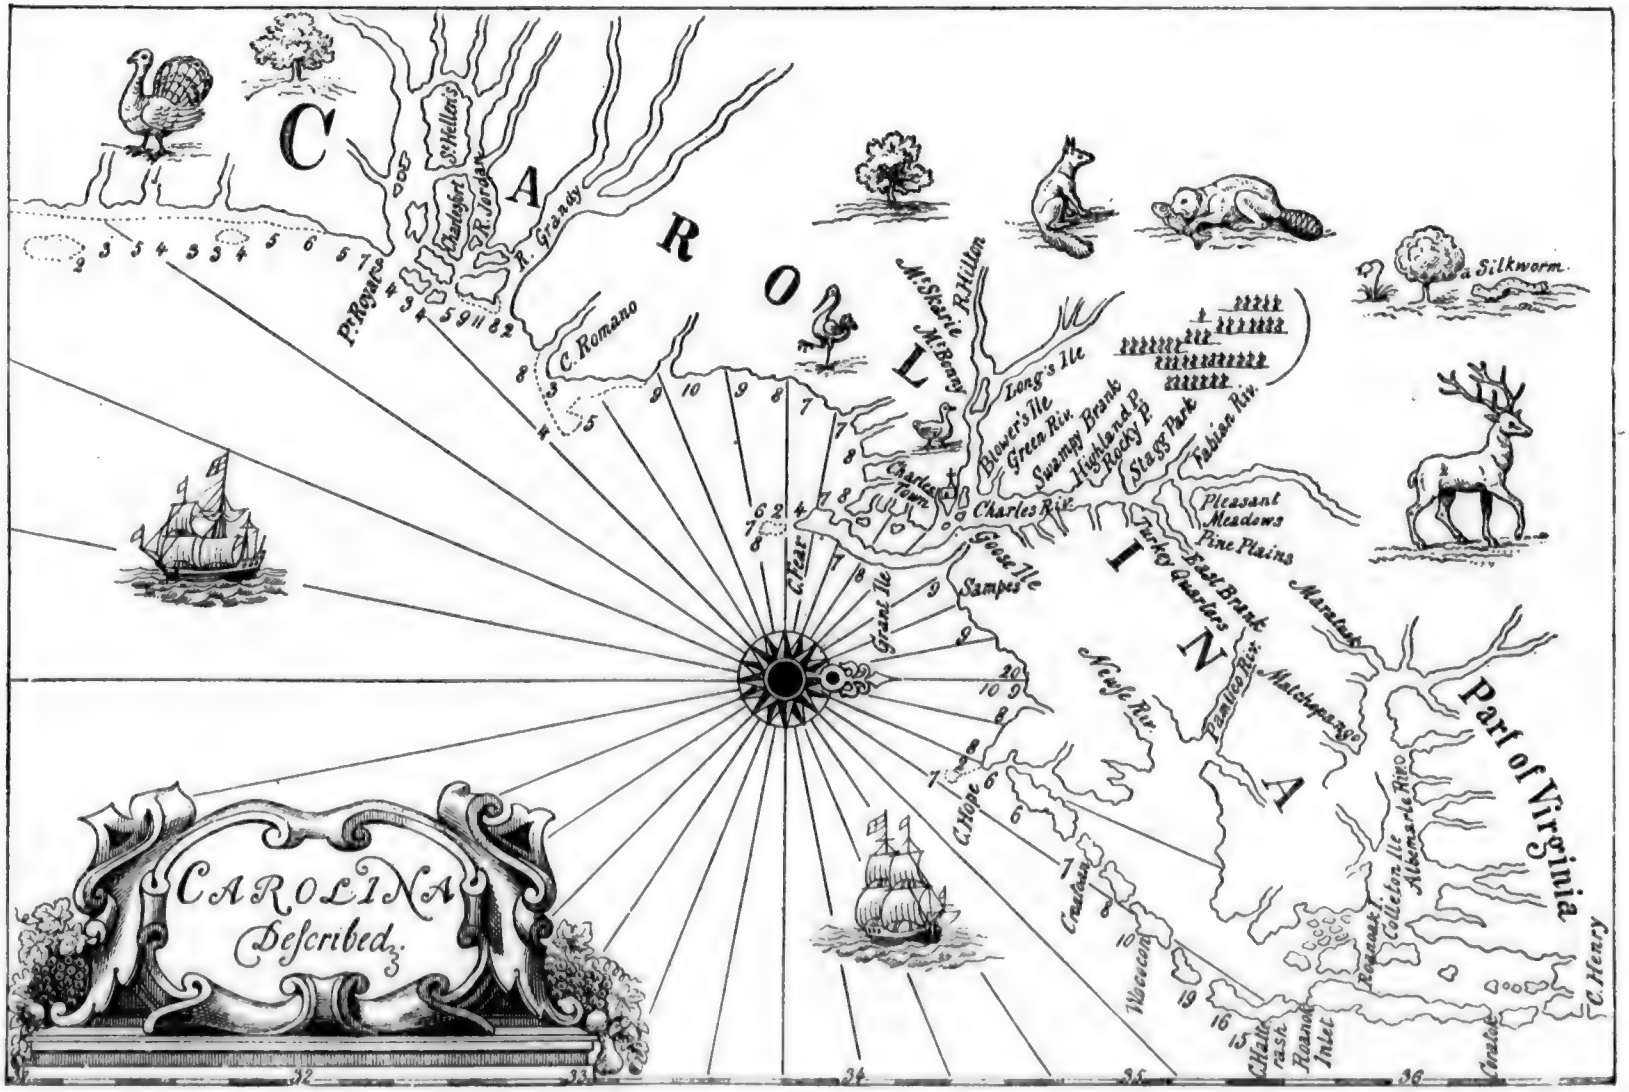
This prosperity, which was to last for several years, was hardly established, when the condition of affairs in their northern colony de-

manded the attention of the vexed Proprietors. The people of Albemarle had become thoroughly discontented. The code of temporary laws sent to them had been openly disregarded, and the Assembly seems to have gone on without paying attention to any other code than its own. All manner of disquieting rumors had been spread abroad concerning the intentions of the proprietors regarding this particular settlement, — how they intended to give it to Sir William Berkeley for his own, separating it from the rest of the province, or how they favored their own colony at the south at the expense of the north. In 1674, to make confusion worse, Stephens, the Governor, died; and Carteret, chosen in his place pending advices from England, proved indifferent to or dissatisfied with his duties, and sailed for home after an administration of little more than a year.

Discontent at Albemarle.

In 1675 the fear of the colonists as to the dismemberment of the province, and Berkeley's dreaded rulership over it, led to an address to the Proprietors. Their prompt denial of the rumor, and their acknowledgment that they had "neglected Albemarle," did not check the excitement. At the same time one Thomas Miller was the object of great suspicion, and was sent to Jamestown for trial, charged with sedition. He was acquitted by a Virginian jury; but this did not allay the popular discontent. That, probably, was increased by the fact that he was taken out of the colony for trial.

Address to the Proprietors.



The case of Thomas Miller.

In 1676 the Assembly decided to send an intelligent representative to England, to lay before the Proprietors the disorderly condition of the colony, to ask redress for various grievances, and to secure a governor who should understand their necessities, and satisfy their reasonable wants. Thomas Eastchurch, the speaker of the Assembly, was chosen for the duty; and about the time of his setting out, Miller also sailed for England, to demand redress for the injuries done him.

Eastchurch sent to England.

Eastchurch succeeded so well in his mission as to secure his own appointment to the governorship, with a set of instructions which he thought would quiet dissension and satisfy the people. But though Eastchurch was made Governor, Miller was no less successful in obtaining redress for his private grievances. The Proprietors acknowledged that he had been wronged in being taken to Virginia for trial, even if there was any ground for the trial itself. He who had been foremost in denouncing their rule in the colony, now became their servant. He was made collector of the customs, secretary, and Lord Shaftesbury's deputy in Carolina. Nor was this all; for, when the two newly-appointed officers sailed together

His success and appointment as Governor.

FAC-SIMILE FROM THE "DESCRIPTION OF CAROLINA."

for the colony, and landed first in the West Indies, Eastchurch fell in love with a Creole heiress in Nevis Island, and sent his companion to rule at Albemarle, with full powers as his deputy, "till the chain that bound him proved too weak to hold him, or strong enough to enable him to draw the beauty who had imposed it." Miller probably did not object to this arrangement, but proceeded promptly to the colony, where, on his arrival in July, 1677, the people received him, no doubt with deep disgust, but with outward signs of submission.

Miller Deputy-governor.

Albemarle had now a population of fourteen hundred "taxables," or persons between sixteen and sixty years of age, one third of them being women, negro slaves, and Indians. How these colonists had been ruled during Carteret's absence does not appear; probably chiefly by their own Assembly, with perhaps an executive named by the Council, whose name has not been recorded. One thing seems certain, however, — that the fourteen hundred colonists had proved themselves as difficult of tranquil government as many populations of ten times their numbers. Affairs had been left "in bad order and worse hands," said the Proprietors; and Miller found the place full of all the elements of turbulence that a combination of plantation and trading-post could furnish. A degree of anarchy must inevitably have resulted from the uncertainty caused by attempts to enforce first one and then another code of laws; but apart from this, the population was made up of the most diverse classes, among whom quiet would have been impossible. Puritan New Englanders, not feeling themselves at ease under ultra-royalist proprietors of a kind whom all their traditions led them to oppose; adventurers, who saw in any kind of strong government the prospect of taxes and restrictions on their profits; refugees from the political troubles in Virginia, finding safety in a province which refused to give them up, — all these mingled with the original colonists to make up a people peculiarly difficult to control. The principal trade was with New England, and the men who carried it on added to the disorder by a systematic evasion of the English customs-dues, which were perhaps unjust enough, yet which the proprietary governors were instructed to enforce.

Continued disorder.

It was on the question of this trade that the first open conflict arose between Miller and the colonists. As collector for the king, he assessed a duty of one penny on every pound of tobacco exported to other American colonies. By this tax he collected in the first six months thirty-three hogsheads of tobacco and more than five thousand dollars.[1] The indignation was great, particularly among the New

[1] Martin. See also Williamson and Hawks.

England trading-captains. Every device of smuggling and concealment was resorted to in order to evade the law.

In December, a northern trader named Gillam, commanding an armed vessel from New England, was arrested for violation of the law, and was bound in a thousand pounds to abide his trial. He threatened the people that he would bring them no more supplies at such risk. In the district of Pasquotank, where the arrest took place, the people rose at once, and the insurrection was almost immediately joined by the planters of other districts. Miller and several of the Proprietors' deputies were imprisoned by the insurgents led by one Culpepper, a man who had already been prominent in agitations on Ashley River. The funds of the revenue officers — some three thousand pounds — were seized, and a popular assembly was called, new courts established, and all matters of administration taken under the control of the successful rebels.

Insurrection against Miller in Pasquotank.

The people of Pasquotank published a proclamation or "remonstrance," addressed "to all the rest of the County of Albemarle," in justification of their conduct. Miller was accused of preventing a free election, which deprived them of a free parliament whereby their grievances could be made known to the Lords Proprietors. The chief of these grievances was that the tax on tobacco was enforced, and that trade was interfered with; and they relate with an almost ludicrous pathos the circumstances of Gillam's arrest — who had come "with three times the goods he brought last year," — which, of course, he meant to dispose of in a contraband trade, in tobacco — of Miller's boarding his vessel "with a brace of pistols," and presenting one of them at George Durant's breast, whom he seized as a traitor.

"Remonstrance" of the Pasquotank people.

The grievance in truth was serious enough. Their chief production was tobacco. The tax was a heavy burden upon colonists inevitably poor; and the enforcement of the Navigation Act was to shut them off from a trade with New England upon which they were dependent almost for the necessaries of life. The arrest of Gillam was the one thing needed to make a crisis. "Three times as many goods as the year before," but safely under hatches in Gillam's vessel, and not to be exchanged for the tobacco on which, nevertheless, the tax was inexorably levied — here was palpable oppression to be borne no longer. The insurrection was completely successful.

When Eastchurch arrived — having won his bride at last in the West Indies — he found that the delay had cost him his governorship. He appealed to Virginia for aid, but before he had time to put his plans into operation, he died.

Arrival of Eastchurch. His death.

The colonists, however, had no intention of setting the Proprietors

altogether at defiance. But it was nearly two years before they thought fit to offer any justification of their conduct in deposing one officer and refusing obedience to another. In 1679, Culpepper and Robert Holden were sent as commissioners to England to lay their grievances before the Proprietors. Miller and his companions in imprisonment succeeded in escaping and in securing passage on a homeward-bound vessel, and appeared in London not long afterward. The majority of the Proprietors seem to have been much puzzled by the contradictory accounts thus simultaneously brought before them. But Lord Shaftesbury, finding that the commissioners were willing to yield every thing to the proprietaries if only Miller should be permanently displaced and the insurgents pardoned; feeling also, perhaps, that the colonists really had grievances which should be redressed; but especially seeing, no doubt, that the successful rebel was much more of a man than the governor he had deposed,—used his influence in Culpepper's favor. No thought seems to have been entertained of returning Miller to the government. A commission as governor of Albemarle had been previously issued to Seth Sothell, who had lately become a proprietor by purchasing the share of Lord Clarendon.

Action of the Proprietors.

Arrest of Durant.

Sothell started for the colony probably late in 1678, or early the next year. But he was captured by the Turks on his outward voyage, and taken into Algiers. The Proprietors consequently decreed

that a temporary government should be continued under one John Harvey, to whom a commission for the time being seems to have been granted previously — perhaps because he was already in Carolina, and in a position to govern till a new officer's arrival.[1] But the expedient proved unsuccessful; his power was derided because it was known that it was to last but a little time. Indeed, he seems to have been virtually deposed in the summer of 1680, one John Jenkins succeeding him for a few months. In February, 1681, still another governor was commissioned pending Sothell's coming — Captain Henry Wilkinson, whose credentials call him "governor of that part of the province of Carolina lying five miles south of the river Pamlico, and thence to Virginia."

Sothell appointed governor.

Governors *ad interim*

In the mean time Culpepper, when he was about to reëmbark for the colony after having apparently gained all his ends, had been arrested, at the instigation, it has been suggested, of the proprietors opposed to Shaftesbury,[2] and brought to trial by the commissioners of customs, for unlawfully acting as collector in the colony, and for high-treason. He begged in vain to be tried in Carolina, where the act was committed; this was refused him on the ground that "by a Statute of Henry VIII., foreign treason may be either tried by special commission or in the King's Bench by a jury of the county, where that court sits."[3] He would undoubtedly have been convicted and sentenced by the King's Bench, had not Shaftesbury pleaded for him that there never had been a regular government in Albemarle, and that the rebellion had therefore been only a quarrel between factions of the colonists. Culpepper was acquitted. This trial occurred in Trinity Term, in the summer of 1680, that is, some months after Sothell's appointment, departure, and capture; and there is obviously no ground for the general assumption that Sothell was sent to the colony as a consequence of Culpepper's acquittal.

Arrest of Culpepper.

His acquittal.

In the province itself dissensions were far from ended; nor did the conciliatory measures which the Proprietaries now adopted do much good. Instructions were given to the Governor to "pardon" the insurgents; a measure which naturally seems to have been laughed at by a faction which was almost as strong as the one now nominally in power; and as naturally disregarded by the Governor himself, who knew that to keep his place at all he must rule with a strong hand.

[1] State Papers cited in *Coll. Hist. Soc. of S. C.*, vol. i., p. 102.

[3] Ventris's *Reports*, 349. Cited by Chalmers.

Severe measures of punishment, on the one hand, and of retaliation on the other, appear to have kept Albemarle in constant anarchy during a period too turbulent to have left us any clear records; and when Sothell, who had escaped from captivity, arrived in Carolina in 1683, he had every reason to find affairs in as bad a state as ever.

Seal of the Proprietors of Carolina.

CHAPTER XIII.

VIRGINIA UNDER BERKELEY.

CONDITION OF VIRGINIA IN 1670. — ABUSES AND POPULAR GRIEVANCES. — THE GRANT TO ARLINGTON AND CULPEPPER. — INDIAN HOSTILITIES AND THEIR RESULTS. — INEFFICIENCY OF BERKELEY. — INDIGNATION OF THE COLONISTS. — NATHANIEL BACON TAKES THE FIELD IN DEFIANCE OF THE GOVERNOR. — HIS INDIAN CAMPAIGN. — BERKELEY PROCLAIMS HIM A REBEL. — POPULAR UPRISING. — CONCESSIONS FORCED FROM THE GOVERNOR. — BACON'S ARREST, SUBMISSION, AND ESCAPE. — HE CAPTURES JAMESTOWN. — SECOND INDIAN CAMPAIGN. — RENEWED ATTEMPTS OF BERKELEY TO SUPPRESS THE POPULAR MOVEMENT. — BACON'S RETURN. — HE SEIZES THE GOVERNMENT. — FLIGHT OF BERKELEY. — THE CONVENTION. — AIMS OF THE BACON PARTY. — REVIVING FORTUNES OF THE DEPOSED GOVERNOR. — BACON AGAIN CAPTURES AND BURNS THE CAPITAL. — ILLNESS AND DEATH OF BACON. — CLOSE OF THE REBELLION. — PUNISHMENT OF THE REBELS. — ARRIVAL OF ENGLISH COMMISSIONERS. — RECALL AND DEATH OF BERKELEY.

IN the year 1670, the Commissioners of Foreign Plantations, in London, asked of Sir William Berkeley a report upon the condition of his colony. Apart from mere statistics, more may be inferred from his response than he saw fit to tell, — more, perhaps, than he really knew. But even the facts he gives are valuable.

Condition of Virginia in 1670. The people.

There were forty thousand people in Virginia at this period: of these, only two thousand were negro slaves; but there were six thousand white servants bound to service for a term of years. It is not a violent supposition that these were not contented subjects. The best of them had been soldiers of the Commonwealth, — men who had risked their lives for the sake of political and religious liberty, and were not likely now to submit quietly to personal servitude. Others were of an even more dangerous class, for the Assembly of that year had listened to complaints, from members of the Council and other gentlemen, of the dangers that threatened the colony by the introduction of felons. The annual importation of white servants was fifteen hundred; the Assembly hoped at least to mitigate the evils of such an emigration by prohibiting the landing in Virginia of convicts from the English jails. Upon these indented servants and the negro slaves the colony depended for its labor. That their lives were held cheaply is plain, for four fifths of

them died when put upon new plantations. It was cheaper to buy new servants than to keep old ones alive by sanitary measures.

Virginia owned but two small vessels of her own, though eighty ships came yearly from England to take away her tobacco and bring in exchange those commodities of luxury or necessity that her people could not do without. Nothing could be exported except to the king's dominions, and nothing, therefore, of much value, could be imported from anywhere but England. No improvement could come, the Governor thought, to the trade of Virginia till she was allowed to sell her tobacco, her staves, her timber, and her corn in the best market, and buy what she wanted in return where it could be bought cheapest. In 1671, she exported sixteen thousand hogsheads of tobacco, on which the export tax was two shillings a hogshead. The price in London ruled the price at which it was put on board the English vessels at the river-banks of the plantations, the planters taking goods in pay. The price of the tobacco was at the lowest, that of the goods at the highest, to which monopoly could bring them. The merchant made an enormous profit on both. More than one old writer says that the remuneration to the planter would hardly find him in clothes; but it was, no doubt, the four fifths of the servants who died that went without the clothes, and not the planters on their great estates, with their generous living and large hospitality. The colonial trade.

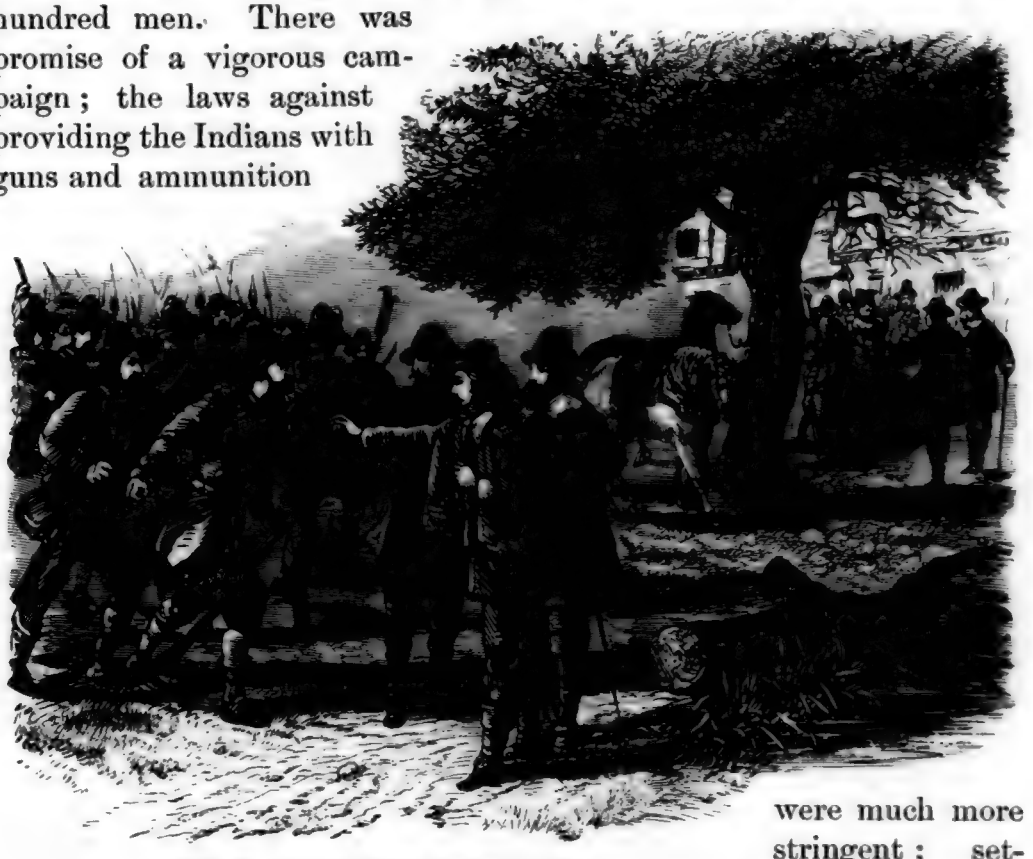
The militia of the province could muster eight thousand men. On the James were two forts; on the Rappahannock, the York, and the Potomac, one each. They were meant, however, less for protection than as ports where ships should load and unload, that the restrictions upon trade might be the easier enforced than when cargoes were discharged and received at the plantations. For a year only, however, was that regulation obeyed. The great fire in London in 1666 reduced the number of ships that came out that season; and the fear that the plague which followed it might be introduced into the colony and spread by the aggregation of people at these ports, scattered the ships again along the rivers wherever a market could be found. But the forts were kept up, and the taxation for that purpose was a grievous burden for which there was no return. The militia.

The religious condition of the colony did not altogether suit Berkeley; with him religion meant conformity to the Established Church, and the church a form of prescribed belief and worship with which the constable should have as much to do as the priest. He hated non-conformity and dreaded any appeal to or reliance upon the human reason. He believed devoutly in authority, and every Puritan that went back to New England, every Quaker Religious affairs.

that sought refuge in Carolina, was a good riddance to a ruler who recognized the perfection of human government under Charles I. and Charles II. There were forty-eight parishes in the colony, and in these, Berkeley said, "our ministers are well paid; by my consent, should be better, if they would pray oftener and preach less. But as of all other commodities, so of this, — the worst are sent us, and we have had few that we could boast of, since Cromwell's tyranny drove divers men hither." But some of these parishes were sixty or seventy miles in length, and better authority, perhaps, than the Governor's, asserted that many of them were for years without pastors. Nor were clergymen, when employed, held in much esteem, — in many cases were not deserving of it. Parishioners were often indifferent whether the parsons prayed or preached most, or whether they did neither. Not unfrequently a lay reader was employed at the lowest possible wages for which a substitute for a minister could be hired. This saved a clergyman's salary, and filled at the same time the Governor's requirement of religious teaching, — no preaching and more prayer-book.

Education.

But if the Governor was a little doubtful as to the religious state of the colony, he had no misgivings of the perfectly healthful condition of the merely secular mind of his people. To this consideration he turns with the keenest satisfaction. "But," he adds, "I thank God there are no free schools, nor printing, and I hope we shall not have these hundred years; for learning has brought disobedience into the world, and printing has divulged them and libels against the best governments. God keep us from both."



From 1660 to 1676 there was no election of representatives to the Assembly of Virginia. That body preserved its power from year to year by prorogation, and rendered any interference with it the more difficult by restricting the right of suffrage. Industry was paralyzed; the taxes were enormous; official tyranny was intolerable; monopoly absorbed all trade; the people had no voice in the government. In 1673 the whole territory, occupied already by nearly forty thousand Englishmen, was given by the king to two of his favorites, the Earl of Arlington and Lord Culpepper, — the former the father-in-law of the king's bastard son, the Duke of Grafton, by the profligate and beautiful Lady Castlemaine, afterward the Duchess of Cleveland. The grant was a new source of taxation to the oppressed colonists, who were compelled to pay heavily for the support of agents in London in vain efforts to procure the restoration of their homes to the rightful owners. The condition of the colony seemed well-nigh hopeless, and only some pretext for revolt was needed to arouse the people to resistance. In 1674 some

Virginia granted to Arlington and Culpepper.

disturbances, which promised to become a revolution, were with difficulty allayed by a proclamation from the Governor and the intercessions of some influential citizens of his party.

But the insurrection, which so many causes combined to make popular and inevitable, was only postponed for about a year. The Indians on the frontier — either the local tribes instigated by Senecas from the north, or the Senecas themselves — became so troublesome that the forts were put in a condition of defence, and Sir Henry Chicheley, the Lieutenant-governor, prepared to march, in the spring of 1675, against the enemy at the head of five hundred men. There was promise of a vigorous campaign; the laws against providing the Indians with guns and ammunition were much more stringent; settlers were warned to take their arms to church; days of fasting were ordered, and the whole colony seems to have been animated with the hope that something was at length to be done whose end was the common good. But when Chicheley and his little army were ready to move, an unaccountable and unexplained order to disband was received from Governor Berkeley.

Indian hostilities.

Gathering of the Virginia Planters in 1674.

Whether this was done in the interest of the Indian traders, — which was Berkeley's own interest, — or whether the Governor sincerely believed that the danger from the Indians was exaggerated, and would disappear if let alone, the effect upon the colonists was

unquestionably exasperating. If the Governor would not defend them, they determined to defend themselves.

Murder of Hen.

The occasion was not long in coming. One Sunday morning, in the summer of that year, some persons in Stafford County, on their way to church, found lying at his own door, wounded and dying, a man named Hen, and near him a friendly Indian, quite dead. Hen lived long enough to tell his friends that the Doegs were the murderers.

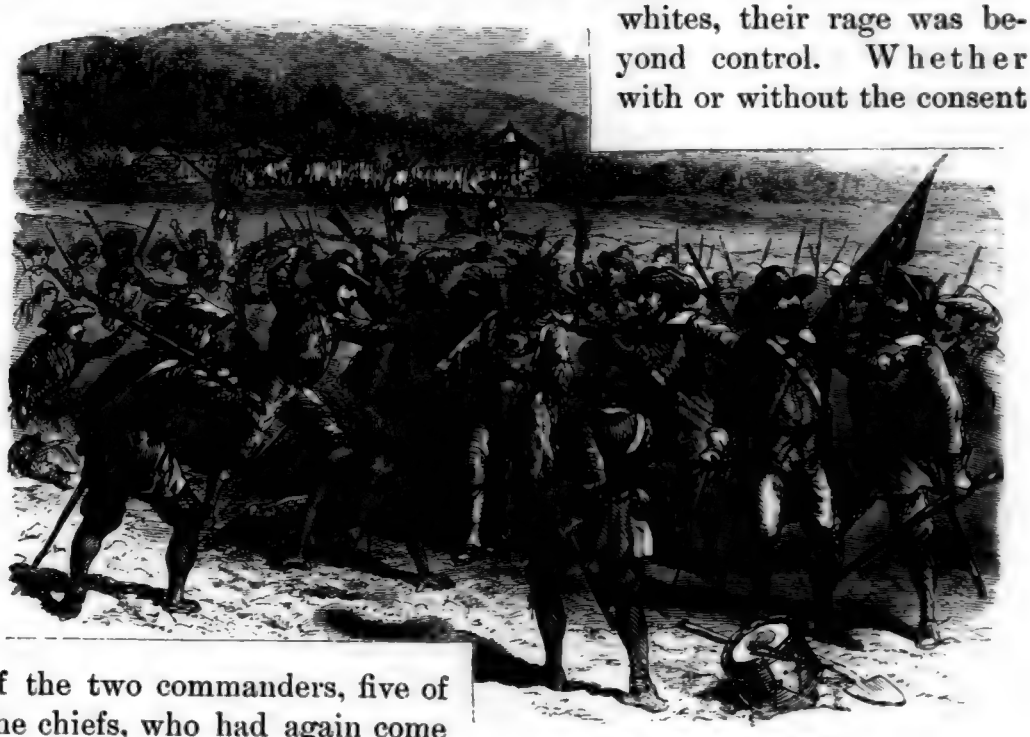
Punishment of the murderers.

Alarm was spread through the neighborhood, and thirty men started at once in pursuit. For twenty miles up the Potomac the trail was followed, till, crossing the river, it divided into two paths. The force separated to follow both, — one party under Captain Brent, the other under Colonel Mason. Brent soon came upon a wigwam, which he surrounded with his men. A chief came out at the Captain's summons, who accused him of having murdered Hen, and, as he attempted to fly, shot him down. His companions within the wigwam made some show of defence, and then, as they rushed out to escape, ten of them fell before the fire of the Virginians. They were of the Doeg tribe, and, very likely, the murderers.

Attack on a Susquehannock wigwam.

The other party, who also reached a wigwam in the woods, waited for no parley. The Indians, aroused by the noise of the firing of Brent's men, rushed to the door, and, as they appeared, fourteen of them were shot dead before the assailants could be made to understand that these were not Doegs, but Susquehannocks. But the murder of Hen was fully avenged. The sun had risen but once over his grave, before — as the Indians believed — twenty-four of their people followed him into the valley of darkness.

Retaliation was inevitable. Susquehannocks, Doegs, Senecas, Piscataways, — all the Indian tribes of the region were aroused by the slaughter in a single day of so many warriors. Two of these tribes mourned for their own; the third was accused of the act that had brought upon them so terrible a calamity. All had now cause to hate the whites; some of them — perhaps all — proved by new atrocities how eagerly they accepted the lesson. In Maryland and Virginia alike, the isolated planters knew that at any moment they might stand face to face with death.



Expedition against the Susquehannocks.

The two colonies united in an expedition, and a thousand men were sent out under Colonel John Washington, — George Washington's great-grandfather, — of Virginia, and Major Thomas Truman, of Maryland. The Susquehannocks had taken refuge with their women and children in a strong fort on the Piscataway, and this the combined force surrounded.

Six of their chiefs were summoned from the fort, that negotiations might first be tried. They denied that their people were guilty of any hostile acts against the whites, and charged them to the Senecas, who had already fled northward. Truman accepted their explanations, and promised them protection, but the Virginians were not satisfied.

The next morning, a detachment brought into the camp the mutilated bodies of one Hanson and some members of his family who had been recently murdered. The act was known before, and was one of those now under consideration. But when this visible evidence of Indian atrocity was laid before the whites, their rage was beyond control. Whether with or without the consent of the two commanders, five of the chiefs, who had again come out of the fort for a parley, and who, under the rules of war, were entitled to protection, were instantly bound and led out to execution.

Killing of the Indian envoys.

The Killing of the Chiefs.

The act was too atrocious to be sustained even by the public opinion of that time. Truman was brought to trial by the Legislature of Maryland, and found guilty in that he did "in a barbarous and cruel manner cause five of said Indians to be killed and murdered, contrary to the laws of God and of nations." How he was punished does not appear, for the records are lost.[1] When Colonel Washington returned to Jamestown, and took his seat in the Assembly, Berkeley said, in his opening address, "If they [the Susquehannocks] had killed my grandfather and my grandmother, my father, my mother,

[1] For the fullest narrative of all these transactions, see a lecture before the Maryland Historical Society, by S. F. Streeter, published in *Hist. Mag.*, vol. i.

and all my friends, yet, if they had come to treat in peace, they should have gone in peace."

Indian retaliation.

This public rebuke was Washington's only punishment. Their revenge the Indians took into their own hands. Though the fort on the Piscataway was strong and capable of defence, they had laid in no provisions for a long siege. In the night, while the camp without slept unsuspicious of danger, the Susquehannocks, with their women and children — leaving behind only a few old men — crept out silently among their enemies, killing ten of them as they went, and escaped to the forest.

Arousing other tribes, they spread dismay along the Rappahanock and the James. Through the following winter they spread through Virginia, almost to Jamestown itself. Their object was rather revenge than plunder. "In these frightful times," says a narrative written a few years afterward by one of the planters who related what he saw,[1] "the most exposed small families withdrew into our houses of better numbers, which we fortified with pallisadoes and redoubts; neighbours in bodies joined their laborers from each plantation to others alternately, taking their arms into the ffields and setting centinels; no man stirred out of door unarm'd, Indians were (ever and anon) espied, three, 4, 5, or 6 in a party, lurking throughout the whole land; yet (what was remarkable) I rarely heard of any houses burnt . . . . or other injury done besides murders, except the killing a very few cattle & swine." Sixty of the colonists, before the spring came, had fallen victims to this savage warfare along the York, the James, and the Rappahannock.

Inefficiency of Berkeley.

In this season of dire distress Berkeley was strangely inefficient or unpardonably indifferent. Even the Susquehannocks, satisfied with their bloody work, made overtures of peace, to which they received no answer; the colonists appealed to him for protection, but he was moved neither by their sufferings nor their prayers. The time had come when they must depend upon themselves for safety. In securing that, came the opportunity to redress much other wrong.

Nathaniel Bacon.

Among the owners of plantations on the James was young Nathaniel Bacon, the cousin and heir of a rich and well-known Jamestown citizen of the same name. Although he was not yet thirty, and had joined his relative in Virginia less than three years before, he was already of sufficient mark in the province to have been appointed member of the council, and to have gained an influence among his neighbors that implied unusual qualities in so

[1] *The Beginning, Progress, and Conclusion of Bacon's Rebellion.* By T. M. Republished in *Force's Tracts*, vol. i.

young a man. He lived upon an estate called Curles, on the river, a little distance below Richmond; but he also owned a plantation near the falls of the James, — perhaps where the place called "Bacon Quarter Branch" still keeps his name.[1] Here, in the late winter or early spring of 1676, a band of savages stole into the clearing, and killed two persons, — a servant, and Bacon's overseer, whom he held in high esteem.[2]

Bacon Quarter Branch.

The young man had been already greatly excited by the distresses of the people about him, and it needed only this appeal to personal interest and feeling to move him to action. His neighbors, one and all, looked to him as their leader; and he and they had "sent oftentimes to the Governor, humbly beseeching a commission to go against those Indians at their own charge." But no commission came. "The misteryes of these delays were wondered at," and the minds of the people, bitter with other grievances, were filled with "surmizes and murmurings." The climax came when Bacon himself, struck at last in his own family, swore that he would avenge his overseer's death,

[1] Campbell's *History of Virginia.*

[2] There are several contemporary accounts of Bacon's Rebellion. The so called "Burwell Account," found among the papers of Captain Nathaniel Burwell, of Virginia, and published in *Mass. Hist. Soc. Coll.*, Second Series, vol. i., is incomplete. That by "T. M." in Force's *Hist. Tracts*, i., is the fullest. See also *An Account of our Late Troubles in Virginia*, by Mrs. An. Cotton, of Q. Creeks, in Force, i., 9th paper; *A List of those Executed for the Late Rebellion in Virginia*, etc., ibid., 10th paper; and the documents in the appendix to chap. v. in Burk's *History of Virginia*, vol. ii.

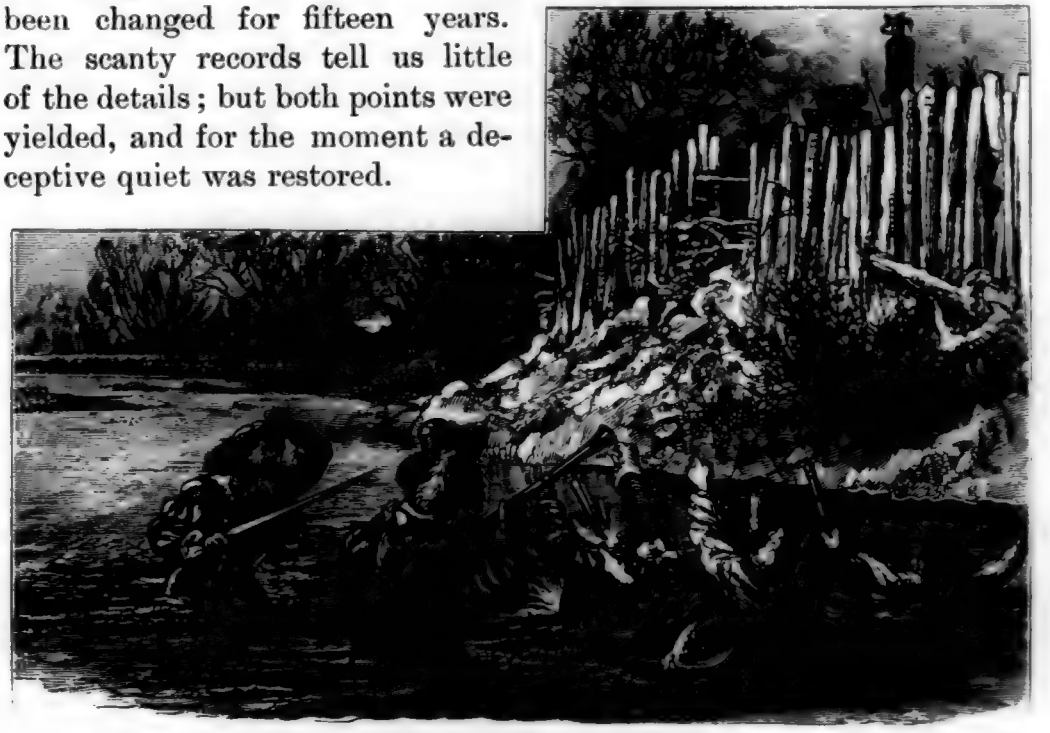
and that should news of another murder reach him, he would march out against the savages, "commission or no commission."

Such news was but a little while in coming; and he kept his word. A force whose numbers are differently stated at ninety, three hundred, and even six hundred men,[1] gathered about their leader. But even on the eve of their march, they sent once more to Berkeley for authority, warning him that should he not send it by a certain day, they would go without it. It did not come, and at the appointed time the expedition moved. It had gone only a short distance, before it was overtaken by a messenger, bearing in hot haste a proclamation from the Governor, denouncing all as rebels who did not disperse and return to their homes before a given date. This was decisive, and the line must be drawn at once between such as would brave the final threat of the authorities and such as would turn back while it was yet possible. Fifty-seven of his company kept on into the wilderness with Bacon; "those of estates," who feared their confiscation, returned with discontented obedience to save their property.

Bacon takes the field.

Bacon and his party had not accomplished that most difficult and dangerous part of Indian warfare, the finding of the enemy, when their supplies began to run low. Coming upon the fortified village of a friendly tribe, they asked the savages for provisions, with offers of pay. If the white men would wait till the next day, they should have what they asked, was his answer. It shows what was the popular opinion of the Governor, that a suspicion at once arose among the Bacon party that these Indians were acting by his direction. It was absolutely necessary that food should be had. Wading "shoulder deep" through the creek that ran before the palisades, they pressed their request. A shot, coming from some unseen enemy as night was falling, killed one of the troop, and aroused a suspicion that the Indians were reënforced. An attack was made, the fort taken and burned, and, according to Bacon's own account, one hundred and fifty Indians were put to the sword. It was the annihilation of the tribe of Susquehannocks. That, it was thought, must put an end to all further trouble from the savages, and the colonists dispersed.

Attack upon friendly Indians.



The supposed collusion of Sir William Berkeley and the Indians had this much color of probability, — that the Governor, so soon as he was satisfied of the determined purpose of Bacon and his men, had taken a troop of horse and set out in pursuit. He did not reach them; but his desertion of the capital, at

Berkeley in pursuit of Bacon's force.

[1] Burk, ii. 164, says six hundred; Burwell, p. 10, says "about seventy or ninety persons;" T. M., p. 11, says three hundred men.

this critical moment, proved an ill-judged step. No sooner was he well away, than a revolt broke out among the planters to the south. In the absence of the Governor, the Assembly hesitated and temporized, and allowed the rebellion to gain headway. Hurrying back, Sir William found the country everywhere in such commotion that he was compelled to make concessions. Among the first demanded was the abolition of taxes for the useless forts, — their uselessness now doubly shown, — and the dissolution of that long Assembly which had not been changed for fifteen years. The scanty records tell us little of the details; but both points were yielded, and for the moment a deceptive quiet was restored.

Popular disturbance. Berkeley's concessions.

Bacon's Troops crossing the Creek.

The elections to the new Assembly, for which writs were immediately issued, resulted almost everywhere, as might have been expected, in favor of the popular party. A great majority of the delegates were men pledged to demand redress of the people's grievances. Bacon, whose great popularity was increased by his action in the Indian matter, was among the new members. Notwithstanding his recent defiance of the Governor, he did not hesitate to start for Jamestown on the day appointed. This audacity even a weaker man than Berkeley might have resented. As Bacon sailed down the river from his home at Curles, on his way to the Assembly's session, his sail-boat was brought to by an armed vessel, and he was carried to the capital under arrest. "Mr. Bacon," asked the old Governor, as the culprit was brought before him, "have you forgot to be a gentleman?" — "No, may it please your honor."

New elections.

The arrest of Bacon.

—"Then," said the old soldier, with a courtesy not forgotten in severity, "I will take your parole;" and the popular leader took his seat unhindered among the burgesses.[1]

The burgesses met on the morning of the 5th of June; and when they had chosen a speaker, the Governor summoned them before him. In "a short, abrupt speech," as we have already related, he rebuked

Bacon's Submission.

Colonel Washington for the murder of the Susquehannock chiefs. Then, after seating himself for a moment, he rose and surprised the house by saying, "if there be joy in the presence of the angels over one sinner that repenteth, there is joy now; for we have a penitent sinner come before us. Call Mr. Bacon." "Then," says an eye witness, "did Mr. Bacon, upon one knee at the bar, de-

Bacon's submission.

[1] T. M.'s *Narrative.*

liver a sheet of paper confessing his crimes and begging pardon of God, the king, and the governor." There was a brief silence broken by Berkeley's saying, with real emotion, "God forgive you — I forgive you." [1]

There seems to have been in the veteran officer a warm personal regard for the brilliant young man before him. A moment after pronouncing his forgiveness, he started up again from his chair and said, "Mr. Bacon, if you will live civilly but till next quarter court — but till next quarter court — I'll promise to restore you again to your place there," — pointing to Bacon's vacant seat in the council. "And in th' afternoon," says the narrator of the incident, "passing by the court door in my way up to our chamber, I saw Mr. Bacon on his quondam seat . . . . which seemed a marveilous indulgence to one whom he had so lately proscribed as a rebell." [2]

It is not easy to credit the assertion that all this action on Sir William Berkeley's part was treacherous ; that his kindness and his emotion were both feigned ; and his reception of Bacon a mere device to conciliate the excited planters. Yet Bacon and his adherents believed this, or at least, doubted that Berkeley meant to heed their just complaints. A few days later, while the Assembly was still engaged in a stormy debate upon the Indian question, "one morning early a bruit ran about the town — 'Bacon is fled — Bacon is fled!'" [3]

The rumor speedily proved true. Leaving no other excuse for breaking his parole, than the insufficient one that he believed he was meeting treachery with treachery, — "having information that the Governor's generosity . . . . [was] no other than previous weadles to amuse him and his adherents and to circumvent them by stratagem," — the young man had left Jamestown to rejoin his neighbors. Some said his cousin had given him "timely intimation to flee for his life;" for that the Governor — "seeing all quiet," and noticing that the turbulent country people who had come to the capital had dispersed again on seeing justice apparently done to their favorite, — had issued "private warrants to take him againe." But it should not be forgotten that the contemporary narratives, on which we must rely for the details of these events, are not impartial and may, therefore, be unjust to Berkeley. Narrow-minded, arbitrary, and destitute of any regard for the rights of the common people, and — as he soon showed himself to be — careless of human life, the whole career of the Governor hardly justifies the belief that he would stoop to gain his ends by deceit and treachery. That Bacon, however, believed him capable of it, is the only justification of his own conduct.

His flight.

[1] "Thrice repeating the same words," says T. M.

[2] T. M.'s *Narrative*.

[3] *Ibid.*

Bacon's adherents of course accepted his conclusions, and all hope, therefore, of a peaceful solution of the troubles ended with his arrival among his friends.

Bacon marches on Jamestown.

Only a few days of excitement and alarm had passed since his escape, when news reached Jamestown that the rebel was marching thither at the head of "an army" of four or five hundred men, who had mustered some thirty miles or more up the river. With almost every hour expresses reached the capital with news of his approach. Berkeley tried vainly to collect the militia for defence; but many of them were already with the insurgents, and no sufficient body could be gathered. On the fourth day after the first news of their coming, the horse and foot under Bacon entered the town without resistance. They were bivouacked upon the green close by the state-house, and the proper disposition made of them to hold all the streets. This done, they disarmed all the inhabitants, and would permit none to enter the town without giving up his weapons.

His interview with Berkeley.

Amid this confusion the Assembly was called together by beat of drum. Barely had its session been begun, when Bacon, with a double file of fusileers, took up a position near the corner of the state-house. The members of the Assembly crowded to the windows, while the Governor and Council went out to treat with the rebel leader. It was a scene of wild confusion; in the midst of "the hubbub" Bacon raged up and down between his files of men, "with his left arm on Kenbow, flinging his right arm every way;" the crowd about him clamoring with such violence that, says the narrator, "if in this moment of fury that enraged multitude had faln upon the Governor and Council, we of the Assembly expected the same immediate fate." Berkeley, as excited as Bacon, thrust himself between the lines of troops, and baring his breast to their weapons, cried "Here — shoot me! 'Fore God, fair mark! Shoot!" To which the rebel, still commanding his temper, as it seemed, answered, "No, may it please your honor — we will not hurt a hair of your head, nor of any other man's; we are come for a commission to save our lives from the Indians, which you have so often promised; and now we will have it before we go!" The Governor turned, and walked toward his private apartments, followed by the Council; and Bacon, now losing his self-command entirely, followed him with "outrageous postures," "often tossing his hand from his sword to his hat," and seeming like one delirious with rage. "Dam my bloud!" he shouted, "I 'll kill Governor, Council, Assembly, and all, — and then I 'll sheathe my sword in my own heart's bloud!" — and turning to his men he ordered them to point their fusils at the windows filled with anxious faces.

For a moment there was wild excitement; the people clamored for the commission with shouts of "We will have it! we will have it!" and the fusileers cocked their pieces; when a person at the window waved a handkerchief, and called out that they should be satisfied. "'T was said," — continues the narrative, — "Bacon had given a signall to his men . . . . that if he should draw his sword, they were on sight of it to fire and slay us; so near was the massacre of us all that very minute, had Bacon in that paroxism of phrentick fury but drawn his sword before the pacifick handkercher was shaken out at window!"

Excitement among the people.

Excited as the people were, both they and the fusileers, as well as Bacon himself, had recognized the person who waved the handkerchief as one of the most influential citizens, and believed that he had both will and power to keep his promise. The soldiers lowered their arms, and Bacon, after a moment's consultation, marched them away to the main body of his troops. In an hour he came back alone, and going into the Assembly's room, addressed that body vehemently, demanding that the commission be issued to him at once. A large majority favored his request, but no one dared to act decisively. Bacon's own colleague, Bruce, hesitatingly said, "it was not in their province or power," or any one's save the Governor's. No one else spoke; Bacon retired "dissatisfied," and for the rest of the day comparative quiet reigned.

Bacon addresses the Assembly.

The anxious night that followed seems to have produced a change of policy on the part of both Berkeley and the burgesses. The former saw himself at last forced to another compromise, and the majority of the Assembly came together the next morning with no sign of the hesitancy of the day before. The only difficulty was to restrain the motions for the redress of popular grievances long enough to permit the all-important Indian question to be finally disposed of. Bacon's commission was speedily passed, and was promptly confirmed by Governor and Council. But, in the altered state of feeling, this was not by any means enough. The house was in perfect accord and sympathy with the people, and its boldness increased with every concession. It next passed an Act of amnesty toward Bacon and his followers, and directed the preparation of a letter to the King justifying their action. A letter written by the Governor, in which he complained to His Majesty that he was "encompassed with rebellion like waters," was submitted, and received by the burgesses with due respect; but it was doubted, nevertheless, that "his hono'r sent all he wrote." Other versions of affairs, however, than that of the Governor's, were sent to England by several delegates.

Action of the Burgesses.

Then followed rapidly a multitude of reformatory measures. The franchise was again extended to all freemen. The county magistrates, who had long had local taxation in their own hands, were now compelled to associate with them a board of delegates elected by the people. The privileges of members of the Council were curtailed. No one was to be appointed to an office who had not for three years resided in the country. Propositions — possibly never carried out — were made for an examination of the colonial accounts. The Governor's fees in certain cases were restricted; his virtual monopoly of the fur trade was abolished. The majority, now altogether under the influence of Bacon and his chief advisers, Lawrence and Drummond, effected in a few days more radical reforms than the boldest would have believed possible a week or two before. That they should be bitterly opposed by the minority, and only confirmed by the Governor under the pressure of necessity, was a matter of course. Some of the debates upon them were very stormy; and party feeling ran so high that, according to one historian, it founded feuds of a century's duration between members of the different factions. The whole time occupied by all this legislation was barely a week, and at the end of it Berkeley succeeded in dissolving an Assembly which had suddenly become so formidable, — the hasty dissolution probably meeting with but little opposition, because it was felt that all that could be done at the moment had been accomplished.

Reformatory measures.

Bacon — who had meanwhile been occupied in organizing the thousand men allowed him by the act, and in wisely appointing as his subordinates men who were already known as officers in the regular militia — now set out for a vigorous campaign against the Indians; and, in a short time after the breaking up of the Assembly, was hotly engaged in the Pamunkey country, driving the savages successfully before him. No sooner was he at a safe distance, however, than events showed that the acquiescence he had extorted from the Governor in measures of reform was to be but short-lived. By a petition which came to him from the people of Gloucester and Middlesex counties (on the peninsula between the Rappahannock and the York), Berkeley was led to believe that the people of that region were still loyal to him, and opposed to the insurgent party. He crossed the York, and called a muster of the militia of the peninsula. Twelve hundred men collected; and relying upon their adherence, he once more declared Bacon a rebel, and called upon them to join in a march against him and his army. He was speedily convinced of his mistake. Immediately "arose a murmuring before his face, 'Bacon! Bacon! Bacon!' and all walked out of the field, muttering as they went,

Bacon's second Indian campaign.

Renewed proclamations of Berkeley.

'Bacon, Bacon, Bacon,' leaving the Governor and those that came with him to themselves."

Bacon was approaching the head of York River when news came that Berkeley had again proclaimed him an outlaw, and was seeking volunteers to pursue him. Answering angrily "that it vexed him to the heart that while he was hunting wolves which were destroying innocent lambs," the Governor and his followers should seek to put him "like corn between two mill-stones," he turned his army instantly and hurried across country. It was the unlucky Berkeley, and not the rebel, who now found himself likely to be

Bacon's return. Flight of Berkeley.

Berkeley and the Gloucester Men.

"ground to powder." Failing completely in his efforts to gain popular support, he fled precipitately to Accomac, across the Chesapeake, and left the province at the mercy of his opponent.

Bacon was now virtually the Governor of Virginia, and the first uses made of his power justified the popularity that he enjoyed. Marching his force as rapidly as possible into Gloucester County, — where, in spite of Berkeley's failure to arouse the people at large, there was still a party in his favor, — he deployed a large detachment to patrol the country, and to arrest Berkeley's adherents. These were put under parole; but they suffered in no other way, and his whole course seems to have been generous and conciliatory. He is credited with offering to spare the life of a spy captured by his men, provided a single voice out of the whole

The Bacon party in power.

little army should be raised in his behalf;[1] "which no man appearing to do," the prisoner duly suffered death. And it was said that during the whole course of the rebellion this was the only man put to death in cold blood by the insurgents, while not a single house, even of the Governor's immediate and most obstinate adherents, was plundered or molested.

Convention of the colonists.

When Bacon issued a call for a convention of the leading men of the province to meet him at Middle Plantation, fifteen miles from Jamestown, it was very widely responded to. A large assemblage gathered in the month of August, and listened to propositions for the reorganization of the government. An oath was to be administered to the people, without distinction. Those who took it were to promise to aid Bacon in a war against the Indians; to oppose Berkeley in any attempt to interfere with them in so doing; and to resist any force which might arrive from England, until its leaders should grant such terms as would include a hearing in England of the popular complaints against Berkeley's administration. The first two clauses were agreed to without hesitation; but to the third, as an act of flat rebellion against the Mother country, there was a determined opposition, and a "bloudy debate" of twelve hours followed.

The new oath of allegiance.

It is said to have been turned in Bacon's favor, after he had eloquently contended in vain against his opponents, by an unlooked-for incident. While the discussion was at its height, a gunner arrived from Fort York, to report that the Indians had made a raid under the very walls, as it were, of that post; that several persons had been killed; and that others had thronged into the works for protection. Bacon's point was instantly and forcibly made; he asked the gunner how it could be that this threatening aspect of affairs could exist close by the strongest work in that part of the province? The reply was that Berkeley, sailing into the York, had on the very day before the murders removed all the powder from the fort into his own vessel. This turned the scale, and the majority consented to Bacon's oath at once. A clause was inserted in the preamble to the oath setting forth that "Sir William Berkeley, Knight, Governor of the Country," having sought to divert the country's army from its pursuit of the Indians, and having failed therein, had "withdrawn himself, to the great astonishment of the people;" and then followed an explanation of the calling of the convention. Thus introduced, and signed by the members of that body, including some of Berkeley's government, and many of the leading men of the whole province, it was published immediately to the citizens at large. Writs for an Assem-

[1] T. M.

bly were issued, under the names of four members of the Council who took part in the convention's proceedings, and had sided throughout against the Governor.

Spirit and aims of the Bacon party leaders.

The feeling among the leaders who had taken upon themselves the responsibility of these decisive measures was that of men who had begun a war of independence. There was no telling to what lengths they might be called upon to go. Their talk was earnest, resolute, and grave, — a forecast of that which, just a century later, was to be heard at Philadelphia in a greater cause. Richard Lawrence and William Drummond, the former governor of Carolina, who appears to have been the brain of the enterprise of which Bacon was the right hand, saw clearly whither their action tended, and guided each step with prudent firmness. Beside them, at a council of which record is preserved, stood Drummond's wife, taking part, with an influence rarely given to a woman of that day and place, in their debates upon the future. The spirited words she spoke seemed half prophetic. "The child that is unborn shall have cause to rejoice for the good that will come by the rising of the country," she said; and to a cautious gentleman, who warned them of "a greater power from England," that would certainly prove their ruin, she answered, "I fear the power of England no more than a broken straw." "Now we can build ships," she added, "and, like New England, trade to any part of the world." If all she uttered was not to be fulfilled in her own time, her great-grandchildren were to see it carried out with a broader significance.

Berkeley at Accomac.

Berkeley, meanwhile, was gathering at Accomac such of his people as could reach him in his disadvantageous position; but, at the best, the force which he could collect was a very small one, and his prospects seemed almost hopeless until the coming of aid from England, when suddenly accident and the bravery of one of his followers changed the whole current of affairs. The first direct act of hostility which the insurgents attempted against him resulted in giving him the very means he wanted to make head against them.

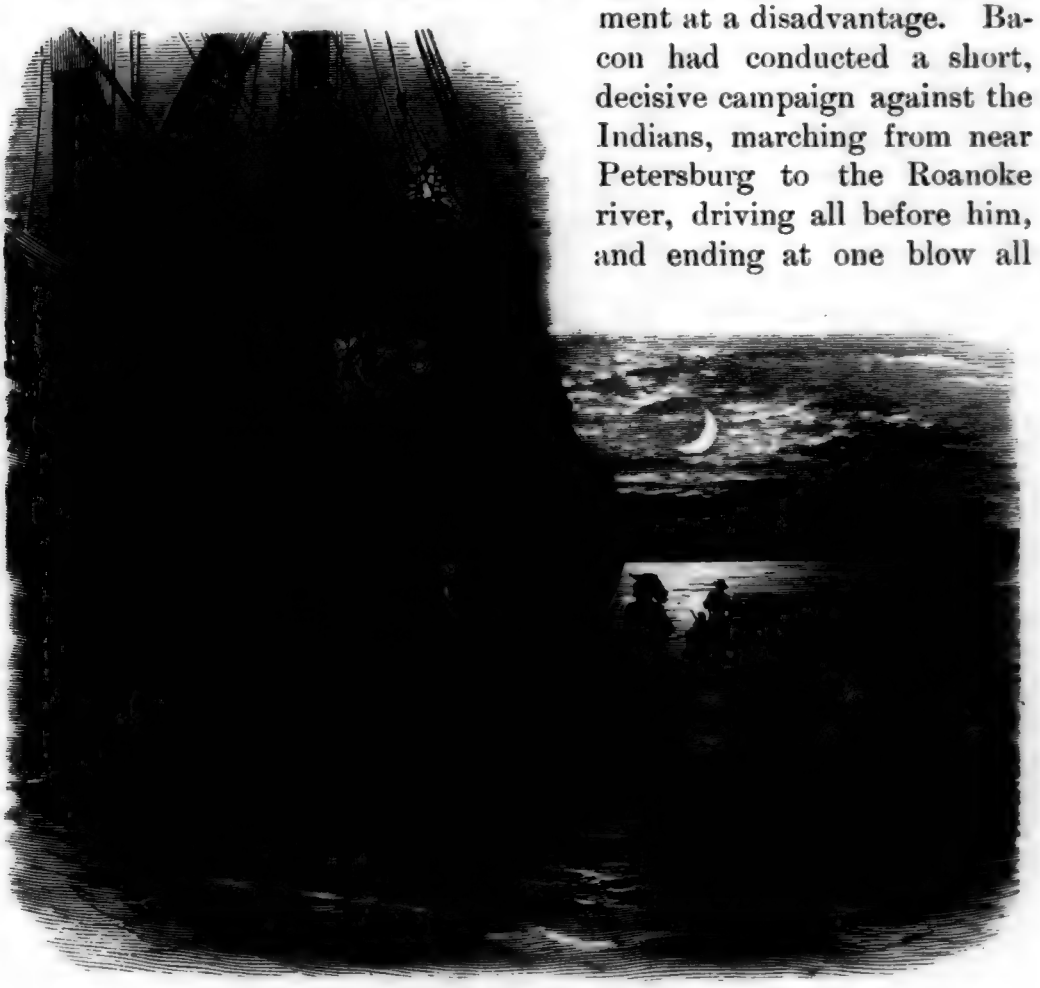
Bland's expedition.

Giles Bland, collector-general of the royal customs in Virginia, was one of Bacon's warmest partisans, besides being a personal enemy of the Governor. In the zeal which grew out of both these relations, he suggested, and was appointed to carry out, a plan for Berkeley's capture. Taking advantage of his office, he was to board the ship of a certain Captain Laramore, that lay near the mouth of the York River, and, while pretending to examine her cargo, was to put his men in possession and take her commander prisoner. Accompanied by a smaller vessel, under one Captain Carver, he was then to sail for Accomac, where the defenceless Governor could easily be captured and returned to Jamestown.

The plan worked admirably as far as the seizure of the vessel went, and Bland, with his armed men, soon had her captain shut up in his cabin, while they and the captured crew weighed anchor and made ready to set sail. But Laramore, feigning complete submission, assured Bland of his willingness to take part in the expedition, proclaimed himself an enemy of Berkeley, and so won Bland's confidence that he was again put in charge of the ship, and forthwith made himself conspicuous in furthering the preparations. Followed by Carver's vessel and a sloop, all manned by more than two hundred men, the collector — or the lieutenant-general, as Bacon had commissioned him — bore away for Accomac. In the bay he compelled another sloop to accompany his fleet, and so arrived at the eastern shore as the admiral of four well-armed craft.

Bland's fleet betrayed into Berkeley's hands.

On the news of the arrival of this hostile force, Berkeley despaired of defence, and proposed to surrender. But while he was debating with his companions, a message was brought to him which changed the aspect of affairs. Laramore had succeeded in smuggling ashore a note, in which he promised, if the Governor would send a force to aid him, to deliver Bland, Carver, and their men, into his hands, and to put the vessels and their crews at his disposal. There was a moment's hesitation, for Laramore's reputation was not of the best, and it was thought that he might be merely acting the decoy. But Philip Ludwell, one of Berkeley's warmest adherents, decided the doubtful question by offering to take charge of the force Laramore proposed, and thus insuring success if the captain were acting honestly, or making at least a stubborn fight if he were treacherous.



At midnight, Ludwell and a company of twenty-six picked men pulled silently alongside the ship. Laramore proved faithful, and the sleeping men on board, waking in confusion and seeing an armed party pouring over the sides, were overpowered before they knew the weakness of their captors. It was only needful to turn the guns of the larger vessel upon her smaller tenders; and without the firing of a shot the formidable little fleet was taken. Berkeley emphasized his triumph by hanging Carver a few days afterward, upon the shore of the bay; and why Bland and the other leaders escaped a similar fate is not clear. Perhaps the Governor — who, while the Laramore plot had been maturing, had sent for Carver under a safe-conduct, and tried to bribe him to desert the Baconites — owed the stout sailor a grudge for turning a deaf ear to all his arguments.

The hesitating loyalists, who had kept prudently aloof while Berkeley was altogether without defence or resources, now rallied, reanimated by Ludwell's exploit. Fourteen sloops and other small craft

were soon added to the four captured vessels, and, with six hundred men ready to follow him, Berkeley found himself at the head of a formidable force. Crossing the bay, he took possession of Jamestown, on September 17, without meeting any attempt at resistance, and at once proceeded to restore his friends to their offices, to reëstablish his old government, and to issue a new proclamation proclaiming Bacon and his followers, for the third time, traitors, rebels, and outlaws.

Rally of the Governor's party. Jamestown recaptured.

The Governor's sudden movement caught his opponents for a moment at a disadvantage. Bacon had conducted a short, decisive campaign against the Indians, marching from near Petersburg to the Roanoke river, driving all before him, and ending at one blow all

Taking of Bland's Fleet.

possibility of any formidable Indian war for years to come. His work thus thoroughly accomplished, and regarding Berkeley as now altogether powerless, he returned to the neighborhood of the James and disbanded the main body of his men; and as nearly all of them were planters, they quickly scattered to their homes. He was in this position when the news of the capture of Jamestown reached him through Drummond and others of his adherents who had fled from the place; but acting with his usual energy, he turned at once to the offensive.

Gathering a small force, to which he added as he marched, he came rapidly across the country, and appeared before the capital just as the Governor had finished his hurried preparations for defence by running a palisade across the neck of Jamestown peninsula. Before the besieged enemy knew his whereabouts, — for he had moved "with a marvellous celerity, outstripping the swift wings of fame," — they heard his trumpet blown from the high ground near the town, and the cannon shot with which he warned them of his presence. It was at sunset that he appeared before the palisades; and by the morning his men were sheltered behind earthworks, which they had finished in apparent carelessness of the "3 grate guns" the Governor had planted on his ramparts, and of the ships, lying "almost close aborde the shore . . . . with their broade sides, to thunder upon him if he should offer to make an onslaute."

He appears before the capital.

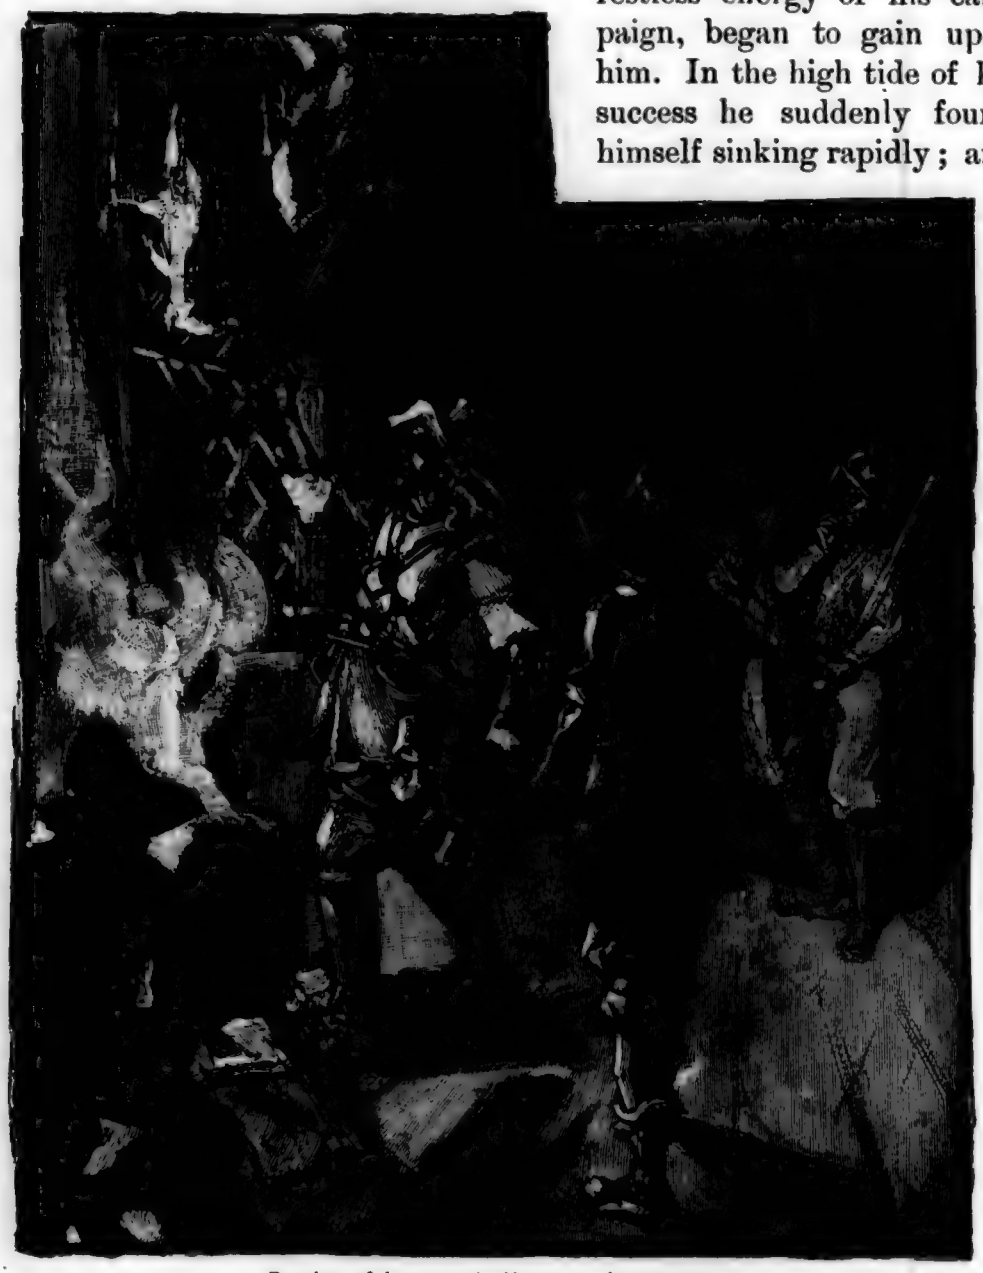
An account hostile to Bacon avers that he made up for "the paucity of his numbers" by a stratagem that was anything but creditable. Sending some of his horse to scour the country near at hand, he ordered them to take and bring to him certain gentlewomen living near by, whose husbands were in the town, that he might hold hostages, as it were, to secure the granting of all his demands. When they arrived, he "sends one of them to inform her owne and the others Husbands, for what purposes he had brought them into the camp, namely, to be placed in the fore frunt of his men at such time as those in town should sally forth upon him." According to the writer of this story, which is not elsewhere confirmed, "these Ladyes white Aprons" naturally "became of grater force to keep the besieged from falling out, than his works (a pitiful trench);" and either "these considerations or some others . . . . kep their swords in their scabbards." Yet he goes on to say that the gentlewomen were after all soon taken out of danger, but that a party sent out by Berkeley to make an attack on Bacon's works, "went out with heavie harts, but returned home with light heels;" — were, in short, driven back disgracefully by the Baconites, to the disgust of the Governor, "which he exprest in som passionate terms."

The next day, when Bacon mounted three guns upon his works, actually to begin the reduction of the place, Berkeley and his adherents gave up all hope of a successful defence. Before the rebels had fired a single damaging shot, the fleet dropped silently down the river, under cover of the darkness, carrying Governor, officials, troops, townspeople, and even their household goods, and leaving Jamestown a mere collection of empty houses.

When Bacon entered, the next morning, he found a deserted capital, the guns spiked, and nothing left but a few horses, "two or three

sellers [cellars] of wine, and some small quantity of Indian Corne with a grate many tanned hides." No army could subsist upon such plunder; nor would it have profited Bacon to hold the empty place. A council was called; and though among his people there were many property-holders of the town, it was decided to destroy it, that it might not serve again as a harbor for the enemy. Lawrence and Drummond applied the torch to their own houses, at nightfall; and that night Sir William Berkeley, lying at anchor twenty miles below, saw the dark sky lighted by the flames of the first English town built in America, — the historic settlement of Smith, Newport, and Wingfield. The destruction was complete, "not so much as sparing the church — and the first that ever was in Virginia." Nor was the place ever rebuilt.

Jamestown taken and burned.



Bacon and the Jamestown Gentlewomen.

Crossing the long peninsula between the James and York, Bacon now established himself at Gloucester Point, expecting to be attacked there by Colonel Brent, who was known to be approaching from Northern Virginia, at the head of a thousand men. But this attack, says a contemporary, "like the hoggs the devill sheared, produced more noyse than wool;" for Brent's men nearly all deserted before they came in face of the enemy advancing to meet them, and left their leader "mightily astonished." Bacon was thus left free to attempt once more the organization and quieting of the province; and began it by calling a convention of the uncertain peo-

Bacon again in power.

ple of Gloucester County, to whom he administered the oath before resolved upon. Then, yearning to make his Indian victories even more final and complete, he began to plan another expedition into the interior.

While thus engaged, a trifling illness which he had neglected in the restless energy of his campaign, began to gain upon him. In the high tide of his success he suddenly found himself sinking rapidly; and

Burning of Lawrence's House at Jamestown.

despite all the efforts of his people, nothing checked the course of his disease. And so, says his hostile biographer, not without an unholy exultation, "all his strength and provissions being spent, [he] surrendered up that Fort he was no longer able

Death of Bacon

to keepe, into the hands of that grim and all conquering Captaine, Death." He died on the first day of October, 1676, in the house of Dr. Pate, near Gloucester. His burial-place was kept a secret that has never been revealed.[1]

The command of Bacon's forces passed into the hands of his lieutenant-general, Joseph Ingram; but the dead leader had left no one behind who was precisely fitted to take his place. Lawrence and Drummond, wise advisers as they had proved themselves, had not the influence of their more active associate over his followers; and the loss of the energetic and brave commander dealt the revolution a blow from which it could not rise. The speedy capture and execution of several leading insurgents, by a party of Berkeley's adherents, served to intensify the despondency and panic that prevailed among the great body of the Baconites; and in the country at large the rebellion suddenly died. A large part of the insurgents scattered quickly to their homes, following the impulse to save themselves from the fate of a lost cause; and only the leaders, the men who had the courage of their convictions, or for whom pardon was believed to be impossible, were left with a small force to make a final struggle.

The insurrection without a leader.

The closing scenes.

Ingram established himself at West Point, on the upper York River, a place which Bacon himself had designed to make his "prime Randevouze, or place of Retreat," because of its natural facilities for

[1] The grief of Bacon's friends and the joy of his enemies have each left a rhymed epitaph, that show the fervor with which he was both loved and hated, and correspond to the two views that have been and are still taken of his action and his restless life: —

"Death why soe crewill! what, no other way
To manifest thy spiteene, but thus to slay
Our hopes of safety; liberty, our all
Which through thy tyrnny, with him must fall
To its late caoss?
. . . . Now we must complaine
Since thou, in him, hast more than thousand slain,
Whose lives and safetys did so much depend
On him there lif, with him their lives must end.
. . . . . .
While none shall dare his obseques to sing
In desarved measures; untill time shall bring
Truth crowned with freedom, and from danger free
To sound his praises to posterity.
Here let him rest; while wee this truth report
Hee 's gone from hence unto a higher Court
To plead his Cause where he by this doth know
Whether to Ceaser hve was friend or foe."

In the other epitaph is lavished a flood of abuse on "his flagitious name":—

"The braines to plot, the hands to execute
Projected ills, Death Joyntly did nonsute
At his black Bar. And what no Baile could save
He hath committed Prissoner to the Grave:
From whence there 's no reprieve. Death keep him close,
We have too many Divells still goe loose."

defence. Here the principal insurgents gathered; but there were smaller bodies at Greenspring, a place belonging to Berkeley himself, somewhat further down the river; and at an estate belonging to Bacon's cousin, probably in the same neighborhood. The whole insurgent force remaining under arms to garrison these three final strongholds probably numbered not more than four hundred men; while in the region about them — now that the death of Bacon led to the appearance of a host of concealed adherents of the Governor, and time-servers who wished to seem so — there were at least as many enemies as friends.

Berkeley lost little time in taking advantage of the new turn of

West Point, Virginia.

affairs. His first step, when the news of Bacon's death had reached him, had been the sending out of that party which, as already mentioned, had captured and executed several leading revolutionists. But he was making preparations to return in person when he dispatched this preliminary expedition, — "a winged messinger, to see if happily the Delluge was any whit abated." Then he ventured out from his "Ark" at Accomac, and appeared in the York River with four ships and "two or three sloops," carrying a force of some one hundred and fifty men. From the people along the lower York he met with no resistance; his return appeared to be taken as a matter of course; and his adherents in Gloucester County volunteered in large numbers

to help him drive out the still troublesome "vermin" from "their warm Kennil." A proclamation of amnesty followed, from which, however, most of the Baconite leaders still in resistance to his authority were excepted, while the bitterness of his enmity to Lawrence and Drummond was shown by a special mention of them.

Driving out the last stubborn rebels did not prove easy work. They again and again defeated parties sent against them, until at last their stronghold at West Point was lost through treachery. Two accounts are given of its surrender: one, that the Governor sent a messenger, one Grantham, who by arguments and promises persuaded Ingram to deliver up the place; the other, that he wrote to Wakelet, Ingram's second in command, offering him pardon and a reward for the same betrayal of his comrades. Ingram escaped in safety, and Wakelet appears to have received his pay, so that it is probable both were concerned in the matter. But, at all events, the position was given up to Berkeley's officers, together with the less important strongholds at Greenspring and at Bacon's house. As an organized insurrection, the rebellion was at an end; it lived only in the embittered spirit of the great majority of the people, who had at one time or another been engaged in it, and who, though wanting courage and persistence to carry it on after the death of their leader, still adhered in secret to the cause which he had so nearly made successful.

Final suppression of the Bacon party.

Drummond before Berkeley.

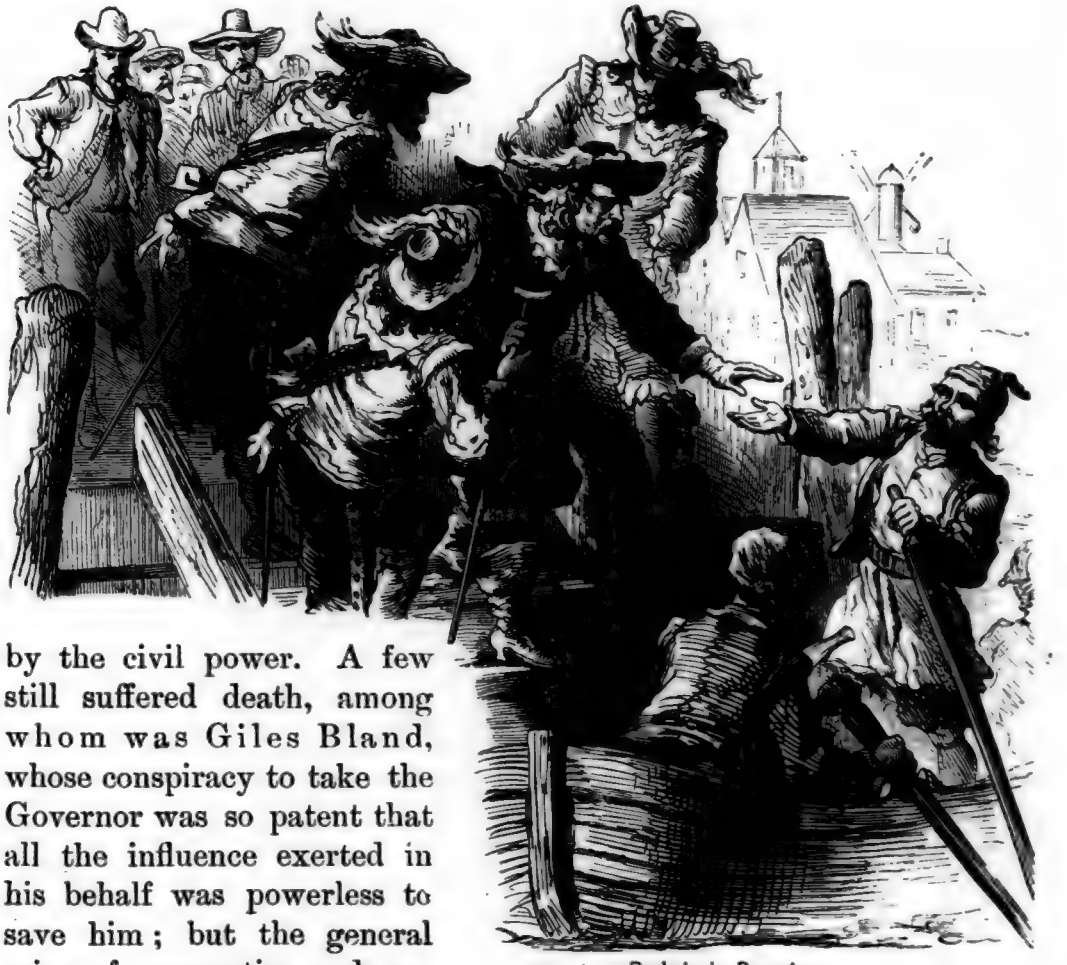
Of the other chief actors, Lawrence escaped into the wilderness; but Drummond, seeking safety by hiding himself for a time in the swamp of the Chickahominy, was captured there in the dead of

winter, overcome by cold and hunger. On the 20th of January, the day after his capture, he was brought before Berkeley at Bacon's house, the former station of one of the smaller bands of insurgents. The old Governor's triumph had come. This man and Lawrence were regarded by him as his bitterest enemies, and he hated them with a positive ferocity. He greeted the prisoner with a low bow. "Mr. Drummond," he said, "you are very welcome; I am more glad to see you than any man in Virginia. Mr. Drummond, you shall be hanged in half an hour." Drummond answered with courage and dignity, "What your honor pleases;" and when, three hours later, his sentence was carried out at Middle Plantation, he met death bravely. He was, says one of the narratives, a sober Scotch gentleman of good repute, and he left a name which few even of his enemies treated with disrespect, except in the one matter of his political action.

Fate of the leaders.

Berkeley used the power that victory gave him without mercy. For a time there was in Virginia an actual reign of terror, and no man knew when he might be seized, condemned, and executed. Drummond's little plantation was seized, and his wife and five children were driven from it "to wander in the woods and desarts till they were ready to starve." It was proposed to expose the bones of Bacon hung in chains upon a gibbet; but his body had been so carefully concealed that all attempts to find it proved useless. Punishments of all kinds — fine, confiscation, imprisonment, banishment, and many ingenious minor penalties — were inflicted right and left, until even the Governor's friends expostulated. Their counsel would perhaps have been in vain, had not a sudden check of a more powerful sort been put upon the angry knight's revenge.

Punishments inflicted by Berkeley.



At the end of January, 1677, the tardy assistance sent from England, in reply to Berkeley's petition of many months before, arrived in the James River. But it did not come precisely in the form which the Governor's party wished. In the small fleet that anchored below the ruins of the capital was Colonel Herbert Jeffreys, armed with a commission to succeed Sir William in his office, while he, as well as Sir John Berry, the admiral, and Colonel Morrison, who had been Berkeley's substitute for awhile in 1661, brought appointments as commissioners to investigate the causes of the rebellion, and to attend to the settlement of affairs after its suppression. Berkeley was, it is true, to aid them in this work; but in reality his own conduct was under examination, and he found himself at once in the attitude of a defendant. The instructions of the commissioners authorized them to grant amnesty to those who should submit and give bonds for future good behavior, excepting Bacon,

Arrival of commissioners from England.

whose death was not known, of course, when the fleet left England; but still, a discretionary power to punish other leaders and those especially obnoxious was left in their hands.

The English officials put a speedy end to the system of drum-head courts-martial, by which the Governor had brought so many of his enemies to execution. From the time of their arrival (soon after which an Assembly met at Green Spring) the trials of Baconite prisoners were conducted with due form and caution

The punishments checked.

Berkeley's Departure.

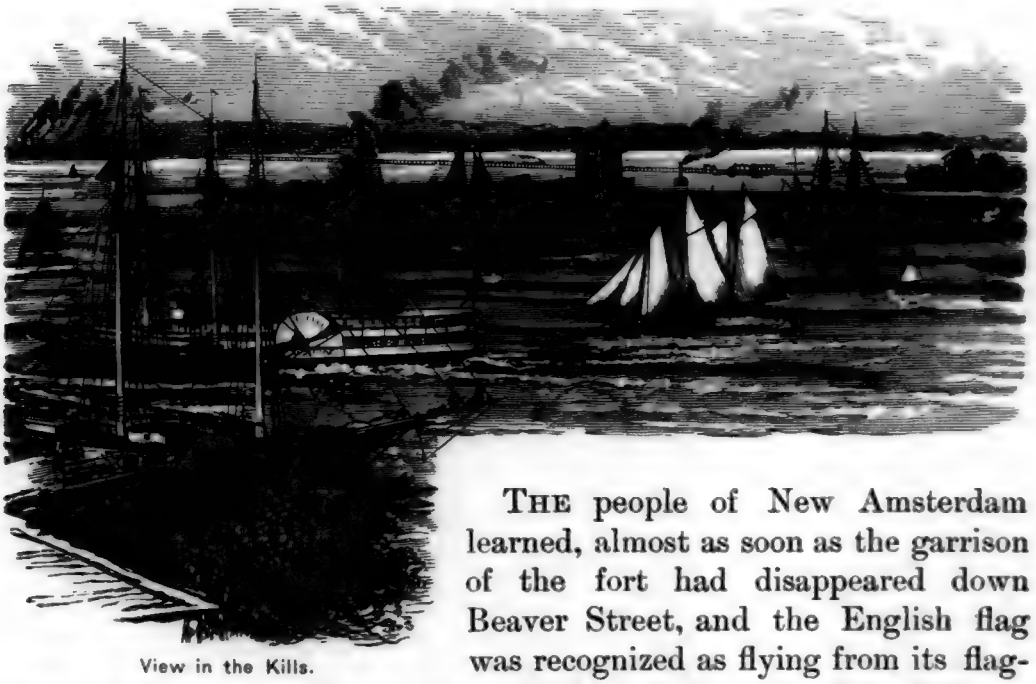
by the civil power. A few still suffered death, among whom was Giles Bland, whose conspiracy to take the Governor was so patent that all the influence exerted in his behalf was powerless to save him; but the general reign of persecution and cruelty ceased with the Commissioners' interference. Local courts winked at the means — sometimes ludicrously ingenious — by which the spirit of ignominious punishments was generally evaded, even when the letter was carried out. John Bagwell and Thomas Gordon wore "small tape," and William Potts "Manchester binding," instead of the halters with which they were ordered to appear in public. Some fifty persons were excepted from the amnesty, including those already executed or banished, and acts of attainder were passed against twenty; but it does not appear certain that all the measures decided

upon were at all rigidly carried out. In their report, Jeffreys, Morrison, and Berry spoke in the severest terms of Berkeley's course in trying men by martial law after peace had been reëstablished; and their investigation of the charges which the people made against him seems to have been made with a positive leaning toward the side of his accusers. Gradually the country became quieter. Protected by the presence of the Commissioners, the Assembly took a more independent tone, and the Virginians, encouraged for a moment to believe that they had gained something of that redress for which they had hoped, gradually settled back into the quiet life of their plantations. Bacon's rebellion had cost the colony a hundred thousand pounds, the loss of many lives, and months of anarchy; but it had shown the people their own power, and had developed an independence that was to bear fruit long after. When, in October, 1677, the royal Commissioners seized the Assembly's journals for investigation, and that body indignantly protested that "such a power had never been exercised by the King of England, and could not be authorized even by the great seal," they virtually asserted the principle of colonial legislative rights for which their descendants fought a hundred years later.

The Commissioners' report.

Results of the rebellion.

When the fleet of the Commissioners returned to England in April, Berkeley went with it, leaving Jeffreys Governor. The old cavalier was ill and broken in spirit. The bitter outbreak of his revenge was possibly, as it was urged on his behalf, a result of the "peevishness" and irritability of age. He had one longing left, — to justify his conduct in the eyes of the King, whose approval would have consoled him for all else. But he seems to have been altogether disappointed. Opinion both in Parliament and at court he found to be bitterly against him. It is said by one writer that he was received by Charles with kindness; but it was generally believed that he was treated with entire neglect, and did not see the King at all, — sinking rapidly from the time of his arrival, until, in a few weeks, he died broken-hearted and disgraced. There came back to Virginia one who had been his servant on his voyage and till his death, "from whom a report was whispered about, that the King did say, 'that old fool has hanged more men in that naked country than he had done for the murther of his father.'" This speech, says the gossiping writer who records it, coming to the old Governor's ears, hastened his death: So that "he dyed soon after without having seen his Majesty; which shuts up this tragedy."



Berkeley returns to England.

His illness and death.

CHAPTER XIV.

NEW YORK.

QUIET BEGINNING OF THE ENGLISH RULE. — THE ADMINISTRATION OF NICOLLS. — THE NEW JERSEY GRANT. — ARRIVAL OF CARTERET. — SETTLEMENT OF NEWARK AND ELIZABETH. — THE CONNECTICUT BOUNDARY. — THE NAMES AND DIVISIONS OF THE PROVINCE. — THE "DUKE'S LAWS." — ENGLISH OFFICIALS. — THE WAR BETWEEN ENGLAND AND THE NETHERLANDS. — DISCONTENT IN LONG ISLAND. — NEW YORK AND CANADA. — THE FRENCH AND THE MOHAWKS. — THE PEACE OF BREDA. — ADMINISTRATION OF LOVELACE. — PROGRESS OF THE PROVINCE. — THE TOWN OF NEW YORK. — RENEWED WAR IN EUROPE. — THE RE-CONQUEST OF TEW NETHERLAND. — COLVE'S ADMINISTRATION. — NEW NETHERLAND CEDED TO ENGLAND BY THE PEACE OF WESTMINSTER.

View in the Kills.

THE people of New Amsterdam learned, almost as soon as the garrison of the fort had disappeared down Beaver Street, and the English flag was recognized as flying from its flagstaff, that the change which had taken place was not, to their dull sensitiveness, a very essential one. Stuyvesant, no doubt, when he had seen his troop safely embarked for Holland, stumped back into the town in profound depression. But depression may have turned to rage as he met the cheerful burghers who had insisted on his surrender, and who could congratulate themselves,

Quiet beginning of the English rule.

and almost reproach him, upon the faithfulness with which the English were observing its terms. There was no plundering, no disorder; the Connecticut men, whom the Dutch had the most reason to fear, were kept on the other side of the river; private property was everywhere respected; the property of the Company was protected from molestation; the course of trade was no more interrupted than in any other brief interval of unusual excitement; and the ordinary affairs of life returned almost immediately to their usual channel. Nicolls wisely acted as if he were receiving a repentant province that had for a season forgotten its true allegiance, rather than as taking possession of one he had conquered. Perhaps the Dutch made no very nice distinctions; but they could remember some heavy grievances under the rule of the Company; this new power promised, at least, that things should be no worse, and it was clearly meant that the promise should be kept.

Organization of Nicolls's Government.

A provincial government of Englishmen was presently organized, but it was chiefly of those who had not before had to do with New Netherland affairs, and had no prejudices. Captain Matthias Nicolls was made secretary; Captains Needham and Delavall, of England, and Thomas Topping and William Wells, of Long Island, were counsellors, — two of the former Dutch officers also being sometimes called into consultation. But, as the articles of surrender provided, the municipal government was unchanged; and the municipal court met and transacted current business on the very day after English occupation. At Fort Orange — now Albany — and at Esopus the same general course was pursued; at Rensselaerswyck Jeremias van Rensselaer was only compelled to renew his patent under the Duke of York, his people taking the oath of allegiance to England. This oath was also required of the Dutch in New York; and although it excited some opposition at first because it was not prescribed in the articles of capitulation, it was taken in October by all the leading Dutch inhabitants. Even Stuyvesant and his immediate followers consented to this when satisfied that it did not affect the terms of capitulation. Nor was this frank acceptance of a new allegiance the only evidence of the general content; the city magistrates sent an address to the Duke of York avowing their warm approval of the new Governor, and of their hopes of prosperity under his rule.

The oath of allegiance.

Grants to Englishmen.

No sooner was the province fairly in English hands than new names were given to different portions, its boundaries were as far as possible defined, and grants of land were made to Englishmen. That region lying between the Hudson and the Delaware was named Albania, and grants and purchases were made within its boun-

THE LANDING OF CARTERET IN NEW JERSEY.

daries from Sandy Hook to the mouth of the Raritan, and from the Raritan to the Achter Cul, now Newark Bay.[1] But before Nicolls, in the name of the Duke of York, had taken possession of all New Netherland, the Duke, in anticipation of that event, granted in June, 1664, the whole country, from the Hudson to the Delaware, and from latitude 41° 40′ to Cape May, to two favorites of the court, Lord Berkeley and Sir George Carteret. Thus New Netherland, before it passed into the hands of the English, had been divided into two provinces, and the division, it is supposed, was made at the instigation of that Captain John Scott, who, not long before, and on doubtful authority, had attempted to wrest Long Island from the Dutch. To the new province the name of New Cæsarea, or New Jersey, was given, in commemoration of Carteret's defence of the Channel island of Jersey against the forces of the Commonwealth in 1649.

Seal of the Carterets.

Of this grant, however, Nicolls knew nothing till June, 1665, when Captain Philip Carteret arrived as governor of the new province. There was, of course, no alternative but to receive with courtesy one coming armed with such credentials, though Nicolls represented to the Duke that he had hastily given away the fairest portion of his dominions. "But I must charge it upon Captain Scott," he wrote, "who was born to work mischief as far as he is credited, or his parts serve him."[2] The grant of New Jersey.

A storm had driven Carteret's ship, the *Philip*, into Chesapeake Bay, but in July she arrived at New York, and a few days later anchored off the point now known as Elizabethport, New Jersey, and landed her thirty emigrants. At the head of these people, Carteret, with a hoe over his shoulder, marched to the spot he had chosen for a settlement, two or three miles inland, and to which, in honor of the Lady Elizabeth, the wife of Sir George Carteret, he gave her name. He found at the point where he and his people Arrival of Carteret.

[1] Achter Cul, or Kol = the cul achter (behind) the great Bay; corrupted into After Cul, and then Arthur Kil, and now applied to Staten Island Sound.

[2] Letter of Nicolls to the Duke of York in the State Paper Office, cited by Chalmers and others; also Letter to the Earl of Clarendon. *N. Y. Hist. Soc. Coll.* 1869.

landed four families who had taken possession of lands under the grant which had been made by Nicolls.[1] The new-comers brought with them the title of a new English province, and, though more than one settlement had been earlier made by the Dutch on this side the Bay of New York, this was the actual beginning of the State of New Jersey at Elizabeth.

Previous negotiations of the New Haven people regarding New Jersey.

Four years before, the West India Company had discerned and sought to take advantage of the discontent and apprehension felt by so many of the English, both at home and in the colonies, at the restoration of Charles II. The Directors invited them to settle on the Raritan, or in its neighborhood, and offered them most favorable terms. Three of the magistrates of New Haven, — where this discontent was very general, — Matthew Gilbert the Deputy Governor, Benjamin Fenn, and Robert Treat, entered into negotiation with Stuyvesant upon this subject, on behalf of some New Haven people, and found no difficulty in getting from the Dutch governor the promise that a hearty welcome would be given and religious freedom be secured to any Puritan colony that should plant itself within the Dutch jurisdiction. But the English asked also for political independence, and the negotiations were suspended. The question of civil relations Stuyvesant felt must be referred to his superiors at home.

Even that concession, he was instructed, the Directors were disposed to make to almost any degree, provided that Dutch supremacy was acknowledged in the last appeal. The New Haven people were the more eager to set up anew for themselves when the Winthrop charter brought them within the jurisdiction of Connecticut, and they would, perhaps, had there been time enough, have yielded somewhat in their demands. But while diplomacy hesitated events made no halt. Before any agreement could be reached, satisfactory to both parties, New Netherland ceased to be a Dutch colony, and the Duke of York had granted to its new proprietaries the whole region from the Hudson to the Delaware.

Their design continued under Carteret.

Treat and his friends, nevertheless, were not turned from their purpose. They could at least free themselves from obligations and ties that had become intolerably irksome, though new ones had to be made. But the constitution Carteret brought with him was as liberal as a proprietary government could be; religious liberty was guaranteed, with the usual reservation providing

[1] In the litigation which arose out of these conflicting claims, it was asserted on behalf of the first settlers, that the place was named for Queen Elizabeth. But this was an afterthought. Carteret undoubtedly called the place Elizabeth, in honor of his brother's wife. *East Jersey under the Proprietary Governments*, by William A. Whitehead.

against license and civil disturbance, but granting to all the ministrations they preferred; a popular Assembly was to have its share of power; the grants of lands to actual settlers were liberal.[1]

In the spring of 1666 the site of Newark was purchased of the Indians, and possession taken by a party from Milford, Connecticut, led by Treat.[2] In the autumn others joined them from Guilford and Branford. A preliminary agreement had been entered into between Carteret and Treat, but its precise character is not known.[3] That it secured, however, to the new colony self-government, independent of the proprietaries and their promise of

Settlement of Newark.

View of Newark, New Jersey.

religious freedom to all comers, is probable. For the Branford people made it a condition of their joining the company that none should be admitted as freemen, or should have the right to hold office, or to vote, who were not members of a Congregational Church. To this the emigrants from Milford assented. Abraham Pierson was chosen minister of the first church, and the place was named Newark in his

[1] Gordon's *History of New Jersey*.

[2] The price paid for the tract purchased of the Indians — which included the present villages of Bloomfield, Belleville, Orange, and Caldwell — was "fifty double hands of powder, one hundred barrs of lead, twenty axes, twenty coats, ten guns, twenty pistols, ten kettles, ten swords, four blankets, four barrels of beer, two pairs of breetches, fifty knives, twenty hoes, eight hundred and fifty fathoms of wampum, two ankers of Liquors, or something equivalent, and three troopers coats."

[3] Whitehead's *Historical Memoir of Newark*. *Coll. N. J. Hist. Soc.*, vol. vi.

honor, as he came from that place in England.[1] Pierson came to the new settlement at the head of nearly all his parishioners, for Branford — whose church was the town — refused to be annexed to Connecticut under the Winthrop charter, to which New Haven and other towns had by this time assented.[2]

Questions as to Carteret's and Berkeley's title.

In later years the title of Berkeley and Carteret to lands occupied by Elizabeth and Newark was disputed. In both cases they had been purchased of the Indians, — at Newark by consent of Governor Carteret; at Elizabeth, before Carteret's arrival, and under warrant from Governor Nicolls. To the division of the province he was appointed to govern, Nicolls had no alternative but to submit. The Duke, his master, was as much the source of power in New Jersey as in New York.

Anxiety in New Haven over the Duke's grant.

Elsewhere, however, there was room for anxiety and negotiation. New Haven and the other towns along the Sound, which had strenuously resisted annexation to Connecticut under the Winthrop patent, ceased all opposition to that measure when confronted by one far more to be dreaded. The grant to the Duke of York included all the country from the west side of the Connecticut River to the Delaware. Local differences were put aside to meet this common danger. Puritan New England could hardly conceive of a greater calamity than to come under the rule of the popish brother of the king.

No feeling of this kind, however, was permitted to interfere with the friendly reception given to Nicolls. He had, as we have seen, the cordial coöperation of the Connecticut people in the subjection of New Netherland. It was only Massachusetts that held back. There was little sympathy in Boston with the impatience felt in the colonies along the Sound at the presence of the Dutch. But there was unceasing vigilance lest the government at home, whether king or parliament, should interfere with that independence which Massachusetts always aimed at and so often abused. While that colony, therefore, from the outset received the commissioners with coldness and distrust, Connecticut, New Haven, and their neighbors, gladly gave their aid against the Dutch, and then combined to preserve the integrity of their own territory against the claim of the Duke of York.

The feeling in Connecticut.

The General Assembly of Connecticut voted that five hundred bushels of corn should be presented to the English commissioners. A further gift of horses was made when Governor Winthrop with six associates went to New York to enter upon negotiation with regard to the boundaries. In our less austere

[1] Whitehead's *Memoir*.

[2] Trumbull's *History of Connecticut*.

age such offerings would have been presented on the one side, and received or rejected on the other, as a bribe. The result in this case justifies no such suspicion. Both parties seem to have been disposed to make an honorable compromise between conflicting claims. The Connecticut patent and the grant to the Duke of York covered the same territory. Connecticut had, besides her patent, the right of possession. Should she be deprived of this, gained by so much toil and sacrifice, by virtue of a sheet of parchment and a royal seal? But the Duke had wrested by force of arms a portion of his grant from a foreign power. What just claim could Connecticut offer to territory she had never occupied though covered by her patent?

Meeting of the Connecticut and New York Commissioners.

To these considerations due weight, apparently, was given. The Connecticut delegates conceded that all Long Island, — which was granted expressly by name to the Duke, and much of which was a part of New Netherland, — properly belonged to New York.

Discussion of the boundary question.

But in the settlement of the boundary on the mainland a singular want of knowledge of the topography of the country was shown on both sides, unless there was, as has sometimes been suggested, a sharp advantage taken by one side of the ignorance of the other. The line, it was understood in general terms, should be run about twenty miles east of the Hudson River. That agreed upon was to start at tidewater on the Mamaroneck creek and

run thence north-northwest to the southern boundary of Massachusetts. But the mouth of Mamaroneck creek is much less than twenty miles from the Hudson, and a line drawn from it north-northwest would cross that river within fifty miles of New York.

The settlement.

This boundary would give to Connecticut a large, and the most valuable, portion of the late province of New Netherland: That Winthrop and his associates understood this, and purposely imposed upon the ignorance of the English Commissioners, is incredible. They were anxious to retain the territory they already occupied; they were willing to release all claim to Long Island if

Mouth of Mamaroneck Creek.

they were not disturbed on the mainland; and they were neither knaves nor fools. As a blunder[1] it was very soon exposed, as it was

[1] That the beginning was twenty miles from the Hudson was clearly a mistake. It is not quite so clear that the commissioners did not understand that the line crossed the river and agreed to it with their eyes open. Nicolls in a letter to the Earl of Clarendon (see *Clarendon Papers*, *N. Y. Hist. Soc. Coll.*, 1869, p. 76), writes: "Your L^dpp will allsoe perceiue by this inclosed determinacõn, betweene the Comission^rs with the Governo^r & councell of Conecticutt that those Townes upon the maine to the Eastward of N. Yorke did properly belong to their precedent pattent, soe that there remaynes only, One small Towne to his Royall highnesse of all that tract of land from Conecticut Riuer to Hudsons Riuer which is all the North part, and soe cold that few or none will bestow their Labours. Only one Towne is seated wth Planters to which or very neare the Indenture reacheth. aboue that 70 myles is Albany seated, who are noe planters but only a towne of Trade, with the Indians, Thus the extent of the Dukes Pattent is described to yor L^dpp."

By the one town "to which or very near the Indenture reacheth," seventy miles below Albany, the Governor must have meant Esopus. A line from the mouth of the Mamaroneck running north-northwest and touching Esopus would necessarily if produced cross the river at that point. Believing this "north part so cold that few or none will bestow their labors" upon it, he may have thought it of little consequence to which jurisdiction the

certain to be even had it been a fraud. What was done in haste was considered at leisure, and the Duke of York refused his assent to the agreement. Twenty years later, a new line was drawn and surveyed beginning at Byram River, which is essentially the present boundary of the States of New York and Connecticut.

To Long Island, thus made, as it has ever since remained, a part of New York, the name of Yorkshire was given. That, with the neighboring country, was afterward divided into three judicial districts or ridings, in each of which a court was to sit three times a year. The present Queen's County (excepting the town of Newtown) and Westchester formed the North Riding; Newtown, the present King's County and Staten Island made the West Riding; the present Suffolk alone was the East Riding. There was, however, some question whether Staten Island belonged to New Jersey or New York, which was not settled till 1668, and seems to have been referred to the proprietary in England. Samuel Maverick, one of the commissioners, writing in February, 1669, to Governor Winthrop, says, on the authority of a letter from Nicolls — who returned to England the previous autumn: "Staten Iland is adiudged to belong to N: Yorke." It is, he says in another letter, "the most commodiosest seate and richest land I haue seene in America." [1]

New divisions and names of the Duke's territory.

The Indians parted with it so reluctantly that the Dutch had been compelled to make repeated purchases; but the chiefs gave a final and lasting title in 1670 to Governor Lovelace, Nicolls's successor, receiving as recompense four hundred fathoms of wampum and a number of guns, axes, kettles, and watch-coats.

The King in his grant to the Duke of York had empowered him to make all laws for his new territory, with the usual proviso that these be not contrary to the laws of England. The Duke in turn had granted this power to Nicolls as his deputy. Having settled the boundaries of New York for the time, renamed its different parts, put English garrisons and officers at Albany, Esopus, and elsewhere, and brought the affairs of the distant Delaware region into proper train, the Governor assumed the duties of a legislator. He took for his guidance the Codes of the New England colonies in civil affairs, but disregarded their severe provisions relating to religion.

Preparation of "the Duke's Laws."

"The Duke's Laws" — as the code prepared by Nicolls and his

territory belonged. But as if doubting the wisdom of this settlement of the boundary he adds: "I humbly begg your L^dpp. to take the whole matter into serious consideracon, for if the Duke will improove this place to the vtmost, Neither the trade, the Riuer, nor the Adjacent lands must bee devided from this Collony, but remayne Entire."

[1] Maverick's Letters in the Winthrop Papers. *Mass. Hist. Soc. Coll.*, Fourth Series. vol. vii.

councillors was called — were promulgated at a meeting of delegates from the towns of Yorkshire, held at Hempstead on February 28, 1665. The people of these towns alone — the great majority being Englishmen — seem to have felt much interest in the character of the new government about to be established. For this reason, no doubt, they only were summoned to send representatives. Certainly the code had been drawn up more with a view to their wants, as Nicolls understood them, than to those of any other portion of the province. Being emigrants from New England, the Long Islanders especially hoped for the concession of all the popular rights which the people of Massachusetts and Connecticut enjoyed. They did not gain them; it was not within Nicolls's power to grant them, indeed; but they received, with considerable grumbling and discontent, the next best system — as wise and liberal a code, perhaps, as it was possible for the deputy of a proprietary government to bestow.

The Long Island people and the new legislation.

The Duke's Laws prescribed the annual holding, on the last Thursday in September, of a court of assizes at New York, which should be the court of highest resort in the province; the holding of courts of sessions, next in rank, in each of the Yorkshire "ridings" thrice a year; arbitration was allowed in trifling cases, but a local court of a constable and six overseers might be held for the trial of cases involving less than five pounds. The executive power in Yorkshire was in the hands of a high sheriff appointed annually by the Governor, the three ridings in turn furnishing the candidate. Each town had eight overseers, chosen by the freeholders, the freeholders selecting one of the eight to act as constable. The town officers made the assessments for taxes. Old land grants were to be looked upon as valueless unless submitted to the provincial authorities and confirmed by new patents issued by the Governor in the Duke's name. Trade with the Indians was restricted — that in arms, ammunition, liquor, and furs being permitted only under special license. Disputes between Indians and whites were to be fairly adjusted by the authorities as if between Christians. Slavery was recognized as legal, as there were many negro slaves already in the province; but kind and humane treatment for them and for servants was enforced by penalties. The militia law included all persons over sixteen years old, the militia expenses to be equitably shared by all the towns. One form of blasphemy ("denying the true God"), treason, murder, some offences against nature, the striking of parents in case the offender were over fourteen, and kidnapping, were capital crimes. A very great number of regulations provided for all minor matters of discipline, for licenses, trading and shipping laws, and so

Provisions of the Duke's code.

on. Trial by juries was provided for; but, except in capital cases, the jury was not to exceed seven men. No person who "professed Christianity" was to be molested for minor differences of opinion. There were a few regulations about church matters, applying equally to all sects, but no Indian was to be permitted "to powow, or perform outward worship to the devil."

Nicolls enforced this code immediately and thoroughly in Yorkshire only, leaving the changes to be very gradual in New York and along the river, where the Dutch could not conform at once to English ways. In the city there was for a little while loud complaint that the English official titles of mayor, alderman, and

The code in New York.

Inauguration of the First English Municipal Government at the Stadt Huys.

sheriff were substituted for the old Dutch terms of schepen, burgomaster, and schout; and when, in June, 1665, Thomas Willett was appointed mayor, and other Englishmen were put upon the board of aldermen, Nicolls was accused of disregarding the articles of capitulation. Such complaints the Governor met by pointing to his instructions, which required him to conform to English custom in his rule of the province. In the appointment of Englishmen to office his wish was, he declared, to provide for the peace and quiet of the whole community by having in office men of both nations. The discontent was speedily allayed, for no fault could be found with the selection of officers made among the English. The mayor, Willett,

English officials.

especially, was greatly esteemed among the Dutch, whom more than once he had served in important trusts in the time of the late governor. Moreover, there could be little real fear of injustice, for the sheriff, or schout, and the majority of this new board of aldermen, were still Dutch.

Breaking out of the war between England and the Netherlands.

Only on the day before the inauguration of this first municipal government in the town so lately called New Amsterdam, the Dutch and English at home were fighting the great naval battle off Lowestoft in the North Sea. The furious cannonading was heard on the banks of the Thames in England — almost in London. While Nicolls peacefully debated with the burghers in the Stadt Huys, the Duke of York was face to face with Dutchmen in quite another way, and one that came well-nigh giving to the Governor a new master; for as the Duke, who was in command of the English fleet, stood on the deck of his flag-ship, the *Royal Charles*, three of his officers were shot down at his side, so that their blood "flew in the Duke's face."[1]

The war had at length come, to which the disturbed relations of the two governments had been gradually leading since the restoration of Charles, and which now the conquest of New Netherland made inevitable. Angry competition on the coast of Africa had given rise to actual conflicts, and the English had driven the Dutch out of the forts they had built. In the East, the Dutch East India Company and the English merchants were virtually at war. The news from Africa and from Manhattan had reached England in the same week, to be received with open approval at court. Carteret told Pepys that "the king did joy mightily at it," but asked him, laughing, "How shall I do to answer this to the embassador when he comes?"[2] He answered it by the insolent claim of priority of ownership of the New Netherland territory, and the English ambassador at the Hague treated the matter with an equally high hand. De Witt, the Grand Pensionary of Holland, answered sharply for the States General that the American province must be given back; at the same time the Dutch admiral, De Ruyter, was secretly ordered to retaliate upon the English on the Guinea coast — which he did effectually a short time after. The English seized such Dutch vessels as were in their ports, and thus the two nations were already at war, though this was only December, 1664, and no formal declaration was made till the fourth of March following, after considerable further negotiation on Holland's part had proved fruitless.

It was in this war that the battle off Lowestoft had been the first — though a useless — English victory. These events belong to Euro-

[1] Pepys's *Diary*. [2] Ibid.

pean, rather than to American history, except that by the treaty of Breda — 1667 — the possession of New York was confirmed to the English. The only immediate effect of the declaration of war upon that province was to compel Nicolls to take all possible measures for its defence, lest De Ruyter should come that way on his mission to "inflict .... as much damage and injury as possible"[1] upon the English. The apprehended attack, however, never came. There were no dissensions between the old and new masters of New Netherland, and through the summer and autumn of 1665 Nicolls was left unmolested to quietly bring the whole province into obedience to his rule.

Progress of the war.

The next spring, however, brought the necessity of quelling some disturbances in eastern Long Island, where there was still much dissatisfaction because the Duke's code denied the people the popular elements of New England, especially of Connecticut, government. When the Governor had quieted these disorders by tempering vigorous measures against the chief offenders with indulgence to the rest, new trouble arose in the same region in resistance to the enforcement of the law of renewal of patents — a matter requiring the wisest management. The Court of Assizes decreed in September that the neglect of the Long Island towns and of individuals to renew their land grants under the Duke of York could be no longer tolerated. It required all Nicolls's skill and firmness to carry out the measure, accompanied as it was by the exaction of fees and quit-rents. After much discontent, however, all the towns of consequence, except Southold and Southampton, yielded, and these complied with the conditions a year or two afterward.

Discontent in Long Island

Though the war in Europe left Nicolls thus free to establish order in his new government, it was not to pass away without disturbance to the American colonies. The alliance of Louis XIV. with the Dutch against England, in January, 1666, had of course made enemies, nominally at least, of those colonies and the French in the new world. King Charles sent out letters in February directing his American subjects to begin whatever hostile measures they could against Canada, doubtless expecting that New England and New York would undertake at once a vigorous campaign against their northern neighbors. But he little understood the comparative indifference to European affairs felt by the colonists. His instructions were received with little enthusiasm, and the only measures taken were some attempts to excite the Mohawk Indians to enmity against the French settlers. Massachusetts, Connecticut, and Nova Scotia agreed that it would not be wise to undertake an expedition against the French settlements in Canada.

New York and Canada.

[1] Dutch document cited in Brodhead, ii., 58.

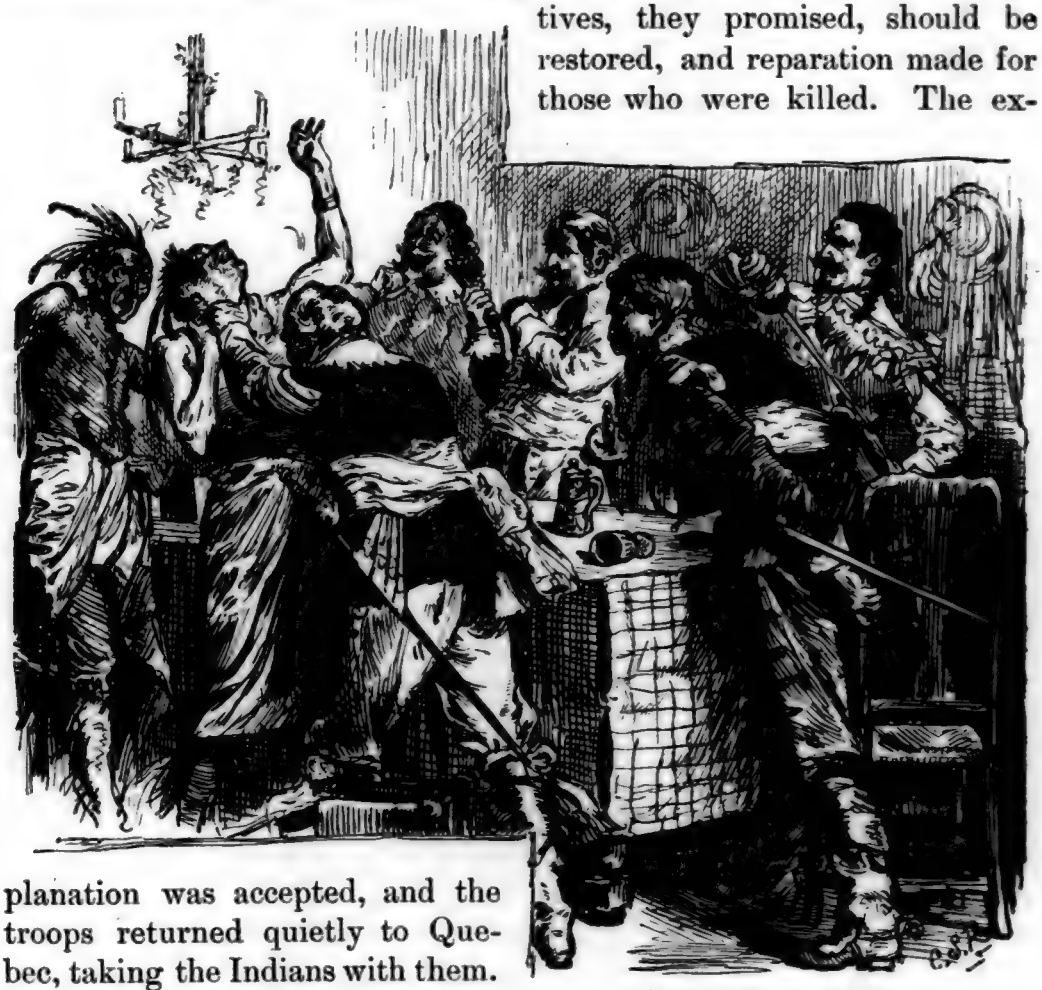
Before any news of the French declaration of war had reached America, however, — indeed, before it had been formally made, — Courcelles, the Governor of Canada, had started from Quebec with some five hundred men, and marched into the Mohawk country, to reduce that powerful tribe to the subjection which several of the other Indian nations beyond the great lakes had already acknowledged. The Canadians did not yet know that New Netherland had passed from Dutch into English hands. But when Courcelles reached Schenectady (which the French called "Corlaer," from a settlement the Dutch commissary Arendt Van Curler had formerly made there), he was met, to his great surprise, by delegates from Albany, who had been sent out, on a report from the Mohawks, to know the purpose of Courcelles' invasion.

Expedition of Courcelles.

Though he already knew the probability of a war between France and England, the Canadian governor did not dare to make any hostile demonstration against the comparatively strong Albany garrison. He declared that his purpose was only to subdue the Mohawks, and the Albany people charitably gave succor to his wounded men, and supplied provisions to his worn-out troops, who had suffered terribly from the long winter's march through deep snows. Beyond a few indecisive skirmishes with his Indian foes, most of whom kept out of sight, he did nothing, and soon after began his homeward march, about the time that news of his expedition reached Nicolls at New York. The Governor, though he expressed some indignation at the inroad, fully approved of the friendly reception given to Courcelles at Albany, and even exerted himself in common with them to bring about a treaty of peace between the French and Mohawks. This was at last so far successful that the Indians expressed their desire for peace to the wounded French left behind at Albany, and letters were sent announcing this to the officers at Quebec, — certain Oneida chiefs undertaking to carry and deliver the important news.

His reception by the Albany people.

French negotiations with the Mohawks.



This was toward the end of March, but the slow messengers did not reach Canada till the beginning of July. Meanwhile another expedition of four hundred men had marched against the Mohawks. But this was now recalled, and messengers were sent by Tracy, the French commander at Quebec, with a treaty to be ratified by the Indians.

This friendly deputation had been gone a few days only when they also were recalled to Quebec. The Mohawks had shown that their offers of peace and friendship meant nothing. A hunting party of French officers had been surprised by an Indian band on or near Lake Champlain, who treacherously murdered

A new French expedition.

several of them, — of whom one was a nephew of Tracy, the Sieur de Chazy, — and had carried off the rest as prisoners. A fresh force of three hundred men started at once to carry destruction into the Mohawk country.

The exasperated Frenchmen had almost reached the Mohawk villages when they were met by an Indian deputation. They begged for peace. The attack upon the hunting party, they declared, was neither ordered by nor approved by their chiefs and people; the captives, they promised, should be restored, and reparation made for those who were killed. The explanation was accepted, and the troops returned quietly to Quebec, taking the Indians with them.

Arrest of Chazy's Murderer.

It was only to find that they had again been overreached by savage treachery and cunning. It was one of these very Mohawk ambassadors who had buried his tomahawk in the brains of Tracy's nephew. The boastful spirit of the savage, aroused probably by drink, led him to avow at Tracy's own table that it was he who split the head of that young officer. He was seized and hanged on the instant, and his companion thrown into prison.

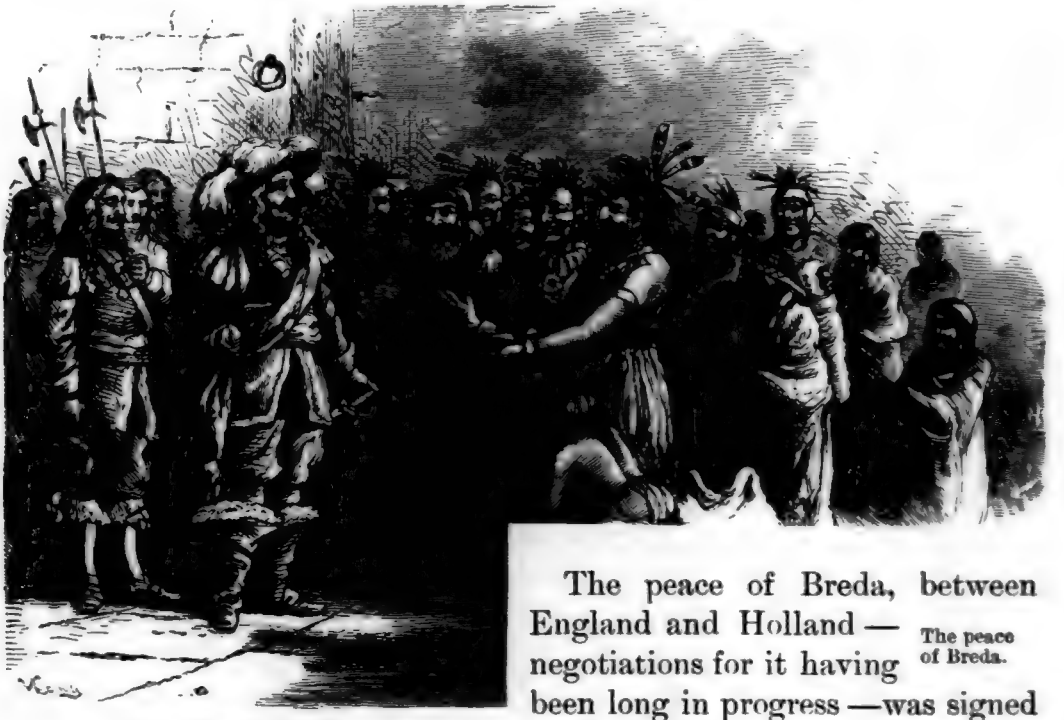
Treachery of the savages.

Tracy, thus repeatedly betrayed and baffled, wrote bitterly to the Albany authorities who had sent him the first overtures of peace,

complaining that they had deceived him intentionally. A few weeks later he set out in person at the head of twelve hundred whites and a hundred Indian allies, passed down Lake Champlain in fleet of boats and canoes, and in the month of October marched through the Mohawk country, burning the villages, which were generally deserted at his approach, and setting up the arms of France in the chief fort. Returning to Quebec, he now sent by his prisoners such terms of peace as he would grant to the tribe, which they had till the next summer to consider.

Tracy's revenge.

In this expedition the French had made no hostile demonstrations against Albany, though the question of doing so had been debated before the march was commenced. Indeed, Nicolls had written in a moderate and friendly spirit to Tracy in reply to his letter accusing the Albany officers, and had told him that he should always prefer the "European interest" as against the "heathen," provided the English possessions were not invaded, as in the case of Courcelles' expedition, at which he again expressed surprise. The Albany authorities also wrote to explain their conduct in the matter of the Mohawk proposals for peace. Tracy answered both letters civilly in the spring, acknowledging that he had judged too hastily. Friendly relations were thus again apparently restored between New York and its northern neighbor.



Correspondence between Tracy and the English.

Nicolls, however, not knowing how far the French were to be trusted, could neglect no precaution, and was kept in a state of constant anxiety. After strengthening the river garrisons, he advised the Mohawks, who sought counsel at Albany in regard to the French terms of peace, that they should stipulate for the destruction of the posts the Canadians had planted along Lake Champlain; and should declare that they (the Mohawks) acknowledged English rule, and would make no peace unless it should be agreed that no more armed forces should enter the English territory. Many were the debates held with the Indians during the winter. The English were earnest in their assurances of protection; eloquent in portraying the advantages an alliance with them would be against a common enemy. But with the Indians, the memory of recent calamity was more vivid than any promise of future good. They recalled their dismantled "castles" and burning villages; their women and children flying to hide themselves in the forest; their stores of corn destroyed or eaten by the French, while they were left to starve; their young men lying dead with only the leaves of autumn to cover them. Then their ears were closed to the words of the English; it was wiser, they thought, to be friends with these terrible Frenchmen who could fight better than an Indian, and were quite as much at home in the woods as he.

English advice to the Indians.

When the summer came a deputation of Mohawk and Oneida chieftains appeared at Quebec, with promises of submission. The war in Europe had recalled Tracy to France, where the services of the brave old man were more needed than in Canada, and Courcelles had succeeded to the command at Quebec. The Indians brought their families with them as pledges of their sincerity, and the new Governor had no difficulty in securing a treaty by which they promised allegiance to the King of France, and consented to accept the teachings of the Catholic priests. It was a treaty meant to be kept, and for many years the English, whose whole northern frontier was now left exposed, had reason to remember it.

French treaty with the Mohawks.

Submission of the Mohawks.

The peace of Breda, between England and Holland — negotiations for it having been long in progress — was signed on the last day of July, 1667; and a separate treaty of the same date closed the war with France. To the colonists in America, whose intercourse with England was seriously interrupted while the war continued, this seemed a sudden as it was a welcome termination of the struggle. To those at home, however, disgusted with the subserviency of their own King to the King of France, the profligacy of the court and the corruption of the government, it brought little satisfaction. Englishmen found no pleasure in a treaty which gave up two colonies in the East Indies, and Nova Scotia in America, and secured in return only New Netherland, the value of which was as yet but little understood. In Northern New England, at least, it was a question, whether such an acquisition was not dearly paid for by the surrender of Nova Scotia,

The peace of Breda.

which brought the Canadian frontier so much nearer to their outlying settlements.

However, the war was over, and immediate danger was past; and if this news was welcomed with pleasure anywhere outside of Holland, it was among both Dutch and English in New York. On the first of January, 1668, Nicolls caused the glad tidings to be proclaimed throughout the province. The English had good reason to rejoice that the question of jurisdiction was now settled by treaty. The Dutch were quite reconciled by the judicious rule of Nicolls to the change of masters; but they heard with satisfaction, that for seven years a limited trade with Holland would be permitted. For this they were indebted to their old governor, Stuyvesant, which made it, no doubt, the more generally acceptable. He had returned in the spring of 1665, to Holland, to answer for his conduct at the time of the surrender, for which the directors of the West India Company were disposed to blame him without measure. But the treaty ended all discussion of that point. Stuyvesant thoroughly understood the wants of the colony, and before returning thither — for he meant it should still be his home — he secured in England this concession of trade for the benefit of the colonists, to whose comfort certain kinds of goods from the Fatherland were indispensable.

News of peace in New York.

Trade with Holland conceded to the colony.

Nicolls had more than once asked that he might be relieved from his government and permitted to return home. After the loss of New Jersey, he seems to have thought the remainder of the grant to the Duke of York hardly worth possessing — much less governing. His request was at length listened to, and Colonel Francis Lovelace was appointed to succeed him.

Nicolls succeeded by Lovelace.

Lovelace was not unfamiliar with affairs in America, and had been both in New Netherland and Virginia. He arrived in New York in the spring of 1668. But he and Nicolls spent the summer in arranging the affairs of the government which was about to be transferred from one to the other; and it was not until the end of August that the freemen of New York mustered under arms and in military order at the lower part of the town, to bid a ceremonious as well as a heartfelt farewell to the Governor, who had ruled them so justly that he left no enemies behind. For four years (his fellow-commissioner Maverick wrote) he had served in the province "with great reputation and honor." He had done "His Majesty and his Royal Highness very considerable service in these parts," indeed, "having, by his prudent management of affairs, kept persons of different judgments and of diverse nations in peace and quietness, during a time when a great part of the world was in warrs." He had

Services of Nicolls.

brought the "several nations of the Indians" . . . . "into such a peaceable posture and faire correspondence" as had never been known before.

On the 28th of August he left New York, bearing with him an address from the people to the Duke, setting forth his good service and the peacefulness of the province, and leaving behind a name which stands preëminent among the royal governors in America for moderation, justice, and wise forbearance. He had spent much of his own means in promoting the welfare of his "station," and had once at least

His departure.

Departure of Nicolls

been obliged to pledge his personal credit to secure funds for the depleted provincial exchequer.

The province had now reached the period most favorable to the growth of a new state. The hardships of the first years of settlement, the trials of early misgovernment, the difficulties of a change of masters, and the perplexities attending a new code of laws, had all been in great measure overcome. The individual citizen felt secure in person and property. Sixty years of slow but constant growth had brought the "village at the Manhattoes" to a size and importance which almost entitled it to its new name of "city"; "the best of His Majesty's towns in America," as Nicolls had called it on his arrival, was beginning to give tokens of its future leadership in commerce — a fact, said its Governor, of which "the brethren of Boston were very sensible."

Progress of the province.

The little sea-port, in this time of its transition under the earlier

English governors, had characteristics not belonging to any other of the colonial towns — peculiarities arising partly from its singular mingling of races, and partly from the reproduction of the manners and customs of another nationality. Looked back upon through two centuries, the life of New York in these first days of its English name has a picturesque quaintness that is sharply marked against the colder background of New England.

Life in the city of New York.

Though a good deal of English energy and activity had already begun to pervade its streets and wharves, yet its customs long remained those which its first settlers had brought with them out of the Dutch fatherland. Its architecture, most of its local names, and even its more common speech, were Dutch. Its domestic and social life was regulated by the customs of Holland. If it was simple and somewhat heavy, it was at the same time healthy, virtuous, and full of kindliness and hospitality. If the stout burghers moved slowly, thought only of the practical side of things, and went to bed at nine o'clock, they also worked steadily, governed their households wisely, and persecuted nobody. If they introduced for a brief period into their new home the law they brought from Holland, of the great burgher-right and the lesser burgher-right, those who received the former were worthy of the dignity, and those who were confined to the latter valued their citizenship and educated their children none the less carefully. The town that now occupied the lower end of Manhattan Island, with its substantial brick houses and its clean streets, had been their work. It is worth while to recall what kind of city they left to their successors as the nucleus of a metropolis.

Topography of the town.

During the decade between 1660 and 1670 New York covered that part of the island which lies below the present Wall Street, which still commemorates by its name the line of stout palisades that there formed the northern limit of the thickly settled portion of the town.[1] A gate in the palisade — the "Land-gate," which the city watchmen shut at nightfall — gave entrance to the wide road called the "Heere Wegh" without and the "Heere Straat" within the wall. This was the thoroughfare that has become the Broadway of the present city, its name preserving a literal translation of the old Dutch title. The "compact and oval" group of houses in which the burghers lived was divided into two nearly equal parts by this street. Altogether there were about four hundred buildings; "the meanest house therein," says one old writer, "being valued at one hundred pounds,"[2] so that they must have been solid and well constructed, "much after the manner of Holland." They were "built

[1] Vol. i., p. 462.

[2] Josselyn's *Two Voyages to New England*, 1672.

with Dutch brick, *alla-moderna*," "covered with red and black tile,"[1] and their gable-ends faced the streets after the fashion of the fatherland.

Solid citizens, men of much consideration, occupied the greater part of this, the town proper, the majority of the poorer class of colonists being scattered on farms or in hamlets outside. Yet there was a distinction between the west side of the Heere Straat, where all the land was good, and the east side, where were all sorts of disadvantages which modern New York long ago covered up, so that they have left no traces but in local names. On the west, from the West India Company's great gardens (which stretched from the Heere Straat to the Hudson, and covered the ground where Trinity Church now stands),[2] to the fort just below the Bowling Green, were the dwellings of the leading men, and their great gardens and orchards that often stretched across all that half of the town and overlooked the water. Here was the churchyard,[3] and the Dominie's house, and the schoolmaster's; and along a part of the river-bank behind the Company's ground were "the locust trees,"[4] shading a path which was a favorite resort for all classes, and an admirable outlook over the river and the bay.

Old House in New York, built 1668.

The region between the Heere Straat and the East River, on the contrary, was covered with marshes and a tangle of water-courses, of which the city of to-day shows no trace whatever. A group of little hills, hardly more than knolls, surrounded a low boggy pasture, — the "Company's Valley," or "the sheep pasture," — which of itself might have made the quarter untenantable for any but true Hollanders. But they contented themselves by partially draining it by a ditch along the Bever-graft (Beaver Street), and one along the upper part of the present Broad Street, — the lower part of which was occupied by something still more characteristic of the fatherland, — a canal from tidewater, extending up to Exchange Place. The busy place was then traversed chiefly by the cattle coming up from the meadow, marking out the future street by their

The eastern quarter.

[4] Ibid.

muddy trail. Between the Heere Straat and the Company's Valley the ground was high; and the boys of New Amsterdam used, in the winter, to bring out their sleds to the "Verlettenberg," and slide down hill directly over the site of the New York Stock Exchange; while in summer they ran down the slope to drive home the cows that fed where the custom-house stands, or collect the sheep that pastured where the vaults of the sub-treasury now undermine the street.

The business centres.

The central point of commercial matters was, however, then as now, in this neighborhood; for Governor Lovelace, to facilitate the business of the town, ordered in 1670 that the bridge over the canal, at the corner of Bridge and Broad streets, should be a meeting-place — an Exchange, or a kind of Rialto — for the New York merchants. There they met every Friday, between eleven and twelve o'clock, to discuss and to trade. Near them were the chief warehouses, — the five stone buildings of the West India Company on the Winckel Street, which ran from Bridge Street to what is now Pearl Street, but what was then a road along the edge of the East River, from which a stout planking defended its outer side. This was "T'Water," or "Waterside;"[1] but some parts of it had different names, from one of which — Paerel Straat — the present title comes. On Bridge Street — so near the "Exchange" as to overlook it — lived many of the merchants and traders; and close by were the most prosperous industries of the little town, the breweries, enough to give their name to a street — Brouwer Straat, now Stone Street, — the tannery, and the shops of smiths and shipwrights.

View of Wall Street.

But though the exchange had its one busy day, the real centre of

[1] Gerard, 36, 37.

bustle and activity was only reached when one had passed the stone house of the Governor, built by Stuyvesant to replace the one formerly used in the fort, and called by the English "the Whitehall" — whence Whitehall Street, — and had come to the Marckvelt — the market-place of the town. This included a large space just east of Whitehall Street, and south of Beaver; and here the farmers, when they had left their wagons ranged side by side, and their horses picketed to graze on the Common (now the Bowling Green), spread out their goods for sale. Some came by boats which they brought up the Broad Street canal and tied to the bridge; others came only so far as the single dock which New York then had, on the East River, a little below the mouth of the canal, where was a smaller market and a weigh-house.[1] Barter went on briskly, but little coin changed hands; wampum and beaver skins were the currency, and their value varied with the supply.

Overlooking all this busy quarter was the fort — Fort Amsterdam under the Dutch, and Fort James under their successors. Bridge, Whitehall, and State streets, and the Bowling Green, now bound the square which it occupied with its imposing, if not very formidable walls. It was "capable to lodge three hundred soldiers and officers;" it had "four bastions, and forty pieces of cannon mounted;" and was "of stone, lined with a thick rampart of Earth; well accommodated with a spring of fresh water, always furnished with arms and ammunition against accidents."[2] Within it was the stone church, — the one which Kieft had built, — with double roof, and a little tower between the two gables at the end toward the bay.[3] The old brick mansion of the Governor also was within the walls, and houses for the garrison. In one bastion towered a windmill; though the chief windmill was probably outside, near the Hudson, about the foot of Battery Place. As a structure the fort lent considerable dignity to the little island town. But as a fortification it was almost ludicrously useless, and its garrison might have been picked off with pistol bullets from the high ground near by. A blockhouse would have been as good defence against the Indians as its elaborate bastions and stone-faced walls; how useless they were against a civilized foe there was evidence enough on two occasions.

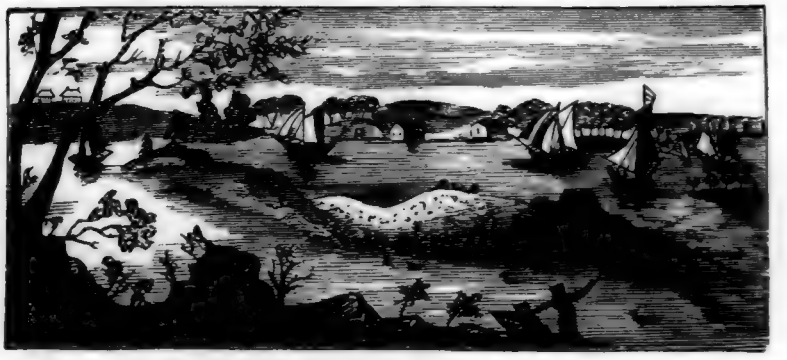
The Fort.

"His Majesty's town of New York," which thus covered the point of Manhattan lying below the line of palisades, was hardly more quaint than its surroundings. Along the Heere Wegh toward the upper end of the Island the houses and bouweries stood close together for a little distance outside the wall. Then came the thickly-wooded and wilder region to the north. The pleasant

The environs of the city.

[1] Gerard, 22. [2] Ogilby. [3] Ibid.

valley-road called the Maagde-Padtje — Maiden Lane; the deep, still pond surrounded by green hills, which lay where the prison of the Tombs now stands; the "Flats" or "Common," covering the site of the City Hall and its park; the "Kissing Bridge" about the corner of Chatham and Roosevelt streets — over which no right minded young Hollander suffered his buxom companion to pass unsaluted;[1] all these were near enough to be favorite resorts of the burghers and their English fellow-townsmen. Then came the farms; and after a long interval of partly cleared land, the "Great Bouwerie" (from which the present Bowery takes its name) of Governor Stuyvesant. Here the old Dutch Governor retired after his return from Holland and England, to take no part in government matters under the English, but to live for a few years in quiet, until, in 1672, he died at the ripe age of eighty, and his towns-people buried him in the little chapel he had built here upon his farm. The Governor's house must have stood near Tenth Street of modern New York, and a little east of Third Avenue. Beyond it stretched swamps, woods, and clearings, interspersed with outlying plantations, over the rest of Manhattan, to New Haarlem, a little village at the junction of Harlem and East rivers.



The Bowling Green.

Hell-gate and East River.

From the Westchester villages along the Sound, the people always reached New York by water, preferring to the woods and marshes, the terrible perils of Hell-Gate. The old descriptions of this dreaded strait show careful observation. "A place called Hell Gate," one calls it; "which being a narrow passage, there runneth a violent stream, both upon flood and ebb, and in the middle lieth some Islands of Rocks, which the Current sets so violently upon that it threatens present shipwreck; and upon the flood is a large Whirlpool, which continually sends forth a hideous roaring, enough to affright any stranger from passing any further, and

[1] Gerard, *passim*.

to wait for some Charon to conduct him through; yet to those that are well acquainted little or no danger; yet a place of great defence against any enemy coming in that way, which a small Fortification would absolutely prevent, and necessitate them to come in at the West end of Long Island by Sandy Hook, where Nutten Island doth force them within command of the Fort at New York, which is one of the best Pieces of Defence in the North parts of America."[1]

Hell Gate (from an Old Dutch Print).

With the nearest part of Long Island, the communication was by a ferry near the present Peck Slip, where such passengers as would cross might summon the ferryman by blowing a horn that hung to a neighboring tree. The ferryman's boat carried its passengers to Breukelen, described as a village with "a small and ugly church standing in the middle of the road;" whence the traveller might turn to the right to go to Gouanes — Gowanus, — to 't Vlacke Bos — Flatbush, — to Rust-dorp — Jamaica, — Heemsteede, and the hamlets and farms beyond.

The Long Island towns.

Along the bank of the Hudson, and kept in communication with the capital by the little shallops of the settlers, or the larger vessels that constantly passed up and down with goods and peltries, were scattered farms and little settlements; while Esopus, Rensselaerswyck, and Albany were garrisoned places — the latter already beginning to present some evidences of rapid growth. To the northwest of Albany, on the beautiful Mohawk, lay the very outpost of civilization, the hamlet of Schaenhechstede — Schenectady, — which had been laid out in 1664 by Arendt van Curler, the former manager of Rensselaerswyck, and who was so popular with the Iroquois that they called the governors of New York "Corlaers" from his name. Regretted by Hollanders, English, French, and Indians alike, he met his death in a storm on Lake Champlain, in 1667, while on his way to Quebec as an ambassador from Nicolls.

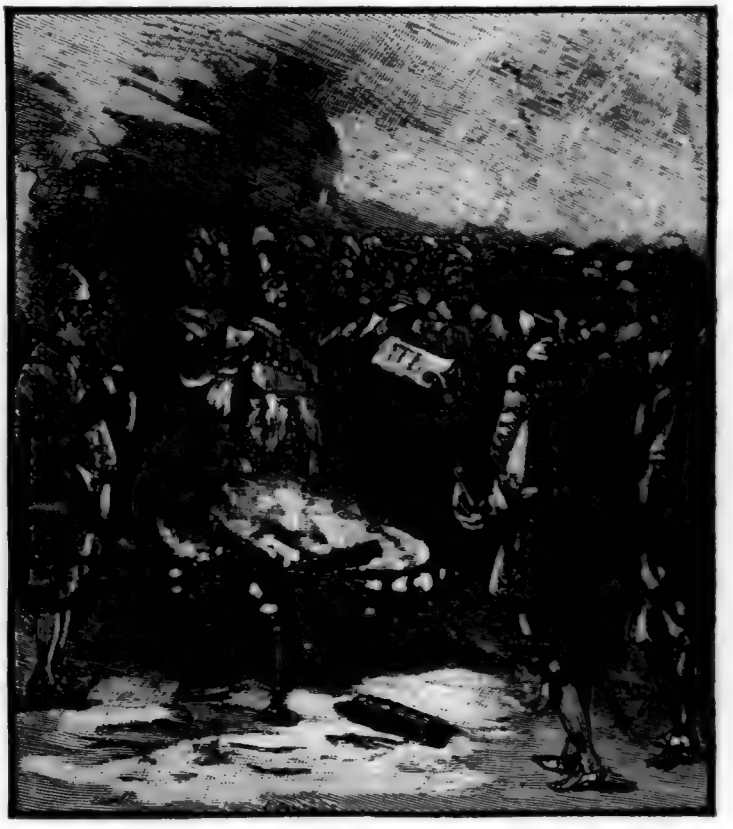
The settlements on the Hudson.

It was long before the English conquest made any essential impression upon the aspect or character of these Dutch towns. The colonists were faithful to the customs, the traditions, and the habits of

[1] Denton's *Description of New York*, 1670.

the Fatherland. Everywhere was the same Dutch picture. It has been often enough described. The Hollander, and his son, and his son's son after him, for generations, sat by the same large tiled fire-place; in his hand was his long clay pipe; the floor about him was strewn with clean sand swept into curves and figures, and the low-studded room scrupulously clean with frequent scouring; his garden was filled with tulips and hyacinths; over the Dutch gable of his house swung the traditional weather-cock; the porch or *stoep* had its benches, where the family collected on summer evenings. Within, in the living room, the settle and straight-backed leather chairs, the great glass-doored cupboard for delft and p ate, the huge linen-chest, the ponderous curtained bed shut into its alcove or closet, replaced in the poorer houses by the mere "banck" or bunk along the wall, — all recalled the furniture of Holland, whence, indeed, most of it had been brought. The pages of Knickerbocker's History rather reproduce than caricature these homes of the early Dutch colonists. Hospitality was boundless; and with the hard work of every-day life was mingled a good deal of jovial festivity. In the winter were the quaint tea-parties for the elder people, and the balls for both young and old at the town tavern — afterward the Stadt-Huys — on Paerel Straat, from five until the watch made their round at nine and warned all to go home. Even the staid city and provincial officials had their times of unbending. "There is good correspondence kept between the English and Dutch," wrote Commissioner Maverick in 1669; "and to keep it the closer, sixteen (ten Dutch and six English) have had a constant meeting at each other's houses in turns, twice every week in winter, and . . . . in summer once. They meet at six at night, and part about eight or nine."[1] And other authorities speak of the "Fiall, Passado, and Madeira," to say nothing of punch, both of brandy and of West India rum, which the Dutch called "kill-devil." There were out-door sports in the day-time on the snow and ice. If they had not the canals of Holland, New Amsterdam was a place of ponds, and the undisturbed waters of the two rivers and the bay were no doubt much oftener covered with solid ice than now. "Its admirable," wrote the English chaplain of the fort, "to see Men and Women as it were flying upon their Skates from place to place, with Markets upon their Heads and Backs."[2]

Domestic life of the Dutch citizens.



In the summer were excursions to gather peaches and strawberries — the trees of the villages of the rich virgin soil about New York being literally borne down with the former fruit, and the ground covered with those that had fallen. As for the strawberries, on Long

[1] Quoted in Brodhead, ii., 153.

[2] *A Two Years' Journal in New York*, by Charles Wooley, 1679.

Island there was such abundance "that the fields and woods are died red: Which the country-people perceiving," says an old writer, "instantly arm themselves with bottles of wine, cream and sugar, and, instead of a coat of Male, everyone takes a Female upon his horse behind him, and so rushing violently into the fields, never leave 'till they have disrob'd them of their red colours, and turned them into the old habit."[1]

Contrasting the simplicity, the contentment, the easy-going industry, and the love of harmless amusement in these Dutch communities with the restless character which belonged to the Southern colonies, and with the bitter theological and political controversies which shook those of New England, it is plain that New York must have been at this time the happiest, though not the most progressive of the American provinces. Lovelace's rule was judicious and for the most part quiet. But some disputes between the English and Dutch at Albany called for the sending of commissioners thither in the spring of 1670, and their report was followed by the dismissal of the English commander, Captain Baker. There was some discontent in the Long Island towns, several of which refusing to contribute to renew the New York fortifications, Lovelace ordered their votes to be publicly burned. This arbitrary measure, however, was only a temporary disposition of a question which was a source of subsequent trouble. On the northern and northwestern borders of the province, the movements of the French and their great progress in the exploration and occupation of the country also gave the Gov-

Lovelace's administration.

[1] Denton's *New York*.

ernor some uneasiness, though less, perhaps, than they caused in New England. But there was neither opportunity nor excuse for action in the matter, and he contented himself with reassuring the Albany people that it was very improbable that when there was no war in Europe, Courcelles would begin one in America. On the whole, the few disquieting matters of Lovelace's administration may be said to have happened on the frontiers, while at the capital all went well, and the province daily grew in strength and numbers.

Recommendations from England to be prepared against all attacks, which reached Lovelace in February, 1672, were followed during the next month by explicit instructions from the King to erect an additional battery in New York, and to see that ships going to Europe should sail in companies for safety. Excepting vague rumors, this was the first news that reached the colony, that war had broken out again between England and Holland.

New complications in Europe.

Charles II. had shamelessly abandoned the famous Triple Alliance by which, in 1668, the plans of Louis XIV. had been thwarted, and England had joined with its Dutch rival in one of the strongest combinations ever formed against a European power. The league had been entirely successful in its objects, and was universally popular; in the House of Commons it had been called "the only good publick thing that hath been done since the King come into England;"[1] yet Charles's heart had never been in it, nor had he ceased for a moment to treat secretly with the French king. In May, 1670, he concluded with Louis the infamous treaty of Dover, according to which, in consideration of large subsidies and military aid from France, Charles was to declare himself a Roman Catholic, and use his utmost endeavors to change the "state of religion in England for a better;"[2] while France and England were to join in a war against Holland. The opposition of Parliament was the only remaining bar to the carrying out of the latter design, which was to precede the fulfillment of the other; but a way was found by which Parliament was deceived. A large appropriation was asked of it, ostensibly to strengthen the fleet for the purposes of the Triple Alliance; and no sooner was this subsidy obtained than parliament was prorogued (April, 1671). Charles, with characteristic effrontery, openly declared that he meant to keep it apart for nearly a year. Then, for the sake of additional supplies, followed the iniquitous measure of closing the exchequer. The King's object was attained. France and England declared war against the Netherlands on March 17, 1672, and the first battles, both by sea and land, followed soon after. In the first naval

conflict, in the Solebay in Suffolk, where De Ruyter attacked the French and English ships, Richard Nicolls was standing near his master, the Duke of York. In the midst of the action he was shot down by a cannon ball from one of the Dutch fleet.

The news of the war, and the explicit instructions that came with it, might well excite the anxiety of Lovelace. But he did not foresee — indeed he had no reason to look for — the serious consequences that were to follow to his own province. The remainder of the year 1672 passed away quietly enough, but in the spring of 1673, when the Governor was temporarily absent, his lieutenant, Manning, sent for him in haste to come back to New York, for a rumor had reached the town that a Dutch fleet was already on its way northward from the West Indies. The Governor thought fit to "slite" the intelligence, and characterized it as "one of Manning's larrums."[1] But he nevertheless concentrated a considerable force at New York, only to be dispersed again when the rumor came to nothing. Only about eighty men were left in the dilapidated Fort James. The blow was coming, and was to fall upon the English with even more suddenness than theirs had fallen on Stuyvesant nine years before.

The Dutch fleet before New York.

On the seventh of August, 1673, twenty-three Dutch ships, carrying sixteen hundred men, under command of Cornelis Evertsen and Jacob Binckes, anchored in the outer bay of New York, just below Staten Island. The fleet was last from Virginia, where it captured a number of English merchantmen, some of which were burnt, and others added to their own force. The ships were in need of wood and water, and would have run, could pilots have been procured, into Delaware Bay. It was accident, therefore, rather than design, which took them to New York; for though they were assured by one of their English prisoners that the place was incapable of defence, another declared that there were a hundred and fifty guns mounted at the fort, and that five thousand men could be mustered in three hours. The necessity of recruiting compelled the Dutch to seek the nearest port, and they entered the bay, "rather afraid," says a contemporary writer, "of receiving some disturbance from New Yorke than giving any to it."[2]

The Dutch on shore hailed the arrival of their countrymen with delight, and soon made them acquainted with the real state of things. The fort was garrisoned by only seventy or eighty men: the guns were either dismounted or their carriages rotten; the Governor was absent, and no efficient commander was in his place; and the people generally were discontented with English rule. Encouraged by such

[1] Manning's answer to charges against him. *Documentary Hist. of N. Y.*, vol. iii., p. 57.

[2] Letter of Richard Wharton (contributed by George H Moore), *Hist. Mag.*, Second Series, vol. i., p. 297.

intelligence, the fleet was taken within the Narrows and anchored off Staten Island.[1]

Attempts at defence.

Manning, meanwhile, was not idle. Messengers were hurried off to recall Lovelace; orders were issued to the military captains of the towns to hasten to New York with their companies; the drums were beaten through the streets for volunteers; the smith was set to work to repair the arms; the commissary was sent out to gather provisions to victual the fort in case of siege; and to gain time, a deputation was dispatched to the fleet to demand the meaning of the approach of this hostile force. Manning — it was afterward granted, when courts sat in judgment of his acts — was not a coward, and, no doubt, he did all that any man could do under the circumstances in discharge of his duty. But his efforts were in vain; there was not time for the Governor to get back from Connecticut; the militia of the country towns refused to rally, even where — as was the case in only two or three instances — their captains responded to the summons from Manning; the drums stirred no martial ardor in the breasts of the citizens; the labors of a single smith on firelocks could avail but little in a fort where nobody would come to use them, where six only of the large guns were on platforms, and to the whole there were only four sponges and four ladles. Even his attempt to gain time by sending a flag to the fleet probably only betrayed weakness and fear to the enemy. The next day their guns were frowning upon Fort James from as many ships as the stream in front could conveniently float.

New York surrendered.

To the repeated demand for surrender Manning could only ask a little more time. The Dutch commanders would give at last but thirty minutes, and turned over an hour-glass to mark the time. As the last sand ran out they opened fire, and some in the fort were killed and some wounded. Any defence, of course, was utterly hopeless, though the fire seems to have been returned; but at the same time a force of six hundred Dutch landed on the banks of the Hudson in the rear of the present Trinity Church in Broadway, and moved to the assault. There was nothing left but immediate capitulation. Just as the sun went down the Dutch troops marched into the fort out of which Stuyvesant had stumped nine years before at the head of his men. How happy would he have been could he have lived to see that sight!

New names and other changes.

Again with a change of rulers came a change of names. The province of New York was once more New Netherland; Fort James received its third designation, and became Fort William Hendrick, in honor of the Prince of Orange; the town itself, a few days later, was declared to be for the future New

[1] Colden's Letters. *N. Y. Hist. Soc. Coll.*, 1869.

Orange, instead of New Amsterdam, as it had been under the rule of the West India Company. Mayor, aldermen, and sheriff, gave place in name as well as officially, and burgomasters, schepens, and schouts, were again hailed as magistrates. Dutch supremacy was asserted, and Dutch influences were again felt to be paramount in all the relations of society.

But the affairs of every-day life soon resumed their usual channels. Personal hostilities, perhaps, may have seized such an opportunity for their indulgence, but now, as nine years before, there seems to have been little disturbance of the neighborly harmony and friendship existing between the two peoples. Here, indeed, was then no large

The Dutch Ultimatum.

city ; no dangerous class was hidden away in dark cellars and obscure attics, to swarm in unexpected numbers, ready for bloodshed and plunder at the first sign of temporary anarchy. But, nevertheless, the capture of New Amsterdam by the English, and the recapture of New York by the Dutch, are among the most remarkable instances in history of peaceful revolutions. There was the confiscation of public property, and its conversion to the use of the victorious party, which, if not absolutely necessary, is not surprising. But the private suffering seems to have been hardly enough to be counted as an act of war. It is doubtful if any private property was molested, except that the houses of Lovelace and Manning were plundered ; and to this — which was done by some disorderly soldiers — a stop was speedily put. Thus in those times as in ours, it seems almost to have

been accepted as a decree of Providence that New York should always be open to occupation by any alien race that thought it worth its while; and that any rule should be acceptable to its citizens, provided there was no personal outrage, and that robbery should be disguised under the form of municipal government.

The province again in Dutch possession.

The Dutch had retaken New Netherland; and the two commanders who had accomplished the conquest, after they had appointed Anthony Colve to be temporary governor, and issued provisional instructions to him pending advices from the Hague, leaving him two ships of war for protection, sailed away at the end of September with the two departments of their fleet — Evertsen for the West Indies, and Binckes for home. Colve issued provisional instructions to his new subjects. The towns on the Hudson had submitted without resistance to a small force sent against them; New Jersey and Delaware had quietly acknowledged, through delegates from the chief towns, the Dutch restoration. The six towns at the western end of Long Island had done the same; others had submitted upon being sharply summoned; and finally, even those at the eastern end were forced to yield. Lovelace imprudently ventured back to New York after some parley, and arrived there three days after the surrender. He was kindly treated, and not held as a prisoner by the commanders and their council of war; but though the hand of military law spared him, he had been only three days in the town when he was arrested for debt; and during all the rest of the Dutch negotiations he remained virtually a captive among the new masters of the province. A few days before their departure, the commanders, after some consideration, issued a decree confiscating all the property they had formerly attached; and the unfortunate Lovelace, thus stripped of his last guilder, was quietly told that if he would now pay what he owed, he would in six weeks be permitted freely to leave the country. But though the property of his subordinate officers and of some other Englishmen was taken, and the right of confiscation against all Holland's enemies in America was assumed, it was declared that "for sufficient reasons" that of "actual inhabitants" of New England, Virginia, and Maryland, might be for the present exempt.

Confiscations of property.

Administration of Colve.

At the end of September Governor Colve found himself left in undivided authority over the mixed population of New Orange; the "Achter Col" (such was the new name of New Jersey); the Hudson River villages, with "Willemstadt" (Albany), and Esopus; Westchester and Long Island; and all the rest which had made up the ancient domain of New Netherland under his Dutch predecessors. He might well assume the state of "a coach and three horses;" yet he and his compatriots, exultant as they

were over the restoration of its lost jewel to the Fatherland, trembled when they thought of their weak condition, surrounded by and mingled with the enemies over whom they had achieved their victory. Reinforcements, which the schout and schepens of New Orange had already written for, must be sent out at once, and Holland must take them under its especial protection; for it was not to be expected that the few thousands of subjects which the States had in America could long withstand the anger and the retaliation of the French and English, by whom New Netherland was surrounded. Secretary Van Ruyven, sailing for home in September, had been charged with these urgent appeals; but his vessel, having almost suffered shipwreck, had to put into Nantucket, whence the secretary, to the surprise and disappointment of every one, made his reappearance in New Orange during the following November. The news he carried was destined to reach Holland by other hands. Would it arrive in time to secure the province from the possibility of English recapture?

News of the recapture received in New England.

New England was naturally both indignant and alarmed to hear that the Dutch were again established on its borders. The commissioners of its colonies met at Hartford early in September, less than a month after Evertsen's easy conquest, and passed a recommendation that each member of the New England confederation make preparations for defence against a possible Dutch attack. Nor were those wanting who urged upon the meeting a more aggressive policy. But want of union, and a natural disinclination for war, prevented. Massachusetts refused to take advantage of the offer of an English captain, whose ship lay at Boston, to retake New York with no other aid than that of supplies and a reinforcement. Unless the conquered region could be annexed to her own territory, that colony did not care to engage in any efforts for the recapture of New York. Plymouth was indifferent in the matter, so long as freedom from Dutch interference with her coasters was secured. Connecticut resolved to do what she could to retain eastern Long Island, at all events. The authorities at Hartford sent a threatening letter to Colve, by a special messenger; and at the same time two commissioners were appointed to visit the island, ascertain the state of affairs, and warn such Dutch authorities as they might find there of the possibility of extreme measures. To the letter Colve replied sharply that it was "impertinent and absurd," and that he could hardly credit its coming from Winthrop. The commissioners were met off the Long Island coast by three officers whom Colve had previously sent out to visit the eastern towns, and receive their submission. Treating each other civilly, the two parties of commissioners went together to Southold,

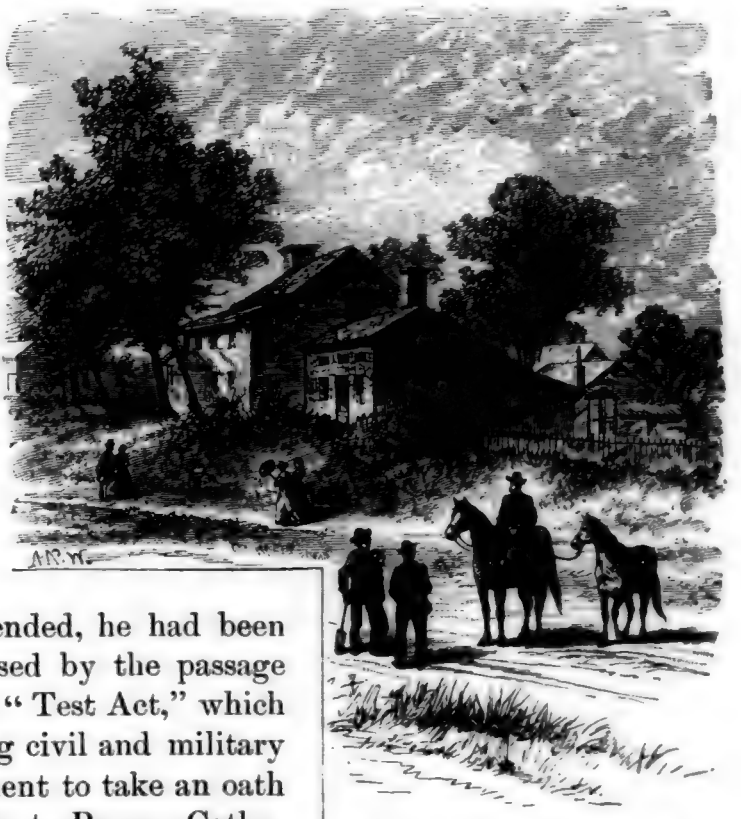
Conflicts between the Dutch and English authority.

where the Englishmen triumphed in so far as to find the inhabitants almost unanimously in their favor, so that Colve's men retired without accomplishing anything. The Connecticut messengers returned to Hartford and reported, and some volunteers were sent over to help the Long Islanders. But no conflict followed, and the whole matter went over quietly until it was swallowed up in the more important events which were soon to follow.

So also passed a momentary prospect of direct conflict with Massachusetts, excited by Colve's prompt confiscation of four Massachusetts coasters, in retaliation for the carrying away of the wreck of Van Ruyven's vessel from Nantucket, as the prize of an English privateer. Massachusetts fitted out a war vessel, and made some preparations for reprisals. But she did nothing more; nor did Plymouth, in spite of the urging of Connecticut. Rhode Island — not belonging to the New England confederacy — looked after her own defence. The year 1673 closed with the rivals in America occupying this position of passive hostility; but it was threatening enough to the Dutch at New Orange to make them long the more anxiously for aid from home.

Rumors of the cession of New Netherland.

Once more, as in the past, the course of events in Europe was to decide the fate of New Netherland without the knowledge of its people or its neighbors. During the first few days of May, 1674, while Colve and his officers were hard at work at the labor which had chiefly occupied their minds throughout the spring — the strengthening of the town against a possible "New England army," — two men came to Manhattan from Connecticut, despite an edict forbidding the coming of New Englanders without passports, and brought the first rumor of a treaty restoring the Dutch province to the English crown. So enraged were the citizens of New Orange at the mere report, that they arrested and punished these bearers of evil tidings. They collected in excited groups in the streets, cursing the rulers at home who would give up so readily the greatest colony of the Fatherland. One of the messengers, returning to Connecticut, declared there that the New Netherlanders vowed in their wrath that no demand or authority "of the States or Prince" should make them surrender again; but that they would keep their territory "by fighting, so long as they could stand with one leg and fight with one hand."



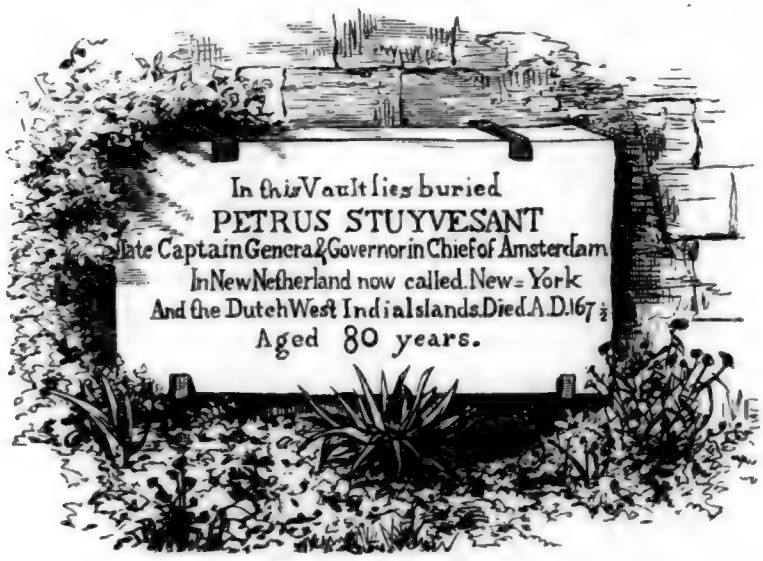
New Netherland again given up to England.

This warlike ardor cooled with time, however, and the rumor proved too true. On the sixth of March, the treaty of Westminster had been proclaimed at London, and at the Hague, whereby New Netherland was surrendered to England. On the eleventh of July, the Governor gave official notice at the Stadt Huys

that peace was made between England and Holland, and that on duly authorized demand he must give up the province over which he had ruled for less than one short year.

The events which brought about the Peace of Westminster are familiar passages of English history. In the hot conflict between King Charles and his party on the one hand, and the Commons and people of England on the other, over questions that were believed to involve the safety of Protestantism in the kingdom, Charles had been for the moment worsted. At first forced into recalling his "Declaration of Indulgence," whereby all "penal laws on matters ecclesiastical against whatever sort of Nonconformists or recusants" were suspended, he had been at once closely pressed by the passage in Parliament of the "Test Act," which compelled all holding civil and military office under government to take an oath which was impossible to Roman Catholics. This compelled the resignation of the Duke of York as Lord High Admiral of the fleet, of Sir Thomas Clifford as a cabinet minister, and of many others. Some of the cabinet would have carried resistance to this act to any length; but the King, once driven to yield, refused his support. He only turned savagely upon his chancellor and most able minister, Lord Shaftesbury, who had aided the Parliament, demanded from him the seals, and so drove his strongest adviser into a determined opposition. The effect of this was quickly seen in the increased bitterness and strength of the Protestant measures now pressed by Parliament. The war against the Protestant Prince of Orange and his nation, which even in a military point of view had been unsuccessful, grew more unpopular every day. Defeated at home by the masterly use made by Shaftesbury of the opposing elements, discouraged by events abroad, and unable to

Events in England.



Old House, Southold, Long Island.

sufficiently repair his exhausted resources even by his old shameless means of a resort to France, Charles was driven into a third surrender. He adopted a policy of concession and conciliation at home; and he consented to make peace with Holland.

New York finally under English rule.

These were the events which had unexpectedly reacted on the fate of the Dutch province in America. New York was to remain in English hands from this time forth; and though virtually winners of a peace on their own continent, the Dutch were to give up for it their only stronghold on this. A new patent to the Duke of York was issued in June, 1674. He appointed as his governor Major Edmund Andros, an officer of distinction, whom the King had already in March appointed to receive the surrender of New Orange under the treaty; and on the first of November the British frigates *Diamond* and *Castle* made their appearance at the anchorage off Staten Island.

On the ninth of the month, Colve, who had asked a week's delay to make all final arrangements, absolved the city officials, in solemn conclave at the Stadt Huys, from their oaths of allegiance to Holland; and on Saturday, the tenth, "the New Netherland and dependances" were formally given over to "Governor Major Edmund Andros on behalf of His Britannic Majesty." The English names were restored, the English laws reëstablished, as they had been under Nicolls and Lovelace. A great number of the provincial and local officers were reinstated; the Mayor's Court was again convened at New York; the routine of public business and private life went on as before. The few months of Dutch occupation had hardly left a trace on the government which Nicolls had been the first, since the settlement of Manhattan Island, to bring into a really smooth, continuous course of prosperity.

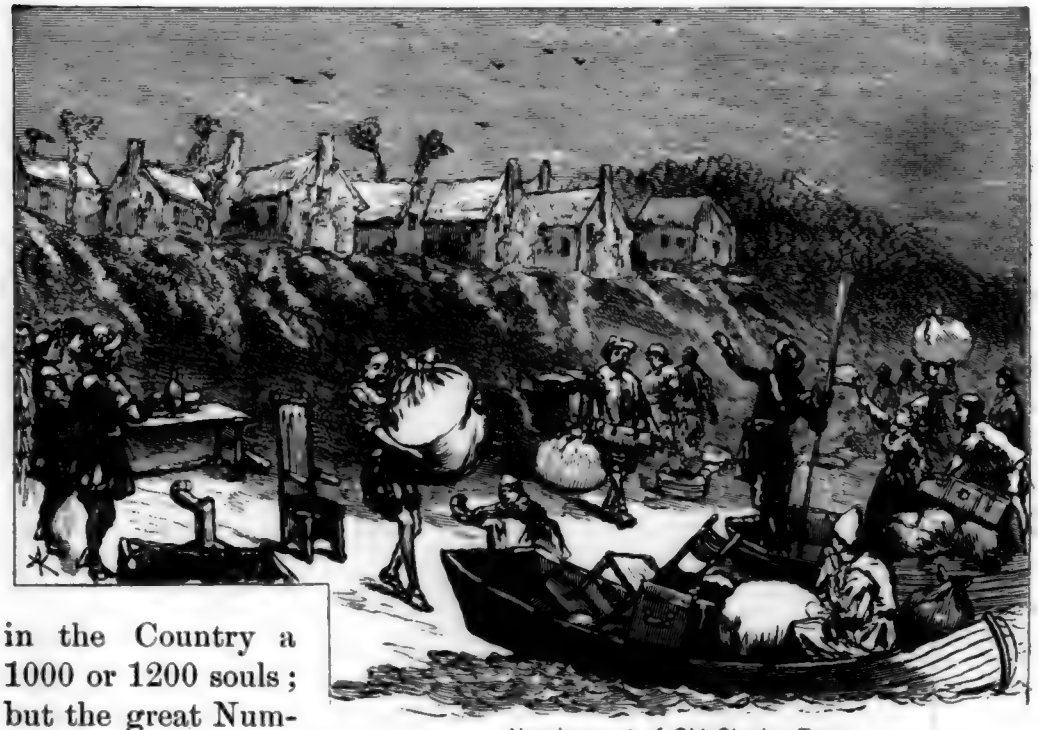
Tomb of Stuyvesant

CHAPTER XV.

NORTH AND SOUTH CAROLINA.

CHARLESTON FOUNDED. — WAR WITH THE INDIANS. — GOVERNOR MORETON. — JOSEPH BLAKE. — LORD CARDROSS'S SETTLEMENT AT PORT ROYAL. — PIRACY AND SPANISH HOSTILITY. — CARDROSS'S COLONY DESTROYED. — SOTHEL DEPOSED AND BANISHED FROM ALBEMARLE. — HE LEADS A REVOLUTION IN THE SOUTH. — HIS CAREER. — THE COLONIES UNDER ONE GOVERNOR. — INTRODUCTION OF RICE. — JOHN ARCHDALE GOVERNOR. — PROSPERITY OF THE COLONIES UNDER HIS RULE.

WHILE northern Carolina had been passing through a time of such disturbance and adversity, the people at the south had enjoyed a period of quiet and comparative prosperity under the skilful rule of Joseph West. Not that the settlements at Cape Fear and Ashley River were free from the troubles which disturbed every American colony — differences of religion, and feuds between the Puritans of New England and the Royalists who had come out under the Proprietors' patronage; — but these were held in check by the Governor, and were little interruption to the general course of affairs. There was a steady flow of emigrants from England; and Huguenots from France sought a refuge from persecution at home in a region whose pleasant climate had for them a peculiar attraction. In April, 1679, the King gave a token of favor to the Proprietaries and the new colony in sending out at his own expense two vessels with a band of Frenchmen skilled in vine growing and silk-producing, who brought with them vine-slips and silkworms' eggs for the establishment of those industries.



The Southern Colonies.

During the years that had passed since their first settlement, the Ashley River people had not failed to see their mistake in settling so far up the stream. Some, indeed, seem not to have made this error at all; for the old records speak of people both from the Ashley settlement and from Cape Fear, "resorting to Oyster Point" from the earliest times of the colony; and, doubtless, dwellings had been built there at the same time that the town had been founded on the more inland bluff. This "Oyster Point" was at the junction of the Ashley and Cooper Rivers; and the tendency to resort thither had grown so strong by the beginning of 1680 that the authorities yielded to it,

as they should have done long before. The old town was abandoned altogether in the spring of that year, and the foundations of a new Charles Town — the present city of Charleston — were laid on what had from the beginning been pointed out by nature as the proper site for the colonial port.

Charleston founded.

The new town was judiciously planned. A visitor, in the first year of its existence, described it as "regularly laid out into large and capacious streets, which to Buildings is a great Ornament and Beauty. In it they have reserved convenient places for Building of a Church, Town House, and other Publick Structures, an Artillery Ground for the Exercise of their Militia, and Wharves for the Convenience of their Trade and Shipping. At our being there was judged

Abandonment of Old Charles Town.

in the Country a 1000 or 1200 souls; but the great Numbers of Families from England, Ireland, Berbadoes, Jamaica, and the Caribees, which daily Transport themselves thither, have more than doubled that Number" [that is, between the visit, 1680, and the publication, 1682].[1] The extreme unhealthfulness of the place soon passed away, a "fortunate revolution" which "men of discernment . . . . attributed to the dispersion or purification of the noxious vapour by the smoke issuing from the numerous culinary fires."[2]

Contemporary testimony does not give the most favorable account of the discipline and manners which prevailed in the promising new

[1] *A Compleat Discovery of the State of Carolina*, by T. A., Gent., London, 1682.

[2] Chalmers.

town; and the looseness and turbulence which ruled there, though not of a kind to make political disturbance, brought upon the colony an evil which for a time threatened seriously to check its progress. "The most desperate Fortunes first ventured over to break the Ice," explains one chronicler, in accounting for the character of his fellow-settlers, "which being generally the Ill-livers of the pretended Church-men, altho' the Proprietors commissionated one Colonel West their Governour, a moderate, just, pious, and valiant person; yet having a Council of the loose principled Men, they grew very unruly, that they had like to have Ruin'd the Colony by Abusing the Indians, whom in prudence they ought to have obliged in the highest degree."[1] It was the usual story of abuse in trade, the taking of the Indian women, and the oppressive punishment of trifling offences often brought about by rum or ignorance; and the Westoes, the tribe of the neighborhood, were a warlike people, and not slow to retaliate. After a series of petty raids, actual war broke out with them in 1680, — the first year of the new seaport.

Character of the Charleston people.

An Indian sent into Slavery.

Fortunately for the colony, it was comparatively strong, well-armed, and, above all, well led by West; and the war was a vigorous and short one, the savages gladly making peace within a year after its beginning. But the conflict had worse results than the actual fighting. To obtain the money for carrying it on, West and his Council had adopted the plan of offering a price for every In-

War with the Indians.

[1] *A New Description of That Fertile and Pleasant Province of Carolina*, etc. By John Archdale, late Governor. London, 1707. In *Carroll's Historical Coll.*, vol. ii.

dian captive, and then selling all who were brought in to West Indian slave-traders, who again disposed of them profitably in the Islands.[1] The war had thus changed, before its close, from one of defence to one of pure greed. The colonists gained money with every captive they sold to the authorities; the authorities, with every one they sold to the traders; and this flourishing traffic went on uninterrupted until it was brought to the notice of the Proprietors, who for once interfered promptly and successfully.

Sale of Indian prisoners suppressed.

Expressing their strong disapprobation of "this barbarous practice," [2] and sharply pointing out the necessity of conciliating the Indians by just treatment, they gave strict orders against the kidnapping of any savages, now that peace had been concluded, and appointed a commission of four members to try all causes of dispute, and to do full justice to any on either side who might wrong the other.[3] But these measures were not enough. The Council openly supported the continuance of a traffic which had proved so profitable; and even West, contrary to his usual moderation and wisdom, opposed his superiors in this. The enemies he had made among the turbulent but influential church-party in the colony, took advantage of the attitude he thus assumed to turn the Proprietors against him; and in 1683 he was removed by their order, after nine years of successful administration, and Joseph Moreton was appointed Governor of Southern Carolina in his place.

Moreton Governor. New difficulties.

Moreton not only had the old dissensions to quiet, — in attempting which he had little success, — but he was almost immediately confronted by new troubles. West had held a "parliament" at Charlestown in 1682, which had made a few disciplinary laws, and organized a militia; and soon after his appointment Moreton called a similar one, to organize further the affairs of the province. The Proprietors had now made Charleston the capital of Southern Carolina, or at least had ordered elections and parliaments to be held there; and all the southern part of the province had, in 1682, been divided into three great counties, — Craven, including much of that formerly called Clarendon; Berkeley, the region immediately surrounding Charleston; and Colleton, the country to the south, extending to the region about Port Royal. It had been ordered that the lower house of the parliament — for there was still an attempt to make that body somewhat resemble that prescribed in the "Grand Model" — should consist of twenty members; and it was with regard to the election of these that the colonists met the first of a long series of legislative difficulties.

It is evident that a large number of scattered settlers had by this

[1] Chalmers. Oldmixon. [2] Chalmers. [3] Oldmixon.

time established themselves along the coast to the southward, or inland at some distance south and southwest of the capital. For although Craven County was considered to have so few inhabitants that it was not worth while for it to elect deputies at all, yet Colleton County was allowed to choose ten of the twenty members of the new Parliament, the rest representing Berkeley. It was this allotment which caused the trouble. The Berkeley people would not permit their scattered neighbors to have a delegation equal to that of the crowded town, and quietly took the matter into their own hands by choosing themselves all the twenty members. There may have been other reasons for this action than the alleged one of inequality of population. The people of the inland country may not have been willing to support the people of the port in the traffic in Indian slaves, — the retaliation of the savages having naturally more terrors for them than for the inhabitants of a town. Whatever was the cause, the usurpation of power by the capital was successful; the twenty Berkeley delegates met, and made laws which were approved by Moreton and his Council. Nor would they disperse at the command of the Proprietors, who indignantly ordered them to do so, and not to meet again until they should have obeyed instructions. Not this Parliament only, but subsequent ones, seem to have utterly disregarded the proprietary orders; until at last, apparently in despair, the Proprietors gave the Berkeley people their own way, and the one-sided system of representation continued till the inhabitants of other counties grew numerous enough to take the matter into their own hands, and put a stop to it.

Choosing delegates to the Parliament.

Success of the Berkeley delegates.

The laws passed by the Parliament were of little moment, save one following the example of Albemarle by suspending "all prosecutions for foreign debts." So indignant were the Proprietaries at the passage and signature of such an Act, — so "contrary to the King's honor," being "in effect to stop the course of justice," — that they ordered all officers to be "displaced, who had promoted it." [1] It was probably for this, among other things, that Moreton, like West before him, was made a scapegoat. He seems to have tried honestly to carry out the Proprietors' wishes, — to have checked the Indian slave traffic, and to have made himself unpopular on this account; while there is no evidence that he was in any sense a "promoter" of the acts of a Parliament which was too strong for him. Whether he resigned because of popular enmity, or was deposed by his superiors, he ceased to govern within a year after his appointment, and the Council made West governor again until a new officer should be sent out from England.

Legislation favoring debtors.

West again Governor.

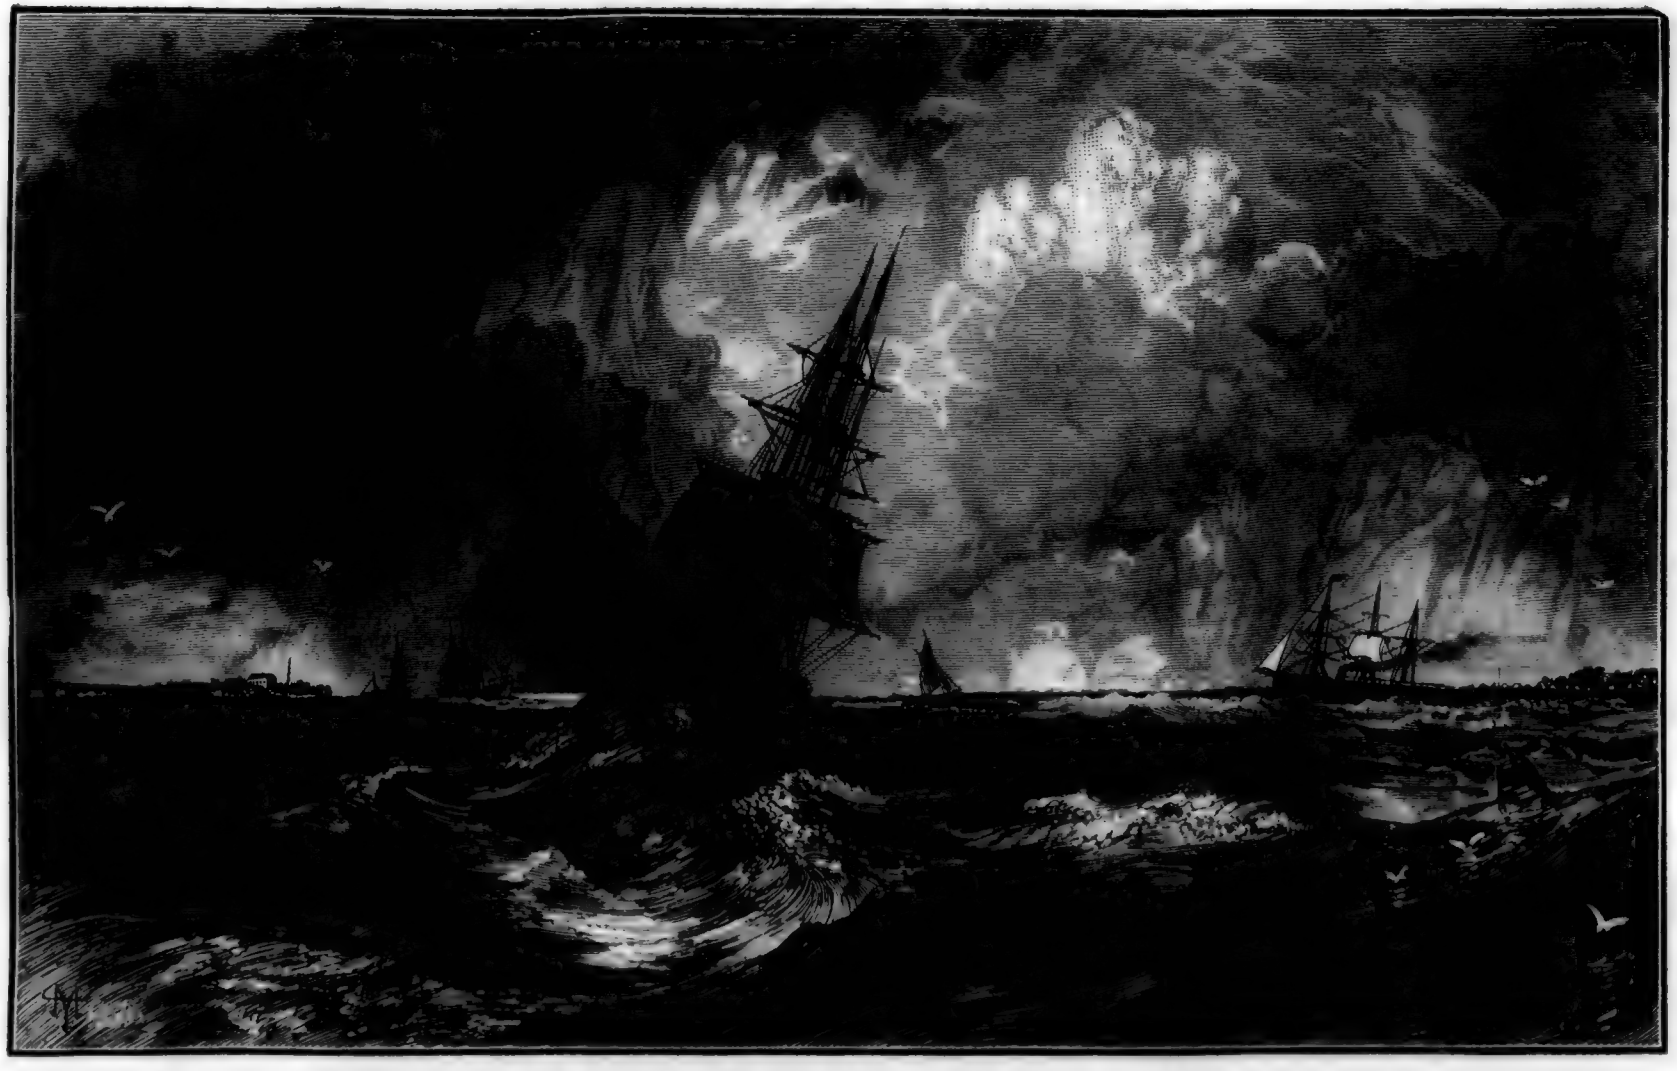
[1] Chalmers

Meanwhile the colony received additions, promising better for the future than did the original settlers. In 1683 Joseph Blake, the brother of the famous English admiral, and a dissenter of great influence, led a new company to Southern Carolina. They were of his own way of thinking — men who believed "that the miseries they endured" in their native Somersetshire "were nothing to what he [Blake] foresaw would attend the Reign of a Popish successor."[1] "Many honest substantial Persons" were among these emigrants, who must have found themselves strangely at variance with the turbulent people of Charleston, in and near which they seem to have made their homes. A company of Irishmen, who came out about the same time under the leadership of one Ferguson, and who "instantly mingled with the mass of the inhabitants," were more welcome.

Arrival of new colonists under Blake.

During West's brief second administration, the county of Colleton also received an important accession of good colonists — a company of Scotch Presbyterians who, under the leadership of Lord Cardross, afterward the Earl of Buchan, made a settlement at Port Royal, in 1684. They understood that their agents had secured beforehand from the Proprietors in London the same rights and privileges that had been granted to the government at Charleston — that they were to be an independent colony. But they found on such a question the people of the country more powerful than the Proprietors, and that assent to so divided a jurisdiction would never be given. Cardross left the colony in disgust, but his companions were compelled to accept a condition which they had not the means to escape from nor the strength to resist.

Lord Cardross's settlement at Port Royal.



During these two years governors — Kyle, Moreton, West, Quarry — followed each other in rapid succession, none of them remaining long enough in office to influence essentially the history of that period either for good or evil, or influencing it only so far as they fell in with the temper of the times though without controlling it. The western Atlantic, and especially the region about the West Indies, had been for years infested with adventurers who had in most cases begun as privateers, but who continued their depredations after the wars had ceased. They preyed chiefly upon Spanish commerce, and while this assured them of immunity from the English government, they were certain of the sympathy if not the coöperation of the southern English colonists, to whom fear of Spanish incursion was familiar.

Rapid change of governors.

Piracy.

The Spaniards had not abandoned their ancient claim to all the territory which the English had included in the region of Southern

[1] Oldmixon.

HILTON HEAD, AT THE ENTRANCE TO PORT ROYAL, S. C.

Carolina. In 1670 an expedition started from St. Augustine to root out the settlement just made on Ashley River; but, having gone only so far north as Stono Inlet, returned on learning that the English were prepared to receive them. Threats of a more serious invasion were often made. In Charleston there was a hearty welcome for Buccaneers who preyed upon Spanish commerce. The port was a convenient recruiting station; the pirates were lavish of their ill-gotten gains; the love of adventure

Spanish hostility creates sympathy for the Buccaneers.

Pirates in Charleston.

appealed to the lawless; the hope of the capture of Spanish ships laden with treasure excited the cupidity of the more sober-minded. Piracy of this sort did not want for encouragement directly from the reckless sailors about the wharves, indirectly even from governors and councils.

Not only the Proprietaries but the King took immediate notice of

this spirit in Carolina, as soon as it was openly manifested under the administrations of West and Quarry. As early as April, 1684, "a law against pirates" or their encouragement had been sent out with the most stringent directions of the Proprietors that it must be at once obeyed. But this, like repeated instructions which followed later, and like the removal of Quarry, and other measures of suppression, proved altogether unavailing. The difficulty was not to be ended during Charles II.'s reign; and it was not until James II., in 1687, sent a fleet to put down the pirates with a stronger hand than that of written law, that the Carolinians were frightened into obedience.

The Port Royal colony destroyed by the Spaniards.

One sharp and unexpected act of retaliation on the part of the Spaniards struck, perhaps, the least blameworthy of all the Carolina settlements. In 1686, a year after Moreton's reappointment, three Spanish galleys suddenly appeared before Lord Cardross's little colony of Scotchmen at Port Royal. The crews landed, and meeting but little resistance from the settlers, "killed and whipped a great many, after taken, in a most cruel and barbarous manner;" and having destroyed the place, took ship again and sailed up the coast. Landing again at an outlying settlement called Bear Bluff, on Edisto River, a little south of Charleston, they sacked the place, and took prisoner Governor Moreton's brother, the leading colonist there. They would have gone farther, perhaps to venture on an attack in the immediate neighborhood of the town, but were prevented by a hurricane, in which one of their galleys was driven ashore so far that she could not be got off. So that, "the Country being by that Time sufficiently Alarmed, they thought proper to make a Retreat; but first set Fire to that Galley on board which Mr. Morton was actually then in Chains, and most inhumanly burnt in her."[1]

The Proprietors forbid retaliation.

Naturally enough the Carolinians proposed an immediate return for this injury, and preparations were made at once for an expedition against St. Augustine, which they do not seem to have doubted their ability to take. But the Proprietaries promptly forbade it. "Every rational man," they wrote, "must have foreseen that the Spaniards, thus provoked, would assuredly retaliate; . . . . the clause in the patent that had been relied on to justify the measure" (the section permitting the colonists "to make war and pursue the enemies aforesaid," etc.), "meant only a pursuit in heat of victory, not a deliberate making war on the King of Spain's subjects within his own territories: nor do we claim any such power: No man, however, can think that the depen-

[1] Introduction to *Oglethorpe's Report on the Expedition against St. Augustine.*

dencies of England can have power to make war upon the King's allies, without his knowledge or consent."[1] The Charleston people yielded, and abandoned the enterprise, though whether owing to these persuasions or to the difficulties of the proposed expedition, must remain a matter of doubt. At all events, the authorities received a rather grim congratulation from their superiors, who wrote, "We are glad you have laid aside your project, as, had it proceeded, Moreton, Godfrey, and others might have answered it, perhaps, with their lives.[2] Furthermore, they received the somewhat aggravating

Burning of the Spanish Galley.

instruction to write a "civil letter" to the St. Augustine commander, inquiring by what authority he had acted. Whether the letter was "civil" or not, it is not surprising that all the older chroniclers of Carolina date from this time a rooted animosity between the colony and its southern neighbors.

Moreton deposed. Colleton Governor.

In spite of the reproof of the Proprietors Moreton certainly seems to have had as good intentions and to have tried as hard to rule the southern province well, as any governor they had sent out. An intelligent and honest man, in sympathy with the better element among the settlers, married to the sister of the generally respected colonist Blake, and throwing his whole influence on the side of law and order, he appeared as good an officer as could

[1] Chalmers.

[2] Chalmers and State Papers.

have been chosen for turbulent Charleston. But either because he could not control the worse part of its people, or because his enemies persuaded the Proprietors that he was acting against their designs, he was deposed, after a governorship of but little more than a year, and his successor, James Colleton, was instructed to punish him and his council for disobedience.

As well might one man, without any physical force to aid him, have been told to punish the whole population of the province. For though Moreton had been unpopular so long as he tried to enforce the proprietary decrees, the anti-proprietary party, grown strong beyond control, promptly espoused his cause, now that he was in opposition. If Moreton had tried to keep them under during his rule, they laughed at a successor for whom they appear to have had much less respect. The Proprietors, weak enough in any case, were now, that James II. had become King, more feeble than ever, fearing that their charter should go the way of the New England patents. They could give their Governor but little help.

Surrounded by factions, "as rampant" says Oldmixon, "as if the people had been made wanton by many ages of prosperity," Colleton called a Parliament in the autumn of 1686. But he no sooner attempted to organize it than the majority of its members refused obedience to the Constitutions, basing their objection on the pretext that the completed version was different from the original draft and the temporary laws sent over long before. They then proceeded to draw up a code for themselves, though they were formally excluded from the house by the Governor; and even sent their version under the title of "standing laws of Carolina"[1] to the Proprietaries for approval. It was indignantly rejected, but this did not check the opposition party, which grew daily stronger. A new Parliament was called in 1687. Its members were instructed to "oppose whatsoever the Governor requested; insomuch that they would not settle the Militia Act, tho' their own security (in a Natural way) depended on it."[2] Grievances and complaints poured in from every quarter. The measures of the Governor were in the highest degree injudicious, though honestly intended to secure their just political and financial dues to the Proprietors; and finally, seeing himself surrounded by threatening factions on every side, Colleton took the rash step of declaring martial law in a colony where the only soldiery were the people.

Determined opposition to the Proprietors

All that the discontented party among the colonists had hitherto wanted, in order to completely overthrow the government they opposed, was a leader; and as the southern settlements had formerly

[1] Oldmixon in Carroll, vol. ii., p. 412. [2] Archdale.

given a chief, in the person of Culpepper, to the insurgents in the north, so Albemarle, at this critical moment, returned the favor by contributing an organizing head to the revolutionary movement at Charleston.

Seth Sothell had no sooner assumed the government of Northern Carolina, in 1683, than he proved equally false to Proprietors and settlers. Deliberately disobeying the orders of the former, who appear to have desired to deal impartially and leniently with the people lately in rebellion, and neglecting the collection both of the customs and the proprietary revenue, he used his official power merely as a means of enriching himself. For five years he kept up an administration under which every class of settlers in Albemarle suffered from his injustice and rapacity, until, at the end of that time, the unconcealed indignation of the people took effect in stronger measures than the appeals they had made to England. By an insurrection, even more decisive and unanimous than that under Culpepper, they deposed and arrested Sothell in 1688, and prepared to send him to London with agents of their own, to defend himself before the Proprietors for his abuse of power. But the delinquent Governor feared his superiors more than the colonists, and begged for mercy, declaring his willingness to undergo trial by the Albemarle Assembly on any charge the people would make against him. His trial was a long one; thirteen specifications appeared in the indictment against him, and on all of these he was found guilty. Sentenced to perpetual disqualification from office, and to banishment from the province for one year, it was supposed that he had been made powerless for further evil, when suddenly he was heard of in South Carolina, just as affairs there were ripe for an outbreak, claiming authority by his rights as a palatine, and everywhere gaining the adherence of the dissatisfied, who were ready to accept a leader with even the flimsiest pretence to official position.

Discontents in the Northern colony.

Arrest and trial of Sothel.

Sothell, in 1690, seized upon the government, and, calling together a Parliament made up entirely from his own followers, demanded the trial of Colleton for various imaginary and real crimes. The same sentence was passed upon him which had driven Sothell from Albemarle, and many of his Council and fellow-officials shared his condemnation and punishment. Widespread confiscation of their property filled the new Governor's coffers, and these acts of rapacity began gradually to open the eyes of the Charleston people to the character of the ruler they had put over them. As was natural, the real nature of the man soon put an end to his temporary popularity. A year after his usurpation he was hated as heartily in Southern Carolina as he had been in Albemarle.

He leads the outbreak in the South.

But he went on steadily piling up additions to his great fortune by the most shameless extortion and injustice. The clamor about him probably mattered little to the hardened adventurer, so long as he was able to keep in his pay men enough to defend his person.

Sothel and the Proprietors.

The unfortunate Proprietaries, perplexed and disheartened with these rapid changes and conflicting reports from the colony, had in vain written with mild expostulation to Sothell after the Albemarle affair. Though they had heard that the people had risen against his alleged injustice and oppression, yet they

Sothell and his Followers seizing the South Carolina Government.

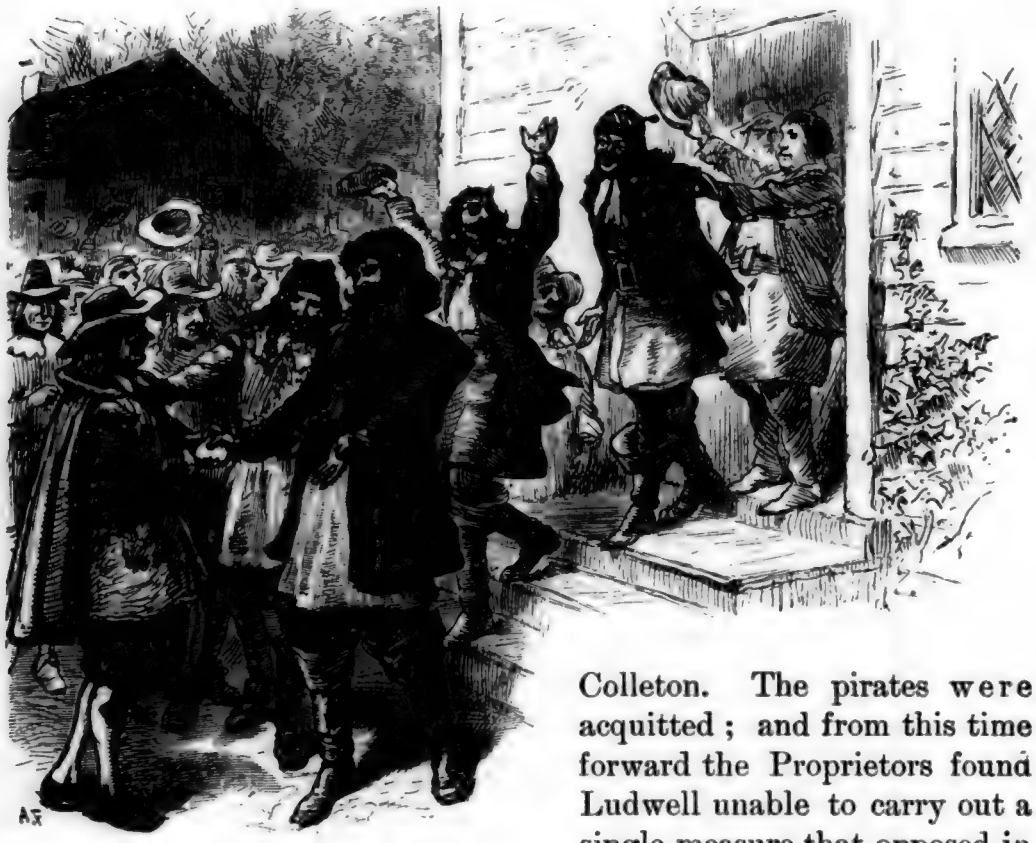
were unwilling to accept the accusations as true. Still, they thought it necessary to suspend him from office, and appointed Colonel Philip Ludwell in his place till an impartial examination should be made. It was only with the failure of their summons to him to appear in England that their eyes were opened to his treachery toward themselves; but even after this, and after they heard of his first doings at Charleston, they wrote with extraordinary mildness — not to say weakness. They had received his letters, they said, under date of October 10, 1690; for it seems he had quietly written to them, even perhaps consulting them about taking charge, under his palatinate rights, of the southern colony. They were pleased, they feebly added,

to find that he would submit to their instructions; but no single Proprietor, they reminded him, had any right to the government, nor to take jurisdiction upon himself without the others' consent; and to do so would be high misdemeanor and treason. They hoped that it was not true that Mr. Joseph Blake had been put out of his office of deputy. Touching the protestation of the deputies, with a list of the misdemeanors in thirteen particulars alleged against him, his imprisonment by the people of Albemarle, his after-submission and compulsory abjuration of the government, and the proceedings of the people, — all these were "highly prejudicial, both to the royal prerogative and to the dignity of the Proprietors;" they "did not approve" of his conduct, but had no intention of acting otherwise than uprightly toward him; still, they "would not be imposed upon."[1]

Only when they heard of the actual usurpation, does a little energy seem to have infused itself into their councils. A series of letters, increasing from comparative mildness to the sternest severity, then began to come in upon Sothell. From the first his claim to be allowed to retain the governorship on the ground of his vested rights in the province, and his being the only resident representative of the proprietary class, was disallowed. His "pretended act, purporting to disable James Colleton" was sharply reproved, and he was ordered to nullify it; the acts of his Parliament were declared void; and finally, on November 8, 1691, a peremptory order suspended him from all power in Carolina,[2] and added the threat that a royal *mandamus* should compel him to come to England and stand trial, if he did not at once submit. This last order overcame his audacity. Amid the rejoicing of all the people he slunk back to the Albemarle region again, where he was suffered to end his days as a private citizen. In 1694 he died.

End of Sothel's rule.

And now the Proprietors did what prudence should have dictated long before. They appointed one governor for all the province, north and south; fixing his residence at Charleston, and allowing him to appoint, subject to confirmation, a deputy or deputies for other quarters. Philip Ludwell, whom they had at first intended to substitute for Sothel in the government of Albemarle alone, now became the first General Governor. His lack of all previous connection with Carolina, and the confidence placed in him by the people of Virginia, gave the Proprietaries great hope that he would be able to restore tranquillity.



Philip Ludwell governor of both colonies.

But Carolina needed a Governor of more than ordinary ability and energy; and this Ludwell did not prove to be, though, like several of his predecessors, he apparently assumed his duties with the best

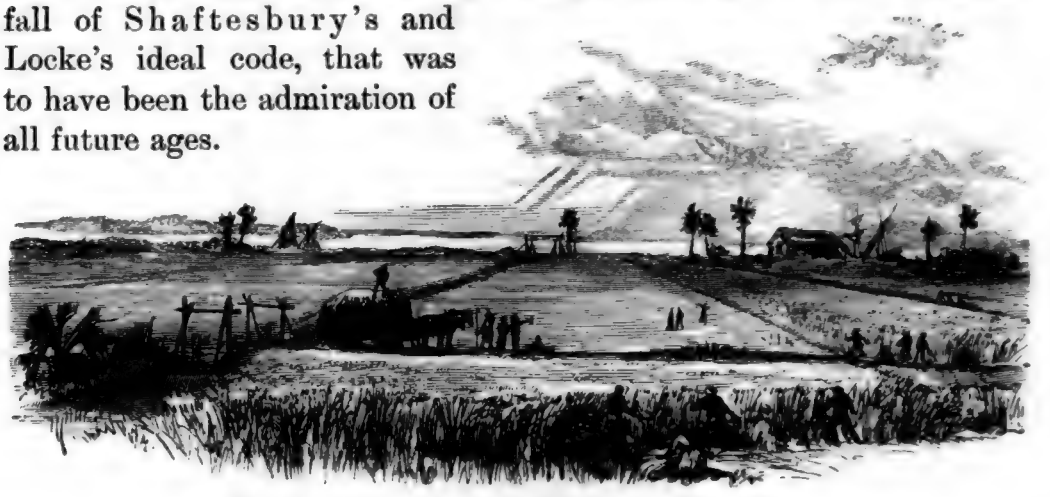
[1] *State Papers in Coll. Hist. Soc. S. C.*, vol. i.

[2] *State Papers.*

intentions. His attempt to carry out his superiors' instructions, by allowing the franchise and equal privileges to the French Protestants, who now formed a large element in the population of the province, was the signal for a new outbreak of discontent. When he further ventured to carry out the law by the arrest of a crew of pirates, he found himself confronted by opposition as determined as that which had made the government impossible to Moreton or to

Acquittal of the Buccaneers at Charleston.

Colleton. The pirates were acquitted; and from this time forward the Proprietors found Ludwell unable to carry out a single measure that opposed in any way the popular will. Disgusted at this renewed failure, they removed him in 1692, and appointed in his place one of the Carolina planters themselves, Thomas Smith — "a wise, sober, well-living man."[1]



Governorship of Thomas Smith.

Though his wisdom, soberness, and other good traits availed no more than the efforts of his predecessors toward preserving order, yet Smith's brief administration of two years was noteworthy for three substantial benefits. In 1693, the year after his appointment, the Proprietaries, worn out at last with their useless attempts to enforce even a few of its complicated provisions, went through the form of abolishing John Locke's "Grand Model." As the "fundamental constitutions"

Repeal of the "Constitutions."

[1] Archdale and Oldmixon.

had never existed in Carolina, save on paper, their repeal was hardly a necessary formality. Yet for men who for more than twenty years had talked in glowing terms of these laws that should "endure forever," it was a significant concession when they confessed that the people of the settlements knew their own needs best. "As the people," they wrote, "have declared they would rather be governed by the powers granted by the charter without regard to the fundamental constitutions, it will be for their quiet, and the protection of the well-disposed, to grant their request." [1] From this time forth the popular legislative body in the province was called an Assembly instead of a Parliament; [2] even the little consideration previously shown it, ceased to attach to the title of landgrave; the people ceased to have an excuse for disputing with the Governor, and the Governor no longer took advantage of the pretext of higher rank to justify arbitrary measures. But except these trifling changes nothing marked the downfall of Shaftesbury's and Locke's ideal code, that was to have been the admiration of all future ages.

A Carolina Rice-field.

The second fortunate event of Smith's administration seemed a trifle at the time, yet its consequences were of lasting benefit to the province. In 1694, rice was introduced into Carolina. An English vessel touched at Charleston in that year, on the way home from Madagascar, and its captain gave to Governor Smith a quantity of seed-rice, which the latter and his friends planted as an experiment. Thriving beyond measure in the marshes along the rivers, it was the origin of one of Carolina's greatest products. A few years later a writer could say of the province that it exported in very valuable quantities "rice the best of the known world."

Introduction of rice into Carolina.

Smith's greatest benefit to the country, however, came with the end of his short rule; for when he grew "uneasy in the government, by reason that he could not satisfy the people in their demands," he

[1] Quoted from *State Papers* by Chalmers. [2] Grahame.

"writ over" to the Proprietors a much wiser and more candid exposition of the state of affairs than had before reached them; and at the same time that he confessed his own inability to improve matters, he suggested a way in which this could be done. It was useless, he showed them, to try any longer to govern by deputy; "it was impossible to settle the Country, except a Proprietor himself was sent over with full power to Heal their Grievances."[1] The Proprietaries saw at last the wisdom of this proposal; and with their adoption of it began the first period of quiet that Carolina had ever known.

Appointment of John Archdale as Governor.

The man first chosen from their number to undertake this mission was Lord Ashley, Shaftesbury's grandson. But when he begged his colleagues to excuse him because his father's affairs compelled his presence in England, the choice fell upon John Archdale, a Quaker, who had bought out the interest of one of the older Proprietors, and who was considered — most rightly, as the event proved — to be a wise, moderate, liberal, and far-seeing man.

Archdale arrived in Charleston in August, 1695; and no sooner was his arrival known, and the almost unlimited power given by his commission fairly understood, than "every faction apply'd themselves" to him "in hopes of Relief." He "appeased them," he says in his account, "with kind and gentle Words;" and as soon as possible after his landing, he called an Assembly, to which he made a wise and kindly address.

His address to the Assembly.

"I believe I may appeal to your Serious Rational Observations," he said, "whether I have not already so allayed your Heats, as that the distinguishing Titles thereof are so much withered away; and I hope this Meeting with you will wholly extinguish them, so that a solid Settlement of this hopeful Colony may ensue, and by so doing your Posterity will bless God for so Happy a Conjunction. . . . . And now you have heard of the Proprietors Intention of sending me hither, I doubt not but the Peoples Intentions of Choosing you were much of the same nature; I advise you therefore, to proceed soberly and mildly in this weighty Concern; and I question not but we shall answer you in all things that are reasonable and honourable for us to do. And now Friends, I have given you the reason of my Coming, I shall give you the Reasons of my calling you so soon, which was the consideration of my own Mortality, and that such a considerable Trust might not expire useless to you. . . . . I hope the consideration hereof will quicken and direct you into a speedy conclusion of what the People may reasonably expect from you; and I hope the God of Peace will prosper your Counsels herein."

[1] Archdale.

The Assembly replied in a similar conciliatory vein, yet "after this fair Blossomin Season to produce Peace and Tranquility to the Country, some endeavour'd to sow Seed of Contention, thereby to nip the same; insomuch that they sat six Weeks under Civil Broils and Heats," till at length they "recollected their Minds into a cooler Frame of Spirit," the Governor's "Patience being a great means to overcome them; so that in the conclusion all Matters ended amicably." "The Acts of grace you have so seasonably condescended unto," wrote the popular representatives to their new ruler at the close of the session, "have removed all former Doubts, Jealousies and Discouragements of us the People; and hath laid a firm and sure Foundation on which may be erected a most glorious Superstructure to the Honour of the Lords Proprietors and you our Governor; which we do, and forever shall be obliged most heartily to own as the Production of the Wisdom, Discretion, Patience and Labour of the Honourable *John Archdale*, Esq."

Good influence of Archdale.

Archdale's Address.

For once it seems as if this flourish of compliments, to which Mr. "Jonathan Amery, Speaker," subscribed on behalf of the delegates, was really richly deserved. Forgiveness of arrears of quit-rent; careful inquiry into cases of individual grievance; the selection of a council from among the citizens most trusted by the people, — these were some of the conciliatory measures which had gained for Archdale the esteem and attachment of "every faction;" while his energy in matters that required a strong hand was no less conspicuous and disinterested. Of the hostile Indians he made warm friends; yet he did not, though a Quaker, abate for a moment his attention to the defence

of the colony; and the militia was never better trained than during his governorship. He exempted those of his own faith from military service, provided they could show that they objected to it from conviction, and not from cowardice; but, for himself, he looked carefully to every detail of military matters. North Carolina accepted his rule as gladly as the southern settlements. One of his daughters married a Pasquotank planter, and the many Quakers at Albemarle seconded his efforts warmly; so that not even a hint of sedition or discontent came in his time from this quarter of the colony. Even the Spaniards at St. Augustine gratefully acknowledged his justice and kindness to some Christian Indians, their protegés, who had been captured, and were about to be sold as slaves by a Carolina tribe. Everywhere in the province tranquillity and prosperity were established, when Archdale, having accomplished all his objects to the mutual benefit of Proprietors and people, set sail for home at the close of 1696.

Prosperity under his administration.

He left as his successor, whom he had the right to appoint, Joseph Blake, the son of the first emigrant of the name, and a man who resembled his father in ability and merit. During the four remaining years of the century he ruled quietly and well over the now prospering colony. No dissension worthy of notice disturbed his Governorship; and the chief event that appears on the record of his time, is his successful and liberal support of the religious interests of Charleston. In 1698, John Cotton, a son of John Cotton, of Boston, settled there[1] with the Governor's hearty support and patronage; while at the same time, with rare impartiality, for he was a dissenter, he procured the passage of an Act giving £150 a year, and a house, to the Episcopal clergyman of the town.

Joseph Blake Governor.

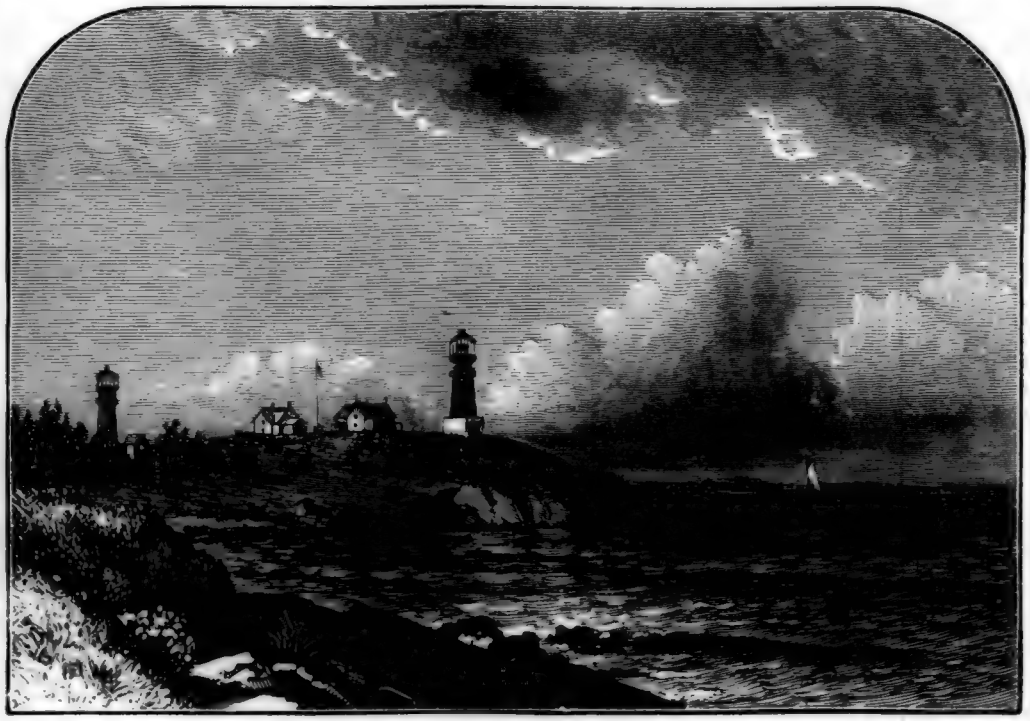
CHAPTER XVI.

THE POLITICAL POLICY OF THE PURITANS.

THE FIRST MASSACHUSETTS CHARTER. — TEMPORIZING POLICY OF THE COLONIAL AUTHORITIES. — THE GOVERNMENT AT HOME BAFFLED. — REVOLUTION IN ENGLAND. — THE LONG PARLIAMENT AND THE NEW ENGLAND PURITANS. — APPEAL TO CROMWELL. — HIS SCHEMES. — THE REGICIDES. — CHARLES II. AND THE CHARTER. — THE ROYAL COMMISSIONERS. — NEW DANGERS TO MASSACHUSETTS. — EDWARD RANDOLPH. — THE CHARTER REVOKED. — GOVERNOR ANDROS'S ARBITRARY GOVERNMENT. — CONCEALMENT OF THE CONNECTICUT CHARTER. — DEPOSITION AND ARREST OF ANDROS. — COURSE OF KING WILLIAM. — A NEW CHARTER. — GOVERNOR PHIPS. — EXPEDITION AGAINST CANADA. — OPPOSITION TO PHIPS. — HIS RECALL.

THE political anxieties of Massachusetts, through all the earlier years of her colonial life, were not less constant, while they were much more reasonable, than the theological dissensions which, as we have seen in former chapters, she so took to heart. Such anxieties seemed, indeed, to the earnest Puritans, of importance, mainly because, through the achievement of a certain political purpose, there might come the realization of a religious end. They aspired to political independence, — so far as a colony could be independent, perhaps even further, — that the Commonwealth which they planted and nurtured might become a commonwealth in which there should be no citizenship, hardly even the right to live, except to those who were of their own faith. But that fervid zeal, while it failed, in the long run, to limit the rights of conscience and of private judgment, established, year by year and step by step, that civil liberty to which the world owes so much.



Political affairs in Massachusetts.

The original charter of Massachusetts, which had been transferred from England to Boston, and which was procured with that intent,[1] was an object of continual hostility and of continual solicitude. A *quo warranto* was soon issued whereby the colonists were called upon to show upon what authority they held that patent. The jealousy of Gorges, and the fear that he might assume the governor-generalship over Northern New England, had their root in the dread of an interference with chartered rights as well as of the

Anxiety with regard to the charter.

[1] See vol. i., pp. 524, 525, 526.

establishment of the episcopacy from which the colonists had fled. They saw with apprehension how carefully they were watched in England by the vigilant eyes from which they hoped they had escaped. Charles changed his mind, — that it would be good policy to rid his kingdom of the Puritans; and then emigration was interfered with. Among some passengers who were ordered to disembark after having taken ship for New England, were, it is said, — and there is good reason for believing the story to be true, — the two men whose staying at home, if he could have looked into the future, the King had the most cause to dread, John Hampden and Oliver Cromwell.

Cape Elizabeth.

Orders of the Royal Commissioners evaded.

In 1637, the lately appointed commissioners for New England sent out a copy of a commission to the magistrates of Massachusetts empowering them to exercise the functions of government only until further orders. This was on the pretext that they were governing without authority. To this order the magistrates gave no heed; contenting themselves with the plea that nothing but a copy of the commission had been served upon them, while the original in London had not as yet — as they learned from a friend on the spot — received the royal seal. About the same time an adroit attempt was made under the commission granted to Gorges to engage the General Court in the government of his eastern province of New Somersetshire, which extended from Cape Elizabeth to the Sagadahoc. To have accepted this charge would

Schemes of Gorges.

have been equivalent to the acknowledgment of his prior patent. Winthrop merely says in his journal that it "was observed as a matter of no good discretion, but passed in silence." They knew as well when to be silent as when to speak.

A year later a peremptory demand was made, in accordance with the *quo warranto*, for the surrender of the charter and that it be sent at once to England. The General Court replied in September, tempering their evasion of the order with assurances of loyalty. They referred to the royal encouragements which had attended the early emigrations; they reminded the King of the venture they had made of lives and fortunes in extending his dominion in those distant and inhospitable regions; they proposed to continue in that obedience to his will which they had always shown; but they did not send back the charter. Again the next year the demand was renewed, with the assurance that the regulation, not the subversion of their liberties, was intended. But their liberties, they thought, were safer in their own hands than in the hands of a royal commission. The General Court gave to this second summons also their serious consideration. Their conclusion was that as the order came this time in a private letter and not by an accredited messenger they were under no obligation to send any answer whatever.

Royal demand for the surrender of the Charter.

Space and time did them good service. It was a long voyage to England and back again; orders and replies were a long while in coming and going; still a longer while passed in waiting for replies that never came. The magistrates were kept carefully advised by friends in England of the condition of public affairs, and of every step taken by their enemies to their prejudice. Explanations were always ready; and if they were not always ingenuous, never was there a time when the plea could be more justly urged — that much may be pardoned to the spirit of liberty. Meanwhile much might happen of which the colony might have the benefit.

And much did happen. The King soon had other affairs on his hands of more moment than to bring to immediate obedience these self-willed colonists on the other side of the Atlantic. His subjects nearer home were in insurrection. In 1640, the Scotch entered England; the "Short Parliament" was called, to be speedily dispersed again when Charles found that redress of grievances must precede any vote of money. The Puritans of England hailed the promise of a brighter future in the events of this period, and they were less anxious to leave the country. Emigration to New England fell off; but Massachusetts was consoled with the reflection that neglect by the government at home was much more her gain than her loss. Increase of population was less desirable than to be let alone.

Affairs in England.

The Long Parliament.

All fear of any interference with the charter was allayed when the news came of the meeting of the "Long Parliament" in November, 1640. The Puritans of England in resisting the King were taking up arms in the cause of the colony as well as in their own. Fifteen months after the meeting of that Parliament the House of Commons declared that "the plantations of New England have by the blessings of the Almighty had good and prosperous success without any public charge to this State, and one now likely to prove very happy for the propagation of the Gospel in these parts very beneficial to the kingdom and nation." For their "better advancement and encouragement," therefore, it was decreed that all trade between Old and New England should be unrestricted by "any custom, subsidy, taxation or other duty." Not long after came a letter

Fac-simile of the First Lines

signed by Warwick, Say and Seale, Cromwell, Harding, and other leading men, declaring that both houses united in a wish for the presence of Mr. Cotton, Mr. Hooker, and Mr. Davenport to come over with all possible speed, all or any of them, if all cannot." "You will find opportunity enough," they added "to draw forth all that healpefullness that God shall affoard by you. . . . . Onely the sooner you come the bettar."[1]

The invitation was not accepted, perhaps prudently. "Had the churches of New England," says Hutchinson, "appeared there by their representations, or any of the principal divines appeared as members of the Assembly [at Westminster] greater exception might have been taken to their building after a model of their own framing." That model was Congregationalism. The next year, adds the histo-

[1] Hutchinson's *History of Massachusetts*, vol. i.

rian, some persons from England "made a muster to set up Presbyterian government, under the authority of the assembly at Westminster; but a New England assembly the General Court, soon put them to rout." They believed with Milton that,

"New Presbyter is but Old Priest writ large."

But whether for personal reasons or for public considerations the three invited clergymen declined to accede to the wish for their presence and counsel in England, the relations between the colonists and the revolution were intimate and influential. Hugh Peters and Thomas Welde went to England at the request of Connecticut and Massachusetts; others followed or preceded them; Sir Henry Vane was already there.[1]

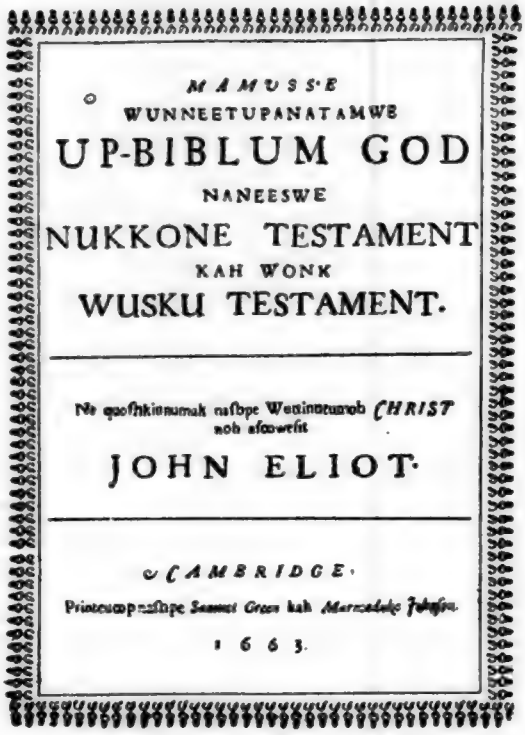
Course of leading New England Puritans.

of the Massachusetts Charter.

Nevertheless when in 1651, after the battle of Worcester, the power of Parliament had become firmly established, and Charles I. had been dethroned and beheaded, a demand was made upon all the colonies to recognize its supreme authority. The charter of Massachusetts was again threatened. Her magistrates were ordered to transmit it to England, and receive in return a new patent. In this emergency, instead of denying the right of Parliament to revoke the charter — as might justly have been done on the ground that it was an extemporized body of men expressing a new kind of authority not dreamed of in the first days of emigration and of the charter — the General Court, declining this dangerous argu-

New danger to the Charter under the Commonwealth.

[1] For a thorough discussion of the influence of the New England Puritans upon affairs in England at this period see *The Historical Relation of New England to the English Commonwealth*, by John Wingate Thornton.



ment, recurred to its old policy of simply baffling without incensing arbitrary power. Instead of the patent, a memorial was sent home; it reviewed the proceedings under the late King and the reasons for leaving England when liberty could not exist there; it rejoiced in the cause of the people; it renewed the colony's allegiance to Parliament, and prayed that they might not be worse off than when they lived under a king.

An appeal to Cromwell.

A judicious letter which the General Court drew up and sent to Cromwell proved more efficacious than the memorial; for it seemed to revive the personal interest of the General in the brave old protesting sentiment which once set him, with other republicans, afloat for America, when perhaps, as the report survives in history, Cromwell himself had land in Massachusetts which he meant to occupy. It was due, no doubt, to the influence of Cromwell that the independence of Massachusetts was respected, while the other colonies were frequently embroiled with Parliament.

Cromwell's plans.

Cromwell's protection, however, resulted from mixed motives. He had a scheme for strengthening his government and pacifying Ireland by removing the whole colony thither, and settling it upon lands which were to be ceded to it. Of course the General Court was not in the least likely to desert its flourishing estate, and at such cost to remove so near to the source of possible oppression. It laid great stress in its reply upon the prospects of converting and civilizing the Indian,

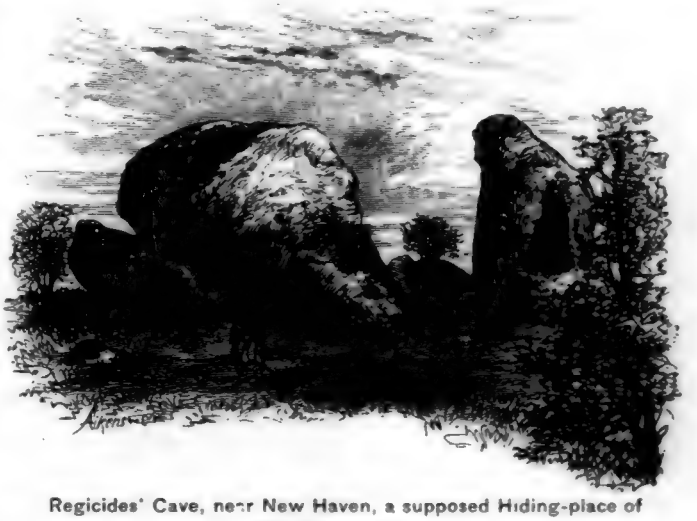
Reduced Fac-simile of the Title-page of Eliot's Bible.



Pleas of the General Court. — Eliot and the Indians.

for at that time John Eliot, Thomas Mayhew, and many devoted associates, were engaged in laboring among the Indians, both on the mainland and among the islands as far as Nantucket. Though the first Indian church at Natick was not founded till 1660, Eliot's Indian Bible was printed at Cambridge in 1664. His influence among the Indians was wonderfully persuasive, and his civilizing efforts did really promise permanent results. He domesticated them and revolutionized their manners, in spite of the jealousy and opposition of the native priests. Cromwell

might well have been interested at this attempt to propagate the Gospel in the spirit of his own reading of it. But his ambition, and a certain fantastic impulse which ran in his blood, seemed to sway him when in 1655, after the conquest of Jamaica, he proposed to Massachusetts to remove to that island, and undertake the conversion of all neighboring Catholics, with various arguments of interest urging them to assist thus in the consolidation of his power.

The Jamaica scheme.

It would have been fortunate, probably, for Jamaica could Cromwell have had his way, but the genuine Massachusetts would have vanished forever.[1] The General Court represented the magnitude of the difficulties of such a step, in a manner so sober and yet so devoted to his service, that Cromwell did not take ill their refusal, and never withdrew his countenance from his favored people.

Regicides' Cave, near New Haven, a supposed Hiding-place of Whalley and Goffe.

It was fortunate that no General Court could ever be prevailed upon to put the colony under the protection of Parliament. The prospect of advantages which friends in England urged for this act of virtual submission was no temptation against the certain good of holding back from entangling alliances. The same advice was renewed after the death of Cromwell, and without effect. Then came, in the summer of 1660, a vessel with the two regicides on board, Whalley and Goffe, to announce the accession of Charles II. Massachusetts was in no hurry to proclaim

The Regicides.

[1] The Englishmen who were successively sent to that island languished and died in great numbers, yet Cromwell kept a stern determination to hold it at all hazards and make it a Protestant colony in the very heart of the "Spanish Domdaniel." He wrote to the Governor of Barbadoes instructing him to remove his colony, saying, "We have also sent to the colonies of New England like offers with yours, to remove thither, our resolution being to people and plant that island." In another letter to Jamaica: "We have sent Commissioners and instructions into New England, to try what people may be drawn thence." [Carlyle's *Life of Cromwell.*] In fact, a large number of colonists were inflamed by Cromwell's ambition "to strive with the Spaniard for the mastery of all those seas." Notably a party from Salem, incited by wilder spirits, were preparing to go, when the General Court interposed and quashed the enterprise. Still, it was the persistency of Cromwell in sending relays of good and bad, and a thousand Irish girls, to the island, which eventually made it a colony. They were led by Venner, a Fifth Monarchy man, that is, one who believed that the four great monarchies of the world would be succeeded by a universal one

its adhesion to the new King: it cordially protected Whalley and Goffe, and when the orders for their surrender arrived, with eminent tact connived at their escapes and various concealments.

The Restoration.

At the next General Court an address was drawn up to be presented to Charles II., filled with protestations of loyalty, allusions to the fact that he had been a fugitive like themselves, and exposures of the heresy of the Quakers as a vindication of the treatment they had received. "We distinguish between churches and their impurities" they said; therefore would the King protect their liberty of worship and civil government? The King was at the beginning of his reign in a forgiving temper: he returned a gracious answer, but it was balanced by a peremptory order for the surrender of the two regicides.[1] It was no doubt chiefly in consequence of the protection afforded to them, and of the connivance of magistrates at their escapes, that the King's mood changed, and he lent a readier ear to the enemies of the colony. Again came alarming rumors over the water,—threats of commercial restriction, of governor general, and, worse than all, the withdrawal of the beloved original charter.

Portrait of Simon Bradstreet.

Massachusetts agents in England.

In May, 1661, Simon Bradstreet, a magistrate, and John Norton, a Boston minister, were sent over in obedience to an order of the King that the complaints against the colony should be met and cleared up. In the meantime the General Court recognized the authority of the King, issuing an address to explain

with Christ for king. He was a cooper by trade, and indulged in preaching. In London his chapel was in Coleman St., where he instigated his followers to a rising against Cromwell, April 9, 1657. But instead of the coming of the expected king, there came a troop of horse which dispersed the monarchy. Venner was afterwards released, and attempting the same thing two years subsequently with Charles II., was tried and executed.

[1] The discussion of the fate of Col. Whalley has lately been renewed. Thomas Robins, of Philadelphia, in a letter to the Historical Society, states that his ancestor of the same name married, in 1736, Leah Whalley, a daughter of Elias, youngest son of Col. Edward Whalley. The latter found his way from a hiding-place in Connecticut to Virginia, where he joined his family who had arrived there from England. Thence he went into Maryland and settled upon a remote point of land in the easternmost county, where he lived safely died, and was buried on his farm. The grave is well known.

upon what grounds they did it. The original patent was the foundation of their Commonwealth: it entitled them to form a government of freemen; to conduct their own municipal affairs; to protect themselves by their own laws, if not repugnant to those of England.

The deputies departed with instructions to insist upon the loyalty of the colony, to explain the causes of false accusations, to watch the enemy, and above all, do nothing that might be prejudicial to the existence of the charter. Supported by the powerful influence of friends near the Court, they succeeded in procuring a royal confirmation of the charter. But the grace was disfigured by distasteful conditions; every ordinance passed during the interim of the Commonwealth should be pronounced invalid; all such as contravened royal authority should be repealed; all persons should take an oath of allegiance; members of the Church of England should be free to sustain public worship according to its usages; all freeholders should have the right of suffrage irrespective of religious opinions, and judicial proceedings should be conducted in the King's name.

Royal instructions. Action of the General Court.

These were demands which might have been expressly premeditated to develop colonial resistance. By obeying them the past would have been sacrificed and the future made still more insecure. The General Court published them according to royal command, but at the same time postponed obedience save on the last point, on the ground that they could not be adapted to the state of the colony without grave deliberation. A delay of two years was thus secured.

The Royal Commissioners in New England.

But in 1664 the royal commissioners Carr, Nicolls, Cartwright, and Maverick, appeared in Boston, duly accredited to hear complaints against the administration of the colony and to enforce the modification of the charter. True, the ostensible object of this commission was the conquest of New Netherland; but the second and not less important purpose was to bring all the New England colonies into complete subjection to the King.

After the capture of New Amsterdam the Commissioners returned to New England. Affairs wore to the General Court a most serious and threatening aspect — the more threatening that one of the board, Maverick, was among the earliest settlers of Boston, and thoroughly understood the motives and policy of her magistrates. But the Court was quite able to hold its ground. The conflict that followed was conducted with no little skill on both sides, the Commissioners, on their part, maintaining the prerogatives of the King, while professing that there was no intention of trenching upon the liberties of the colony; the colonists, on the other hand, taking their stand upon the reserved rights of the charter, with, at the same time, the most ear-

nest protestations of loyalty. In the end the Commissioners were baffled in every attempt to force from the General Court an admission of their authority ; their acts of assumed jurisdiction were pronounced invalid ; the General Court acknowledged allegiance to the King under the protection of the charter, and that was all its conscience could allow.

The fire and plague of London.

It is noticeable how singularly events seemed to conspire with the temporizing policy of the Colony to postpone the designs of its enemies. Not only England's engagement with European politics, but occurrences at home interfered to divert the King and council from their attempts upon the charter. In 1666, just after the return of these Commissioners from their fruitless errand, and the refusal of Massachusetts to send over deputies to meet their complaints before the King, the Great Plague of London broke out, and this calamity was speedily followed by the Great Fire.

The Cradock House at Medford, built about 1639.

Aid from New England.

The General Court took advantage of all England's critical moments to earn a character for loyalty and obedience. If the motive was merely politic, the result was the same as if it had arisen solely from patriotic affection, — to win a degree of consideration and forbearance from the government at home. Thus when England was occupied with the Dutch war of 1664–66, Massachusetts assumed the government of Maine and New Hampshire ; but at the same time she furnished from the Maine forests great store of shapely spars, which were sent over to the King ; the freight alone amounted to over £1,600. The West India fleet was completely revictualled at the expense of the colony ; and after the Great Fire of London the General Court encouraged the colonies to contribute to the utmost extent of their means for the relief of their distressed countrymen.

The colony had never been in so prosperous a condition as in the few years immediately following the departure of the Nicolls Com-

mission. Its jurisdiction over New Hampshire and Maine was, for the time being, firmly established. Commerce was active and profitable, for, notwithstanding the navigation laws, the merchants traded where they would, and in what they pleased, without let or hindrance, for there was no custom-house or customs officers. It was a condition which most excited anxiety in England, for it was difficult to see how a people outwardly prosperous, and inwardly determined and rebellious, could best be dealt with.

Action of the Board of Trade and Plantations.

John Evelyn — one of the Board — writing of a meeting of the Commissioners of Trade and Plantations in May 1671, says: "But what we most insisted on was to know the condition of New England, appearing to be very independent as to their regard to Old England or his Majesty, rich and strong as they now were, there were greate debates in what style to write to them, for the condition of that colony was such that they were able to contest with all other plantations about them, and there was feare of their breaking from all dependence on this nation. . . . . Some of our council were for sending them a menacing letter, which those who better understood the peevish and touchy humor of that colonie, were utterly against." A month later, on the receipt of fresh intelligence, there was again long debate upon "the best expedients as to New England," and "at length 'twas concluded that, if any, it should be only a conciliating paper at first, or civil letter, till we had better information of the present face of things, since we understood they were a people almost upon the very brink of renouncing any dependence on the Crowne." And when in August of the same summer the Board resolved to advise the King to send commissioners again to Massachusetts, the necessity was debated "of seacret instructions to informe the council of the condition of those colonies, and whether they were of such power as to be able to resist his Majesty, and declare for themselves as independent of the Crowne, which we were told, & which of late years made them refractorie." [1]

The Commissioners of Plantations were not unreasonably anxious. There was, no doubt, a certain vagueness in the Massachusetts mind as to the exact degree of political independence of the mother-country which Massachusetts wanted. But on the whole it came perhaps to this, that she would be dependent when it suited her and at all other times free of control. She would make her own laws, agreeing that they should be in accordance with the laws of England; but the laws of England should be of no effect and void within her borders except it pleased her to give them her voluntary respect. But as to religious matters she was never in doubt. England and her hierarchy

[1] Evelyn's *Diary and Correspondence.*

she had left behind her; the theocracy she had established with God's help she would maintain against the world. The depth of her religious fervor, though it so often made her a bigot, gave her also a robust political constitution which would do its own work in good time.

The question of the charter was suspended only, not dismissed during this period. Fortunately for New England the government at home permitted it a still longer rest, calling only upon Massachusetts to defend her assumption of jurisdiction over New Hampshire, and leaving her free from the old anxiety while the war with Philip gave a serious check to her prosperity. The King determined at length upon rigorous measures. The Council of Trade and Plantations was dissolved and its duties devolved upon a committee of the Privy Council which brought the affairs of the colonies more under the direct supervision of the King.

Edward Randolph.

The controversy in regard to New Hampshire had brought to New England one Edward Randolph, whose part in affairs was thenceforth, for some years, a conspicuous and important one. It was said of him by the people that he "went up and down seeking to devour them." It was true enough in a sense, for his official zeal seems to have been almost a passion. From year to year this man went back to England, carrying each time some fresh complaint against the colonies and returning always with some additional official orders. From the bearer of the King's letter he became an inspector of the customs; from an inspector he rose to the control of all the customs-revenue of New England. It was impossible that so zealous a servant of the crown should faithfully serve his master in England and not become at the same time obnoxious to the colonists. He could not fail to see that some ordinances had by long immunity been rendered inoperative; that others, the colonists deliberately set aside when found to be inimical to their welfare, or an infringement upon their rights. Though overbearing in temper, hesitating at no measure however arbitrary, strengthening his resolution and his zeal by yearly visits to England, the collector, nevertheless, still found himself powerless, in a great measure, to cope with the steady, sagacious, as well as stern spirit of independence in which the colony managed its affairs.

Among his accusations against Massachusetts was one of entire disregard of the Act of Navigation. The General Court acknowledged its truth; but such laws they declared were "an invasion of the rights, liberties and properties" of the colonies, "they not being represented in parliament" — an early protest against the doctrine of taxation without representation to be fought out a hundred years later. The laws of England, they said, did not reach America, but

still as the King had signified that these acts relating to trade should be observed in Massachusetts, they would provide for it by an act of their own. So Randolph laid his commission as collector before the General Court and asked their aid in enforcing the laws; they paid no regard to him. He informed the public, by notice posted in the town-house, of his appointment and the requisitions of the law; the marshal, by order of the Court, or some of its members, tore the notice down. He appealed to the Governor; but that magistrate — who was that year Bradstreet, one of the more moderate party — seems to have given no heed to the complaint. Randolph carried his grievance to the King, and to the rebuke that followed there was in reply a general denial so far as that served the purpose, a general promise of future acquiescence quite as vague, with a decided intimation that these appeals from their authority ought not to be listened to by the King.

Pine Tree Sixpence

Pine Tree Threepence.

Randolph's Complaints against Massachusetts. — The coinage.

Randolph also complained that Massachusetts coined money, which was a mark of sovereignty. It was not the first time that the charge had been brought against the colony. In 1652, in the time of the Commonwealth, a mint had been established which continued in operation till 1684, issuing silver coins of the value of a shilling, sixpence, threepence and two pence.[1] These formed the currency of the country, in large part, remained in circulation for nearly a century, and were shipped sometimes as bullion to England in the course of trade. It is related that when Sir Thomas Temple, who had been residing for some years in New England, returned to England after the Restoration, he was sent for by the King to learn from him something of the affairs of Massachusetts. Charles, it is said, showed a good deal of irritation against her, and among other things declared that her magistrates had encroached upon his prerogative by coining money. Temple took some of these coins from his pocket and handed them to the King with the assurance that they had been issued by the colonists for their own use, and

Pine Tree Twopence.

[1] Hutchinson, vol. i. See Discussion of the "Pine Tree" coinage of Massachusetts in *Mass. Hist. Soc. Coll.*, First Series, vol. vii.; Second Series, vol. ii.; *Memoir of John Hull; Archæologia Americana*, vol. iii.; *Hist. Mag.*, vol. iii.; John Hull was the master of the mint, and received a remuneration of one shilling out of every twenty that he coined. John Hull's daughter Hannah married Samuel — afterward Judge — Sewall, and the tradition is that at the marriage her dowry was paid in the "Pine Tree" coin, the bride being bal-

without any intention of infringing upon the law, of which, he said, they knew little. The King inquired what tree was represented upon the coin. "Sir Thomas, artfully taking hold of that circumstance," says the narrator of the story, "informed His Majesty it was the Royal Oak. The Massachusetts people, says he, did not dare to put your Majesty's name on their coin, and so put the oak which preserved your life. The King was put into a fit of good humor, said they were a parcel of honest d—gs, and was disposed to hear favorable things of them." [1]

There is no official authority for calling the tree of this coinage a pine tree, though that supposition has given it its popular designation. The motive for its issue was undoubtedly the public convenience and not an intention of usurping a sovereign right. While the imports of the country largely exceeded the exports little of the coin of the realm would remain in the country, and there was absolute necessity of some domestic currency to satisfy the wants of the people. Wampum was generally resorted to, but its inevitable inflation soon made it valueless. At one time in the early days of Massachusetts (1634–5) it was decreed, "that muskett bulletts, of a full boare, shall pass currantly for a farthing a peice, provided that noe man be compelled to take above xijd att a tyme in them." [2] Various expedients of paper money were from time to time resorted to, depending sometimes on public credit, and sometimes on mortgages upon real estate. A large amount of the pine tree money was coined — how much is not known — which long continued in circulation, and was unquestionably a firm basis, as far as it went, for sound and prosperous trade.

Pine Tree Shilling.

But these various complaints and complications all tended to the inevitable revocation of the charter. In accordance with its temporizing and procrastinating policy, the colony had neglected to send deputies to England to answer the various charges made against it. In

anced in one scale against an equal weight of coin in the other. Hutchinson says her dowry was £30,000, the weight of which — in shillings or sixpences — would have been about three tons and three quarters. But Judge Sewall's ledger (see *Memoir of John Hull; Arch. Am.*, vol. iii.) shows that he received with his wife £500. It is not impossible that Miss Hull may have been weighed against this sum, in shillings, which would have been about 120 pounds, Troy.

[1] Letters from Andrew Eliot to Thomas Hollis. *Mass. Hist. Soc. Coll.*, Fourth Series, vol. iv.

[2] *Records of Massachusetts*, vol. i.

1681 there came a peremptory letter from the King that such deputies should be sent with authority to tender the unqualified submission of the colony. Delay was no longer safe, and Joseph Dudley and John Richards were sent to England in answer to the summons.

Deputies sent to England.

Judgment against the Colony.

Dudley belonged to the moderate party, and he went with a disposition to compromise; but he also carried a letter of the General Court of a tone so inflexible that the King's patience gave way. Again a writ was issued against the colony, to show by what warrant it held its charter. Judgment was pronounced against it in 1684, and an official copy served upon the General Court on the 2d of July, 1685.

Events now moved rapidly against the liberties of Massachusetts. Colonel Kirke was appointed Governor of that province together with New Plymouth, New Hampshire, and Maine. His commission was confirmed a few months later by James, and he was about to sail for the colonies, when, fortunately for them, his services were required to aid in the suppression of the insurrection in Scotland under Argyll, and in the West of England under Monmouth, which immediately challenged James's succession to the throne.

Charles II. died in February, 1685, and James was proclaimed in Boston the following April, before judgment on the charter had been officially announced. By the advice of Randolph the temporary control of affairs was given to a provisional commission, at the head of which was put Dudley, who had taken care while in England to ingratiate himself with the party inimical to the colony. The General Court contented itself with a protest. "The subjects," they said, "are abridged of their liberty as Englishmen, both in the matter of legislation and in laying of taxes." They urged the Commissioners to consider whether such a commission "be safe for you or for us;" but, they added, if the members of the Board were satisfied to assume the government, "although we cannot give our assent thereto, yet we hope we shall demean ourselves as true and loyal subjects to his Majesty, and humbly make our addresses unto God, and in due time to our gracious prince, for our relief." Yes; "in due time;" they knew how to wait.

Protest of the General Court.

The provisional government was short-lived, doing little harm and no good, when Sir Edmund Andros arrived in Boston in December, 1686, with a commission as Governor of all New England, — the governor-general that Massachusetts had dreaded, and planned against, and been almost ready to fight against for half a century. As Governor of New York Andros had made himself familiar with colonial affairs; the consolidation he was now to rule over he had long before advised; his character, and his faithful adherence to

Arrival of Andros.

the principles by which the King proposed to govern his kingdom, pointed him out as a fit instrument to carry out the royal purposes.

Andros was a proud and ostentatious man, who regarded his official relation to the King more than all things else. He found himself among men proud, but not vain-glorious, highly comfortable with this world's goods, and a fund of sanctifying grace. His drinking bouts were especially distasteful, for even healths were no longer drunk by the Puritans. He was more irritable; they were quietly and provokingly tenacious of purpose. At that time New England easily supported a population of more than 130,000: a dozen years before his coming it could furnish 16,000 fighting men. Fifteen merchants were worth £50,000 each: five hundred persons about £3,000 each. The country around Boston, in which town there were about fifteen hundred families, was thickly settled with these men who in the last resort would insist upon having their own way, as they did.

Portrait of Sir Edmund Andros.

The new Governor began his administration by announcing that all the laws then in force were to be respected, if not found to be inconsistent with the laws of England. There was little satisfaction in this, for the colonists maintained that it was for them to decide what laws they needed, whether inconsistent with those of England or not. A tax was levied of a penny in the pound on all estates real or personal; of twenty pence a head as poll-tax; of a penny in the pound on all imports; and an excise beside on all liquors. The taking away of the charter had abolished the General Court, and this taxation was without the consent of the people or their representatives. To enforce it the severest measures were resorted to, for the resistance was everywhere determined. Then the obnoxious Randolph was appointed licenser of the press, and other officers were brought from New York who soon made themselves quite as unpopular as he.

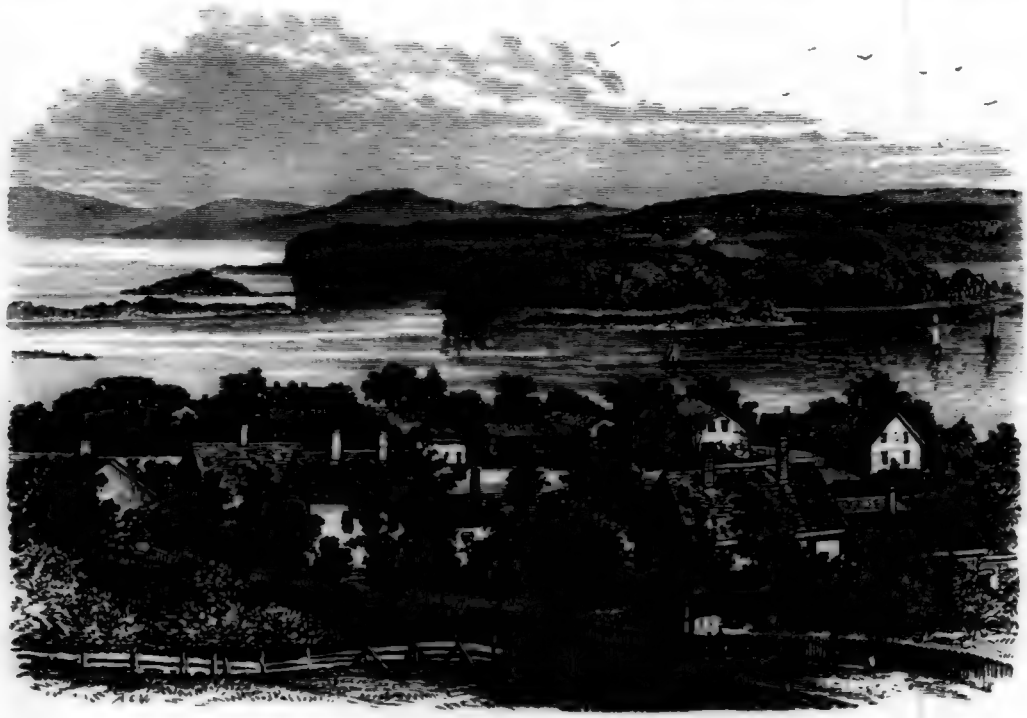
New taxes and laws.

But these were civil affairs; Andros touched more dangerous ground when he issued an order that no marriage could be solemnized save by a clergyman of the Church of England. Civil marriages by

magistrates had for a long time been common among the people, and they clung to the habit. But the Governor ordered that persons to be married should enter into bonds with sureties, to be forfeited in case any impediment might be afterward shown. He had no respect for Puritan principles, and was always menacing the Congregational style of worship. He demanded the use of the Old South meeting-house during a part of the Lord's Day for celebration of the Episcopal service. The reading of the service for the dead at the grave frequently created a disturbance. Then a formality, repugnant to the people, of swearing by the Book, instead of holding up the right hand, was introduced.

Oppressive acts of Andros.

His administration, as it went on, became more and more intolerable. He levied taxes, not as he at first promised, according to the previous rates, but by a rate of his own; but this came in, partly in consequence of the Indian wars in which he became involved in 1688. All the judges, elected from the council, charged high fees. Various other arbitrary proceedings served to exasperate the people. Here is an example, — he denied the writ of habeas corpus to Rev. John Wise, of Ipswich, who had advised his people from the pulpit to resist his system of taxation without representation. Said Andros, "Did they really think that Joe and Tom may tell the king what money he may have?" That is just what Joe and Tom did think, even then, — much more thoughtfully afterwards. On another occasion he said: "The scabbard of an English Red-Coat shall quickly signify as much as the Commission of a Justice of the Peace."



Andros preserved the trial by jury, but was accused of using intrigue to pack it for some special trial. But he gave the rudest touch to the colonial nerve when he summoned the land-owners to give up their titles for examination. When some of them showed their deeds from the Indians, signed or marked by them, he threw them aside contemptuously. "They are not worth the scratch of a bear's paw," he said. No doubt, from the absence of a strict surveying system, and from the loose habits of early squatting, many of the farmers could not define their land. But the chief objection with Andros was that all the titles held their validity under a charter which no longer existed. This excited the bitterest reflections. Andros offered to renew titles if the proprietors would acknowledge their invalidity, and pay a quit-rent. Those who refused these conditions were threatened with writs of intrusion, which occasionally were issued.

Despotic as the rule of the new Governor seemed, he was only carrying out the will of his master. He thoroughly and honestly believed, no doubt, that both in civil and religious affairs such government was righteous and wise. Conceding his honesty, he is not to be

blamed for his energy, for he only discharged with vigor the duty that devolved upon him. Out of the struggle between a royal despotism and a Puritan oligarchy came, in due season, the government of the people.

Acts of Andros in regard to other colonies.

Andros was as firm and unyielding elsewhere as he was in the colony of Massachusetts Bay. Thomas Hinckley, the Governor of New Plymouth complained with good reason that his people were compelled to pay taxes more burdensome than they had ever known before. Rhode Island willingly accepted a change which promised to end her struggle with her Puri-

View of the Harbor of Castine.

tan neighbors. In New Hampshire the new Governor established his authority with little difficulty: in Maine, he had, or thought he had more to fear from the interference of the French than any unwillingness on the part of the English to submit to his rule. At the mouth of the Penobscot, the Baron Vincent de Saint Castin had established himself as the lieutenant of the French governor of Acadia; had encroached upon the territory of the Duke of York; had won the favor of the Indians by adopting their habits, and taking several of their women as his wives, and had gained so much influence over them as to be made one of their chiefs. When the condition of affairs in Massachusetts permitted, Andros made a visit to New Hampshire and Maine, and an important part of his errand was to bring Castin to submission. The baron did not wait for an inter-

view, but fled with all his retainers. Andros entered his house, or fort, took possession of the arms, ammunition, and some other property; but left the little popish chapel and its furniture untouched. The plunder, he sent word to Castin, should be restored on his submission to the English King. The only result was the exasperation of Castin's friends, the Indians, which in due time had its results.

Connecticut, like Massachusetts, was deprived by a *quo warranto* of its Charter, in spite of its protests and its prayers. In October, 1687, Andros appeared in Hartford at the head of a troop of soldiers, while the General Court was in session. He demanded the surrender

Securing the Charter.

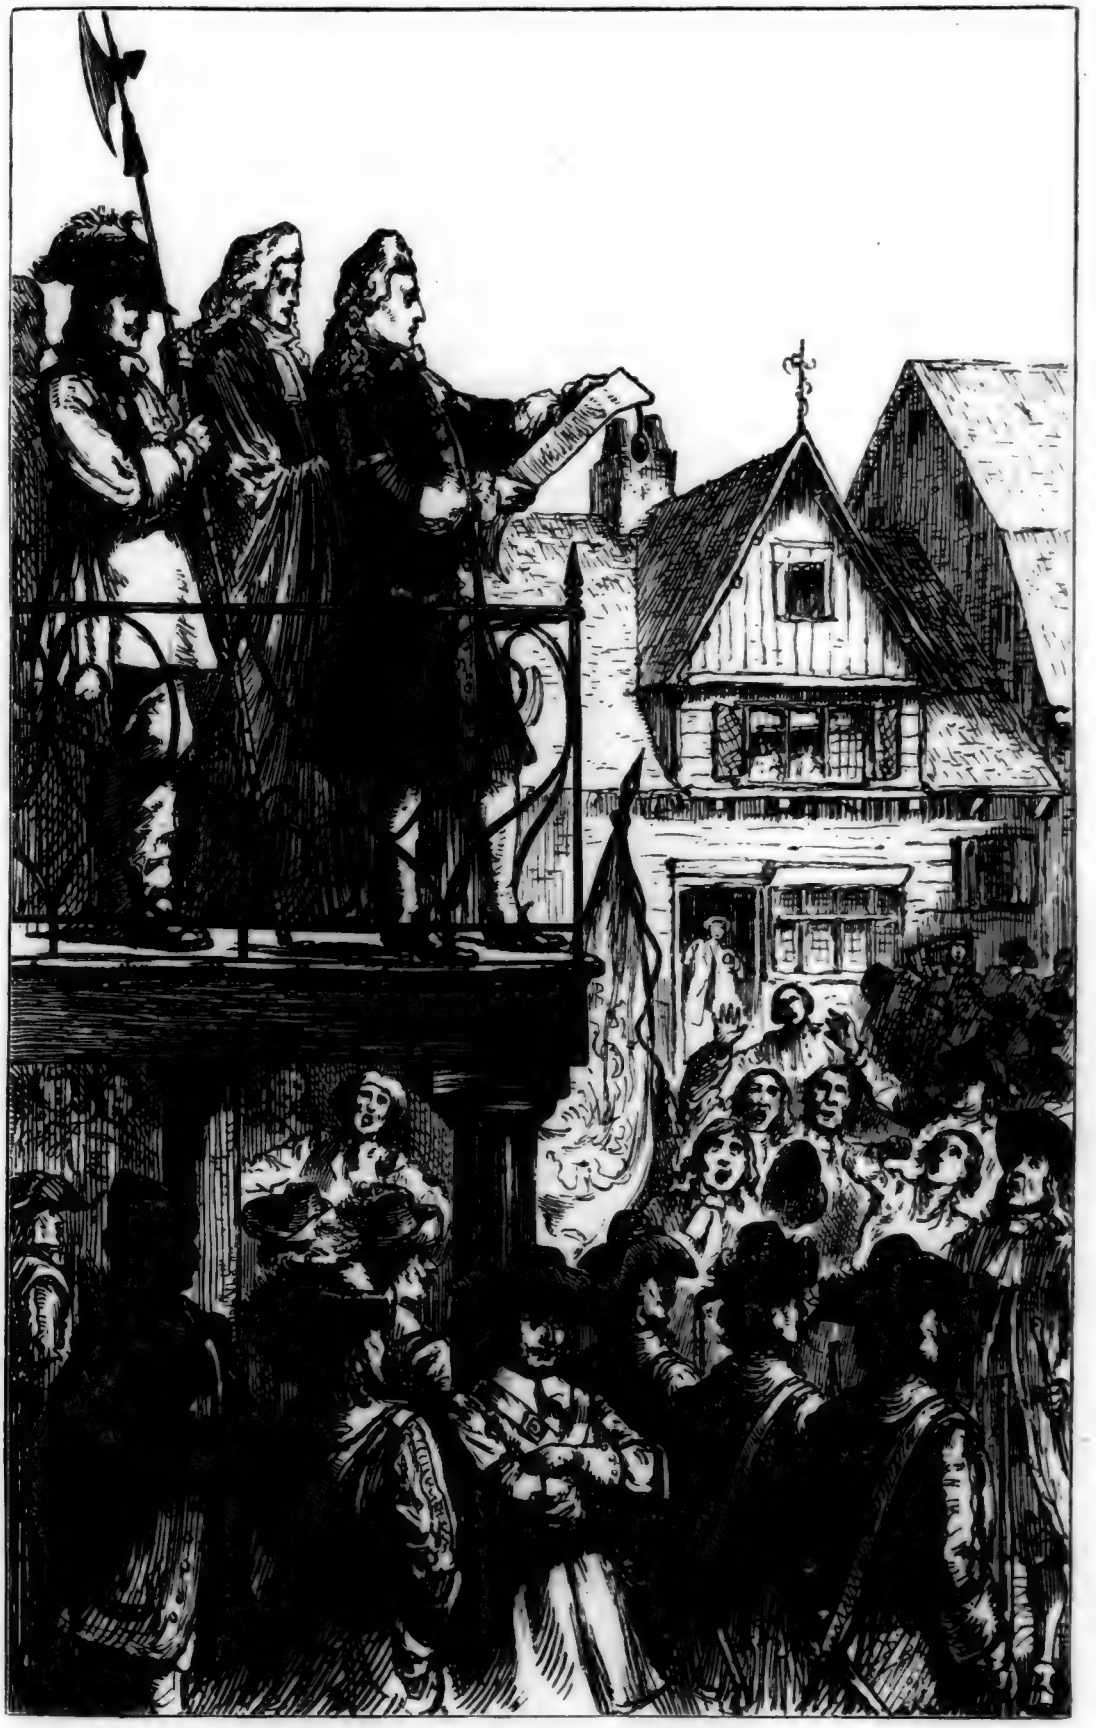
of the charter, declaring that the government under it had come to an end. He seems, nevertheless, to have permitted the subject to be debated, Governor Treat defending their right to the charter, recounting the hardships the early settlers had suffered in making a home in the wilderness, and asserting that they had had no sufficient hearing in England.[1] The arguments were not new, and not likely to influence Andros, however courteously he may have listened to them. The charter, meanwhile, lay with its box upon the table.

The debate continued till evening, and candles were lighted. An excited crowd had collected in and about the building. Discussion

[1] Trumbull's *History of Connecticut.*

came to an end, and Andros ordered the charter to be returned to its box and delivered to him. Suddenly the lights were put out. Naturally there must have been some confusion and some delay in relighting the candles. When this was at length done, the charter was not to be found. It had disappeared in the darkness. The instrument, at least, was safe, and the royal Governor so far baffled. Other resistance, however, was useless, even if any was thought of, for Andros had at his back sixty obedient soldiers. The General Court submitted, for they could do no otherwise. Entering upon their records a minute of the meeting, they wrote at the end

Concealment of the Connecticut Charter.



The Charter Oak.

the significant word "FINIS." The crowd dispersed, sorrowfully no doubt, but quietly. The beloved parchment was safe in a hollow oak on the grounds of Samuel Wyllys, one of the magistrates, where it had been put by Captain Wadsworth of Hartford, and where it long remained.

Connecticut was now only a part of the royal province of New England. A few months later Andros received a commission as governor, also, of New York and New Jersey.

When the rumor came creeping up in April, 1689, from Virginia, of the landing of the Prince of Orange in England the previous November, the inhabitants of Boston could hardly fail to look upon it as a providential interposition. The young man who brought the news — John Winslow — was impris-

News of the English Revolution.

THE DEPOSITION OF GOVERNOR ANDROS.

oned, and Andros issued a proclamation against the Prince's cause. But the people could not be restrained by that, nor by the hesitating policy of some of their own leading men. The reports and suspicions which usually spring up in such critical moments, filled the air of Boston, and needed no electric wire to thrill the adjacent towns. Was there a plot for a massacre of the people by the Governor's Guards? Was the town to be fired at one end by traitors on shore, while Captain George from the *Rose* frigate set it on fire at the other end by bombardment?

The popular excitement was soon beyond control. The North End heard that the South End was in arms; at the South End came swift rumors that the North End was up and on the march. The tar-barrels blazed up on Beacon Hill. From the country round about the people came raging into Boston by land and by water on the 18th of April. Drums beat through the town; where the signals had blazed on Beacon Hill by night, a flag was raised by day. Up King, now State, Street marched a company of Boston soldiery under Captain Hill, escorting a number of the former magistrates, whom the crisis had called together at noon. These gentlemen appeared on the balcony of the Town House overlooking King Street, and to the expectant and excited crowd below was read a "Declaration of the Gentlemen, Merchants and Inhabitants of Boston and the Country adjacent." It rehearsed the oppressive acts of Andros's administration; the illegal appointment of the Dudley Commission; the wrongful suppression of the charter; it hailed the accession of the Prince of Orange to the throne, and justified the arrest and imprisonment of "those few ill men which have been (next to our sins) the grand authors of all our miseries." Cotton Mather is supposed to have been the author of this address.

Deposition and arrest of Andros.

Some of the most obnoxious of the citizens, official and otherwise, had already been arrested. Captain George of the frigate *Rose* was met on the street and arrested. A boat was sent by his lieutenant to rescue Andros, who was in the fort on Fort Hill, but was captured by the soldiers. Finding escape impossible, he went to the Town House with others, and was put under guard in a private house, to be removed a day or two later to the fort. Several members of the council were arrested with him. Randolph was thrown into the common jail. Dudley, who was absent on his judicial duties — he had been made Chief Justice — was arrested a few days later. The next day the fort was surrendered. The *Rose*, it was agreed, should strike her topmasts and send her sails ashore, and so lie helpless in the stream under the guns of the fort. The revolution was complete and without the shedding of a drop of blood. A provisional government was

organized under the name of a "Council for the Safety of the People and Conservation of the Peace." The venerable Simon Bradstreet, now eighty-seven years of age, was appointed president, and a number of the old assistants were called to his aid as a council.

The Council of Safety.

Twice Andros escaped from confinement; the first time by disguising himself in the clothes of a woman. He passed two of the guards in safety, but his shoes betrayed him to the third, and he was

Governor Andros's Attempt at Escape.

taken back to the fort. The second attempt was more successful. His servant plied the sentinel with liquor and took his master's place. On the 5th of August he was recognized in Newport, arrested the same day, and returned to Boston.[1]

The overthrow of the Andros government was as complete in the other colonies as in Massachusetts. Rhode Island remained without a governor; but Connecticut at once restored her old magistrates.

[1] For a complete history of the Andros administration, see *The Andros Tracts*, in Publications of the Prince Society.

The revolution in New York, with its tragic consequence, requires a chapter by itself. Andros was at length sent back to England, but his career in America did not debar him from further favors, and he subsequently returned to the country as Governor of Virginia.

Representatives of the people from fifty-four towns of Massachusetts assembled after the fall of Andros, and though the feeling was strong that the ancient charter might be resumed, it was decided to suspend all action under it until it was restored. On May 26, the news arrived that the new King had been invested with the crown, and on the 29th, William and Mary were proclaimed in Boston.

Colonial policy of the new King.

For once the colonists had been deceived in their expectations. They relied confidently upon that clause in the Prince's Declaration to the people of England, that he came in order that "all magistrates who have been unjustly turned out, shall forthwith reassume their former Imployments, and the English corporations return to their ancient prescriptions and charters." For James II., in order to neutralize the Whig and Dissenting interest, imitated the action of Charles I. after the Rye-House Plot, deprived more than a hundred boroughs of their charters, and put Tory magistrates in the places of incumbents. New charters had been granted which reserved a power to the King of dismissing magistrates. Under the new Charter of London more than eight hundred prominent citizens had been turned out of office at one stroke.

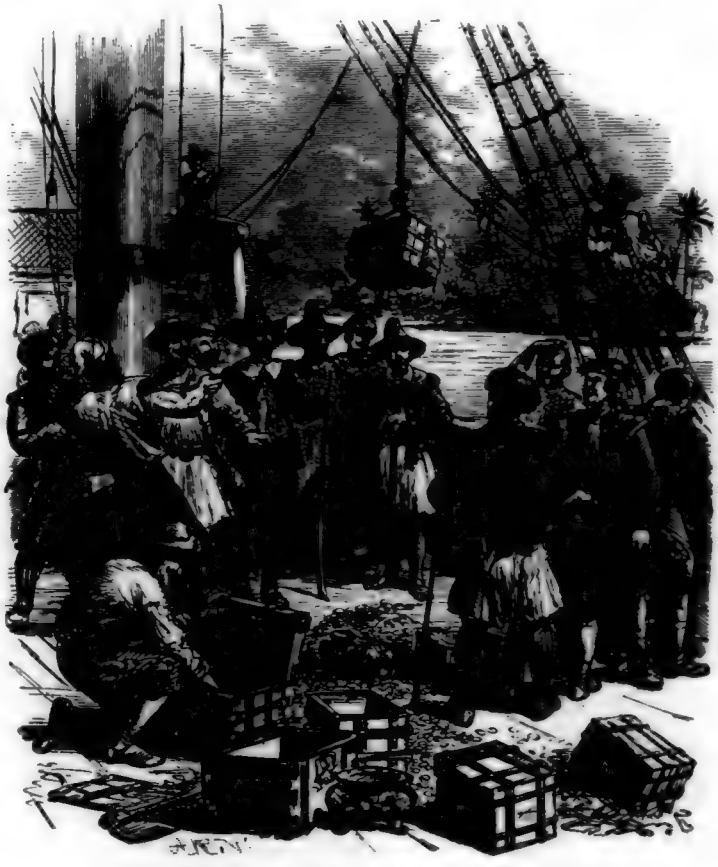
But William's ministers explained that the English charters had been taken away for different cause from those of the colonies; on the new political grounds they might be restored. The colonial charters had violated the Navigation Acts, and threatened the interests of English trade and manufactures. The King and his advisers, — Lord Halifax alone strenuously urging the return of the original charter, — though not disposed to imitate the ruinous policy of the late reign, were unwilling to let the opportunity slip for putting some restraint upon colonial independence, and maintaining a foothold here for the royal authority. Therefore the Massachusetts deputies could only gain permission to use the old charter until a new one could be framed.

Appointment of Sir William Phips as Governor.

To make this proceeding more palatable to the colonists, the designation of a governor, who would be acceptable to the people, was left to the agents of the colony. One of these was Increase Mather, the President of Harvard College, who had been sent to England when the affairs of the colony were considered in the most critical condition. He had not succeeded either in saving the old charter or in procuring a new one which would satisfy the people; but his influence was sufficient to secure the appointment, as governor, of Sir William Phips, who was then in London.

Phips was a native New Englander, a successful adventurer who had made a large fortune for himself and others, had achieved some success, as well as met with some disaster, in military expeditions in Nova Scotia and Canada, and whose popularity at home was sure to make him acceptable as the chief magistrate. Mather's confidence in him was, perhaps, all the greater that he knew him to be a member of his son Cotton Mather's church. The Governor was not likely to be in want of plenty of counsel, and the elder Mather, no doubt, thought it would be as good as it was sure to be plentiful.

Portrait of Increase Mather.



Phips arrived in Boston with the new charter in May, 1692. By this instrument a new Province was created including Massachusetts, Plymouth, Maine, and Nova Scotia. New Hampshire begged hard to be included, but the inheritors of the Mason claim had interest enough to prevent it.[1] The Governor, Deputy, Secretary, and Admiralty officers were to be appointed by the crown. A General Court, or House of Assembly, was provided by election of two persons from each town, to frame laws which were to be subject to the royal approval. Under its common seal, in the King's name, judges, justices, sheriffs, and civil officers could be appointed; military officers could only be appointed by the Governor; the dangerous power was also conferred upon him of annulling the appointment of other officers. Citizenship was no longer to be restricted to church-members, liberty of worship was free to all but Catholics. All laws were to be transmitted to England, and if not approved within three years were to be void. This prerogative which the King reserved, of rejecting any laws and acts of the Province, was the sharp point of the new charter; but the General Court felt constrained to adopt it, and it remained substantially in force, with but few and slight amendments, till the American Revolution. The first law which the King rejected was one passed by the Assembly exempting the colonists from all taxes except those which were imposed by their own representatives.

The new Charter.

[1] Edward Randolph, the obnoxious Collector, married Jane Gibbon, whose brother Richard married Anne Tufton, sister of Robert Mason (Tufton), and grand-daughter of the old proprietor, Captain John Mason. All his colonial interests waited upon the success of the family claim to lands in New Hampshire.

Phips as a governor was not successful; as a picturesque figure in the history of Massachusetts he is distinguished. He was at this time only forty-two years of age, having been born at Woolwich, on the Kennebec, in Maine, in 1650. His father and mother were the parents of twenty-six children, twenty-one of whom were boys. Till he was eighteen years old William's occupation was that of tending sheep, and in after life he took pleasure — as most men do in such early associations — in pointing out the fields where he had followed his flocks. Afterwards he passed four years in a ship-yard and became a skilful ship-carpenter. He went to Boston — as country boys of New England have done ever since, — to seek his fortune. He found it before the year was out in learning to read and write, and in marrying a sensible and good woman. She was a widow, some years older than himself, and possessed of some fortune. Her money gave him a fresh start in his career, and her good sense as well as his energy and courage, no doubt made a most important element of his future success.

Life and character of Phips.

Phips raising the Spanish Treasure.

The young man built himself a vessel and engaged in commerce. But he wanted a quicker turn of fortune than carrying lumber would bring him. He determined to do what so many have tried and so few have succeeded in — to recover treasures lost in a wrecked ship. Somewhere at the bottom of the sea in the West Indies there were such treasures in bullion, plate, and coin in sunken Spanish vessels, if one could but find them. One such vessel he found, but the return was small. But he heard of another, and he only wanted, he believed, sufficient means to certainly recover her.

He went to England, and so succeeded in arousing the King's interest in his proposed adventure that a man-of-war, well appointed, was given him. He was gone on his first voyage two years, and came back without any treasure, but the certain knowledge, he thought, of the exact spot where it could be found. But he also brought back a high reputation as a naval commander, for he had shown great skill and courage in quelling a formidable mutiny among his men.

That he should have been able to induce a company to second him in another attempt is an evidence of the irrepressible energy of the man. And this time he succeeded. The sunken Spanish ship was found and she was filled with treasure.

About £300,000 were recovered in bullion, coin and plate. Phips's share of this was £16,000 and a gold cup of the value of £1,000, which was given to his wife by the Duke of Albemarle, the patron of the expedition. But he was otherwise rewarded, for the King knighted him, and the young man who a few years before was hewing ship-timber in a Boston ship-yard, and learning at odd times to read and write, was wealthy and famous.

He returned to New England in 1688, with the appointment of sheriff, the duties of which office, however, he found it impossible to discharge under Andros. Two years later — both Andros and his master having been meanwhile disposed of, and war having broke out between France and England — Phips was appointed by Governor Bradstreet to lead an expedition against Port Royal. In this he was successful. The fort was destroyed, the town plundered, the French governor and others taken prisoners and carried to Boston. On his return Sir William landed at various points along the coast, and the whole of Acadia was reduced to English rule.

Phips's expedition against Port Royal and Canada.

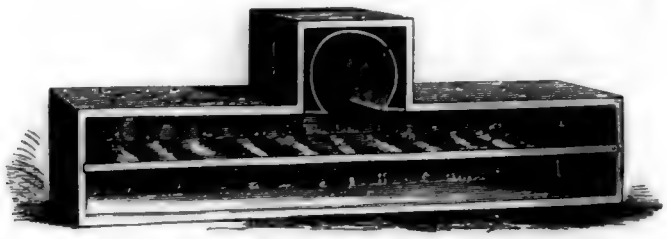
Soon after his return from this successful expedition, a larger and more important one was undertaken, for the reduction of Canada, which had been planned and decided upon at a Congress of the colonies which met at New York at the call of Governor Leisler. A land-force of New York and Connecticut troops, under John Winthrop and Robert Livingston, were to invade Canada and threaten Montreal, while a naval expedition under Phips, with Major Walley of Plymouth as commander of the troops on board, was to take Quebec. The fleet, which sailed in August, 1690, consisted of thirty-two vessels and carried two thousand and two hundred men.

The expedition from New York met with nothing but disaster. Disputes before starting between New York and Connecticut in relation to commanders caused delay and neglect of measures essential to

success. When the troops reached the lakes no boats had been provided for their transportation. A march through the wilderness seemed impossible, and the army turned back. Phips meanwhile had sailed leisurely along the coast and up the St. Lawrence, so leisurely that Frontenac had time to hear of his coming and to move down from Montreal to Quebec and to prepare for defence. When at length the fleet reached the fortress, the attack was so clumsily conducted — owing partly to Phips's inexperience in military affairs, and partly to Walley's cowardice and inefficiency — that repulse was inevitable. Men were landed at the wrong time and in wrong places; ammunition was wasted in useless bombardments of works on which no impression could be made; useless exposure brought on fatal sickness; cold weather set in and caused a good deal of suffering. A second attempt, in which it was hoped some of these blunders might be corrected, was prevented by a storm which dispersed the fleet. The ships found their way back to Boston as best they could; several were so long at sea that they were given up for lost; one was never again heard of; another was burnt at sea, and a third was wrecked, though the crew was saved. No booty was brought away to help pay the cost of the expedition, which was large enough to impair seriously the finances of the colony; some of the artillery was left behind in the hands of the French, and the loss of life — though Phips denied this — was said to have been two hundred men.

To meet the exhaustion of the colonial exchequer, caused by this unfortunate expedition, a resort was had to an issue of paper money. The soldiers were paid off in a currency which soon fell to a discount of about thirty-three per cent. It is greatly to Phips's credit, that feeling himself in a large measure responsible for this public disaster, he redeemed with his own money the depreciated bills which his soldiers had been compelled to accept.

Owing probably in part to this generous act, the credit and popularity of Sir William were little impaired by his military failure. In 1691 he again went to England to interest the King in fresh projects for destroying the French power in Canada, in bringing to an end the Indian raids under French guidance upon the eastern settlements, and to aid the agents in London in obtaining, if possible, the restoration of the old Charter. He returned with a new Charter and as Governor, as we have already said, in May, the next year.



The stubborn friends of the old Charter soon organized themselves into a party in watchful opposition to Governor Phips. It was, no doubt, a factious opposition, so far as there could be any real expectation of restoring the old rule of Puritanic government. But Phips was not a man of much wisdom, of much dignity of char-

Opposition to Phips.

acter, nor of that experience in political affairs which sometimes suffices in the absence of higher qualities. He made an expedition to Maine against the Indians, which had no brilliant result, while the fort he ordered to be built at Pemaquid was costly, of little use, and gave rise to bitter complaints of the taxation it involved. He was sometimes indolently or ignorantly good-natured, leaving the General Court to follow the bent of its own inclinations without check; and he was sometimes so choleric in temper as to assert what he conceived to be his official privileges, in a way better fitted to the deck of a ship and a disorderly crew than the peaceful citizens of a quiet city. For example, he disputed the authority of the Collector sent from England; and when that officer declined to obey the Governor's order for the release of a ship and cargo, Sir William went down to the wharf, fell upon the Collector and gave him a beating. He had a dispute with a Captain Short, of a British frigate, and on meeting him in the street, upbraided and abused him and finally fell upon him and "broke his head with a cane."

One incident of his administration, however, had political importance. It was common in the country towns of Massachusetts to choose their representatives to the General Court from among the citizens of Boston. The inevitable result was a preponderating influence which usually enabled a few men in Boston to manage affairs to suit themselves. Phips was popular in the country, where probably little was known of his overbearing temper and his ignorance of affairs of state. In 1694, a movement for his removal had gathered so much strength that his friends in the General Court proposed an address to the King against it. The motion was carried, but it was only by a vote of twenty-six to twenty-four, and in the minority were all the members chosen from Boston. A law was immediately enacted requiring that no town should be represented in the General Court by a non-resident.

But Phips's enemies at length prevailed, and he was ordered to England to answer the charges made against him. He went in 1694, and about a year after died of malignant fever in London.

Box in which the Connecticut Charter was kept.

Mount Hope.

CHAPTER XVII

PHILIP'S WAR.

OUTBREAK OF PHILIP'S WAR. — ITS CAUSES. — PHILIP'S EARLIER RELATIONS WITH THE ENGLISH. — INDIAN ATTACKS AT SWANSEA, TAUNTON, AND ELSEWHERE. — WILLIAM BLACKSTONE. — THE FIGHTS AT BROOKFIELD AND HADLEY. — THE AMBUSH AT BLOODY BROOK. — EXPEDITION INTO THE NARRAGANSETT COUNTRY. — THE SURPRISE AT TURNER'S FALLS. — PHILIP ATTACKED AND KILLED NEAR MOUNT HOPE.

THE conduct of affairs in Massachusetts devolved, when Phips went to England, upon William Stoughton, the Lieutenant-governor. The Indian hostilities, which, as the next chapter will relate, had broken out again in the eastern provinces, soon gave him sufficient occupation, and he was wanting neither in energy nor ability to meet the exigency. But he is better remembered as a benefactor of Harvard College, where a hall still makes his name familiar to each successive generation; less pleasantly remembered as one of Andros's judges in the Ipswich and other trials, where the people resisted the despotic Governor; while as the Chief Justice of the province in the witchcraft persecution, which marked the period of Phips's administration, the distinction he achieved was that of a cruel magistrate in whom superstition overcame all sense of justice.

Lieutenant-governor Stoughton.

Before, however, that gloomy page in the history of Massachusetts is turned, it is necessary to revert to a previous bitter experience — the last great war in New England with the Indians, an account

of which, in chronological order, would have interrupted the consecutive narrative of events relating to the charters.

Outbreak of Philip's war.

The origin of this war, which broke out in 1675 and lasted for two years, was, of course, in that hidden but inextinguishable hatred which the red man felt for the white intruder, — a hatred that might, at any moment, be lit by a single spark and blaze up at once into a mighty flame. Philip, the chief of the Wampanoags, or Pokanokets, who was at the head of this decisive struggle, did not, perhaps, premeditate a war until the temper of his tribe made it inevitable; even when his intentions were suspected, there was no wish, perhaps, for a conflict with the Indians, on the part of the colonists, but rather a dread of it, while the memory of the fate of the Pequots, it was hoped, would deter the savages from so desperate a measure. But there came the inexorable point of time and circumstance where race and interest, civilization and savage freedom, clashed, and forced the bloody conclusion.

If it were easier to disentangle the web of Indian politics in New England through the last two thirds of the seventeenth century — from the settlement of New Plymouth to the time when the native tribes were subdued or annihilated, — it would be possible, perhaps, to trace events to their immediate causes, to understand that sudden outbreak of relentless hate which blazed through the provinces from Narragansett Bay to the extreme northern and eastern borders. But

Causes of the conflict.

this we know, — the very presence of the whites was a provocation; instinct alone soon taught the savages that civilization must crowd them out of lands which were useless except they remained a wilderness. Purchase, so far as they understood what purchase meant, was no equivalent for the loss of the hunting-grounds from which they mainly drew the means of existence; practically an exchange of a cart-load or two of clothing and trinkets, a few guns and a little ammunition, for hundreds of square miles, was as much an infringement of the Indians' right to the soil as it was for the whites to take possession of the lands by violence. Purchase meant to the Indian, in the first place, only toleration of a joint occupancy; but when in the course of time it was plain that joint occupancy was impossible, — that to the whites there came absolute possession, to themselves absolute expulsion, — then the purchase, which they had misunderstood, was as much a robbery as if no price had been paid. Herein was the bitter root of deadly hostility.

Other provocations there were, known and unknown. Personal wrongs and outrages were committed on one side and the other, impossible to be avoided in frontier settlements, however peaceful in theory and even in practice may have been the policy of the state.

Chiefs and tribes became involved in controversies and in the conflict of interests between different colonies. The Indian balance of power would sometimes be thrown in on one side or the other as a preponderating influence; the Indian himself would make use of an alliance with the whites to feed fat some ancient grudge against a rival tribe. So Uncas avenged himself in the death of Miantonomo when Massachusetts involved them in her quarrel with Gorton and his people. So Pumham and Saconondoco were used by the magistrates of Boston to give them a pretext for jurisdiction over the heretics of Shawomet.

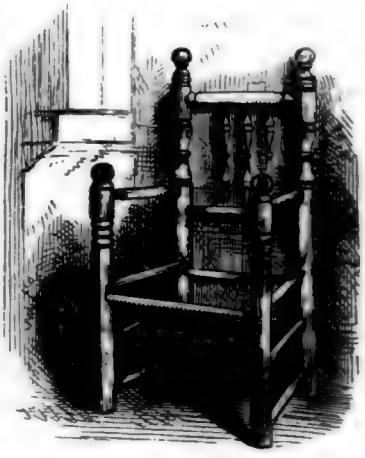
Grave of Uncas.

It is impossible now to separate and trace all these personal wrongs, these political expedients, these jealousies of tribes, intensified always by hatred of race, which led, at length, to the war under Philip. If the outbreak seemed sudden and inexplicable, it was only because the real causes were sometimes remote and often unseen. Who could tell what influence may have been exercised over the mind of Philip by the memory of a feud between his father and Pumham, when Pumham was a tool in the hands of the Masssachusetts Puritans? What was the measure of all the outrages which Uncas for years inflicted upon other Indians, under the protection of his close alliance with the English? Philip had no stronger ally than Nanuntenoo, and he was hardly less

Personal grievances of Philip and his allies.

dreaded than Philip himself. Could this chief of the Narragansetts forget that he was the son of Miantonomo? In 1661, Philip's elder brother, Alexander, was taken and compelled to go as a prisoner to Plymouth on suspicion of hostile designs, in conjunction with the Narragansetts, against the English. This accusation may have been, or may not have been, true; the proof was not forthcoming. On the way the chief was taken suddenly ill and in a few hours was dead, — died, his captors said, of a fever, into which he was thrown by rage and mortification. His young wife was the squaw sachem Weetamoo, whose camp or fort was on the Pocasset shore, now Tiverton. She believed the English had poisoned her husband. Were her suspicions forgotten when, fourteen years later, she joined with Philip? She brought to the king three hundred warriors. One year later, but twenty-six were left, when all were surprised and taken prisoners on the banks of the Mattapoisett, she alone evading capture. She was drowned in attempting to swim the river, and when, soon after, her poor naked body was found washed up upon the bank, the head was cut off and set up in Taunton. When the prisoners, the feeble remnant of her late followers, saw this sight, "they made," says Mather, "a most horid and diabolical lamentation, crying out that it was their queen's head."[1] The spirit that prompted the act, and this contemptuous comment, were not the growth of a single year.

Philip's relations with the English.



Massasoit, the sachem of the Wampanoags or Pokanokets, the early and steadfast friend of the Pilgrims at Plymouth, lived till 1660. Three or four years before his death, he took two of his sons, Mooanam, known also as Wamsutta, and Metacomet, also called Pometacom, to Plymouth, and asked that both should receive English names. Thenceforth the first was known as Alexander, and the second as Philip. How Alexander came to his death, soon after he succeeded his father as sachem, we have just related. From that time Philip was the head of the tribe.

Philip was watched, as his brother had been, with anxiety and suspicion. In the intervening years, before war actually broke out, there were on both sides provocations enough to keep up the angry irritation of the old wounds, which were never closed, however hidden. In 1671, some strolling Indians murdered a white man near Dedham in Massachusetts. The connivance, if not the instigation of Philip, was suspected; but an Indian, the son of a Nipmuck sachem, was tried and executed. Boston called upon Philip to explain his position, and to allay if he could the jealousy which was created by the rumor that he was preparing arms of all kinds, and collecting ammunition. Taunton Green was designated as the place

[1] Increase Mather's *Brief History of Philip's War*. Drake's *Book of the Indians*.

for an interview. His party approached in war-paint and fully armed; but, perceiving that the Boston party was large and also armed, they paused on the ridge of a hill. The English hesitated to go further, and insisted that Philip should advance to the appointed spot. They could only overcome the distrust of the natives by leaving hostages with them during the interview, which, it was mutually agreed, should take place in the meeting-house. One half of the sanctuary was filled by the painted warriors, with feathered crests and beaded trappings, — sombre, silent, wary. On the other side was the counterfoil of Englishmen in broad hats, muskets slung in bandoliers, cuirasses, and long rapiers, — a picture from the age of Cromwell. Never before or since did the plain roof of a New England meeting-house cover a contrast so highly colored in costume and idea. In those pews, Boston compelled Philip to promise to deliver up all the English arms in the possession of his tribe. Slowly and reluctantly they came in afterward, and the compulsion rankled sorely. To the feeling of the natives it seemed an aggression which they were always trying to match in various petty ways. It was clear to Philip, in 1674, that he must begin to look around for allies.

The conference with the Indians at Taunton.

Philip's Chair.

There was an Indian of the name of Wussausmon, who was one of Eliot's disciples. His name was pronounced Sausamon by the English. John Sausamon went freely to and fro among the Indians, and was even trusted by Philip. John observed the inevitable drift of the native feeling, and warned the Plymouth men. For this, it was supposed, he was murdered in the winter of 1675, near Middleborough Pond, and his body thrust into a hole in the ice. His trappings were left lying near the edge, and conveyed at first the impression that he had fallen through. But when the body was recovered, marks of violence were found upon it. Three Indians were caught, tried by a jury of six white men and six Indians, and executed for this deed. Apparently there was some reason for doubting that there had been any murder, or, if there had been, that the real murderers had been discovered. "Many wish," wrote Roger Williams, "that Plymouth had left the Indjans alone, at least not to put to death the 3 Indjans vpon one Indjan's testimony." Whether Philip meditated war or not, the anger of the Indians could have hardly failed now to push him into one.

Philip prepares for war.

Accordingly, on June 24, 1675, — a day that had been appointed for a fast that the horrors of war might be averted, — the unsuspecting people of Swansea, who were just going home from the meeting, were attacked. One man was killed, and others wounded; the two men who were despatched for a surgeon were killed. Six other men near the garrison were killed and horribly mutilated. Some barns and houses were burned.

The attack at Swansea.

At this time the New England villages were scattered over a large area. Emigrants had gone from Connecticut as far as Deerfield; the remotest western settlement was Westfield. Haverhill was on the frontier; Lancaster and Brookfield were isolated settlements. Leverett was governor of Massachusetts, Winslow of Plymouth, John Winthrop of Connecticut and New Haven. At first the war was confined to the Plymouth Colony. At Middleborough, Taunton, Dartmouth, Rehoboth, and elsewhere much property was destroyed and many were killed. Rehoboth was most unfortunate, for its houses, barns, and mills were all burnt. Its vicinity to Mount Hope, the home of Philip, may have made it peculiarly the object of hostility, for five times in the course of the war its homes were made desolate. Rhode Island, though not approving the war, was nevertheless involved in the general calamity. Houses were burned and several persons killed at Pocasset — now Tiverton — in July; a few days before eighteen houses were destroyed in Providence. It was probably then that the savages laid waste the place of William Blackstone, on the banks of the Seekonk, a few miles from Providence. Here, on the spot which he named "Study

Other settlements attacked.

William Blackstone.

Hill," the first white settler of the peninsula of Boston as well as of Rhode Island, had built a house and planted an orchard and found a refuge for his old age from the turmoils of the time and the "lords brethren" of Massachusetts. His rest was undisturbed by the savages, for he had died a few weeks before and been laid in a quiet grave — still to be seen — among his apple trees.

In August the General Court proposed to negotiate a peace with the Nipmucks — or Nipmets — who lived on the northern tributaries of the Thames. The result was a disastrous fight at Brookfield, near which the conference was to be held. No Indians were to be found at the place appointed, and Captain

The fight at Brookfield.

Blackstone's Study Hill.

Wheeler with twenty troopers went in search of them. They had not gone far when they fell into an ambush; eight of the twenty were shot down, either killed or wounded, and among the latter was the captain. Those who escaped regained Brookfield by a circuitous path, and gave the alarm.

There was hardly time to hurry the people, men, women, and children, to the number of seventy, into the one house capable of defence, when the village was filled with three hundred yelling savages. They set fire to every house and its surroundings, save only the one in which the English had taken refuge. That needed to be approached with more caution.

The attack was begun. It was furious, determined, and incessant for two days and nights. Shot were poured in from all sides; against the walls of the house fires were kindled; crevices and projections were sought for with fire-brands tied to poles; roof and walls were

pierced with arrows around which were wound burning rags filled with sulphur. But every attempt to get into the house, or to drive out its brave garrison, was met and baffled. By sorties the most threatening fires against the walls were put out; water was poured, in spite of risk, upon the burning sulphur as fast as it fell upon the roof; every stratagem was met with some more cunning device; the savages were glad of the shelter of the forest against the desperate bravery of men who were fighting for their wives and children.

On the third day a new and most alarming stratagem was resorted to by the assailants. They contrived a sort of cart on which were piled bundles of flax, and hay and hemp and any other combustible material on which they could lay their hands; and this machine, all ablaze with mounting flames, they thrust with long poles against the building. The strait was desperate. Either the besieged must submit to cruel death by fire, or face the hardly less cruel alternative of fighting hand to hand, surrounded by women and children, with their savage enemy who outnumbered them more than three to one. But fortunately before they were compelled to make their choice between these desperate measures, a sudden and heavy shower of rain extinguished the fires, and made a repetition of the experiment impossible.

Blackstone's Grave.

Before the day was over Major Simon Willard of Boston, who, on the march westward, had been intercepted by a messenger the besieged had contrived to send off, dashed into the town with between fifty and sixty men. They attacked the Indians with spirit, and before day-break the next morning, they had all disappeared. Not only were the Brookfield people saved, but so successful had been their defence that eighty of the Indians were killed and wounded.

Spread of the war.

The emissaries of Philip were ubiquitous. They stirred up the Indians of the Connecticut valley, and even at length succeeded in influencing the baptized Indians, for blood is thicker than water. Men went to meeting with their arms; ammunition was stored in the meeting-houses; each man furnished himself, under a penalty of two shillings for each neglect, with at least five charges of powder and shot. Flint locks were in general use here

before they were known in England, the new exigency of Indian warfare turning the matchlock into a musket.

Hadley on the Connecticut was an important frontier post, and a place of deposit for military supplies. On the first of September, a month after the burning of Brookfield, the Indians took advantage of the absence of most of the garrison, to attempt its destruction. It was a fast-day, and the people were in the meeting-house when the alarm was given. The men seized their arms, which were ready to their hands; but even the hands of men as brave and determined as they were may have trembled a little, when they looked at their women and children huddled together in a building which was incapable of any defence from within, and when they listened to the war-whoops of savages more pitiless than wild beasts. It seemed to them, it may be, that they could only die; that with such odds against them there could be no hope of repelling the enemy; that the sight of their helpless families unnerved rather than inspirited them. They defended rather than attacked; they looked over their shoulders at the cowering figures behind as often as at the savages who pressed nearer and nearer in front. They wavered and fell back; upon the action of a moment of time hung the result of the fight and the fate of the whole village.

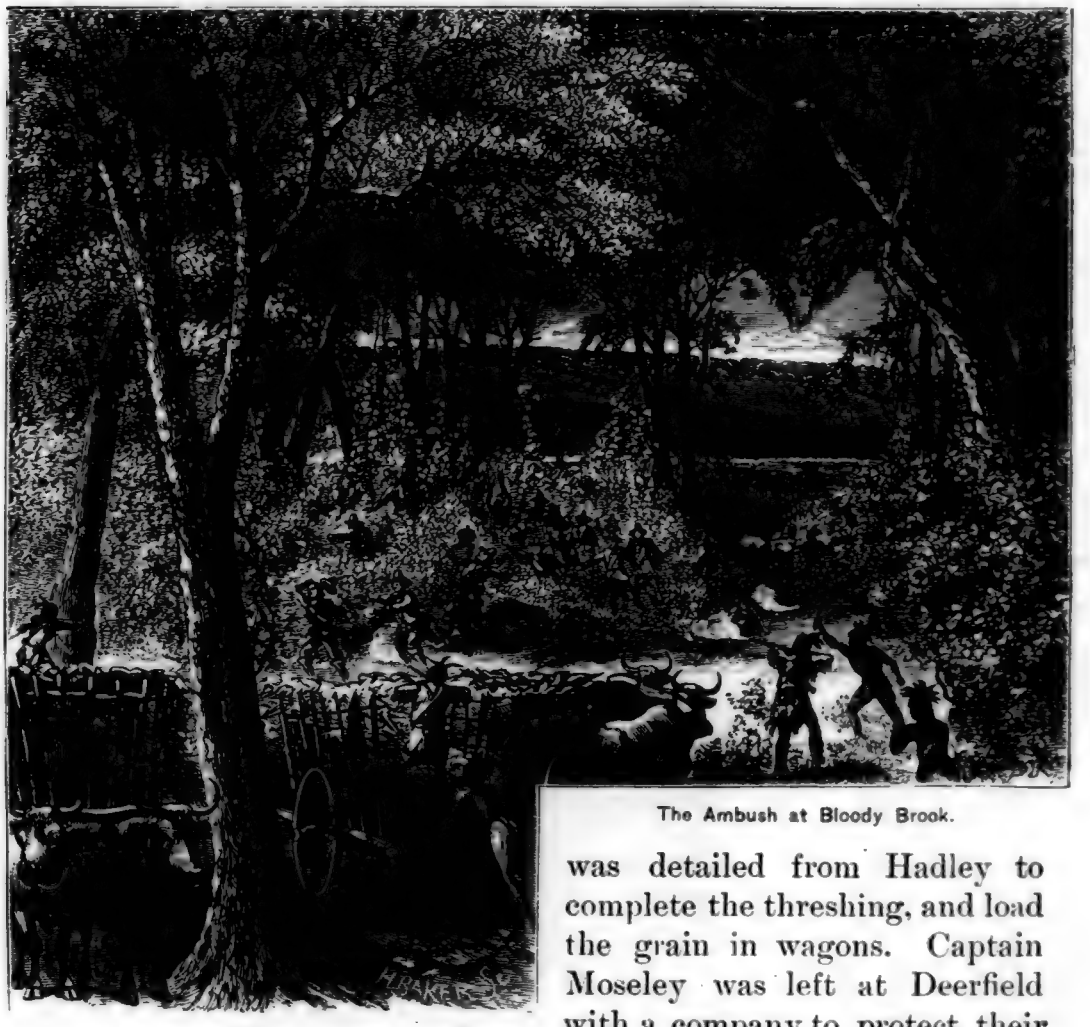
Hadley attacked.

Suddenly there stood among them a man almost aged, but of a soldierly bearing and commanding presence. He drew his sword as one who knew how to use it; he put himself at the head of the men as his natural and proper place. Whether he spoke or not, words were hardly needed, for he marched forth as a captain. There was the quick response of men who did not want courage but needed leadership. They rallied, as certain now of driving back the savages as before they were doubtful of successful defence. It was defence no longer, but attack. Under the impulse of vigorous command sprung hope and energy in place of despair. Wherever this calm and brave soldier would lead they would follow. There was much, no doubt, in the strangeness of this sudden apparition of a captain when all would be speedily lost without one; there must have been still more in the commanding aspect, the confident assumption of power, the quiet intrepidity of the man, that made him at once accepted and obeyed.

Sudden appearance of Goffe the Regicide.

The tide of fight was turned. The savages fell back, — then fled, the impetuous English pursuing them to the woods. When the sound of the retreat had died away, the men gathered together again in the village; but he who had led them to victory was not among them; he had gone as suddenly as he had come; whence he came none knew, and none saw him go away.

Such is the story as tradition has handed it down. There is no reason for doubting its essential truth, though the imagination of successive narrators may have made a romance of a natural though effective incident. The regicide, Colonel Goffe, was at that period concealed in the house of Mr. Russell at Hadley, and the old soldier certainly would not see the villagers getting the worst of the fight with the Indians if his presence and bravery could prevent it. He



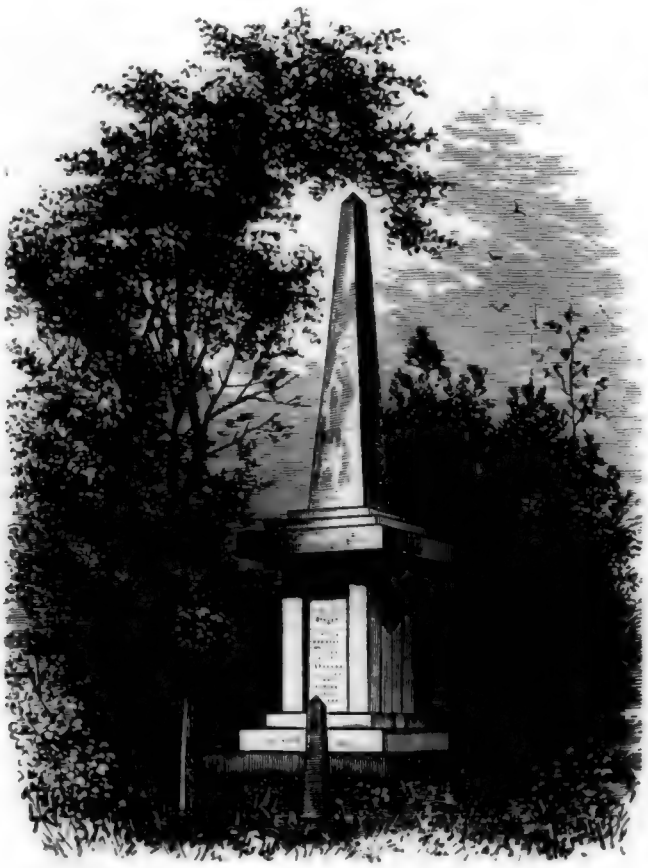
Goffe at Hadley.

may have seemed to his countrymen almost a supernatural visitor when he appeared so suddenly among them, and the impression would be deepened when he as suddenly vanished. That Goffe was concealed in Hadley was probably unknown to the people, for though there was, perhaps, no wish on the part of the magistrates to surrender the regicide, had the place of the retreat of himself and Whalley been publicly known, there would have been a legal obligation for their capture not easily evaded.

September was a fatal month. At Deerfield, on the same day that Hadley was attacked, several houses and barns were burnt, and two

men killed. The block-house at Northfield was besieged after a dozen men had fallen and the dwelling-houses were burned. Captain Beers, going with thirty men to its relief, was ambuscaded and killed with twenty of his men. Deerfield was again attacked; the people were fired on as they were going to meeting, and their houses burned. The farmers in their flight had left a quantity of grain unthreshed. A company of eighty picked men, the flower of Essex, under the command of Captain Lathrop of Ipswich,

Renewed attack on Deerfield.



The Ambush at Bloody Brook.

was detailed from Hadley to complete the threshing, and load the grain in wagons. Captain Moseley was left at Deerfield with a company to protect their rear. Early on September 18, Captain Lathrop, returning to Hadley, halted his command in a fair grove watered by a brook, a few miles from Deerfield; the men broke their ranks and loitered to and fro, thrown off their guard by the allurements of the cool and pleasant spot.

The savages had been all night upon the trail, waiting for such an opportunity. Seven hundred of them, sheltered by the trees, delivered a fire so destructive that Lathrop and all but seven of his men

were killed. By this massacre the clear brook acquired its name of Bloody.

While the savages were hilariously engaged in scalping the troops, Captain Moseley, who had heard the firing, hurried to the spot, charged the savages repeatedly, going through them with great slaughter, and maintaining his ground against the superior numbers, from eleven o'clock till evening, when Major Treat arrived with one hundred men and sixty Mohegans, and the Indians were driven off with great loss and pursued for some distance. All day long Captain Moseley lost only two men and eleven wounded.[1]

The Monument at Bloody Brook.

After this disastrous autumn it was resolved to strike the headquarters of the Indians in the country of the Narragansetts, who were secret allies of Philip. Massachusetts furnished five hundred and twenty men, Plymouth one hundred and fifty-nine, and Connecticut three hundred: there were in addition one hundred and fifty Mohegan Indians. Governor Winslow of Plymouth was appointed commander of the expedition.

The fort of the Narragansetts was in South Kingston, Rhode Island. It was built upon five or six acres of dry ground, encircled by a swamp, and was very formidably defended with palisades and a chevaux-de-frise, a rod in thickness, of felled trees. The troops

[1] Athwart the terror of those years there falls a single gleam of grotesque humor from Bloody Brook. When Captain Moseley came up with the Indians as they were collecting spoils and scalps, he coolly took off his periwig and stuffed it into his breeches, to be in better fighting trim. This action startled the Indians, one of whom exclaimed, "Englishman got two heads? Me cut off one, he got noder, put it on beter!" Drake (*Old Indian Chronicle*) has the report that some of the Indians disappeared in consequence of this occurrence. But Moseley's fresh muskets were more demoralizing than a head that was too indefinite to yield a scalp.

marched through a deep snow, reaching the vicinity of the fort early on December 19, and attacking it at four in the afternoon. There was but one entrance, and to reach it the men had to get over a log breast high, under fire from a block-house or shelter. The fire was so heavy that the Massachusetts men, who were first to enter, were obliged to retreat. At this time Captains Johnson, Davenport, and Gardiner, of Massachusetts, and Gallop, Seely, and Marshall, of Connecticut, were killed. By another desperate onset, a party, under Captain Benjamin Church, managed to get into the rear, which was not so elaborately defended, and entered the place, Church receiving three bullets. Then it became a

Expedition into the Narragansett country.

Attack on the Narragansett Fort.

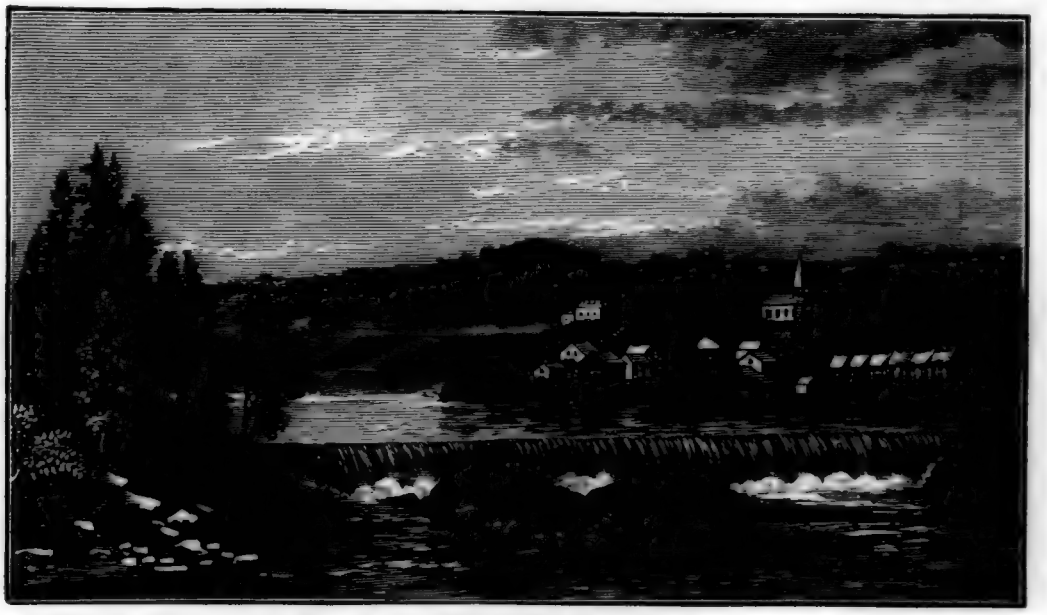
driving hand-to-hand fight, the six hundred wigwams were set on fire, — a blunder, however, against which Church in vain protested, for they were filled with corn. The savages were driven out through the swamp into the open country, after a desperate and bloody contest. About seven hundred Indians were killed, including twenty chiefs. Of a great number of wounded, three hundred died. Many old men, squaws, and children perished, some of them in the flames. All the utensils and great store of corn were burnt. That winter's day had a lurid sunset. The Connecticut troops alone lost eighty men.[1] It was a great blow, but not a decisive one, for Philip was yet alive.

[1] *Connecticut Historical Collections.*

The next year the war was again transferred to the interior of Massachusetts. Lancaster was attacked in February, 1676, by the Wachusett Indians. One of the sachems had married the sister of Philip's wife, and also had another squaw, who was the widow of Wamsutta. The Lancaster tragedy was made memorable by the story of Mrs. Rowlandson's captivity. Her youngest girl, six years old, was wounded in the attack upon the garrison house, and died on the eighth day. The brave woman had toiled through the snowy swamps and forests with her child in her arms, subsisting upon ground nuts, acorns, old bones, horses' ears and entrails, frogs and rattlesnakes, compelled to witness the stealthy and ferocious attacks on other places, returning finally to Mount Wachusett, where she was redeemed for £20.

The war in Massachusetts. — Mrs. Rowlandson.

The Indians had taken possession of the deserted acres of Deerfield and were planting them. A large body of them was camped around the falls, which earned a name from that Captain Turner who here made himself famous. When this news was brought in by escaped captives, Turner, who had succeeded to the command of the forces in the valley, gathered one hundred mounted men at Hatfield for a night ride of twenty miles across the country through Whately and Deerfield. An Indian lodge was roused from sleep by hearing the noise of their march, but discovering no hoof prints at the ford, which Turner had avoided, concluded that a herd of moose had crossed the river. The sound of Turner's approach was deadened by the sound of the rapids which were four miles further up the stream. He found the main encampment, therefore, fast asleep, close to the overhanging rocks, just at daybreak of May 10. The horses had been left in a ravine below, and the troops marched a mile or two to gain the rear of the Indians, who had neglected to post a guard. The surprise was complete. Many of them took to their canoes, but left the paddles behind and went over the falls. Many were shot in attempting to cross the river. Many hid among the rocks and were killed by the sword. After the fight one hundred Indians lay dead, one hundred and forty were counted as they went over the falls, all of whom but one perished. Over three hundred Indians had been destroyed. Turner's loss was a single soldier.



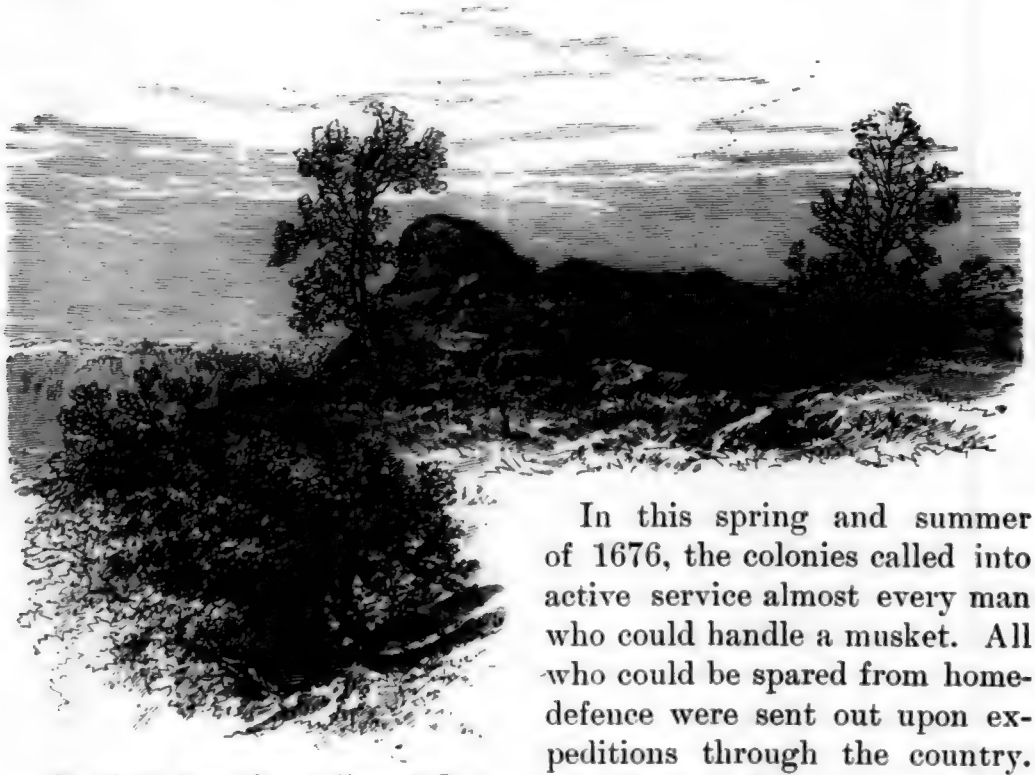
Turner's Expedition

But another party of Indians, not far off, heard the noise of the fight and were soon on Turner's tracks. Then commenced a disastrous retreat. A panic seized the troops, on a rumor that Philip was at hand with a thousand men. Captain Holyoke took command of the rear-guard and checked the pursuit. Turner was killed; a large number of his men were cut off; but Holyoke reached Hatfield

safely with the main body. The excitement and fatigues of that day, however, cost him his life, as he died not long after.

Among the earliest of the Indian chiefs to turn against his old friends, and take part with Philip, was Pumham. In this fight at Turner's Falls, he was conspicuous in the pursuit of the English for his bravery and great strength. Two months later, he was found lurking, half starved, with a few followers, in the Dedham woods, near Boston, where he was killed, fighting desperately after he was mortally wounded.

This disaster at Turner's Falls was a great blow to Philip, for it broke up his fishery at that place, by which he intended to provide himself for the winter. Many of his best sachems had been slain.



Turner's Falls.

He attempted reprisals by an attack upon Hatfield, but a reinforcement from Hadley defeated the savages, killing twenty-five of them. Hadley was again beset by a band of seven hundred Indians, but they were repulsed with heavy loss. Captain Henchman at one place, and Major Talcot at another, were equally successful in defeating and killing a number of the Indians.

Further fights at Hadley and elsewhere.

The garrison at Northampton was largely reinforced, and it became clear to Philip that he could not hold the valley. The war was again shifted to the south. Seekonk, Plymouth, Bridgewater, Scituate, and many other places, were partly sacked and burned. Through the spring and summer all Southern Massachusetts, and the contiguous settlements in Connecticut and Rhode Island, were kept in constant alarm. The settlers knew that the savages might at any moment be

lurking in the woods about their homes, with a tread as stealthy and still as that of a tiger, and thirsting, as tigers thirst, for blood. By night and by day, in the field, at the work-bench, in the meeting-house pew, the thing nearest to each man's hand was his musket. The peculiar qualities which gave the Indian a certain superiority as a hunter and a warrior, were his no longer. Stern necessity had compelled the white man to learn from his enemy and improve on what was taught. And the women were as brave as the men, as fertile in resources, as quick in defence, as enduring in captivity, when captivity happened to be their lot. Thrilling stories of defence, escape, rescue, stratagem, still make the legendary lore of that whole region.

Site of the Squaw Sachem Magnus's Fort.

In this spring and summer of 1676, the colonies called into active service almost every man who could handle a musket. All who could be spared from home-defence were sent out upon expeditions through the country. Notwithstanding the superiority of the whites, the aspect of affairs was sometimes almost desperate, for there was more than one signal disaster. Thus Captain Wardsworth, going to the relief of Sudbury, in Massachusetts, which had been partly burnt, was entrapped in an ambush, and he, and about sixty of his company of eighty men, were killed. The fate of Captain Pierce's company of fifty Englishmen and twenty friendly Indians was even worse. The enemy surprised them, and only one of the Englishmen and but a few of the Indians escaped. There was as little mercy on one side as on the other. Nanuntenoo, the son of Miantonomo, was almost as much feared as Philip himself. Great was the rejoicing when the news was spread abroad that he who it

was supposed had led in the attack on Pierce, had been taken prisoner and immediately executed. "I like it well," said the brave chief; "I shall die before my heart is soft, or have said anything unworthy of myself." But on neither side was there an act of more signal vengeance than that of Major Talcot, who, with a force of three hundred mounted men, — English and Indians — overtook a body of nearly the same number of Narragansetts in a swamp in their country. Those who were not killed in the first assault were made prisoners, and ninety so taken were put to death. Among them was the Squaw Sachem Magnus, whose fort was on a hill in the present town of North Kingston, Rhode Island.

The Indians themselves were the first to show that the strain was too much for them. Plymouth had put the conduct of military affairs almost exclusively into the hands of Colonel Church, and his uniform success had aroused a dread of him among the Indians, as much as it inspired the confidence of his own people. He was more than a match for the Indian in cunning as well as courage; could meet him and beat him where he thought himself strongest; detect him in ambush, or lead him into one; overcome him by strategy, or defeat him when hand to hand in open fight. When the savage doubts and hesitates, he is lost. If success ebbs, there is no returning flood. The loss in chiefs and warriors weakened and disheartened the Indians, and large expeditions were abandoned. To distract pursuit, they broke up into small parties, and continued only a predatory warfare. Philip himself retreated to the hill and isthmus of Mount Hope.

Church's Sword.

The chief was at last in desperate strait. Twice within a few weeks he had barely escaped capture or death. On one of these occasions his uncle was shot down at his side, the English soldier not recognizing Philip, who had cut off his hair to disguise himself; at another time, he avoided capture by a precipitate flight, abandoning his wife and children. Now he had reached his own home, hoping there to find concealment and safety.

Church was at Tiverton, when a savage, whose brother had just been killed by Philip for counselling submission to the English, came and offered to betray his chief. He and his men, the deserter said, were on a bit of upland at the south end of the swamp at the foot of Mount Hope. The place was well known to Church. When this intelligence reached him he started at once for Mount Hope, arriving there about the middle of the night. His arrangements were all

quietly and speedily made; so far as the number of his men permitted, every outlet from the swamp was guarded; then a company was sent in to arouse the camp.

The Indians were sleeping in tranquil security. One at length awoke, and was fired at; then a volley was poured into the camp. Philip jumped to his feet, and, seizing only his gun, sprang forward at his utmost speed. His flight was directly toward the spot where two of Church's men — an Englishman and an Indian — lay in ambush. Both raised their guns; the Englishman's missed; the Indian fired, and Philip fell forward dead in a pool of the swamp.

Essentially this was the end of the war, though some of the Indians, in small parties, held out a little longer. It had lasted for more than a year. Thirteen towns had been destroyed; six hundred buildings burned, countless numbers of stock of all kinds were lost; six hundred men killed in fights or murdered, and great numbers disabled by wounds. There was hardly a family without its scar of sorrow. But the power of the Indians in all Southern New England was destroyed for ever. Some escaped by flight into the western wilds where the white man had not penetrated; but many small tribes were obliterated; whole families had perished; many who were captured were sent to the West Indies, and dragged out the remainder of their miserable lives as slaves.

THE DEATH OF PHILIP.

Portsmouth Harbor.

CHAPTER XVIII.

NEW HAMPSHIRE.

CHARACTER OF THE MAINE AND NEW HAMPSHIRE SETTLERS. — KITTERY. — GORGEANA. — THE NORTHERN COLONIES ABSORBED BY MASSACHUSETTS. — EARLY NEW HAMPSHIRE CHURCHES. — THE ISLES OF SHOALS. — HISTORY OF MASON'S NEW HAMPSHIRE GRANT. — THE CLAIMS OF HIS HEIRS RESISTED. — NEW HAMPSHIRE GOVERNORS. — INDIAN HOSTILITIES. — ATTACKS AT SACO, BERWICK, AND ELSEWHERE. — THE TREATY AT CASCO. — WAR RENEWED. — DOVER ATTACKED. — MURDER OF WALDRON. — CLOSE OF THE WAR.

THE settlers who came out to New Hampshire and Maine, under the patronage of Gorges and Mason,[1] were mainly royalists and adherents of the Church of England. The principal men were disposed to favor those feudal notions of manors, seignories, and ecclesiastical sees, which the two proprietors entertained. Captain Francis Champernoon, who bought of Gorges Gerrish's and Cutts's islands, near the mouth of the Piscataqua, and the place of whose burial upon Cutts's is still marked by the simple cairn of stones which he directed for his monument, was a distinguished royalist, whose ancestor, Richard, was a stout adherent of Henry VII. in his struggle with Richard II. The favor of the family at court is shown by an extant petition of Arthur Champernoon to Charles I., in 1634, about the Priory of Plimpton, which belonged to him in tail male, and which, in default of male

Early Maine and New Hampshire settlers.

Francis Champernoon.

[1] Vol. i., p. 333.

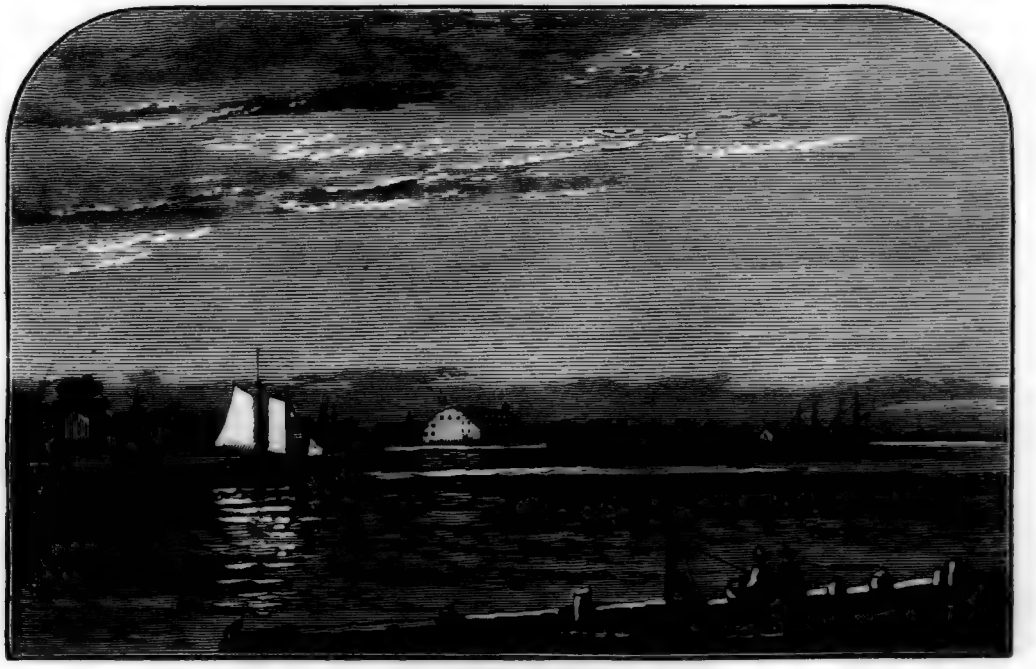
issue, would have reverted to the crown. He prayed for a grant of reversion to himself, and the petition bears the king's consent. The island, afterwards called Gerrish's, was at first called Dartington by his son Francis, from the name of a family castle upon the River Dart in Devonshire.

The town of Kittery.

Another place upon that English river was Kittery, which, in 1652, became the name of a town in New Hampshire, originally called Piscataqua, at a time when it included Eliot, South Berwick, and Berwick, which are on the eastern bank of the river, and now in Maine.

The "city" of Gorgeana.

In 1636, there were a few settlers at Agamenticus, as the territory was called, between the mountain of that name and the sea, which is now the township of York. Here an incorporated city was founded in 1641, on the old English plan, with a mayor and aldermen, and pompous revival of antique usage. It was called Gorgeana. The occupants of the land were to be subject to the proprietors as their tenants at will. Mason and Gorges did their best to transplant to America foreign fruits and the feudal manor. But of them all the grapes and the manor failed to effect a lodgment. The aristocratic principle could not take root and become New English any more than the varieties of slips which were intended for vineyards. But the English apple liked the soil, where it improved in size and flavor till it became the hardy symbol of New England. One of the apple trees which were brought over in tubs, in 1629, to start an orchard in York, has borne fruit ever since, till the year 1875, when it was cut down.



Champernoon's Cairn.

Ill-success of feudal methods in New England.

Many of the settlers, who came over to improve their fortunes, favored no prerogative but the personal one of earning their living. They did not relish any transfer of old abuses to the scene of their new venture. The proprietors were baffled and discouraged, because the popular opinion among men, who were bold and hardy enough to venture here, was decidedly hostile to privilege. The settlers were always trying to establish a system

of governing that should meet their local wants and circumstances, with the least possible encroachment from delay or vested rights. Mason aspired to be Lord of the Manor. The settler wanted to own his farm and fishing-stage. The dissensions which arose from the collision of the two interests, finally led a great number of the settlers, in 1641, to petition the General Court of Massachusetts to be included under its government; a popular tendency which, of course, was skilfully fostered by agents of the Puritans, who longed to exercise authority over the region where their enemies in religion and politics ruled, and all the disaffected sectaries took refuge. For Gorges and Mason were tolerant in religious matters, though staunch royalists and intensely feudal. They had, of course, no objection to the expectation that fishing and trading

Northern Colonies absorbed by Massachusetts.

View of Kittery, N. H.

might pay the expenses of colonizing and serve as an inducement to colonists. But while they were profoundly loyal to their own religious convictions, and to the customs of public worship which belonged to them, they were well disposed to welcome all men with freedom to worship God in their own way.

Richard Gibson, an Episcopalian, was the first minister of the Piscataqua parish at Portsmouth; and the people at Odiorne's Point came over the water between there and Strawberry Bank — as Portsmouth was first called — to hear him preach. A chapel was built for him in 1638. This appeared to be no religion at all to the Massachusetts men, who were prone to accuse

First church at Portsmouth.

their neighbors of cultivating tolerance solely for the sake of trade. Gibson, Winthrop said, "did scandalize our government, oppose our title to those parts, and provoke the people, by way of arguments to revolt from us." Therefore, they had him up before the General Court in Boston, extorted from him an acknowledgment of his offence; but, as he was about to leave the country, dismissed him "without any fine or other punishment." Mr. James Parker of Weymouth, "a godly man and a scholar," took Mr. Gibson's place. Parker was, of course, a Puritan, or Winthrop could not have thus commended him. He adds that the new minister was invited to come to Portsmouth by more than forty of her people, whereof "the most had been very profane, and some of them professed enemies to the way of our churches." Even so godly a man as Mr. Parker could do little with

View of Exeter, N. H

so perverse and backsliding a generation. The Governor bewails that "most of them fell back again in time, embracing this present world," — fell back, that is, into the slough of a non-Puritan church.

Wheelwright's settlement at Exeter.

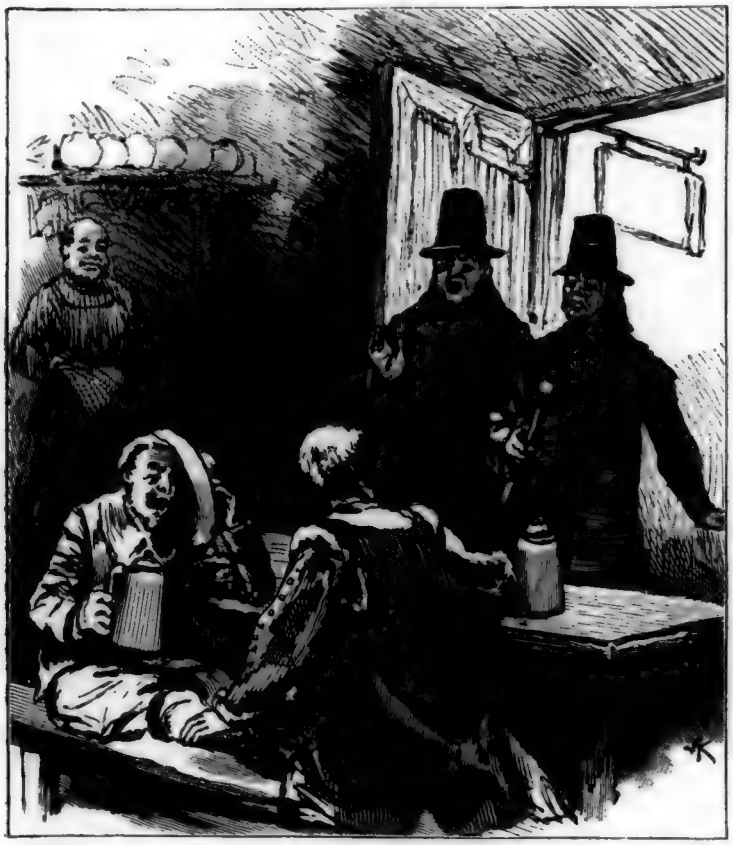
When John Wheelwright was driven, in 1638, out of Boston for Antinomian opinion, he founded at Squamscot Falls, Exeter, a church, and at the same time a body politic, upon a purely democratic basis. Every man, without respect to his theological bias, had a voice in choosing rulers annually, and two assistants to each ruler. A similar social system was founded and prevailed at Dover. Two elements from the old country appear to have met in

New Hampshire. The settlers from London and Bristol seem generally to have favored the Church of England; those from the West Country were more inclined to non-conformity. There are traces of certain jealousies between the two parties, as when the agent of the Dover people claimed a point of land at Newington, and was resisted by the agent of Portsmouth. When the affair threatened to be serious, the employers of the agents had recourse to arbitration, and the point was amicably settled, though to this day it is called Bloody Point from the unsanguinary nature of the quarrel there.

When New Hampshire came under the jurisdiction of Massachusetts, in 1641, Wheelwright's policy was respected; he had the triumph of seeing the rights of his freemen without regard to their religion allowed by the colony which banished him. But he would not remain under its jurisdiction. He retired to Wells, in Maine; afterward he was permitted to preach at Winnicumett (Hampton). During Cromwell's protectorate he went to England, was admitted to an audience of his old college mate, the Protector, who received him with much consideration. Turning to the persons standing near, Cromwell said, "I remember the time, gentlemen, when I have been more afraid of meeting Wheelwright at foot-ball than of meeting any army since in the field." Wheelwright returned to New Hampshire, and died at Salisbury, in 1680.

Signature of Wheelwright.

Wheelwright was a stiff Calvinist. The men who exiled him held Calvinistic doctrine with a silent modification in favor of practical religion, and lived, as he said, mainly under a covenant of works. But he was a pure supporter of a Covenant of Faith. To his mind the doctrines of Election and Foreordination were absolute; they claimed his homage so entirely that he seemed to undervalue justification by works.



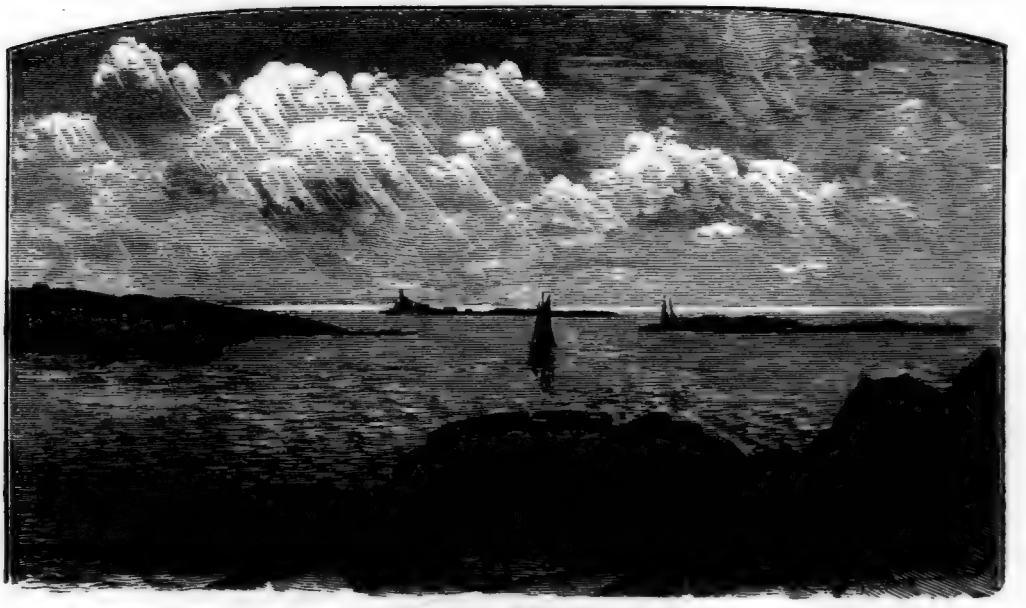
Notwithstanding the strong predilection for the Church of England, which the proprietary settlers brought with them, the principles of the Puritans soon prevailed in the colony, and fortunately brought it into greater sympathy with the Colony of the Bay. Winthrop and the rest used to regard the Piscataqua as another Rhode Island, that is, only a sink for Massachusetts, into which all malcontents, fanatics, royalists, and miscreants drifted. Some persons of a bad moral quality did indeed find it safer to go there, but also safer eventually to leave it. The colony was not so jealous of its strict brethren of the Bay as to countenance moral irregularities.

Puritanism in New Hampshire.

The spirit of antagonism was kept alive partly by the pretensions of Gorges and Mason, and partly by these theological differences. But the early Episcopalians of the Piscataqua were quite as sincere, and of a motive as honest as any other people in New England, though the man who should have said so in 1642, in Boston, would have been haled before the General Court.

Early legislation on church matters.

We find, as everywhere else in New England, a great deal of early legislation applied to church matters and customs. It was ordered, in 1662, that a cage be made by the selectmen, "to punish such as sleepe, or take tobacco on the Lord's Day out of the meeting in the time of publick exercise." The usual custom prevailed of seating the people in the meeting-house according to rank and consequence. When Mr. Moody was ordained, Captain John Pickering was appointed, on account of his great strength and commanding manner, to reserve seats for the distinguished guests and keep the congregation in order. But he let all the people in before service time on the ground that all men were equal in a house of God.[1]



The Sabbath Inspection of Taverns.

The early records contain an order in town-meeting that "one householder or more walk every Sabbath day in sermon time with the constable to every Publick House in ye town to suppress ill order, and if they think convenient, to private houses also." It is also ordered, "for the prevention of fire or other dangers which may happen by smoking in the Meeting House, that every person soe smoking at any meeting in the Meeting House be fined." This alludes to the town meetings which were held in the early times in the single meeting-

[1] Rev. James De Normandie's *Historical Sketches.*

house belonging to the town. The names of common drunkards were furnished by the selectmen to every inn holder, who was then fined for selling liquor to them. A vote was passed that all persons should go over the ferry free upon the Sabbath. If strangers remained in town more than a day or two, they were obliged to give their names to the selectmen.

Cases of intolerance were quite rare in New Hampshire; they seem to have occurred chiefly while the colony was under the jurisdiction of the Bay. It was in 1662 that an occurrence already alluded to took place. Three Quaker women were sentenced to be publicly whipped at the cart's tail through several towns. The punishment was applied in two or three, when Walter Barefoot interfered, and prevailing upon the constable to surrender the warrant to him, released them. In 1656 there were several enactments against "a cursed sect of hereticks lately arisen up in the world, which are commonly called Quakers, who take upon themselves to be immediately sent of God."

The Isles of Shoals.

The Isles of Shoals, a group of seven rocky islets lying about nine miles southeast of the mouth of the Piscataqua, had in the seventeenth century an importance now hardly conceivable. These islands had been seen and visited quite early, but received no particular description. In 1610 Samuel Argall was driven by a storm upon the coast of Maine, and returned thence to Virginia with a cargo of fish which were caught in these waters, and perhaps cured upon the rocks of the Shoals. But we have definite accounts of them in 1614, by Capt. John Smith, whose opinion of them was slightingly

The Isles of Shoals.

expressed afterwards when they fell to his share in a division of territory under a patent of Gorges. He says, "No lot for me but *Smith's* Isles, which are a many of barren rocks, the most overgrowne with such shrubs and sharpe whins you can hardly pass them; without either grass or wood, but three or four short shrubby old Cedars."[1] These scrubby trees gave the name to Cedar Island; but John Winthrop had no other cause to write in his journal, "the Isles of Shoals are woody."[2]

The name would indicate that the group is encircled by shoals, like those which lie off Nantucket and in the neighborhood of Cape Cod; but there are only three or four outlying ledges which are distinctly marked by the breaking water. The sea deepens quite abruptly around all the islands, and it is evident that Captain Smith laid down upon his map several ledges as if they had been islands, making three or four out of Duck Island, for instance; so that perhaps the name of the group was derived from this number, as of a shoal of islets. It is more likely that the abundant shoals of fishes which attracted vessels thither gave it the name. But there is one authority which claims that the word *Shole*, in some dialect of the west coast of England, means cod-fish.

Ownership of the Islands.

The group was first included in a patent which Gorges obtained from the King in 1620; under it they belonged to Maine till 1652. It was in 1621 that the Council of Plymouth was summoned to the bar of the House of Commons, upon the charge that its charter for the settlement of New England was based upon a monopoly of fishing and trading, and included the right to lay taxes upon other parties; as Captain Smith complained, "those patentees procured a Proclamation, that no ship should goe thither to fish but pay them for the publike, as it was pretended, five pound upon every thirty tuns of shipping, neither trade with the natives, cut downe wood, throw their balast over bord, nor plant without commission, leave and content to the Lord of that division or Mannor: some of which for some of them I believe will be tenantlesse this thousand yeare."[3]

Politics and interest combined to make an effective, national grievance of this fishing question; and the principal fishing station was the Isles of Shoals. The Islands gradually lost their importance: new ports upon the coast were opened, trade became diverted to more thriving settlements, and vessels from Malaga and the West Indies sought safer harbors. When, in 1679, New Hampshire became a sep-

arate Royal Province under the Presidency of John Cutts, the group was divided by a line running through the middle of the roadstead: then the northerly islands, Appledore, Smutty Nose and Duck reverted to Maine, the others came under the government of New Hampshire. This was the old partition agreed upon between Gorges and Mason, when the latter occupied the Piscataqua; and the division remains undisturbed to-day.[1]

Captain Mason's New Hampshire grant.

The history of Captain John Mason's proprietorship, by virtue of which he and his heirs claimed the ownership of all New Hampshire which lay west of the Piscataqua, with power to extort rent and taxes from the actual settlers, is interesting because it furnishes a most striking example of the way in which municipal and republican usage were developed in America. It must, however, be briefly told, because it was protracted clear through the seventeenth century.

In 1620 Gorges obtained a comprehensive patent, which covered all New England, described as then existing between the fortieth and forty-eighth parallels of latitude. This was not only the basis of all the supplementary patents which were issued to different individuals, and empowered them to occupy their grants or claims, but it also furnished Gorges and Mason with their authority to assume, as they did afterwards, the control over the whole territory of the Massachusetts Bay and the Piscataqua. It provided for a General Governor, who should be a royalist, and for a form of worship after the ritual of the Church of England. As often as this scheme recurred it was of course vigorously resisted by the Massachusetts men. They viewed with dismay such a prospect of consolidating New England in the interest of royalism. But the charter clearly justified Gorges and Mason in the attempt to transfer their favorite scheme of government and religion to the New World. It was therefore that the Massachusetts people viewed it as a divine interposition when Captain

[1] Appledore is chiefly remembered as the place where William Peperell, a fisherman, first settled. Removing to Kittery, he became the father of Sir William, the hero of Louisbourg, and the first and only native New Englander (except possibly his own grandson) upon whom a baronetcy was conferred while the colonies belonged to England. Sir George Downing, who was also made a baronet, was not a native of New England; Sir William Phips was only a knight; Sir John Davie inherited his baronetcy; also Sir John Stewart; Sir John Wentworth was made a baronet after the separation of the colonies from England. — Sabine's *American Loyalists*. *Hist. Magazine*, vol. i., p. 150. It is claimed also (*Hist. Mag.*, p. 286), that Sir William Peperell's grandson, born a Sparhawk, whose name was changed to Peperell when he became the baronet's heir (a son having died), was created a baronet in 1774.

William Peperell did not relish the rough life at the island, and it is related that he and his friend Gibbons agreed to leave it in the direction which their canes took in dropping from the hand. Peperell's cane pointed toward Kittery, and Gibbons's toward Maine, whither he went and settled on land which was afterward covered by the Waldo Patent.

John Mason, who had been appointed Vice Admiral of New England in 1635, died during the same year. Then, as Winthrop said in his Journal, "all the business fell on Sleep." If the growing independence of New England had been checked by such a scheme in the interest of monarchy, the restraint would have only lasted until the English Commonwealth arose. Then its republican politics would have interfered to restrain the ambition of royal proprietors, and to confirm the Puritan tendency of New England.

Death of Mason.

But the heirs of Gorges and Mason clung tenaciously to the proprietary claim. In 1676 New Hampshire was still under the jurisdiction of Massachusetts. In that year the heirs perceived their opportunity, in the jealousy of Charles II. which had been long nursed against the independence of New England, to renew their claim under the old patent issued by the Council of Plymouth. When Charles II., who had been waiting several years for a pretext to interfere with the affairs of New England, sent Edward Randolph to Boston, the General Court was ordered to appear by deputy in England to defend its pretensions, on peril of judgment in case of disobedience. No remonstrance or delay could serve their cause; the deputies were obliged to repair to London. There it was decided that the Council of Plymouth never had the right to convey to Gorges and Mason, under a simple grant of territory, any absolute jurisdiction over New Hampshire. No municipal jurisdiction existed, therefore, that could be transferred to Massachusetts. It remained vested in the crown; a royal commission for the government of New Hampshire was issued, which restrained Massachusetts from its exercise of jurisdiction. John Cutts was appointed in 1679 the President of a council of nine to govern this royal province for one year.

Claims of his heirs.

New Hampshire a Royal Province. — Cutts Governor.

But at the same time it was decided that the heirs of Mason might claim the ownership of all the land which had been granted to Captain John Mason, in 1629, and occupied ever since by numerous tenants. These had purchased their estates from previous holders, had put toil and money into them, and therefore were in no humor to pay rent to a new claimant, or to take leases of him.

When a grandson of Captain John — Robert Mason, who had dropped his father's surname of Tufton, and assumed his maternal grandfather's — came from England, and claimed proprietorship, proposing to issue titles, receive back-rents, and extort sixpence in the pound upon all the improvements that had been made by the settlers for more than forty years, there followed endless complaints, great bitterness of feeling, and obstinate litigation. His stewards demanded rents with threats to sell the occupant's prem-

Robert Mason in New Hampshire.

isés over his head if the demands were not complied with. Sheriffs attempted to serve writs of ejectments, but the colonists united everywhere in the sturdiest resistance. There was little respect for proceedings at law, and quite as little paid to persons. Mason, in despair, returned to England to solicit a change in the administration of the Province, under which he hoped to renew his claim more successfully. Edward Cranfield was appointed Lieutenant-governor, with a council at whose head sat Mason, who undertook to contribute to Cranfield's support in office by mortgaging the province to him as security for an annuity of £150. Cranfield came out with the resolution of a Roman proconsul to make the province bleed.

Signature of Robert Mason.

Cranfield, Lieutenant-governor.

His preliminary proceedings, looking to the interest of the claimant, were so arbitrary, and inflamed the popular discontent to such a degree that riots broke out at Hampton and Exeter, started by Edward Gove, a hot-headed member of the Assembly which Cranfield had just illegally dissolved. No persons of importance joined him. He was arrested, tried, and condemned to death, as if his offence had involved high-treason. The Governor, fearing to execute the sentence, sent him to be put to death in England. This monstrous spectacle of the King's government carrying out the sentence of a provincial magistrate was prevented, partly, it is said, by the interference of Cranfield himself, who felt that his rule was too unpopular to be much longer tolerated.

As a few of the settlers consented to take leases of Mason, the Governor and Council concluded that among them a sufficient number of jurymen and sheriffs could be found willing to try cases for Mason and serve his writs. His law suits began; a dozen cases were sometimes disposed of in a day; but Mason could do nothing with the estates that lapsed to him. Cranfield's tax-bills developed even more resistance than Mason's writs of ejectment. Under provocation from these arbitrary measures, the people sometimes lost their temper, and opposed "swamp law to parchment law." The hard-worked women were as little disposed as the men to acknowledge Mason's bit of parchment as a needed title-deed, where the right had been won by the hard fight with a savage wilderness. They heated spits and prepared scalding water for a suitable ovation to the renegade settlers who had turned officers. One sheriff,

General resistance to Mason's demands.

who incautiously attempted to make an arrest during divine service, was floored by a damsel who brought the collective word of God to bear in one blow with a folio Bible; the whole parish joined the Church Militant upon the spot, and Cranfield's posse was dismissed.

The influence of non-conforming clergymen over public opinion was conspicuous during New Hampshire's royal episode. Cranfield

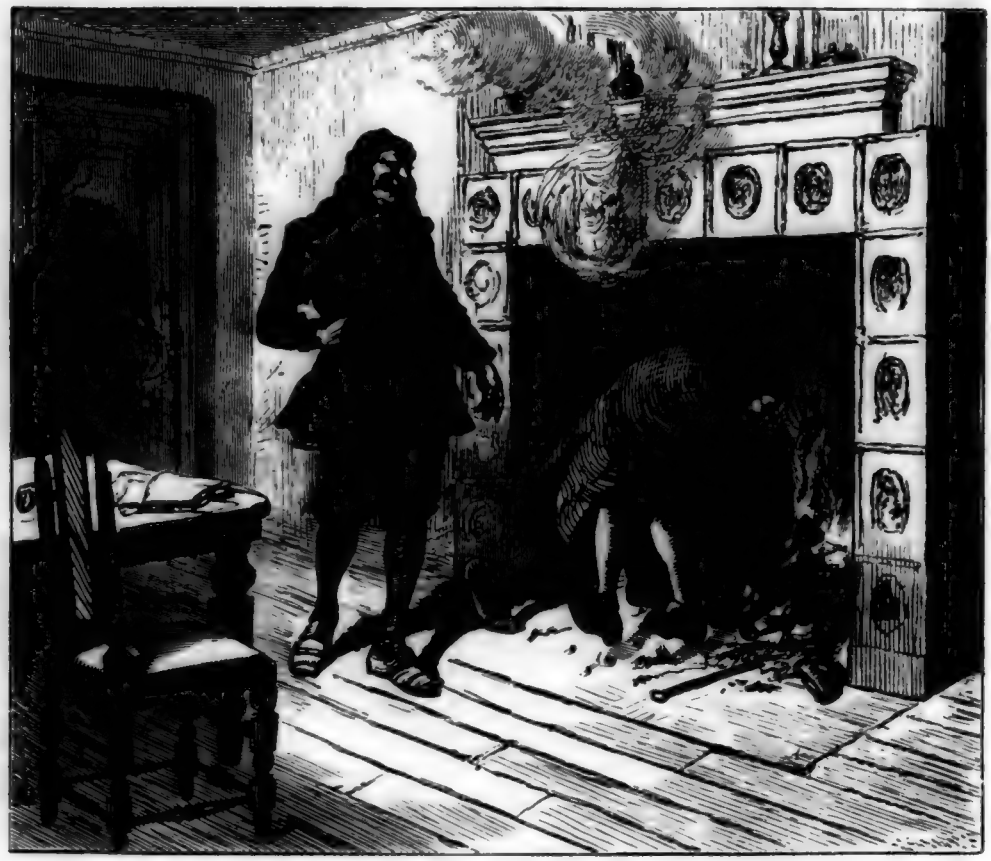
The Sheriff Resisted.

wrote to England that allegiance was impossible while the clergymen had the liberty of speech. Among them the figure of Moody, the Puritan minister of Portsmouth, stands stoutly forth in resistance to the politics of the Governor, who endeavored to silence him by enforcing the act against non-conformity. Cranfield issued an order that the ministers should admit all persons of moral life to the Sacraments of the Lord's Supper and Baptism, and notified Moody that he should appear at the Lord's table the next Sunday, with the expectation that the Communion would be admin-

Ministers as popular leaders.

istered to him according to the liturgy of the Church of England. Cranfield knew that Moody would refuse. The minister was put upon trial, and notwithstanding the valid defence he made that he had not been episcopally ordained, sentence went against him, his living was forfeited, and he was sent to prison. Being afterwards banished from the province, he preached in Boston till 1692, when he could return to Portsmouth.

Cranfield was given leave of absence in 1685, and Captain Walter Barefoot was appointed Deputy Governor during his absence. His efforts, on behalf of the assumed proprietor, were quite as earnest as Cranfield's, but quite as futile. Mason was a lodger in Barefoot's house, and that intimate relation was unfortunate for both. Two sturdy yeomen, Thomas Wiggins and Anthony Nutter, called to see Mason one day, probably to expostulate with him upon the legal proceedings to substantiate his claims, by which they, in common with the colonists generally, were threatened with the loss of their long years of hard labor in making homes for themselves and their families.



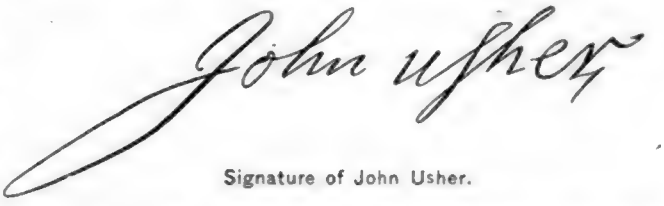
There was evidently little ceremony in the approach of these men even to a Deputy Governor and the assumed owner of all New Hampshire. Wiggins declared that neither he nor others cared "one rush" for Mason's claim; that he had no business in the province; that he had not a foot of land there, and never should have; and "did give" — says Mason, in an affidavit — "very abusive and provoking language." Both Barefoot and Mason ordered Wiggins to leave the house, and Mason, unfortunately, undertook to enforce the order. Wiggins seized him and tossed him into the fire; — not only tossed him into the fire, but sat upon him; — not only sat upon him, but grasped "his wind-pipe in high contempt of his majesty's royal authority, and against the peace of our sovereign lord the King," and "almost choked him." Barefoot rushed to the rescue; but him also Wiggins seized and tossed into the embers out of which Mason was crawling, and sat upon him so hard that he broke two of his ribs. Mason called for his sword, which, before he had time to draw, was taken away from him by Nutter, who had stood by hitherto laughing at the way in which his companion handled the official gentlemen. The maid screamed for assistance; the neighbors rushed in, but only, it seems, to snatch the Deputy Governor's velvet cap from behind the back-log, and to pick the live coals from his breeches, for clothes and periwigs were burning.[1] It was in this temper that the settlers met the assertion of right under a royal

[1] Affidavits in *Provincial Papers of New Hampshire*, vol. i. Compiled and edited by Nathaniel Bouton, D. D., Secretary of N. H. Hist. Society.

patent against the claim of personal ownership, bought with their own sweat and blood. How easy it is to discern in these encounters the fountain of that spirit of independence which, in another century, would break into a flood.

Usher Lieutenant-governor.

Robert Mason left his odious land-title to two sons, who sold it out to Samuel Allen, of London, who received a commission to govern the province. William of Orange appointed Allen's son-in-law, John Usher, Lieutenant-governor of New Hampshire, to act during the absence of Allen. Usher was amiable, and



The Assault on Mason and Barefoot.

disposed to conciliate the province; but he was pledged to Allen, and the old distraining processes of Mason had to be renewed, but so ineffectually that Allen could not pay to Usher the annuity which had been promised to him. Usher had greatly excited the people by removing from his council two prominent men who were hostile to Allen's claim. During a visit which Usher made to Boston, the people privately dispatched an influential merchant, William Partridge, to London to solicit, in their name, the office of Lieutenant-governor. Partridge was successful, owing to private interest exerted in his behalf; and the councillors who were obnoxious to Usher resumed their seats at the council board.

Usher, at the beginning of his administration, found the actual possessors of land as unwilling to be ejected by writs issued under Allen's derived title as under Mason's original one. They were, at the very moment, defending their homes, with loss of life and property, against the attacks of the Eastern Indians. Smarting under the griefs and hardships of that warfare, living in constant uncertainty and dreading fresh outrages, they naturally resented this legal onset upon possessions which they could hardly hold against the savages. While the exposed settlements saw their barns and dwellings disappear in smoke, their kindred vanish into captivity, and precious lives laid down to maintain a colony, this fire in the rear was opened upon them by the official persons in Portsmouth.

Renewed difficulty as to titles.

Signature of John Usher.

It was important for Usher to obtain possession of the papers which preserved all the business connected with Mason's suits. They had been taken by force from the clerk who legally held them, and carried over to Kittery, to be concealed there. This was done in 1689, after the people in Boston had deposed Andros, and the colonies were expecting a new king and a change of administration. Usher attempted to recover them from the person who was prominent in their removal; but he, though imprisoned, refused to deliver them up except upon an order of the Assembly. It does not appear that such an order was issued; but Usher did at length get possession of the papers, which were restored to the custody of the clerk.

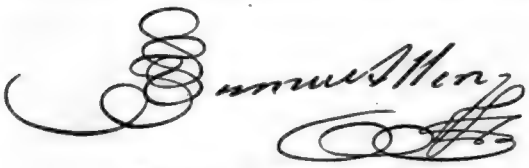
Signature of William Partridge.

But while Usher was in Boston, and when the party which was hostile to Allen's claim had put Partridge into office, the Assembly ordered the papers to be placed in the hands of a newly appointed recorder.

Allen, who was the actual Governor, came over in 1698, and assumed office; Partridge continued in his place as Lieutenant-governor, notwithstanding the remonstrance of Usher, who produced a letter from the Lords of Trade which directed him to hold his office till the arrival of the Earl of Bellomont. But Partridge's commission was held to be valid. The Earl had been lately created Governor of New York and the New England Provinces. He went first to New York and spent a year there, during which Allen's

Arrival of Allen.

administration only served to embitter the popular feeling; it was expressed in the resistance which the Assembly made to some of his measures, and so stubbornly that he dissolved it. The people hailed the appearance of the Earl in the summer of 1699, for they had then a Governor whose private interest was not involved in the proprietary title. He was able to entertain impartially the complaints of both parties. He advised the Assembly to reconstitute the courts which had been presided over by judges who were disposed to favor Allen's claim. Their commissions had been vacated. Now the Assembly passed an act reëstablishing the superior and inferior courts, and Partridge, as acting Governor in the absence of the Earl, appointed the judges.



The Earl of Bellomont.

When the question came before the new courts, it was found that no record of any judgments in favor of Mason, and no trace of his taking possession under them, was in existence. New suits were brought, therefore, to test the claim of Allen, who did not succeed in winning one of them. Consequently he appealed to the King through the court. But the court held the Massachusetts doctrine that, under the old charter, no appeal through the court to the King was admissible. Allen was obliged to petition the King to grant him an appeal.

Progress of the litigation over Allen's title.

It would prove monotonous to recount at length the varying fortunes of this legal strife, so important to a large portion of New England. The King died, and Allen's appeal came before Queen Anne. Thus the great quarrel passed into the eighteenth century. Juries refused to find a verdict for the plaintiff. But the people were disturbed at the prospect, that litigation might at any time be renewed at the will of the representatives of Allen's claim. Therefore, through a meeting of deputies of actual settlers, a scheme for settlement was drawn, by which the inhabitants of townships should hold their lands absolutely free by quitclaim from Allen and his heirs, upon payment of £2,000, to be assessed upon inhabitants of townships, and an allotment of sundry acres of common land in the several townships.

A settlement proposed.

Signature of Samuel Allen.

It is probable that Allen, whose means had been all swallowed up in lawsuits and expenses of agents, would have accepted this composition; but he died before it could be presented to him. Of his assets falling to his son there was nothing but an opportunity to renew the litigation if the prospect pleased him. It was renewed in 1706 by a fresh writ of ejectment brought against Waldron, who was one of the largest landowners on the popular side,

and had been brought prominently forward, as his father was before him, to resist the title of Mason. Losing the suit, Allen appealed to the Superior Court, when a last supreme effort was made by both parties, and all the conflicting documents were displayed, including that famous and doubtful deed which four Indian Sachems, it was said, had made in 1629, to Rev. John Wheelwright and others, under which Wheelwright settled Exeter. Settlers of other places also held their land directly from the original native proprietors. Waldron's father thus possessed lands in Dover. It is not necessary to review the charters, grants, and decisions which supported the proprietary title, nor the arguments employed by the counsel on both sides. The jury found for the defendant, Waldron, a confirmation of the judgment of the inferior court; an appeal was made as usual; but before it could reach a hearing in council Allen died in 1715, and the memorable contest never was renewed.[1]

Signature of Waldron.

End of the contest.

The Indians who lived on the Piscataqua, the Merrimac, and around Lake Winnipiseogee, speaking a kindred dialect with the Abnaki tribes of Maine, were called Tarratines by the Massachusetts Indians. At some former period one original Algonquin language probably prevailed all along the coast of New England; but at the time of the white man's coming it had fallen apart with various modifications, influenced by the movements of separate tribes, by distance, isolation, and the fortunes of war. From the river St. George to the Piscataqua, and perhaps to the Merrimac, the tribes appear to have been once under the sway of the chief of the Wawenocks, the famous *Basheba*, a word that was either a title

New Hampshire Indians.

[1] Belknap's *History of New Hampshire.*

Mason's direct heirs were so reduced in fortune that we find a Tufton Mason living with his mother obscurely in Boston, in 1713. One day the son, rummaging in an old cabinet hit upon a secret drawer in which a signet ring was concealed, that bore the arms and motto of the Tufton family. The head of the Tufton branch was the Earl of Thanet, and the young man determined to earn money enough to take him to England, that he might there prove his connection. He went to sea as a common sailor and worked his way up to be the mate of a ship. Finding himself in an English port, with a respectable outfit, he inquired his way to the Earl's mansion, and bade the porter announce him as an American. Upon being admitted, he said, "My Lord, I am one of your Lordship's kindred," and produced the ring, which bore the motto, "*Ales volat propriis*," the bird flies to its kind. The Earl accepted the claim which was thus made upon his relationship, became interested in Mason, procured his education, and then a commission in the army. He was a major of marines at the taking of Senegal from the French, was made a colonel for gallantry, and then Governor of Senegal. He presented to St. John's Church, in Portsmouth, the beautiful font which was found among the French spoils. In this form the tradition of the old territorial Proprietor was gracefully transmitted by one of his landless descendants. MS. of John L. Hayes, Esq., *Traditions of a Royal Province.*

of some prominent chief, or his name which became a title. His head-quarters were on the Sagadahoc. The Penobscots had attacked the tribe and destroyed the supremacy which it exercised both to the eastward and westward. Then the different sachems found themselves unmolested in their local authority over their respective tribes; but though independent of the Eastern Indians they were still exposed to raids, and dreaded the restless and warlike temper of the Penobscots. The Mohawks also frequently attacked the New Hampshire Indians, and a great defeat, which was sustained by the Penacook Indians near the present Concord, was remembered with dread.[1]

View on Lake Winnipiseogee.

The four sachems mentioned in Rev. John Wheelwright's deed as sellers of land to him were Passaconaway of Penacook ("place of the ground-nut," now Concord), Runawit of Pentucket (at the falls of the Merrimac), Wahaugnonawit of Squamscot, now Exeter, and Rowls of Newichawannock, now Berwick. Of these sachems Passaconaway was the most influential; the other sachems and the natives around Lake Winnipiseogee deferred to his counsels. He was a great medicine-man, skilled in all the charms and occult practices of

The sachems named in Wheelwright's deed.

[1] The Indians loved to settle around falls and profitable fishing places. They named parts of rivers rather than their whole length. Merrimac means the Place of Swift Water, and was applied to the rapids below Amoskeag. The latter word means fishing-place. Pawtucket means the Place of Deer. Piscataqua means Big-Deer Place, because deer were found in great numbers around the river in the interior. The elements of the word also enter into Pautuckaway. "When the inhabitants in that district became numerous enough to petition for an act of incorporation as a town, they sent a large deer as a present to the Governor, Benning Wentworth, who thereupon signified his wish that the new town should be called Deer-field." Wamesit was at the junction of the Concord and Merrimac rivers. Naumkeag was the fishing-place at the Falls. — Ballard's *Geographical Names*.

the Indian, and used them with great effect to preserve ascendency over the native mind. Some of the feats which were told of him have all the color and flavor of East Indian jugglery. Years afterward, when he was an old man, he confessed at a great feast that he had often tried his strongest spells against the white man, with a view to hinder his increase in the country; but as they invariably failed he had made up his mind that war would be a failure also, and counselled his young men not to engage in it. His influence, which preserved the early settlements from attack, may be partly credited to John Eliot "the Apostle," who came into his country on a missionary tour with Mayhew, and impaired his belief in the native sorcery, chiefly by convincing him of the efficacy of English drugs in the treatment of disease. In 1642, the settlements became alarmed to find Indians in the woods who were hunting with fire-arms, and a force visited the old chief to discover his intentions. But the alarm was groundless, except that the unwelcome discovery was made that a trader from Weymouth had been furnishing guns and powder to the natives. In fact they were provided with arms before 1628.

The Pequot war was waged at too great a distance to agitate the Eastern Indians. No common ground of offence then existed, no emissaries tampered with them. The New Hampshire settlements enjoyed immunity till 1675. Wonnelauset, the son of Passaconaway, was then the chief, though the old man was still alive; he lived, in fact, to be over one hundred years of age. Eliot conversed with the son at Pawtucket, now Lowell, Massachusetts, and found him well disposed toward the new doctrine. He said to Eliot that he was "quite willing to leave his old canoe and embark in a new canoe." But on the breaking out of Philip's war he fell under suspicion of the English, and a hundred men, under Captain Moseley, were sent to his village, at Penacook. At their approach the natives withdrew and hid in the woods, to avoid offence and collision. The soldiers wantonly burned the wigwams and their contents. But Wonnelauset did not undertake to retaliate for this injury. He withdrew all his people to the headwaters of the Connecticut that they might not be led into war.

Long-continued freedom of New Hampshire from Indian hostilities.

It is doubtful if Philip did anything to excite the Eastern Indians to hostilities. He had no need to lift his hand for that, because it was diplomatically fomented by French priests and officers. The old story of wanton outrage, remembered by the native while he bided his time, was repeated. Various kidnapping operations had not been forgotten. Supercilious acts were frequent enough; and a disparaging behavior galled the native pride. One day some sailors upset the canoe of the sachem Squando, in which were his squaw and an in-

fant, as they said, to see if the child had a natural gift of swimming. The frantic mother succeeded in rescuing the child, but it died of the shock. Quite naturally Squando made a note of it. The English annalists affect to talk about the malignant influence of this sachem, but outrages similar to this one, and a number of petty treacheries which did not reach the length of murder, are quite sufficient to account for the promptness with which the Indians availed themselves of the moment of Philip's war. There suddenly appeared a chance for bringing the white man to a reckoning when he was deeply involved in other directions.

The beginnings of hostile feeling.

The New Hampshire Indians in Philip's war.

The Indians around the Kennebec struck the first blow when their English neighbors, who dreaded the effect of the news from Philip,

The Sailors upsetting Squando's Canoe.

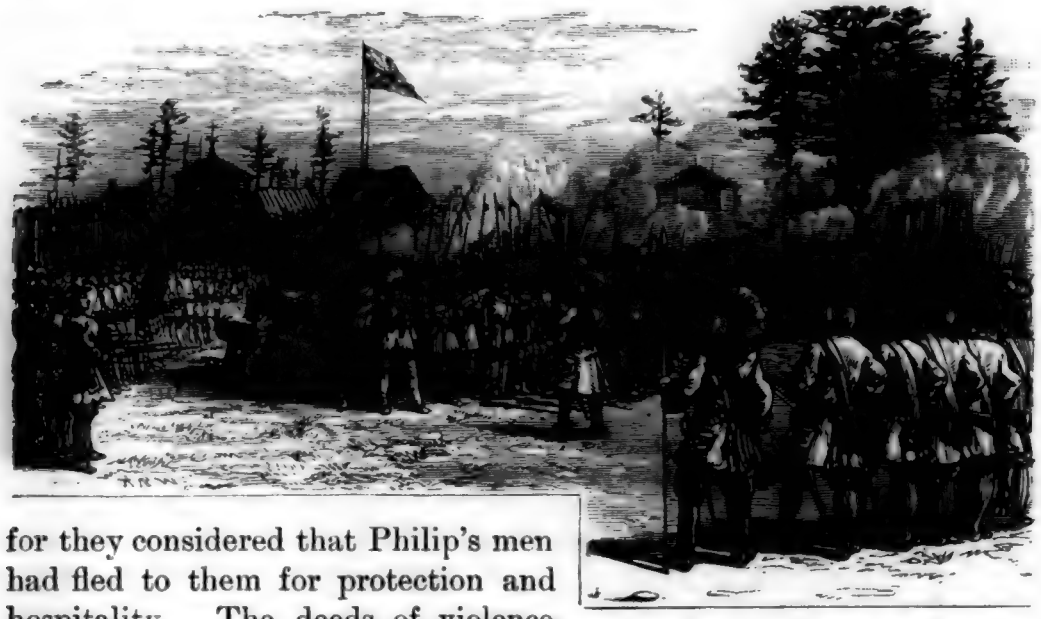
attempted to make them surrender their arms. Then a case or two of plunder and assault broke the long truce, and sufficed to bring on hostilities. The savages tasted their first blood at Falmouth, where an old man and seven of his family were killed and most barbarously mutilated, and two grandchildren carried off. When the Indian temper was thus aroused, and every pretence of accommodation thrown aside, devastation spread slowly but surely from place to place.

Hostilities begun.

The tactics of the savages were the same as in Massachusetts. They lay in wait for laborers in the field, for isolated parties that strolled out of the garrison-houses. They skulked behind people who were returning to a fortified place, and slipped in with them. At Saco they attempted to set fire to a garrison house by the same strat-

agem which Philip's men tried at Brookfield. Screened behind a wagon filled with combustibles, they pushed it up to the log-walls. Both attempts failed: the wagon in one case getting hopelessly mired, and in the other jerking suddenly into a rut and exposing the savages to the fire of the besieged. They seldom persisted in attacks which promised to be long and obstinate. Like the tiger, if the first spring missed the victim, they slunk away to make fresh attempts elsewhere. Fire and blood blazed their path as far as Exeter and Dover. At Newichawannock (Berwick), a servant-maid of eighteen who observed a party of Indians approaching Richard Tozier's house, bravely held the door till the rest escaped to the garrison-house: fifteen women and children were within. The Indians hacked down the door, and with it the girl, left her for dead, and pursuing the rest, caught two little children who could not get over a fence, and killed them. The girl recovered and lived to be quite old. A hundred Indians attacked this place again in October, when three soldiers were surprised and killed. Brave Roger Plaisted, going out with a cart and twenty men to recover the bodies, fell into another ambush. All his men and the frightened team ran back; he and two sons stood fighting and were slain. The example of their heroism made a wholesome impression upon the savages, who went on more cautiously, scoring their fury as far as Kittery; but by the end of 1675 as many as fifty settlers had been murdered, and many barns, mills, and houses burned.

Incidents of the war.



A severe winter with a great fall of snow compelled the Indians to suspend their designs. Hunger, too, proved to be an excellent peace-maker, for they had grown dependent upon the English for various supplies. Therefore, a treaty was made and all captives restored. But the bitter feelings only smouldered, and blazed out again, principally in Maine, where some of Philip's men who were dispersed by his death retreated and mingled with the Eastern Indians.

Massachusetts was not unmindful of the dangers which threatened the remote settlements of New Hampshire. She sent one hundred and thirty men to Dover to join the force of Major Waldron who commanded there. This was in the summer of 1676. Under orders to seize all Indians who had been guilty of murder, he invited those who were disposed for peace to come in to him under a flag of truce. They came without any guaranty of protection. Among them were a number of Philip's men, and the Massachusetts soldiers insisted that an indiscriminate seizure should be made of all. To effect this without bloodshed, Major Waldron invited the Indians to participate in a mock training, and when, at the command to fire, all their muskets were

Aid from Massachusetts.

Major Waldron's stratagem.

emptied, the troops closed round and took all prisoners save two or three. The Major intended to release the well-disposed, among whom were Passaconaway's son and the Penacook Indians who had returned from the Connecticut; but so little discrimination was used that many of them were included in the two hundred who were removed to Boston and subsequently sold as slaves, "sent into other parts of the world, to try the difference between the friendships of their neighbors here, and their service with other masters elsewhere!" The savages stored up the recollection of this stratagem and its benign results;

Waldron's Sham-fight.

for they considered that Philip's men had fled to them for protection and hospitality. The deeds of violence were renewed. Seven Massachusetts men were surprised and killed at Falmouth, and an entire settlement of forty persons in a remote place was destroyed; many were murdered under tortures and the rest carried into captivity. At Cape Neddock [1] a woman, and her infant at the breast, were murdered in a most barbarous manner.

Retaliation of the Indians.

Captain Hathorne was detailed with one hundred and thirty men, in the fall of 1676 to pursue the Indians; but he never succeeded in coming up with them. In November there appeared at Portsmouth a famous sachem of the Eastern Indians named Mugg or Mogg, to make another treaty. He was sent to Boston to confer with the magistrates, and concluded with them a treaty providing for cessation of hostilities, restoration of prisoners, and a prohibition to purchase arms and powder except from an agent of the government.

[1] Meaning "cleared land," a neighborhood where the Indians had some cultivated fields, and many of their implements are still turned up by the plough. — Ballard's *Geographical Names*.

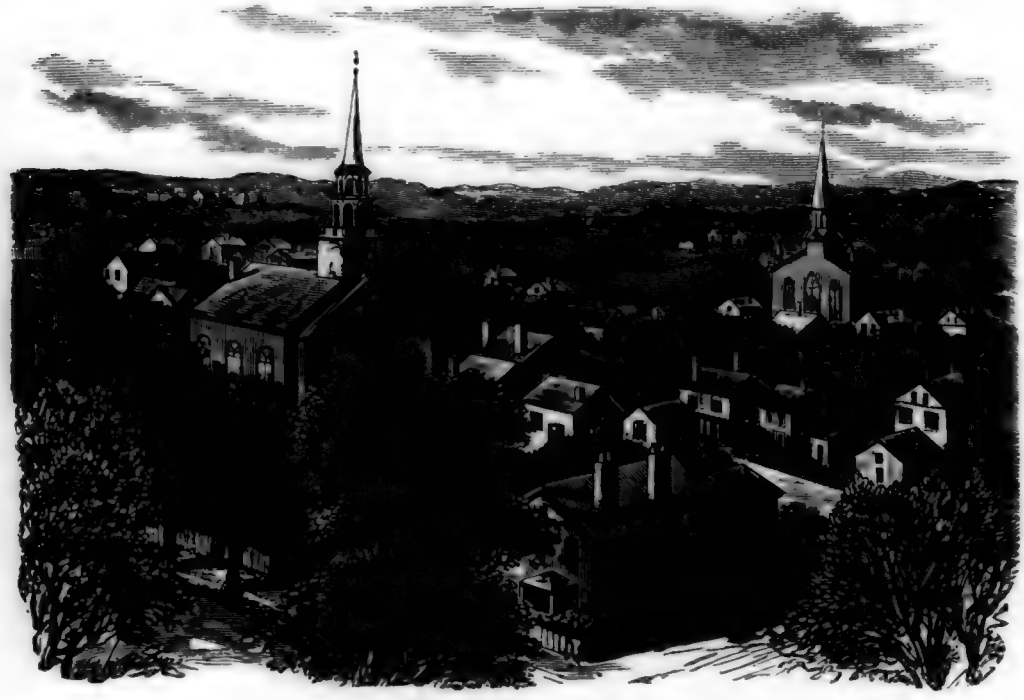
Mogg carried this treaty to Madockawando, the sachem of the Penobscot, who was his chief; he signed it in behalf of his tribe, and doubtless in good faith. But Mogg, under pretence of visiting other tribes to persuade them to release their English prisoners, did not return, and fomented the hatred of the natives. This policy was suspected at Portsmouth, and the alarmed inhabitants prevailed upon the government to forestall the treachery of the natives by some prompt action of its own. Consequently in February, 1677, Major Waldron, with a force of English and Natick Indians, sailed for the Kennebec and Pemaquid.

Mogg's Treaty.

At the latter place an interview with the natives looking to some amicable arrangement was broken up by the discovery that they had brought arms; at least one lance was found concealed in a canoe. In the quarrel that ensued, several Indians were killed; and hostilities were renewed with the opening spring. Seven men were killed near York, nine at the mouth of the Kennebec. Mogg was killed in leading an attack upon Black Point, but at the same place a week after ninety soldiers were caught in an ambush and sixty slain. The natives became so adventurous that they engaged in sea-fights, by boarding from their frail canoes fishing vessels that lay at anchor off the coast in various places, sometimes between the Isles of Shoals and York. If these vessels were carelessly guarded, the savages always got possession of them, killed the crew and destroyed the cargo. Up and down the Piscataqua continual alarms travelled. Houses were burned and people slain in Wells, Kittery, and within the limits of Portsmouth, at a place now called Greenland.

Hostilities renewed.

The General Court of Massachusetts sent Major Pynchon of Springfield and Richards of Hartford into the country of the Mohawks to stir up their ancient animosity against the Eastern Indians and direct it toward the protection of the settlements in New Hampshire and Maine. This mission was so far successful that some parties of Mohawks appeared in the neighborhood of Dover and Wells. In the former place they made the mistake of attacking some of Major Waldron's friendly Indians, so that it became rumored abroad among the natives that the English had treacherously imported Mohawks to slay indiscriminately all Indians. The native suspicion was kept alive by this unhappy mistake and this injudicious policy of setting Indian to fight Indian. The immediate results were not important, but subsequently the French adopted that policy when they wanted to combine the natives against the English.



Negotiations with the Mohawks.

At length commissioners, one of whom was Captain Champernoon

of Kittery, were appointed to meet the various sachems at Casco and endeavor to effect a permanent treaty. Thither Squando went, sated of vengeance, and Madockawando, the father-in-law of Baron Castin, by him instructed how to meet the advances of the English. It was the Baron who had supplied the arms and powder for this three years' war.

A treaty of peace.

The most aggressive tribes were represented at this council. A treaty which closed hostilities, but only for a few years, was here made, which promised to return all captives and to refrain from future attacks upon the settlers, who were to be allowed to reoccupy their desolated lands. The English, on their part, engaged to pay one peck of corn annually for every English family settled between the Piscataqua and Penobscot. This was regarded by the Indians not only as tribute but symbol of acknowledgment of their original proprietorship of the soil. But the annual payments were very irregularly made. The treaty was concluded in April, 1678.

View of Dover, N. H.

Cranfield's action in Indian affairs.

Governor Cranfield in 1684, laid a tax upon the people without their consent. When the council demurred he adroitly availed himself of reports that the Eastern Indians meditated new disturbances in the coming spring, and the tax was agreed to on the ground of the common defence. His project of enlisting the Mohawks against the Eastern Indians, and paying their

services out of the money raised by the tax, increased his unpopularity. The friendly Indians became alarmed, for it was understood that the Mohawks made no distinction among New England Indians: they were all traditional enemies. In the summer of 1685 the Penacook and Saco Indians, after gathering their corn, began to remove their families from the English neighborhood, under the impression that the Mohawks were about to invade them. The English in their turn became alarmed at the movement; but inquiries led to a good understanding, and a treaty of mutual defence and reparation of injuries was made, which lasted about four years.

Signature of Champernoon.

The chief of the Penacooks at that time was Kancamagus, a nephew of Wonnalauset, who went by the English name of Hogkins or Hawkins. He wrote to and visited the Governor, but there was a want of that personal attention so grateful to an Indian, and a disregard of the appeals made by him and his people. The chief was converted into an implacable foe, and is supposed to have planned the subsequent attack upon Dover.[1]

[1] Hogkins wrote the following curious letter to Cranfield: "Honour Governor my friend, you my friend I desire your worship and your power Because I hope you can do som great matters this once I am poor and naked and I have no men at my place because I afraid allways mohogs he will kill me every day and night if your worship when please pray help me you no let mohogs kill me at my place at Malamaki [Merrimac] River called Panukkog and Nattukkog I will submit your worship and your power and now I want powder and such allminish shott and guns because I have forth at my hom and I plant theare.

"This all Indian hand but
pray you do consider your humble Servant
JOHN HOGKINS."

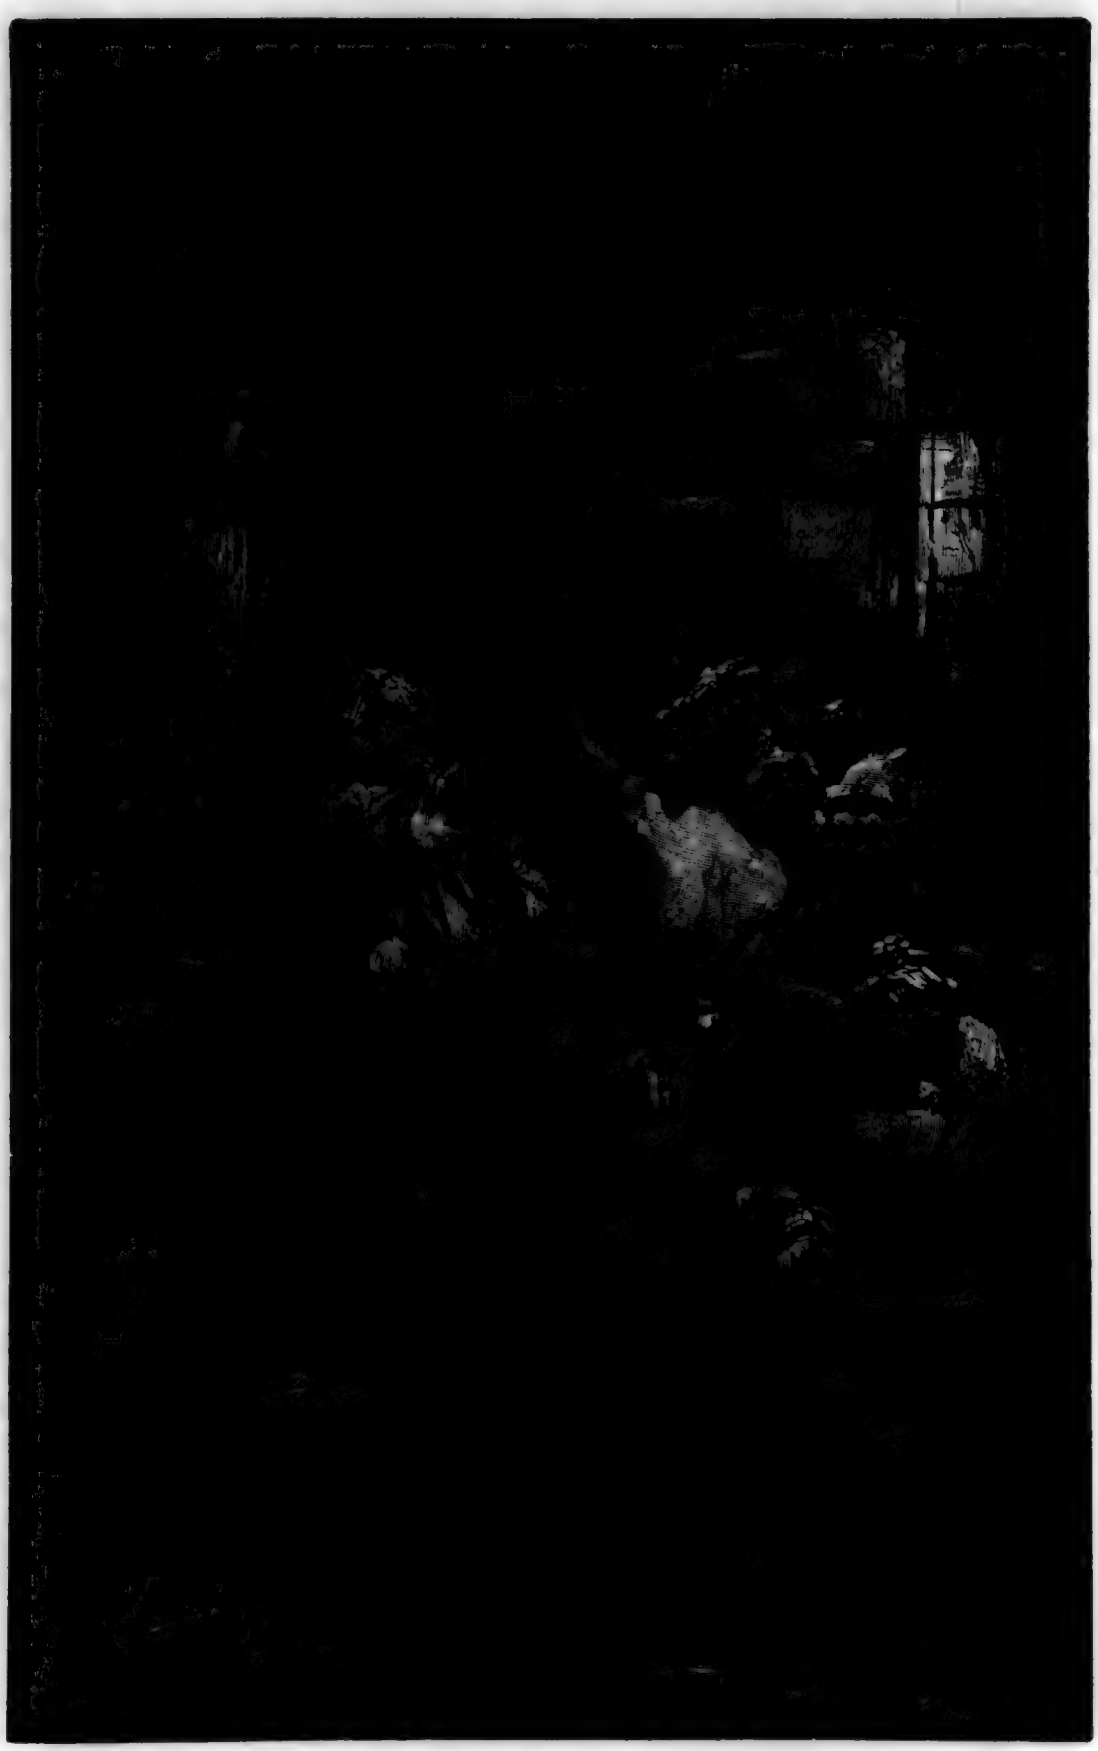
Another Indian outbreak.

In 1688, the Eastern Indians were again in motion, at the instigation of Castin, whose house had been plundered by Andros. A few raids in Maine during the summer were only preliminary to the outbreak of 1689 which so seriously affected New Hampshire. Major Waldron's mock training bore mortal consequences after thirteen years of brooding vengeance. Some of the natives who were sent to Boston and sold into slavery escaped, and found their way back. They easily inflamed numbers of Philip's men who were still harbored by the Penacook and Fryburg Indians; and the resentment spread to the tribes who were nominally friendly. Castin's agents were also at work to effect a hostile combination against the English.

The Indians at Dover



There were five garrison-houses in Dover to which the inhabitants retired at night. They were strongly built, surrounded by tall palisades, and capable of making an effective defence. Anxiety concerning the Indians had subsided. Waldron himself felt entirely secure. The watch at these garrison-houses was carelessly kept, and the Indians went freely to and fro among the inhabitants. Some of the settlers fancying that the natives were observing the situation more closely than usual, became alarmed. There was renewed dread of coming trouble, but Waldron told the people to mind their pumpkin-planting. Though the town was fuller of Indians than usual, Waldron professed to divine instinctively their disposition, and lightly rallied the concern of the people.

On the 27th of June, toward evening, two squaws applied at each garrison-house for permission to pass the night, as they had frequently done before. They were admitted to all but one of them. A chief accompanied the two squaws who went to Major Waldron's house. They were received with hospitality. Said the squaws to the Major, many Indians will come to trade to-morrow. Said the chief, "Brother Waldron, what would you do if the strange Indians should come?" "If I lift my finger I can summon a hundred men," said the Major.

The attack. Murder of Waldron

So profound was the confidence in their perfect safety which Waldron had inspired in his people that when the gates were secured, the squaws were instructed how to undo the fastenings, on their intimation that they might wish to go out during the night. At a signal from their confederates outside the squaws unbolted the gate, the Indians entered and found their way to an inner room where Waldron slept. The old man of eighty seized his sword and drove the savages out from room to room, but a blow from a hatchet stunned him and he fell.

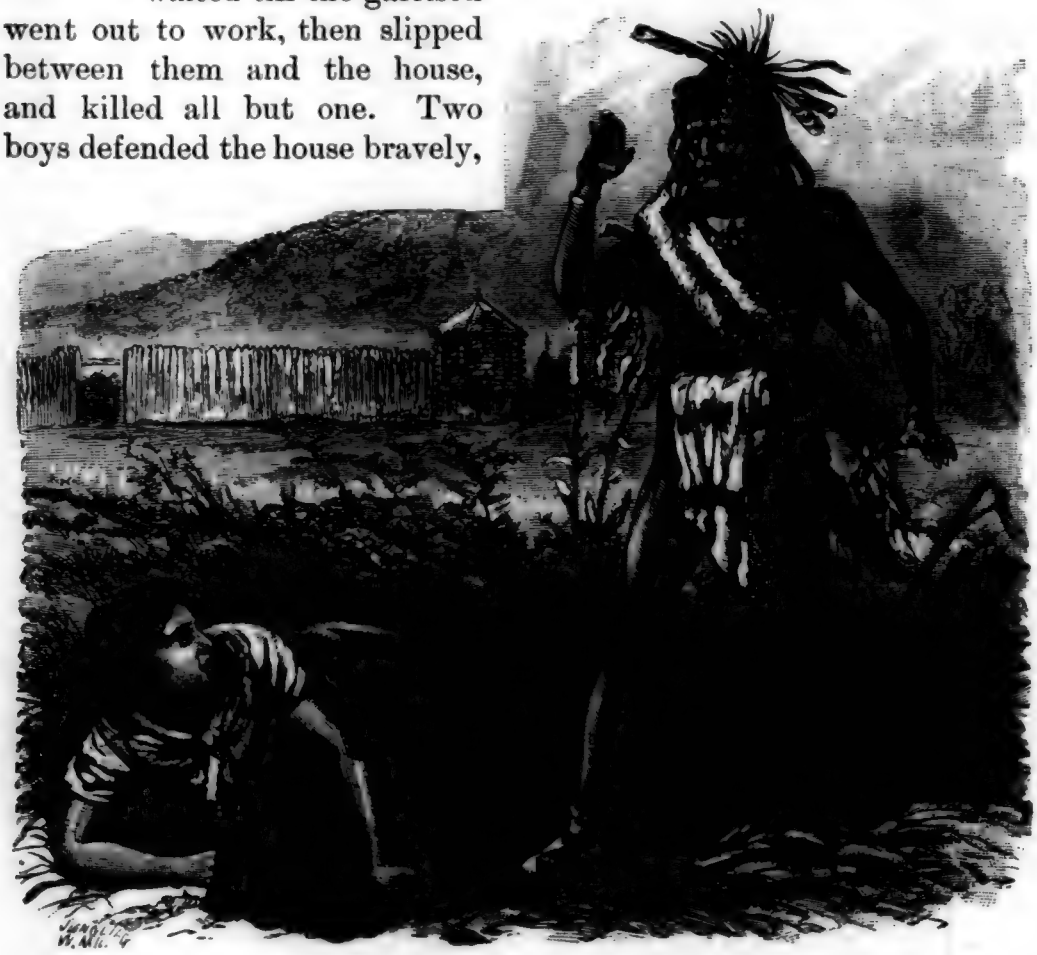
Now came the hour of triumph. It was not for a sham-fight that they picked up the old man and set him in a chair upon a table, cry-

THE MURDER OF MAJOR WALDRON.

ing "Now judge Indians." Then they deliberately helped themselves to food, compelling the other inmates of the house to serve them. After the meal they gathered round the Major and each one slitting some part of his body with a knife, said, "That's my account — I cross it out." One savage cut off his nose, another his ears; another, calling for the scales used in barter to weigh beaver skins, cut off his right hand and threw it in, saying, "We 'll see if it does weigh a pound," for there was a saying among the Indians that in selling beaver a white man's hand weighs a pound. To their terror and astonishment it weighed a pound exactly. Then the old man sinking from the loss of blood, they held his sword so that he might fall upon it and be transfixed.

The house was pillaged and set on fire. Another was served in the same way after the men had been killed and the women set aside for captivity. The barking of a dog saved another just as the Indians were entering. A man cast himself on the ground to avoid the bullets which the savages began to fire through the door and held it with his feet till the inmates were aroused. One house belonging to a man against whom the Indians bore no grudge escaped with pillaging; they made him throw his coin among them while they scrambled for it. He was the father of the man who had refused admittance to the squaws. They took him to the house and threatened to kill him if the son would not surrender. These two families were reserved for captivity, but in the confusion managed to escape.

Incidents of the attack.



Elizabeth Heard, with three sons and a daughter, belonged to the house which was saved by the dog. She was coming with them up the river from Portsmouth that night, and hearing the noise she suspected trouble, and the party landed and went to Waldron's house. Not procuring admission, a young man scaled the palisade, and saw an Indian with a gun waiting at the inner door. The woman was so overcome by the news that she sunk to the ground, and only begged her children to leave her and escape. Toward morning an Indian came toward her with a pistol, looked at her and walked away. He returned, and she spoke to him. He recognized the voice and ran away with loud exclamations. He was one of the Indians who escaped from Major Waldron's stratagem in 1676, took refuge in her house, and was harbored by her. He promised then that he would never do harm to her and her family. Thus one act of gratitude relieved the horrors of that night.

Twenty-three persons were killed and twenty-nine were taken to Canada,[1] and sold to the French, who brought the children up as Roman Catholics. Several houses and mills were burned.

[1] The Saco starts in Crawford's Notch.

Massachusetts despatched a few companies, and Captain Church was sent from Plymouth. The name of the conqueror of Philip was a terror to the Indians. Along the Androscoggin, the Penobscot, and the Kennebec, he made several campaigns, never fighting without success, but often unable to overtake the savages, who fled on hearing of his approach, leaving behind them only the ashes of their villages and their stores. But the blow of the enemy always fell upon places where it was least expected. At Oyster River the Indians waited till the garrison went out to work, then slipped between them and the house, and killed all but one. Two boys defended the house bravely,

Other raids

Elizabeth Heard and the Indian.

till it was set on fire, and even then refused to surrender, save on condition that the lives of the women and children should be spared. The promise was broken: one of the little children was impaled before the eyes of the mother.

In 1690 the French were at war with England. The Governor of Canada organized expeditions of French and Indians, against various points of the colonies in New England and New York. Fifty-two men attacked Salmon Falls on the morning

Later Indian hostilities.

of the 18th of March. The inhabitants made a brave but vain resistance. Thirty were killed and the rest surrendered. Twenty-seven houses and two thousand head of cattle in the barns were destroyed.[1] This party was pursued by one hundred and forty men, and warmly engaged, but made good their retreat with little loss, carrying off the women and children, some of whom were treated with great cruelty. The incident of dashing a babe's brains out against a tree, which is told of various places, occurred upon this journey through the woods to Canada. It was more economical to slay the weaker captives, because each scalp brought a premium when presented before some French officer.

The details of every fight in this war need not be told. Casco was destroyed, Exeter was attacked, houses were burned, and people killed in the field in various directions. Twenty persons were killed and captured at Rye Beach in 1691. York was destroyed the previous year. In 1694, a body of two hundred and fifty Eastern Indians under French guidance, and with a French priest to shrive the dying, made an attack upon the settlement at Oyster River. Twelve of the houses were fortified, but they were badly watched and ill provided for defence. Many of the people lived carelessly, in ordinary houses. How easily the edge of bitter experience grows dull in a frontier life, where Nature's sense of security seems to be shared by human beings. An important element of success in these enterprises of the savages was the short memories of the victims.

Attack on the Oyster River Settlement.

On this occasion the party divided into small groups, one being detailed to each house on either side of the river. The first gun fired was to be the signal for a simultaneous assault, but a man drew the first shot prematurely by appearing at the door of his house. The attacking parties were not all in readiness, so that only five of the garrison-houses were taken, but nearly all the other houses were destroyed, a great many people killed, with the usual barbarities. Persons who surrendered on a promise that their life should be spared were instantly butchered. A woman with child was ripped open; a little boy of nine was made to run down a lane of the Indians, who pelted him with tomahawks till he was killed. Thomas Bickford, who was alone in his house, managed to repel an assault by frequently changing his hat and dress, and issuing orders as to a number of men. While the massacre was going on the French priest got into the meeting-house, and amused himself by scrawling the tenets of his faith with a piece of chalk on the pulpit. About a hundred persons were

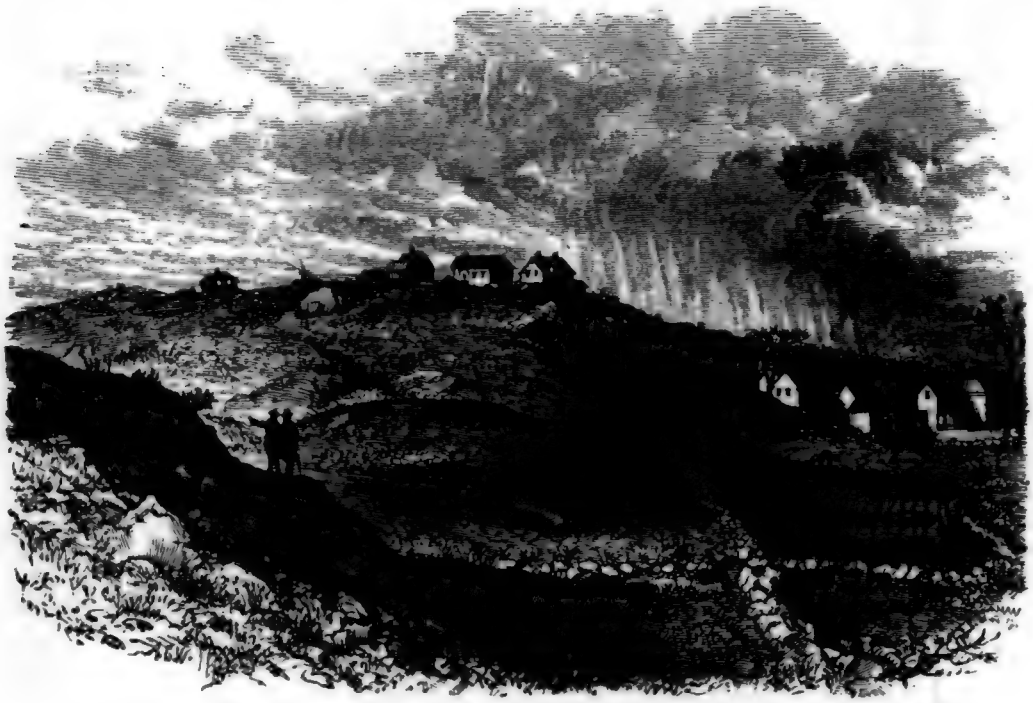
[1] Charlevoix is quoted with some incredulity by Belknap's *Hist. of New Hampshire*, i., 207.

killed and captured. One woman during the succeeding winter was delivered of a child in a violent snow-storm. The Indians killed it. She lived fourteen days on a decoction of bark and water, became senseless from the cold, was revived by the usual Indian remedy of warm water poured down her throat, remained in brutal captivity four years, rejoined her husband, had fourteen children, and died at eighty-nine![1] Of such stuff were made the matrons of those perilous times.

About three miles up the river from Portsmouth, Madame Ursula Cutts, widow of John Cutts, the first royal President, lived upon her farm. The affair at Oyster River did not scare her into town. She insisted upon staying in the country till all her hay was in the barn. Some Indians lay in ambush as she was in the field directing her laborers. She was shot and scalped, and her fingers were cut off for

Rye Beach.

the rings. Colonel Richard Waldron and his wife were going up the river in a boat to dine with the old lady when the tidings of her death intercepted them.



In the summer of 1696 the Indians crossed from York to Rye Beach in canoes, and made an attack upon some houses near Little Harbor, killing fourteen people and firing the houses. They were pursued, but reached their canoes and put to sea. Some boats that were sent to intercept them, delivered fire too soon, and they escaped by going round the Isles of Shoals. Fort William Henry at Pemaquid, which the Indians had captured six years before, was the scene of a serious disaster. Sir William Phips had rebuilt and fortified it at great expense contrary to the advice of Church, who believed that

[1] Belknap's *Hist. of New Hampshire*, i., 216–220.

in Indian warfare such places were only "nests of destruction." It was a constant provocation to the French of Canada, who were determined to take and destroy it. A force of two ships of war, with two companies of soldiers, under Iberville, to be reinforced by Baron Castin with Indians, was sent against it. On the way Iberville encountered two English ships of war, the *Newport* and the *Sorlings*, and a cutter belonging to the Province of Massachusetts. The *Newport* he took, the others escaped in a fog. At the mouth of the Penobscot Castin joined the expedition with two hundred savages in a fleet of canoes. This formidable force invested Pemaquid, and summoned it to surrender. The fortress had a garrison of a hundred men, ammunition and food enough to stand a siege, and mounted fifteen guns. The first summons was rejected; but in the night the French set up a battery on shore, and on the second day threw shot and shell into the town and fort. Castin threatened that if the place was taken by storm it should be given up to the plunder of the savages. Captain Chubbs, the commander, yielded, and threw open his gates. The garrison was only saved from massacre by being taken to an island in the harbor and put under a guard of French marines. But the fort was demolished and the town plundered. Chubbs may have only meant to save the lives of his men, but he was, nevertheless, tried for cowardice on his return to Boston, and cashiered.[1] At Dover three persons were killed returning home from divine service. Belknap relates the remarkable escape of Exeter in the summer of 1697. A number of Indians were concealed near the town waiting for an opportunity. By a stroke of foolish good luck some women and children took that very time to go into the fields for strawberries, and would not be prevented. Somebody in town fired a gun to scare them back; but the report scared the Indians also, who retreated, supposing that they had been discovered. But on the 4th of July of that year they killed Major Frost, at Kittery, thus closing a piteous list of massacres, and making the circle of their revenge complete by the death of an officer who was concerned in Major Waldron's sham-fight at Dover. This, probably, was the last Indian shot fired in New Hampshire during the war. In 1698 the Peace of Ryswick restrained the Indians from further hostilities. Many of the captives were returned, but a good many preferred to remain, and thus started a race of half-breeds to be most dangerous enemies in future wars.

End of the war.

CHAPTER XIX.

THE WITCHCRAFT DELUSION.

OUTBREAK OF THE WITCHCRAFT DELUSION. — ITS EARLIER HISTORY. — CAUSES OF THE EXCITEMENT IN NEW ENGLAND. — WITCHCRAFT CASES IN SALEM. — SAMUEL PARRIS. — THE EARLIER TRIALS. — RETURN OF PHIPS. — A SPECIAL COURT CREATED FOR WITCHCRAFT CASES. — FURTHER PROSECUTIONS. — EXPOSURE AND END OF THE DELUSION. — WITCHCRAFT IN NEW HAMPSHIRE. — THE BELIEF FINDS FEW ADHERENTS OUTSIDE MASSACHUSETTS. — "STONE-THROWING" AT GREAT ISLAND. — THE CASE OF GEORGE BURROUGHS.

THE important and interesting political events — ending with Phips's return from England with the new charter — following the close of Philip's War, had hardly ceased to agitate the colonies, when there came, especially upon Massachusetts, a dispensation more gloomy and terrible than marked any other period of the century. It cannot, indeed, be said that the witchcraft panic, which broke out in 1692, was a result of Puritan theology, or due to the sombre and intolerant temperament which its doctrines nourished. The belief in a diabolical possession is coextensive with and as old as the human

race. Its superstitions, it is true, have been colored by the culture of different epochs, and by different developments of the religious sentiment. But no religion has ever succeeded in so filtering the popular mind as to let the so-called facts of witchcraft drop as dregs to the bottom. If the Puritanism of New England was as powerless as other religious systems to enlighten the ordinary intelligence, its faith, nevertheless, in the intimate nearness of the supernatural, made its followers peculiarly susceptible to the delusion which, under the name of witchcraft, so overwhelmed the colony. It may, however, be said on their behalf that never yet has the belief of a supernatural interference in the affairs of men, distinct from the omnipotent and omniscient rule, been rooted out of the human mind. It lurks even now, not merely among half-civilized peoples, but in the habits and practices of the most cultivated nations, wherever the inevitable combination of credulity and ignorance invites it.

Certain obscure facts of a physico-nervous character have always drawn the attention of mankind, and suggested thoughts of supernatural causes. Whenever the accidental and abnormal traits of the human organization are not understood, they are invariably interpreted in a preternatural sense. The sufferers are victims of invisible agencies; the names which have been invented for these run along a whole gamut from heathen and classical times to the mediæval imps and the modern Satan. It is not at all surprising that people should endeavor to protect themselves against something uncanny which they do not understand.

Earlier history of the witchcraft delusion.

Perhaps the modern animosity against reputed witches was first fomented by the Bull of Pope Innocent VIII., in 1484, to arrest persons suspected of witchcraft. In 1485 forty-one old women were burnt in Burlia, denounced for something that was only crabbedness of disposition, oddity of habit, repulsiveness of appearance, — traits which perhaps they used to threaten or to affright. These marks have always sufficed to send odd and lonely old women to the stake or gallows. Massachusetts did not invent mankind's great trepidation. One hundred persons were condemned by one inquisition in Piedmont, and forty-eight in Ravensburg. In 1515 five hundred were executed at Geneva in the space of three months. These are merely random specimens of the mediæval temper. It was the same in all other countries, and under Protestant as well as Catholic religions. If Luther, worn out by too protracted study, could conjure the Devil out of the air of his apartment, what must have been the visions and frights of peasants and burghers? Probably no amount of ink thrown at that dark personage will ever expel him from the fancy.

It was in the twelfth century that the notion of a witch, as a woman who had made a secret compact with Satan, who gave her power to ride through the air to attend a witch's meeting, first appeared. This survived to be the chief modern qualification of a witch. She could perform various other preternatural feats, vex, blast, blight, and kill. Her genius was always guided by malice, but the aeronautic faculty was her distinction. People suspected of this were sacrificed in Europe by thousands, so deep a terror had seized hold of the popular mind. The more sensitive woman, subject to hysteria, to religious and epidemical influences, to obscure affections of the nerves, was the principal sufferer, always the Joan of Arc of the popular ignorance.

Witchcraft in England.

In the reign of Henry VIII. there were a few executions for witchcraft in England, under a law of 1541, which was soon repealed. Ever since the reign of King John there had been trials for witchcraft, and probably executions. In 1537, Lady Glammis of the Douglas family was burnt alive as a witch; but, as in the case of Joan of Arc, political motives were mixed up in the act. Scotch witchery was connected with the use of herbs, salves, remedies, and charms: attempts at *unbinding*, that is, healing, were punishable. In Aberdeen, in 1597, one man and twenty-three women were burnt. In the same place there was an outcry of witchcraft in 1617, and twenty-seven women were burnt in that year. In 1559 the English Parliament passed a law against witchcraft, and again in 1563, which remained in force till it was repealed in 1736. Bishop Jewel, in a sermon before Queen Elizabeth, who used to frequent Dr. Dee's conjuring shop for consultation, informed her that witches and sorcerers were marvellously increased in her realm. In 1575 many were hung at Barking; in 1579, three at Chelmsford, four at Abingdon, two at Cambridge; in 1582, thirteen at St. Osith's, and so on, with melancholy frequency. Matthew Hopkins, in 1644–1646, undertook the function of Witchfinder. He laid down rules and reduced the hunting of witches to a science, while Harvey, Wallis, Wilkins, Boyle, were founding the Royal Society. It is pleasant to know that he found too many witches: the people became disgusted and alarmed, and mobbed him into obscurity. His most lucrative witch-year was 1645, when about ninety were hanged. The trials were held before Sir Matthew Hale, a devout believer in witchcraft. So were Dr. More and Sir Thomas Brown. Hobbes was undecided. Cudworth used to listen to reputed witches, to test them by their ability to recite the Common Prayer and the Apostle's Creed. The Lord's Prayer was a later test. Lord Bacon prescribed the ingredients for a witch's ointment. Even Selden, famous lover of liberty, said that

if witchcraft were a delusion, still crimes of the imagination might be punished with death, because realities were not more deadly in their consequences. Boyle inclined to a belief in it; Archbishop Cranmer put a witch-clause into his Articles of Visitation. In 1593 the income of £40, derived from the confiscated property of three persons executed for witchcraft, was appropriated for an annual lecture upon its enormity, to be preached by a Doctor or Bachelor of Divinity, of Queen's College, Cambridge; and the custom continued for one hundred and twenty-five years.[1]

A class of witch-finders was created by the popular demand who were very active. Like judges, they used to go on the circuit; the town-crier would make proclamation and order up the witch-cases before them. Finders realized so much per head on all persons convicted, and free passage to and fro. It was the best speculative business of the time, when a man like Edward Fairfax, the translator of Tasso, whose children were subject to fits, prosecuted six of his neighbors for bewitching them. In 1655 Dalton's "Country Justice" lays down the legal signs by which the victim may be held for trial. The witch-names used by Shakespeare were found in the Manual of W. W., which was printed in 1582. In 1693 a great many trials were held before Chief Justice Holt. He kept a clear brain through the business, and was the first public man in office who protected the accused.[2] Then the superstition began to decline in England: the last capital trial occurred in 1712. But in Scotland it was 1727 before the last witch was burned. Perhaps the worst time in England for witches was in 1661, the year after the Restoration. Fourteen commissions were issued for trying them,

Witch-finders.

[2] "I told the Bishop of Worcester that his diocese is infected with notions about witches; he intends his clergy shall rectify their mistakes in that particular. He told me some of the topics he would have argued. He don't much controvert the power of devils in the Gentile world, and their extraordinary operations may still take place among the Pagans. He is inclinable enough to believe what some authors have writ of the strange effects in such places; but he thinks the Gospel, as far as it reaches, has destroyed the works of the devil, and those who are in the covenant of grace can receive no hurt from the infernal powers, either in their persons, children or goods; that a man may be so profligate as to give himself to the devil, but he can have no assistance from him to hurt anybody else in a supernatural way. I think we may assent to this latter part, and leave the devil and the Gentiles to argue the rest among themselves." *Letter of James Vernon, King William's Secretary of State, to the Duke of Shrewsbury*, written in June, 1699. But at that time even Englishmen of broad intelligence and unsectarian feeling could go no further than this. The common clergy of all sects were advocates of witchcraft.

and one hundred and twenty victims were hanged. In 1662 fourteen additional commissions were issued. In Sweden, 1670, children charged seventy persons with bewitching them; many confessed and were executed. Then fifteen children confessed and were executed. Fifty others were whipped every Sunday.

Literature of witchcraft.

Certainly Massachusetts did not enter upon a novel and untried path. During all the European epochs of the delusion a vast literature upon the subject sprang up; out of it all only three books of consequence undertook a refutation of witchcraft. It was a dangerous thing for an author's good repute and sometimes for his person. All the other books, tracts, pamphlets, were more or

General View of Salem, Mass.

less elaborate defences of the reality of witchcraft. What could be expected when all the leading men of society, politics, religion, firmly pledged their faith to its reality? When such a man as Baxter could write the "Certainty of the World of Spirits," and thank Cotton Mather for information of fresh cases and for his zeal in the cause, and grow very angry when some Sadducee disbelieved, a thriving crop of books might be expected. They performed an awful work in propagating the delusion. They came over to New England and were perused with creeping awe in farm-houses and towns. Clergymen made a point of procuring them in order to learn how to resist the wiles of the adversary; — no gentleman's library was com-

plete without them. The Rev. Samuel Parris, of Salem, had these books where his children and neighbors could get at them. One of them was a book by William Perkins, preacher at St. Andrews, Cambridge, entitled "Discourse of the Damned Art of Witchcraft," written toward the close of the sixteenth century. Sir Matthew Hale's "Trial of Witches," 1661, enjoyed a great authority in both countries, because it was based upon the Old and New Testaments. Indeed it was enough for a Puritan to fall back on the clear letter of Holy Writ. First, find your witch, and then, "thou shalt not suffer a witch to live."

Earlier prosecutions for witchcraft in New England.

A few sporadic cases of witchcraft had previously occurred in New England. Margaret Jones was hanged at Charlestown in 1648. Mrs. Hibbins, although she was a sister of Deputy Governor Bellingham, suffered in 1656, upon no other ground that can be discovered than that of knowing a great deal more than her neighbors, and of venting it with a sharp and cynical tongue. Her husband had been a prominent merchant, and was an agent of the colony in England. He died in 1654. How strange it is that the woman could not have been saved from such a fate! John Norton, the Boston clergyman, hinted that she knew too much, that she was too subtle in her perception of what was occurring around her. Michelet, in treating of the mediæval sorcery, shows that the possession of any unusual talent or knowledge was enough to turn a woman into a witch. Several accusations followed hers, but none of them terminated fatally, for Philip's War was too definitely diabolical to admit any play for a metaphysical Satan.

Events preceding the outbreak of the delusion in Massachusetts.

Great despondency reigned throughout the colony in 1692. The wounds of Philip's War still smarted, another Indian war seemed impending at the eastward, several murders had already occurred, the beloved Charter was lost, and there was nothing but uncertainty for the future. Four times the small-pox had raged along the coast, carrying off a great many people in Boston and the vicinity: the last time in 1690. Six great fires had laid waste the city; the last two in 1690 and 1691. All these calamities, by reducing the tone of the public temperament, made it susceptible to fears and suspicions, and ripe for any epidemic.

The Goodwin case.

In 1688, a daughter of John Goodwin, of Boston, was offended by an Irish washerwoman named Glover, and in childish spite, accused the harmless creature of bewitching her. Forthwith she fell into the conventional tricks and spasms, crying out whenever the Irishwoman was near, and falling to the ground. Three other children caught the infection. The poor woman was tried and hanged. Cotton Mather, who believed devoutly in witchcraft, took

the girl into his family to make a study of the phenomena. She could not bear to hear the Assembly's Catechism, or Cotton's "Milk for Babes," but could read the "Oxford Jest Book" with impunity. She flew violently at the Doctor when he proposed domestic worship, but always managed to stop short of striking him. She fell into the use of incoherent language, was "struck dead" by day, but slept peacefully at night. She had committed herself to the trick, and succeeded in deceiving Mather. When the woman was executed, she managed to recover. The excitement of such repeated performances will generally establish a half conscious impression in the actor's mind that they have a basis of reality; they are not thrown off in cold-blooded hypocrisy. The person is really possessed by his own deceit; if physical weakness or nervous disorders conspire with this mood, there is a sense in which the person has bewitched himself. And such, to a considerable degree, was the case with the children and young people in Salem Village, now Danvers, with whom the delusion there originated.

Portrait of Cotton Mather.

Beginnings of the first cases at Salem.

The parish in Salem Village had been set off from the First Church of Salem. Its people had never been harmonious; bickering and heart-burnings disturbed its councils and nourished animosities which mingled fearfully in the approaching tragedy. There was great opposition to James Bayley, the first minister, and eventually he was not settled. His wife was a Mary Carr, whose sister Ann married Sergeant Thomas Putnam. Ann had a good deal of influence, was a clever woman and of a high temper. Perhaps she remembered the bitter feud in regard to her brother-in-law when afterward she, her son, and especially her daughter, were swift and bitter witnesses against some accused of witchcrafts.

Samuel Parris.

Deodat Lawson, a learned and eloquent man, was settled in 1684, but left the parish before 1690, and went to Scituate. Then came Samuel Parris, a merchant of Barbadoes, who did not cast off the tricks of his trade when he put on the surplice. For a year, while he seemed to be reluctant to settle, his native sharpness was employed in bargaining with the parish. His terms were accepted in 1689. The first ministerial duty which he exer-

cised, was to get hold of the parochial property. Great was the indignation when he was labored with to give it up, and refused. The parish split into two parties, and Rebecca Nourse's family were in the opposition. Parris loved all the power he could get, a most obstinate man, incapable of accepting the broadest hint, and not thoroughly scrupulous in his methods.

His daughter Elizabeth was nine years old; a niece living in the family was eleven; a frequent visitor and neighbor was Ann, the daughter of Thomas Putnam, Sergeant and Parish Clerk, who was

Tituba and the Children.

twelve years old. Parris had two slaves, John Indian and his wife Tituba; she was half negro, half Indian, and was learned in the practices of sorcery. In the winter of 1691–92, the Parris children, and three or four neighbors, whose ages ranged from twelve to twenty, met at his house to form a circle for practising various tricks, some of which were suggested by Tituba.[1] They had learned from Cotton Mather's account the performances of the Goodwin girl and the other children, and soon the entertainment took the form of an imi-

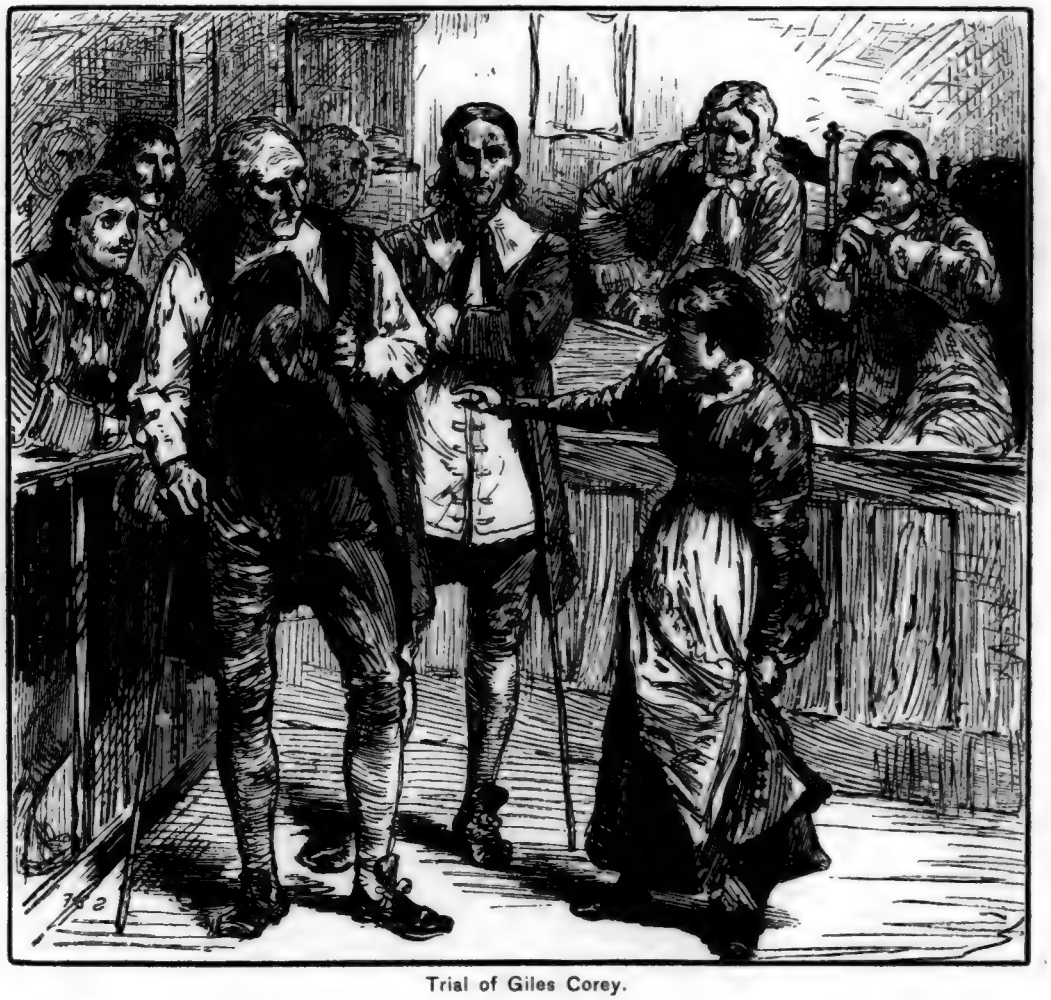
[1] One is tempted to note that her name is the imperative of a Latin verb, and means "tip."

tation. By the contagion of intercourse, during these forbidden exercises, the girls became thoroughly infected with their own fancies. Elizabeth was a precocious girl. Mary Walcot, seventeen years old, when quite young was in the family of Rev. George Burroughs. Perhaps Parris, who hated his old rival, though he lived in Wells, made a note of that. By this time their strange actions and contortions had plainly established a hysterical condition; but when the doctors were called in they pronounced that they were bewitched.

The children of the Parris family declared bewitched.

This hint was enough for young people in a condition of morbid excitement. The Rev. Mr. Lawson, preaching for Parris, was interrupted by them during the service, with grotesque remarks. The parish was profoundly moved. The fresh temptation set in when they were asked who was bewitching them. Did Parris foment this trouble for purposes of his own? Perhaps not, at first; but he managed to direct it in the path of his own dislikes. The children began to name individuals.

On March 1, 1692, they pitched upon Sarah Good, against whom some popular prejudice existed. She was brought before Justices Hathorne and Curwen, and sent to prison. These two justices and Marshal G. Herrick did a thriving business in sending people to jail. There were some remarkable circumstances in the case of Giles Corey, a man eighty-one years old, odd, unconventional, irascible, and very positive in his ways and opinions. Many stories were afloat concerning him, which now-a-days would be mainly traceable to his manner. He beat a farm laborer, who soon afterwards happened to die, and Corey was arrested for murder. In default of evidence, he was discharged upon paying a fine. He was again arrested for arson, but clearly proved an alibi, — a much suspected man upon the slenderest grounds. He was the kind of person whom it would be safe to denounce. He seemed to incline to a belief in witchcraft. His wife was an obstinate skeptic, and tried to keep him from the examinations; but he would attend them. So one day the children fell into convulsions at his presence, and writhed on the floor in agony. Corey was made to approach, so that they might touch him, for this was a test of bewitching, the children growing calm, as if by the touch the maleficent fluid were discharged. When Corey was brought to trial he refused to plead, and manfully kept his mouth shut, apparently with the hope of escaping a conviction for witchcraft, of whatever else he might be found guilty, and the consequent forfeiture of estate. But the justices killed him all the same for contumacy, sentencing him to the terrible punishment of *peine forte et dure;* — he was pressed to death, the



Sarah Good and Giles Corey accused.

Corey executed.

first and only time of this infliction in New England. When the brave old man's tongue lolled out, the sheriff thrust it back with his cane.

When Sir William Phips returned and assumed the office of governor, he organized a special court of oyer and terminer for these trials; in fact, a commission consisting of seven magistrates, among whom were the implacable Stoughton, Judge Sewall, and Saltonstall. This was an illegal proceeding on the Governor's part, as all the cases properly should have gone before

A special court organized for witchcraft cases.

Trial of Giles Corey.

the Supreme Court. No notice, however, was taken of this at the time, so deep was the preoccupation of the public mind. Simon Bradstreet, the acting Governor superseded by Phips, was no believer in witchcraft. As the trials went on, a few other persons were courageous enough to resist the tide, and declare their disbelief: among clergymen, Willard, Increase Mather, and the staunch old Puritan Moody; among laymen, Thomas Danforth, Thomas Brattle, and Robert Calef, the merchant who wrote down his opinion that some of

the cases, like that of Margaret Rule, were simply attacks of delirium tremens. Two or three of the Massachusetts justices were also much dissatisfied. Men who talked in this way carried their lives in their hands. Saltonstall soon became disgusted, and left the bench; the rest sat through the tragedy, among them Judge Sewall, who afterwards read a public recantation in the Old South Church, bowed down with mortification and sorrow. Annually he shut himself up for a day of penance and fasting, to keep alive the memory of his sad complicity. Not so did Deputy Governor Stoughton, who never forgave his colleagues when they began to waver in the matter of convictions; and when he perceived the public opinion was falling away from sustaining the bench, he resigned his seat in a passion on occasion of a reprieve.

Portrait of Saltonstall.

A statute against witchcraft, passed in the reign of that superstitious king, James I., seems to have been the basis of these colonial proceedings. The doctors were frequently called in to examine the bodies of the accused, to discover the witch's marks, the teat at which sometimes the apparitions of two black pigs were suckled, sometimes Satan himself sought refreshment there. Any mole or callosity served the doctors to pronounce upon the witch's mark.

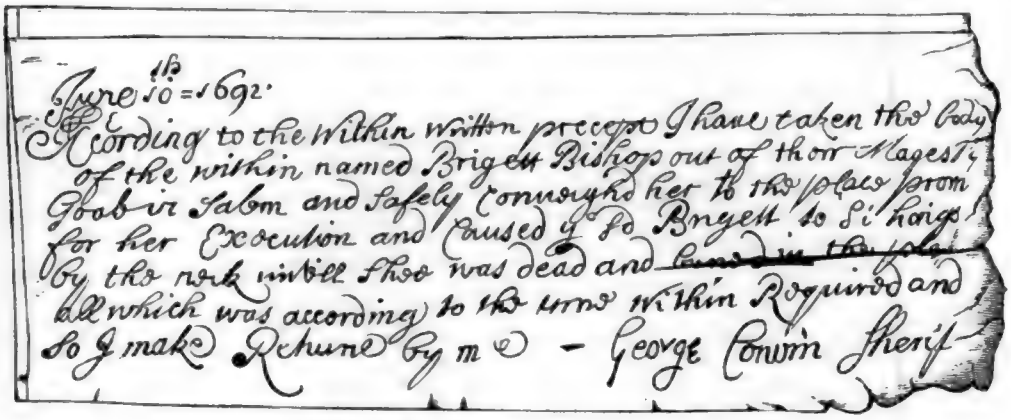
The case of Rebecca Nourse.

Francis Nourse and his wife Rebecca were living happily in a house that was built in 1636. Unfortunately he had a quarrel with the Endicotts about the occupation of his farm. Jealousy and hostile feeling, that drew in other people, had for some time existed. The children "cried out" one day against Rebecca Nourse; the usual display of hysterics, fits, possessions, took place, terrible to the overwrought feelings of the spectators. A clergyman, named Lawson, delivered a most exciting discourse on March 24, which put the witchcraft trials upon Scripture grounds and confirmed all minds. A blameless life and a sweet demeanor at her trial could not save Rebecca. The jury were forced to believe her inno-

cent, but were sent out till they consented. She went the way of all the rest to Witches' Hill, and her body was thrown into the common pit provided as a dishonored last resting-place for these unhappy victims. It is easy to imagine that piteous midnight search of Rebecca's pious children and husband, braving possible detection, to recover the motherly body and give it a more tender burial in the little burial ground near the old homestead. Before she was executed, she was led up the broad aisle of the meeting-house, that the minister Parris might excommunicate and thrust her out of the communion.[1] When Parris afterwards preached a denouncing sermon, Sarah Cloyse, sister of Rebecca, got up and left the meeting. To leave the public service under any circumstances was an unpardonable offence to the forefathers of Massachusetts, but doubly so in this case, because the sister sided with a witch. The children promptly denounced her.

Portrait of Lieut.-governor Stoughton.

Bridget Bishop, in 1680, was a gay and pleasant woman, anti-puritan in her style and opinions. She used to appear in a black cap, black hat, and a "red-paragon boddice." If a woman wore a scarlet petticoat it went hard with her if she did not become suspected.[2] Red was Satan's favorite mediæval color. Bridget's dress and manner led to gossiping, and it was thought she was going "the primrose way to the everlasting bonfire." An accusation of witchcraft was made and she was tried, but at that time it was more difficult to convict. In the present temper of the people much less was required for the manufacture of a witch. A woman walking from Amesbury to Newbury, in bad weather, came into a kitchen and boasted that her shoes and clothes were not wet. That was clearly impossible, save by preternatural means. She was denounced. As another woman was crossing a marshy place, a will-o-wisp was noticed to be near her, like an imp dancing attendance. That too was fatal. A



Bridget Bishop.

Other cases.

[1] A few of her descendants lately met in Boston to form a "Nourse Monument Association," charged with the duty of erecting a monument to her memory. For once let an epitaph record the unvarnished truth.

[2] A Portsmouth witch "had on her head a white linen hood tied under her chin, and her waistcoat and petticoat were red, with an old green apron, and a black hat upon her head — and she vanished away in the shape of a cat."

man named Jacobs was accused; he said, contemptuously, "You tax me for a wizard, you may as well tax me for a buzzard." All sorts of personal piques and private grudges, says Upham, many of them of long standing, now began to influence these transactions. When Burroughs was denounced, a strong charge against him was that he possessed a witch's trumpet, which he used to summon his partners whenever he desired a conference. Cotton Mather stood by to see Burroughs hanged, and when the people seemed impressed by his sweet and lofty words, he explained that Satan often transformed himself into an angel of light to delude men's souls. On occasion of the execution of eight at one time, the Reverend Mr. Noyes stood

June 10th 1692.

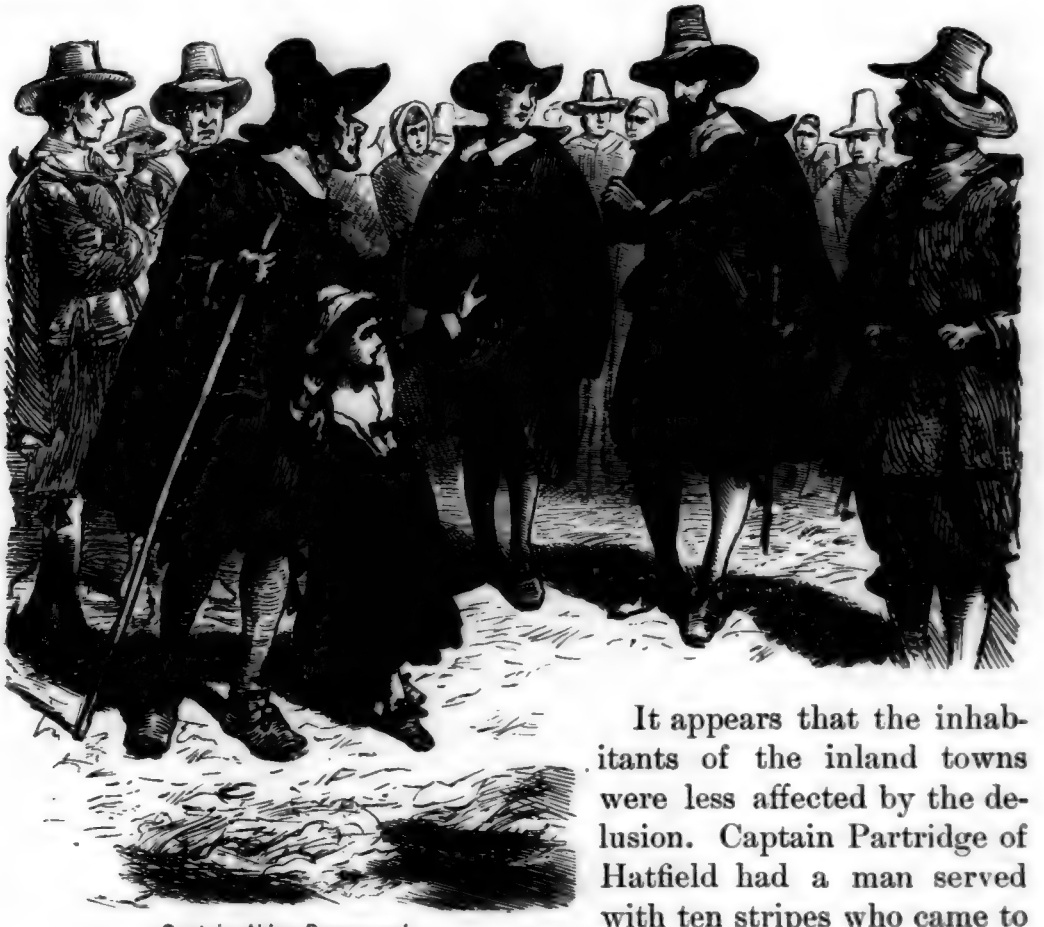
by and said to the people, "What a sad thing it is to see eight firebrands of hell hanging there!"



A committee of vigilance was appointed, and the citizens were organized for the purpose of finding and prosecuting witches. Any man who had a grudge found opportunity now to put his enemy into jail. The children had a very precise way of imitating, half automatically no doubt, the gestures of accused persons, their way of shaking the head, lifting the eyes, shifting the attitude. This was attributed to supernatural domination. But this consummate acting was not a mere histrionic display; the hysteric passion was too much implicated for that. It was a contagion that extended to all persons whose state of health and nervous condition invited it. Several other children were thus bewitched. At length one of them, Mary Warren, who found she was dissembling, impeached the other children. There began to be suspicions of a conspiracy. The accused children turned upon her and denounced her for a witch to recover their own credit.

A committee of vigilance.

But now the end was approaching, for the children, under the stimulus of the popular madness, began to fly at higher game. Per

sons of too great importance were implicated in their accusations, and opinion was manifestly affected by the admirable record and demeanor of the denounced. Mrs. Hale, wife of the minister at Beverly, was too fine and good. As soon as they mentioned her name their occupation began to wane. She was probably selected because her husband believed in witchcraft.

First exposure of the delusion. — Its quick decline.

Captain Alden Denounced.

It appears that the inhabitants of the inland towns were less affected by the delusion. Captain Partridge of Hatfield had a man served with ten stripes who came to him to accuse a neighbor of witchcraft. The children denounced some excellent persons in Andover, who were protected by the people. Several actions for slander were commenced. A few persons of importance who were imprisoned in consequence of denunciations, were assisted to escape. Among them was Captain John Alden, belonging to a Duxbury family. He was sent for by the magistrates to be examined. The children went through with their usual performances but when asked to point out the person who was afflicting them, one of them selected the wrong man, till one who was standing near her stooped down and whispered something: then she cried out, "It is Alden." Said the magistrate, "Did you ever

Cases in other towns.

The case of John Alden.

see him?" "No, but the man just told me so." Instead of dismissing the case, the infatuated magistrates ordered a ring to be formed in the street with Alden in it: the child was secretly instructed by the man, who was probably an enemy; so when told to point out Alden she did so, crying, "There stands Alden, a bold fellow, with his hat on, sells powder and shot to the Indians." He was committed. The children prudently cried that it was his sword which afflicted them, and it was taken away. Alden was a prominent man, and the magistrates carried him into the meeting-house and put him on a chair in full view of the people, where of course he began to pinch the children. He was asked to confess and give glory to God. Alden replied "that he hoped he should always give glory to God, but never would gratify the devil." Then he asked the magistrate why his looking upon him did not strike him down as well as his accusers. The only answer to that plain bit of common sense was his commitment to prison. He proposed to stand his trial, but was prevailed upon to be aided to escape. He went to Duxbury, and entering the house of a relative, "saluted them with the cheerful assurance that he was come from the devil and the devil was after him."[1]

The breaking of the bubble.

After the illjudged accusation of Mrs. Hale several trials occurred, but nearly all of the persons were acquitted. When, in May, 1693, the children began to whisper the names of the Governor's wife and of some relatives of Increase Mather, Phips took decisive measures. Even Cotton Mather surmised that Satan had become confused. The General Court, at the instance of numerous petitions from victims still shut up in jail, had superseded Phips's Special Commission. Now he ordered a general jail-delivery. The huge and baleful bubble had collapsed.

Compared with European epidemics of the mental kind, this American experiment was brief, but bitterly sharp while it lasted. A moment came when the excitement ran so high it turned to froth; it was a moment of collapse and not of increase. But twenty innocent persons, and two dogs suspected of being witches' familiars, had been executed. Two persons, and perhaps many more, died in jail; a good many broke jail, and were not recaptured; one hundred and fifty prisoners were released by Phips. Several hundred had suffered for this delusion. Persons who were acquitted were obliged to remain in jail till they had paid all charges, — board, jailer's fees, court charges. Many were too poor to do this, and would have lingered in confinement save for the Governor's discharge. The motive which influenced fifty-five of the victims to confess, was partly a hope of

[1] Winsor's *History of Duxbury*.

self-preservation and partly a suspicion, growing out of their theological conception of Satan and his influence, that it might be true that their singular sensations were really consequences of bewitchment.

Only one special pardon was granted by the Governor during all the convictions. The intention to secure safe convictions grew to be almost a mania. Frequently false depositions were procured after the trial, and secretly interpolated among the papers to make the case seem more complete. Two theories were propounded in the court; one, that the Devil used the spectres of the persons who were in league with him, in order to torment others; the other, that the spectres of any persons, whether in league with the Devil or not, might be employed by that personage for the same object. The Chief Justice ruled that the first theory was the more rational one and in harmony with legal precedents.

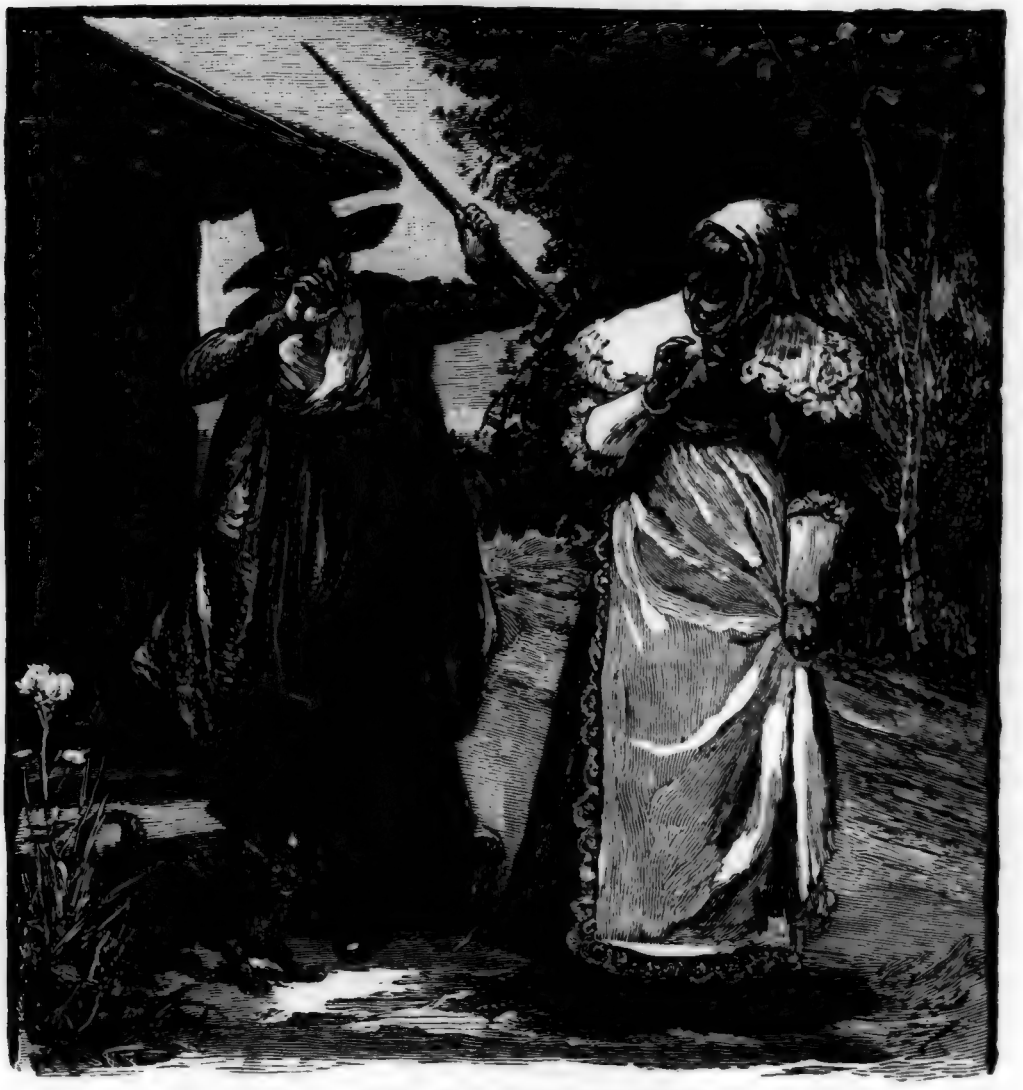
Chief Justice Sewall.

During the excitement there were some curious incidents, the reports of which assume to be authentic, involving the spontaneous movement of objects, the throwing of stones, the opening of doors, and the freaks of different utensils, spectacles, rolling-pins, books, tubs, all engaged in a promiscuous excursion. A person who was trying to write an account of these phenomena was interrupted by the attempts of his hat to rub out the page; he held it tight, but could not prevent it from getting away. There is a remarkable similarity in the narratives which cluster around different periods of nervous excitement. Occurrences like these are not unusual even now. But they excite only a momentary curiosity, and the belief in them as supernatural phenomena, if it exists at all, is limited to the few to whom they are otherwise inexplicable.

Incidents during the prevalence of the delusion.

It must be recorded greatly to the credit of the New Hampshire settler that he did not take kindly to the delusion of witchcraft.

The delusion discouraged in New Hampshire.



This is sometimes attributed to the more liberal sentiment which belonged to adherents of the Church of England, whose influence in Portsmouth was so considerable. When however, the delusion broke out at Salem, the most vigorous denouncer of it was the Puritan Moody; and Portsmouth became a place of refuge for persons who were accused in Massachusetts, or who had reason to fear that they would be selected. The settlers on the Piscataqua, without distinction of creed, indulged sparingly in bigotry and persecution. A stern and unrelenting discipline did not there involve, as in Massachusetts, the safety and existence of the colony. Many of the people were refugees for opinions' sake; many were liberal livers and thinkers who retreated from the too nipping and eager air of Plymouth and the Bay; and many of the most prominent men were easily tolerant, but not from sheer indifference, of sentiments which were not their own. But on the point of witchcraft there was a quite general public opinion that a belief in it should not prevail.

Every now and then there was an opportunity to test the feeling of the people. In 1658, Susanna Trimmings, who lived at Little Harbor, met Goodwife Walford, who asked her the loan of a pound of cotton. Susanna said that she had but two pounds and would not lend any to her own mother. Whereupon the Goodwife said that she would rue it, and that she was going on a long journey and never would return. With this threat a clap of fire struck Susanna on the back, and the Goodwife vanished in the shape, to her apprehension, of a black cat. Then also the woman wore the red petticoat which was the regular thing for witches. Susanna went home, and was soon found by her husband ill and moping by the fire. An action was brought against Goodwife Walford, and several persons testified that she had done strange things. The case was not decided against her, but she was bound over to appear at the next court. At the next term the case was dropped. Then she brought an action for slander against her accusers, laying damages at £1,000, and succeeded in recovering £5. She was wife of a church-warden, and it has been hinted that the charge of witchcraft originated in the enmity that existed between the Independents and the Episcopalians. Now and then an accusation would be brought against prominent individuals, who promptly answered with actions for slander, and thus broke up such prosecutions.

It is the more strange that there was no popular excitement, for Great Island, now Newcastle, was the scene of an incident supposed to be preternatural, and the people ought in all decency to have been profoundly moved by it. Salem would have been delirious with appro-

bation of such proof of Satanic agency. Dr. Mather would have dipped his credulous pen in the blackest ink to record it. The story is told by Richard Chamberlain, justice of the peace, in a pamphlet entitled "Lithobolia, or the Stone Throwing Devil. Being an exact and true Account of the various actions of infernal spirits or (Devils incarnate) witches, or both," etc. This

The "Stone-throwing" at Great Island.

Susanna Trimmings and Goodwife Walford.

rare pamphlet was printed at London in 1698, five years after the terrible delusion at Salem had passed away; but the incidents recorded in it happened in 1682, ten years before the troubles at Salem. In the summer of that year, Chamberlain was living in George Walton's family, "a sojourner in the same family the whole time (about three months) and an ocular witness of those diabolical inventions." They consisted of the throwing about by an invisible hand of stones,

bricks, hammers, iron crows, spits and other kitchen furniture, just as it happened to come "into their hellish minds." And these objects seemed to have a personal spite against the inmates of the house. When Chamberlain undertook to dissipate his alarm by playing upon some instrument, a big stone rolled into his room, — not attracted by his playing, as he says, for he was no Amphion. The windows of the house were broken by stones which seemed to be hurled from the interior; one stone lodged in the hole which it made in the glass, and was taken from it. Stones gambolled on the grass of the neighboring field, and hopped up to hit those passing by. A pile was made of the stones which thus saluted them in the open daylight, but it disappeared soon after, although no one had been noticed near it. One day Walton was returning from Portsmouth in a boat when his anchor leaped overboard and stopped it. When working in the fields, men found their sickles bent by blows from stones hurled by some invisible agent. All these disturbances by night and day were attributed to a neighboring woman who had accused Walton of appropriating a piece of her land and fencing it into his own lot. The fence was thrown down, and when some men undertook to replace it, they were pelted with above a hundred stones. These incidents were witnessed by a number of prominent persons who testified to them. Among their names we find Woodbridge, the minister, Jeffrey, a merchant, the Governor of West Jersey, and the Deputy Governor of Rhode Island. And Chamberlain declares that he who would doubt the facts and disbelieve in their Satanic origin, "must temerariously unhinge or undermine the best Religion in the world; and he must disingenuously quit and abandon that of the three Theologick Virtues or Graces to which the great Doctor of the Gentiles gave the precedence, Charity, through his unchristian and uncharitable incredulity."

Supposed cause of the "Stone-throwing."

But the people had little charity for his preternatural theory. The phenomena ceased about the time that the Council called witnesses, and began to take notice of the affair. Walton's head was broken by a stone as he was on the way to be examined; and it appears to have been the last stone thrown. No charge was sustained against any person; the incidents, instead of creating a panic and fostering delusion, seem to have been neglected and forgotten. There was, indeed, as late as 1769, a place called "Witches' Creek," half way between Great Island and Portsmouth; perhaps it was where Walton's anchor concluded to come to a mooring.

There is another place in New Hampshire, to this day called "Witch Trot," that painfully connects the State with the dread affair at Salem. Parris, the Salem minister, in whose family the first symp-

toms of the delusion appeared, and who eventually availed himself of it to destroy his rivals, or enemies, hated the Rev. George Burroughs and drove him away from Salem. He retired to Wells, in Maine, and settled there with his family. Parris had influence enough, in the height of the witch trials, to have Burroughs arrested for witchcraft and brought to Salem. It seems incredible that it could have been done; but he had left many enemies behind when he went to Wells. The accusation was based upon some commanding personal qualities which Burroughs possessed. He was a man of great stature and uncommon strength. His personal presence carried control and infected people with the magnetism of a superior nature. His look was very daunting. His knowledge of the mysteries of wood-craft, and forest life seemed to many people an uncanny endowment. When at his trial he happened to look backward, all the persons fell down whom he was supposed to be afflicting. He was charged with lifting a barrel of cider, with holding out a heavy musket at arms' length. No man, it was thought, without preternatural aid could perform such feats. He explained that he grasped the musket just behind the lock. It was said that he lifted a barrel of molasses by just putting his fingers into the bung-hole. This he denied. He was asked if his house in Wells was not haunted; he denied this, but was willing to own, he said, that there were toads. Alas, the house in Wells was haunted by wife and children filled with agony and dread, as they waited so long for him; but he did not return. Parris managed to have him hanged. He was a spotless man, and possessed a ruling intelligence.

Arrest and prosecution of George Burroughs.

His execution.

It was supposed that the enterprise to arrest him would be a difficult one, so an elder and two constables were sent to bring him to Salem. When they arrived and stated their errand, he promptly replied, "Oh, yes," and left his family, who were cheered, no doubt, with the reflection that a charge so preposterous could not for a moment be sustained. As the party started about nightfall, it was the more desirable to take the shortest route. Burroughs conducted them along a stretch of country leading through Berwick to the upper waters of the Piscataqua. There was no direct road; the track lay through an unbroken forest. The constables demurred at the prospect; Burroughs said that he knew the way; they dreaded him, but had to follow, as they afterwards declared, because they were under a spell. He knew the desolate forest as well as his own acres, for it was favorite ground of his. In the depth of it they were surprised by a storm which began with a pitchy darkness and a great hush. The men trembled with the suspicion that Burroughs

was evoking supernatural aid They watched and shuddered with fear. Then came the powerful wind, bending and breaking trees, the rush of rain and the crashing thunders. The horses were mad with terror, and started at a furious pace over the ground that is now called Witch Trot. The party came out at length upon the river safely, and Burroughs with them, who had no desire to escape; but the constables on the day of his trial added their testimony to his familiarity with the powers of air and darkness, and always believed that he raised the storm.

Burroughs and the Sheriffs.

In 1720, an attempt was made in Littleton, Massachusetts, to revive the witchcraft delusion, but it proved abortive. But the old Scotch ordeal for discovering witches by throwing the accused into the water, when the innocent one would sink, not much to her personal advantage, was tried in the eighteenth century at an inlet of Lynnhaven Bay, Virginia, called "Witch-Duck."

Later attempts to revive the witchcraft excitement.

When the curtain had fallen upon the Salem tragedy, Cotton Mather undertook to sum up the matter and vindicate his share in it. This superficial and ambitious divine wrote thus: "It may be

that errors on both sides have attended them [the troubles] which will never be understood until the day when Satan shall be bound after another manner than he is at this day; but for my own part, I know not that ever I have advanced any opinion in the matter of witchcraft, but what all the ministers of the Lord that I know of in the world, whether English or Scotch, or French or Dutch, are of the same opinion with me."

Mather's vindication.

CHAPTER XX.

COLONIZATION BY FRIENDS.

PROGRESS OF NEW JERSEY. — INSURRECTION UNDER JAMES CARTERET. — CHANGES IN THE NEW JERSEY TITLES. — THE "QUINTIPARTITE DEED." — DIVISION INTO EAST AND WEST JERSEY. — PROSPERITY OF WEST JERSEY UNDER QUAKER RULE. — CONFLICTS OF JURISDICTION. — THE QUAKERS BUY EAST JERSEY. — EARLIEST CONNECTION OF WILLIAM PENN WITH AMERICAN COLONIZATION. — LIFE AND CHARACTER OF PENN. — THE GRANT OF PENNSYLVANIA. — EARLY SETTLERS. — PENN IN AMERICA. — PHILADELPHIA FOUNDED. — THE TREATY AT SHACKAMAXON. — PENN'S RETURN TO ENGLAND. — PROGRESS OF THE COLONY. — PENN AGAIN AT PHILADELPHIA.

THE new Proprietors of New Jersey had no reason to complain of any want of progress and prosperity in their colony for the first few years after it came into their possession. The constitution of government which they had established was acceptable to the people; the climate and the soil were attractive; the vicinity to older colonies made it easy to supply the wants of those who should settle in it, — exempt from the privations and hardships which necessarily attend a settlement in an isolated wilderness. Such representations brought emigrants from England; the enterprising and discontented in New England, whether desirous of more room, or restless for political or religious reasons, saw, or thought they saw, that they could better their condition by a removal to the new province. The first towns grew rapidly; others were begun. The axe and the plough, in the hands of sturdy farmers, everywhere encroached upon the primeval forests and the virgin soil.

Progress of New Jersey.

But when, in 1670, the first quit-rents were demanded by the Proprietors, there came a check to all this prosperity. Titles to lands led to inevitable and bitter disputes. Some had purchased from the Indians; some claimed under the original Dutch owners; others had received grants from Nicolls; fewer still held deeds from the Proprietors at that time, Berkeley and Carteret. Bergen and Woodbridge were among the latter, and acknowledged their liability to the payment of these rents; but Elizabeth, Newark, and isolated farmers here and there, who had settled upon

Trouble over rents and titles.

their lands before the country had come under the jurisdiction of the English, united in resisting the demands of the proprietary government.

Resistance, at length, came to be absolute insurrection. A leader only was wanted, and it was not long before one was provided. About a year after the demand for the quit-rents was made, James Carteret, the second son of Sir George, arrived in the colony on his way to Carolina, of which he was one of the landgraves. A dissolute, unscrupulous, and ambitious man, he was ready to take advantage of any fortune that chance threw in his way. He put himself at the head of the movement against his cousin, Philip Carteret, who held his commission from James's father, Sir George. In the spring of 1672 the insurrectionary party called an assembly at Elizabethtown, formally deposed Philip Carteret, and elected James to be Governor in his stead.

Captain James Carteret at the head of the insurrection.

Philip made little further attempt to contest the matter on the spot, but, appointing a deputy to represent him, took ship in the early summer and sailed for England, to lay the whole matter before his superiors. It was his wisest course. Unaided, he could do nothing against an unwilling people; and possibly he believed that his cousin's government would be to the malcontents a most salutary lesson. Such, at least, was the result. James showed himself to be utterly incompetent. By the time orders were received from the Duke of York, the insurgents were ready to submit. Captain Berry, Philip Carteret's deputy, was acknowledged without further trouble in May, 1673;[1] and James Carteret sailed for Virginia ten days afterward.[2] There was no further interruption of the proprietary government until the Dutch reconquest of New Netherland in the autumn of that year; and even then, though New Jersey received the new name of Achter Col, and ostensibly passed once more under the Netherland rule, the real change was but slight, and internal tranquillity was almost undisturbed.

The Proprietary Government restored.

New Jersey was placed in a new position when by the treaty of Westminster New Netherland was restored to England. The Duke of York's title to New York had been entirely extinguished by the conquest of the territory by a foreign power, and its subsequent passage to the crown by treaty; and he required a new grant from the King, in order to be again the rightful proprietor of the province. How much more, then, it

Title to New Jersey after the Treaty of Westminster.

[1] Whitehead, pp. 58, 59.

[2] He came back to New York afterward, where he was seen in 1679, "running about among the farmers, and staying where he can get most to drink, and sleeping in barns on the straw." — *Journal of the Labadists.*

was argued — and it was an argument the Duke was willing enough to listen to — was the title of his grantees, Berkeley and Carteret, in the province of New Jersey destroyed. James saw that he had an opportunity, under cover of this theory, to possess himself again of the territory he had parted with so rashly; and he availed himself of it without delay. He gave to Andros, after he had taken possession of the government of New England, a commission to govern all his property in America, New Jersey included, assuming that the grant to Berkeley and Carteret was void.

Action of Sir George Carteret. His title confirmed.

In the meantime, however, Sir George Carteret had hastened to do all in his power, not only to protect his own title, but to absorb that of his partner as well. He had gone to the King at once; and Charles, before he sealed his new grant to the Duke, had been induced to assure Carteret by letter that he was "seized of the Province of New Cæsarea, or New

Entrance to Barnegat Inlet.

Jersey," and that he had "the *sole* power, under us, to dispose of the said country, upon such terms and conditions as he should think fit." Berkeley, whose title had been equal with that of Carteret,

Berkeley's grant to Fenwicke and Byllinge.

had, in the spring of this year (1674)[1], conveyed his "undivided half" to John Fenwicke in trust for Edward Byllinge, but both his right to grant and his grantees were utterly ignored in this new royal document.

This step on the part of Carteret, interfering alike with the interest of all parties, led to a compromise. A short time after the

A new grant.

issue of Andros's commission, a new grant was made (August 8, 1674), to Carteret, in severalty, of that part of New Jersey lying northeast of a line drawn from Barnegat Inlet to Ren-

[1] Proud says (*History New Jersey*, i., 136), "in or about 1675;" but there is no doubt it was on March 18, 1674.

kokus creek; but in conveying this the Duke did not give, as he had done before, "the full power and authority to rule and govern," nor did he vary the terms of Andros's appointment to be Governor over all the Duke's possessions in America. For a time all went well once more, and in the beginning of the next year Philip Carteret returned as Governor, made liberal concessions on the part of his cousin, and was quietly accepted by the people. But just as his government was thoroughly restored, the successors of Berkeley's grantees proposed another compromise, the consequences of which were momentous.

Fenwicke and Byllinge.

A quarrel had sprung up between Fenwicke and Byllinge with regard to their respective rights in their new purchase. It was against the tenets of their faith — both were members of the Society of Friends — to go to law with one another, and they had decided to settle the matter by the arbitration of one of their own number. The dispute was referred to William Penn, already one of the most eminent members of their sect in England; and his decision, after some argument with Fenwicke, was made satisfactory to both. Fenwicke in person, with a few companions, set sail for America to found a colony; but Byllinge, overwhelmed by debts, was compelled to make an assignment for his creditors; and the greater part of his right and title in New Jersey was handed over to Penn, to Gawen Laurie and Nicholas Lucas — the latter being two of those to whom Byllinge was most deeply indebted.

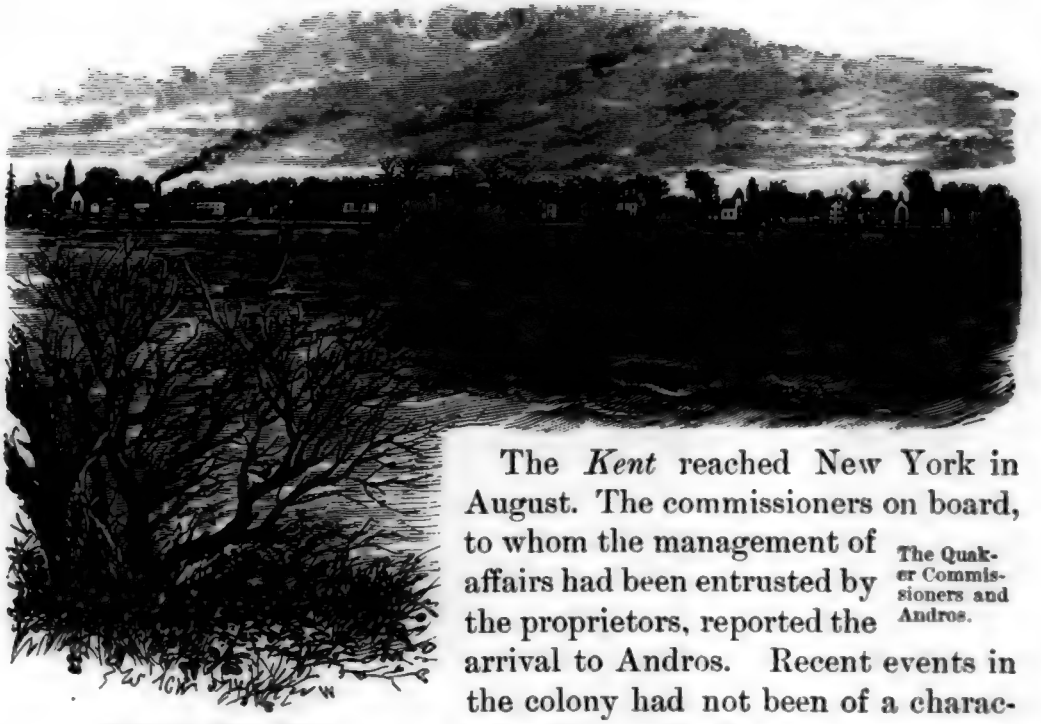
The matter had now become so complicated that all who were interested saw the necessity of an exact division of the province; for Berkeley had disposed of his share as an undivided half; while Sir George Carteret's pretensions, as the Duke of York's secretary wrote to Andros, had not yet been so adjusted that he could disregard the claims of others. Carteret evidently thought it better to negotiate directly with those whose rights were at least equal with his own, than to trust to the Duke's last grant, or even to the documents that had preceded it; while Penn, Laurie, and Lucas were anxious to make Byllinge's property of immediate avail, if possible, and perhaps also to carry out another plan of colonization, the outlines of which had just been considered among them. On the first of July, 1676, old style, therefore, after much preliminary negotiation, a "quintipartite deed" was completed, and signed by Carteret on the one side, and Penn, Laurie, Lucas, and Byllinge on the other, which divided the whole province of New Jersey into two great portions. "East New Jersey" included all that part northeast of a line drawn from Little Egg Harbor to a point on the most northern branch of the Delaware River, in north latitude 41° 40′. "West New Jersey" comprehended all the rest of

The "Quintipartite Deed." — East and West Jersey.

the territory originally granted by the Duke. East New Jersey was the property of Carteret; West New Jersey passed into the hands of the associates; and the Quintipartite Agreement marked the first great purchase made by Friends in the New World, where they were to found a powerful State.

Subdivision of West Jersey.

The four managers of the newly defined territory now proceeded to make an equitable division of it among the persons interested. Dividing it into one hundred parts, and setting aside ten for Fenwicke, who had already made (in June, 1675) the first settlement at Salem on the Delaware, — they arranged to administer or dispose of the other ninety in the interest of Byllinge's creditors. And since, to make the scheme profitable, it was necessary, first of all, to attract more colonists than the few who had joined the Salem settlers, they drew up a set of "concessions and agreements," which should at the same time provide for the future government of their province, and, by its liberality, draw emigrants to the province. Like the constitution of New Jersey under Berkeley and Carteret, these "concessions" provided for taxation by the people themselves, through an annual assembly having one delegate from every "propriety;" but the new instrument went farther. It provided for a secret ballot, "whereby every man may freely choose according to his own judgment and honest intention," instead of the "common and confused way of cries and voices;" and every colonist could vote and was eligible to the position of a delegate. Each delegate was to be paid for his services at the rate of a shilling a day during the Assembly's sitting; each was to be known as the "servant of the people." Religious freedom, it need hardly be said, was secured in the fullest sense. Imprisonment for debt was abolished, and a sensible bankrupt law substituted. Trial by jury and the rights of the English common law were secured to every settler.



Seal of East Jersey.

Its Laws.

These liberal provisions were published in England in the beginning of 1677. The proprietors invited and urged Friends to remove to a country where they would be secure from persecution, and certain of prosperity. Several hundred persons went over that year. In March a company of two hundred and thirty had collected and embarked on one vessel. As their ship, the *Kent*, lay at anchor in the Thames, about ready to sail, King Charles passed by in his

barge. The crowded decks attracted his attention, and he came alongside. He asked her destination; he inquired if all on board were Friends, for, probably, he had heard of an enterprise in which so much interest had been aroused all over England. It certainly excited his curiosity, perhaps something more, for he wished them a good voyage and gave them his blessing. It did them no harm if it did them no good, though, perhaps, there was not another man in the kingdom less capable than Charles of comprehending the character and the principles of the people to whom he gave his benediction.

Burlington, New Jersey.

The Quaker Commissioners and Andros.

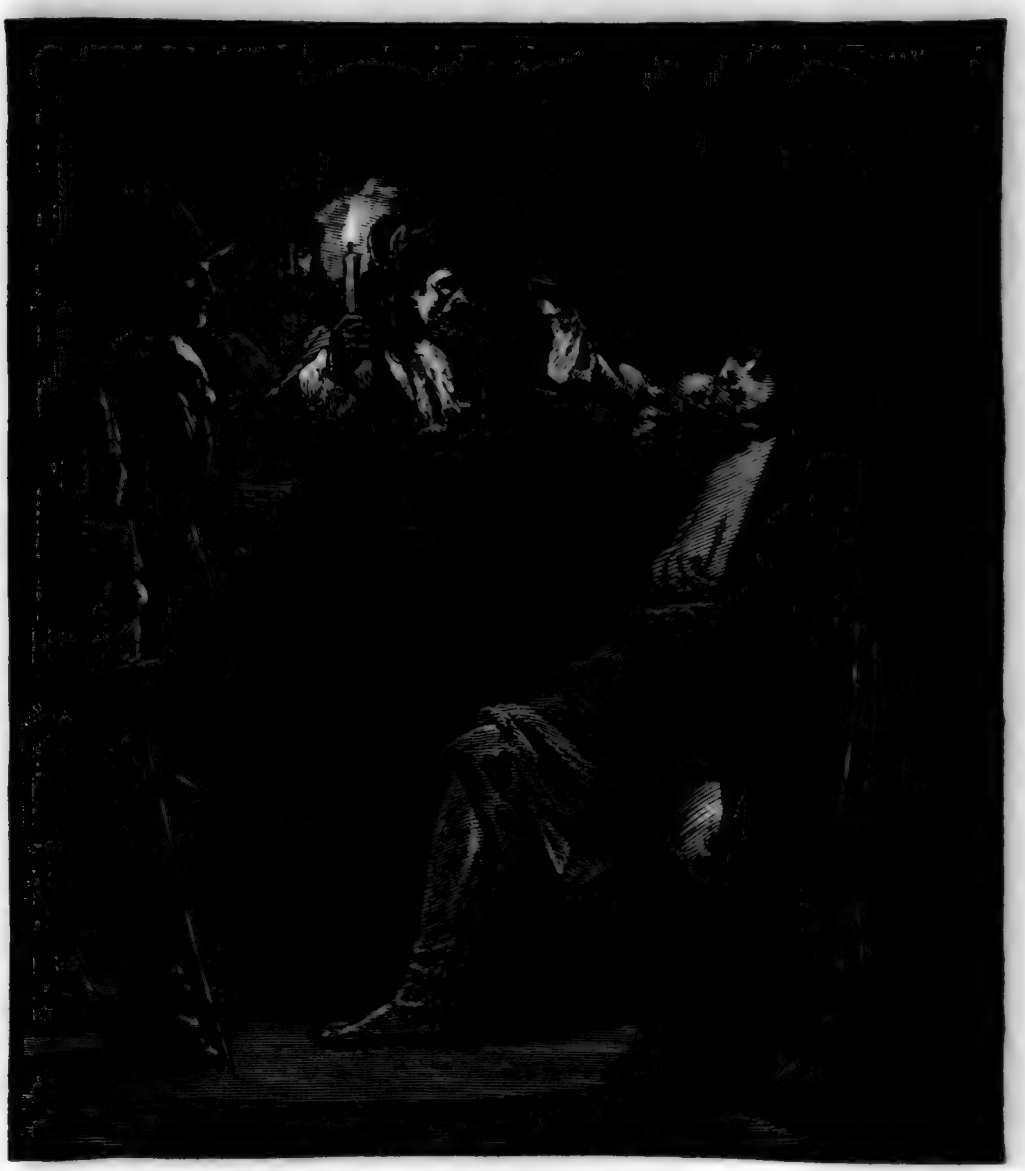
The *Kent* reached New York in August. The commissioners on board, to whom the management of affairs had been entrusted by the proprietors, reported the arrival to Andros. Recent events in the colony had not been of a character to dispose the Governor to welcome their coming. Fenwicke, who had now been two years at Salem, had denied the legality of the Duke of York's customs-duties and other taxes, and in the January preceding the arrival of these new emigrants had been arrested, brought to New York and thrown into prison. He was still confined in Fort James, and when the commissioners came before Andros, his first question was, what evidence had they to produce of title from the Duke. They had none. The successive grants from the Duke to Berkeley, and from Berkeley to others, gave, they asserted, right of government as well as title to the soil. This, the Governor declared, it would be as much as his head was worth to grant without orders from his master; but if they "had but a line or two from the Duke, he would be as ready to surrender it to them as they would be to ask it." As he laid his hand on his

sword in confirmation of his purpose to hold his government over all the Duke's territory till further commands from England, the Friends saw themselves obliged to yield thus far; and agreeing to consider themselves only as magistrates under him until other instructions came, they were suffered to proceed upon their voyage. Fenwicke was permitted at the same time to go upon his own recognizance, and directed to report in the following autumn at New York, for the final decision on his case.

The question of jurisdiction compromised.

The *Kent* arrived at Newcastle on the Delaware on the sixteenth of August. It was three months later, however, before a place of permanent settlement was fixed upon. This was the present town of Burlington. It was first named New Beverley; but this was soon changed to Bridlington — corrupted into Brellington, then Burlington — a parish in Yorkshire, England, whence many of the emigrants had come. "Here is a town," wrote one of them, John Crips, to a friend in England, "laid out for twenty proprieties, and a straight line, drawn from the river side up the land, which is to be the main street, and a market-place about the middle. The Yorkshire ten proprietors are to build on one side, and the London ten on the other side; and they have ordered one street to be made along the river side, which is not divided with the rest, but in small lots by itself, and every one that hath any part in a propriety is to have his share in it. The town lots for every propriety will be about ten or eleven acres." [1]

The new village was prosperous from the beginning, and as shipload after shipload of colonists arrived, other settlements sprung up along the river and its tributaries, until the Proprietors saw their plantation increasing more rapidly in two or three years, than other colonies had done in ten, and this almost entirely through the exertions of Friends alone.



The greatest drawback to the complete success of the undertaking was the question of jurisdiction. Taxes were still assessed on behalf of the Duke of York. In East New Jersey Philip Carteret and Sir Edmund Andros were in open opposition. Carteret had proclaimed, with the hearty support of the Assembly, that all vessels coming directly to the province should be free from duties. Andros intercepted a ketch bound to Elizabethport with a cargo of rum, and compelled her captain to pay duties at the New York custom-house. A proposal for a friendly meeting of the two governors on Staten Island was declined by Carteret. Andros warned him to forbear exercising any jurisdiction; and announced that he should erect a fort "at Sandy Point"

Renewed difficulties as to jurisdiction.

Conflict between Andros and Carteret.

[1] Letter in Proud's *History of Pennsylvania.*

to aid in the enforcement of his authority. Carteret declared that this should be resisted; and when Andros went to New Jersey, a month later, seeking a peaceful conference, Carteret met him with a military force to oppose his landing. As Andros came without troops he was permitted to land, but the conference came to nothing. The

Arrest of Carteret.

crisis soon came. A few weeks after Andros's visit, Carteret was taken from his house at Elizabethtown by New York soldiers, in the night; and taken to the city, where he was put in the sheriff's hands like a common criminal. He was tried at a special term of the Court of Assizes, in May, and, though Andros sent the jurors out three times, acquitted. He was compelled, however, to give security that he would not again assume any authority in New

Arrest of Carteret.

Jersey. As some atonement for this ill-treatment, Andros escorted him back to Elizabethtown. The Assembly was asked to accept the "Duke's Laws," but they maintained their own, while at the same time they accepted the government of Andros. Carteret transferred the dispute to England, where it was presented by the widow of Sir George Carteret — who had died the year before — for the decision of the Duke himself.

The Friends of West Jersey had been even earlier in presenting their complaints against Andros. They succeeded in having their case referred to the Duke's commissioners in September, 1679; and Penn and his associates came forward with a masterly argument which secured their end. It was a bold and striking plea in favor of popular liberty; and the commissioners, advised by Sir William Jones, decided that James's grant had reserved no jurisdiction, and that none could be rightly claimed. The Duke accepted the decision. In August, 1680, he executed a new deed, relinquishing all rights over West Jersey; and in October, Carteret's friends secured a similar document with regard to their portion of the province, and a deed confirming it to Sir George Carteret, the grandson of the original grantee. But East New Jersey had never been a profitable property; and now, while its neighbor grew apace, it seemed to lose rather than to gain. Philip Carteret imprudently brought forward again a question already once decided — the ownership of Staten Island, — and thus came once more into conflict with the representatives of the Duke of York. At the same time his home administration was disturbed by quarrels with a new Assembly, which he at last arbitrarily dissolved in the autumn of 1681. The proprietors at home were discouraged. The watchful Friends, whose own undertaking had been so successful, now saw an opportunity to extend it further. Proposals were made to the trustees of Carteret's estate, which the latter were only too glad to close with; and in February, 1682, the eastern territory was sold to ten of the West Jersey proprietors, among whom was William Penn.

West Jersey freed from the Duke of York's control.

The Quakers buy East New Jersey. 1682.

William Penn was the son of Admiral Sir William Penn, a distinguished naval officer born at Bristol in 1621, of a family that had preserved an honorable station and record for fourteen generations. Sir William, the father, was peculiarly fitted for a life of enterprise, and had a capacity for commanding men, which was, however, signally baffled when he undertook to bend his Quaker son to his own notions of preferment and court life. He became a Captain at twenty-one, Rear Admiral of Ireland at twenty-three, Vice Admiral at

Parentage of William Penn.

Career of Admiral Penn.

twenty-five, and Vice Admiral of England at thirty-one years of age. When Cromwell planned his expedition against the Spanish West Indies, he was appointed, in 1654, Admiral of the fleet that was destined to coöperate with the land forces under General Venables. Unfortunately the Protector sent on board civil commissioners charged with some control over the actions of the officers. This, and the climate, and a disagreement or failure of coöperation between the sea and land forces, resulted in a disastrous failure, and the Admiral, on his return, fell into temporary disgrace and was lodged in the Tower. But we find him returned for Parliament from Weymouth, in 1655, and, what is more important, a commander under the Duke of York in a great fight against the Dutch fleet in 1665, when he rendered such important service to the Duke that Charles II. made it a special point in the patent which he issued to his son for the government of Pennsylvania, partly to conciliate the Duke, who had some pretensions to the territory and was opposed to Penn's claim.

The Admiral died in 1670. His turn for public affairs, and a certain vivacity of temper and sense of humor, were inherited by his son William, who was born in London, October 14, 1644, of a pious and high-minded mother. She very early began to impart her religious feeling to her son, and to awake the instinct which he had plainly inherited from her. When he was five years old she asked him a great question. "Who made you, William?" "Sure enough," said the eager boy, "was it not God?" "But, how do you know?" "You have told me so a hundred times." "But suppose I had not told you, could you have found it out for yourself?" "I don't know." "Why, William, nothing is easier." "Tell me, mother." "Do you see that stone lying there?" "What of it, mother?" "It is something, is it not?" "Yes." "But how do you know?" "Why I see it, I can feel it, and lift it." "Then do you think it made itself?" "I don't see how; it is a senseless thing, and no thing can make itself." Many and sweet must have been the colloquies between mother and son upon high matters, while perhaps the Admiral was on the seas, or tempting the unstable element of courts.

Birth of William Penn.

The boy was sent to school at Chiswell in Essex. One day in his eleventh year he perceived an exceeding glory in his room, and great comfort and emotion flowed through his soul. This experience was not traceable to any external influence; he had as yet held no communication with Friends who expected and cherished these mental states. But this first touch of the divine presence did not impair the buoyancy of his youth. He loved sports and manly exercises, was overflowing with animal spirits,

His childhood and youth.

and was fond of a joke. At fifteen, he was so advanced as to enter Oxford, where he associated with noblemen of rather discursive habits.

But there came to Oxford one Thomas Lee, an eminent preacher of the Society of Friends. Penn heard him and was greatly impressed with the new doctrines. Gradually he began to stay away from the Anglican worship because of his love of hearing any Friend speak who came to town. For this he was fined in 1660. When, under Charles II., a mandate came up to Oxford, restoring the habit of the surplice to the students and making its use imperative, Penn, collecting a few of his spirited comrades, attacked the students

Inclines to Quakerism.

Wanstead, Essex, Home of William Penn's Childhood.

who appeared in surplices and tore them over their heads. This led to his expulsion, to the extreme disgust of the Admiral, who cherished views of propriety and advancement for his son. In a fit of anger, in spite of the protesting mother, he turned young Penn out of the house. Repenting at leisure of this undomestic procedure, and alarmed at Penn's increasing tendency to the peculiar views of sectaries, he was summoned back and despatched to Paris in 1662, well provided with money; the father hoping to divert his mind by gayety and to change his habit of life.

Expelled from Oxford.

He is sent to Paris.

Penn did not dislike it; all his senses were keen and vital, and he liked to taste the humor of things. He was engaged once in a street fight, but he acquired fine manners and a more easy accommodation to circumstances. The delighted Admiral presented him at court,

then sent him to Dublin to look after some family property. Here he led a gay life, till one day he saw a placard announcing that a Friend "would preach in the Market House." He was impressed to go and listen. The preacher was his old friend, Thomas Lee, who taught him at Oxford to despise ordinances and cherish the Spirit. His heart was turned back to the old genuine affections of his nature, and he became again the school-boy who had felt a presence in his room.

Penn is sent to Dublin.

The decisive moment of his life had arrived. He doffed the courtly garb and adopted the ordinary costume of the Friend of that period; but the courtly eloquence and suavity of manner which nature had bestowed upon him he could not dispense with. There remained too the inextinguishable force and vivacity of his nature, which still sometimes led him into a broadness of speech and contemptuous allusion. Immediately surrendering his old habits of living he became a constant attendant upon the meetings of Friends. And it was upon one of these occasions in Cork that he was arrested, taken before the mayor, and for the first time committed to prison. His father, though disgusted at the change in his son's opinions, continued to be useful in getting him out of prison, whenever his boldness lodged him there. He was recalled home in 1666, and subjected to the father's arguments and threats. A severe struggle took place in his heart between his paternal duty and the new light which had risen within him. The light prevailed, and the angry father again dismissed him from the house.

Penn definitely embraces the Friends' doctrines.

Now he began to speak in Friends' meetings, and to employ a sprightly pen in defence of the new doctrines. In 1668, after an abortive discussion with some Presbyterian ministers, he wrote his "Sandy Foundation Shaken," which gave such offence that he was committed to the Tower on the charge of heresy. Here he solaced confinement with industrious writing; among other treatises composing his famous "No Cross No Crown," of which he said, "It is a path God in his everlasting kindness guided my feet into, in the flower of my youth, when about two and twenty years of age." And we find the key-note of the whole Quaker practice in England and America in this sentence: "To say that we strain at small things, which becomes not people of so fair pretensions to liberty and freedom of spirit, I answer with meekness, truth and sobriety; first, nothing is small that God makes matter of conscience to do or leave undone." He was kept in the Tower for seven months, and at length released in consequence of his clear and positive religious statements in a treatise called "Innocency with her open Face."

Penn imprisoned. — His writings.

The father's temper had "like to break his heart when things went wrong," but he underwent a hard conflict to set them right. A partial reconciliation between him and the son led gradually to a complete one before his death in 1670. Then Penn inherited great estates, which he lavishly used and encumbered in his important enterprises.

Persecution of Penn and other Quakers.

But meantime the persecutions of the Quakers attained unusual severity. Although Charles II. had enjoined the Boston magistrates to suspend their cruelties against the Friends, and had manifested a spirit of toleration in England, he subsequently, when under the influence of his ministers, issued fresh orders to New England to suppress the sect, and allowed the statutes to be enforced at home. Mayors and Recorders took advantage of this mood and revived the municipal statutes against dissenters' meetings and preaching. When the King recovered from his temporary mood of reaction and began to have considerable regard for leading Quakers, it did not affect the popular prejudice. The prosecutions went on, and the King made no active interference. The usual outrages prevailed through the kingdom. Meetings were mobbed, hats pulled off and trampled on, Friends were beaten, robbed, given over to any ruffianly treatment, thrown into loathsome jails, and if they had any money were fined, in some cases at the rate of £20 a month.

Penn's trial.

Penn was arrested for preaching in 1670, and his trial at the Old Bailey occurred in September. He and his friend, William Mead, a linen-draper who knew how to quote Latin in his plea, were arraigned on an indictment that absurdly charged them with gathering a tumultuous assembly in Grace Church Street with force and arms to the disturbance of the King's peace, and did there preach to the great terror and disturbance of many of his liege subjects. We have Penn's own report of this trial, published in Howell's "State Trials" and in his Works. On September first, the accused simply pleaded not guilty, and were remanded till the third. On that day, as they entered the court, some official rudely pulled their hats off, whereupon the Mayor rebuked the officer and made him put on their hats again. At this the Recorder magnified his office by fining each forty marks for contempt of court, though the order for replacing their hats came from the bench. So, said Penn, it is not we, but the bench which ought to be fined. When the Recorder said that the indictment was founded upon the common law, Penn asked him what was that law; to which the testy and virulent Recorder replied that he had not time enough to explain the cases which made the common law; and Penn rejoined, "If it be common it should not be so hard

to produce." Penn's retorts were so sharp that the tolerably well disposed Mayor ordered him into the bail-dock, a felon's dirty place in the purlieus of the court room; and Mead conducted himself with such steadiness that he soon followed. The jury, though vigorously bullied by the Recorder, brought in the simple verdict, "Guilty of speaking in Grace Church Street." Sent out again, they soon returned with the same verdict. But this did not suit the court. The jury was shut up and watched overnight, without meat, drink, fire, or any

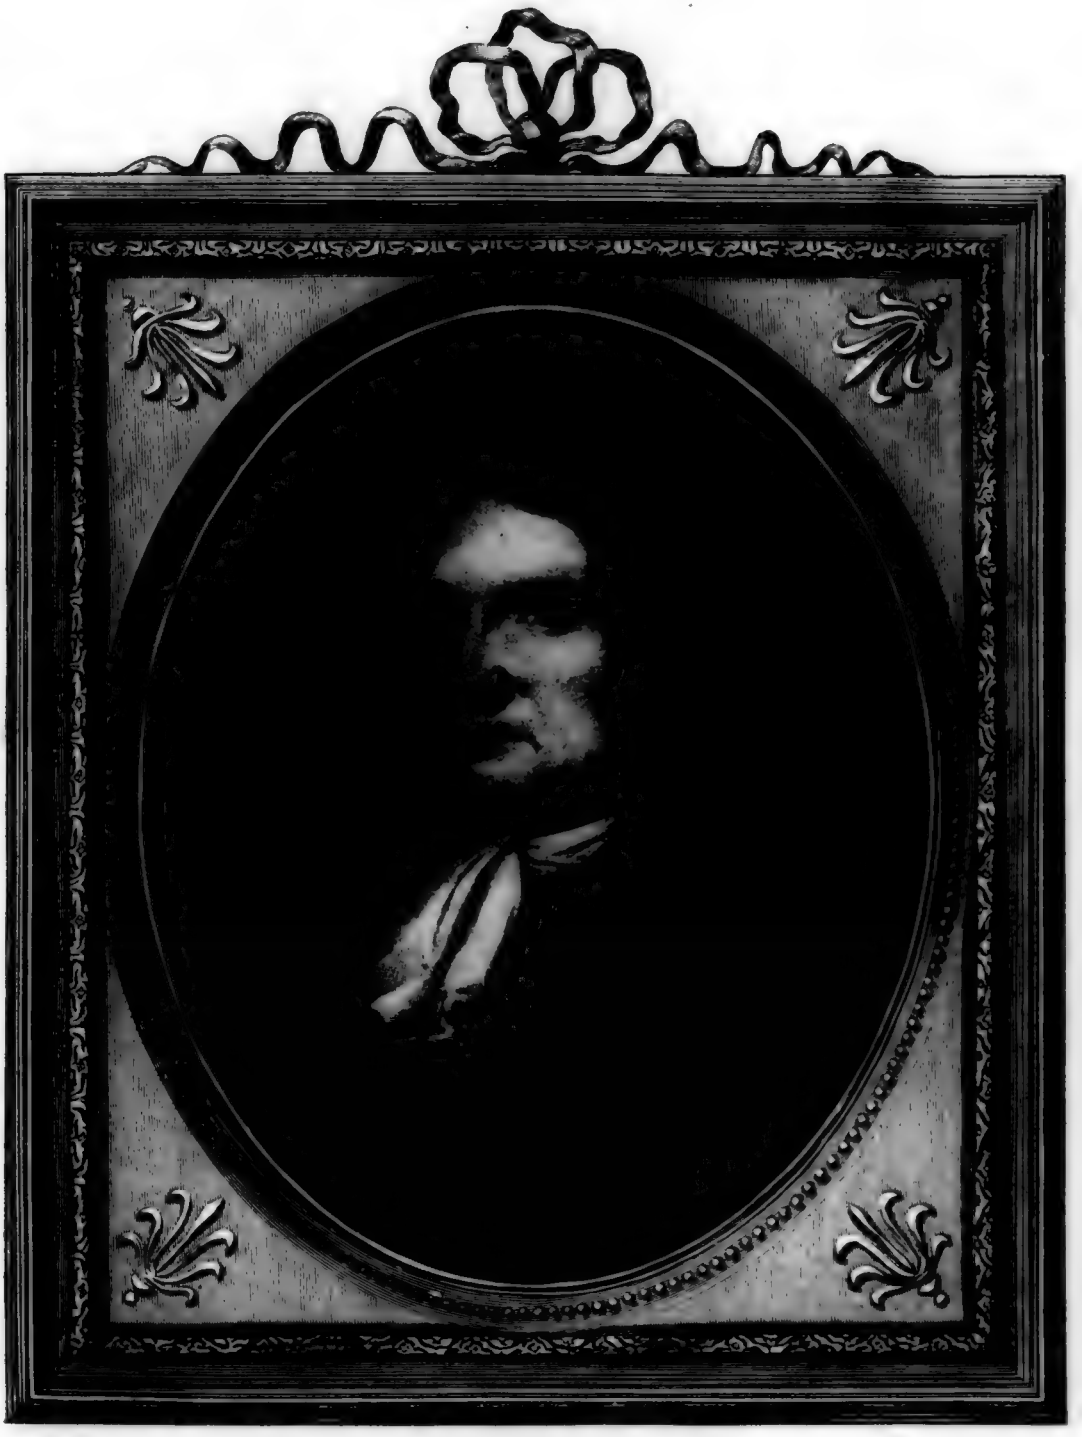
Trial of William Penn.

other accommodation. The next morning it returned the same verdict. Again it was angrily sent out, only to return with the original verdict. This happened twice more, the trial lasting till September fifth, and Penn and Mead being transferred to Newgate while it was pending, and the obstinate jury being shut up without food or drink. When at last the original verdict was rendered, each juror was fined forty marks for following his own opinion, and Penn and Mead sent to Newgate till each paid his forty marks for having his hat reset

upon his head. Such was the tolerated spite and injustice of that interval of persecution.[1]

Death of the Admiral.

Soon after the trial at the Old Bailey, Penn's father died, as it appears under great concern of mind at a tardy recognition of his son's courage and virtue. After taking the final leave of the household, he said: "Son William, I charge you do nothing against your conscience: if you and your friends keep to your plain way of preaching, and keep to your plain way of living, you will make an end of the priests, to the end of the world."



In 1671, Penn was again in Newgate for six months for being present at a Friends' meeting. After his release, he went on a religious mission to Holland and Germany, with Robert Barclay, author of the famous "Apology," and George Fox. His interviews with the susceptible Princess Elizabeth of Germany are memorable in the annals of Quakerism.

Penn's claim against the Crown. His proposal.

Among the effects of his father, Penn had inherited a claim against the Crown for arrears of the Admiral's pay, and for various loans to the Admiralty. What with principal and interest, it amounted in 1681 to £16,000, a sum which, in the money value of to-day, would be a very large one. Penn proposed to the government to liquidate this debt by a grant to him of territory in America. Those members of the Privy Council who were hostile to the views of Quakerism relative to the Church and State, strongly opposed the grant. But even the Duke of York, with whom he had been lately in controversy, favored his petition, mindful perhaps of the Admiral's great service to him in the tight pinch of the naval battle. The Duke might have preferred to extend his own province of New York farther to the southward.

Penn was well skilled in the methods of courts, and knew when to wait, when to persist, how smoothly to deal with the men of influence, in order to prefer his claim. The treasury also was empty, and the King thought he would be well rid of a debt of £16,000 for many square miles of wilderness peopled only by Indians. The Lords' Committee of Colonies, the Board of Trade, were quite contemptuous

[1] Eighty years later, on June 7, 1753, a Quakeress managed to get into the House of Lords, and reprehended the Peers on account of some fashionable excesses in dress and amusements. The *Monthly Review* said: "She was indulged with the attention of the House." During the French Revolution, a Quaker preferred to keep on his hat in the tribune when he was present at a sitting of the Council of Ancients. It was the President's opinion that the Council, by allowing him to remain with it on, would give a proof of its respect for the freedom of religious opinions. But the order of the day was carried upon a very sensible remark by Rousseau, who said: "He may come with his coat buttoned after the fashion of the Quakers, if he pleases, but let him take off his hat or stay away. If the delicacy of his conscience cannot yield to his curiosity, let him make his curiosity yield to the delicacy of his conscience."

WILLIAM PENN.

(From the copy by Place at the National Museum.)

over the idea of establishing over Indians, and amid foreign rivalries, a set of non-resistants. But a very cogent address in Council by Penn's chief advocate, clearing up the anti-governmental, anti-priest, and anti-royal principles of the Friends, prevailed. Chief Justice North was appointed to draw up a charter, with specifications of boundaries, which was signed March 4, 1681. In consideration of two beaver-skins annually, and a fifth part of all the gold and silver that might be mined, the King granted to Penn a territory of forty thousand square miles. This monarch was nothing if not merry; he must be allowed his sport. "Here," said he, "I am doing well in granting all these coasts, seas, bays, etc., to such a fighting man as you are. But you must promise not to take to scalping. And will you practise entire toleration toward all members of the Church of England?" To which, of course, Penn readily assented. As regards the scalping, a striking decline from the principles of his father was shown by the grandson of Penn, who proclaimed in July, 1764, that for every male Indian above the age of ten who was captured, a bounty of $150 should be paid; for every male killed and scalped, $134; for every one thus served under ten, $130; for every female killed and scalped, $50. But Penn's descendants had then long ceased to be Friends, and the frontier influence of the French among the Indians was of the most murderous kind.

The grant of Pennsylvania.

The King had called the new territory, thus granted, Pennsylvania. But Penn, whose family originated in Wales, had intended to call it New Wales. In the conference with the Secretary, who handed him the charter, he objected to the King's designation, and tried to prevail upon the Secretary to substitute his own, even offering him, when he proved stubborn, twenty guineas to alter it. But the Secretary could not overcome his sense of duty. Upon referring the matter to the King, with the compromise of Sylvania, the King said, "No. I am godfather to the territory, and will bestow its name."

The new territory named.

Penn's proprietary jurisdiction thus made secure, he issued a far-sighted and liberal advertisement of the inducements for emigration, which particularly addressed the Quaker disposition. His scheme of administration is too long to reproduce entire: but two or three special traits of it deserve emphasis. He declared that he wished to establish a just and righteous government in his province, that others might take example by it. In England there was not room for such a holy experiment. Government is a part of religion itself, a thing sacred in its institution and end. Any government is free to the people under it, whatever be the frame, where the laws rule, and the people are a party to those laws. Gov-

Penn's proposals to emigrants.

ernments depend upon men, not men upon governments. The first principle of Penn's new code recognized liberty of conscience; all persons acknowledging the one Eternal God, living peaceably and justly, were not to be molested or prejudiced in matters of faith and worship.

Penn went further than this; with the sad example of New England experience in his thought, he added that nobody shall be compelled at any time to frequent or maintain any religious worship, place, or ministry whatsoever. Only murder and treason were to be punishable by death. That, at least, was insisted upon by Chief Justice North. But while Penn lived, no gallows was erected in his province. He said that a prison must be converted into a school of reformation and education; that litigation ought to give way to some regularly appointed arbitration; that an oath was a superfluity; so, also, were cock-pits, bull-baiting, card-playing, theatres, and drunkenness. Lying was punishable as a crime. This, indeed, went to the root of the matter, for all nations from the earliest times have acknowledged that a lie is the parent of a horde of vices. Trial by jury was established, and in all cases which involved an Indian, the jury must be composed of six whites and six natives, and whenever a planter conceived that he was injured in person or property by a native he must not take the law into his own hands, but apply to a magistrate, and the latter must confer with the native's sachem. The person of the Indian was declared to be sacred.

Penn advertised the land in his province at forty shillings per hundred acres, and even servants could hold fifty acres in fee simple. "Still," said he to the Friends, eager to enter upon their new homes, "let no one move rashly, but have an eye to the Providence of God." So great was his reputation in Europe that he attracted many emigrants from its countries, mainly from Germany, and recruited from the soberest and thriftiest kind. A German Company, under the guidance of Franz Pastorius,[1] bought fifteen thousand acres.

Early settlers.

Three vessels came over in 1681. One of them was frozen in at Chester, and the passengers could get no further. They were obliged to dig caves in the river bank and live in them. This was a common expedient with the earliest settlers, and at a later period Penn complained of the liquor drinking and excesses in the caves. It had always been his object to live in his province and manage his affairs. When the ship in which he intended to embark

[1] See a German pamphlet in the library of Harvard College, by Fr. Daniel Pastorius, "a geographical statistical Description of the Province of Pennsylvania." It contains the events which occurred from 1683 to 1699. At the time of writing it he was chief magistrate at Germantown.

was nearly ready, he requested an audience of the King. Said Charles, "It will not be long before I hear that you have gone into the savages' war kettle: what is to prevent it?" "Their own inner light," said Penn. "Moreover, as I intend equitably to buy their lands, I shall not be molested." "Buy their lands! Why, is not the whole land mine?" "No, your majesty, we have no right to their lands; they are the original occupants of the soil." "What! have I not the right of discovery?" "Well, just suppose that a canoe full of savages should by some accident discover Great Britain. Would you vacate or sell?" The King was astonished at the retort, and no less at the policy which soon bore such admirable

Penn and the King.

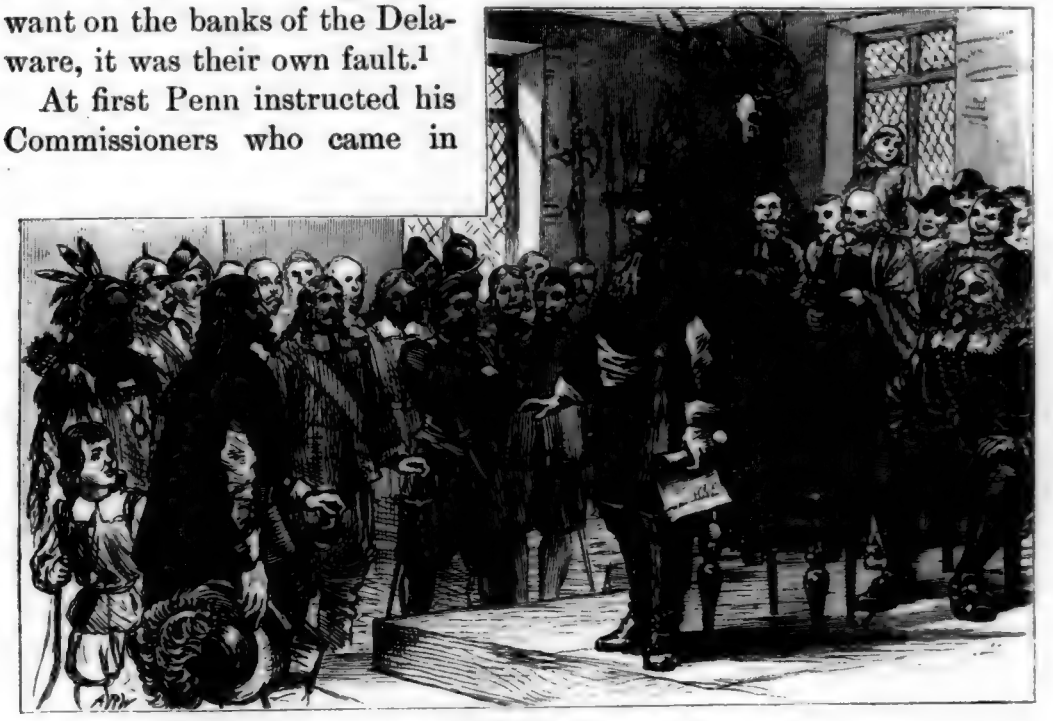
Chester, Pennsylvania.

fruit that was unfertilized by blood. New England began by trying to convert the Indian, taking in the mean time his land in the name of the Gospel. Penn began by paying for the land and solemnly treating with the Indian that he might thus possibly convert him.

After his visit to the King, Penn passed a day with his family at Worminghurst, engaged in devout exercises and domestic converse. He left there a truly Christian document in the form of a letter to his family, which was at the same time an address to all who professed the opinions of Friends. On September 1, 1682, he set sail in the ship *Welcome*, a name as propitious as *May-flower*, with a hundred passengers, nearly all of whom were Friends from his own county of Sussex. Robert Greenaway

Penn's voyage to America.

was the commander. The uncomfortable voyage lasted six weeks, during which thirty of the passengers died of the small-pox. One day the captain saw a ship which appeared to be in pursuit of his own, and took her to be an enemy. He made every preparation for resistance, and manned his guns. Then addressing the non-resistant Quakers, he advised them to take refuge in the cabin. Penn and the rest did so, excepting James Logan, his private secretary. Logan stayed on deck and took his station at a gun. When the strange sail came near it proved to be a friendly one. Penn came on deck and severely rebuked Logan for remaining to fight. Said Logan, "I being thy secretary, why didst thou not order me to come down? But thou wert willing enough that I should stay and help to fight the ship when thou thought there was danger."



The landing at Newcastle.

At length the Delaware was reached, and a landing was made at Newcastle on the 27th of October. The Dutch and Swedes gave the heartiest welcome to their new Governor. His first act was to naturalize all these inhabitants of the province. They were summoned to the court-house and addressed by Penn on the true nature and functions of government. The commissions of all the existing magistrates were renewed. Then he went up the river to Upland, now Chester, and met the delegates who had been already selected by his Commissioners to compose the first Assembly. Their first session, held in the Friends' Meeting House, lasted only four days, much time being saved by the admirable rule which was adopted, that "none speak but once before the question is put, nor after, but once; and that none fall from the matter to the person, and that superfluous and tedious speeches may be stopped by the Speaker." So the Quaker principle of freedom of utterance as the spirit prompted, was judiciously balanced. No four days of legislative work were ever more harmoniously spent in laying the foundations of society. Penn's own sincere temper was imparted to all. "As to outward things we are satisfied; the land good, the air clear and sweet, the springs plentiful, and provision good and easy to come at; an innumerable quantity of wild-fowl and fish; in fine, here is what an Abraham, Isaac, and Jacob would be well contented with."[1]

Plenty and prosperity in Pennsylvania.

[1] The wild turkeys sometimes turned the scale at forty-six pounds; one of thirty pounds sold for a shilling, a deer for two shillings. One settler bought a fat buck for two gills of gunpowder. Wild pigeons could be killed with sticks, apparently too numerous to get out of the way. Six rock-cod cost twelve pence, salt fish three farthings' a pound. "Peaches by cart-loads," said one letter writer: "the Indians bring us seven or eight fat bucks a day. Without rod or net we catch abundance of herrings, after the Indian manner, in penfolds." There were plenty of swans, and oysters six inches long. But all this was true of nearly all the more southern settlements in the earlier years.

In good years the farmer gathered twenty or thirty bushels of wheat for every one he sowed. A native grape grew in great abundance, and yielded an excellent wine. The woods and meadows swarmed with all kinds of wild berries; and the settlers soon had their various fruit trees and bushes, melons planted, their presses started, and perry, cider, etc., running from them. The natives were always hospitable, well inclined to barter because never overreached. Great plenty ruled in this province from the beginning. If the Dutch and Swedes had suffered from hunger and want on the banks of the Delaware, it was their own fault.[1]

Penn's Address at Newcastle.

At first Penn instructed his Commissioners who came in 1681, to examine the neighborhood of Upland to find a suitable site for a town; but when he went up the river he pitched upon the broad peninsula that lay between the Delaware and the Schuylkill. Here he projected a city upon a great scale of squares, streets with avenues of trees — some of which still preserve the names

Philadelphia founded.

[1] A planter, writing before 1696, gave the following rates of wages: Carpenters, bricklayers, and masons, six shillings a day; shoemakers, two shillings on each pair; journeymen tailors, twelve shillings a week and their diet; weavers, ten pence a yard; wool-combers, twelve pence a pound; potters, sixteen pence for a pot which cost in England only four pence; brick-makers, twenty shillings per thousand of bricks at the kiln; hatters, seven shillings for a hat; all other trades, of which every conceivable kind was pursued in the province, making it quite independent of the mother country, were rewarded in the same proportion. All kinds of food were much cheaper than in England; and the Barbadoes furnished a constant market for corn. Laboring men earned fourteen pounds a year, with meat, drink, washing, and lodging; maid-servants ten pounds a year. Floating mills for grinding corn took advantage of the river's current, and on the land horse-mills were used

of the original trees — and houses to be surrounded with gardens. Before houses could be built the settlers lived in huts, and in caves which were excavations in the river bank arched over with branches and sodded. The chimneys were built of clay strengthened with grass. One house was in process of building by a man with the happy name of Guest. Penn's first landing was made at Dock Creek opposite this unfinished house, which was afterwards known as the Blue Anchor Tavern. The first keeper of the tavern was Guest, and a long line of hospitable Friends succeeded him. Beyond Guest's house, ten others were soon built in the old English fashion, of frames

Letitia Cottage, Philadelphia, supposed First Residence of Penn.

filled in with brick, and called "Budd's Long Row." The tavern "was but about twelve feet front," says Watson in his copious "Annals," "on Front Street, and about twenty-two feet on Dock Street, having a ceiling of about eight and a half feet in height." A little cottage, built by one Drinker, who settled on this site alone several years before the arrival of Penn, was the first habitation on the site of Philadelphia. Penn meant to convey to the settlers by the name of his new city the disposition which he hoped would prevail within its walls.

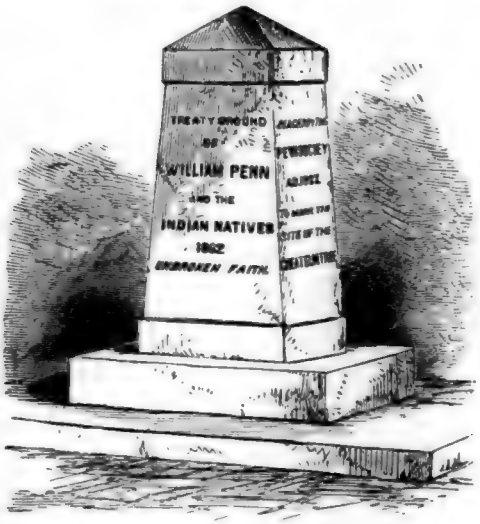
In this year of Penn's landing twenty-three ships filled with colonists came up the Delaware. In less than a year eighty houses and cottages were built, three hundred farms laid out, and bounteous crops

secured. In 1684, there were three hundred and fifty-seven houses, "large and well built, with cellars," and fifty townships had been settled. In 1685, there were six hundred houses. In one year ninety ships brought more than seven thousand people into his province.

Rapid increase of settlers.

A treaty had been made with the Indian tribes of the neighborhood, which only required to be ratified before the Governor. A scene, October 14, 1682, which history has made memorable, took place under the spreading branches of an American elm, at Shackamaxon, or Sakimaxing, "place of kings," an old resort for Indian councils. The Indians met Penn at "the half-way house," that is, at noon. They were tribes of the Lenni Lenape, a nation which long ago had its seat beyond the Alleghanies, whence it migrated to the Hudson and Delaware. Their tribal names were derived from the creeks and rivers of their territory, as Raritan, Assunpink, Mingo, Navesink. They were of a warlike disposition, and falling into frequent fights with Indian neighbors. Penn described them well, with a few strokes: "They are tall, straight, tread strong and clever, and walk with a lofty chin. Their custom of rubbing the body with bear's fat, gives them a swarthy color. They have little black eyes. Their heads and countenances have nothing of the negro type, and I have seen as comely European-like faces among them as on your side the sea. Their language is lofty, yet narrow; like short-hand in writing, one word serveth in the place of three, and the rest are supplied by the understanding of the hearer. I have made it my business to understand it, that I might not want an interpreter on any occasion. In liberality, they excel; nothing is too good for their friend; give them a fine gun, coat, or other thing, it may pass twenty hands before it sticks; light of heart, strong affections, but soon spent. The justice they have is pecuniary. In case they kill a woman, they pay double, and the

Penn's Indian Treaty.



The Treaty Ground at Kensington, before the Fall of the "Treaty Tree."

reason they render is, that she breedeth children, which men cannot do. It is rare that they fall out, if sober; and if drunk, they forgive it, saying, it was the drink and not the man that abused them."

On this occasion, Penn had an interpreter. The chief sachem, Taminent, sat in the middle of a semi-circle, composed of old men and councillors. At a little distance behind, "the young fry," in the same order. The sachem deputed one to address Penn, during whose harangue no one whispered or smiled. Penn's company advanced to this meeting without arms; he was only distinguished by a blue silk net-work sash. The sachem wore a kind of chaplet, with a small horn projecting from it as a symbol of sovereignty. When he put it on all the natives threw down their arms; it was a signal that the place was inviolate.

The scene at Shackamaxon.

The Treaty Monument, Kensington.

The confirmation of the treaty was engrossed upon a roll of parchment. Penn's address, with its emphasis of the Great Spirit, must have sparkled with a peculiar sincerity, because of his personal belief in a direct intercourse with the source of all power. He told the Indians that every thought of the heart was known above; that the desire of his own heart was to live in perpetual amity with them; that he and his friends came unarmed because they never used weapons. Then the conditions of the purchase were read, and in addition to the stipulated price he presented them with various articles of merchandise. The treaty concluded upon this pacific basis, without the exhibition of a single weapon of modern warfare, and expressly disclaiming a resort to force, was faithfully kept by those barbarians for sixty years.

While Penn was allotting land to purchasers, he reserved a tract of a thousand acres for his friend George Fox. Land was frequently purchased of the Indians by paying for as much as the purchaser could comprise in a walk. When some of the best English pedestrians were detailed for this new style of measurement, they covered so much ground that the Indians were mortified at the unequal bargain. Then an additional present of merchandise set the matter right. Thus the peace was always kept in politic fashion, and the Indian could entertain no cause for feud. Only one alarm ever occurred purporting to come from an Indian quarter, when one day in 1688, some

women came running in with the tidings that a large body of Indians were coming down to massacre. This was dire news to the defenceless Friends. But instead of sending out scouts to reconnoitre, who were willing to bear arms, a commissioner was despatched, who, upon arriving at the place indicated, found an old Indian chief lying all alone upon the grass nursing his lame leg, and a number of squaws at work in the field. No other man was in sight. The old chief said the women ought to be hanged for spreading so false a report.

Penn used every lawful art of intercourse to conciliate the Indians. "He walked with them," at one of their earliest meetings, sat with them on the ground, and ate with them of their roasted acorns and hominy. At this they expressed their great delight, and soon began to show how they could hop and jump, at which exhibition William Penn, to cap the climax, "sprang up and beat them all." We cannot imagine the fathers of New England jumping in rivalry with savages. Their methods seldom raised a smile.

Education and religious matters in Philadelphia.

In October, 1683, one Enoch Flower — what pleasant Quaker symbolism in the name — began to teach boys and girls in a dwelling made of pine and cedar planks. His terms were, "To learn to read, four shillings a quarter; to write, six shillings; boarding scholars, to wit: diet, lodging, washing, and schooling, ten pounds the whole year." A printing-press was set up soon after. From the time of the first settlement of New Netherland it was seventy years before any book or paper was printed there.

In 1683, among the emigrants who came over was James Claypoole, author of several books and pamphlets, an admired friend of Penn. He was an uncle of the Lord John Claypoole who married Cromwell's favorite daughter, Elizabeth. He was one of the Friends to whom Penn addressed a touching religious exhortation, just before his return to England in 1684, to be read at all Friends' Meetings in the province. The first Yearly Meeting in Philadelphia was held in July, 1683.

Penn returns to England.

One reason for Penn's return to England was the necessity for determining the boundary line between his own province and that of Maryland. Lord Baltimore had already gone on this business, reasserting the right, under his patent, to the country along the west side of the Delaware, from Philadelphia to Cape Henlopen, which he had so persistently maintained against the Dutch in Stuyvesant's time. On this vexed question, after many delays, Penn succeeded in getting a decision from the Committee of Trade and Plantations against Lord Baltimore. Baltimore, the Dutch had contended, had no title to this country, because it was settled by their people at the time his patent was issued, and that

patent only entitled him to lands uncultivated and inhabited by savages. The King had conquered the country from the Dutch and granted it to the Duke of York, and the Duke had conveyed it to William Penn. The title, therefore, was now vested in Penn, as against Baltimore, by Order of Council.[1]

But he was moved to go to England by another motive. He had heard of the accusations which were rife against him, that he was working with Jesuits to secure the supremacy of James II., who would have been glad to reintroduce the Roman Catholic religion into England. The only ground for the absurd report seems to have been the favor in which he had been held by Charles II., and still enjoyed from James II. To his care the elder Penn — whom James had so much reason for holding in affectionate remembrance — had warmly commended his son. Surely that son is not to be blamed that he retained the King's esteem by his admirable bearing, his conciliatory temper, and his unflinching integrity. The influence he acquired he used for the benefit of all who were in need, especially for hundreds of his own sect who still suffered in prisons all over England. If he sought to retain that influence for his own purposes, it was only on behalf of that commonwealth he had founded, which he so loved, and for which he spent his own life and estate. If his principles of toleration found favor with James, it was not because of any leaning, on Penn's part, to the Catholic Church. It is impossible not to believe that his numerous avowals against idolatries and ordinances were sincere; impossible not to accept as true his many disclaimers of any sympathy with the Church of Rome. The "No Cross, no Crown," is thoroughly anti-papal.[2]

The Penn Mansion, later Residence of the Penn Family in Philadelphia.

[1] The line fixed by this decision was the present boundary between Maryland and Delaware. The final line between Maryland and Pennsylvania continued a question of dispute till settled by the running of "Mason and Dixon's Line," by Charles Mason and Jeremiah Dixon, in 1762.

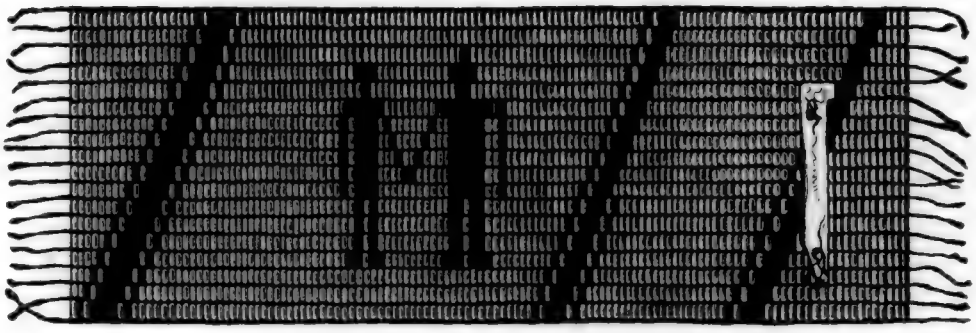
[2] Were we professing to give a complete biography of William Penn, it would be nec-

But his enemies, and the haters of Quakerism, could not tolerate the favor which his diplomatic disposition, combined with his remarkable independence, won for him at court. They were less the foes of Jesuits. Penn thought it right to use all the influence he could command for the benefit of his American province, and to have the new persecutions against the Quakers abated. He succeeded in both purposes. Before leaving America he appointed a Provincial Council to act for him during his absence; but it was not long before disputes arose which caused him much anxiety. He could not succeed in prevailing upon the Assembly to restrain the use of spirituous liquors, and to withhold them altogether from the Indians. His officers committed many extortions in the sale of his lands. He experienced great difficulty in collecting his quit-rents, and was seriously embarrassed by the great outlay which he had made: "Six thousand pounds out of pocket," he said repeatedly.

Penn in England.

At the revolution of 1688, he fell under serious suspicion of aiding in the plots for the return of James II. Once he was arrested and brought before the Lords of Council, and, at his own request, was taken before the King. A letter had been written him by James, and when examined in regard to it, he could not, he said, prevent him from writing to him; but if that brought him under a suspicion of plotting for a restoration, it did not compel him to violate his duty to the state. The King seemed satisfied with his defence, and he was not again molested. It did not seem to him proper, however, to leave the kingdom while under such suspicion, and he remained in England.

During this time he was pained by the accounts sent to him of the dissensions in his province. The three lower counties on the Delaware, called the "Territories," had insisted on a separate government, and to this he reluctantly assented. Other difficulties occurred, relating to the religious doctrines of Friends. These were chiefly fomented by George Keith, who had been appointed the principal of the Friends' public school in Philadelphia, which was established in 1689. The court took advantage of these disturbances to depose Penn from the government of the province, and another governor was sent out, who administered affairs till Penn was reinstated in 1694, having shown the hollowness of the charges against himself and reëstablished old feelings of amity with the sus-



Penn removed from his proprietorship.

essary to meet the various charges brought against him by Macaulay, in his *History of England*. A complete refutation of them may be found in a Preface to Clarkson's *Life of Penn*, by William E. Forster, the English statesman; in *The Life of William Penn*, by Samuel E. Janney; in a *Defence of William Penn*, by Henry Fairbairn; and in Dixon's *Life of Penn*, which on this point, at least, may be considered as an authority. The evidence is ample, and would be accepted in any court of justice.

picious party in the Society. The new Governor, Fletcher, who was also Governor of New York, had, in the meantime, with the usual fatal facility of royal governors, quarrelled with the Assembly and retired in disgust to New York.

His restoration.

Penn made his defence and explanation before the Council in 1693; his reinstatement in the proprietary government took place in August, 1694. While he was preparing to return he appointed his cousin, Colonel Markham, Deputy Governor of the province, his friend Thomas Lloyd, who had been his Deputy for some time, having recently died. Markham's administration was, on the whole, satisfactory, and there was little for several years to disturb the tranquillity and prosperity of the colony, which already contained 20,000 people. Penn permitted his private affairs to retain him in England till 1699, when he once more sailed for America with his family, with the firm intention of remaining there for the rest of his days.

Wampum received by Penn in Commemoration of the Indian Treaty.

CHAPTER XXI.

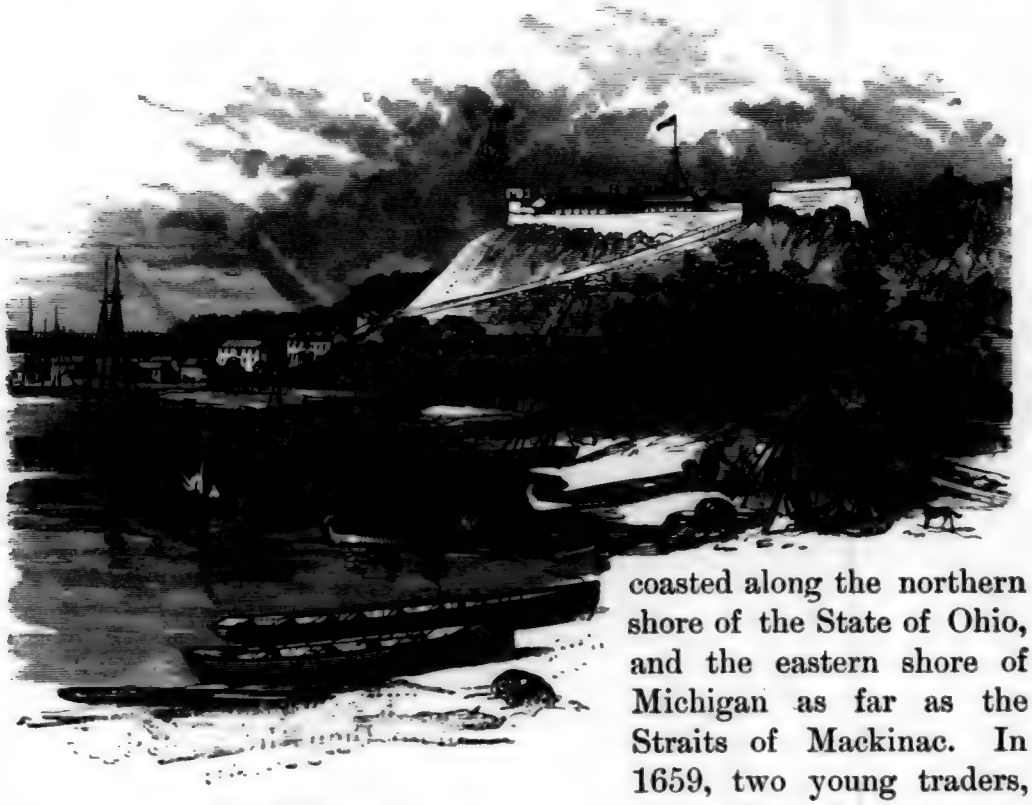
THE FRENCH IN THE MISSISSIPPI VALLEY.

THE EXPLORATION OF THE MISSISSIPPI AND THE SETTLEMENT OF LOUISIANA. — FRENCH MISSIONARIES AND HUNTERS. — DISCOVERY OF OHIO, INDIANA, AND OTHER NORTHWESTERN STATES. — THE POLICY OF COLBERT AND TALON. — DISCOVERY OF THE UPPER LAKES. — CONGRESS OF NATIVE TRIBES AT MACKINAC. — MARQUETTE AND JOLIET SAIL FOR THE DISCOVERY OF THE MISSISSIPPI. — FRENCH COLONY OF 1699. — D'IBERVILLE AND HIS BROTHERS. — BILOXI AND POVERTY POINT. — WAR OF SUCCESSION. — PENSACOLA. — MINES. — CROZAT'S GRANT.

THE English and Dutch settlers, to whose history this volume has thus far been for the most part devoted, never showed any disposition to make permanent homes with the aborigines. Their efforts to Christianize them were made loyally, but did not include life in their wigwams or villages. Even the hunter or trapper of English blood, who brought furs from the frontier to the sea, was not a man who had carried on his hunting or trapping in league with the natives. He had lived in a solitary hut, or he had made his excursions from a frontier village.

Totem of the Hurons (from La Hontan).

Tendency of the French toward exploration and adventure.



From the very beginning, however, a different disposition showed itself in the French colonies of Acadie and of Canada. When the white population of Canada was not more than three hundred persons, a considerable number of those persons were living in the villages of the Hurons,[1] whose homes were then further to the east than that great lake which now preserves their name. Some of these Frenchmen were traders for furs, some were priests, at first of the

[1] The handful of Wyandots, now in Kansas, represents the great tribe of Hurons. The spelling Yendat is the earlier form. See Gallatin's *Synopsis*. The word "Huron" is itself not Indian but French, derived from the French word *hure*, meaning a rough mane or head of hair.

Récollet order, afterwards of the fraternity of Jesuits. It was by such traders and missionaries that several of the western States of the American Union were first opened to the knowledge of Europe.

The great Champlain, from whom the real history of Canada begins, arrived in Quebec on the 3d of July, 1608, only a year after the settlement at Jamestown.[1] In 1615 he discovered Lake Ontario, and Lake Nipissing. He pressed his explorations westward, and recent research has shown that as early as 1634, Jean Nicollet, a Frenchman who had become an Indian in all his habits, visited, in the course of his western travels, the region which we now know as Wisconsin. These were pioneer adventures. Nicollet was himself a sincere Catholic. He and other pioneers were followed, as early as the year 1640, by the Fathers Chaumonot and Brébœuf, who

French pioneers.

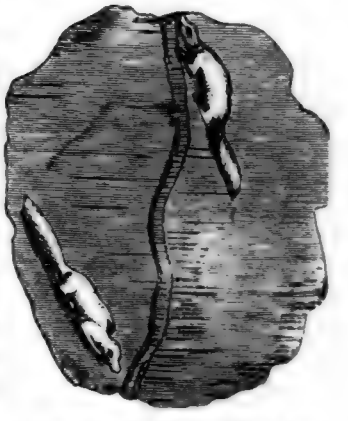
Island of Mackinac.

coasted along the northern shore of the State of Ohio, and the eastern shore of Michigan as far as the Straits of Mackinac. In 1659, two young traders, who pushed their explorations farther west, joined a tribe of Indians, with whom they went so far west upon Lake Superior, that they heard for the first time of the great tribe of the Sioux, whose conflicts against the whites occupy the journals even as late as our day. At that time, the Sioux appeared to these travellers a powerful nation, of more gentle manners than the eastern Indians, whom they had known before. The Frenchmen reported that they were not cruel to their prisoners, and that they wor-

[1] See vol. i., p. 321.

shipped one God.[1] These pioneers returned to Montreal in the spring of 1660, with sixteen canoes packed with furs. In these movements, dictated now by adventure, now by religious zeal, and often by both combined, our States of Ohio, Indiana, Michigan, Illinois, Wisconsin, and Minnesota, were first visited by the whites. Perhaps it would be too much to say, in all cases, that those who made these explorations were what we should call civilized men.

In the summer of 1660 Father Mesnard took with him some Indians of the Algonkin race, and founded a new mission. He established himself at first at a point on the southern shore of Lake Superior which is still known as Chagwamegan,[2] the name it then bore. Mesnard, however, on the invitation of the Hurons, returned to the western bay of Lake Huron, where he lost his life in some unknown way. In 1665, Father Allouez established a mission at the same point, and was able to preach in the Algonkin language to twelve or fifteen different tribes. The same language is still used by the Chippeways of that region.



Mesnard's Algonkin mission.

Totem of the Sioux (from La Hontan)

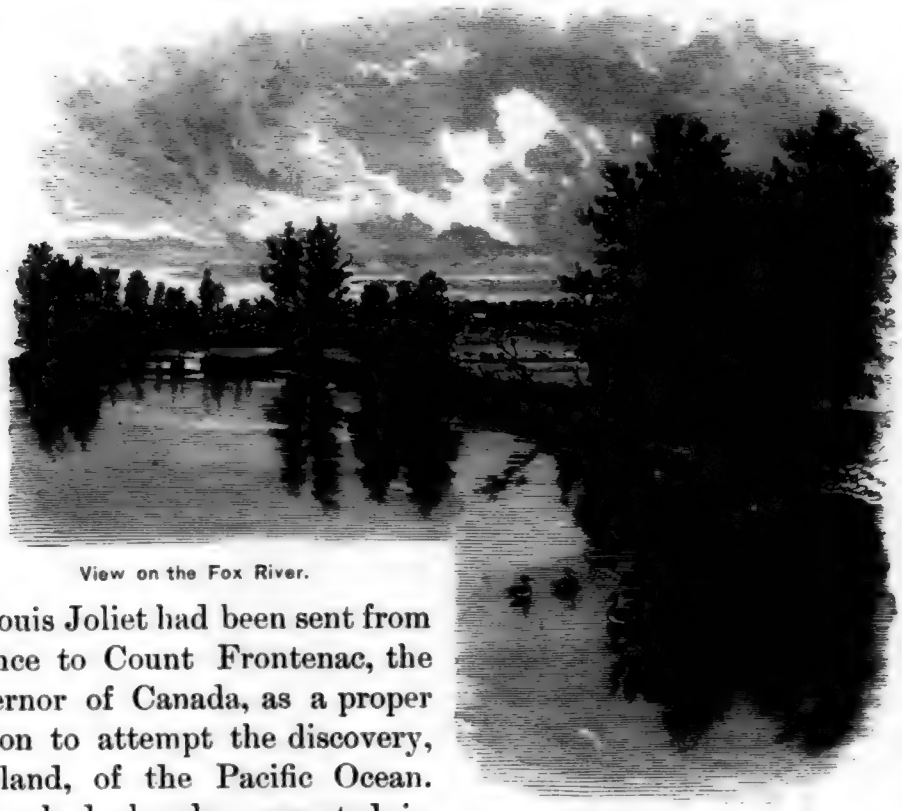
The Jesuit writers say that the fame of Father Allouez extended even to the Sioux, and that they told him of the prairies on the banks of the Mississippi. Father Dablon, another missionary, learned of the Mississippi from a map which the Sioux drew for him, and as early as 1669 proposed to himself an expedition to discover it. With Father Allouez he went as far as the Fox River, and learned that the Wisconsin River, of the present State of Wisconsin, was one of the affluents of the Mississippi.

Other missions.

Totem of the Foxes (from La Hontan).

Meanwhile the genius of Colbert in France had apprehended the value of the French establishment in Canada. He was beginning to undo the unfortunate results of the narrower policy of Cardinal Richelieu. In pursuance of this policy, Jean Talon, who had gained the favor of the king in France, was entrusted with the oversight of commerce in Canada. He arranged a great coun-

[1] The Sioux call themselves Dahcotahs.

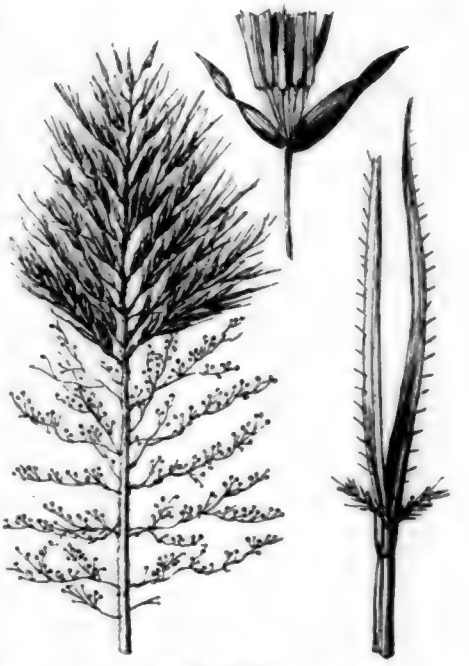


[2] Chagwamegan means "on the long, narrow point of land, or sand-bar." For this, and many similar interpretations, we are indebted to Dr. J. Hammond Trumbull, the learned master of the Indian tongues.

cil of Indians at the Sault Ste. Marie, at the foot of Lake Superior, in 1671. Nicolas Perrot, who knew their languages and customs, convened the assembly. It is in the report of this council that the name "Chicago" first appears in literature. M. de St. Lousson represented Louis XIV. He found here the chiefs of tribes as distant as Hudson's Bay on the east, and the head of Lake Superior and Lake Michigan on the west and south. In the joint hyperbole of French genius and the Indian dialect he described the glories of *Le grand Monarque*. The chiefs declared that they asked for no other father than the great *Onnonthio* [1] of the French. A cross was erected, to which the Arms of France was fastened, and possession was assumed in the name of the French crown.

Talon's Indian Council.

Signature of Joliet.



View on the Fox River.

Louis Joliet had been sent from France to Count Frontenac, the governor of Canada, as a proper person to attempt the discovery, overland, of the Pacific Ocean. Talon had already suggested in France, the appointment of Poulet, a captain of Dieppe, for an exploration of the Pacific by way of the Straits of Magellan. Father

[1] The name lingers among the Indians of the St. Lawrence. In the deposition of Charles Soskonharowane, of Caughnawaga, taken to determine whether Rev. Eleazer Williams should or should not be known as King Louis XVII., son of Louis XVI., this Indian says, "Many incidents of his youth would remove the thought of his being the son of the great *Anonthica*." Sworn to April 16, 1853.

Marquette, who had already gone as far as Wisconsin as a missionary, joined Joliet, and, in 1673, they started on the expedition in which, so far as we know, the source and course of the Mississippi were discovered by Europeans. Of the discovery of its mouth by the adventurous Spaniards, and part of the region above, the history is already told in an earlier chapter.[1] Marquette's voyage.

In this eventful voyage, the first in which civilized men navigated a large part of the course of a river, which has since become the highway of half a nation, Marquette and Joliet descended the Mississippi as far as the mouth of the Arkansas River. They satisfied themselves that they were in the neighborhood of the Gulf of Mexico, and wishing to avoid any collision with the Spaniards returned to Canada. We have a charming account of the enterprise by Marquette himself, which was published in Paris in 1681. The voyagers passed up Green Bay, and the Fox River. Near the head of the Bay was the most advanced French station, and here they bade their compatriots good-by. The Indian village there was made up of Miamis, Mascoutins, and Kickapoos, of whom the priests rated the Miamis most highly for civility. The travellers saw, with pleasure, a cross, which had been erected in the village, and was adorned by the devotion of the natives. They addressed the assembly of them, explained their object, and enlisted two Miami guides, who should show them the difficult passage by which to cross from the Fox to the Wisconsin River; from the waters of the St. Lawrence to those flowing into the Gulf of Mexico. The channel of the river was so choked with wild rice, that the Frenchmen could not have found its course without such help. A passage of little more than a mile brought the explorers to the waters of the Wisconsin. The two guides there left the party of seven Frenchmen alone on these strange waters, five or six hundred leagues from Quebec, according to Marquette's calculation, to take the stream which would bear them into lands wholly new. Marquette's own map preserves, with curious accuracy, their route in Wisconsin, through the county of Portage, which takes its

name from the easy transfer here made between the two great systems of American waters.

They seem to have crossed the portage on the 10th of June. A week was sufficient for the voyage of forty leagues, according to their estimate, which brought them to the Mississippi, which they entered

Marquette's Map.[1]

with inexpressible joy. They estimated the latitude of the point where the Wisconsin joins it at 42½ degrees, — about half a degree farther south than it is placed by the more modern observations.

[1] The map here given is a part of that published in Paris by Thevenot as "Marquette's Map." It differs from the original manuscript, which is still preserved, in the spelling of a few of the words, — probably only through an error of the engraver.

For eight days the navigators floated down the river, without seeing men or signs of men. The herds of buffalo, which they called by the Indian word Pisikiou, were new to them, and are carefully described. For fear of surprise, the explorers made but little fire, spent the night in their canoes, anchored a little distance from the shore, and always kept a sentinel on the alert. At last, on the 25th of June, a well worn path on the shore indicated the presence of men, and Marquette and Joliet, warning their crews not to be surprised in their absence, followed up the trodden trail to communicate with the natives. These proved to be Illinois; and they re-

Meeting with the Indians.

Marquette's Reception by the Illinois.

ceived the Frenchmen cordially. The chief of the village came forth naked from his wigwam to welcome them, with his hands raised to the sun; others flourished the pipe of peace. To these pipes they gave the name "calumet,"[1] now so familiar to us, which was, however, new to the voyagers. While the formalities of smoking were

[1] Marquette notes the fact that the calumet was made of red stone. The Indians of the Northwest still use the Pipe Rock for their calumets, which has acquired a sacred value. It is found in the ridge between the Missouri and the Mississippi. It appears to be the only locality now known in the world, for that almost precious stone which antiquaries know as Rosso Antico.

going on, an invitation arrived from the great chief of the Illinois that the strangers should visit him at his village, — and they did so. They found him standing between two old men in front of the cabin, which served him for a palace, — all three naked. The chief held a calumet turned towards the sun. After felicitating the strangers on their arrival, he invited them into his cabin, and received them, as Marquette says, "with the usual caresses." After a feast, and a sort of triumphal procession in which the strangers saw the town, which consisted of three hundred cabins, more than six hundred persons accompanied them to their canoes, assuring them of the pleasure which their visit had given. They gave to Marquette a calumet, which proved valuable to him afterwards.

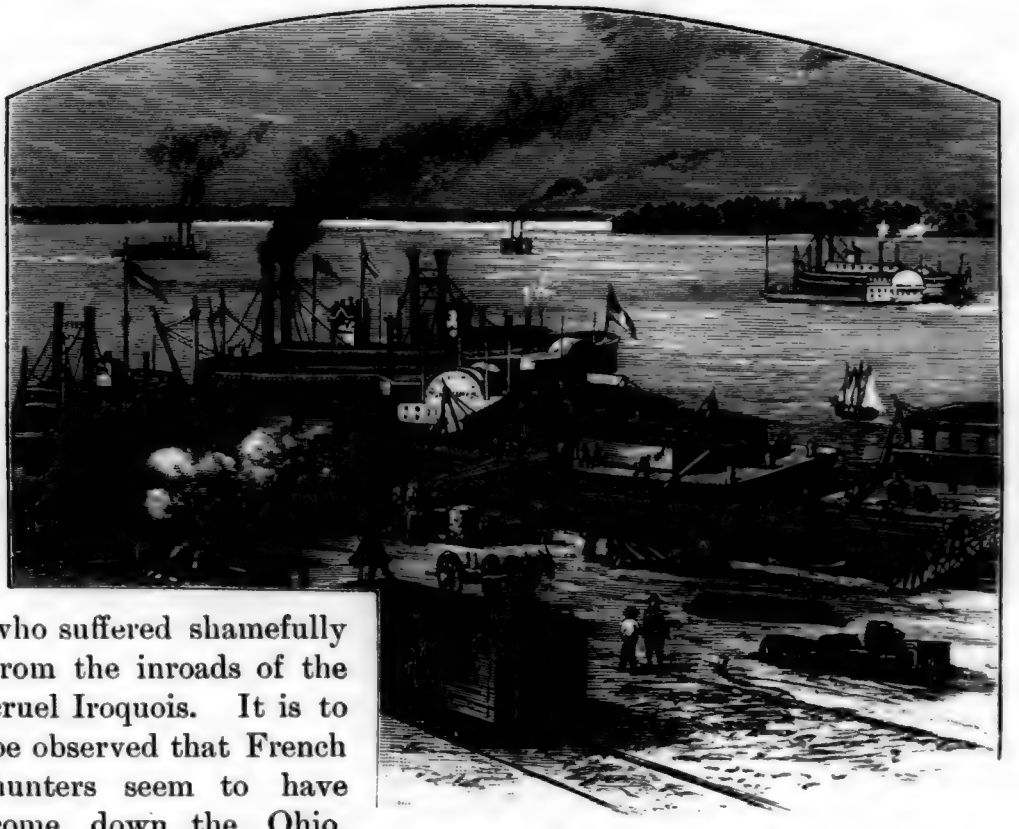
The Painted Rocks.

Leaving their hospitable friends they continued their voyage. They recognized the rocks known long afterward as the Painted Rocks, on which the designs were so striking that Marquette thought the best painters in France would scarcely have done so well. Traces of these paintings have been made out within the present century.[1] They struck the Missouri, — to which they gave the name of Pekitanoui.[2] Their description of its mighty flow, of its muddy water, and the distinctness of its current from that of the Mississippi, notes the points which every traveller first observes, to this day. Marquette says in his journal that he hoped by means of it to make the discovery of the Red Sea or Gulf of California, both these names being given in his time to the same gulf, which we know only by the latter title of the two.

Totem of the Illinois. (From La Hontan.)

The Missouri River.

In this hope he was encouraged by his Indian friends, who told him that by going up the Missouri, for five or six days, he would come to a beautiful prairie twenty or thirty leagues long; that he could carry his canoes easily across this prairie to the northwest, where he would find a little river. By this river he could descend ten or fifteen leagues till he came to a little lake, the source of another deep river "which flows to the west and discharges into the sea." All this imaginary geography may have had little foundation, but it excited Marquette's hopes of visiting the Pacific. From the course of the Missouri, and these narratives of the



[1] See Dr. Shea's paper, *Wisconsin Hist. Trans.*, vol. viii., p. 116. The painting last preserved could be made out, even from the other side of the river. It was called the Piasa Bird. We have found no representation of it sufficiently accurate to copy. It was destroyed in quarrying, within the memory of the present generation.

[2] For Pekitanoni is the misprint of the French printer.

Indians, he was already satisfied that he should find that the Mississippi discharged itself into the Gulf of Mexico.

He and his companions fixed the latitude of the mouth of the Ohio at 36° north, — supposing themselves two degrees farther south than they were. They give the name of Ouabouskigou to this river. The name Wabash, which is the modern form of this word, is now confined to the stream which makes part of the western border of the State of Indiana.[1] The travellers here speak of the Shawnee Indians, resident on the banks of the Ohio, as a peaceful race, who suffered shamefully from the inroads of the cruel Iroquois. It is to be observed that French hunters seem to have come down the Ohio, almost to the point of its union with the Mississippi, before Marquette's voyage, for he alludes to their account of iron mines upon the river. In a memorial of the date of 1677, La Salle, of whom we are soon to speak, claims

The Ohio.

Mouth of the Ohio.

[1] Ouabachioui, or Wabashiwi, in the Illinois dialect, means "silver." Some romantic red man may have called the stream a "silver stream," as so many other poets, of other races, have called other rivers. But Father Du Marest mentions the report, which would grow naturally from the name, that silver mines had been found near it. This report has not been confirmed, nor is it likely to be. In the Chippeway, "Wabashkiki" means "swampy" or "marshy." So certain is it, that one man's silver is another man's dirt. But there seems no reason why Chippeways should have named a river of the Illinois, or Shawnees. Our name Ohio, is from the Iroquois, in allusion to the beauty of the stream. It is so said on a MS. map of 1673, in Mr. Parkman's possession."

that he discovered the Ohio. Its upper waters are not far from his post on Lake Erie.

Passing the junction of the Ohio, Marquette notes the canebrakes and the mosquitoes, peculiarities of the Mississippi which two centuries have not changed since his time. The discoverers were fain to surround themselves with mosquito nets as they sailed. As they floated down, they saw on shore savages, armed with guns, who invited them to land, and regaled them with buffalo beef, bear's grease, and "white plums."[1] Their hosts assured them that they bought their guns, powder, knives, hatchets, and cloths from Europeans on the eastern coasts; that these men had images and hats and played on instruments, and that a voyage of ten days was enough to bring the travellers to the sea. And they seem to have given to Marquette the impression that they themselves had found European traders at the mouth of the Mississippi. On this news he eagerly resumed his voyage.

Indian tribes along the river.

At a point not far from the site of the city of Helena he found a village named Mitchigamea. The name seems to show that its people had strayed thus far from the north.[2] These savages had no guns, but they appeared hostile until they saw the calumet. By an old man who spoke the Illinois language, communication became possible, and these people took the strangers as far as to the next tribe, of which the chief town was ten leagues further down. It was named **Akansea,** as the French travellers spelled it,[3] and here they met the tribe known to us till lately, as the Arkansas Indians. They have since recovered their original name of Quapaws.[4] Here the Frenchmen were hospitably entertained, a good interpreter was found, and the natives heard with wonder what Marquette told them of the mysteries of faith, and showed a great desire that he might give them further instructions. As to his voyage to the gulf, however, they dissuaded him. It was possible to make it in five days. But the tribes whom he would meet were hostile. They cut off from the Arkansas all commerce with Europeans, and they were so much in the habit of plying to and fro on the river, that the voyagers would be, according to these Indians, in great danger.

[1] The *prunus Americana* of Michaux. Its range is as wide as from the Saskatchewan to Texas. Its colors vary, and, while Marquette calls the plums *blancs*, they are sometimes yellow, and sometimes red.

[2] See Dr. Shea, *loc. cit.*, p. 116.

[3] Or their French printer.

[4] See Dr. Shea, *loc. cit.*, p. 116. Mr. Gallatin suggests that they are the Pacachas of De Soto. Tonty calls them Cappas. Mr. Gallatin says: "The superiority of this race of Indians struck the French, who called the Arkansas '*Beaux Hommes.*' Their men are said to have exceeded in height the average of the Europeans."

This friendly reception by the Arkansas was not to be wholly relied upon. The same evening the chiefs held a council to decide whether they should not knock the Frenchmen on the head and take their goods. But the great chief forbade, assured the travellers of his protection, and even gave to them, as a token, his own calumet. The Arkansas.

Joliet and Marquette, however, decided that it was time for them to return. They knew that they were near the Gulf of Mexico. Indeed they mistook its real boundary, and expected to find it at a point a hundred miles farther north than New Orleans. They supposed themselves to be in the latitude of forty-four degrees, and in this supposition they were nearly correct, for the site of the village of Dakansea, or Akansea,[1] was nearly opposite the mouth of the Arkansas River. They reflected that if they fell into the hands of the Spaniards all the results of their expedition would be lost. They therefore turned on their course on the 17th of July. But, when they reached the Illinois River, they took that beautiful stream, and made one of the portages, since so well known, into Lake Michigan. Of the Illinois Valley Marquette writes: "We have seen nothing equal to this river for the goodness of land, prairies, wood, cattle, deer, goats, wild cats, bustards, swans, ducks, parroquets, and even beaver; there are many little lakes and little rivers." A chief of the Illinois guided their return to Green Bay, and here they arrived in the end of September. Voyage up the Illinois.

In this voyage our States of Missouri and Kentucky were discovered, so far as we know, to Europeans. There can be no doubt that Tennessee, Arkansas, and Mississippi, which were now visited by Marquette, had been traversed in some parts by De Soto and his followers.[2]

Marquette, whose simple and devout narrative makes the reader love the adventurer, remained two years among the Miamis. On his way in his canoe to Mackinac in 1675, he stopped on the eastern shore of Lake Michigan to raise an altar and celebrate the mass. He then asked his companions to leave him alone for a little while. They did so, and when they returned they found him dead. Joliet, his companion in adventure, had returned to Montreal in 1674. On his way thither his canoe upset, he lost his papers and his journal, and some curiosities from the discovery. A little Subsequent life of Marquette.

[1] Marquette gives one name on his map and the other in the text.

[2] See vol. i., p. 165. Coxe, in the appendix to the "Carolana," a book written to show that the valley of the Mississippi belongs to the English crown, says that the first rediscovery of the great river after De Soto's was made by adventurers from New England. But Coxe's memorial was dated in 1699, and we have no earlier mention of Col. Wood.

boy, of ten years old, who had been given to him, was also lost. Joliet himself was four hours in the water, and, as he says, rescued only by miracle. He reported, on his arrival, to Count Frontenac, the governor, and he relates the success of the expedition in a despatch to Colbert of the 14th of November, of the year after it was completed.

Robert Cavelier de la Salle.

When Joliet returned with the tidings of the success achieved by this modest expedition, Robert Cavelier de la Salle, a Norman gentleman, was living in Canada. He had been trained by the Jesuits in early life, and was determined both to make a reputation and a fortune. He had come to Canada eager to seek a passage to Japan and China, and at this moment had a trading house at Lachine, above Montreal. It is said that the name "Lachine" is taken from that of China. When the news of Marquette's discovery was made known, La Salle waited upon Count Frontenac, and represented that the time had come for an expedition to the Pacific. So little interest had been taken in France in these discoveries, that as late as April 16, 1676, Louis XIV. writes to Frontenac, in a letter which still exists in manuscript, "With regard to new discoveries you will not address yourself to them excepting in a great necessity." This was not encouraging. But Frontenac gave La Salle a good introduction at court, and he obtained from the Marquis of Seignelay, who had succeeded Colbert as Minister of Marine, all that he asked for.

He sailed from Rochelle for Canada, in the summer of 1678, with thirty men, and with the stores proper for equipping the vessels which he meant to build upon the lakes. Arriving at the head of Lake Ontario, he made the portage by Niagara Falls to Lake Erie, and on Niagara River began to build a ship of forty-five tons, which he called the *Griffin*. On the 7th of August, 1679, she sailed on her western voyage, and on the 28th of that month arrived at Mackinac. The appearance of a vessel of her size, armed with seven cannon, waking on occasion with their thunders the echoes of the wilderness, amazed the natives, who had, till now, never seen the servants of their great Onnonthio, Louis XIV., but in the humbler garb and equipage of trappers and missionaries. La Salle proceeded in state to hear mass at the chapel of the Ottawas at Mackinac, and then continued his voyage prosperously to the settlement of Green Bay, where he arrived in September. Freighting the *Griffin* with furs, he proceeded to St. Joseph at the head of Lake Michigan, at the mouth of the river which still bears that name, nearly opposite the river Chicago. Here he built a fort, and here he expected the *Griffin*, which did not return, however, and was in fact never again heard of.

Voyage of the *Griffin*.

THE FALLS OF NIAGARA. FAC-SIMILE FROM "HENNEPIN'S VOYAGES."

Anxious though he were, he pushed his explorations westward, and somewhere at the head of the Illinois River, probably in the very county which bears his name, he established Fort Crève-Cœur, which took its name from his depression of spirits in the calamities of that sad winter. No tidings came of the *Griffin*, and La Salle determined to return by land to Niagara.

He first detached Father Hennepin, a missionary, with one companion, to trace the Illinois to its mouth, and then to ascend the Mississippi in search of a route to the Pacific. This Hennepin did. He appears but meanly as a narrator, or as a voyager, in comparison with the modest and unselfish Marquette. He availed himself of the "local colouring" which he thus acquired, to give probability to a lying narrative, which he published in France some years afterward, in which he claimed for himself the honor, which belongs to La Salle alone, of tracing the river to the Gulf of Mexico. There is no better instance in literary history of the danger of such an attempt, or the certainty that it will furnish the means within itself to disprove its own statements. What Hennepin did was to sail down the Illinois to its mouth, and then to ascend the Mississippi as far as the falls of St. Anthony. Here he was taken prisoner by the Sioux, who permitted him to return to his countrymen, on condition that he would revisit them in the next year.

Hennepin's journey.

Sioux Chief (from Catlin).

La Salle had left his companion Henri de Tonty[1] in charge at Crève-Cœur while he went back to Niagara. At this time however the Iroquois, always hostile to the French, and excited, as La Salle thought, by his personal enemies, attacked the Illinois, among whom the fort was situated.[2] Tonty's whole garrison was five men. He found himself obliged to evacuate Crève-Cœur and to return. While he passed down Lake Michigan on its west side, La Salle passed up on the other with reinforcements. His heart must have quailed again when he came to Crève-Cœur to find it deserted. After this failure, he could only do his best to secure alliances with the Indians,

Signature of Tonty.

La Salle's return.

[1] He was son of Lorenzo Tonty, who invented the Tontine.

[2] Mr. Parkman has identified the site of the great town of the Illinois. It is near Utica, La Salle County, Illinois.

and then returned to Montreal. Here he had to compound with his creditors, for the loss of the *Griffin* left him unable to meet his pecuniary obligations. He said, himself, that with the exception of the governor, Count Frontenac, it seemed as if every man in Canada were opposed to his adventure. He succeeded, however, in bringing together the resources for his undertaking, and started once more, on the expedition which proved successful, in the summer of 1681.[1]

The party embarked on Lake Erie at the end of August, and arrived at the port at St. Joseph early in November. La Salle there

Site of Chicago

chose for his party twenty-three Frenchmen and eighteen Indians, of the Abnakis and Mohegans, New England tribes, which had put themselves under his protection. Daniel Coxe, in his memorial to William III., cited above, says that these native New Englanders were chosen, because they had in the year before accompanied a considerable number of adventurers from New England to the Mississippi. The statement is probable enough, but the narrative to which Coxe refers has not yet been found in the Massachusetts archives. The Indians took with them ten of their wives and these women had three children. The whole party thus consisted of fifty-four persons, among whom were the Chevalier Henri de Tonty, Father Zenobe, of

[1] We have his own narrative, written in the third person, recently discovered in the archives in France, and printed in Thomassy's *Geology of Louisiana*. We have also Joutel's narrative, and that of the Chevalier Tonty.

the Recollet Order, and Dautray, the son of the procureur general of Quebec.

They crossed the lake to the Chicago River, to which they had given the name of the Divine River.[1] Time has preserved the native name, of which the derivation is not savory, and, as time will, has forgotten the piety of the discoverers. This river proved to be frozen, and Tonty, who commanded the advance, had to build sledges for the party and its boats. They left the site of the present city of Chicago on the 27th of January, 1682, and were obliged to haul their luggage and provisions eighty leagues. On this march they passed the chief village of the Illinois, but the tribe wintered elsewhere. At the widening of the river where Fort Crève-Cœur stood, which they called Lake Pimedy, they found the ice melted. Here they were able to launch their canoes, and in them they arrived at the mouth of the Illinois on the 6th of February. La Salle placed this point at 38° of north latitude. In this calculation he was a degree too far south.

Second expedition of La Salle.

The ice of the Mississippi detained them for a week, when they sailed. The next day, on the fourteenth, they passed the village of Tamaroa, but here, also, they found no inhabitants, and they continued their voyage for more than a hundred leagues without meeting any person. On the first of March, having lost one of his hunters, La Salle established a fort on shore, and ordered several excursions in hope of finding him. In one of these two natives were taken prisoners, who said that they were Sicachas. They were probably of our tribe of Chickasaws.[2] They said their town was distant a day and a half's journey. But, after La Salle had accompanied them for that time, the town proved to be still three days off, and he refused to go farther. One of them returned with him, and the other said he would bring the chiefs to the river. La Salle returned to his boats, — the lost hunter had meanwhile been found,[3] — and on the 3d of March he continued his voyage.

On the 13th, after sailing forty-five leagues, the sound of drums and war-cries gave notice that the savages had discovered them, and on the right bank of the river their village could be seen. La Salle established himself at once on the left bank and in an hour's time built a fort on a point of land there. The Indian chiefs sent across a canoe, — the occupants of which received the calumet of peace, — and pleasant relations were at once opened

A meeting with the savages.

[1] La Salle's text is distinct. "Pour aller vers la rivière *Divine*, appelée par les Sauvages Chicagou." On many of the maps the name *Divine* is given to the Illinois.

[2] Their name is mentioned in the narratives of De Soto.

[3] The hunter's name was Prudhomme, and was given to a fort at this place, which retained that name long after.

between the parties. La Salle remained with his hosts three days, and, when he left, they provisioned him from their stores. He noticed, at once, the difference between them and the northern Indians. "These are better formed," he says, "free, courteous, and of a gay humour. The northern Indians are all *triste* and of severe disposition."

This village is described as opposite the mouth of the Ohio. "Many kinds of fruits and peaches were already formed on the trees." La Salle planted a cross there, with King Louis's arms, and on his return, he found they had surrounded the cross with a palisade. They also gave him provisions, and interpreters to communicate with their allies, the Taensas, eighty leagues further down.

Wisconsin Indians gathering Wild Rice.

The Taensas.

On the 22d he came to the Taensas, whom he found living in eight villages. He had passed, without stopping, the villages of the Arkansas. He describes the houses of the Taensas as built of walls of mud and straw, the roof of canes, which form a dome ornamented by painting. "They have bedsteads and other furniture and embellishments. They have temples in which they bury the bones of their chiefs, and they are clothed with white robes, made of the bark of a tree, which they spin." The whole account shows relationship to the Natchez and, probably, to Mexican or other Southern tribes. Their chief received De Tonty hospitably, La Salle having

sent him as his ambassador. Continuing their navigation, the French opened communication with the Natchez, who told them that they were still ten days from the sea. On the 2d of April they were for the first time attacked by Indians, who belonged to a tribe called Quinipisa.[1] The French had offered them the calumet, but the savages fired their arrows and fled. La Salle did not pursue them, but kept on his course. On the 6th the river divided into three branches. La Salle took the west, he sent De Tonty to the middle, and Dautray to the left. Two leagues farther and the water was salt, — a little more, — and the sea appeared, and the great discovery was made!

La Salle at the mouth of the Mississippi.

On the 9th of April, La Salle planted a cross with the arms of France. They sang the hymn *Vexilla Regis* and the *Te Deum*, and in the name of King Louis he took possession of the river and all the streams which fall into it, and all the countries which belong to them. This act of possession has been substantially respected ever since. It is under this act that France held her rights to the great province known as Louisiana, — and, therefore, it is under this act that the United States holds the State of Louisiana, and all its territory north of the line of Texas and west of the Mississippi to the Rocky Mountains, to this day. It must be remembered, that, until 1803, the name LOUISIANA applies to the whole Mississippi valley.

Portrait of Louis XIV.

La Salle's provisions were nearly exhausted. The party found some dried meat near the mouth of the river, and were glad to satisfy their hunger with it, till the suspicion was started that it was the flesh of men. On this the whites left it to the savages, who declared it was delicious.[2] On the 10th of April, La Salle began his return; and, until they came to the Quinipisa Indians, the party had to live on alligator's flesh and potatoes. He suc-

His return.

[1] On the map, as drawn by Franquelin, this is spelled Kennipesa, the same as were afterwards spelled Colapissas, and Aqueloupissas, "Those who hear and see."

[2] See report of Father Zenobe, of which the original is in possession of M Dooz, of Baton Rouge.

ceeded in capturing four women of the Quinipisa; he explained to them that his intentions were peaceable, and by their means purchased maize and other supplies from the tribe. He was well received by the Taensas and Arkansas, arriving at the villages of the latter on the 17th of May. When he was a hundred leagues below the Illinois River he fell dangerously ill. He was therefore obliged to intrust his dispatches to De Tonty, who went on in advance. La Salle himself was detained forty days by his illness. He arrived at St. Joseph at the end of September, but the approach of winter prevented his return to Quebec. "He thus finished," he says in closing his report, "the most important and difficult discovery which has ever been made by any Frenchman, without the loss of a single man, in the same country where Jean Ponce de Leon, Pamphile de Narvaez, and Ferdinand de Soto perished unsuccessful, with more than two thousand Spaniards. No Spaniard ever carried through such an enterprise with so small a force, in presence of so many enemies. But he has gained no advantage for himself. His misfortunes and the frequent obstacles in his way have cost him more than two hundred thousand livres. Still he will be happy if he has done anything for the advantage of France, and if his endeavors may win for him the protection of Monseigneur."

His report to France.

Father Mambré took to France La Salle's report of his great discovery. Unfortunately for the great explorer, Count Frontenac had been replaced by M. de la Barre, who had conceived a dislike of La Salle. He had written home, charging him with the Iroquois war; and he afterwards represented that La Salle was a mischief-maker among the Indians, who perverted his royal commission for the purposes of mere trade. But so soon as La Salle himself was able to report in person at Paris, he swept away any injurious impressions which had been thus made. The French monarchy was never at a higher point of success or ambition. The peace of Nimeguen in 1678 had given to Louis almost all he could ask for. Seignelay, the Minister of Marine, listened with pleasure to La Salle's narratives.[1] He sent directions to La Barre to restore Fort Frontenac (now Kingston) to his agents; and to La Salle himself he gave large powers for the colonization of Louisiana.

In the memoir, which is still preserved, which La Salle addressed to the Marquis Seignelay, he proposes to establish a colony sixty leagues above the mouth of the river. This would have been, according to his own map, not far from the point where the Atchafalaya makes a separate course from the Mississippi to the sea, — and it is probable that he intended at that point to establish his colony. With-

[1] On Franquelin's map, made in 1684, under La Salle's direction, the Mississippi is named the "Colbert," and the Red River is named the "Seignelay."

out any disguise, he proposes, as the principal object of this colony, such an attack on the back of the Spanish possessions, as was to open to the French their thirty silver mines in New Biscay. And he coolly remarks, that if the peace of Europe makes it necessary to postpone such designs, it will be well to be prepared for them in the event of a war. He says that Spain makes six million crowns yearly by these mines, and that, with superior ease of transport of silver, France will make much more. La Salle is truly enough called a representative of the spirit of chivalry, and to the real spirit of the chivalrous ages such a proposition as this not unfitly belongs.

Seignelay and the King gave him more than he asked for. The colonists sailed from Rochelle on the 24th of July, 1684, admirably well equipped, in four vessels, — a part of a fleet of twenty-five, of which the others were bound to the French West Indies and to Canada. But the passage across the Atlantic was then long. Much time was consumed in stopping at San Domingo, and the year had almost ended before the squadron of La Salle was near the mouth of the Mississippi. By a terrible misfortune, due to the difficulty of rightly calculating longitude in those times,[1] they passed the true mouth of the great river.

La Salle's third voyage.

On the 1st of January, 1685, La Salle landed, — perhaps on the southern shore of our State of Louisiana, near the Sabine, — but he could learn nothing from the Indians, and continued west for a fortnight longer. When they found the coast trending south, they were sure of their own error. But the captain of the fleet, Beaujeu, refused to return along the coast, and after an altercation between him and La Salle, the vessels entered Matagorda Bay, which they called the Bay of St. Bernard. Here the stores of the colony were landed, and here Beaujeu, who had been at cross-purposes, left them. By such a series of misfortunes did it happen that the State of Texas was the earliest, after Florida, of the States which we call Gulf States, to be colonized by Europeans. Beaujeu left the party on the 12th of March,[2] under circumstances of cruel desertion. On his return to France he made the most unfavorable report, and to him, and possibly to Jesuit hatred, may it be attributed that no relief was sent out to the great explorer.

Lands at Matagorda Bay.

To the stream which flows into Matagorda Bay from the northwest, La Salle gave the name *Les Vaches*, from the buffaloes he found

[1] A quarter of a century after, Sir Cloudesley Shovel and his fleet were lost on the coast of Cornwall, because their longitude was more than a degree out of the way.

[2] He left among other stores eight cannon, which the King had given to the colony. They were lately to be seen at Goliad, identified by having Louis XIV.'s mark upon them.

there. Near the same spot, the town of Lavaca retains the name, the only name given by La Salle to his establishments in Texas which has been preserved. The name St. Louis was given to the new settlement. The Indians, whom he found in Texas, were of the same great race as the tribes he had met on the Mississippi. They had large and populous villages, with well-built cabins, said to

La Salle's Landing in Texas (reduced fac-simile from Hennepin).

be sometimes forty and fifty feet high.[1] They had traded with the Spaniards for horses, clothing, spurs, and silver spoons, and knew what money was. La Salle found them gentle and hospitable. Among such tribes he was to pass what little was left of his adventurous life.

[1] Father Douay's narrative. It is supposed that the name Texas is from the Spanish Tejas, in allusion to these covered houses.

His colony once sufficiently established, he left it on the 1st of November, 1685, on an expedition of discovery, always hoping to find, what Joutel, his second in command, learned to call "his unfortunate river." Once and again from such expeditions, in which he traversed Texas far in different routes, he returned to the settlement, always to hear some new story of misadventure. But his own buoyant and easy temper would restore the spirits of his men, and he would find new resource in every difficulty. At last, at the end of 1686, he determined to lead a party across to Canada to obtain succors from France for the colony, for which, thanks to Beaujeu's treachery, no supplies had arrived in two years' time.

Signature of Beaujeu.

On the 7th of January, 1687, this hero, who combines in his own character so much that would have challenged regard in a chevalier of the days of Philip Augustus, — and would command respect in the vigorous enterprises of to-day, — left the wretched colony, on what was to prove his last adventure. For want of better material, the clothing which he and his men wore was made from the sails of the little vessel which had been lost. He was to lead his party nearly two thousand miles overland. The same journey may be made to-day by railroad, and the traveller if he chooses, takes his ease. But even now, no man thinks the journey a trifle. Poor La Salle and his companions were to make it with little guidance beside that which the compass gave them, and must trust to their weapons or their address, to secure their passage among hostile tribes.

Overland journey to Canada.

He had bought five horses from the Indians, who had already learned the use of horses from the Spaniards. These beasts were used as pack-horses for the party. Twenty of the colonists, among whom were seven women and girls and some children, were to remain behind under Barbier, a hunter, who had been married since their arrival in America, and who was appointed governor in the place of Joutel. La Salle made them a farewell address in his own engaging way, and all who were to stay, while they felt the necessity of his journey, were melted to tears. Yet, doubtless, they felt that their dangers were less than his.

The travelling party consisted of about twenty also. La Salle and his brother Cavelier, the priest, with their two nephews, — Joutel and Father Anastasius, Duhaut and Liotot, the surgeon, were those who seemed the most distinguished of the party.

La Salle's companions.

Beside them were a man named Hiens, who had been a buccaneer, and was sometimes known as English Jem, and Nika, a faithful Shawnee Indian.

In that climate, there is no real hardship in travelling in January, and had the party been better provided, it would have made rapid progress, compared with what proved possible. But they lacked shoes, until they could supply their place with buffalo-hide and deer-skin. The rivers were swollen, and they were obliged to make boats from hides to ferry them. Thus they crossed the Brazos, and in two months' time, they approached Trinity River. Nothing but the scantiness of their equipment, and the fullness of the streams and rivers, accounts for the slowness of their progress. Meanwhile the members of the party were not on good terms. La Salle appeared reserved and anxious, and Liotot and Duhaut had quarrelled with young Moranget, his nephew

Signature of Cavelier.

On the 15th of March, La Salle sent a party from camp to find some provisions which he had left on his last expedition. They found the provision spoiled,— but they killed two buffaloes, and sent to La Salle for horses to bring the meat. La Salle sent Moranget and two others with the horses. They found the successful hunters, among whom were Duhaut, Liotot, and Heins, already curing the meat. Moranget, hot-headed boy as he was, broke into rage with them, because they had put by for themselves some part of the meat, to which the customs of hunting entitled them. It was not the first of Moranget's outbursts of rage. Duhaut was so angry, that he conspired with the others to kill Moranget, — and, as he knew the fidelity of Nika the Indian, and Saget, La Salle's servant, their death also was determined. Night came, the three victims each served his watch in turn. So soon as they slept, Duhaut and Heins stood by with their guns cocked, — and Liotot, with an axe, killed the three sleeping men. La Salle was six miles away.

Mutiny in the camp.

They did not dare join him. When the others had been absent two days, La Salle sought them in his anxiety, accompanied by the friar Anastasius. As they walked he talked with the priest on religious themes, and of his gratitude to God for his safety in twenty years' peril. Suddenly he was overcome with profound sadness, and was so much moved that Father Anastasius scarcely knew him. They came near Duhaut's camp, and La Salle noticed two birds of prey hovering above. He saw on the ground a piece of bloody clothing. He fired his two pistols to summon the hunters. They heard the shots, and crossed a little river to meet him. La Salle asked for his nephew. One of them replied insolently, that "Moranget

Murder of La Salle.

was along the river." La Salle rebuked him. Duhaut fired his gun in reply, and La Salle fell dead, — shot through the brain.

"There you are, great pashaw," [1] — this was the contemptuous cry of the false surgeon. Such was the death of one of the noblest heroes of France, when he seemed at the very prime of his life. He was only forty-three years old. Had he lived, with his spirit and power of command, to carry out the enterprise he had planned, the history of Louisiana must have been different. By his death, the valley of the Mississippi was left for nearly twenty years more to be the home of savages.

After his death, the first history of his colony, which had left France in such high hope, sinks into the separate effort of the colonists to escape with their lives from a wilderness. In a quarrel among the murderers, Duhaut, who had himself fired the fatal shot which killed La Salle, was himself killed, and the little company afterwards broke in pieces. Joutel, Father Anastasius, — the two relatives of La Salle, — and four others, made a separate party, which persevered towards Canada. They had horses, which they had obtained from the natives, and, by following a northeast course, from the country of the Caddos, above the lake of that name on Red River, they came out, to their delight, on the 24th of July, upon a cottage built in the French fashion, and a cross upon the northern side of the Arkansas River, just above the place where it unites with the Mississippi.

Death of Duhaut.

The cottage was the home of two Frenchmen, Charpentier and De Launay, both of the city of Rouen, whom De Tonty, La Salle's old companion, had left at the junction of the Arkansas and Mississippi, in the spring of 1685. De Tonty had gone down the river, in vain, in hopes to meet his old chief there. The names of these Frenchmen deserve permanent record, as those of the persons who established the first permanent post of Europeans south of the Illinois River, in the valley of the Mississippi.

From this point the friends of La Salle went home by routes now familiar to the French. The fate of the twenty colonists left at St. Louis, in Matagorda Bay, is not clear. A Spanish officer, dispatched to find them in 1689, found only the deserted settlement. Two of the

[1] "Te voilà, grand bacha, te voilà." Joutel's narrative. There are three narratives by members of this wretched expedition: Father Cavelier, Joutel's, and that of Father Anastasius. We have followed Mr. Parkman's thrilling narrative. The spot is not determined. The Texan historian supposes it to have been near the Neches River where the old Indian trail crosses that stream. Yoakum's *Hist. of Texas*, i. 38. But the old map of De Lisle places it distinctly at a point about seven miles west of Trinity River, in the county of San Jacinto, not very far from the field of the critical battle known by that name.

murderous party were arrested by the same officer, and were eventually condemned to the Spanish mines. Thus the first French effort to colonize the southwest left no sign, in 1689, but the cottage of the two Frenchmen who were established at the mouth of the Arkansas, with the addition of a third from La Salle's party.

The successful colonization of Louisiana, and from Louisiana upwards, of the valley of the Mississippi, was due not to the spirit of chivalry, so far as that was represented by La Salle, or to his chivalrous plans for seizing the Spanish silver mines, but to more modern developments of the spirit of mercantile adventure.

Canadian explorers.

It is probable that the long and successful enterprises of La Salle and his companions were the first steps which led to the education of a race of men still existing, known as the Canadian Voyageurs. In all the great river adventures of North America from those days down, these voyageurs have taken their part, humble, but none the less essential. The names of such men are in the narratives of Hearne and Mackenzie, of Lewis and Clarke, of Franklin, Back, and the Simpsons. The nomenclature which they have created is still in use on all the American rivers between New Brunswick and California, and their readiness to undertake any of the hardships of a campaigner's life makes them favored volunteers in the composition of any expedition of adventure. From the time when De Tonty went down the river in 1686, in unsuccessful hope of meeting La Salle, there was, perhaps, not a single year that some of these voyageurs did not "try the adventure" of the Mississippi in whole or in part.[1]

But it was not for ten years after La Salle's death that the French Crown made any effort to renew the colonization of the Mississippi valley. The work was then put into competent hands.

The Sieur Lemoyne d'Iberville was the third of eleven brothers, sons of Charles Lemoyne, Baron Longueuil, of Canada. To him was intrusted the oversight of an expedition fitted out by the King to plant a colony. Two frigates conveyed the colonists, of which D'Iberville himself commanded the larger, so that the evils of a divided command, which had broken the strength of La Salle's effort, were avoided. A third vessel joined at Saint Domingo, and on the 25th of January, 1699, the expedition arrived at the island of St. Rosa, just below Pensacola. At this point the Spaniards had established themselves more than a month before.

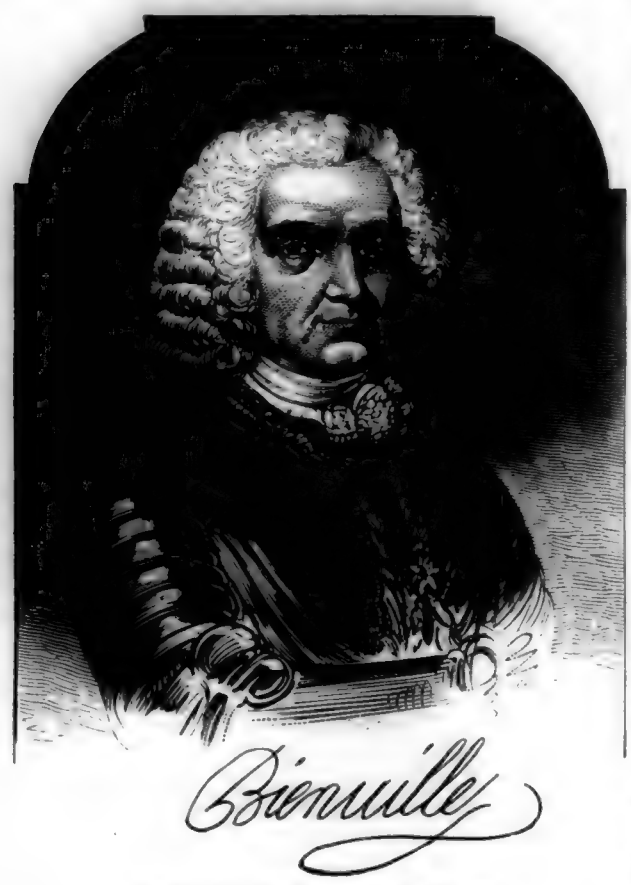
Expedition of D'Iberville.

[1] It has been said that a party went to the mouth of the Mississippi as early as 1686 No such party made a permanent establishment; this statement is derived from some recollection of De Tonty's expedition.

D'Iberville spent some weeks in exploring the coast, and on the 2d of March entered the Mississippi River. He had with him Father Anastasius, who had accompanied La Salle, and who found no difficulty in recognizing its turbid waters and its majestic flow. Evidence more convincing to D'Iberville was found, when, forty leagues up the river, they found the Bayagoula Indians, who brought out cloaks which La Salle had given them, a breviary which Father Anastasius had left in 1682, and a letter which De Tonty had left in 1686. They called it "a speaking bark."[1] D'Iberville's first post was at Biloxi Island, in Mobile Bay. He returned to France, and was again despatched to the river. He founded his second post at a point on the Mississippi, now known as Poverty Point, about thirty-eight miles below the present city of New Orleans.

Signature of D'Iberville.

The settlement at Biloxi was within the limits of the present State of Alabama, and was the first establishment of whites there. It was abandoned after a year for a station further up on the Mobile River, about eighteen leagues from the sea. The settlement at Poverty Point was the first settlement made in Louisiana. It was established in 1700. By this time D'Iberville had the assistance of a Canadian colony to meet him by the way of Lake Erie and the Miami portage.



The settlement at Biloxi.

While D'Iberville was absent in France, his brother Bienville fell in with an English ship, commanded by Captain Barr, which was twenty-eight leagues up the river, having been sent out to explore and take possession of the Mississippi. Bienville boldly told him that the Mississippi was farther west, that this river was a dependency of Canada of which he had taken possession, and Barr went in search of the great river, just where poor La Salle had looked for it so vainly. The reach of the river where this interview took place is still known as the "English turn." The expedition thus arrested was a private expedition sent out by Coxe, an Englishman, who held a charter given by Charles I., for a supposed province of Carolana or West Florida. Our only other account of this expedition is by Coxe's son, and was published twenty years after. He complains that the captain of one ship deserted the other, but says that one of the two ascended the river one hundred miles.[2]

[1] "*Écorce parlante.*"

[2] The younger Coxe's map is drawn to show that all of southern Louisiana, except the

During the war of succession, in the earlier part of the eighteenth century, Spain and France were in alliance, and the Spanish governors, both of Mexico and of Florida, rendered one and another service to the infant French colony which D'Iberville, and his brothers Bienville and Serigny, requited as they could in their weakness.[1] The history of the infant State is but little more than that of a small garrison, whose enterprising commanders were making alliances with the neighboring savages. Communication was constantly kept up with Canada, and in 1700, Le Sœur, an explorer of mines, went so far as Lake Superior, and returned, with what the chronicler says was two hundred thousand pounds of copper ore.[2] It must be doubted whether any such quantity was carried across the Portages of Wisconsin or Minnesota, especially as Le Sœur's journal says that it was in three canoes.

Portrait and Signature of Bienville.

The pacification of Europe resulting from the Treaty of Utrecht, gave the signal for an enlargement of the little colony. At that time the military force in Louisiana did not exceed one hundred French soldiers, and seventy-five Canadians. There were perhaps three hun-

very mouths of the Mississippi, was included in the charter of "Carolana," that is, was north of 31° north latitude. The line of 31° is the northern line of our State of Florida, and the southern of the greater part of Mississippi. Coxe claims the river for England on the ground that his father's ship was the first to enter it from the sea. It probably was, but the claim of discovery is absurd. Still, had William the Third lived longer, he might have followed up this claim.

[1] *Archiv de la Marine.* No. 9, No. 458 in Mr. Forstall's list.

[2] La Harpe's narrative, preserved in MS. in the Philosophical Society's Library. The text is, "Monsieur Le Sueur arriva avec 2000 quint^{x} de terre bleue y verte, venant des Scioux." The narrative, in an English translation, has been published by Mr. Trench in the *Louisiana Historical Transactians.*

dred whites beside, and twenty negroes held as slaves, scattered over the enormous territory known as Louisiana. So soon as the peace came, the King granted the whole territory to Antoine Crozat, one of those great financiers who play so curious a part in the French history of those times. The grant says specifically, that in consequence of the war there had been no possibility of reaping the advantages which might have been expected. It says also that Crozat's zeal, and singular knowledge in maritime commerce, encourages hope for as good success as in his former enterprises, "which have procured great quantities of gold and silver to the kingdom in such conjunctures as have rendered them very acceptable."

Grant of Louisiana to Crozat.

In the grant, the great rivers are thus named: "The river St. Louis, heretofore called Mississippi, the river St. Philip, heretofore called Missouri, the river St. Jerome, heretofore called Ouabache." But these names have lasted as little as the other special privileges granted to Crozat. The grant cedes all territories watered by the Mississippi. Crozat appointed as his governor, La Mothe Cadillac, a soldier, in place of Le Muys, who had died on his passage home. Le Muys had been the governor-general named by the King.

Crozat's government.

Cadillac arrived at the colony in May, 1713, bringing the news of peace, the news of the grant to Crozat, and of his own appointment. With him came several officers of administration. D'Iberville had died, but his influence in the colony was inherited by his brother, Bienville, so long celebrated in the history of Louisiana. Naturally enough altercations grew up between the new officials and Bienville and his friends, which were the basis of parties extending well down into that century. In a colony where there were not a hundred persons resident at any one point, and at this time not more than four hundred persons in all, such altercations were, doubtless, all the more bitter. Crozat's plans were based on the hope of commerce with the Spaniards. But the Spanish government changed its policy, and fell back on a system of exclusion, which had originated with Philip II., and which generally characterized its rule of its colonies, until it brought that rule to an end. Cadillac remained in the country but two years. He made some personal explorations, and ordered an expedition into Texas, which will be best described in our chapter on the early history of that State.

Beginning of Bienville's influence in the colony.

His successor was M. de L'Epinay. Bienville was appointed King's Commandant, while De L'Epinay was Governor-general. There was

no less dissension between these two than between Bienville and Cadillac. But the fortunes of the colony were not dependent on as trivial motives as the discords of local commanders. With the death of "Le grand Monarque" in 1715, and the accession of the Regent Duke of Orleans to the sway of France, a new destiny awaited Louisiana. It came through the spirit which was given to emigration by the enterprise, so disastrous in Europe, of the famous John Law, known in history as the Mississippi Scheme.

Indians in a Canoe (fac-simile from La Hontan).

CHAPTER XXII.

THE MISSISSIPPI SCHEME.

JOHN LAW. — THE REGENT ORLEANS. — LAW'S BANK. — THE WESTERN COMPANY. — RENEWED EMIGRATION. — THE INDIAN COMPANY. — SPANISH WAR. — NEW ESTABLISHMENTS. — FAILURE OF LAW'S PLANS. — RUIN OF SPECULATORS. — MISSIONS IN LOUISIANA. — THE CITY OF NEW ORLEANS. — ESTABLISHMENT AT NATCHEZ. — RELATIONS WITH THE INDIANS. — CUSTOMS OF THE NATCHEZ. — CHOPART'S FOLLY. — ITS RESULTS. — CAMPAIGNS AGAINST THE NATCHEZ AND CHICKASAWS. — BIENVILLE RE-APPOINTED. — HIS ILL-SUCCESS AS A MILITARY LEADER. — VAUDREUIL AND KERLEREC.

JOHN LAW was born in Edinburgh in April, 1671, the son of a goldsmith of considerable fortune. The goldsmiths of that day were the bankers of the world, and all the social privileges of a banker of to-day belonged to this Scotch goldsmith then. John Law was but fourteen years old when his father died. He was educated with care, but did not choose to embrace his father's calling, preferring a life of pleasure and travel. He left his mother at the age of twenty, and went first to London, where, like many other adventurers, he applied his knowledge of finance and mathematics to the calculations of the gambling table, without more success than is usual. His mother paid his debts and saved his estate. For himself he became popular in London; but the fortune of Louisiana was changed, as it happened, on the 9th of April, 1694, when in a duel in Bloomsbury Square, he killed on the spot a gentleman named Edward Wilson, "commonly called Beau Wilson." For this

John Law.

John Law.

offence he was tried, convicted, and sentenced to death, but was pardoned by the King. He was, however, thrown into prison on some charge connected with the duel, but he effected his escape and fled to the continent.

His career and financial schemes.

At Amsterdam he became a clerk of the English Resident, in order to study the system of the celebrated Bank of Amsterdam; and at thirty years of age he returned to Scotland. About the year 1700, he presented in print a plan for what we should now call The National Bank of Scotland, — far in advance of the financial wisdom of the day, and, indeed, only differing from the systems now in use in the European national banks, so far as it included the system, then universal, of monopolies of commerce and of farming out the revenue. Another plan of his, at this time, that for a land bank, has been often brought forward since, but never really tried.

The Regent Orleans.

Neither Scotland nor England was prepared for his financial schemes, and, returning to the continent, he engaged himself in the not uncongenial occupation of gambling, — managing faro banks with profit. This occupation brought him into acquaintance with the Duke of Orleans, an acquaintance which afterwards proved so important. On the close of the war of the succession he urged his financial plans on the French government, which was already bankrupt. But Louis XIV. rejected them, not so much because the plans were not good, of which nobody in France was a judge, as because the author of them was a Protestant. Law went to offer them to Victor Amadeo at Turin, and to the Emperor of Germany. Both these sovereigns declined to try his experiments. But at their courts and elsewhere, he won two million livres at gambling, — and this he carried to Paris, where it became the nucleus of his after fortunes.

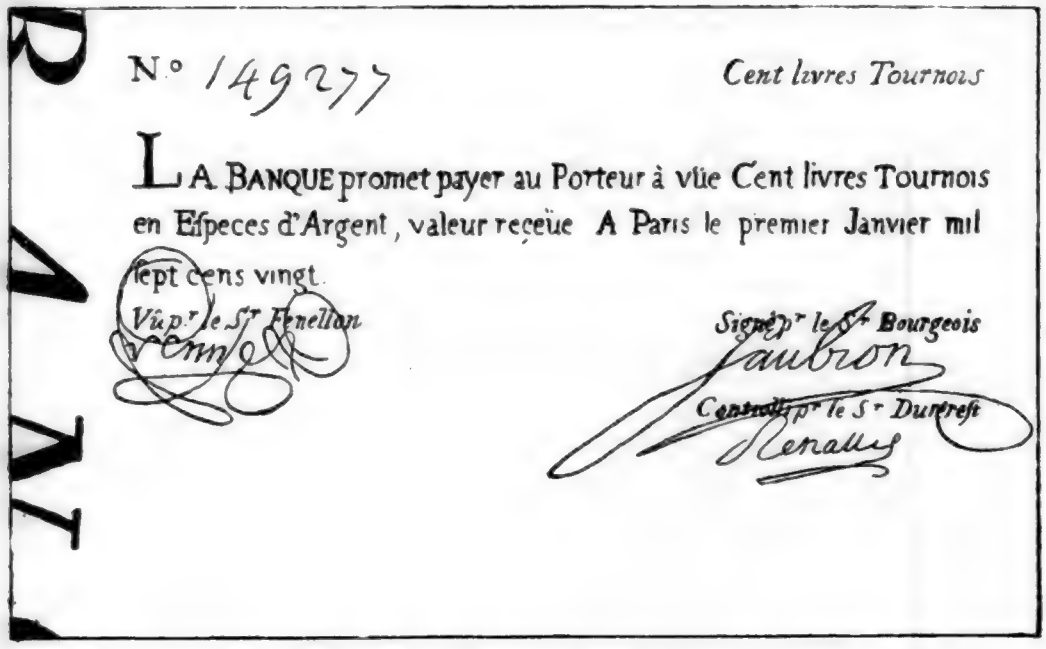
Reception of his plans on the continent.

Louis XIV. died. His ambition, his selfishness, and in especial, the war of the succession, had brought France to bankruptcy. It is not fair to ascribe this bankruptcy to John Law. The truth is, that he

postponed for a few years the inevitable catastrophe. To borrow the language of the modern exchange, he flew the great kites, which, for a little while, promised to carry France over an abyss. When the King died the royal stocks were at a discount of from seventy to eighty per cent. A treasury report of September 20, 1715, shows that the annual expenses were one hundred and forty-eight million livres.[1] All the receipts of the year were pledged in advance, except three millions. Seven hundred and ten millions of stocks were due in the current year. The troops were not paid, commerce was ruined, and whole provinces were depopulated. The Regent was urged to proclaim the crown bankrupt. The Regent declared that he should be dishonored, and that France would be dishonored, by such a course. In place of it he attempted every half way measure known in his time, or indeed, since, to insolvent states or failing merchants. When it is remembered, that in fourteen years the expenses of the monarchy had been two billions of livres more than the revenue, and that this amount had been borrowed; that the arrears, when the King died, were seven hundred and eleven millions, and the deficit on the year then current was seventy-eight millions; when it is also remembered that Law's plans, such as they were, maintained the credit of the crown for five years; the injustice will be seen of that sweeping charge, which says that the public bankruptcy of France was the consequence of those schemes.

Their acceptance in France.

When the Regent came into power he had placed the Duke de Noailles at the head of the department of finance. To this department he referred Law and his plans. Law proposed a public bank, which should collect the revenues, carry on the great monopolies, issue bills current as money, and discount notes of merchants and others who wished to borrow. The Council of Finance rejected this proposal, and Law substituted a private bank of discount, on a basis which seems modest to later times. The capital was six million livres, divided into twelve hundred shares. It was authorized to discount merchants' notes, and to issue bills redeemable in coin. The Duke of Orleans accepted the title of Patron of the bank, which was opened in Law's own house.



History of Law's Bank.

So necessary were these simple bank facilities, in the disordered commerce of France, that the bank at once became popular and acquired credit. At the end of a year Law's predictions were fulfilled, and he was able to take a second step. The government, also, could give him its countenance, by a decree ordering

[1] The value of a livre varies, from time to time, especially as it is a paper livre or made of silver. But the reader of our time may remember to advantage, that, in 1700, the word represented, in substance, what the word "franc" stands for now.

public officials to receive the notes of the bank, as if they were coin. From this time, of course, they answered all purposes of exchange within the kingdom. With such facilities the notes instantly gained value, the deposits of gold and silver increased, and the bank was on the high road of prosperity. Its notes even commanded one per cent. more than specie, at times, for the government was not above tampering with specie; but the bank redeemed its notes in the coin it received. The trade of the country felt the benefit to commerce of such a currency. Taxes were paid cheerfully, and branches of the bank, in accordance with Law's original plan, were established in five provincial cities.

A second feature of Law's great scheme had been the management of the great commercial monopolies, which made, at that time, a part

Fac-simile of Bank-note issued by Law.

of the commercial system of all the great nations. He was now tempted to engraft this part of that plan upon his private bank. And it is from that temptation, and the plans made in consequence, that Law became the founder of New Orleans, and, practically, the person who directed the French settlement of the valley of the Mississippi. Crozat, who had obtained the grant of the Mississippi trade for twelve years, had not been successful in his plans, for reasons which have been stated. He asked permission to give up his privilege, and Law gladly became his successor. It seems as if Crozat had attempted commerce only, with hopes of success in mining, while Law, with a broader view, expected to make

Formation of the "Western Company."

the colonists at least support themselves by agriculture. The contract for the trade in beaver in Canada expired in 1717. Law, therefore, asked permission to form a company, which should unite all the commerce of Louisiana with the fur trade of Canada. The Regent granted all that he asked, in an edict issued in August, 1717.

The company thus formed received the name of the "Western Company." The grants made to it were for twenty-five years. The sovereignty over all Louisiana was granted to it, on the condition of homage to the king of France, and of a gold crown at the beginning of every new reign. This token of vassalage indicates the nature of the hopes with which it was undertaken. The capital was nominally one hundred million livres. But subscribers were permitted to pay three fourths of their subscriptions in royal bonds, which were still at the old discount of seventy or eighty per cent. Only one fourth of the subscription was asked for in coin. It will be seen, therefore, that the real capital paid in was about forty million livres.

New Orleans in 1719 (from an old Map).

With this capital Law and his associates went to work with spirit in the details of colonization. We can still refer to the little emigration tracts which they circulated through France and Germany to collect emigrants. Vessels were armed, troops sent forward, and colonists enlisted. The great feudal cultivators of France did not encourage the emigration of peasants. The emigrants, therefore, were not so often as might have been wished, persons used to agriculture. They were indeed enlisted largely by the hope of collecting gold, — then, as now, the hope most tempting to a poor and discouraged people. M. de L'Epinay was recalled, and Law showed his good sense and knowledge of the position by appointing Bienville Governor-general of Louisiana. Bienville was also instructed, probably by an echo of advice given by himself, to select a new site for the capital. With the

Preparations for colonization.

Bienville governor. The settlement of New Orleans.

knowledge he had acquired of the geography of his dominions, he chose the admirable site of New Orleans, commanding the approaches to the sea by the river and by Lake Pontchartrain, and here in February, 1718, he left fifty persons to clear the ground and to build. Through the year different vessels arrived with colonists for different landowners, — in one party alone eight hundred persons.

The next year two of Bienville's brothers arrived with news of the short Spanish war, set on foot by the folly of Alberoni. With great promptness Governor Bienville moved against the Spanish port of Pensacola, and took it. It was soon retaken by a superior force, but was again captured by a French squadron in September. Meanwhile, without check from the war, John Law was going forward with apparent success in his great schemes. The Western Company, as the charter called his corporation, had not at first attracted much public attention. But its shares gradually rose to par, that is, to a money par, though they had been largely paid for in reduced securities. In May, 1719, he was strong enough in public confidence to obtain from the Regent power to join with it the East India Company of France. The exclusive right of trading beyond the Cape of Good Hope was given to it. Its name was changed to that of "The Indian Company," and, for its new purposes, it was authorized to issue fifty thousand new shares at a par of five hundred livres.

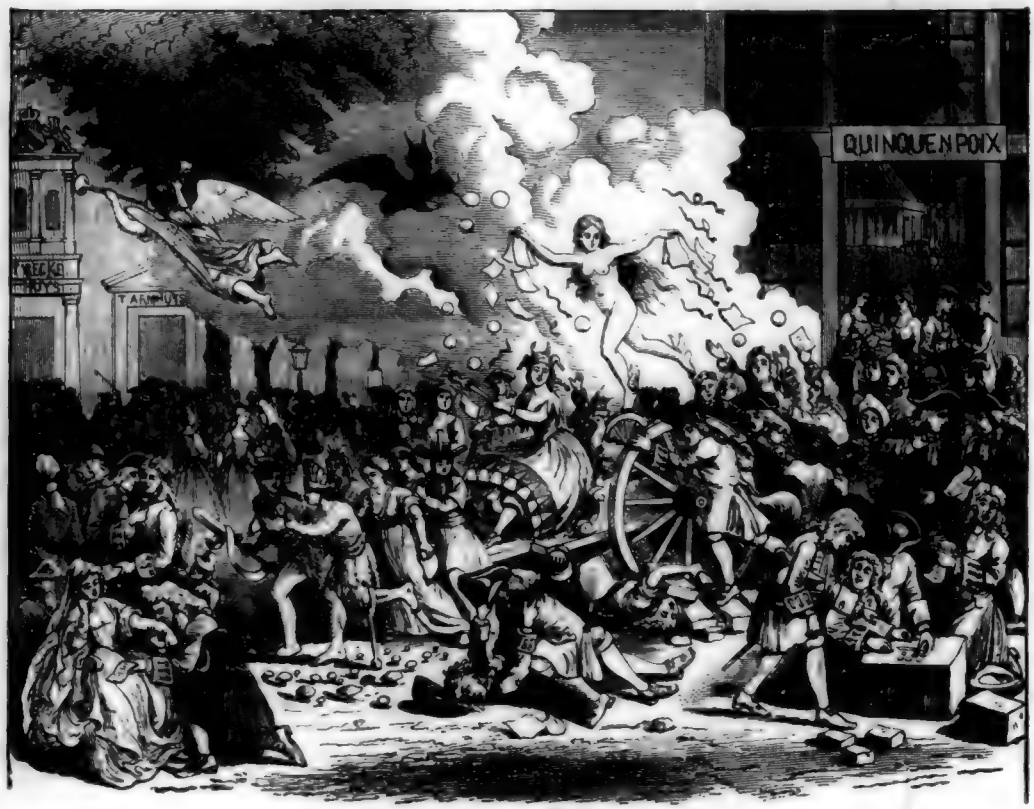
The Indian Company.

But the company was already so prosperous that it refused even to issue these new shares at less than five hundred and twenty livres, fifty livres down, and the remainder in twenty equal monthly payments. Nor was any person permitted to take one new share who did not exhibit four old ones. Old shares, therefore, rose rapidly under the new enthusiasm. This condition brought them from three hundred livres up to seven hundred and fifty livres, — that is, they rose from sixty per cent. of their nominal value to fifty per cent. above it.

It was at this crisis, when the Western Company became the Indian Company, that it really won the bad name which from that moment to this has hung around the "Mississippi Scheme," so called.[1] A capital of forty million livres was not an extraordinary sum with which to develop the fur trade of Canada, and all the resources of the Mississippi Valley. The methods of the Company for its legitimate business, even in the midst of stockbroking in Paris, were judicious, though they were not so considerable as its capital would have justified. Concessions of land, as they were called, were

[1] Which has seemed to attend subsequent financial transactions which bore the same name.

made to adventurers under the Company, and these adventurers sent out settlers, as the Company itself did. In 1718, seven vessels were sent out with stores and emigrants, numbering in all, perhaps, fifteen hundred persons. The year 1719 sent eleven ships, besides those ships of war belonging to the crown, which assisted in the operations against Pensacola. Meanwhile new establishments for trade were opened on the Red River, the Missouri, and the Upper Mississippi.[1] In this year five hundred negroes from the Guinea Coast were brought in, and another cargo arrived the next year. A terrible epidemic, contracted at St. Domingo, where the vessels always stopped, swept through the emigrants of 1720. From one vessel, one man, who was set on shore at his own request, was the only person who ever arrived; the ship itself was never heard of again. In 1721 nearly a thousand white emigrants arrived, and thirteen hundred and sixty-seven slaves were brought from Guinea, not three quarters of the poor wretches who were embarked for the voyages. In this year the *Garonne*, belonging to the Company, with supplies and three hundred German emigrants, was taken by pirates near St. Domingo.



Progress of emigration.

This year, however, the most active of the operations of the Company, as far as Louisiana was concerned, was the last of its prosperity at home. The popularity gained by the union of the East and West India Companies in August, 1719, was so great, and the demand so flattering for the consolidated stock, that Law was able to advance another step towards his original design, and to undertake, by the Company, the payment of a considerable part of that terrible public debt, with which the Regent's administration had found itself saddled by the later wars of Louis the Magnificent. In exchange for the privilege of collecting the revenue of France, he proposed to take up, by the issue of company stock, government stock to the amount of more than fifteen hundred millions, a considerable part of which was approaching maturity. The plan was gigantic, but it offered unquestionable advantages. If so large an enterprise could have been carried out with the privacy and delicate handling necessary, it seems to have rested on an intelligible and practicable basis. In fact the new shares which Law issued, of which nine tenths were to be paid in government stock, were sought with overwhelming eagerness. This means, partly, that the French people went crazy. But it also means, partly, that people trusted John Law and his business-like methods of administration more than they did

The "Mississippi Scheme."

[1] In the Yazoo country, at Baton Rouge, at Bayagoula, at Ecores Blancs, at Point Coupée, at the Black River, at Pascagoula, and among the Illinois. All these plantations proved permanent.

the Regent Orleans and the men around him. For the real question was, whether the holders of government securities would or would not exchange them for his securities, when they could do so, if they would add a payment of one ninth of the amount in cash, for all which they would receive his bonds, or those of his company. The speculators and the capitalists of France alike, chose to make the change. And this is the cause of the frenzy, in which all France combined to give, for a moment, an exaggerated value to the bonds of the India Company. It was not the possession of the whole valley of the Mississippi. Land is as valueless in itself in any market, as is the ocean

A Caricature of the Time of the "Mississippi Bubble."

or the clouds. It needs the occupancy of men — men who know how to subdue the earth — before it has a money value. If the Indian Company could have given this element of value to their empire on the Mississippi, it would have been worth the whole debt of France a hundred times told. But such inhabitancy, or such a population, is not to be gained by any inducements which such companies can offer.

For the moment, however, the public enthusiasm supplied the place of more substantial values. Three hundred thousand new shares were applied for, where there were but fifty thousand to distribute. The enlargement of currency, accompanied by universal confidence, quick-

ened every form of industry. The annual taxes were reduced by fifty-two million livres in the year 1719, while thirty-five millions had been taken off before, since the Regent's accession to power. The rate of interest fell, lands rose in price, labor found its reward, and plenty appeared everywhere. The author of such wonders was hailed as a demi-god; the crowds followed him, the nobility courted him, the Regent honored and obeyed him. To John Law, the Scotch goldsmith's son, poor France owed the one gleam of prosperity which she had enjoyed for twenty years.

Momentary effects of the plan. Law at the height of power.

It is said that in the three years of its power in Louisiana, the Indian Company expended twenty-five million of francs. It would probably be impossible to say what this immense sum was expended for. La Harpe, a very competent authority, testifies that eight million francs only were expended on supplies and transportation for the colony, and he avers that this sum brought no return to France. He says that convicts and prostitutes were sent out as colonists; that inexperienced clerks were put in charge of the stores and plundered them openly; that the Company did not hold to its contracts with Swiss and German companies, and with miners; that these contracts themselves were unfortunate; that it was always making places for adventurers, and always quarrelling with Bienville. All this is said more simply, when we say that a company of directors in Paris undertook to rule a colony in America. Napoleon has taught us that two good generals are worse than one bad one. When a directory of generals is on one side of the world, and their army is on the other, its ruin is certain. It is a curious question, whether under a careful management, that part of the capital of the Company which was subscribed for the development of Louisiana, could, in these days, have been made productive. An annual income of four per cent. would have satisfied the shareholders. Their privilege ran for twenty-five years, and when it reverted to the crown, the separate holders could take lands to represent the principal. It is certain that the furs of Canada and of Louisiana would not amount to an annual value of one million six hundred thousand livres. Indeed, the Company relied, not so much on furs, as on mines and tobacco. They never found any mines of value, and the product of tobacco was inconsiderable. So far their empire in the West yielded them but little. If, however, the Company had been willing to do as Winthrop and his associates did, go themselves with their charter to the province of which it made them masters, it could not have been

The Company's rule in Louisiana.

Arms of the Western Company.

hard to make that province worth forty millions francs before 1742. But no man of the stockholders, though the examples were before them of Winthrop, of Champlain, of Penn, and other colonists, had, at any moment, any such idea.

Wild speculation in the stock.

Whatever may have been the legitimate basis on which Law's earlier plans were founded, all recollection of it was swept away and all thought of any basis was forgotten in the whirlwind of excitement which swept over France, when all men tried to join in the successes of those whose early investments in Indian stocks had proved fortunate beyond the wildest hope. Under this wild excitement shares issued at 500 livres eventually sold at 5,000 livres, and even more. In its five issues, the Company put out 624,000 shares, which at the nominal par amounted to 312,000,000 livres. To pay four per cent. interest on these, would have required 12,480,000 livres annually. It is an interesting fact that its income was more than six times this amount, being 80,500,000 livres annually. The Company was therefore amply able to make good its technical obligations. But, of course, persons who had bought for 5,000 livres a share nominally worth 500, would not be satisfied with a miserable annual income of twenty livres for that investment. The price of shares was merely fanciful. It could not be held at the fictitious level. And the moment the decline began, nothing would arrest it. These statements are due to the memory of John Law. He undoubtedly made the grossest errors in his efforts to arrest the fall of these securities. But it was, in the first instance, not the audacity of his proposals, but their success, which caused his ruin.

Ruin of the Company and of Law.

Ruin came. So soon as the holders of shares began to buy with them houses and castles and jewels, and did not buy other shares, so soon as they ceased to speculate and began to invest in real securities, so soon the price of bonds fell. All the ingenuity and all the audacity of Law, all the willing help of the unscrupulous Regent could not arrest the fall, more than they could make water run up hill. In one year from the greatest success of the "system," as this rash adventure was called, it had wholly disappeared. In that time thousands had become rich who were poor, thousands were poor who had been rich. Law fled from Paris, and all his estates were sequestered.[1] This was in November, 1720. News of his fall and flight arrived in Louisiana on the 15th of April, 1721. The year 1721, however, saw the largest accession yet made of emigrants to the colony.

[1] For an admirable account of all Law's transactions, examined in the light of modern financial science, such as it is, see M. Thiers's chapters, translated into English with illustrations, by Frank S. Fiske.

As the "system" rolled on, adding one extravagance to another, it was announced that Law had become a Roman Catholic. Whatever may have been the sincerity of this conversion, it was followed by his appointment as minister of finance, and men said he had become a Catholic that he might become a minister. It was perhaps this conversion which gave rise to the first measures of the Company for assisting the religious missions in Louisiana, — missions to which, in the outset, France owed even her knowledge of the river. Pierre François Xavier de Charlevoix, the writer to whom we have since owed our most interesting history of New France in that century, who was indeed the diligent historian of Jesuit enterprise

Voyage of Charlevoix.

View on the Arkansas River.

through the world, embarked at Rochelle, in July, 1720, to visit the Canadian Missions. He was at Kaskaskia, in our State of Illinois, in November 8, 1721. The brethren of his order had already established a post here, six miles from the Mississippi. He went from this point down the river in a canoe made from a long walnut tree. Thirty miles above the mouth of the Arkansas he found the village already in ruins where Law was to have established, on his own concession,[1] nine thousand Germans from the Palatinate. All who came were discouraged, and eventually planted what is now known as the "German Coast" above New Orleans. No part of the world shows more beautiful homes and farms than those made there by these exiles who were then thought to be abandoned to misery. Charlevoix found that

[1] The concession was twelve miles square.

the small-pox was already ravaging tribes which La Salle had found numerous. He arrived at Natchez, on the 15th of December, and at New Orleans on the 31st. It is amusing now to see, that the little circle of critics in New Orleans thought, that, if he had chosen, he could have found his way to the Western Ocean.[1] That enterprise was reserved to Lewis and Clarke, nearly a hundred years after, and occupied them then more than two years. The Jesuit missionary proved his own good sense, and made good his Christian profession, by reconciling Bienville the Governor, and Hubert, one of the other officers, who were in one of the chronic quarrels which embittered life in the petty colony.

Reports of early explorers.

Charlevoix, like the other early explorers, sent home accounts of the resources and geography of the country, which are amusing when read by the light of our modern knowledge. We have seen that La Salle proposed to establish his colony as an easy method by which the French could attack the Spanish silver mines. La Harpe, one of the most valuable officers who served under Bienville, in a report which he presented at home, urged the necessity of keeping the English away from these same silver mines of New Mexico. And in Charlevoix's first letter describing the resources of the new colony, the two productions which he describes with most enthusiasm are the "apalacchine" and the wax of the candleberry. The first of these is already wholly forgotten. It is the *Ilex Cassine* of the botanists, and, at the time Charlevoix wrote, had a reputation as a substitute for tea, and even as dispelling the emotion of fear. There will be many, even among the American readers of these lines, who have never heard of candleberry wax, which Charlevoix supposed was to be an important article of foreign export. Those who ever have made a candle from it, will sympathize with the "five or six slaves," who being unfit for ordinary duty, were thought by the good father sufficient to gather a shipload of wax every year.

Ilex Cassine (Yaupan).

[1] By a curious parody on this criticism, the biographical dictionaries, French and English, say that Chateaubriand, at the end of the eighteenth century, crossed from the Mississippi to the Pacific, — an impossible journey in the period of his tour.

The city of New Orleans, so named in honor of the Regent, was regularly laid out on paper when Charlevoix visited it, — on the convenient plan made by La Tour and Pauger, but it was still a city on paper. There were two hundred people encamped there, who were to carry out the plans of the engineers. To each applicant a lot was given sixty feet in front by twice that depth. Each landholder was directed to fence in his lot and to leave a vacant space, three feet wide, for open drains which should carry off superficial water. These ditches were connected, and a dyke or levee of earth made on the river side. The seat of government was removed thither in the same year, and the names of the two hundred settlers whom Charlevoix found there, are preserved. Bienville's is first upon the roll.

Founding of New Orleans.

The result in America of the work of the Western Company, or the Indian Company, had been the establishment of a few thousand emigrants in a climate to which they were not accustomed, on soil of whose capacities they were ignorant, with hopes which could not be gratified. A staff of officials, larger than would be appointed now for the same region, though its population is counted for millions, quarrelled among themselves, but regularly drew their salaries. The common-sense and practical intelligence of Bienville were the most cheerful element in the horoscope of the infant state.

The French establishment at Natchez was the most flourishing of the trading establishments on the river. The massacre by the Natchez Indians of almost all its male inhabitants, was the first terrible event which broke the course of the development of the colony, and the vengeance taken upon that tribe was the first great effort made by the colonists against the natives.

The settlement of Natchez.

The policy of La Salle had been to conciliate the natives of all tribes. He would not permit his men to fire upon them, except under extreme provocation, and he would not adopt the easy policy, which was a favorite policy with the Spaniards, of taking one side or another in their mutual feuds. D'Iberville and Bienville seem to have been willing to continue in a policy of conciliation. But, from the beginning, it was the custom of the French to supply the Indians with guns, powder, and shot. They relied on the Indians of the north for hunting, as the supply of furs to Europe made the largest element in their trade, and they boldly took the risk that such arms might be used against themselves.

So long as the charge of the outposts was entrusted to officers of humanity or discretion, this hazardous policy, which armed the Indians as well as the whites, brought few disastrous consequences. All parties regarded themselves as adventurers, and the loss of one life,

more or less, in a brawl with savages was not regarded so seriously as it would have been in the earlier settlements of New England. As early as 1716, some Indians of the Natchez tribe, or allies of theirs, had killed some *voyageurs* coming down the river. Bienville suspected that they had been instigated to this atrocity by English traders from the Carolinas. He took resolute measures. He seized on some of the Natchez chiefs, and gave the tribe to understand that he would take the lives of these men if the heads of the murderers were not sent to him. After some intrigue and wavering, caused partly by their doubt of his firmness perhaps, and partly by real inability to meet so hard an order, it was complied with in full. From this moment the Brother of the Sun, as the chief of the Natchez was called, must have felt that he had a master. This transaction is known in the colonial history as the first Natchez war.

French policy toward the Indians.

View of the Mississippi at Natchez.

So far as we can see, the Natchez might have been retained, as a useful ally of the French, for an indefinite period, but for the folly and selfishness of one French commander, named Chopart. The tribe was more compactly organized than most of the Indian tribes. It understood subordination to its chiefs, and, indeed, in many other regards, showed a higher civilization than that of most of the Indian nations. The conjecture has always seemed probable that it was an off-shoot from that superior Mexican race, the civilization of which, as described in the exaggerated accounts of the

The Natchez tribe.

companions of Cortez, is still one of the problems and wonders of history. The Natchez worshipped the sun. His temple was of oval shape, built of clay, without windows, and arched in a dome. It was about one hundred feet in circumference, and, to defend it from the rain, was covered with three layers of woven mats. Above it were three wooden eagles, one red, one white, one yellow. No person was permitted to live in it, but the Guardian of the Temple had a little shed without, where he lodged. The whole was surrounded by a palisade on which were exposed the skulls which had been brought back from battle. In this temple a perpetual fire was kept, supplied from time to time by the Guardian of the Temple. It was his duty to feed the fire with logs, to see that they did not blaze, and that the fire did not go out.

The palace of the great chief, who took the name of the Brother of the Sun, was similar to the temple. It was raised on an artificial mound, that he might the better converse with his brother in the heavens every morning. The door of the palace fronted the east, and, when the sun arose, his brother saluted him with howls, ordered that his calumet should be lighted, offered to him the three first puffs of smoke, and raising his hands, and turning from east to west, directed his course for that day through the heavens.

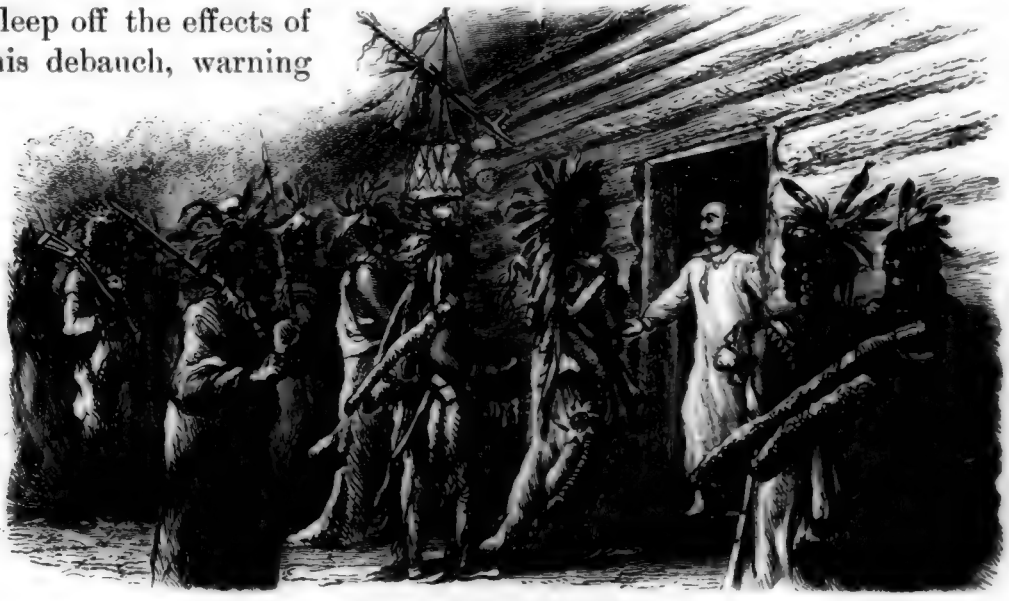
Their government and customs.

On the death of the supreme chief his sister's son succeeded. The princesses of the blood espoused none but men of obscure family, and had the right of dismissing a husband whenever they pleased. The power of the Brother of the Sun was absolute; no man would refuse him his head if he asked for it, and if he appointed a guard to wait upon the French, none of these men were permitted to receive any wages. He had a sort of body-guard, or personal staff, appointed even at his birth. For, so soon as an heir presumptive was born, a certain number of infants was chosen from the infants of the tribe near his age, and these were assigned for the service of the young prince. They hunted, fished, planted, and farmed for him, — they were his servants, and they furnished his table. That they might serve him in another world, they all sacrificed themselves to follow him, when he died. In a religious rite of great solemnity they were strangled that they might go at once to be his servants in the world of spirits. All these customs, and many others, described in the early writers, are analogous to those ascribed in the Spanish writers to the Mexican tribes. Charlevoix observed bas-relief carvings, "not so badly done as one expects," among the chiefs of a neighboring tribe.

The Natchez were not disposed to make war, but for some reason, perhaps because of the small-pox which their new friends gave

them, their numbers diminished rapidly after the arrival of the French, or were supposed to do so. It was thought that they were more numerous in La Salle's day than when Iberville landed; and, in 1722, Charlevoix thought they had diminished in six years from four thousand to two thousand fighting men. They were fond of the French, and the French found them very useful. Opposite to their town, the French had established a post which bore the name of Rosalie, a name still preserved. It was given by Bienville in compliment to Mad. la Duchesse de Pontchartrain. The convenience for trade, the excellence of the soil, and the beauty of the situation, which is exquisite, called up a very considerable number of whites,—and, as has been said, this was the most successful settlement in the valley. After the "first Natchez war," for nearly ten years this beautiful village showed every sign of external prosperity. But for the folly and selfishness of Chopart, the commander, this prosperity might have continued.

Chopart's madness



Chopart formed the idea, which seems almost insane, that he should like the site of the great village of the Natchez for his own home, and that the fine plain about it would be an admirable plantation for himself. He had the effrontery to send for the Brother of the Sun, and to tell him that the great chief of the French had ordered the Natchez to leave this village, as he needed it. The chief and council refused indignantly. They said that the nation had long possessed this territory, and that it was sacred. The very ashes of their fathers were buried beneath the temple. They reminded him that till now all the points occupied by the French in their territory had been given in token of regard, or had been bought and paid for. Chopart was deaf to their arguments. He insisted that in two months' time they must be ready to remove. The wily Natchez pretended, after deliberation, to assent to his mad demand. Chopart even made them agree to pay an indemnity in compensation for the extension of time.

The Indian plans for retaliation.

In fact, however, the Natchez agreed, in secret council, that they would by one fell stroke get rid of the French, and that forever. They sent messengers to the other Indian tribes to bind them to the same work of destruction. Nor did any tribe refuse so far as to betray them. The Choctaws joined eagerly in the plan, and took, as their part, the destruction of the French on the lower part of the river. To make sure that the massacre should take place on the same day, at all the lower settlements the Choctaw chief and the Natchez chief exchanged parcels of little sticks, in each of which were as many twigs as would indicate the number of days before that appointed for the butchery. This had been fixed at the

time when Chopart had directed the abandonment of the village and the temple.

The fatal night came on without any preparation on the part of the French to oppose the Indians. Women from the Natchez tribe, more faithful to their French lovers, or to those who are so called, than to their race, warned them of their danger. Some of these men communicated the warning to Chopart, but he ridiculed their fears, arrested them and put them in irons. He had just returned from a visit of state to the Brother of the Sun. The Indians had well kept their horrible secret, all parties had drunk and revelled together, and it was not till three in the morning that Chopart returned, received the report of danger, ordered the men to be ironed who brought it, and then retired to sleep off the effects of his debauch, warning the sentinel not to call him till nine in the morning. This was on the 28th of November, 1729.

Chopart and the Indian Envoys.

Morning came. There was not a settler's house but had in it one or more Indians, who came in on one pretence or another. The great chief set out from his village, attended by his warriors, beating the drum of ceremony, and bearing the calumet aloft. The calumet, as La Salle had seen, may be a calumet of war as well as of peace. The pretence of the procession was that they might bring to Chopart the tribute exacted in payment for delay. They reached his house and wakened him. He came out in his *robe de chambre*, and bade the cortége enter. They did so and offered their tribute. They then proceeded to the river, where a galley just up from New Orleans was unloading valuable stores. Every Indian in the train picked out his man among those

Massacre of the French settlers.

at work on the galley, fired, and killed him. The discharge was the signal agreed upon. All through the settlement the Indians closed on the French, and in an hour's time more than two hundred[1] Frenchmen were killed. Of the garrison, which consisted of one small company, only one soldier escaped. Most of the women and children were spared, to be held as slaves. But some of the women were killed in the effort to defend their husbands.

Death of Chopart.

Chopart was among the last to be killed. He saw the slaughter, but saw it too late. He fled to his garden, not so much as seizing a gun. He whistled for his soldiers, — but, they were not left to hear. He was surrounded by Indians. But no Natchez would lay hands on him. He was a dog, they said, unworthy to be killed by a brave. A Puant chief was called, who killed him with a club.[2]

Had the simple arithmetic of the Natchez and Choctaws proved as accurate as they expected, that day would probably have been the last of the whole colony. But if, in the best calculations of the greatest, a little dog may do more mischief than he can conceive, — what must not be expected in the computations of ignorant savages? It happened that one day when the Natchez chief burned his fatal stick in the temple, his little son stood by. While the father's attention was engaged elsewhere, the boy, with a child's passion for imitation, burned two sticks, as he had seen his father burn one, without being observed. In consequence of this accident, the Natchez pounced upon their prey two days earlier than the day fixed upon in their solemn treaty.

With all the facilities of modern skill, the traveller is a long day in descending the Mississippi, even on the flood, from Natchez to New Orleans. The distance, in a direct line, is more than a hundred miles, and, by the winding of the river, it is twice as far. The poor fugitives from Natchez had no means of carrying the intelligence of the massacre to New Orleans in the fatal two days which were left to that post. When, therefore, on the appointed day, the first of December, six hundred of the Choctaws assembled in force by the Lake of St. Louis, Perier, the governor, had no notice of what had taken place above. The Choctaws sent to him a delegation, saying that they had come to present to him the calumet. Perier was alive to the advantage of conciliating this important tribe; but he was too good a soldier to admit them inside his fortifications. He sent a civil message, that he would gladly receive the chief with thirty of his warriors. This answer disconcerted the Choctaws, and seems to have been enough

[1] This number corresponds best with what we know of the colony. But Dumont says seven hundred.

[2] The Puants were Indians from Green Bay, now in Wisconsin.

to avert an immediate attack. They sent a delegation to the Natchez to present the calumet to the great chief. The delegation was not received with such honor as was expected. They soon learned that the Natchez had made their attack two days before that agreed upon. What was worse, perhaps, in the presents which they received, from the plunder then taken by "the Brother of the Sun," there were no guns, powder, or balls. The Choctaws were indignant at all this, and turned their rage against the Natchez. They accused them of selfishly anticipating the assault, that they might gain all the benefits. They forbade them to kill any of their captives, lest they should have to account for such lost lives to the Choctaws.

Meanwhile, on the third of December, fugitives who had escaped the slaughter, arrived at New Orleans. Perier acted with promptness. He sent an officer to communicate with the Choctaws, and, before long, had succeeded in engaging these fickle savages on his side. He formed a little army, and, with his new allies, moved against the Natchez. The negotiations and preparations consumed the months of December and January, but, in February, the Choctaws arrived at Natchez, sixteen hundred in number. The French contingent joined them in March, and the fort of the Natchez was invested. They did not stand a siege in which cannon were to be served against their palisades. They agreed to surrender their prisoners and to make peace on those terms. Loubois, the French commander, on the spot, acceded to these terms, without meaning to keep them, having a theory that he was not bound to keep faith with them, more than they would with him. The next morning, therefore, after he had received the prisoners, he prepared to renew the siege. But he found that the Natchez did not trust him

The news at New Orleans.

Costumes of French Soldiery early in the Eighteenth Century.

any more than he deserved, and that they had abandoned their town.

The main body of the tribe kept together, and, after one or two efforts to surprise the fort at Natchez, moved up the Red River, and made an attempt on that at Natchitoches. But St. Denis, the commander, was too watchful for them. The same summer, Perier, finding himself reinforced by three companies of marines from France, made a final movement up the river. He found the Natchez in their last retreat, attacked them and compelled them to surrender. In truth, two hundred of them, of whom most were women, were taken prisoners, and were sold as slaves to the plantations at St. Domingo. Three hundred escaped, and found asylum among the tribes which hated the French. At this day, among the Creek Indians, who now cultivate the fertile lands reserved to that tribe in the upper valleys of the Washita River, there are three hundred or more good citizens who speak the Natchez language, and trace their descent back to the vassals of the "Brother of the Sun."[1]

The poor Natchez, however, in their untimely insurrection, achieved more than they knew. For when the news of the destruction of the only promising post on the river reached Paris, the Western Company, quite discouraged, represented to the king their loss, and returned to him their unprofitable right in the colony. The king, very wisely, appointed Bienville its governor again, in the place of Perier, and Bienville's last administration began. He arrived at New Orleans in 1734; Perier, who had been promoted to be lieutenant-general, resigned the government and returned to Europe.

Failure of the Western Company's system.

The surrender by the Western Company marks the miserable failure of the old system of giving the business of colonization over into the oversight of favored boards of men who did not mean to emigrate. After thirty years of nursing, after all the energy of Law's movements, and the large sums of money which had been expended on the colony, its population, when it was returned to the king, was estimated at only five thousand. Of these, nearly two thousand were negroes. The whole number was scattered among eleven posts. Fourteen years later, a careful census showed even a smaller number, — so that this estimate of five thousand, even, was probably exaggerated. In 1745, there were but seventeen hundred white men, fifteen hundred women, and two thousand and twenty slaves, of whom the Illinois had about three hundred white men, the Missouri posts two hundred, and Natchez, which had been the most attractive settlement of all, only eight white men and fifteen negro slaves. It must be remembered, therefore, that we are still tracing

[1] See Gallatin's *Synopsis, Arch. Am.*, vol. ii., p. 114.

chronicles which derive their interest only from the results which were to grow from petty beginnings, and not from the numbers engaged, or, indeed, even from the personal characteristics of most of the actors.

Bienville's designs against the Chickasaws.

Bienville probably wished to show, that if he had been commander, the savages would not have come off so well as they did under Perier's administration. He demanded of the Chickasaws that they should surrender the Natchez. The Chickasaws had by this time cemented alliances with the English of Carolina, — they were confident of their own power, — and they sent back word to Bienville that the Natchez and they now formed one nation, and that they should not comply with his demand. Bienville then determined to attack the Chickasaws. He sent orders to D'Artagnette, who commanded the fort at Kaskaskia, among the Illinois, to

Bienville's Army on the River.

meet him in person on the 10th of May, 1736, in the Chickasaw country, with the largest army he could muster from Illinois Indians, French troops, and settlers. Bienville himself proposed to lead an army from New Orleans and Mobile. The expedition thus set in motion was by far the most formidable which the little colony ever attempted. Bienville's contingent made its rendezvous at Mobile. On Easter Day, the 1st of April, it moved up the Mobile River in a fleet of thirty piraguas and as many batteaux. On the 20th he reached a point which he called Tombecbé, — which is the Jones's Bluff of the Little Tombigbee River of the Alabama geography of to-day. Hither he had sent an advance guard, the year before, to

build a fort. The Choctaws met him there with the calumet, and received the tribute, for so they began to regard it, — in consideration of which they served as auxiliaries. On the 4th of May, the army, thus reinforced, reëmbarked and proceeded slowly up the river, and, on the 24th disembarked for the last time, and then began the construction of a palisade and shed for the protection of its stores.

His expedition.

The enemy was in a stockade fort, seven miles distant, built upon a hill, surrounded by the cabins of an Indian village. The fort was built of heavy timbers a foot in diameter: it was circular in shape, with three rows of loop holes. The Chickasaws were not only protected by the logs, but stood in pits or trenches which covered all but the upper parts of their bodies. They kept silence, and let the French come within good musket shot before they fired. As the French approached they saw Englishmen whom they supposed to be allies of the Chickasaws. The stockade proved to be quite too strong to be taken by storm, as Bienville had proposed. After a loss of nearly one hundred and twenty, very severe for so small a force, he was obliged to withdraw his men, without producing the least effect on the enemy.[1] He spent the night in his camp, but on the next day he had the grief of seeing that his men, who had been left dead on the field, had been cut to pieces by the Chickasaws, who had exposed the quartered bodies on the palisades in derision. A rumor was spread that D'Artagnette, with the Illinois contingent, was approaching. But Bienville had no such good fortune. He returned to his camp on the Tombigbee, not much molested on his retreat. His attack was made on the 26th of May.

The French repulsed.

Poor D'Artagnette had, in fact, with military precision, arrived in time to make the junction contemplated in his orders. He reached the Chickasaw country on the 9th of May, and waited within sight of the enemy till the 20th, but heard no news of Bienville. His Indians murmured, and wished either to retreat or attack. D'Artagnette chose to attack, — and did so successfully, — but while driving the Chickasaws from a second village he was himself wounded. His Indians abandoned him, — but a loyal company of forty-eight Frenchmen held by him. This force was so small, that he was compelled to surrender, and he and they were prisoners of the Chickasaws at the time when Bienville made his rash and unsuccessful attack. The whole Illinois detachment had been 396 men, of whom 130 were French, 38 Iroquois, 38 Arkansas, and 190 Illinois and Miamis. So soon as Bienville retreated, the savages took their French prisoners to a plain, tied all but one of them to stakes and

Fate of the prisoners.

[1] This estimate of the loss is that of Du Tortre in a despatch sent to Paris. Dumont's account says the French loss was thirty-two killed, and at least sixty wounded.

burned them to death by a slow fire. The whole expedition was a wretched failure, of which the blame seems to rest with Bienville. The Chickasaws never lost the prestige which their success gave them. The historian of Alabama says of them: "The Chickasaws have never been conquered." [1]

In 1740 Bienville led another expedition against them by way of the Mississippi river. He moved with thirty-six hundred men, — of whom one third were whites and the rest negroes and Indians, — from Fort Assumption, which stood near the site of our city of Memphis. This was the largest army which the colony had ever put in the field. The unconquered Chickasaws were frightened, and offered to make peace on condition of surrendering all their white slaves. Bienville assented. He received from them two English prisoners, satisfied himself that they had no French in their hands, and with this concession, withdrew his expedition. The Chickasaws pretended, and the French believed what was probably true, that the Natchez had, for the time, so far withdrawn from their confederacy, that a war against the former tribe did not serve the purpose of vengeance against the latter. The two campaigns certainly did not add to the reputation of Bienville as a military leader. But he retains the reputation of a successful administrator of a colony, who had to act often on his own responsibility, who was always separated from his metropolitan masters by an ocean of slow navigation, and often by the frequent wars. He dismissed his auxiliaries with presents. Fort Assumption was razed, and no new military works were erected on its site for one hundred and twenty years. After an absence of more than ten months the army returned to New Orleans. Bienville himself returned to France the next year, and was succeeded by the Marquis de Vaudreuil. Bienville never returned to America. He died in 1767.

In truth Louisiana had succeeded as a royal colony no better than it succeeded under the Western Company. Its officers and garrisons in Bienville's time entailed on the Crown an annual expense of five hundred thousand livres, — not a very large sum in current money, but not inconsiderable in the pinched finances of the latter part of the reign of Louis XV. If the figures could be relied on, with which the Western Company gave back their charter to the King in June, 1731, its population was then five thousand on the Mississippi and all its affluents, beside two thousand slaves. A census taken fifteen years later showed a population of only four thousand whites, of whom eight hundred were the troops in the garrisons. These figures would show even a decrease in the years of the Royal administration. Twenty years later, under the careful admin-

Second campaign of Bienville.

[1] Pickett's *Alabama*.

istration of Ulloa, a census showed a population of 5,526 whites, and about as many blacks. It was not unnatural that Louis XV. should care but little for his namesake, which, after half a century of nursing, had shown such inconsiderable growth, and gave so little visible promise of improvement. An army of eight hundred men to protect four times their number of settlers gave indeed but little hope for any permanent establishment of value.

Louis XV.

The Marquis de Vaudreuil was appointed Bienville's successor, and he filled the post of Royal Governor at New Orleans for eight years, whence he was transferred to Canada. He was in fear that the English would attack him by sea, as through the Choctaw allies of the Carolinians and Georgians they threatened him by land. Under more vigorous lead the English would have done so. But no English fleet attempted to force his petty fortifications. By land, his people were, again and again, in terror of attack from the Choctaws of the English party. At one time Vaudreuil was inspecting his post at Mobile, so that the colony at New Orleans was without its chief. On the German Coast so called, on the river, and indeed close to the little city, the Choctaws killed one and another Frenchman. Vaudreuil returned to find the city in dismay. He sent out detachments of regulars, militia, and friendly Indians, on every side. His strategy was successful, and was rewarded by the capture of the whole Choctaw army, excepting two men. The others, — only eleven in number, — were brought prisoners to the city, and the Marquis's satisfaction for such a victory was of course chastened by his mortification for the terror of his subordinates.

Vaudreuil's conflicts with the Choctaws.

In 1750 that part of the Choctaws who were attached to the French interest obtained a series of crushing victories over the smaller party who were in the English interest, and, by what was known as the Grand Pré Treaty, extorted such hard terms as to secure for a time peace from their most dreaded enemy. The Chickasaws offered peace also. But Vaudreuil wrote to his government that he did

not want to make a treaty with them till he had conquered them. In this desire, he was never gratified.

In 1751, so great was Vandreuil's consideration at Court, and so desirous was the Court to maintain Louisiana against the English, that he had under his orders two thousand soldiers, — a force more than one third of the whole white population of that immense region. With such a force the expenses of the colony of course increased also, and in the last year of his administration they were 930,767 livres. On the 9th of February, 1753, he gave up his place to Capt. Kerlerec of the Navy, and took the command of Canada. The petty victory over the Choctaws which we have mentioned, a series of anxious discussions about the paper currency of a handful of traders, and the well sustained memoirs in which a large staff of officers explain how the river should and how it should not be defended, make up the voluminous annals of the colony during his administration. Meanwhile that conquest of the soil and climate made progress which is so seldom recorded in history, but on which all history of course depends. That commerce in the wax of the candleberry to which Charlevoix had called attention, still attracted interest. One year the king bade Vaudreuil purchase the whole crop on his account at the rate of ten or twelve livres a pound. A dispatch of a later year says that one planter raised six thousand pounds of the wax, a handsome crop for those days at the rate named. The report says that this is the only luminary used by the inhabitants. Another report of the year 1752[1] speaks of the difficulties of the cotton culture, resulting from the amount of labor necessary to separate seed from fibre, and alludes to a gin which M. Dubreuil, the same planter who had succeeded best with the wax, had invented for that purpose. This unsuccessful gin antedates Eli Whitney's by forty-one years. The manufacture of sugar, sufficient for the needs of the few colonists, was introduced, but afterwards declined. Indigo was cultivated, and eventually became an article of export. There can be no doubt that while the expenses of the crown doubled in the period of Vaudreuil's stewardship, the real prosperity and wealth of the planters were increasing in a larger proportion. Full memoirs preserved in the French Archives show that intelligent men, even then, foresaw in a small degree some part of the immense value which the valley of the Mississippi had in store for the world. It is interesting to see that at a period of scarcity in New Orleans the Illinois farms were already productive enough to supply the distant seaport with bread-stuffs. The culture of silk and tobacco

Administration of Kerlerec. — Productions of the Colony.

is eagerly recommended, and the development of the mines of copper and lead in the northwest, the existence of which was perfectly well known to the officers of the crown.

The administration of Kerlerec, as governor, covered ten years. At the end of that time he was recalled to France, and thrown into the Bastile. He was a captain in the French navy, who had distinguished himself in battle. But in the colony he was constantly quarrelling with Rochemore, the intendant of commerce, and his arrest was caused by charges of mal-appropriation of ten millions of livres in four years under the pretence of preparation of war. He held office during the most of the French war of George II.'s reign, and for long periods of that time was left without any direct dispatches from France; for the English cruisers, who never attacked him directly, were successful in cutting off all his communications. Kerlerec's administration began with high hopes of conciliating the Choctaws. But he soon lost confidence in them, and his reports home, regarding the under officers of the crown, and indeed most of the people, with whom he had to do, were anything but flattering. The army itself was recruited from such worthless material as to give Kerlerec quite as much trouble as the savages whom it was to keep in order.

Coins struck in France for the Colonies.

The Old Fort at Saint Augustine

CHAPTER XXIII.

SPANISH COLONIZATION.

SPANISH FOOTHOLD IN THE UNITED STATES. — SUCCESSIVE ACQUISITIONS BY THE UNITED STATES. — THE FORTUNES OF FLORIDA. — BORDER WARS WITH CAROLINA AND GEORGIA. — OGLETHORPE'S EXPEDITIONS. — FLORIDA CEDED TO ENGLAND. — ITS POPULATION. — DISCOVERY OF CALIFORNIA. — ORIGIN OF THE NAME. — ROMANCE OF ESPLANDIAN. — FATHER NIÇA'S PRETENDED DISCOVERIES. — CORONADO'S EXPLORATION IN ARIZONA AND NEW MEXICO. — DRAKE IN CALIFORNIA. — HIS RECEPTION BY THE INDIANS. — LOCALITIES OF HIS DISCOVERIES.

THE destiny of the United States has passed so far under the empire of institutions which have an English origin, that it is easy to forget how large a portion of her territory has in other times belonged to the Spanish crown. The prevalence of the English language as the language of public procedure in every State and Territory, and the sway, in a very large degree, of English law and the habits of English administration, are enough to keep out of view the fact, that, at one time or another, more than half the present territory of the United States has been, on the map at least, subject to the King of Spain. The Spanish claim to Mexico and the regions north of it, was pressed indefinitely northward. Somewhere on the coast of what we call Oregon, Drake saw the shore in 1579, and he took possession of the country in California for

Extent of Spanish dominion in North America.

the English crown as New Albion. But England scarcely asserted her rights under this discovery for centuries.

At one and another time since she seized the port of Astoria in 1813, she has made one and another claim to this territory, running back to her rights under Drake's discovery. But the decision which gave to the United States, holding under the Spanish claim, the region south of the line of 49° north latitude, states, quite correctly, the average opinion of the older geographers.[1] On the seacoast of the Pacific the Spanish claim resulted from a series of discoveries and explorations, beginning, as will be seen, when Hernando Cortez discovered California in 1536. In the interior the eagerness for silver early established colonies of which Santa Fé in New Mexico was the most important of those far to the northward. It is generally supposed, that the droves of wild horses now found through the whole of Western America, as far north as the climate will permit, were of Spanish origin. So far as the natives received any supplies from the workshops of civilization, it was from Spanish traders; and, to this hour, some fragments of the Spanish language, acquired at a very early period, will be found in their dialect.

The Pacific slope.

Eastward of the Rocky Mountains, the Spaniards showed no disposition to extend their dominion, after the expeditions of De Soto and Ponce de Leon had seemed to prove that no treasure of gold or silver was to be found there. The Spanish government made no protest when, under Louis XIV., the French claimed a right to the whole valley of the Mississippi, founded upon the discoveries of Joliet, Marquette, and La Salle. On the ground, an irritable commander of a Spanish post in Texas might quarrel with an impetuous French officer in a garrison on the Red River. But at home the policy of Spain was well defined; and if the King of France were willing to keep a line of defence between the English colonies and the Spanish mines, the King of Spain made no objection. It was not until the treaty of Paris, in 1763, that the King of France showed that he was tired of this expensive good-nature. He then gave this immense territory to his well-beloved brother of Spain, who showed himself, indeed, somewhat coy about receiving the magnificent but costly present. Twenty years afterward, the Spanish crown gave it back to France, only to learn, in a few months, that France had sold it to the young Republic of America.

Spanish policy east of the Rocky Mountains.

Florida, from which so much was hoped in the days of Ponce de Leon, had remained in the possession of Spain, after the cruel mas-

[1] This claim was reinforced by Gray's discovery of the Columbia River, and Lewis & Clarke's exploration of it. These discoveries gave to the United States precisely the same sort of right as that which La Salle's gave to France, for the valley of the Mississippi.

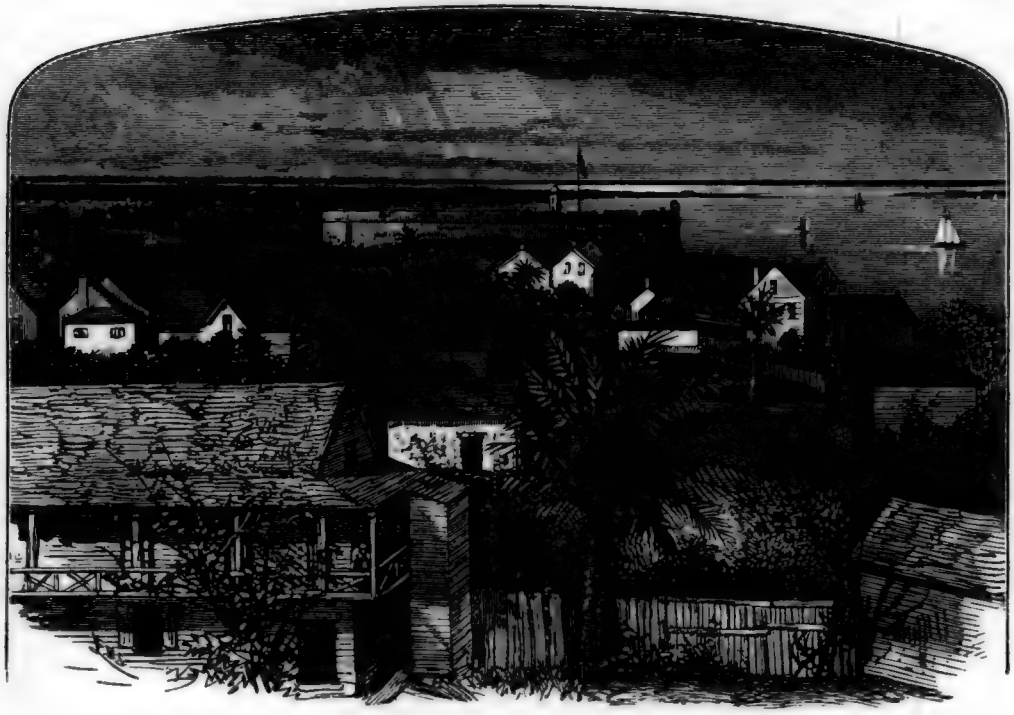
sacres which have been already described.[1] But no discoverer had found gold, or silver, or the fountain of life in Florida. The Spanish posts, therefore, were simply military positions, held to insure the command of the Gulf of Mexico. On the eastern side St. Augustine, without trade, and with but a small civil population, was held by Spain until 1762, when it was ceded to England, to be restored in 1783. By Spain it was ceded to the United States in 1819. On the other side, Pensacola, as has been seen, once and again fell into the hands of the French. Afterwards, with Eastern Florida, it fell to the English. But no settlement of Florida followed from either of these establishments. The territories, nominally Spanish, thus added to those which were colonized under the flag and protection of England, or under titles derived from her, cover rather more than half of the superficial area of the United States, with the exception of the province of Alaska, recently purchased from Russia. Of the several parts of this immense domain, the earliest to come under the dominion of the United States, was the western part of the valley of the Mississippi, which was that which came latest under the Spanish flag. In 1819 the United States acquired Florida from Spain, and all her rights on the western shore of the continent north of 42° north latitude, comprising the State now known as Oregon, and Washington Territory. In 1845, by a joint resolution, the Congress of the United States annexed Texas to the Union, and this decision was confirmed by the arbitration of war. The question whether Texas were a part of Louisiana or not, had always been an open question between France and Spain, but it had practically been yielded by France, and in the treaty of 1819 the United States had acquiesced in that decision. By the treaties with Mexico of 1848 and 1853, the dominion of the United States was extended by the acquisition of California and the region now covered by the territory between that State and Texas.

The Spaniards in Florida.

We recur now to the earlier history of the Spanish possession of these regions.

The reader has already been told[2] of the destruction of the oldest town in the United States, St. Augustine, by Sir Francis Drake, on his return from his expedition to the Spanish Main. The Spanish Armada occupied the attention of England too intensely, when Drake returned, for any effort to be made, either to follow up his victory in Florida, or to renew the English establishment at Roanoke. The Spaniards who had fled from his arms in Florida, returned to the ruins of their fort and reëstablished it. The Menendez, who has earned the right to be

Events after Drake's capture of Saint Augustine.



[1] Vol. i., p. 208.

[2] Vol. i., p. 222.

called "great" by his cruelty and falsehood, had died. But the government of St. Augustine was made hereditary in his family[1] until the year 1655. The history of the colony, meanwhile, is scarcely more than that of an insignificant garrison, elevated occasionally to general interest in the events of a general war.[2]

Missions in Florida.

In 1593 twelve brothers of the order of St. Francis were sent to Florida, to continue such missions as had been established among the natives. By their efforts and those of other brethren sent to continue and enlarge their work, many missions were

General View of St. Augustine.

established in the course of the next hundred years. Of these, the most important was at first at the island of Guale. But the chief of the savages in this neighborhood excited his people against them, in a severe attack which resulted in the murder of five priests, and the cruel injury of another. The Governor avenged them by burning the granaries and dwellings of the Indians. In the years 1612 and 1613, thirty-one missionaries of the same brotherhood were sent to Florida, and the name of St. Helena was given to it as a religious province of that order.[3] Twenty missions were now established, and the brethren

[1] In Buckingham Smith's collection of Florida papers is the will of one of the smaller Menendez governors.

[2] It has been admirably treated, in its detail, by Mr. Fairbanks in his history. The South Carolina Historical Collections give original authorities on the "wars" with Carolina

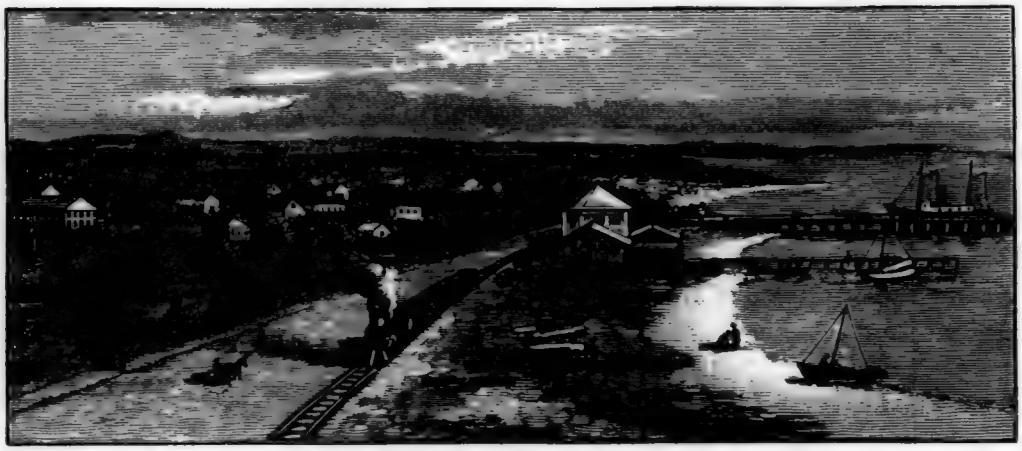
[3] This name must not be confounded with the name of St. Helena on the shore of South Carolina, though both had the same origin.

preached to the natives with success in their own language. In 1638, a war broke out between the colony and the Apalachee Indians. Such Indians as were captured were reduced to slavery; the tribe was so far overcome as to be kept for the time within its own limits. Meanwhile the growth of the colony was so small, that in 1647, eighty-two years after Menendez founded the colony, the number of families in St. Augustine was but three hundred, and this was almost the whole of the settlement. There were also fifty Franciscan friars domiciled in the city. When it is remembered that Menendez took with him two thousand six hundred and fifty colonists from Cadiz, it will be seen that the history of Florida, thus far, had been a history of decline and not of progress.

Slow growth of the colony.

With the colonists of Virginia and other northern colonies the Spaniards had little intercourse, peaceful or otherwise. So soon as Charles II. gave a charter for the settlement of Carolina, which was in 1663, jealousies arose on both sides, and the hatred of Englishmen for Spaniard, and Catholic for heretic, was enough to keep the little colonies suspicious of each other, even when nominal peace united their sovereigns at home. In 1665 an expedition under Captain John Davis, a buccaneer, made a descent on St. Augustine and ravaged the town. In 1667, however, Charles II. of England concluded a treaty with Spain,[1] in which Spain conceded to England all colonies which Charles and his subjects "then possessed." On the other hand, Charles agreed to cut off all future protection from the buccaneers, who, till this time, had considered Spanish property to be fair prize if found in the Pacific, and were not distressed if they seized it in the other great ocean. No English settlement was in fact made in Carolina, under Charles's charter, until 1670. But, in the diplomacy of the two nations, it was virtually agreed that the English claim to that region was good, and the line of the St. Mary's River was eventually agreed on as the line of the separation between the English and Spanish dominions. It is therefore, to this day, the dividing line between the State of Georgia, which bears an English name, and that of Florida, which retains the Spanish name given it by Ponce de Leon.[2]

Spanish and English claims.



The Spaniards, on their side, attacked the English colonies in 1670 and 1686, but without other success than burning and ravaging the homes of a few settlers on the coast. Such raids, of course, kept up the feeling of mutual hatred, strong enough at the very best. But

[1] Each king was Charles II. Charles II. of England reigned from 1660 to 1685. Charles II. of Spain reigned from 1665 to 1700.

[2] See vol. i., p. 147.

for the rest of the seventeenth century, there was no exploit on either side which deserves the name of war.

Menendez had been authorized, at the very beginning of the colony, to introduce five hundred negro slaves. So many laboring men pressed themselves upon him in Spain, that he made no use of the concession. But in 1687 one hundred negroes were introduced as slaves, and for nearly two centuries Florida suffered under the disadvantage of slave labor. Cabrera, who was governor in 1681, undertook the enterprise of removing the Indians not Christianized to the islands of the coast. The result was simply an insurrection of these tribes, who took refuge within the limits of Carolina. In a subsequent incursion, these Indians attacked the Tomoquas, a Christian

Pensacola.

tribe, friendly to the Spaniards, whose name is still preserved in the Tomoka River. They killed a large number of the Tomoquas, and carried the other prisoners to the colony of St. Helena, where their Christianity did not protect them so far but that they were reduced into slavery.

The settlement of Pensacola.

Meanwhile, on the western coast of the peninsula of Florida, the Spanish government established a fort at Pensacola, in the year 1696. The name of the place, spelled by them Pençacola, is that of a tribe of Indians who once resided there. The Spaniards were stimulated by the efforts of the French to settle at the mouth of the Mississippi, and, indeed, had only just founded Pensacola when the French colony under D'Iberville arrived. A square fort, known by the name of Charles, the king of Spain, a church, and other public buildings, were erected. Andres d'Arriola was the first governor. Within two years D'Iberville touched at the new post, nor was it long before his brother was attacking it, in the War of the Succession. Before that time, however, new opportunities

for carnage and ravage had been found by English and Spaniards on the eastern shore.

Near the close of the year 1700, on the death of Governor Blake of Carolina, James Moore had been chosen as his successor. With the poor object of personal gain from the traffic in Indian slaves, he granted commissions for the capture of Indians with power to sell them as slaves; and, on the outbreak in Europe of the war with Spain, he undertook an expedition against St. Augustine with the same object in view. He embarked with this purpose in September, 1702, having arranged that Daniel, an officer of spirit, should make a descent upon the town by land, while Moore himself blockaded the harbor by sea. The Spaniards, under their governor Cuniga, had heard of the movement, and retired with their effects into their castle. When Moore arrived, he found his guns too weak to assault them, and sent Daniel to Jamaica for heavy artillery. While Daniel was absent, two Spanish ships, one of twenty-two guns and one of eighteen, appeared off the harbor, and so terrified the English that they raised the siege. Moore retired by land to Charleston, without losing a man, burning the town of St. Augustine and his own transports. Daniel, on his return with the mortars and guns for which he had been sent, hardly escaped capture.

English expedition to St. Augustine.

The Spaniards retaliated for this foolish assault in exciting the Apalachee Indians, their allies, to attack the English settlements. The Apalachees marched, nine hundred in number, but fell into an ambush of the Creeks, who were always the firm allies of the English, and were routed by them. In reward for this service, all who survived of the Indians who had been held as slaves in St. Augustine and those who had been taken since 1640, were now set free by Cuniga, under a promise that they should return to work on the fortifications whenever they were needed. Cuniga urged the government at home to send him the means to make five new posts on his frontiers. Before any such aid reached him, Moore, with a thousand Creeks and about fifty of the Carolina militia, attacked the Indian allies of the Spaniards and defeated them. He carried away three hundred slaves, — most of the people of seven Indian towns.[1] He burned San Luis and Ayaralla, and took the church plate and vestments, and everything else of value. These Indians had, before this time, made some progress in civilization — it was, perhaps, the loosening of the habits of savage life which made them so easy a prey to the untamed savages who attacked them. This incursion was followed by others, frequent enough to forbid the

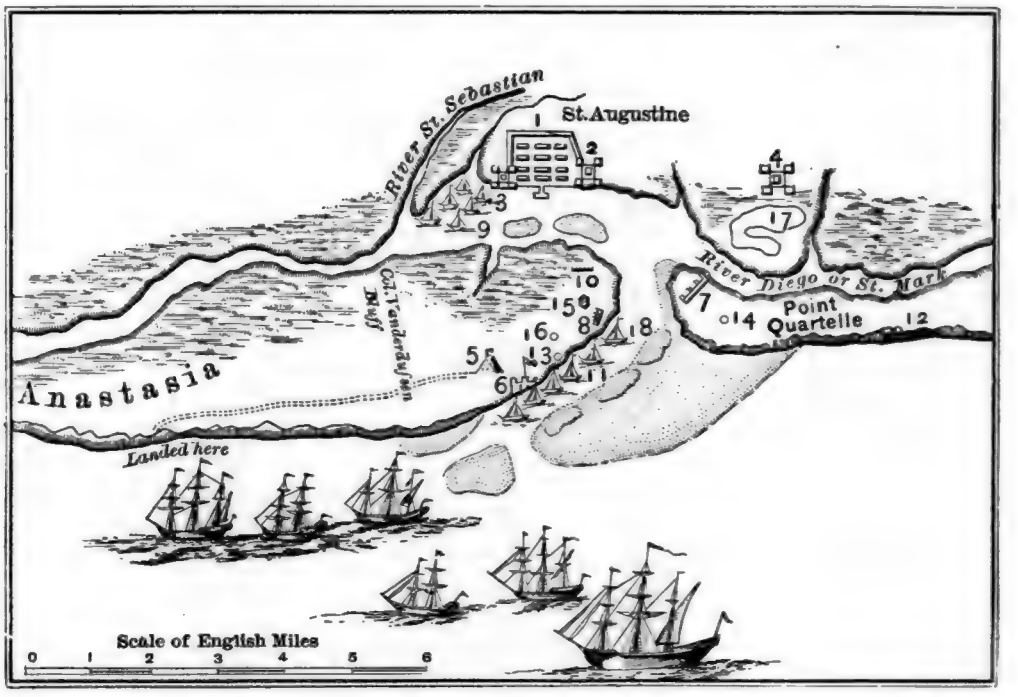
Spanish Retaliation.

[1] South Carolina Report in Carroll's *Collections*, ii. 353.

recolonization of the wasted country before the end of the war. So enraged were the Indians that the Carolinians were obliged to put up forts for their frontier defence, one of which was established at Apalachicola, close to the limits of the State of Florida.[1] The Yemassees, who had been driven out from Carolina into Florida, kept up an unremitted warfare on the frontiers.

Capture and recapture of Pensacola.

So soon as Bienville, Governor of Louisiana, learned in 1719, that war existed between Spain and France, he took Pensacola by surprise. The Spaniards retook it at once, in the same way. But, in September of the same year, Bienville took it again. This time the French commander destroyed the fortifications and the town, leaving only a small battery and a handful of men. In 1722, the Spaniards reoccupied the harbor, and built a town on Santa Rosa island, near where Fort Pickens now stands. But the settlement was gradually transferred to the northern side of the bay, where the present city of Pensacola stands; the point taken on the island having proved particularly sandy and barren.



Hostilities between Georgia and Florida.

In 1732, Oglethorpe's settlement of Georgia pressed even closer than Carolina had done on the frontiers of Florida. Oglethorpe claimed that the Altamaha was the southern boundary of his province. The English fort, King George, erected on the banks of that river, had already given umbrage to the Spaniards, and in 1736, the Spanish government ordered Oglethorpe to evacuate all territory south of St. Helena Sound. The Governor brought three companies of foot with him to Frederica, the most northerly Spanish settlement, — the place still known by the same name on the sea-coast of Georgia. Oglethorpe went at once to England for aid. At that moment the people of England were indignant with Spain for other reasons, and Oglethorpe returned, with the commission of major-general, and a regiment of men. The Spaniards strengthened St. Augustine in their turn. In October, Walpole's pacific policy was abandoned, war was declared, and the English sent a squadron under Admiral Vernon to the West Indies, with directions to aid Oglethorpe, who at once set on foot operations against St. Augustine. He succeeded in cementing the alliance between the English and the Creeks, who hated the Spaniards with a very perfect hatred.

The officers of the navy having agreed to coöperate in the attack on St. Augustine, Oglethorpe appointed a rendezvous on the Florida side of the St. John's River and moved on the 9th of May, 1740, with

[1] This is not at the site of the present town of Apalachicola. The point was farther up the river of that name, not far from Chattahoochee. The fort known as Savanas was still farther up, and must not be confounded with the site of Savannah.

four hundred whites and a large party of Indians. The next day he invested a Spanish outpost called Diego, belonging to a Spaniard, named Spinosa, reduced and garrisoned it. He then returned to his rendezvous, and with his whole command — two thousand men, regular troops, provincials, and Indians, moved against Fort Moosa, two miles from St. Augustine. The Spaniards abandoned this post and retired into the town, which he had given them time to provision by driving in cattle, while he was occupied with Fort Diego and his counter-marches. He was compelled to blockade the harbor and invest the town. He left

Oglethorpe's Attack on St. Augustine (from "An Impartial Account of the Late Expedition to St. Augustine." London, 1742).[1]

ninety-five Highlanders and forty-two Indians at Moosa, to intercept all supplies of cattle for the town. This was all the force he left on the land side. He sent Colonel Vanderdussen, with the Carolina regiment, to take Point Quartelle on the water side, about a mile distant from the castle, and build a battery. With his own regiment and most of the Indians he landed on the island of Anastasia. One of the ships was stationed to the southward to block up the Matanzas passage, and the others blockaded the harbor. Batteries were erected on Anastasia.

Having made these dispositions, Oglethorpe summoned the Spanish

garrison; to receive from the Governor the cheerful answer that he should be glad to kiss his hands in the fort. Oglethorpe then began his attack by throwing shells into the town, which were returned by the fort and six half galleys in the harbor. Little execution was done on either side. Captain Warren of the English navy offered to lead a night attack against the Spanish galleys, but a council of war declared this impracticable. On the other hand, the Spanish commander sent out a detachment against Colonel Palmer in his isolated post at Moosa, and broke it up, killed him and sixty-eight of his men, and took many prisoners. A party of Chickasaws coming to the English camp, cut off a Spaniard's head and brought it to Oglethorpe. He showed his indignation, called them barbarous dogs and bade them begone. The proud "unconquered Chickasaws" were offended, and said the French would not treat them thus, had they carried in an English head, — which was probably true. These allies, thus rebuffed, deserted the English camp. The vessel at the Matanzas passage was not a sufficient guard on the south. For, by the Mosquito inlet, which runs parallel to the sea, supplies from Cuba were received by the garrison. The master of the vessel at Matanzas Inlet could see them pass, beyond his range of prevention. Some Spanish prisoners, who were carried to Oglethorpe, told him that the reinforcements were seven hundred men, with a large supply of provisions. All prospect was thus lost of starving the garrison.

Retreat of the English.

The naval commander of the English feared hurricanes, and said he must withdraw. The Carolinian troops withdrew without asking leave. And poor General Oglethorpe himself, sick of a fever, was obliged to withdraw his own regiment, and reached Frederica early in July.

So disgraceful a defeat of a force so considerable greatly elated the Spaniards. When their supplies arrived from the Havana, they had but three days' bread, and they piously ascribed their relief to St. Rosana, the Virgin of the Apalachees. The Carolinians, who had expended men and money freely in the expedition, were indignant, and charged Oglethorpe with utter incompetency, nor were the officers of the English army and navy of another opinion.

Monteano, the Spanish Governor, who had defended his post so well, expected a renewal of the attack in the autumn, which would have been a much more favorable season for his enemies. He begged for reinforcements, and received eight companies of infantry. But no second attack came. He was tempted to retaliate. A terrible fire had devastated Charleston, and he urged the Governor at Cuba to make an attack on the place at the moment of its exhaustion. His advice was not taken in 1741, but in the next year a fleet of thirty-

six sail with two thousand men was sent to him. He added a force of one thousand men, took the command, and sailed for the harbor of St. Simon's, better known now, perhaps, as the harbor of Brunswick. This movement, however, was, in its turn, unsuccessful, and Monteano returned as much mortified as Oglethorpe the year before.

In March of the next year, Oglethorpe took the aggressive, and marched to the very walls of St. Augustine, with such celerity, that his Indian allies killed forty Spanish soldiers before they could enter the fort. But, failing to draw out the Spaniards for an encounter in the field he again retired, and in 1748, peace at home closed these miserable hostilities on the frontier. The garrison

Continued hostilities.

Old Gate at St. Augustine.

at St. Augustine was so reduced that in 1759 the whole force was but five hundred men. When in 1762 hostilities broke out again between England and Spain, an English fleet seized the Havana, and, on the negotiation of peace, Spain was glad to cede Florida to regain Cuba. This measure indeed was necessary to the tripartite diplomacy between England, Spain, and France, in which eastern Louisiana was ceded to England. For, where eastern Louisiana began and where Florida ended, had never been determined. Spain gained by that treaty all western Louisiana, and could well afford to give up Florida to the victorious English, who thus carried to the Gulf the frontier of that colonial empire which was to be theirs for so few years. The English government named

Cession of Florida to England.

General Grant Governor of East Florida, and he received the post from the Spaniards. At the period of the evacuation the whole population amounted to 5,700 persons, including a garrison of 2,000 men. Many left the place never to return. Three years afterward, a traveller speaks of Picolata, a small fort and garrison on the St. John, Mr. Rolle's settlement, twenty-five miles above, and Mr. Spalding's trading house, fifteen miles farther up, as the only stations on this magnificent river.[1] The greater part of the population of Florida consisted of a mixture of the remnants of the Cowetas, Talipoosas, Coosas, Apalachees, Cussetas, Ockmulgees, Weetumkas, Pakanas, Taensas, Chaesihoomas, Abékas, and other tribes, who had organized in a confederacy under the name, since well known and formidable, of Muscogees. From this confederacy the Seminoles afterwards parted; their name Isty-Semole, wild men, indicates that they were hunters, rather than farmers. In 1773, Bartram speaks of the Seminoles as but a weak people in respect of numbers; he supposes all of them would not people one of the Muscogee towns. As civilization advanced, and the Indian towns were broken up, the "wild men" must have gained accessions from their former kindred. Bartram "ventures to assert that no part of the globe so abounds with wild game or creatures fit for the food of man" as the territory which they then inhabited. The population of this Muscogee confederacy, sixty years after, was twenty-six thousand.[2] The population of Indians and whites in 1762 was probably larger than that of whites and negroes in 1830, when there were only about fifteen thousand of each of those races, reported in the census of the United States.

Condition of Florida at and after the cession.

While the kings of Spain followed up thus languidly the expeditions of Ponce de Leon and of Hernando de Soto, in Florida and the other eastern regions traversed by those adventurers, their viceroys and other officers in Mexico showed more eagerness both in discovery and in colonization to the northward, and their enterprises, both by sea and by land, come within the range of the historian of the United States.

Hernando Cortez himself, as early as 1534, sent out an expedition of discovery under Hernando de Grijalva on the Pacific coast, in which that commander first discovered the peninsula of California. Not long before, a Spanish author,[3] who had with very inferior genius attempted to write a sequel to Lobeira's inimitable romance of Amadis of Gaul, had invented a pagan queen of

Grijalva in Lower California.

[1] Bartram found only the same settlements in 1773, three more trading-posts were to be established in that year. His map shows the sites of "Rollestown" and Spalding's post.

[2] Roman's *Florida*. Gallatin's Synopsis, p. 101.

[3] Garcia Ordoñez de Montalvo.

Amazons, who brought from the "Right hand of the Indies" her allies to the assistance of the infidels in their attacks on Constantinople. In this romance — which bore the name of "Esplandian," — the Emperor Esplandian, the imaginary son of the imaginary Amadis, appears as the Greek emperor, living in Constantinople. The imaginary Amazonian queen is Calafia, and to her imagined kingdom, blazing with gold and diamonds and pearls, the author had given the name "California," a name perhaps derived from the word Calif, which in the mind of the children of crusaders was connected with paynim lands. This romance, which would now be forgotten but for this name California, and from a single reference to it in Don Quixote, was a comparatively new novel in the days of Cortez, the first edition having been issued from the press only in the year 1510, and the second in 1519. Both Grijalva and Cortez were still deluded by the universal impression of their time that they were on the coast of Asia or in its neighborhood; and, having discovered this region near the latitude of Constantinople "on the right hand of the Indies," they were not unwilling to engage the interest of the romance-reading world by giving to their discovery the name of the gold and diamond bearing region of Amazons.

Portrait of Cortez

Origin of the name California.

This unknown country, which by this accident gave the name to the country which proved to be the richest gold-bearing region in the world, was thus described by the exuberant fancy of the romancer. twenty-five years before Grijalva discovered the peninsula of California, and at least thirty years before the discovery of that part of the mainland which has yielded to the world its untold millions of gold.

"Know that on the right hand of the Indies there is an island called California, very close to the side of the Terrestrial Paradise,[1] and it was peopled by black women without any man among them,

[1] In the cosmogony of that time it was supposed, as it had been supposed in Dante's time, that the Terrestrial Paradise was opposite to Jerusalem. Compare Mr. Hale's paper, *Am. Ant. Soc. Transactions*, April, 1872.

for they lived in the fashion of Amazons. They were of strong and hardy bodies, of ardent courage, and great force. Their island was the strongest in all the world, with its steep cliffs and rocky shores. Their arms were all of gold, and so was the harness of the wild beasts which they tamed and rode. For in the whole island[1] there was no metal but gold. They lived in caves wrought out of the rock with much labor. They had many ships with which they sailed out to other countries to obtain booty." In another part of the romance it is said coolly that precious stones are to be found in California like stones of the field for their abundance.

Expedition of Cortez.

The imperious and impetuous Cortez was dissatisfied with the slow progress of Grijalva, and embarked himself, in hope of more success, with four hundred Spaniards and three hundred slaves in 1535. He had, before this, sent a small expedition north by land, of whose fate he never heard a word. He now coasted both sides of the Gulf of California, then called the Gulf of Cortez, but known for nearly two centuries afterwards as the Red Sea.[2] During his stay in the bay of Santa Cruz he learned the distressing news of the arrival of the Viceroy Mendoza. The appointment of this officer by the Emperor Charles left to the great conqueror no civil administration, and restricted him to his duties as military commander. So eager was he, however, for the further prosecution of discovery at the north, that he sent Francisco de Ulloa to continue it, and in the course of two years Ulloa traced the coasts of California nearly to the mouth of the Colorado River of the West.

The very first exploration of the Gulf of California resulted in the discovery of pearls, and from that day to this the pearl fishery has been prosecuted there. In the excited notions of that day, it was taken for granted that a country which produced pearls would produce gold and diamonds; and it can hardly be doubted that a reflected glory from the romance of "Esplandian," and the gorgeous description there of the imagined California, hung over the unexplored parts of the namesake of that province. Spaniards are proverbially ready for building castles in the air; and, although the voyages of Grijalva, of Cortez, and of Ulloa, brought back no diamonds, and no gold, yet they brought pearls enough to awaken popular interest and curiosity. As it happened, also, these reports gave birth to another romance hardly second in absurdity to the fables of Esplandian. Mendoza, the viceroy, was disgusted when he found that his rival Cortez still insisted on his right to send out explorers. When

[1] It is possible that this reference to the island gives the reason why, in face of all explorations, the geographers so long marked the peninsula of California as an island.

[2] So called by Marquette in his Narrative.

Cortez sent out Ulloa, Mendoza borrowed money with which to send out Vasquez de Coronado in the same direction. Coronado sent in advance a Franciscan friar named Marco de Niça, who had with him a negro, one of the four men who had crossed the continent from the perilous expedition under Narvaez.[1] This Father Marco showed a facility in narrative, which belongs only to the master of that "lie with a circumstance" which is said to be the most deceptive lie of all. Returning to Coronado he announced the discovery of seven cities, whose number alone suggested the famous "seven cities" of the island of the old legend.[2] To the capital of these Seven Cities the name Cibola, or Cevola, was given. He gave a description of the city of Cibola, as he finally arrived there after thirty days of travel from St. Michael in Culiacan.[3]

Expedition of Marco de Niça.

According to his story, Stephen Dorantes — the negro, who had served as in some sort a guide, and whom he had sent before him — had been killed by the jealous inhabitants of this city. Niça himself, however, determined to see it with his own eyes; and thus came near enough for the mountain prospect which he describes. He then fled back with his story to St. Michael in Culiacan, "with more fear than victuals," as he says.

In sharp contrast with his tales of gold and silver and turquoises and diamonds, is the business-like report of Vasquez de Coronado, who with a little army followed up the father's traces. On the 22d of April, 1540, they left St. Michael, and on the 23d of June, had arrived, by travelling in a northern and northeasterly direction, on the confines of a desert country of which Niça had warned them. Through the desert "is a most wicked way, at least thirty leagues and more because they are inaccessible mountains." After the thirty leagues, however, they found pleasant country, with rivers and grass, and, in a day more, they met Indians who at first seemed friendly. But a day or two more showed that the natives meant to defend their passes, but brought Coronado to a town, which he called Grenada, and which, however unlike the Cibola of Father Marco's description, he was willing to accept for it.

Expedition and report of Coronado.

"To be brief," he writes, "I can assure your honour that the friar saith truth in nothing that he reported, but all was quite the contrary." Still the names of the cities proved to be correct, and although the houses were not wrought with turquoises nor lime nor brick, they proved to be "very excellent good houses" of three or four lofts high, with good lodgings and fair chambers and ladders

[1] See vol. i., p. 156.

[2] See vol. i., pp. 13, 35. Compare note xxiv. in Appendix to vol. iii., Irving's *Columbus*.

[3] See vol. i., p. 192.

instead of stairs. The seven cities were within four leagues of each other and all together made the kingdom of Cibola.

Of turquoises, Coronado found none, though he thought some had been carried away in fear of his arrival; of emeralds he found two, which were lost on his way home; and of gold none. This was the sorry result of the monk's story and of the expedition founded upon it. The natives wore cotton dresses, though Coronado thought the country too cold for cotton.[1] He said they ate the best cakes that he

A Pueblo restored (from Cozzens).

ever saw, and had the best way of grinding. One woman of Cibola would grind four times as much meal as four Mexican women. They brought their salt from a lake only one day's journey from their city. But they had no knowledge of the Northern Sea, nor of the Western Sea, at which ignorance Coronado did not wonder, for he believed himself one hundred and fifty leagues from the Western Ocean. He describes what we must suppose to be buffaloes, as "sheep as big as a horse, with very great horns and little tails, — with their horns so big that it is a wonder to behold their greatness."

Here ends Coronado's own narrative, which deserves respect and credence. He would not return without doing something nor with empty hands, and as he was told that the country was better and better he went on. Cardenas with a company of cavalry continued

[1] It afterwards proved that these dresses were made from the thread of the *maguey*.

westward till he came to the sea. Coronado went to Tiguex and there had news of the long-sought Quivira. After sieges and battles and other adventures, he found a region which he accepted as worthy of that name. But in place of the hoary headed King Tatatrax whom he was to find here, who was girt with a Bracamart and worshipped a cross of gold with the image of the Queen of Heaven, Coronado found a naked savage, with a jewel of copper hanging from his neck, "which was all his riches." After two years of such misadventures, Coronado fell from his horse and went mad. The rest of his party, excepting one or two stragglers, returned to Mexico.[1]

Fate of Coronado.

They represented Quivira as in the latitude of forty, with grass, plums, mulberries, nuts, melons, and grapes, but without cotton. The people dressed in ox-hides and deer-skins. They reported, Gomara says, that they had seen ships on the coast, with golden albatrosses or pelicans on their prows, the seamen of which made signs that their voyage had been thirty days.

The narrative of Gomara is entitled to little historical regard,—that of Father Niça to none. But the manly letter of Coronado commands respect, and his narrative was unexpectedly confirmed nearly half a century after, by a new discovery which enables us to fix with some precision the site of Cibola and the "seven cities." Coronado's report displeased Mendoza, who had spent large sums in the expedition. But Coronado insisted that the country was poor and too far from succor, and therefore no establishment was made there. An after narrative gives a more particular description of the buffalo, and alludes to the custom of the natives of burning the buffaloes' dung. These notices are alone sufficient, in a degree, to locate Quivira. But his tale of dogs, trained as beasts of burden, has not yet been confirmed by other writers. With the introduction of the horse, the Indians may have abandoned such use of those animals. Meanwhile, upon the coast, after various failures, a voyage was made in 1543, which resulted in the discovery of the sea-coast of that part of California, which is now so important a State. Juan Rodriguez Cabrillo sailed with two ships from the port de Navidad, on the 27th of June in that year.

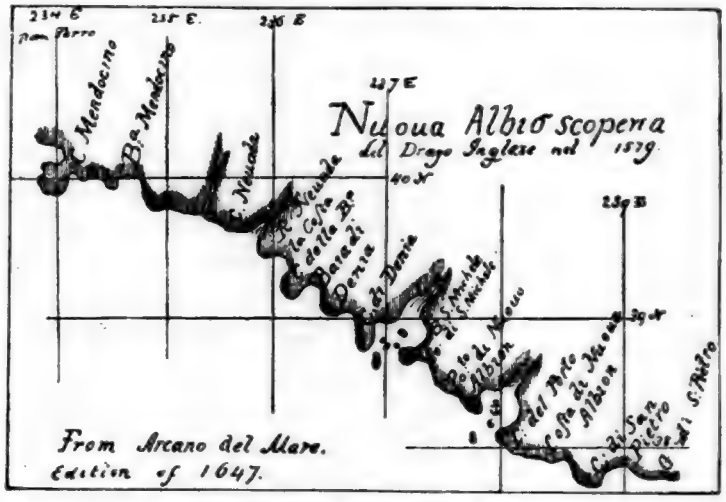
Voyage of Cabrillo.

Touching near the point of the peninsula, he coasted it on its ocean side as far as the latitude of 44°. Here he found extreme cold in March of 1543–44, and returned. He gave names to different points, which have not been retained, with the exception of Cape Mendocino, which he named in honor of the Viceroy Mendoza, who had sent him. He described it as a large cape between mountains covered with

[1] Gomara, cited in Hakluyt, iii. p. 454.

snow. This cape subsequently became the point best known upon that coast, because the Spanish fleets took their departure from it on their way to the East Indies, and it was made the object of the fleets eastward bound. Cabrillo placed it about the latitude of 40° north; it lies, in fact, a few minutes northward of that parallel. Like all other Spanish voyagers of that time, Cabrillo missed the remarkable Bay of San Francisco, the entrance to which is not easily discerned. Near its parallel he described some hills covered with trees, which he called the Point of San Martin.

In the next year Juan Rodriguez repeated this voyage, by sailing as far as Cape Mendocino; but it was reserved for Sir Francis Drake, the great English seaman, to discover a seaport in California. He spent some weeks on shore, and took possession in the name of Queen Elizabeth. He was engaged in his celebrated voyage round the world. With his little fleet, consisting of the *Pelican* of one hundred tons, the *Elizabeth* and the *Marigold* each of eighty, Drake had passed the Straits of Magellan, and entered the Pacific Ocean on the 6th of September, 1578. On the 30th, he lost sight of the *Marigold* in a gale, and never saw her again. On the 8th of October, the *Elizabeth* deserted him; and he was left to pursue his voyage of adventure and discovery in the *Pelican* alone. He was for the rest of that year and the beginning of 1579 the terror of the Spanish ports in the South Seas. Having left the port of Guatulco on the Mexican coast, on the 16th of April, he went directly to sea, and having first sailed west and afterwards north, he ran as far north as the parallel of 43°, or, according to other accounts, of 48° north latitude, — where they were all dismayed by exceeding cold. Six men could hardly do the work of three, so stiff was the rigging from ice, and this as late in the year as the month of June. On the 5th, they made land, and anchored in a bay much exposed to winds and flaws, and, "when they ceased, there instantly followed thick stinking fogs, which nothing but the wind could remove." If this land, the first seen by Drake on the



Sir Francis Drake.

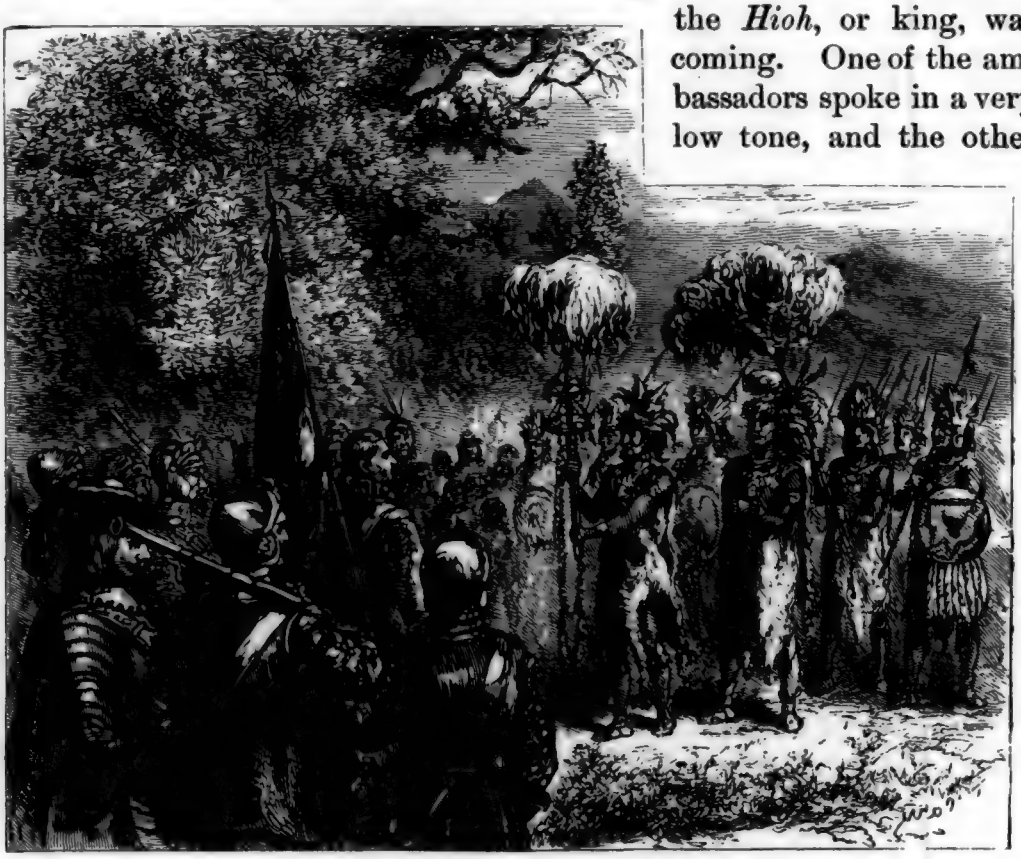
coast north of Mexico, were indeed under the parallel of 42°, as one account implies, it is the shore of Pelican Bay, which has been rightly named from his ship, at the line which divides Oregon from California. But, although the accounts are confused, Drake seems to have seen the coast as far north as 43° 30′ of north latitude, and indeed the claim was made that he saw it at 48°.[1] This latitude corresponds best of all with the accounts of the severe cold. But Robert Dudley, a son of the Earl of Leicester, himself an explorer, and well acquainted with the survivors of these voyages, says: "The reason why Drake sought and found the port of New Albion, was that having passed beyond Cape Mendocino in latitude forty-two and a half, in seeking for water as far as forty-three and a half, he found the coast so cold in the month of June that his people could not bear it."[2] Dudley gives the same latitudes to Drake's discoveries on his map, and it seems probable that the parallel of 43° 30′ marks the northern limit of Drake's discovery. Discouraged by the cold, Drake ran down the shore toward the south-east, and on the 17th of June, "it pleased God to send us into a fair and good bay with good wind to enter the same." In this bay, which he called the Port of New Albion, he lay for more than a month, having landed his men, while he refitted his vessel, and built a little fort on shore.

Drake in California.

Drake's port of New Albion.

Drake's Port of New Albion.

The next morning after their arrival an Indian appeared in a canoe making tokens of respect and submission. He brought with him a little basket of rushes filled with an herb called tabak, which he threw into Drake's boat. Drake tried to recompense him, but in vain, — he took nothing but a hat thrown into the water. Then and afterwards, the ship's company of the *Pelican* thought that these natives reverenced them as gods. Drake proceeded to land his stores, by way of preparation for repairing his ship. As he landed, a large company of the Indians



[1] Humboldt evidently thought so. See Humboldt's *New Spain*, ii. 337, *et seq.*

[2] Early maps, and a note on Robert Dudley in *The Proceedings of the Am. Antiq. Soc.* Oct. 21, 1873.

approached, and, to the end of his sojourn, the most friendly relations were maintained between them and the Englishmen. Drake exerted himself, probably not without success, to remove the impression that he and his were gods. But he took the precaution of fortifying his camp with care against too eager advances.

An embassy from the Indians.

On the 26th of June, the news of the arrival of the strangers having been widely dispersed, a greater number of people assembled, among them the king himself, a man of goodly stature, with many other tall and warlike men, and a guard of a hundred strong. He sent two messengers in advance, to say that the *Hioh*, or king, was coming. One of the ambassadors spoke in a very low tone, and the other

Drake and the Indian King.

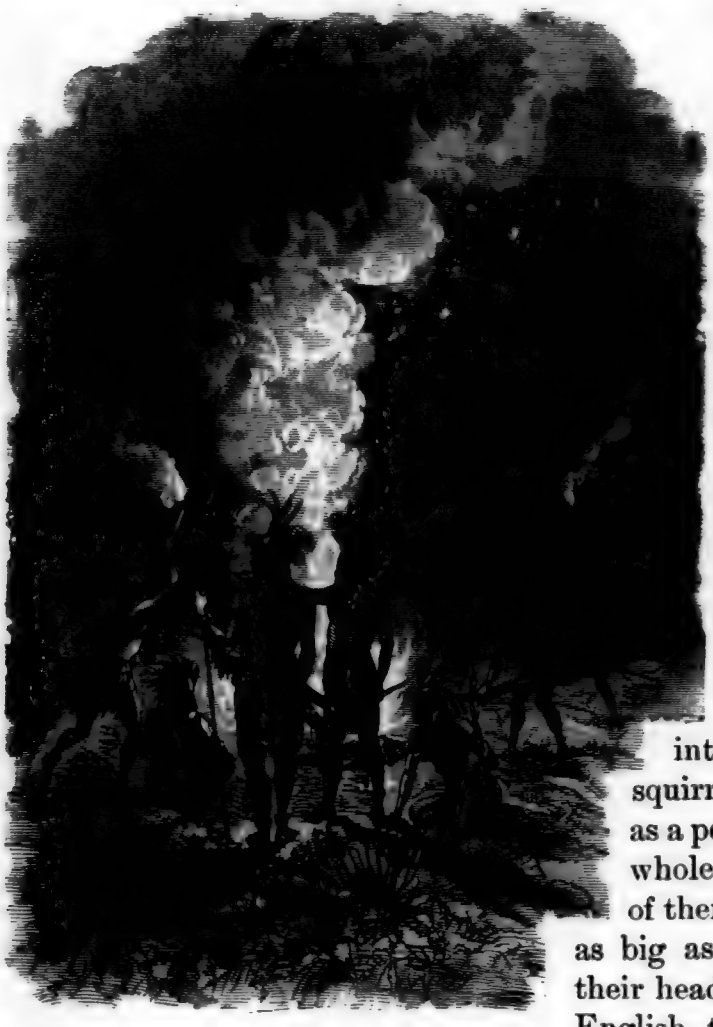
repeated the message verbatim, very loud, in a ceremony which lasted half an hour. They then asked for a present in token of friendship, which Drake gladly gave. On their return to the king he and his train appeared in pomp. In front of him marched a tall man with the sceptre or mace of black wood, a yard and a half long. Upon it hung two crowns, one larger than the other, with three long chains of bone. Such chains were regarded as marks of honor, the links in each were almost innumerable. The king was clothed in a dress of rabbit skins, — this being a distinction which the others might not claim. The guard were dressed in other skins. The great body of the people

were almost naked. Those about the king's person wore feathers as a sign of honor, and had "cawls of feathers" covered with a down growing on an herb, exceeding any other down for fineness, and only to be used by those around the king. The common people were almost naked, but their hair, also, was tied with feathers, arranged in a different way.[1]

Drake received them cordially but with precaution. The sceptre-bearer and another officer then spoke for half an hour, one repeating very loudly what the other said in low tones. This ceremony was followed by a dance, in which the women joined. After this they asked Drake to sit down, and the king and others were then understood by the Englishmen to ask him "to become the king and governor of their country," to whom they were most willing to resign the government of themselves and their posterity; and more fully to declare their meaning, the king, singing with all the rest, set the crown upon Drake's head, and enriched his neck with all their chains. They saluted him by the title of *Hioh*, and in a song and dance congratulated themselves that now he was their king and patron they were the happiest people in the world.

California Indians and their Summer Huts. (From Bartlett.)

Drake having half a continent offered him in this manner, thought best to accept it, not for himself, but for his queen. "In the name and for the use of Queen Elizabeth, he took the Sceptre, Crown and Dignity of that Land upon him, wishing that the riches and Treasures thereof, wherein the upper parts abound, might be as easily transported to England as he had obtained the sovereignty thereof." When the ceremony was finished, the common



Drake made king by the savages.

[1] La Perouse and Langsdorff observed their fondness for feathers, as late as the end of the eighteenth century. "The feathers are twisted together into a sort of ropes, and then these are tied close together, so as to have a feathery surface on both sides." Langsdorff counted in one feather bandeau four hundred and fifty tail-feathers of the golden-winged woodpecker. Each woodpecker furnishes but two feathers. — See Forbes's *California*, p. 183.

people eagerly offered sacrifices to the strangers with shrieks and weeping, tearing the flesh from their faces with their nails. The English vainly attempted to dissuade them, by lifting their hands and eyes to heaven. During their stay the people generally brought sacrifices every third day, till they at last understood how much the English were displeased by them.

Expedition into the interior.

As soon as the English had finished the repairs upon their ship, Drake and some of his company made a journey into the interior. He found the Indians living in villages. The houses were made by digging round holes in the earth, covered by poles of wood, which met in the centre "like a spired steeple," the whole being covered with earth. The door "made slopous like the scuttle of a ship" was also the chimney.[1] The people slept in these houses on rushes on the ground, around a fire in the middle. The country was very different from the barren sea-shore. It was fruitful, and furnished with all necessaries. The adventurers saw thousands of deer in a herd, and were much interested by the ground squirrel, which they describe as a peculiar "coney." The whole country was a warren of them. Their bodies were as big as the Barbary coneys, their heads as the heads of the English, the feet like the feet of a want, and the tail long like that of a rat. The coney had on each side of the chin a bag into which to gather such food as he did not need to eat.

Drake's Departure.

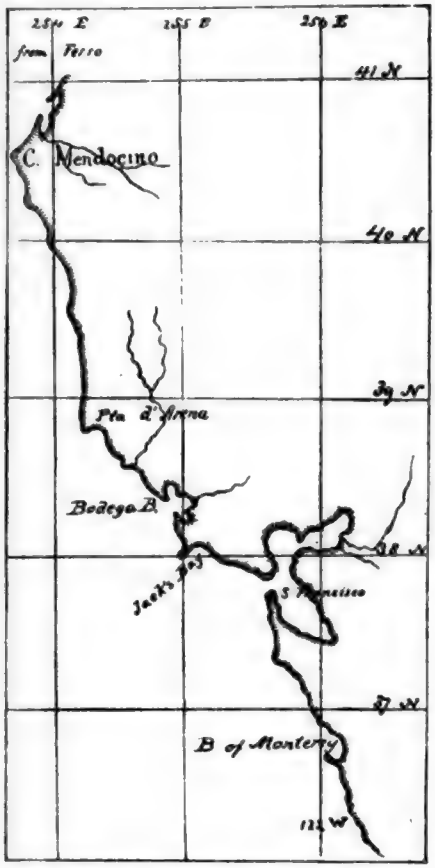
Returning to his port, Drake took possession of the country in the

[1] Captain Beechey found similar houses as late as 1827.

name of Queen Elizabeth. He erected a monument which was, like so many other monuments of possession, only a wooden post with a copper plate upon it. On this he inscribed an assertion of the right of Queen Elizabeth and her successors to that kingdom, with the time of his own arrival, and a statement of the free resignation of the country by the king and people into her hands. Her picture and arms, and Drake's arms, were also engraved on this remarkable plate, which must have done credit to the amateur engraver from the crew of the *Pelican*.

Drake's departure.

After this ceremony of possession, the ship sailed for the Moluccas, to the great grief of the native king and his followers, who lighted fires on the cliffs as if to cheer them on their way.



Locality of Drake's Bay.

It is a curious question, not yet decided by geographers, what was the bay where Sir Francis Drake repaired his ship, and on the shore of which he encamped and took possession. The various accounts differ about the highest north latitude attained by Drake, but when driven back by cold weather he came south, they agree "it was within thirty-eight degrees toward the line." "In which height it pleased God to send us into a fair and good bay with good wind to enter the same." Was this bay the Bay of San Francisco, of which the opening, by the Golden Gate, is in 37° 49′ N. latitude, or is it the open bay just above this, marked on the maps as Sir Francis Drake's Bay, or is it Bodega Bay, where the latitude of the anchorage is 38° 19′?[1] Within so narrow a range it would be idle to infer anything from Drake's general statement that the good bay which God led him into was in 38°. Either of them is near enough to meet that definition.

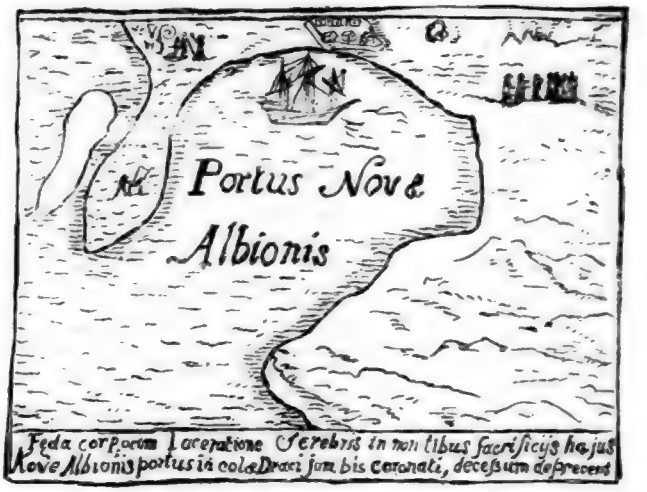
The maps annexed will enable the reader to understand this difficulty. The more modern one represents the coast substantially as it has been drawn by the accurate hydrographers of our own time. The other was drawn early in the seventeenth century by Robert Dudley, son of the great Earl of Leicester, himself a navigator and the son-in-law of Cavendish, one of the explorers of the South Seas. Drake's port of New Albion will be found on this, so drawn as to represent sufficiently well the double bay of San Francisco. If this were the only authority it would probably be granted that Drake's port was San Francisco Bay. But it is quite certain that the Spaniards, who eagerly tried to rediscover the port, with this map in their possession, did not succeed until near two hundred years after. Long before they did discover it, they were seeking for it, calling it the Bay of San Francisco — that name probably having been taken from no less a

[1] These latitudes are those of Captain Beechey's survey.

saint than the heretic, Sir Francis Drake. In 1769, a land party discovered the great bay which runs south from the entrance, now called the Golden Gate. But it was not until 1776 that this inland sea was connected by the Spaniards with the ocean.

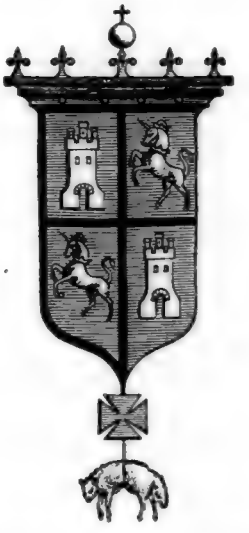
Map of a Part of the California Coast.

It is urged on the one side, that Sir Francis Drake would never have called "Jack's Bay," which is the Sir Francis Drake's bay of the maps, "a fair and good bay," nor thanked God as for a special providence for the wind which took him into that open roadstead, which under the circumstances, he could hardly have kept out of. If indeed, he did land, and unload his ship there, repair her, and take in his cargo again, lying for five weeks there, he is the last shipmaster who has done so. Having done so, that he should have drawn the bottle-shaped bay, which appears on the charts of his time, seems impossible. For such reasons, high authority[1] concedes that he entered the Golden Gate and the Bay of San Francisco, now known by that name. On the other hand, it is urged that the physical distinctions of the Golden Gate and the present San Francisco Bay are so marked that Drake or his historian must have said more of them: that "fair and good bay," is not language as strong as should be used of that matchless harbor, and that once discovered, it could never be forgotten. The weight of Californian opinion at this time seems to be that Sir Francis Drake never entered the Golden Gate. In one of the early narratives of his voyage, in Hondius's voyages, the annexed map of the bay, unfortunately with no scale, is given in the margin. It bears this inscription in very bad Latin: "The inhabitants by terrible frequent laceration of their bodies deprecate the departure of Drake, now twice crowned, from this harbour of Albion." But it is clear enough, from an examination of the copy of a small part of the Bay of San Francisco, from Captain Beechey's survey, that the draughtsman of Hondius's[2] map, had no knowledge of that great estuary.



Opinions of geographers.

[1] So Davidson in the *Coast Pilot*, and Mr. Greenhow.



[2] For the copy of Hondius's very rare map, we are indebted to Mr. Charles Deane.

It is equally sure, however, that his map represents no other bay on the coast, and that it must, therefore, be taken as merely imaginary.

Dudley also says that Drake found many wild horses at the northward, — at which he wondered, because the Spaniards had never found horses in America. It is customary to account for the immense herds of American horses on the assumption that the Spaniards introduced them. Drake's visit, however, to Port New Albion was but thirty-eight years after Coronado's visit to Cibola, — which, as we now know, was at least five hundred miles away. It is difficult to believe that a few stray horses from Coronado's troop, should, in so few years, have multiplied into large herds observed by Drake on the distant seaboard of Oregon. Coronado had but few horses, would have had fewer brood mares, and would have been apt to mention any loss of a large number of auxiliaries so essential.

Hondius's Map of Drake's Bay.

CHAPTER XXIV.

SPANISH EXPLORATIONS AND COLONIZATION.

Father Augustin Ruyz. — Rio del Norte. — Cunames. — Acoma. — Zuni or Cibola. — Juan de Oñate. — El Paso. — "El Moro." — Inscriptions. — Viscaino. — Eusebio Francisco Kino. — Salvatierra. — Arizona — Pablo Quihue. — Father Augustin de Campos. — Expulsion of the Jesuits. — La Salle. — De Leon. — St. Denis. — Don Martin d'Alarcorne. — Texas.

Two years after Drake's departure a land expedition on the other side of the Sierra brought the lost cities of Cibola to light again.

Expedition of Ruyz.

In the year 1581, the Franciscan Father, Augustin Ruyz, interested by the report of some Conchos Indians, undertook an expedition northward, which resulted in the re-discovery of Quivira and some certainty as to the location of the Cibola of Coronado. Eager to save souls, Ruyz obtained leave to travel thither, and started with two brethren of his order, and eight soldiers. Leaving the mines of Santa Barbara in Northern Mexico, in the southern part of the present province of Chihuahua, four hundred and fifty miles from the capital, they began their journey northward; but one of the friars having been killed by Indians, the soldiers deserted the others, and left them to go forward alone. When at Santa Barbara the soldiers reported the plight in which they had left these holy men, a spirited gentleman of St. Bartholomew, a station in the neighborhood, named Antonio de Espejo, raised a company for their relief,

Journey of Espejo.

and started, in November, 1582, with a caravan of one hundred and fifteen horses and mules and some Indian guides. They travelled northward through various tribes, and soon struck the Conchos River, which flows into the Rio del Norte. Here they found natives who seemed to have some knowledge of the symbols of Christian faith, and when asked how they obtained it, they said that three Christians and a negro had passed that way, and had instructed them.

The Spaniards believed these missionaries to have been Cabeça de Vaca, Dorantes, and Castillo Maldonado, with their negro whose escape from the wreck of Narvaez's party has been described.[1] Con-

[1] Vol. i., p. 156.

tinuing northward, the explorers met men, willing to trade with them, who wore cotton garments, made of stuffs striped with white and blue.[1] They could only converse with them by signs. But they saw among them the precious metals; they learned that these were obtained from a place at five days' journey westward. After travelling together for some days, — probably along the foot of the Organ Mountains — they found a Concho Indian whose language they could

The Organ Mountains, near El Paso.

in part understand. He told them that fifteen days westward there was a large lake, and that, after passing this, they would come to large towns with houses of three or four stories high, whose inhabitants were well clothed. He even offered to conduct them thither. The adventurers were not able to follow his directions, because they were still pressing to the north in pursuit of the two priests whom they hoped to succor.

Travelling up the valley of the Rio del Norte they passed for fifteen days together a forest of pines, "such as men see in Castile," without meeting any inhabitants. Eighty leagues farther they came to a little village, whose inhabitants surprised them by the skill with which they tanned their leather, which was of as fine quality as that of Flanders. After two days' stay with them, still following the river, of which they found both banks cov-

The Valley of the Rio del Norte.

[1] The impression of later travellers is that this cloth was that made from the maguey fibre.

ered with poplars, varied sometimes by nut trees and vines, a journey of two days brought them to villages containing ten thousand persons, where they were well received. The houses were well built, four stories high, with good chambers, most of them having fire-places for winter. The people were well dressed in cotton and leather, with good shoes and boots, such as the Spaniards had not seen among the natives before. To this country they gave the name of New Mexico.

The Tiguas.

After remaining with them for four days the travellers went on to another tribe called the Tiguas, of sixteen towns. Here it was that the missionary had been killed, and here in a town named Poala, they obtained news of the murder of the two other fathers whom they were seeking, Lopez and Ruyz. The Indians seeing the interest taken in these men by so large a company, fled from their houses and could not be persuaded to return. Espejo determined to establish a camp here, and with only twelve companions to prosecute the further discovery. In two days more he came to a country of eleven towns, of which the natives said the population was more than forty thousand. Espejo believed that this country was next to the famous Cibola. He was cordially received and found the appearance of rich mines, and observed that, in the houses where the idols were, there were pieces of silver. After this expedition he returned to his camp. Here he obtained news of the province of the

The Quires.

Quires, six leagues from the Del Norte. He visited them, and found five towns, with a population of fifteen thousand people. The Spaniards were pleased to find a pye in a cage, "as you may see in Castile," and umbrellas, like those of China, on which were painted sun, moon, and stars. At this point Espejo fixed his latitude and found it 37½° north. If this observation were correct, he was in the limits of the present State of Colorado; but this must have been an error of more than two degrees.

The Cunames, the Amejes, and the town of Acoma.

Fourteen leagues further he found the Cunames, who had five towns, with a population of twenty thousand people. Their houses were built of stone and lime and were the best he had seen. They also had the precious metals. Next to them were the Amejes, thirty thousand in number; fifteen leagues westward, the travellers found the town of Acoma, inhabited by six thousand people. This town is still in existence, probably with the same race of inhabitants. It was on a high cliff, which has more than fifty platforms in height, and could only be ascended by steps cut out of the rock itself. At this the Spaniards greatly wondered. All the water was in cisterns. The people met the Spaniards cordially and brought them presents of clothes. Their arable land was two leagues away and was watered by artificial means from a little

river in the neighborhood. Here the Spaniards spent three days, and were entertained by a solemn ball.

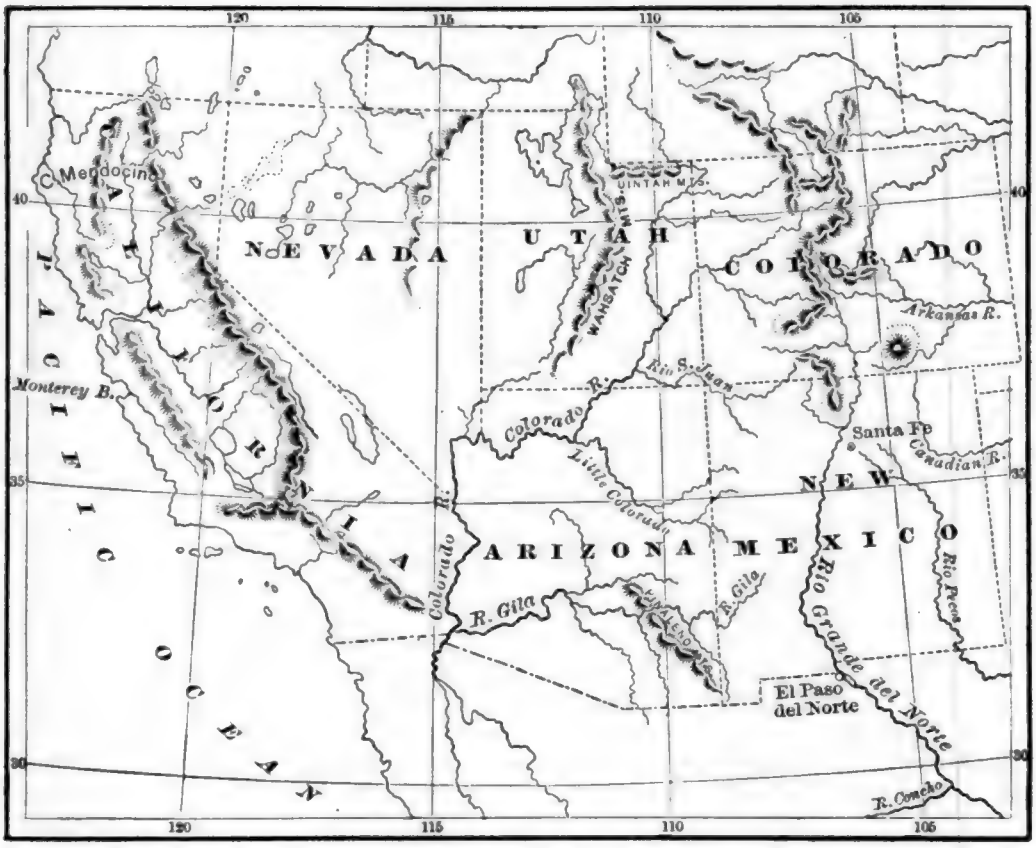
This curious spot is perfectly known. Similar cave dwellings in other regions have been identified, described, and pictured by the recent surveying parties of the United States government. The description of Acoma is so distinct that it is clear that at some point Espejo must have left a little while before what we call the Del Norte, and come on the waters of the Puerco River.[1]

Espejo reaches Cibola.

Twenty-four leagues further west, Espejo and his men came to the province known as Zuni by the natives, and Cibola by the Spaniards, which Coronado had entered half a century before from the Gulf of California. They found the crosses planted by him and other tokens of his presence, among others three baptized

Acoma.

Indians, who served them as interpreters. These men apprised them of a great lake sixty days further on, where were great cities with much gold. The province of Zuni still retains its name. The Zuni



[1] Judge Cozzens thus describes Acoma in 1860: "It stands upon the top of a rock at least three hundred and fifty feet above the surrounding plain. The Pueblo can only be reached by means of a staircase containing three hundred and seventy-five steps, cut in the solid rock. At the upper end of this is a ladder eighteen feet long, made from the trunk of a tree, in which notches have been cut for the feet." — *The Marvellous Country*, p. 287.

A narrative by Mr. Holmes of similar residences now in ruins, further west, describes such edifices where Spanish civilization has not followed on that of the natives. The remnant of the cave dwellings may still be traced. The openings are arched irregularly above, in a soft and friable shale, a hard stratum serving as a floor. In many instances, this gave a platform by which the inhabitants passed from one house to another. Fragments of mortar still show that the houses were plastered. They probably had doors and windows.

A drawing by Mr. W. H. Holmes, who visited a series on the San Juan, in 1875, shows their appearance at that time. In another drawing, Mr. Holmes gives his impression of their appearance when occupied, as Espejo may have seen them.

people still live there, and maintain at their altars the worship of the days of Espejo.

Espejo was disposed to go still farther on his adventures. But, finding the religious men and most of the party unwilling, he went on with nine soldiers only. After travelling twenty-eight leagues, they came to the city Zaguato. After some suspicion, they were hospitably welcomed. Espejo, after a few days' stay, went with five companions forty-five leagues farther. Here he found the mines of which he

Map of California, Arizona, and New Mexico.

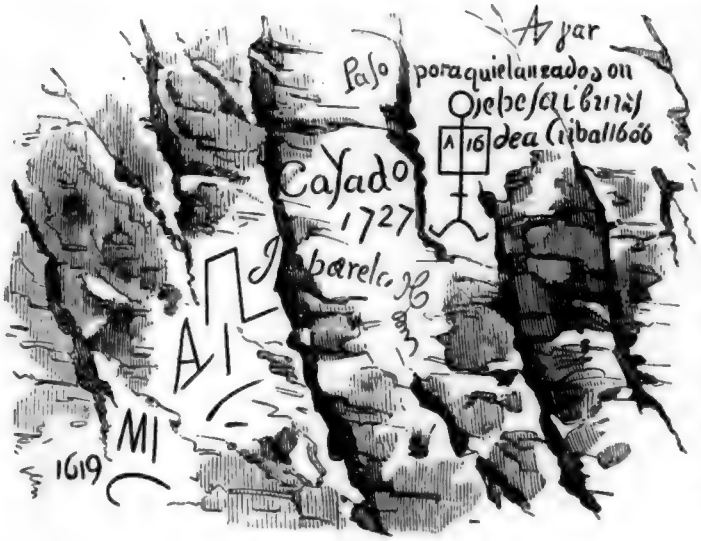
had been told. With his own hand he took ores which contained a great quantity of silver, of which he could see that the vein was very large. The Indians of the neighborhood received him kindly. They told him that on the other side of their mountains was a river eight leagues wide. They showed by signs that it flowed to the Northern Ocean, and on its banks the towns were so large and so many that their own were nothing but hamlets in comparison. With this intelligence Espejo returned to Zuni, or Cibola. Unfortunately the account does not tell in what direction Espejo travelled from the site of the Zuni. Their pueblos are placed by the surveyors of the United States government about latitude 35° north, and longitude

109° west.[1] The city of Zaguato, twenty-eight leagues distant, is not easily identified. The interesting tribe of Moquis are now at about that distance to the northwest of the Zuni.

When Espejo rejoined his party the greater part of his people determined to return to Santa Barbara. But he himself, with eight soldiers, undertook the further exploration of the River del Norte. Having returned to the Quires, he found, twelve leagues west of them, the Hubates, twenty-five thousand in number, who received him kindly. Their houses also were four or five stories high, and their hills covered with pine and cedar. Next to this tribe were the Tamos, who were not friendly; and Espejo, rather than risk a conflict with them, returned home by another valley, of a river which he called the River of Cows, so many did he find there. This stream brought him to the Conchos River, by which he returned to the valley of St. Bartholomew, whence he had departed. He found that the other part of his party had preceded him. The expedition had lasted nearly two years.[2]

Further explorations of Espejo.

The interest excited in Spain by these discoveries must have been very great, although with the policy which then prevailed at Madrid, no official publication was made of them. It seems to be by accident that the narrative of Espejo was printed in connection with the history of China, from which the vigilance of Hakluyt at once reproduced it for English readers. Orders were given from Madrid that New Mexico should be occupied, and as early as 1594 we have the thanks of the king to the company of Jesuits for their success in planting missions there. In that year it was attached to the ecclesiastical charge of Father Martin Pelez of Cinaloa, the most northerly station till then held, and on the other side of the Sierra. In 1595, the Viceroy of Mexico, the Count of Monterey, sent Juan de Oñate into New Mexico, and under his directions colonies were planted in the valley of the Rio Grande.[3] One of Oñate's settlements was near Santa Fé, which may probably, therefore, claim to be settled before Jamestown, and to be, after St. Augustine, the oldest town built by whites in the United States. Acoma is an older town. The original settlement by Oñate was made with



The news of these discoveries received in Spain.

[1] It is in section 77 of the Hayden Survey.

[2] This narrative is preserved by Gonzales de Mendoza, the author of the "History of China" and the "Itinerary to the New-World." It is perhaps embellished by exaggerations. But it carries with it, — in many of the local descriptions which were not verified for nearly three centuries by other narrators, — evidence that Espejo went over the ground which he described. He may be considered, therefore, as the discoverer of New Mexico, and the valley of the Gila, above the points where it had been explored by Coronado. It is probable that in the word Tiguas we have the origin of the name Texas, which next appears in the form Latekas, used by La Harpe.

[3] Allegre, *Hist. Jesuits*, vol. i., p. 325. Mexican edition of 1842.

one hundred soldiers and five hundred settlers, and it is not probable that the establishments in New Mexico largely exceeded these numbers for a century. A bloody massacre by the Indians in 1640 is alluded to by the Jesuit historians, and in 1680, by a successful union of the pueblos, they drove all the Spaniards from the upper river and compelled them to take refuge in El Paso. Successive expeditions against the Indians from that point proved unsuccessful till 1692, when Diego de Bargas regained possession of the valley for the Spanish garrisons.[1] The town of El Paso, on the Mexican side of the frontier of the United States, where the western boundary determined by the treaty of Guadalupe Hidalgo begins, was probably founded by Oñate. The Piro Indians had a village called Sinecu, which still exists within the precincts of the town. From the missionary establishment there, it is probable that the town of El Paso sprung. The signs of Moorish architecture may be still noticed in the public buildings of El Paso, as in other mission buildings of Mexican or Spanish origin in that region; and the venerable church itself is supposed by the worshippers to have been built in the earlier part of the seventeenth century.

Inscription Rock.

From this time, with various reverses, the valley of the Rio Grande was held by Spanish priests and officials, with some settlers. Inscription Rock, a remarkable rock on the west side of the Sierra Madre, not far from the pueblo of Acoma, records, not insufficiently, the history of this outlying province, in the autographs, or autoglyphs, of the men who belonged to the time. For two hundred and ten feet of its height this rock has a natural polish. At a distance it perfectly resembles a Moorish castle, so that the Spaniards called it "El Moro." Indians and Spaniards have used it as a monument rock; and when Lieut. Simpson saw it in

Inscription Rock.

[1] The dates given by Pike, Allegre, and Venegas are confused, but those in the text are furnished for Lieutenant Simpson by Don Donaciano Vigil, Secretary of State for New Mexico, and may probably be relied upon.

1849, he found a large number of inscriptions still visible. Some were mere savage carvings of hands or animals, but many were in Spanish or a sort of Latin.[1]

Action of Spain in regard to California. Viscaino's voyage.

On the western coast, the news of Drake's discovery stimulated the court of Spain to make some new efforts to save the land, whose natives had given it to the heretic queen. Under the king's own orders Viscaino, an officer of ability, was again despatched on the survey of the coasts of California. After one voyage on the gulf, which resulted in disaster, he sailed from Acapulco for a second on the 5th of May, 1602, and went as far as the parallel of 42° north. He rediscovered the harbors of San Diego and Monterey, and gave to them those names. He reported that the natives on the coast were docile, clothed with the skins of sea-wolves, — but with abundance of hemp, flax, and cotton. The Indians all told him, he said, that in the inland were large towns, silver, and gold. Viscaino's manuscripts have not been brought to light. His second voyage was not finished until 1603. It appears that his instructions were to put into "Puerto Francisco," and see if anything was to be found of the ship *San Augustin*, which in 1595, had been sent from the Philippine Islands to survey that coast, and had been lost there.

[1] With praiseworthy accuracy Lieutenant Simpson copied these curious records, and in his Report fac-similes of them were published. There are thirty-eight inscriptions in his list, ranging from the 16th day of April, 1606, when some officer "passed this place with despatches," down to 1836. It seems to have become a custom with the Spanish officers to leave here a brief account of their mission. As the other records of New Mexico before 1680 were burned by the Indians in that year, the earlier of these inscriptions supply names and dates not elsewhere accessible. The character of them may be understood from such examples as these:

"Passed this place with despatches — 16th day of April, 1606."

"J. Apaulla, 1619."

"Bartolome Narsso, Governor and Captain General of the provinces of New Mexico, for our Lord, the King, passed by this place on his return from the pueblo of Zuñi, on the 29th of July, of the year 1620, and put them in peace at their petition, asking the favor to become subjects of His Majesty; and anew they gave obedience. All which they did with free consent, knowing it prudent, as well as very Christian.

"To so distinguished and gallant a soldier, indomitable and famed, we love. . . . ." (The rest of this inscription is illegible.)

"Here passed General Don Diego de Bargas to conquer Santa Fé for the royal crown, New Mexico, at his own cost, in the year 1692."

Judge Cozzens, in 1860, found and copied an earlier inscription: "Don Joseph de Bazemzalles. 1526." Judge Cozzens rightly says, that such an inscription could only be truly carved by one of the lost officers whom Cortez sent north in a quest for the lands of silver. Of that band of twenty men there is no history since they left Cortez, excepting on this silent stone.

But, among Lieutenant Simpson's inscriptions, there appears, perfectly distinct, on another part of the rock, "Por aqui pazo el Alferez D^{n} *Joseph* de Payba *Basconzelos* el ano que tugo el Canildo del Reyno a su costa a 18 de feb^{o} de 1726 Anos." *Tugo* is some misspelling of the stone-cutter, — but the meaning is that this officer, whose rank was that of lieutenant, passed here in an expedition undertaken at cost of the council of the kingdom.

She was under the direction of Sebastian Rodriguez Cermenon. Her pilot, Volanos, was chief pilot of Viscaino's squadron. Having passed the latitude of Port Francisco, they returned to look for it, and anchored under La Punta de los Reys. This is the westerly point of "Jack's Bay." They did not land, and Viscaino having parted from his tender, continued his voyage in search of her. He thus lost his opportunity of discovering the great Bay of San Francisco. He ran up the coast, as far north as 42°, and then, because his whole company were sick with a terrible distemper, they returned to Acapulco. The tender persevered as far as 43°. Here her com-

Acapulco.

mander found a river whose banks were covered with ash trees, willows, and other Spanish trees. But he had passed farther than his orders directed, and he returned to Acapulco also. No such river exists in that latitude. The Columbia is as far north as 48°.

Order of Philip III.

Philip III., of Spain, or some minister of his, on the reception of this report, issued a very interesting order, of the greatest stringency, that the search for a harbor should be renewed, and that Monterey should be occupied. But the fatality of inaction, which governed both Mexico and Spain, prevailed. Viscaino died as he was preparing for the expedition ordered, and the occupation of Northern California was reserved to another century. Men, widely differing from those who discovered California, acting under another class of motives, undertook the colonization which for a century and a half had been neglected, since it proved that she had no cities of gold and turquoises. The Spanish court, meanwhile, had changed as

much as the adventurers in Mexico had changed; and the appeals to Charles the Second of Spain rested on different motives from those which had swayed the Emperor Charles, who from his distant throne lifted Cortez or put him down at his will.

After one and another inefficient scheme for the conquest, as it was called, of California, a royal order came from Mexico to Spain that all enterprises in that direction should be laid aside. At this moment the Jesuit body, hardly yet declining from the maturity of its power, was urged by the persons in command in Mexico to take the charge of California. The Viceroy offered to the Jesuits the necessary sums, to be paid out of the king's treasury, if they would undertake the enterprise. The Mexican chapter of the society was convened for the consideration of the proposal, and answered that while the society would undertake the spiritual duty of furnishing missionaries, they saw great inconveniences in undertaking the temporal charge of such an enterprise, and declined. The general council urged it again, but again the society refused. The last of these refusals was in 1686.

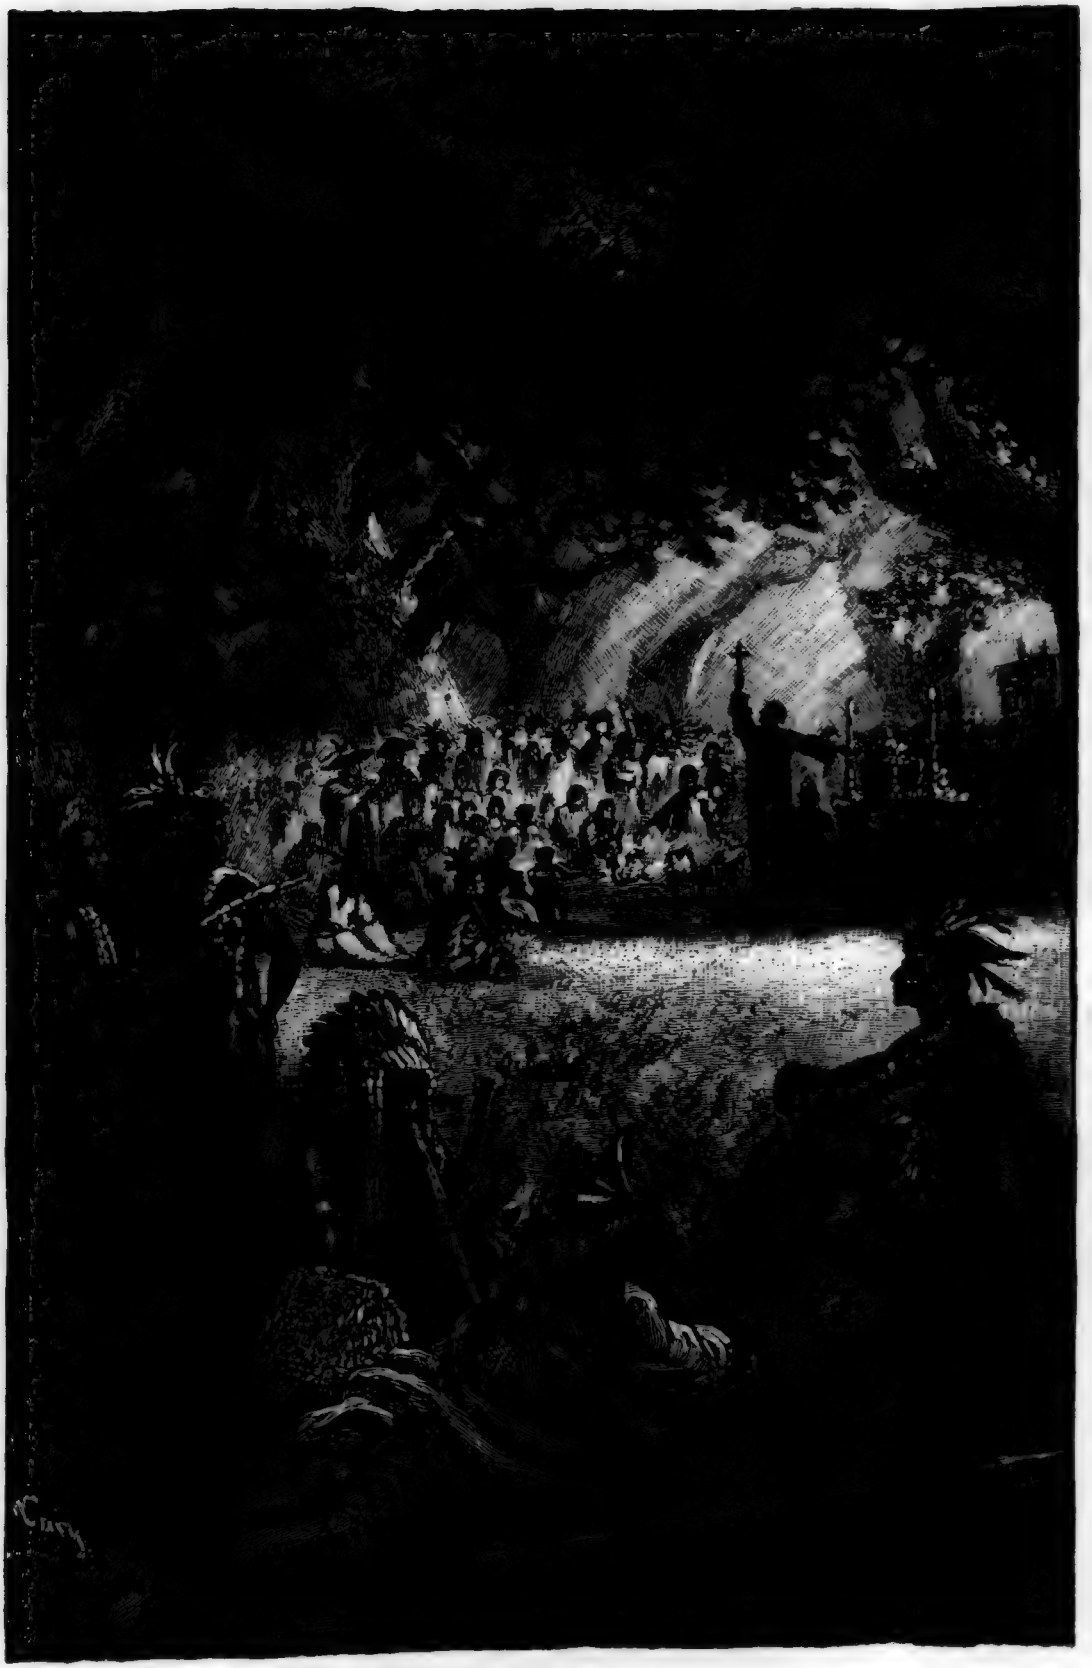
Portrait of Philip III. of Spain

Eusebio Francisco Kino, a brother of the Jesuit Society, who had come from Ingoldstadt in Bavaria, in pursuance of a vow made when seemingly at the point of death, undertook, almost single-handed, the regeneration of the peninsula of California. To his efforts, as it proved, the first settlement was due of those parts of California and Arizona which now belong to the United States. It is said that as early as 1658 he had been connected with the explorations of Arizona.[1] He had afterwards been engaged in the examinations of the peninsula of California made by order of the government. In 1686 he left the city of Mexico, as superior of the province of Sonora, the Mexican province immediately south of Arizona.[1] In 1670, with other priests, he set out on a mission on the Gila. In 1672, he began a mission among the Yaquis. Before 1679 he and his companions had established five missions among Yaquis, Opotes, and Papa-

Father Kino in California.

[1] Cozzens's *Wonderful Land* (Arizona), p. 32. Mr. Cozzens refers to MSS. in the monastery of Dolores. Kino accompanied Admiral Otondo as early as 1648.

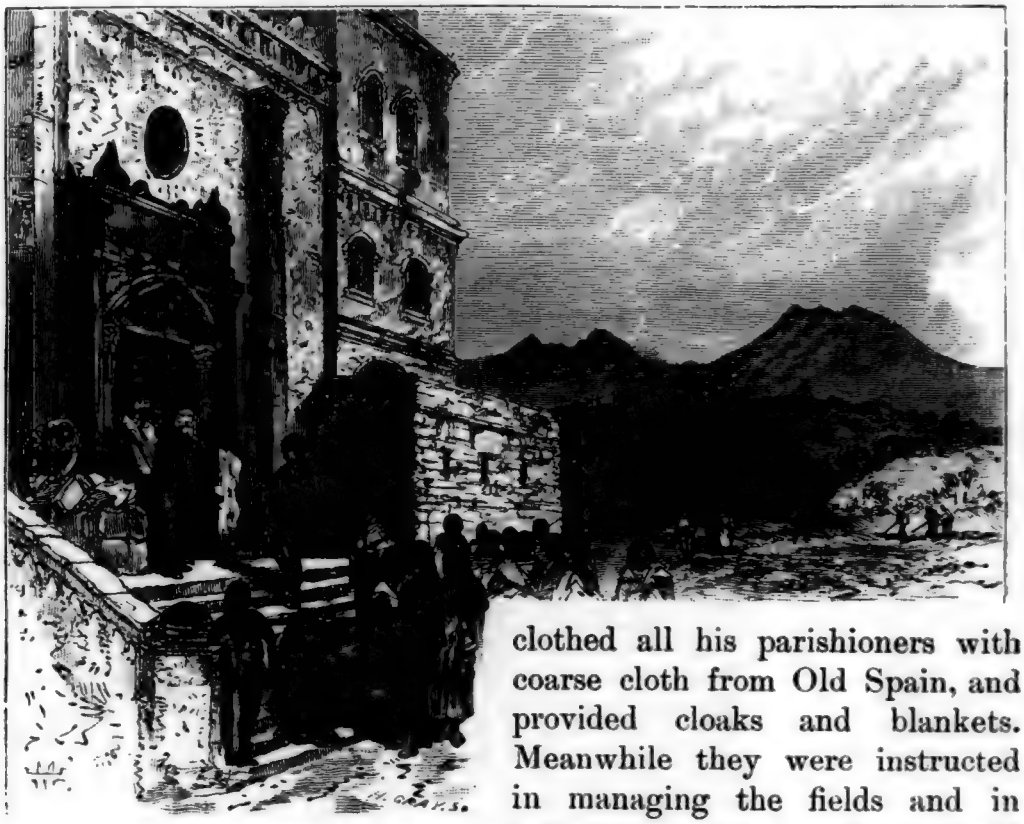
goes.[1] On the left bank of the Gila, he established Encarnacion and San Andres. In San Andres he describes one of the "great houses," four stories in height, which recall the memories of Cibola. His wishes for California were not accomplished until 1697, when Father Salvatierra was appointed to make collections for a mission in Lower California, and at length sailed from Hiagui in that service on the 10th of October.



The Californian Missions.

The sedulous efforts by which he and his companions attempted to civilize and Christianize the savages of that peninsula, do not belong to this narrative. But as a consequence of these plans, a series of missionary efforts grew up, which resulted in the first civilization of the State known as California of the American Union, the limits of which correspond nearly with those of the province of Upper California, as it is described in the narratives of Mexico. The friendly relations of Father Kino in Sonora on the eastern side of the Gulf of California, with Father Salvatierra on the west side, led constantly to mutual offices of kindness and help; and the history of the two regions is substantially one history of two provinces, administered in the same spirit and under the same general system. In one expedition of Salvatierra, he passed to the head of the gulf, and satisfied himself that California was indeed a peninsula. "This discovery," he says, "we owe to the holy virgin of Loreto;" and he adds, "these are the steps by which within a few years California may come to be the soul of this kingdom, the main source of its opulence, the scene of cheerful industry; and accordingly I conclude that you will charge all persons that they continue to assist us in these missions of Nuestra Senora de Loreto de Californias."[2] There was only this external distinction between the missions of California and those of Sonora: that in California a handful of soldiers was in each mission placed under the direction of the Fathers. In Sonora, the garrisons, if garrisons there were, were directed immediately by the viceroy. But scarcely any difference in result seems to have arisen from this distinction. It must be understood that the word Sonora, in the history of that country at that time, includes what is known to our geographers as Arizona.

Having selected a point for a mission, the fathers began immediately to invite and induce the Indians to attend the daily religious services. As soon as they themselves acquired the language of the country, they taught the natives the catechism in that language. By way of rewarding those who attended on the services, the fathers served out rations to them, and attempted in the same way to wean all the



[1] *Noticias Estadicas del Estado de Sonora*, by Jose Francisco Velasco. Mexico, 1850.

[2] *Venegas*, vol. i., p. 307. English translation.

JESUIT MISSIONARIES IN CALIFORNIA.

savages from the habits of wanderers. In California all who attended divine service were wholly supported by the mission. Every morning and night they received an allowance of "atole," a sort of hominy; at noon they were served with boiled Indian corn, called pozoli,[1] and with fresh or salt meat and vegetables, according as the mission provided. All the sick, aged, and children from six to twelve, and the Indian governor of the village, were also thus provided with food. Beside these, a weekly allowance of the same amount, was made to such Indians of the rancherias as came to be catechised and as attended the divine service on Sunday. The missionary priest also

The Mission Indians.

clothed all his parishioners with coarse cloth from Old Spain, and provided cloaks and blankets. Meanwhile they were instructed in managing the fields and in irrigation; and as they would not save the crops, Venegas says, the fathers preserved them for their regular use. Wine, which was at an early date produced in the Californian missions, was the only product withheld from them, the fathers early learning that such was the only method to save them from drunkenness.[2]

The effect produced by such a system would not immediately appear. But, after a generation, a body of children had grown to be men and women, without any habits of the chase or of war, and with the habit of farm labor and regular attendance on the

Effect of the Missions.

[1] Cozzens's *Wonderful Land*, 37.

[2] *Venegas*, i. 432.

rites of the church. The missions were, in many instances, very small establishments. One father with one soldier might be all the white population. The father then appointed one Indian as governor of the village, one to the charge of the church, and a third to be the catechist of those who were undergoing instruction. So simple a system was considered sufficient. In the absence of the father the soldier acted as his vicegerent, having "an eye to everything" as is the expressive phrase of Venegas.[1] He could seize delinquents, and mildly punish them, "unless in capital cases," which were referred to the captain of the garrison. The minor punishments were more or less lashes; the severer punishment was imprisonment in the stocks. The first care in every mission was for the education of the children. Some of them were selected from every Californian mission to be sent to Loreto, the chief station. They were instructed in reading, writing, and singing, and in the Spanish language, and afterwards as they showed ability were promoted to be churchwardens or catechists in the several "rancherias."

It is mentioned as an exceptional instance in these plans, that, on the peninsula of California, Father Ugarte taught his Indians to spin wool and weave it, himself making the distaffs, wheels, and looms. He added the industry of making sail-cloth from hemp. This was a violation of the whole colonial system of Spain, which attempted to compel the colonies to obtain all their manufactures from Europe. Venegas, the Jesuit historian, is eloquent in his description of the ruinous effects of this policy in the province of Sonora. The cause of the poverty of Sonora, he says, is its want of almost all necessary manufactures and trades. While other European nations encourage these in their colonies, Spain depresses them. But the immediate consequence of manufacture, he says, is the promotion of agriculture, for the providing of the raw material and for feeding the artisan. The policy of Cortez, therefore, was to encourage manufacture, and this policy was continued by some of his successors. But his policy having been overturned, poor Sonora must receive from Mexico the cloth which had been bought in Cadiz, after it had been carried thither from Holland.

Their support.

As the expense of the Jesuit missions involved the feeding and clothing of all the converts, neophytes, and catechumens, it was of course considerable, and, so long as any mission was in its infancy, it must be supplied by contributions from the faithful all over the world. At this point the literary ability of the Jesuit brethren was called upon, and the attractive histories of their missions, published through Europe, assisted their indefatigable collections

[1] *Venegas*, vol. i., 435.

of money. The Fathers never founded a new mission unless some benefactor had endowed it with ten thousand dollars. This sum furnished, at five per cent. interest, five hundred dollars, which was allowed for the support of the missionary and his unavoidable expenses with the Indians. A royal grant of three hundred dollars for each missionary seems to have provided in part for other missions. Venegas, the historian of Jesuit missions, explains still farther, that the funds for the first seven missions were invested in farms near the city of Mexico, and that the necessary supplies of cattle and of corn were furnished from these farms. To the agent who had these farms in charge the king's payment was made, of eighteen thousand dollars a year for the payment of the garrisons and of the seamen employed by the missions. From these funds, and from the products of the farms, were paid everything necessary for worship, for the building and repair of the church and for the maintenance not of the priest only, but of his people. It is interesting, at this time, to observe, that in Salvatierra's report of the 25th of May, 1705, he says, "in those parts of the country that are conquered and discovered there are very promising appearances of mines."

These anticipations were fully confirmed as that century went on. The acquisitions from mines in Arizona, as we now call it, and from Sonora cannot be accurately distinguished. But it is certain that Arizona well earned its name, — which is derived from Arizuma, a name said to be given by the king himself to denote its richness in silver. As early as 1683, the attorney of the king brought a suit in Sonora to recover a mass of virgin silver weighing twenty-eight hundred pounds, which he claimed as a "curiosity," although it was found in the mine of an explorer named Gandera.[1] A wide desert separated the silver-bearing parts of Arizona from the Pacific. A long transport by land separated them from the Gulf of Mexico. But the traces of old mining operations and the records of the viceroyalty of Mexico alike show, that in face of these discouragements, very large mining operations were conducted in the seventeenth and eighteenth centuries in the frontier provinces which are now States and Territories of the United States.

Difficulties encountered by the Missionaries.

The tranquil arrangements of the Jesuits, which attempted to substitute for savage life the proprieties and decorum of pueblos of men and women trained to act like obedient children, were constantly broken in upon by savage uprisings, which the fathers considered as so many triumphs of the devil. As early as 1695 the Janos, Jocomes, and Apaches were at war. The Conchos Indians joined in the fray, which was for the time suppressed by

[1] Cozzens, as above, p. 41.

the energetic efforts of Antonio de Solis, the military commandant. But none the less on all sides of the frontier were there fears of a general rising. An Indian called Pablo Quihue was considered the head of a conspiracy. He had been the governor, under the scheme just now described, of the mission of Santa Maria Basieraca, but he now proved faithless to his masters. He told all the natives that in the last sixty years they had gradually given away all their lands to the Spaniards; that the fathers, instead of acknowledging such gifts gratefully, had seized the lands and enslaved the people. Lands, flocks, herds, houses, women, and children were all at the disposal of the priests. "Do they tell you that their soldiers protect you? Do they tell you that they will defend you? Do they tell you that you live in true religion, in obedience to the king and in peaceful life? So they told us when they came, and we, like fools, received them as men who came from heaven to bless us. What has come of these magnificent promises? You can see. The Apaches, the Jocomes, the Janos, have for years desolated our fields and stolen our flocks. Have the fathers protected us? Have their soldiers helped us; have they not been our ruin? Have more Sonoras, Pimas, Tarau-mares, and Conchos fallen under the arrows of the Apaches, than have perished under the cruelty of the Spaniards. At the least alarm, they charge us, whom they have enslaved, with being apostates, traitors to God and to the king, enemies of our country and allies and accomplices of the Apaches! They show more enmity to us than to them! Do they treat them as cruelly as they treat us? Have the Apaches ever seen their faces? And have they ever hurt us so much, as these protectors of ours?" Such is the remarkable speech, which Allegre, a Jesuit historian, is frank enough to put into the mouth of this rebel.[1]

Indian Council (from La Hontan).

So well founded were his arguments, so imposing the outside force of the Apaches, and so hateful the Spaniards, that his hopes might have been crowned with success, but that, by an accident so often repeated in savage annals, the conspiracy broke out too early in one quarter. The Cuquiarachi, Cuchuta, and Teurcicatzi broke into rebellion before his plans were ripe. The people of these places seized the ornaments of the churches and fled with them into the mountains. This precipitancy disarranged all the plans

An unsuccessful Indian rebellion.

[1] *Allegre*, iii., 93: Mexican edition.

of Quihue. The rebellion was suppressed; and the fathers were able to praise the loyalty of many of the pueblos, whose people joined with the Spanish soldiery in the movements necessary, and in one case sustained a battle which lasted from day to night, without their assistance.

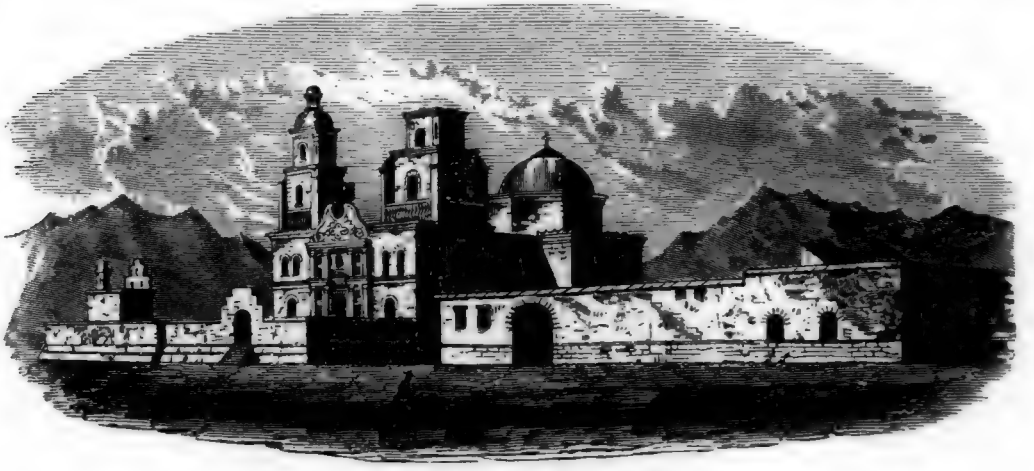
In 1697 new invasions from the Apaches and Jocomes wasted Sonora; and again the suspicions of the Spaniards were roused against the people of their own flocks, including Pimeria, as the missions among the Pimos began to be called at that time. It was true that the Pimos suffered as much as the Spaniards, or more, but they fell under the suspicion which in all colonies, English, Spanish, or French, has always hovered over converted Indians. An inspection by a Spanish officer wholly relieved them from this suspicion. It proved that they had beaten the Apaches in fight, as they do to this day, and were in no way entangled with them. His report estimates the numbers of the Opas and Maricopas as about 4,000. He speaks of their aqueducts and fertile land, their crops of wheat and houses of adobe, much as a traveller of to-day might do. But it must be remembered that they then occupied a site lower down the Gila River than that which they live upon to-day.[1] At length, on the 30th of March, the chief of the Quiburi, one of the "reduced" or converted tribes, struck a fortunate blow with his people upon the marauders and wholly defeated them. By this blow, rather than from any action of the Spanish troops, as would appear, the tranquillity of the missions was for some time assured. In a pastoral visit made to the northern stations at this time Father Kino made an observation of latitude at St. Rafael de Actun, which fixes that place as in the parallel of 32° 30′ 45″ north. He frequently alludes in his letters to the certainty that California is a peninsula, as it had been pronounced by Cortez and his

Indian invasions. — The invaders repulsed.

California Indians catching Salmon.

[1] Emory's report, on the authority of Kit Carson.

contemporaries. The later geographers, for a long time, insisted on marking it as a long island; and it was long before the intelligent assertions of the Jesuit Fathers, though founded on personal observations, were attended to by the map-makers. In January, 1699, on one of these tours of inspection, Fathers Kino and Gilg met five hundred Yumas, Opas, and Cocomaricopas at a point three leagues above the junction of the Gila and Colorado. These people had traditions of the arrival of Spaniards from the east, which probably referred to the party of Oñate. They told of a visit from a white woman whom the Fathers supposed to be an enthusiast named Maria de Jesus Agreda, who had gone out alone as early as 1630, among the savages.



Junction of the Gila and Colorado Rivers.

These people also said that at the north there lived white men who wore clothes, who at times came armed to the Colorado, and brought goods in exchange for skins. This can only allude to some expedition of French traders, of which we have no account, or possibly to the expedition from Boston, already alluded to, which is said to have preceded by a year the expedition of La Salle.

Death of Father Kino.

So far at least, as their written history goes, the flourishing condition of the Pimeria, which was the result of the Jesuit labors in Arizona, ended with the death of Father Kino in the year 1711. This remarkable man, one of the most successful and enterprising of apostles, had been a professor of mathematics in the University of Ingolstadt in Bavaria. By a divine call

he was led to abandon his professorship and to enter on the work of preaching the gospel to the heathen. His indomitable spirit, his courage and adventure, led him to such successes, as have been described. His zeal constantly outran the slower notions of the Mexican Viceroys, and he was frequently in conflict with them and with other authorities. It was only after long delay that his plans for the reduction, as it was called, of California, were adopted; and he was frequently held back in his undertakings in his beloved Pimeria. It is said that he himself baptized more than forty thousand infidels, — and that he would have baptized many thousand more had the zeal of the church behind him been sufficient to provide them with teachers and ministers. San Xavier del Bac, as it now appears, gives an idea of the external appearance of the churches he founded. The people of

The Mission of San Xavier del Bac.

Arizona believe this building to be the very same which was erected under his direction. In this temple the worship of the Catholic church is still maintained by a handful of Papajo Indians.

His successor was Father Augustin de Campos. But he could not prevent the decay of the missions. Probably the enthusiasm of Europe and Mexico had been turned in other directions, and it was impossible to provide ecclesiastical chiefs for these frontier settlements. The slow death settling upon Spain, — attributed by most students of history to the inevitable lethargy attendant on Jesuit counsels, — hindered the aid which the Spanish monarchs themselves often tried to give the missions. Nothing is more amusing, if it were not at the same time pathetic, than the narrative by Venegas of the ingenious ways in which the officials of the crown resisted and defeated the pious orders of their kings. For many years, the Jesuit historian tells us, the people of the villages maintained their crops and built their houses in a civilized way. But as time passed, they fell

Decay of the Missions.

back toward the habits of savage life. Many of the villages had no Spanish ministers till 1731, when a sudden revival for a moment filled the posts anew. Dolores and Remedios were entirely unpeopled, and many others suffered from the invasions of the Apaches.

A new Indian rebellion.

In 1740 a rebellion broke out, more critical than any before, led by an "apostate" Indian named Muni, one of the Yaquis, — another named Baltazar, and another named Juan Calixto. Succeeding in Mayo they passed to Cedros and Bayorca. Muni was at one moment taken prisoner, but having been liberated he was so far encouraged that with his Yaquis he continued his ravages. So efficient was this rebellion that the villages of the valley of the Gila were wholly cut off from Mexican inspection, and, indeed, they have remained in much that condition ever since. In 1744 Father Keeler, who attempted to revisit them, was permitted to pass no farther than the first village of the Moquis. A second revolt in 1750, under one Luis, did still more to break up the missions of the southern part of Sonora, which now constitutes the Mexican state of that name, and well-nigh completed the isolation of Pimeria in the valley of the Gila. The authority of Luis over the Pimeria was not broken until the year 1753, when a new governor seized him and put him in prison, where he soon died of "melancholy." His relative took refuge with the Seris, a barbarous tribe on the Gulf of California, always their enemies till now. Some fathers were despatched, after this success, to renew the abandoned missions; but it would appear that their decay could not be arrested.

The lesson taught by these attempts.

Their history is at the bottom the same as that of the Jesuit missions in Paraguay, which have attracted more of the attention of students of social order. By these experiments it is proved possible to educate savages in a state of tutelage, and to maintain the outward external aspects of exquisite order and simplicity. The lover of tranquillity, delighted with such social order when he sees it contrasted with the strifes of a more active world, describes the pretty scene as an Arcadia, if he be of a classical bent; or as the kingdom of heaven on earth, if he be trained in another school. But the moment a storm comes, or the moment the mild tyranny of the spiritual father is removed, it proves that this people, so gentle and so simple, have not been educated to the care of themselves. They have been taught to obey, in a false school, which has not taught them either to direct or to command. And the lovely village, so charming to the traveller who sees it from the outside for a day or two, is swept away, like a vision of the night, and leaves almost as little trace behind.

For the missions of Pimeria and of Upper California, the final blow was struck, — so far as Jesuit supervision went, — on the 25th of June, 1767. "A little before the break of day," says the historian, with a certain pathos, "the decree for the expulsion of the Jesuits went forth, with the great seal itself, from the council chamber of Charles III." In the endless intrigues, in which the history of the company of Jesuits is involved, perhaps from its own nature, the balance had gone against it heavily, at that moment, in the dying court of Spain. King Charles was so eager to secure the execution of his decree that by an autograph letter to the viceroy of Mexico he notified his will, and the expulsion of the Jesuits from Mexico followed with much more rapidity than had attended the execution of many of the decrees in their favor. The accounts given by the Jesuit writers and their enemies as to the origin of this decree, belong rather to the history of Europe than to that of Pimeria. It was due to the influence of Choiseul and Aranda, who seem to have succeeded in convincing Charles that the Jesuits had circulated slanders regarding his own birth. Certain is it that the blow was sudden and unexpected.

The expulsion of the Jesuits.

Portrait of Charles III. of Spain.

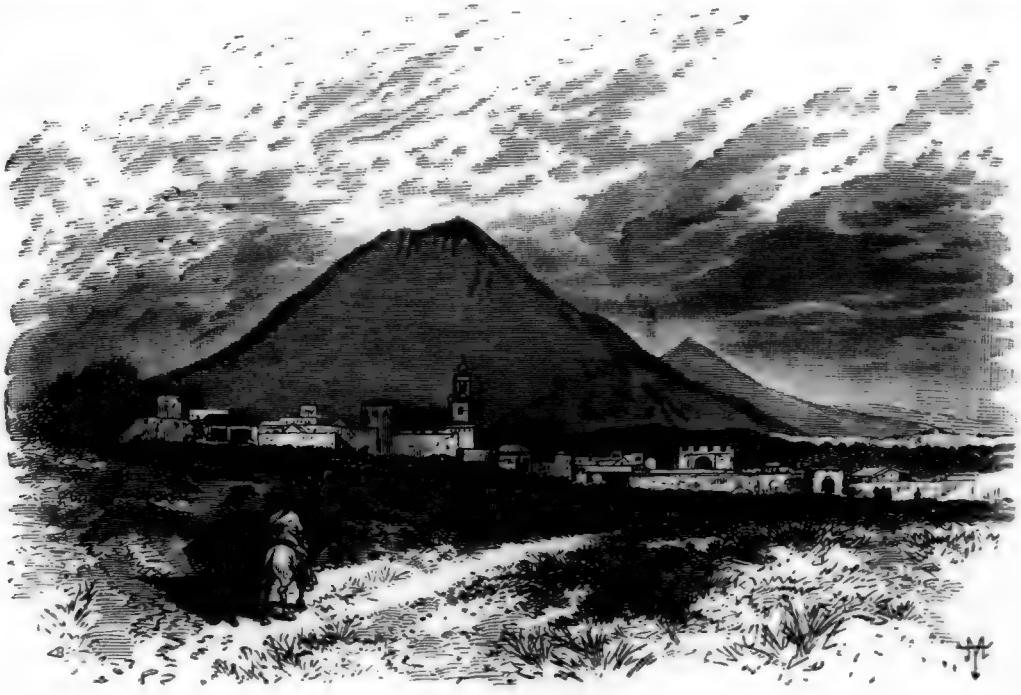
When, in 1683, the French explorer, La Salle, addressed to the king of France his memoir on the foundation of a colony in Louisiana, the silver mines of New Mexico were so well established, that the prime reason suggested by him for his enterprise, was the ease with which the French might seize the product of those mines, and bring it down the Red River. After two hundred years, that route is not yet taken by the silver of New Mexico and the neighboring regions. But it may yet prove true, that by a railway through the valley of the Red River these stores of silver, the magnitude of which has deranged the balance of the coinage of the world, may find their way to their market. The Spanish government was as quick as La Salle to note the danger to their mines from his enter-

New Mexico and Texas.

prise. When his unfortunate colony landed, in fact within the limits of our State of Texas,[1] in Matagorda Bay, which they called the Bay of St. Bernard, the nearest Spanish positions on the gulf were the port of Panuco, near the present Tampico, more than two hundred leagues distant, and El Paso on the Rio Grande. The Spanish settlers had been driven from New Mexico by the rising of 1680, nor was possession regained until 1695. Early in 1686 the viceroy of Mexico, Laguna, was informed of the French expedition of La Salle. But its destination was unknown; and the historian of Texas believes that the Spaniards learned from the Camanche Indians of the colony in St. Bernard's Bay. A council held in Mexico determined on an expedition of discovery and repression, and to this expedition Captain Alonzo de Leon was appointed, under the title of Governor of Coahuila.

Expedition of De Leon.

De Leon arrived at Fort St. Louis on the 22d of April, with his command of one hundred men. He found there the wreck of the unfortunate French colony; and, learning from the Indians that there were French stragglers among the Cenis, he visited them and found two of the murderers of La Salle, whom he took prisoners. They were sent to Mexico and thence to Spain, and then sent back to Mexico and condemned to the mines.



De Leon made a favorable report as to Texas, and it was determined to establish a mission at Fort St. Louis. In 1690 this was done. The king approved of this proceeding, saying it was of importance for the security of his dominions in New Mexico. Venegas, the historian of California, expresses a mild regret that the necessities of the crown diverted to this enterprise treasure which he is sure could have been well used on the Pacific shore. But the French were too near for delay. It would indeed seem as if, till this time, the policy of Spain had been that ascribed to the ancient Persian prince, who kept a portion of desert three days journey in width between his own empire and many others. But Texas was then a desert far more than three days wide. If such were the policy, it gave way before the danger that other colonists might inhabit the desert. In 1691, Don Domingo Teran was appointed governor of Coahuila and Texas, and with fifty soldiers and seven lay friars, proceeded to establish missions and military posts. These they began, but in 1693 they were all abandoned, in face of hostile Indians, and the king approved of the abandonment. At the beginning of the eighteenth century, therefore, Spain had no posts in Texas. On the west side of the Rio Grande, the posts still known as Presidio del Norte and El Paso were maintained as stations on the road to New Mexico.

When in 1712, Louis XIV. gave to Antoine Crozat a grant of

[1] See chap. xxi.

Louisiana, it was so phrased as to extend his boundaries to the Rio Grande on the west. In 1714, he sent out Huchereau St. Denis, a young man of noble family, on an expedition to the western part of his new domain. Leaving Natchitoches on the Red River, where a trading post had already been established, St. Denis crossed Texas, and in August reached the mission of St. John Baptist on the Rio Grande, where he was hospitably received by the commander. But, so soon as Don Gaspardo Anaya, the Governor of Coahuila, heard of his arrival he arrested St. Denis and one of his

Expedition of St. Denis.

El Paso.

companions and sent them to Mexico, where they were imprisoned for six months. After two years, however, he returned to Mobile, having escaped or been released. He married the daughter of Villeseas, the governor of St. John Baptist, and from that day began a system of smuggling between the Mexican territories and those of Louisiana, which has continued to this time.[1]

Those movements alarmed the Spaniards again, and the Duke of Linares, now Viceroy of Mexico, made new efforts to prosecute the colonization of Texas. A new mission was established in the Bay of St. Bernard, and one among the Adaes, only fifteen miles from Natchitoches. It was therefore within the present line of the State of Louisiana. A mission called Dolores was

Spanish attempts to colonize Texas.

[1] Yoakum, *Hist. Texas*, vol. i., 48. *American State Papers*, vol xii. Mr. Gayarré has made a romance from these adventures.

established west of the Sabine, and San Antonio de Valero was placed on the right bank of the San Pedro, about three fourths of a mile from the present church at San Antonio. The present position of San Antonio was soon after chosen instead of the first, for reasons which recommend themselves to every visitor to that beautiful city. Soon after, a mission was established near the present town of Nacogdoches, and a sixth near San Augustine. The establishment of these missions was intrusted to a captain named Don Domingo Ramon. When he was at the Adaes he visited San Denis at Natchitoches, and was hospitably received.

San Antonio, Texas.

The Texan missions were from the first in the hands of Franciscan fathers. But the methods of these fathers were not materially different from those which we have described as practised by the Jesuits. At each presidio or mission there was a garrison, with a military commandant; but these garrisons were sometimes very small. A *plaza de armas*, surrounded by the church, barracks, storehouses, and other public buildings, was the centre of the establishment. Around these huts were built for the "reduced" or converted Indians.

Conflicts between the French and Spanish.

After the declaration of war of 1718 between France and Spain had been heard of on this distant frontier, the little garrisons made an attempt to imitate the contentions of their masters in Europe. The Frenchmen, La Harpe and St. Denis, broke up the Spanish posts and drove the garrisons from the lesser stations to San Antonio. The Marquis de Aguayo, the Spanish Governor of New Estremadura, collected five hundred men to drive them back, but they had already retreated, and Don Aguayo reëstablished the garrisons[1] which they had put to flight.

[1] *Am. State Papers*, vol. xii.

In the same year Don Martin d'Alarcone had been appointed Governor of Texas. After the success of Aguayo's expedition, a larger army was fitted out against the French settlements on the Upper Mississippi. The Spaniards lost their route, and falling in with the Missouri Indians, mistook them for Osages. They had relied on the assistance of the Osages against the French. Now, the Missouris were the firm allies of the French. The Missouris had the address to encourage the mistake, till they had received from the Spaniards pistols, sabres, hatchets, and what the narrator speaks of as fifteen hundred muskets, a number which is incredible. With these arms, however, the Indians massacred all the Spaniards except the priest, and this misfortune ended the Spanish claims on the Upper Mississippi.[1] The French home government, in the meanwhile, ordered Bienville to establish a new post in Matagorda Bay, which he did. But the detachment was soon withdrawn on account of the hostility of the Indians.

A royal order of 1721 directed the Spanish authorities to attempt no further hostilities against the French, but to fortify the bay of St. Bernard and other important posts. A garrison called "our Lady of Loretto" was accordingly established at St. Bernard. In the next year the four garrisons which defended Texas, consisted of one hundred men at the Adaes Mission, twenty-five at the Neches, ninety at the bay of St. Bernard, and fifty-three at San Antonio. There were no colonists, excepting the fathers, at the missions, but Aguayo, before returning to his own department, recommended the introduction of colonists. So soon as he departed, the forbidden trade between French and Spanish frontiersmen began again, and when, in the war of 1726, France and Spain were in alliance, this trade gained new activity.[2]

Further progress of Texas under Spanish rule.

In 1728 the Spanish government ordered the transportation of four hundred families from the Canary Islands to Texas. The garrisons were reduced to one hundred and fifty-three men in the whole province. Of the four hundred families ordered, thirteen arrived at San Antonio, and this new population was a stimulus to the missionary efforts. In 1732 the Spanish troops defeated the Apaches, and this victory gave security to the colony. In 1734 Sandoval took the place of Cevallos as governor, and again checked the depredations of the savages. While he was Governor, St. Denis removed the French garrison of Natchitoches to a point west of the Red River. Sandoval having been charged with conniving with this, a long litigation took place, — with the interminable slowness of Spanish procedures, — in

[1] Gayarré's *Hist. of Louisiana*, vol. i., p. 264.
[2] Yoakum, i., 77.

which he and Franquis, his successor, were engaged. In 1740 Sandoval was thrown into prison, in one of the consequences of this charge, but with the arrival of a new governor, he was liberated.

In 1744 the European population of Texas did not exceed fifteen hundred, divided mostly between Adaes and San Antonio; a few were at Bahia, and a few at San Saba. The settlements to the south of Texas made but very little progress, and the old policy of Spain, to leave a desert between her provinces and her neighbors, was in no way violated.

The Yucca Tree of New Mexico.

TABLE OF DATES.

1540. Coronado's expedition in search of Cibola.
1579. Drake on the California Coast.
1582. Espejo's expedition on the Rio del Norte.
1602. Voyage of Viscaino on the coast of California.
1636. Endicott's Expedition to Block Island.
Providence founded by Roger Williams.
1637. The Pequot War.
Sir John Harvey returns as Governor of Virginia.
1638. New Haven founded.
Settlement of Rhode Island at Portsmouth.
A *quo warranto* issued against the Massachusetts charter.
Exeter, New Hampshire, founded.
1639. First Constitution of Connecticut adopted, and a Government formed.
1640. Explorations of Fathers Chaumonot and Brébœuf, in Ohio and Michigan.
1641. The Body of Liberties adopted in Massachusetts.
New Hampshire passes under the jurisdiction of Massachusetts.
1642. Sir William Berkeley Governor of Virginia.
1643. The Confederation of New England Colonies formed.
Trial of the Gorton Party at Boston.
Issue of the Narragansett Patent.
Murder of Miantonomo.
1644. The Charter for Providence Plantations granted to Roger Williams.
Indian massacre in Virginia.
1647. Stuyvesant arrives at New Amsterdam as Governor of New Netherland.
Stuyvesant's controversy with the popular party at New Amsterdam.
1650. Boundary Treaty between Connecticut and New Netherland concluded at Hartford.
1651. Clark, Holmes, and Crandall tried in Boston.
1652. Surrender of Jamestown to the Commissioners of the Commonwealth.
A mint established in Massachusetts.
1653. Elective municipal government established at New Amsterdam.
Rhode Island declares war against New Netherland.
First Settlements in North Carolina, on Albermarle Sound.
1655. The Dutch take possession of New Sweden.
Establishment of the Colony of New Amstel.

Conflict in Maryland between the Puritans and Roman Catholics.
Indian massacres at Hoboken, Pavonia, and elsewhere.

1656. The First Quakers arrive in Boston.
1657. Persecution of Quakers in New England.
1659. Execution of Quakers at Boston.
1660. Berkeley reëlected Governor of Virginia,
(Or 1661), Settlement of New England men at Cape Fear, S. C.
Execution of Mary Dyer at Boston.
Father Mesnard founds a Mission on Lake Superior.
1661. Charles II. checks the persecution of Quakers in New England.
1663. Charter of Rhode Island and Providence Plantations granted by Charles II.
First Grant of Carolina.
1664. Grant of New Netherland to the Duke of York, and its Surrender to the English. — Named New York.
Landing of the Colony under Yeamans at Cape Fear.
Government of North Carolina established.
Grant of New Jersey to Berkeley and Carteret.
First settlement of Central New York at Schenectady.
1665. Second Grant of Carolina.
Arrival of Philip Carteret as Governor of New Jersey. — Elizabeth founded.
The "Duke's Laws" adopted in New York.
1666. Newark, New Jersey, founded.
1668. Lovelace, Governor of New York.
1669. Completion of John Locke's "Fundamental Constitutions for Carolina."
1671. Great Indian Council at Sault Ste. Marie.
1672. Anti-rent insurrection in New Jersey.
1673. Recapture of New York by the Dutch.
Marquette explores the Mississippi.
1674. Treaty of Westminster confirms New York to England. — New Patent issued to the Duke of York.
Andros Governor of New York.
Fenwicke's and Byllinge's Purchase of West New Jersey.
1675. Outbreak of Philip's War in New England.
Indian War in Virginia.
1676. Bacon's Rebellion in Virginia.
The "Quintipartite Deed" for the Partition of New Jersey.
Close of Philip's war.
1678. Royal Commissioners arrive in Virginia. Berkeley's recall and death.
Emigration of Friends to West Jersey.
Insurrection in the district of Pasquotank, N. C.
Indian Treaty concluded at Casco, Me.
1679. New Hampshire made an independent Royal Province.
1680. Hennepin's Voyage on the Mississippi.
Charleston, S. C., founded.
1681. The Grant of Pennsylvania signed. — Emigration begun.
1682. The Friends buy East Jersey.
Penn sails for America.
Philadelphia founded.
Penn's Indian Treaty.

La Salle's Voyage on the Mississippi.

1684. Lord Cardross's Colony founded at Port Royal, S. C.

Judgment against the Massachusetts Charter.

Penn returns to England.

1685. La Salle's colony founded in Texas.

1686. Andros Governor-general of New England.

1687. Andros attempts to seize the Connecticut charter. Its concealment in the Charter Oak.

Murder of La Salle.

1688. Indian War renewed in Maine and New Hampshire. Massacres at Dover and elsewhere.

1689. Deposition and Arrest of Andros at Boston.

William and Mary proclaimed.

1690. Sothell seizes the government of South Carolina.

French and Indian expeditions into New Hampshire.

1692. Phips Governor of Massachusetts under the new Charter.

Outbreak of the Witchcraft Panic at Salem, Mass.

1694. Rice introduced into South Carolina.

1695. Archdale Governor of South Carolina.

1696. Spanish fort established at Pensacola, Florida.

1699. Penn returns to America.

1700. Iberville establishes a settlement at Poverty Point, La.

Attack by the Carolinians on St. Augustine.

1712. Louisiana granted to Crozat.

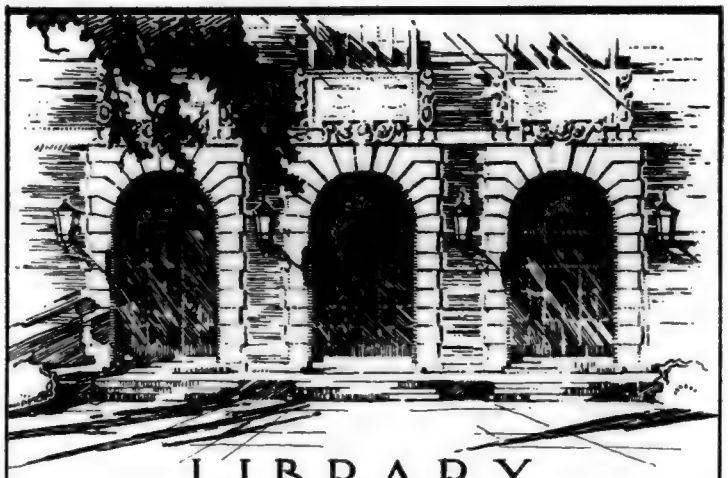
1717. Law's "Western Company" established.

1718. New Orleans founded.

1719. Law's "Mississippi Scheme."

Capture of Pensacola by Bienville.

1720. Charlevoix's voyage to visit the Jesuit missions in America.



1722. Recapture of Pensacola by the Spaniards.

1729. Massacre of French by the Natchez.

1740. Oglethorpe's Attack on St. Augustine.

CHAPTER I.

NEW YORK UNDER THE ENGLISH.

Condition of New York on the Arrival of Andros as Governor. — Comparison with New England. — Andros visits Connecticut. — His Reception by Captain Bull at Saybrook. —Complained of by Lady Carteret, and others. — His Recall to England. — New Proprietors of East Jersey. — Thomas Dongan appointed Governor of New York. — General Assembly ordered by the Duke of York. — Charter of Liberties adopted. — Assembly dissolved by James. — Dongan's Administration. — Andros as Governor-general. — Accession of William and Mary. — Affairs under Lieutenant-governor Nicholson. — His Council-men, Phillipse, Van Cortlandt, and Bayard. — Captain Leisler assumes Command, and acts as Governor. — Supported by a Committee of Safety and recognized by the Colonies. — His Difficulties. — Troubles with the French and Indians. — Contest with Captain Ingoldsby. — Surrenders the Government to Colonel Sloughter. — Trial and Execution.

When Edmund Andros first arrived in America, — fifteen years before the catastrophe, already related, that overtook him in Boston,[1] — the colony of New York which he was to govern contained only about six or seven thousand people. The population of New England is computed to have been at that time not less than one hundred and twenty thousand. Striking as the con-

New York under Gov. Andros.

[1] See vol. ii., p. 393, *et seq.*

trast is between these colonies of nearly the same age, it is not difficult to account for it. The colonial commerce of that period had no need to seek out the most commodious, or the most accessible of harbors; the small or inconvenient ports, whose selection was determined by some other exigency than that of trade, answered all commercial necessities. The superiority of soil and of climate, the easy access from the sea, the navigable inland waters, and the central position of New York, so certain to insure the future supremacy of the State, were not yet taken advantage of with that stern purpose and restless energy through which the hardy people of New England so outstripped their slower and duller neighbors of another race.[1]

Condition of the province

From the accession of the English, however, there came, with English ideas and English enterprise, an increase of prosperity and a more rapid growth to New York, although the influence of the Dutch, especially in the social character of the people, was long felt. Within four years of Andros's arrival there was an addition of probably a third to its population. Besides the natural increase, which prosperity would stimulate, there was some emigration from England, — still more, perhaps, from other colonies.

The eastern part of Long Island, from its relations to Connecticut, felt this new impulse more sensibly and rapidly than any other part of the colony. Whaling soon became an important industry on that shore, and Southampton was deemed worthy of mention with New York by Andros as one of the two principal places of trade. Nantucket, — settled in 1659 by Thomas Macy and his family,[2] — which, with Martha's Vineyard, made a county of New York, was also at this early period engaged in the whale-fishery along the coast; but it was a far more important industry at the eastern end of Long Island than anywhere else in any of the colonies. Albany continued the centre of the Indian trade, and was of importance as the place of negotiation with the Indians, and with the French. These negotiations, involving the question of whether the Iroquois or Five Nations should be

[1] Even a century later the population of New England was nearly three times as great as that of New York, though the area — exclusive of Maine, which was still largely a wilderness — was less. It was not till within the last fifty years that the natural advantages of New York were able to overcome the superiority which New England had so long held, and which was largely due to difference of character in the founders of the colonies.

[2] The first proprietor of Nantucket was Thomas Mayhew, who bought the island of James Torrett, the agent of the Earl of Stirling, in 1641. Mayhew conveyed nine tenths of it to nine others, namely: Tristram Coffin, Thomas Macy, Richard Swain, Thomas Barnard, Peter Coffin, Christopher Hussey, Stephen Greenleaf, John Swain, and William Pile. Pile sold his tenth to Richard Swain, and the nine proprietors then took as partners John Smith, Nathaniel Starbuck, Edward Starbuck, Thomas Look, Robert Barnard, James Coffin, Robert Pike, Tristram Coffin, Jr., and Thomas Coleman. Thomas Macy was the first to settle, with his family, upon his lands. Others soon followed. — *A Short Journal of the First Settlement of Nantucket, etc.* By Zaccheus Macy. *Mass. Hist. Soc. Coll.*, vol. iii.

controlled by French or English, a question on which peace or war so often depended, occupied much of the time and attention of Andros and his immediate successors.

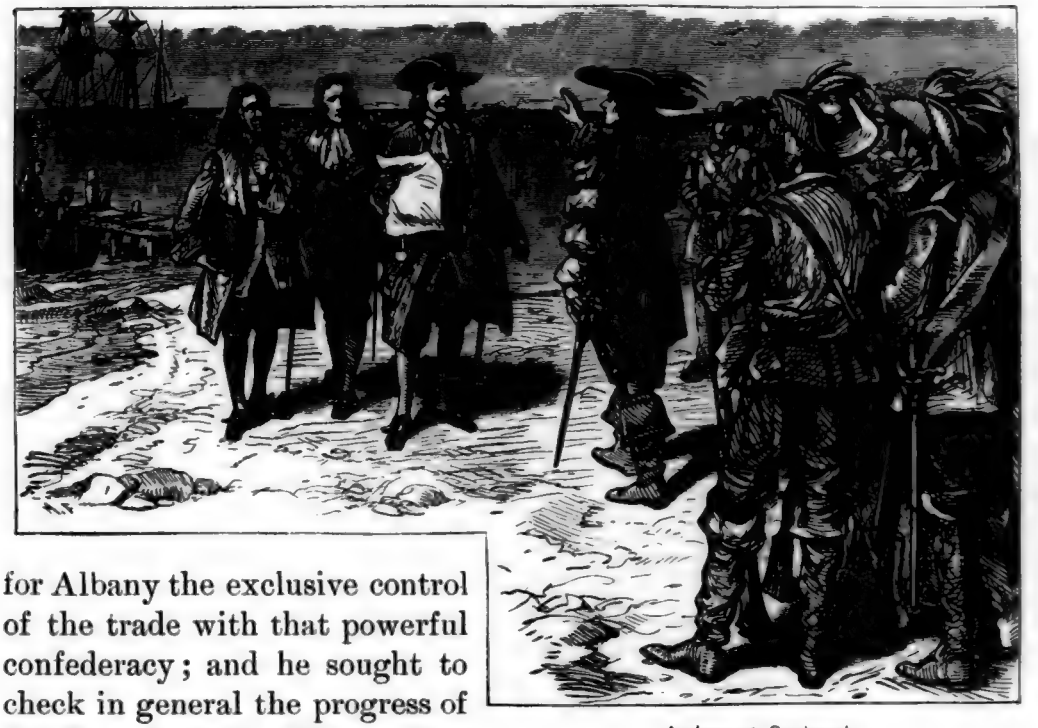
In a report upon the condition of his colony in 1678 Andros says that he could muster two thousand militia men; the fort in New York — James-Fort — mounted forty-six guns; that at Albany twelve guns, and the fortifications at Pemaquid in Maine seven guns. In each of these the garrisons were victualled for a year. Within two years twenty thousand acres had received new settlers. The colony contained twenty-four towns or villages; it exported yearly about sixty thousand bushels of wheat, besides provisions, fish, tobacco, peltries, lumber, and even horses; and the valuation of its estates was £150,000. A merchant was thought a substantial citizen who was worth a thousand or even five hundred pounds; the standard of wealth in a planter was only half as high.

Island of Nantucket.

Condition of the province.

The annual export trade of the province was carried on in fifteen vessels of an average measurement of a hundred tons. Of these one third belonged to New York, and some were built there. Occasionally there was an arrival from England, the yearly value of the imports amounting to £50,000; but most of these small vessels must have been engaged in a coastwise trade, the most important of which, no doubt, was bringing tobacco — their single staple — from Virginia and Maryland, and exchanging

for it bread-stuffs and provisions. No law, however severe, could induce their planters to raise for themselves sufficient food for their slaves so long as a crop of tobacco returned a profit.



There were slaves also in New York, but not enough to influence the system of labor. As Andros said, they were "but very few." Beggars there were none; the poor who could not support themselves were taken care of — easily taken care of, no doubt, as there could not have been many. The manufacture of flour soon became an important industry; and more than one attempt was made by legislation, which for some years succeeded, to give a monopoly of it to the city of New York. Ministers, Andros said, were "scarce," and "religions many." The Catholic Duke, his master, could tolerate all sects so long as the law of England proscribed his own.

This, briefly, was the condition, two hundred years ago, of the little town destined in the lapse of time and events to become one of the foremost cities of the world. To Andros the province seemed, doubtless, of small value, as it had to Nichols, unless he could retain New Jersey and the country on the Delaware within his jurisdiction, and extend it also over that portion of New England embraced within the Duke of York's patent. One of the earliest acts of his administration was to assert this claim, seizing as the occasion information sent him by Winthrop of the breaking out of Philip's war. He was "very much troubled," he wrote to the Connecticut Governor, "at the Christians' misfortunes and hard disasters in those parts, being so overpowered by such heathen." But, he added, "I intend, God willing, to set out this evening, and to make the best of my way to Connecticut River, His Royall Highnesses bounds there."

Andros visits Connecticut.

The Connecticut authorities were alarmed at this plain intimation of the purpose of the new Governor to maintain the Duke's claim to their province. The General Assembly was convened, and one Captain Bull was sent to Fort Saybrook with a hundred men to resist this violation of their chartered rights. Andros was not permitted even to read the Duke's patent to the people, and, after declining to submit the question in dispute to a commission, he yielded to the evident determination to be rid of him, which he could not resist, and reëmbarked for New York. The rebuff may have irritated him, but if the tradition preserved by Trumbull be true, it amused him no less. This Captain Bull, he said, was a bull whose horns should be tipped with silver. He hardly could have failed to remember this first reception in Connecticut when twelve years later he came to Hartford as Governor-general, to demand the colonial charter. He could then compel submission, but he was met with the same spirit of defiance, which could still baffle if it could not rout him.

Though his efforts to retain New Jersey were unsuccessful;[1] though the distant settlement at Pemaquid, in Maine, where he built a fort, was an expensive and almost useless acquisition; and though he failed to bring Connecticut under the jurisdiction of New York, his administration of the affairs of his immediate government was judicious. He inaugurated the policy which aimed to detach the Five Nations from an alliance with the French, and to secure for Albany the exclusive control of the trade with that powerful confederacy; and he sought to check in general the progress of the French at the West. But he saw that the position of New York was, in comparison with other colonies, one of insignificance, and he believed it would remain so unless all the northern provinces were united under a single government.

Andros at Saybrook.

He urged this policy upon the Duke of York, and it is quite possible that he did not regret being recalled — as he was in 1680 — when complaints from Lady Carteret, the widow of Sir George, of unwarrantable interference in the affairs of New Jersey, required that he should return to England. Some charges of misgovernment were also made against him by others between whom and himself differences, more or less serious, had arisen, — particularly by Christopher Billop of Staten Island, whom Andros had sent as his deputy to the Delaware and then recalled for misconduct. These accusations fell to the ground, and events disposed of those of Lady Carteret. Andros, who, on a visit to England three years be-

Recall of Andros.

[1] See chap. xx., vol. ii.

fore, had been created a knight, was now further rewarded by being made a gentleman of the king's bed-chamber.

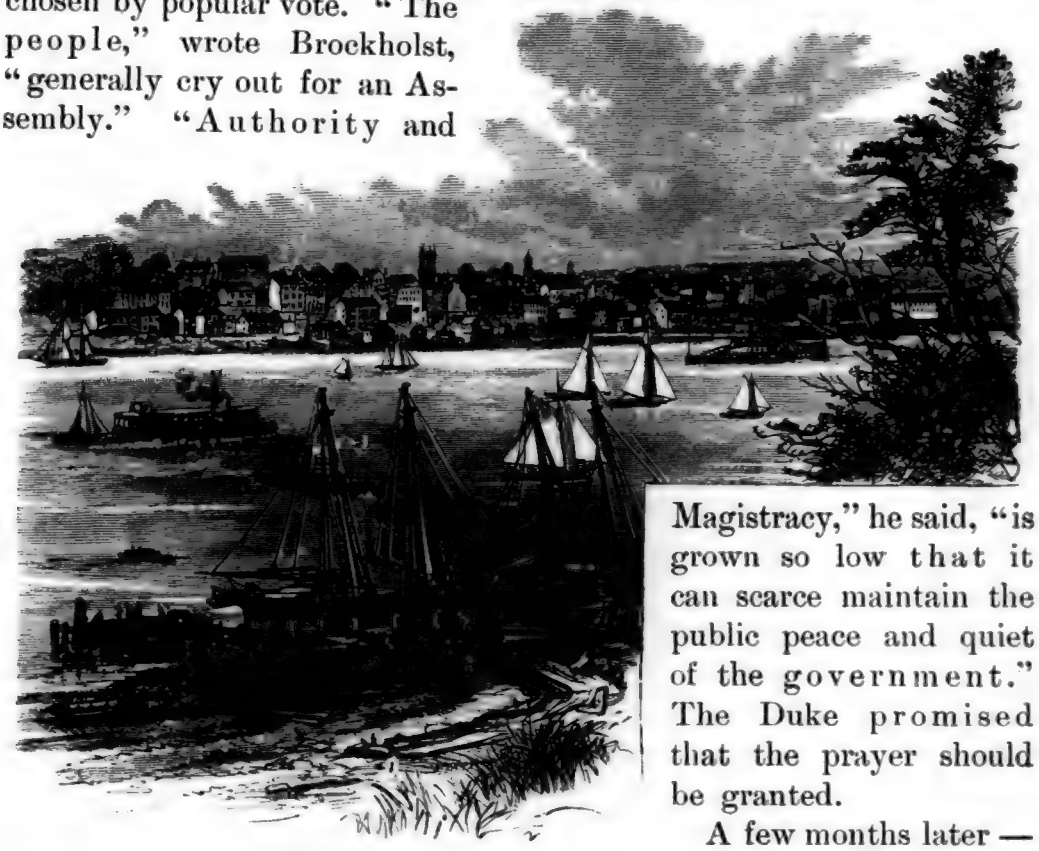
New proprietors of East Jersey.

The Carteret interest in East Jersey ceased, soon after the recall of Andros — as has been already shown in another chapter — by the sale of the young Sir George's patent to Penn and his associates. In March, 1682–83, these twelve proprietors associated with themselves twelve others, most of whom were Scotch.[1] The Governor of the province was Robert Barclay of Ury, a distinguished member of the Society of Friends, a favorite of the Duke of York, and the author of that Quaker classic: "An Apology for the True Christian Divinity, as the Same is Preached and Held Forth by the People, in scorn called Quakers." The Scotch interest in East Jersey induced, from time to time, a large emigration from Scotland, many seeking in the new colony an asylum from both religious and political persecution at home. At Ambo Point, at the mouth of the Raritan, a new city was founded at this time and called Perth — now Perth Amboy — in honor of the Earl of Perth. This became ere long the capital of the province, in place of Elizabethtown, and for a while was a successful rival even of New York in commerce.

Brockholst appointed Lieutenant-governor of New York.

On leaving the colony Andros had appointed Anthony Brockholls — or Brockholst — as Commander-in-chief of the Militia and as Lieutenant governor. But he neglected to renew the order for collecting the customs-duties, which had expired by limitation, and Brockholst was at once involved in a controversy with the merchants. They refused to pay these duties, and William Dyre, formerly of Rhode Island, who was collector of the port as well as mayor of the city, seized a cargo of goods. The merchant brought a suit against the collector; his act was pronounced illegal,

Payment of customs-duties refused.



and an indictment found against him for treason in usurping power over the people. Brockholst and his council sustained the decision of the court, and the city seal and his commission were demanded of Dyre. He refused to surrender them, disputed the authority of the court, summoned specially for his trial, on the ground that their power and his emanated from the same

Collector Dyre tried and acquitted.

authority, — the Duke of York, — and one could not be responsible to the other where there was a common master. He was hereupon arrested and sent to England for trial, where, in due time, it was decided that he was guiltless of any offence.

[1] The twenty-four proprietors of East Jersey, a majority of whom were Friends, were, James, Earl of Perth, John Drummond, Robert Barclay, David Barclay, Robert Gordon, Arent Sonmans, William Penn, Robert West, Thomas Rudyard, Samuel Groome, Thomas Hart, Richard Mew, Ambrose Rigg, John Haywood, Hugh Hartshorne, Clement Plumstead, Thomas Cooper, Gawen Lawrie, Edward Byllinge, James Braine, William Gibson, Thomas Barker, Robert Turner, and Thomas Warne.

For some months there was entire free trade in the colony, for customs-duties are never a free-will offering; but a more important result of the controversy was that the Court of Assizes, which attempted the trial of Dyre, represented to the Duke that arbitrary taxation, without regard to the wishes and interests of the people, was a grievous burden, and that a remedy for this and other evils could only be found in the right of self-government through a General Assembly chosen by popular vote. "The people," wrote Brockholst, "generally cry out for an Assembly." "Authority and Magistracy," he said, "is grown so low that it can scarce maintain the public peace and quiet of the government." The Duke promised that the prayer should be granted.

Perth Amboy.

A few months later — in the summer of 1683 — a new governor, Colonel Thomas Dongan, the younger son of an Irish baronet, was sent out to supersede Brockholst. He brought orders to issue writs for the election of eighteen representatives of the people, who were to constitute a General Assembly to be, with the Governor and Council, the government of the colony. Their acts were to be subject to the approval of the Governor, and finally of the Duke. The Governor and Council, whose appointment still remained with the Duke, were to grant lands, establish courts and custom-houses, control the militia; but no tax was to be levied without the consent of the Assembly. No man was to be punished except by due course of law; a grand jury of inquest, and trial by jury, were decreed; martial law and the billeting of soldiers in private houses were declared illegal; the right of dower, in

Thomas Dongan, Governor.

one third of the real estate of the husband, was secured to widows; religious freedom was guaranteed to all professing Christians who did not disturb the public peace; the right of suffrage was given to every freeholder and freeman in any corporation; the Assembly was to meet every three years with the right of meeting and adjourning as it saw fit during the session; and the members and their servants — if not more than three — were for that time free from arrest or any legal action, except in cases of treason or felony.

The Charter of Liberties and Privileges proposed.

An Act embodying these franchises, under the title of "The Charter of Libertys and Privileges" was passed by the Assembly, at its first meeting in October, 1683, and sent to the Duke of York for his approval.

The new form of government was quite as liberal as that accorded by royal charter to any of the colonies. But it was not to last long. The Duke gave no formal assent to the Act of the Assembly, and within less than two years from the time of its first meeting Charles II. died and his brother succeeded to the throne. The new policy, begun with New England, of uniting the crown colonies under a single governor, soon embraced New York.

When the first troubles, which awaited the King at home, were disposed of, James had leisure to give his serious attention to colonial affairs; a new commission with fresh instructions was then given to Dongan, and Andros was sent out as Governor-general of New England. In these the King declared it to be his will and pleasure that the recent "Charter of Franchises be repealed, determined and made void." New England was first to be reduced to obedience; New York, meanwhile, was to be held in subjection as a royal province, its government invested in a governor and council of the King's appointment without regard to the popular will. James objected to the phrase, "The People, met in General Assembly." The motto upon the great seal of New England, delivered to Andros, was more to his mind: "Nunquam Libertas gratior extat," — "Liberty is never more agreeable than under a pious King."[1]

Andros Governor-general of New England

Dongan was faithful to his master but not less faithful to the interests of his colony. He followed the policy of Andros in unwearied efforts to conciliate the Five Nations, to secure their trade for his own countrymen, to cripple the influence of the

Dongan's policy.

[1] The whole sentence in Claudian's *De Laudibus Stilichonis*, from which the motto is taken, is: —

. . . . Nunquam libertas gratior extat,
Quam sub rege pio. . . .

It was probably assumed that the loyal subject would remember, or evolve from his own consciousness, the latter portion of the passage in looking at the figure of the King on the seal.

French over the native tribes, and to repel French intrusion upon the territory south of the St. Lawrence and the chain of the great lakes. In these efforts he was the more successful because he was a Catholic, could call English Jesuits to his aid, and satisfy the religious sentiment in the Indian, which inclined to the symbols of the Church of Rome, so far as he was moved at all by Christian teaching.

No former governor saw more clearly than Dongan how much the wealth and importance of the province would be enhanced if its jurisdiction could include the territory south and east, originally covered by the Duke of York's patent. Penn had planted his vigorous commonwealth at the south, taking from New York the rich lands of the Delaware; East Jersey, under its successive Lieutenant-governors, — for Barclay remained in England, — Rudyard, Lawrie, Lord Neill Campbell, and Andrew Hamilton, had in ten years doubled in population. If the prosperity of his neighbors did not excite the jealousy of Dongan, it at least made him the more anxious that his own colony should have the advantage of it. He proposed that Pemaquid — too far off to be of any value to New York — should be given to Massachusetts, and in lieu thereof Connecticut and Rhode Island be annexed to New York. That any part of Connecticut should go to Massachusetts would be, he said, "the most unproportionable thing in the world, they having already a hundred times more land, riches, and people than this Province, and yet the charge of this government more than that." He complained that New Jersey robbed New York of her trade and her people; that Pennsylvania was encroaching upon New York territory on the Susquehanna; that Connecticut was, as always, grasping, tenacious, prosperous at her neighbor's expense, of evil influence over the New York towns of Long Island, whose "refractory" people would carry their oil to Boston and

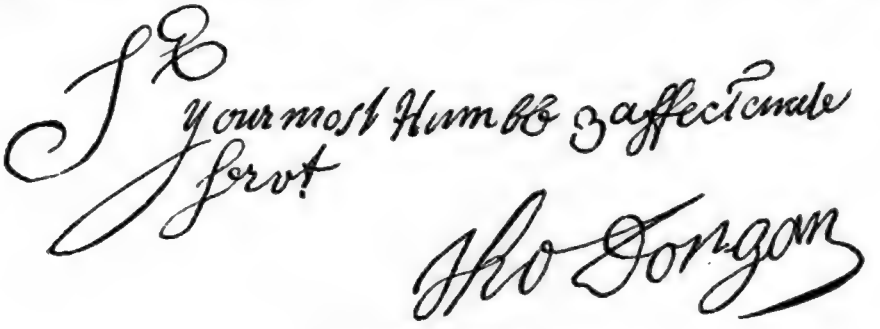
Seal of New England.

their whalebone to Perth, rather than to their own capital. In 1687, while on Long Island they were already complaining of the want of land, the Governor wrote that he believed there had not come into his colony, within seven years, twenty English, Scotch, or Irish families. The population, he added, had increased by Dutch and French — Huguenot — emigration; but this fact he used only as an additional argument for annexing the nearest English colonies to his own; — "that a more equal ballance may be kept between his Mat^{ys} naturall born subjects and Foreigners, which latter are the most prevailing part of this Government."

Prosperity under Dongan.

He hardly did justice, however, to the growth of New York, in his ardent desire to extend its dominion. In the first fourteen years of English occupation its population had trebled. Yet he acknowledged that "the people [were] growing every day more numerous," and as a reason for suggesting the necessity of more forts, he said, they were "generally of a turbulent disposition." He gave them credit for great vigor, for, he said, "the men that are here have generally lusty strong bodies;" and of the other sex he had an equally high opinion, for this is his representative woman: "In this country there is a woman yet alive from whose Loynes there are upwards of three hundred and sixty persons now living."

But the old pleas were powerless now. The policy of the Duke, the provincial Proprietary, was not the policy of the King, who meant to take away all charters and unite the colonies in a single royal province. In only one case did Dongan succeed in effecting any change in colonial relations, — it was agreed to end the long and vexatious controversy as to the boundary line between Connecticut and New York by fixing its starting-point, where it has ever since remained, on the Byram River instead of the Mamaroneck. Another early act of his administration makes it memorable: the province was subdivided into twelve counties with new names to some of them, which names, though not the boundaries, remain unaltered. Ulster was so called for the Irish earldom of the Duke of York; Orange, for his son-in-law, William of Orange; Richmond, probably, for his illegitimate son by the Duchess of Portsmouth; Duke's, which comprised Nantucket, Martha's Vineyard, Elizabeth Islands, and No Man's Land, was so named, no doubt, for the Duke himself, as Duchess was either for his wife or his mistress. Suffolk took its name from an English county, and so also did Cornwall, which included Pemaquid and the rest of the Duke's possessions in Maine.[1]



The Connecticut boundary.

Naming of Counties.

[1] The twelve counties were: The City and County of New York, Richmond, Queen's, King's, Suffolk, Duke's, Westchester, Ulster, Orange, Duchess, Albany, and Cornwall.

The new government of the "Territory and Dominion of New England" was enlarged by the addition of New Jersey and New York, and a new commission issued to Andros as Governor-general in 1688. Though many may have rejoiced at the removal of the Catholic Governor, Dongan, the act by which he was superseded was by no means popular. To merge New York in New England was not to annex New England to New York in the way that had been so long wished for. The greater would now swallow the less in fact as in name. The independence of the colony was sac-

New York annexed to New England.

Signature of Dongan.

rificed to the policy of the King. They might be reconciled to this in the eastern part of Long Island, where they were chiefly New Englanders, but elsewhere the feeling was one of humiliation and chagrin.

Andros, nevertheless, was received in New York with military pomp and civic honors. The seal of the province was formally broken in pieces and that of the Dominion of New England presented as its substitute. Whatever the popular feeling might be, official gentlemen had much to expect from the new Governor; and he on his part was not slow to reward his old favorites, the more readily that every office — whose duties were to be discharged in Boston, the proposed seat of government — bestowed upon a New Yorker, not only served a friend but mortified an enemy. He visited New Jersey; at Albany he called a council of the chiefs of the Five Nations, and exchanged with them high-sounding phrases on the inferiority of the French, — who had recently consented, under a general pacification, to abandon the fort built the year before on the site of La Salle's old Fort de Conty — on the superiority of the Iroquois, and their willingness to be considered, not the children, but the brothers, of the English. After a sort of vice-royal progress through his southern provinces, the Governor-general returned to Boston, taking with him the most important of the official records of New York. Francis Nicholson, a lieutenant in the army, remained as Lieutenant-governor.

We have sketched already the character of the administration of Andros, and the heavy hand that Boston laid upon him in return

when the opportunity came to her.[1] William of Orange landed in England only about a month after Andros returned to New England from New York. In another month James had fled to France; in February, 1689, William and Mary were proclaimed in London King and Queen of England. All winter, tidings of the progress of the revolution had crossed the Atlantic; in February they knew in New York that the Prince of Orange was at Torbay. The news was sent by Nicholson and his Council to Sir Edmund both by land and by water, and they ordered, at the same time, that the King's money should be placed in the fort, — a fact that shows that even at the outset they were apprehensive of some popular outbreak. A more timid or a wiser man than Andros would have taken prompt measures to anticipate an event which, he should have foreseen, would be sure to follow in the colonies any serious disaster to the King in England. But he sent no instructions to his New York Council till nearly three months later, when he was already a prisoner in the hands of the Boston Committee of Safety.

Revolution in England and deposition of Andros.

The government of New York was left in the hands of Nicholson, the Lieutenant-governor, Frederick Phillipse, Stephen van Cortlandt, and Nicholas Bayard, the three more active members of the Council.[2] These men were to work out their difficult problem with such wisdom as they had, — wisdom which, as it happened, would have been insufficient for an exigency of much less moment. The popular mind was governed by other though not less efficient influences, than those which moved the people of Boston. The Dutch inhabitants naturally sympathized with the Prince of Orange and hoped for his success. There were in New York more Romanists than in all New England; the Protestant population were alive to the fear of Popery, quickened by the apprehension that Dongan — not without power, though out of place — and Nicholson were both under Jesuit influence. Dongan was frankly and openly a Catholic; Nicholson, it was suspected, only pretended to be a Protestant.

The Revolution in New York.

But neither the people on one side, nor the Council on the other, took any action until the 26th of April, when news came from Boston of the revolution there on the 18th, and Colonel Nicholson called together his Council and read to them the formal declaration of "the

[1] See vol. ii., p. 387, *et seq.*

[2] Brodhead says (*History of the State of New York*) that Phillipse was remarkable only for being the dullest and the richest man in the town. Van Cortlandt had made himself ridiculous a few months before at a celebration of the birth of the Prince of Wales, when he "both sacrificed his hat, peruke, etc." (Letter from Leisler, *N. Y. Col. Doc.*), and it was remembered against him. Bayard, the most efficient of the three, was a wealthy and respectable merchant, but a hot-headed militia captain, quite unfit, as his own letters show, for important command in a time of emergency.

gentlemen merchants and inhabitants of Boston." [1] To him and his associates in the Government this was a "great surprizall." Being but four in number, as they said, they took the usual refuge of weak men in conditions of unexpected responsibility, and called together the mayor, the members of the common council, and all the officers of the militia. It was agreed to fortify the town against the French, with whom England was now at war, and, as the merchants were already sensitive about paying import duties to the old officers, it was agreed that all such duties should be expended on the new fortifications. For some time the little town assumed the aspects of a camp.

Action of Lieutenant-governor Nicholson and the Council

On the first of May the Council wrote an ingenious letter in duplicate to be sent to Boston, one copy to Sir Edmund Andros, to ask him to return the Records of the Province which he had with him, — the other to Governor Bradstreet and the other leaders of the popular movement, in which the request for the Records is changed into a request that Andros himself may be forwarded to them. But the Massachusetts Committee of Safety declined to release the Governor, and Colonel Nicholson and his three friends were again left to face their own difficulties.

The Council write to Boston.

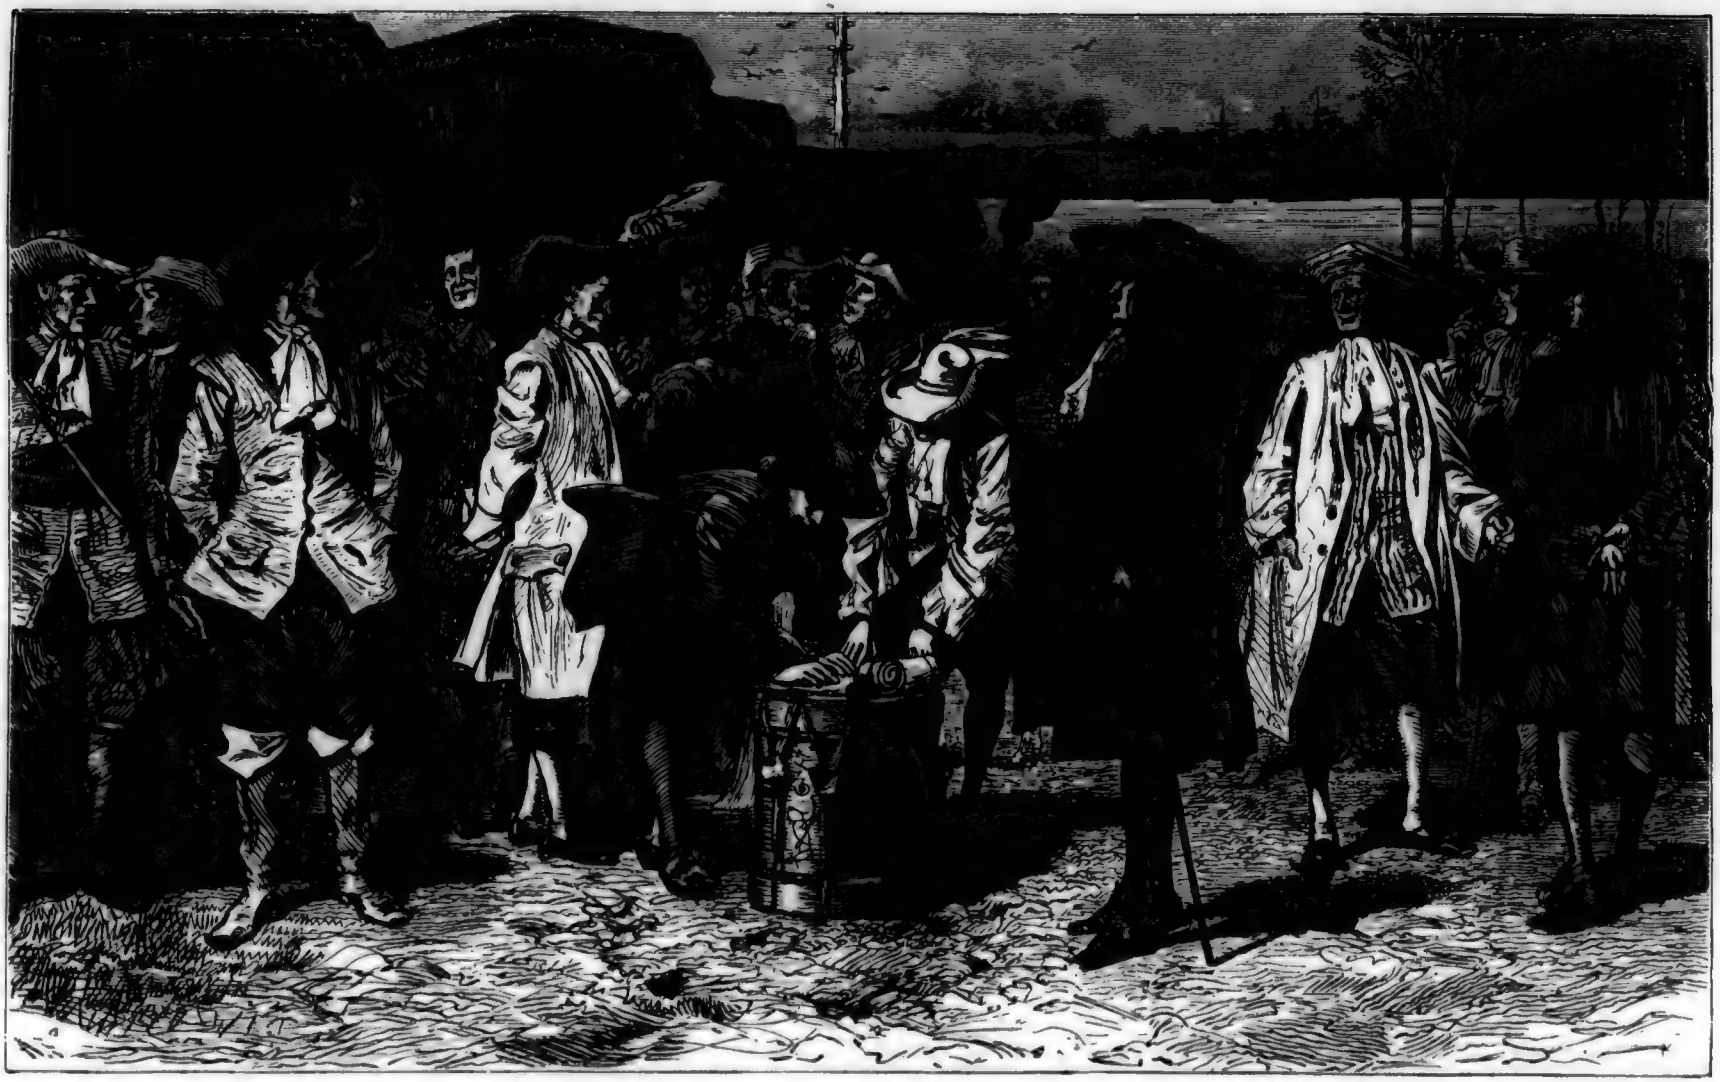
Meanwhile — to mention a straw which showed the wind — the chaplain at the fort prayed regularly for the infant Prince of Wales, and that the dethroned king might be "victorious over his enemies." No proclamation of William was made. The anxious Council wrote to the Secretary of State, whoever he might be, and the Board of Trade, whoever they might be, explaining how doubtful their position was, and how fortunate it was that New York was not more closely united with Boston. A few days after a verbal message arrived from Andros, asking that Hamilton and Smith, two of his councilmen, might be sent on to him. But both these gentlemen had troubles enough at home, and declined mixing in his affairs. This was on the 22d of May. On the 6th of June Nicholson had determined on what was certainly the course of prudence, — to leave his jurisdiction; on the 10th of June his administration ceased, though he did not sail till the end of the month. But the power, and the duties of government, had already passed into other hands.

The transfer of power had really taken place when this imbecile Council called together the officers of militia, and with their advice embodied the military force. At a time when some one must take command, it followed, almost of course, that those who in arms supported the little state took the place for which the Council showed itself wholly incompetent. Among the captains of the militia Jacob

[1] The *Bostoines*, as a despatch of the time calls them.

Leisler appeared as the most prompt and courageous man, willing to take responsibility. While the temporizing policy of the Council — waiting for more news — exasperated the great body of the people; while terrors of French invasion kept the little army on the alert, everybody asked why William was not proclaimed. A foolish speech of Nicholson's gave rise to a rumor that he had threatened to burn the town. When Leisler's turn came to guard the fort with his company, he gave notice that he should call all the train-bands on parade, and ask the inhabitants to unite to defend the Protestant religion. A rumor spread that the French fleet was

Captain Leisler takes command.



Leisler's House.[1]

below. Leisler's critics afterwards said that he started this rumor; — certainly he improved it. He gave the signal agreed upon, and the train-bands met. The captains of some companies ordered them to disperse, but they refused; and at Leisler's direction they all signed a declaration, by which they said they held and should hold the fort for his Royal Highness the Prince of Orange, on behalf of such person as he had appointed Governor. Six captains and four hundred men signed this document.

Within a very short time news arrived that William and Mary had for the present confirmed in office all Protestants holding commissions

[1] Leisler's house was on Whitehall Street, south of Pearl Street, and was the first brick house in New York. The picture — taken from the *Corporation Manual* — is from a drawing made in 1679. Leisler's house is marked L.

THE TRAINBANDS SIGNING LEISLER'S DECLARATION.

in the colonies. Had Nicholson possessed the confidence of the people at all, or, indeed, had he been a man of resource, he might even now have resumed authority under this order. But Leisler was in command. Almost all the counties, except New York, had thrown off all allegiance to Nicholson already. And thus, as we have seen, he notified the Council on the 6th that he should leave for England. They approved of his departure, and Leisler at the head of his train-bands was thus left the only commander of the city. Comparing his position with Bradstreet's in Massachusetts, it is impossible to say that Leisler was more a usurper than Bradstreet. In the case of the New York interregnum, the Governor who held under James was permitted to depart in peace; while in Boston he was put under close watch and ward. Had Leisler's assumption gone no further than this, he would probably have received, in the end, not even a momentary censure, but the constant favor of the new monarchs.

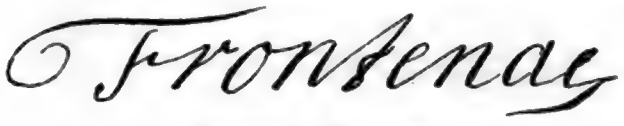
Nicholson leaves for England.

Leisler thus became leader of the Protestant movement, — which happened to be the Dutch movement, — which happened also to be the popular or plebeian movement in the little city, all of whose people, of every shade of politics and religion, did not number more than three thousand. It was at the same time the "country" movement, to adopt a convenient phrase, often used in English politics, and sometimes in the politics of America, to express the sentiments of the rural districts, where they differ from those of the merchants, or other men of cities. Leisler, however, was not himself a Hollander, or of Dutch origin. He was born at Frankfort-on-the-Main, and had come to New York thirty years before as a soldier. But for many years he had been a merchant, and, of late years, a prosperous merchant. He first appears in the records of recent dissensions as receiving a cargo of wines, on which the duties, amounting to a hundred pounds, he refused to pay to a revenue officer, who was still serving under King James's commission and claimed no other authority.

Connecticut proclaimed William and Mary on the 13th of June, and delegates from Connecticut, who had the printed English proclamation of the accession, delivered this to Leisler. On the 22d he made the formal proclamation. The fact that the Connecticut delegates recognized him as the actual Governor instead of going to the "rump" of a Council, excited the indignation of the Councillors. The King's proclamation, confirming all Protestants in office, was made public by them; but this was but a half triumph on their side, as it compelled them to dismiss Plowman, the Collector, who was a Catholic, and who had most aroused the indignation of the Protestant party. Leisler appointed Peter de la Noye Col-

William and Mary proclaimed.

lector in his place, turning out the three commissioners appointed by the other party. Bayard took alarm at the audacity of Leisler's proceedings, and on the 28th fled to Albany, leaving Phillipse and Van Cortlandt the only representatives of the Council. Van Cortlandt soon followed, and from this time, for a year and a half, Leisler was practically at the head of the government.



Flight of the Council.

In imitation of the proceedings in Massachusetts, and in London, he invited the counties and towns to meet in convention. The call was obeyed, and the delegates assembled on the 26th of June. The meeting consisted of twelve members, of whom two withdrew after the first session. The others signed a paper appointing Leisler to be Captain of the Fort, and constituting themselves a Committee of Safety. Under this authority Leisler assumed from this time to be the governor of the province.

Committee of Safety appointed, and Leisler recognized as commander.

This unskilled, self-taught merchant, into whose hands the conduct of affairs had fallen at a dangerous and critical moment, was beset with difficulties from without as well as within. King James, who had commissioned Nicholson and his council of three, was at this moment the guest and ally of Louis XIV. That king, on the 7th of June, in the very week in which Leisler took command of the fort, gave these instructions to Frontenac, Governor of Canada, with regard to the whole Province of New York: "If among the inhabitants of New York there are any Catholics whose fidelity can be assured, they may be left in their homes after they have sworn fidelity to King Louis. From the other inhabitants, artisans and people necessary for agriculture may be kept at work as prisoners. All officers, and all the principal inhabitants, will be kept in prison till they are redeemed by ransom. With regard to all others who are not French, they will be transported to New England, France, or other places. But all Frenchmen, especially those of the pretended reformed religion, will be sent to France." These were a part of the direct orders for an invasion of New York. And at this very moment the Jesuit body, at once servants and masters of this French king, were carrying on, on the frontier, those intrigues which in this and the following years resulted in the massacres of Pemaquid, of Schenectady, of Salmon Falls, and of Wells' River. Of these massacres the cruelties were due, in the first instance, not to savage ferocity, but to the counsels of men who took the name of Jesus for their own.[1] At such a time Leisler

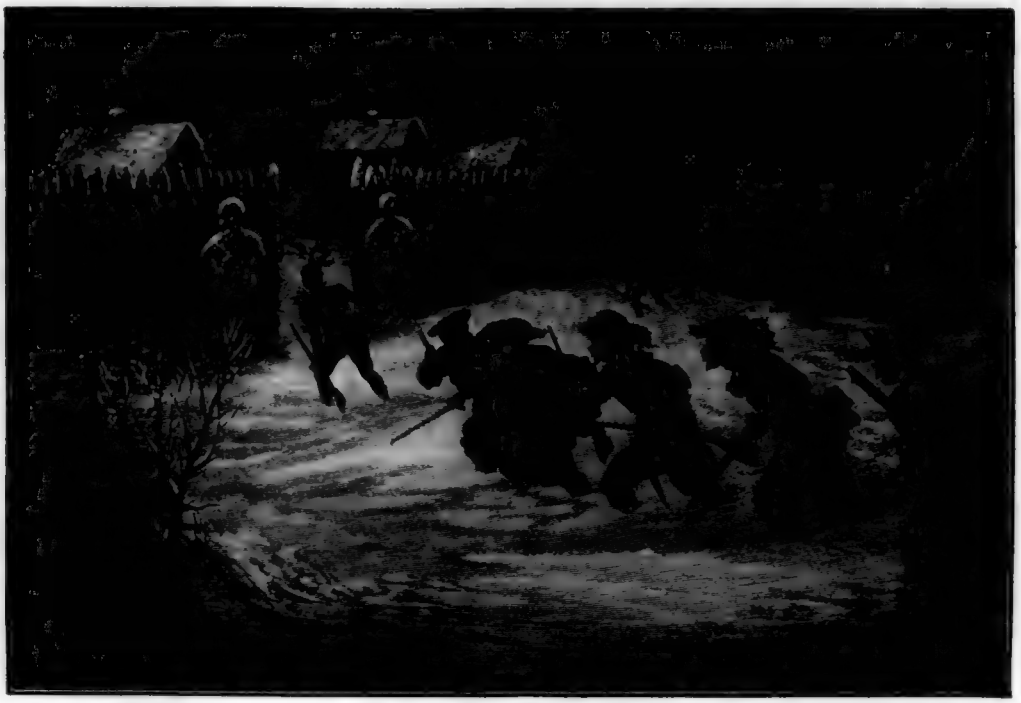
Indian massacres on the frontiers.

[1] Compare, for the details, Parkman's *Life of Frontenac*.

found one of the few Roman Catholics in his province a governor of Albany on the frontier, and another the collector of the king's revenue in New York. He would not have been justified, either as the representative of King William, or as governing the province for its own best good, had he consented to serve, on equal terms, with these Catholic officers.

The city and county of Albany was the only part of the province which for a time refused to recognize his authority. Albany was probably strengthened in its independence by Colonel Bayard, and not unwilling to resent New York interference. She had called her own convention, and intrusted all public affairs to her own magistrates. She had declined to send delegates to Leisler's convention. This quasi independent attitude would probably have excited little attention in history, but that the news of the butcheries of Pemaquid and at Dover[1] arrived at this time in Albany. The frontier village now felt its weakness. She sent for aid to the city whose ruler she had defied, asking for help. Leisler would not recognize the Albany government, and they wrote to Connecticut and to Massachusetts asking for a garrison for the fort. They appointed Schuyler to its chief command, displacing Sharp, against whom as a Catholic there were "jealousies." Leisler sent up a company under Milborne, but he was refused admission to the fort. He returned, and the fort and outposts at Schenectady were garrisoned by Connecticut men.

Albany refuses to recognize Leisler as Governor.



Had Nicholson dared to remain in New York he would have received a commission from King William broad enough and strong enough to relieve him from all difficulty. For, all through these confusions William showed no fondness for any revolutions but such as he made himself On the 30th of July, while Nicholson was yet on the ocean, an order issued at Whitehall to appoint him Lieutenant-governor, enclosing instructions from the King and Queen. The letter was addressed to him, and, in his absence, "to such as for the time being take care for preserving the peace and administering the laws." It is said that Nicholson arrived in London before the letter was started, and it has been conjectured that no alteration was made in the address because it was supposed that Phillipse, Cortlandt, and Bayard would open it. But Nicholson must have told the authorities that a convention had been summoned, and that Leisler was in actual command. It is probable either that the despatches were beyond correction, or that the English authorities were willing to avail themselves of the doubt hidden under the address. In point of fact at the moment they were writ-

Orders received from England.

[1] See vol. ii., pp. 444, *et seq.*

ten, Bayard and Cortlandt had both fled from New York, and there was no government there but that of Leisler. Nor did the Council, which was thus reduced to Phillipse alone, make any pretence of exercising authority.

The letter did not arrive till the 9th of December, when Bragge, who brought it, came by way of Boston. He delivered it to Leisler, who claimed it as "the person who administered the laws and preserved the peace." When Cortlandt, who had returned, and Phillipse claimed the despatches, the messenger prudently said he would not be hanged for any of them. With this addition to his authority Leisler continued his administration and again proclaimed William

The Attack on Schenectady.

and Mary, "Scotland being formerly omitted." Cortlandt and Phillipse sent a protest to the King against his claim, but made no pretence of assuming the duties of governor themselves.

The duties of the post to which Leisler found himself called might well have appalled him. Frontenac on the north, one of the ablest rulers over hunters, Jesuits, and savages, who ever served France, was taking advantage of the declaration of war to pounce upon the exposed frontier. In February, 1689–90, the blow came. He formed three war parties of picked men, who were to attack Albany, New Hampshire, and Maine. The first gathered at Montreal, made up of ninety-six Christian Iroquois, so called, and more than a hundred French *coureurs du bois*. They were led by three of the Le Moynes,

of the same blood as Iberville and Bienville who founded Louisiana, — of the distinguished family to whom France owed so many victories in the years of her American rule.

These leaders were destined to meet one cruel disappointment. After the party had crossed Lake Champlain on the ice, a council was called in which the Le Moynes named Albany as the point of attack. "How long," said the sullen Indians, "since the French have been so bold?" The Frenchmen answered that since their late misfortunes, honor required them to take Albany or die. The Indians had no such notion of honor, and at the Hudson, where the tracks then and now diverge — one for Albany and one for Schenectady — they took the path to Schenectady. The French were obliged to acquiesce. A thaw had softened the snow and ice, and it was nine days more before they came near the fated village. About dark on the 8th of February, they reached the river Mohawk, a little above the village. Sunset has a peculiar marvel at that spot, which even savages have observed. The range of southern mountains on its western side is so curved that the red ball of the sun, seen through the mists of the river, seems to roll slowly down the ridge to its repose. But in this fatal twilight and bitter storm there was little thought of nature's beauty or of savage legend. The scout, sent forward, saw nobody. The cold was so bitter that they feared to dispense with fires, while their prey was so near that they dared not make them. Nor was delay needed. Some village festival was just finished and the whole town was asleep soon after nightfall. Talmadge of Connecticut, with eight or nine of his militia, was in the block-house, and only two snow images stood as sentinels at the gate of the palisades of the town, in fatuous derision of danger. In two bands the invaders entered, without opposition, having failed to close the Albany gate so as to shut in the fugitives. One band marched to the right, one to the left, till the sleeping village was surrounded. The signal was then given, they "screeched the war-whoop together," and fell to their horrid work. No resistance was made but at the block-house. In two hours of carnage sixty persons were killed, — men, women, and children, — and eighty or ninety captives were secured. A few escaped through the storm to Albany. The village was fired, and at noon it was in ashes. Four hundred thousand livres' worth of property was destroyed, says the French report, with a curious precision.

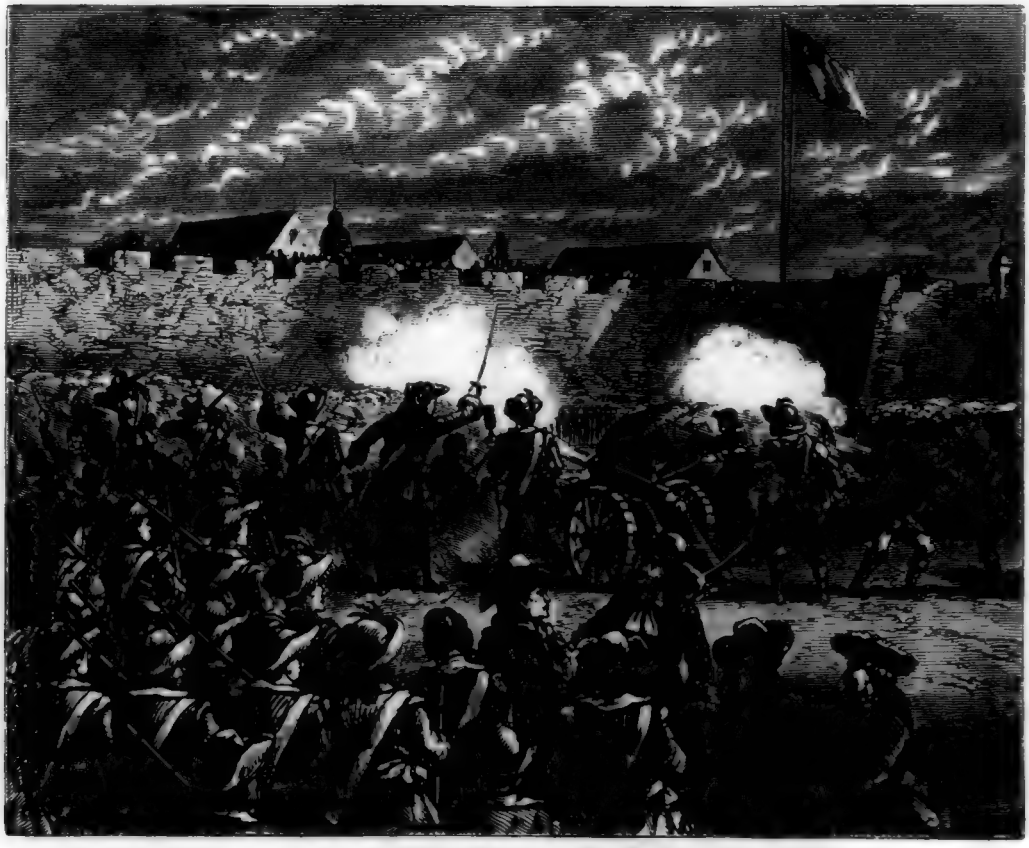
War with the French.

Destruction of Schenectady.

The Albany commander, Schuyler, learned from prisoners whom he took in pursuit, that Frontenac meant to attack Albany in the spring. He sent messengers to Massachusetts, Connecticut, Maryland, and Virginia, urging them to relieve him, and even to "the civil and mili-

tary officers at New York." Connecticut gave him sound advice in suggesting that this was no time for quarrel with New York, and this advice prevailed. Leisler renewed and pressed the urgent demands made by the Albany government, upon the other provinces; Albany received the reënforcements, and sent delegates to the House of Assembly which he summoned to meet on the 24th of April. An expedition was concerted against the French, and to form plans for this Leisler invited the other colonies to send delegates to New York.

Seven delegates attended this first Colonial Congress, which was in session on the 1st of May. The names of all have become historical in the annals of this and the next century. They were Stoughton, Sewall, Gold, Pitkin, Walley, Leisler, and De la Noye. They agreed that New York should provide four hundred men, Massachusetts one hundred and sixty. Connecticut one hundred and thirty-five, and Plymouth sixty. Maryland had promised one hundred. It was agreed that Leisler should appoint the commander.



With the energy which merchants or other men of affairs often show when some accident throws them into the administration of government, and with the eager and terrified zeal of the burghers and sea-faring men of New York to back him, Leisler rebuilt the fortifications of that city, which had fallen into decay in the preceding peaceful years. Hearing of French cruisers at sea he sent out privateers, some of considerable force, to capture them; and he was able to offer some assistance also to the ill-fated New England expedition against Canada. The year 1690, for the whole of which he was the sole Governor of New York, was a year of spirited military and naval enterprise. And the occasional arrival of a prize showed that neither the dangers nor the rewards of the seas had been over-estimated.

His foreign was more successful than his domestic policy. At home there was no lack of complaint; and probably many of those who had found fault with the imbecile languor of King Log, found fault now with the activity of his successor. When the royal Governor arrived, who had been fifteen months in coming, he found a hotbed of sedition and bitter complaint ready to welcome him. Walley, the Plymouth delegate to the Congress, not unfriendly to Leisler, had characterized his temper well enough when he said, "He is a man that carries on some matters too arbitrary."

Still, had King William at this juncture appointed any competent person governor of New York, the troubles which followed, with the cruel tragedy which they involved, would have been prevented. But, with the recklessness which has not yet been outgrown in the administration of colonies, William considered the needs of the candidate for office rather than the need of the colony which was to be governed.

Soon after the letter was sent, under which Leisler continued his rule, but long before it arrived, William appointed Col. Henry Sloughter, a personal favorite of his own, to represent the crown in New York. Even now, had Sloughter with any promptness assumed his office, he would have arrived in New York as soon as the paper which served Leisler for a year as his commission. In fact, however, Sloughter, who was commissioned November 14, 1689, did not sail until December 1, 1690, — after a year of inexplicable delay, — and then went by way of Bermuda. Unfortunately again, Rich-

Sloughter appointed Governor of New York.

Ingoldsby's Attack on the Fort.

ard Ingoldsby, who sailed at the same time with Sloughter as a captain of a company of grenadiers, arrived in New York on the 29th January, 1691, a few weeks before his Governor. Finding Leisler in command of the fort, he ordered him to deliver it. He had no civil commission; he had no warrant from Sloughter to hold the fort; he had no commission whatever but that of major in the King's army. No officer of any rank, superior to Ingoldsby's, would have obeyed such a command, unless special orders were given him by a superior. Leisler offered to Ingoldsby every courtesy, and quarters for the troops, but declined giving up the fort until Sloughter or some one commissioned by him, should arrive. On

Arrival of Captain Ingoldsby.

this Ingoldsby proceeded to mount cannon against the fort, and actually fired upon it. The fort returned the fire. There was afterwards a collision of testimony as to which began this combat. But it is certain that almost all the injury and loss of life were caused by Ingoldsby's party, who maintained a fire against the fort for some hours. At the utmost but a few men, most of them soldiers, were killed.

He attacks Fort James.

In this state of half war, Leisler maintained the fort for some weeks, until on the 19th of March, Sloughter, the long looked-for Governor, arrived, for whom all along he said he had been waiting. Here, on the after trials, testimony differed again. Leisler's son said that his father, as soon as he had notice of Sloughter's arrival, although late at night, sent two gentlemen to congratulate him on his arrival, and offer the fort and government to him as their Majesty's Governor, but that they, without being heard, were committed to the common jail; that the next morning Captain Leisler sent a letter to the Governor desiring him to send some persons to receive the fort, which he did, but immediately caused said Leisler and others to be committed to prison.[1] Colonel Sloughter, in his official report to the King, says he sent Major Ingoldsby to demand the fort, to whom Leisler replied that he would own no Governor without orders from the King directed to him. Sloughter also says that Leisler sent a man out that night to identify him and make sure that he was Colonel Sloughter; that he then demanded the fort from Leisler a second time, and that he refused it; that only when preparations were made to storm it, did Leisler send out the two persons spoken of to surrender it.

Ingoldsby marched into the fort. Some of Leisler's men threw down their arms, and without further opposition he relinquished the command. Sloughter issued a commission at once for the trial of him and his Council for murder and treason. The trial immediately followed. It has become one of the celebrated cases in our history. Six of the prisoners pleaded in form. Leisler and Milborne, his son-in-law, refused to plead until the court would decide whether the King's letter of July 30, 1689, had not given Leisler formal authority. The court would not go into this question, but referred it to the Governor and Council. They replied that the King's letter and the papers with it gave no power or direction to the said Leisler. Leisler and Milborne still refused to plead, and after a trial of eight days, they and six others of Leisler's Council were found guilty and sentenced to death. Dudley, a Massachusetts man, whom the king had made judge, pre-

The fort surrendered to Sloughter.

Leisler and his Council brought to trial.

[1] Administration of Leisler. *N. Y. Hist. Soc. Collections*, 1868.

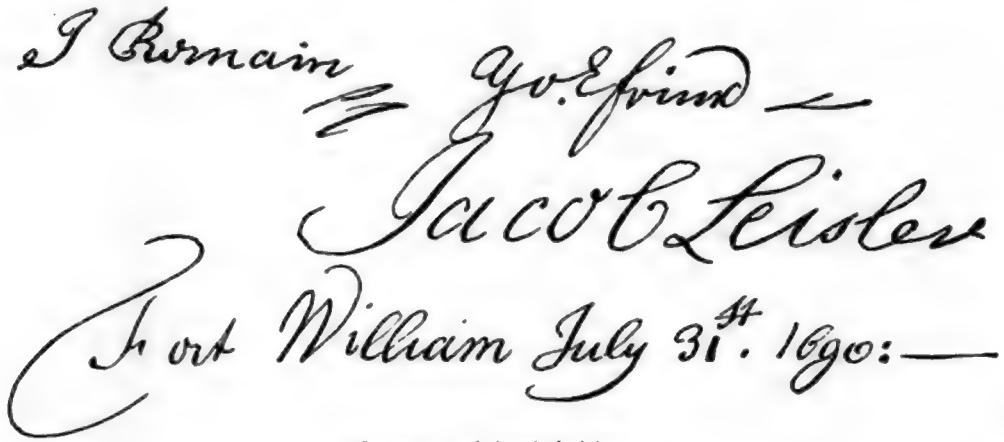
sided at the trial and pronounced sentence. The Governor, by the advice of the judges, reprieved all the prisoners until the king's pleasure was known.

This was on the 20th of April, 1691. The whole picture is a wretched web-work woven by men who were wild with the excitements of religious bigotry and the hot rivalries of race, in the narrow confines of a petty seaport, far from their chiefs, and jealous of their privileges. The historian who traces it feels all along that even thus far it might all have dropped into the oblivion to which the most of such wretched broils belong, but for the terrible blunder made a few weeks later.

Sloughter signing Leisler's Death-warrant.

Sloughter called, as he had been bidden, the first regular Assembly summoned by a royal governor. The province was more wild than ever in its dread of the papists, under the horrible lessons taught on the frontier. But the Assembly was chosen wholly in the interest of the party whom Leisler had ousted; and it had captured, as a modern phrase has it, Ingoldsby and Sloughter. All the men whom Leisler had deposed from authority were now ready to take their revenge. On the one hand petitions for Leisler's pardon were pressed on the Governor. Counter-petitions for his execution came in, some of them even from women. Bayard, of kin to Leisler by marriage, pressed Sloughter, who was his guest, to carry out the sentence. "Tradition says that when no other means could prevail with him, a sumptuous feast was prepared, to which Colonel Sloughter was

invited. When his reason was drowned in his cups the entreaties of the company prevailed on him to sign the death-warrant, and before he recovered his senses the prisoners were executed."[1] This was on the 16th of May, 1691, nearly two years after Leisler had assumed the government. On that day Leisler and Milborne were hanged, and their bodies were then beheaded, in the presence of a crowd of indignant people.



Sloughter signs Leisler's death warrant.

Sloughter himself died suddenly on the 23d of July. There were suspicions that he had been poisoned, but a medical examination gave no color to them. It is not difficult to account for the sudden death of such men. Within three years, on the application of Leisler's son at London, the whole question as to his father's guilt was argued before a committee of the House of Lords, the attainder pronounced on him was reversed by Parliament after full discussion, and such reparation as money could give was made to his family, for the charges which his private estate had met in his conduct of the administration. Bellomont, who succeeded him after some years as Governor of New York, made no scruple in saying that the evidence on the trial convinced him that Leisler was murdered judicially. That he would have been more prudent had he surrendered his command to Ingoldsby, the event has proved. That he should have yielded to Sloughter, at the moment he knew who Sloughter was, is certain. That he was unjustly charged with murder and treason was the decision of the English Parliament, and such will probably be the verdict of history.[2]

Leisler's attainder reversed by the House of Lords.

CHAPTER II.

ROYAL GOVERNORS UNDER WILLIAM AND MARY.

COLONIAL POLICY OF WILLIAM AND MARY. — GOVERNOR FLETCHER OF NEW YORK. — HIS VISIT TO CONNECTICUT. — RENEWAL OF HOSTILITIES WITH THE FRENCH AND INDIANS. — SCHUYLER'S EXPEDITION. — ADMINISTRATION OF THE EARL OF BELLOMONT. — PREVALENCE OF PRIVATEERING AND PIRACY. — CAPTAIN KIDD'S ADVENTURES. — LORD CORNBURY, GOVERNOR OF NEW YORK AND NEW JERSEY. — EAST AND WEST JERSEY UNITED AND PROPRIETARY GOVERNMENT ENDED. — CONTROVERSY BETWEEN CORNBURY AND THE NEW JERSEY ASSEMBLY. — GOVERNORS LOVELACE, INGOLDSBY, AND HUNTER. — PORT ROYAL TAKEN BY THE ENGLISH. — PROPOSED INVASION OF CANADA. — NOVA SCOTIA CEDED BY THE FRENCH. — ADMINISTRATION OF GOVERNOR BURNET.

SLOUGHTER had been governor only four months at the time of his death. Except for the melancholy tragedy which marked his administration, it is remembered only for a visit to Albany and the Mohawk River, when he renewed the treaties of friendship with the Iroquois, and succeeded in detaching the Mohawks from the French. The Chief Justice, Dudley, would have been his temporary successor, as the senior member of the Council, had he not been absent in the West Indies. Captain Ingoldsby for a brief period discharged the duties of that office, but was relieved in August, 1692, by the arrival of Benjamin Fletcher from England with a commission from the King.

Signature of Fletcher.

Appointment of Fletcher as governor.

The Whig party, and William and Mary whom that party led to the throne of England, understood as well as any people in the world of that day, how to use those phrases which denounced tyranny and asserted the rights of Englishmen. But, as has been often remarked, this oligarchy — for it was nothing more — was quite as willing to use the results of the tyranny of the Stuarts, as if that tyranny had been their own. When Mather and Phips were in England, pleading for the restoration of the charter of Massachusetts, Somers

was as ready as any Tory lawyer would have been, to instruct them that the crown could take no steps backward. In his government of the new province of New York the new King did as his predecessor would have done. The Governor was instructed to send home all laws for approval; he was directed to introduce the Book of Common Prayer among Presbyterians, Huguenots, and Dutchmen, where perhaps James II. would have been glad to introduce a mass-book; he was to take a salary of £600 a year from the colony revenue, accepting no gift from the Assembly unless the King permitted; and he was to send to the King a list of prominent persons from whom the Governor's Council would be named. The Stuarts would hardly have found anything to change in this scheme for colonial administration.

Colonial administration under William and Mary.

King William.

William and Mary's first appointments, also, were such as reflected little credit on their advisers. It must be remembered that New York was more distant in time from England than any of her colonies are to-day; that the population of the city was hardly four thousand; that besides the city were "only Long Island and some other small islands, Zopus, Albany, and the limitts thereof," — to borrow from one of the Council's declarations of its weakness. If one considers how little care is given at this time by the most careful ministry to the selection of a colonial governor for ten thousand people on the other side of the world, it is easy to understand why the new-created Whig monarchy of William and Mary was as indifferent as it seemed to be in the choice of its representative in New York.

No more striking proof, for example, could be given of the carelessness with which colonial affairs were managed than the power bestowed upon Fletcher, who was not a man of more than ordinary ability, and of rather less than ordinary good character. His commission gave him the command of the militia of the New England colonies as well as his own. But Sir William Phips, when appointed Governor of Massachusetts, was also, by his commission, made commander-in-chief in Connecticut and Rhode Island. Yet both these colonies were under governments of their own in accordance with their

charters, and neither of them was likely to submit quietly to any assumption of authority within their borders by either Phips or Fletcher. It was thought necessary, for the safety of all the colonies against the hostility of the Indians, that there should be somewhere exclusive command over the whole body of provincial militia. The heedless appointment of two commanders-in-chief would have necessarily defeated that purpose, even had Connecticut and Rhode Island been disposed to submit to the orders of any other governor than their own. Phips and Fletcher quarrelled with each other, and both quarrelled with Treat of Connecticut. That colony sent General Fitz-John Winthrop to England to complain to the King of the violation of their rights under the charter. So strong was the feeling of her people, that twenty-two hundred of her three thousand freemen assembled to give popular sanction to Winthrop's mission. Rhode Island was no less determined to withstand Phips's attempt to displace her militia officers, and also sent an agent — Mr. Almy — to England with a protest against this assumption of power by the Massachusetts Governor.

Conflict of authority over the provincial militia.

Queen Mary.

But Connecticut was quite capable of defending her own rights without waiting for help from the King. Fletcher appeared in Hartford in October, 1693, and ordered the militia under arms. He assured the Assembly that he had no intention of exercising any undue authority over the colony, and in proof he offered the command of the troops to Governor Treat, as his lieutenant. The Assembly were equally determined that he should exercise no authority at all, whether he intended it or not; and Treat declined to be appointed second in command where he was already commander-in-chief.

Fletcher visits Connecticut.

The grim humor of the sturdy Puritans of Connecticut again showed itself as it had more than once before in recent years in resisting usurpation, or what they believed to be so. The militia were allowed to muster at Hartford, apparently to give to Fletcher's pretences a practical answer which could not be misunderstood. He ordered his commission and instructions to be read to the troops.

Captain Wadsworth was in command in front of the ranks, and, as some there remembered, he was not afraid of governors. When the reading began, he gave the order, "Beat the drums!" Their rattle completely drowned the voice of Captain Bayard, — Captain Nicholas Bayard, of New York. Governor Fletcher commanded silence. The reading recommenced, when Wadsworth shouted, "Drum! drum! I say." "Silence! silence!" cried the Governor. "Drum! drum!

The Reading of Fletcher's Commission.

I say," repeated the captain. Then, turning to Fletcher, he added, with a fine disregard of the present facts, but a keen perception of his duty to Connecticut, "If I am interrupted again, I will make the sun shine through you in a moment!" No further attempt was made to resume the reading, and such was the evident spirit of the crowd, that the Governor and his suite thought it prudent to quit Hartford with what dignity was still left them.

Fletcher and Phips both claimed Martha's Vineyard, and with equal heat promised each other to meet there in arms in the spring

of 1693; but when the spring came, each was otherwise engaged. Fletcher's principal occupation, according to Bellomont his successor, was rifling the revenue, and in particular, dealing with privateers and pirates, to whom he sold licenses, quite indifferent how they were used. Under his sway New York became, as Bellomont says, "a nest of pirates."

The Governor, however, did not altogether neglect his public duties. So long as Count Frontenac was governor of Canada, no English colony on the border had leisure to rest for an instant without alarm. He was every inch a soldier, and even in his old age, active and adventurous. The savage attacks made on the New England frontier have been described in another chapter.[1] The Mohawk villages, and Albany itself, were to renew the terrors of the capture of Schenectady.

Renewed French and Indian hostilities.

On Wednesday, the 8th of February, 1693, three years after the massacre of Schenectady, the settlers of that village were aroused by the report that an expedition of French and Christian Indians had arrived on the upper Mohawk. The news was sent at once to Albany, and the next day Schenectady was reinforced by a troop of horse, soon followed by Major Peter Schuyler, who took command. On his arrival he sent messengers to warn the nearest Mohawk fort; but these returned without being able to cross the river. On Friday a party of observation brought the news that two of the three Mohawk towns were already in the hands of the French. On Saturday an advance party of fifty was sent out to feel the enemy and build a fort of observation. They heard firing at the nearest Mohawk town. When the news that the enemy were so near came to Albany, the commander there collected a hundred men and sent them on Sunday to Schenectady. With these and the Schenectady detachment, in all about three hundred men, Major Schuyler marched on Monday afternoon, but too late to help the two Mohawk towns. These had been surprised by their Christian kinsmen on succeeding nights, and the inhabitants killed or captured, men, women, and children. It is said that the French tried to keep their Indians to a promise they had made of killing all their prisoners, but that, more humane than faithful, they refused.[2]

Schuyler's expedition.

After burning the towns the allies had turned to a jubilant, victorious return to Canada. Schuyler by a quick night march reached, early on Tuesday morning, the block-house built on Saturday; the enemy, it was said, were within eight miles, and a large party of friendly Indians were coming from the upper river. He sent out scouts towards the enemy and also a demand to Albany for more sup-

[1] See vol. ii., chap. xviii.

[2] Parkman's *Frontenac*.

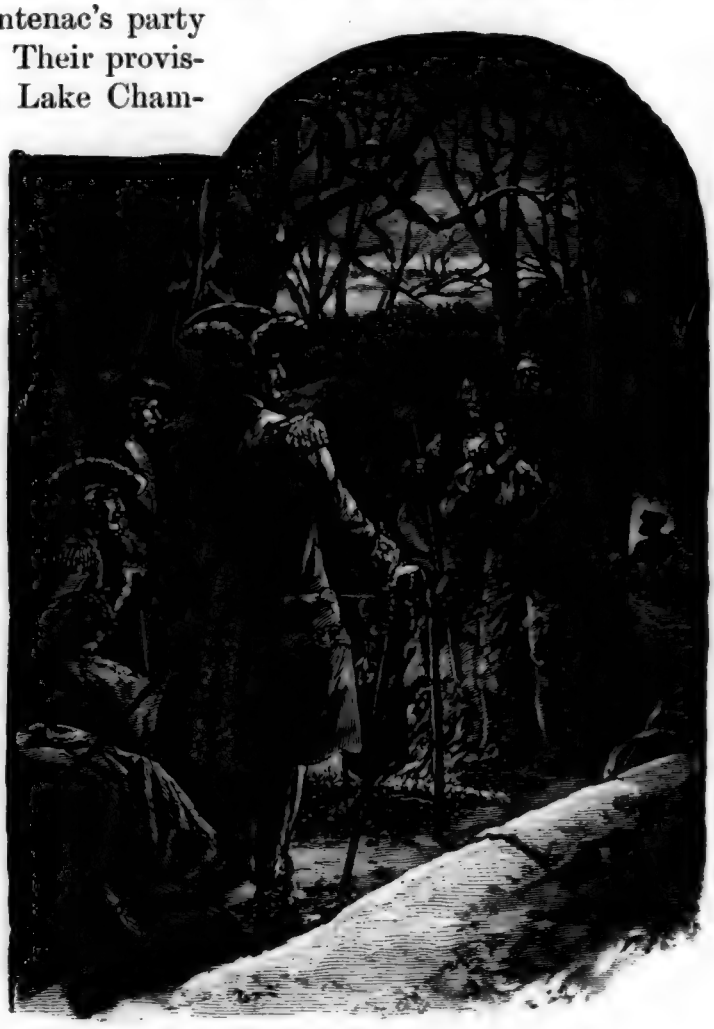
plies to feed the reënforcements. These scouts, apparently without the knowledge of Schuyler, gave the enemy the surprising information that peace had been declared, and that Schuyler wanted only to parley. At this the Indians refused to go further, despite the prayers of the French, but built themselves a log fort where they prepared to wait for the overtures of peace. The French, unwilling and afraid to desert them, were constrained to stay as well.

On Wednesday Schuyler was joined by his reënforcement of about three hundred Indians, men and boys, and, in the afternoon, he cautiously marched ten miles on the track of the enemy, without meeting them. The next morning he marched ten miles further, when one of the Oneidas met him who had been sent by the French to gain over the Mohawks to their side. He told Schuyler of the encampment of the French. Sending back information of this to Schenectady, Schuyler again pushed on two miles, when the news was confirmed by an escaped prisoner. Advancing to a favorable position he built a fortified camp where he passed the night. On Friday morning his scouts brought him information that the enemy were but a mile distant. Breaking camp he marched forward till he came in sight of them. At this he gave orders to engage, risking his five hundred and fifty men against the rumored seven hundred protected by a log fort. But here his Indians failed him. They insisted on building a counter-fort, and he, like his French opponent, was compelled to assent.

Schuyler overtakes the enemy.

The French, not receiving the promised overtures of peace, sallied out three times against him, to be repulsed each time. It then began to snow, and both parties retired to their fortifications, and passed the night in great discomfort, the Albany troops suffering from hunger as well as from cold. The next morning a deserter brought in news that the enemy were packing up for flight, and scouts venturing up to the fort announced that they were gone. Schuyler wished to march immediately in pursuit, but his men refused to move till provisions should arrive. He therefore remained in camp all day, merely sending out a party of observation.

Retreat of the French.



On Sunday, at ten, the convoy arrived, and when the men had been served with their biscuits they were sent after the enemy. They marched quickly, and at four the news was sent from the front that they had come up with them. Now again, however, the Indians refused to move, their reason being that the French threatened to kill all the prisoners if they were attacked. After an hour's pleading they were persuaded, but too late; the enemy had crossed the Hudson on a "flake" of ice and were beyond pursuit.

Schuyler would have followed still, but the men were worn out and

hungry, and the Indians still mutinous. He therefore turned back, and reached Schenectady on Tuesday, a fortnight after the first alarm. Here he found Governor Fletcher, who had heard the news at New York on Sunday, the 12th, and had immediately collected one hundred and fifty men and set sail up the river. The voyage had taken three days, and he arrived too late.

Failure of Schuyler's pursuit.

After this raid Frontenac's party were not successful. Their provisions, left in dépôt on Lake Champlain, were spoiled, and the ice failed them. They broke into small parties, and in dreadful straits for food, returned to Canada only after severe hardships.

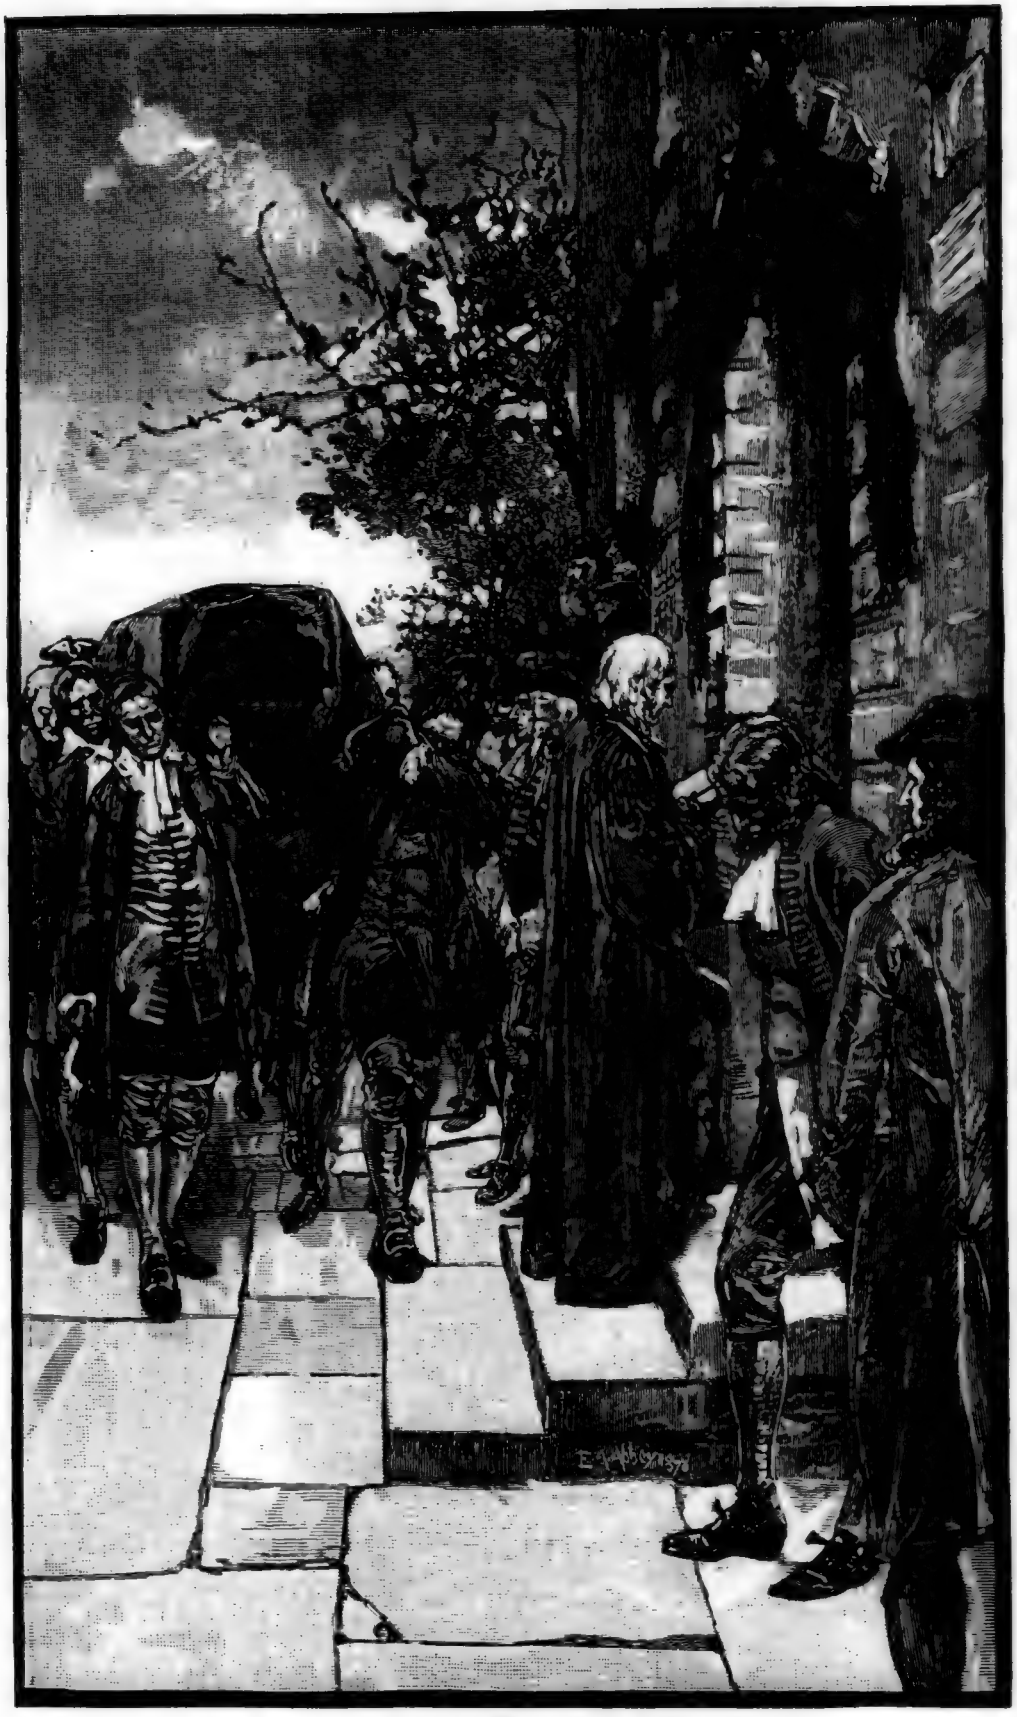
Schuyler and the Scouts.

Fletcher's laurels, such as they were, earned in this expedition, were all that belong to his administration. Its after history, till 1698, is merely the record of his intrigues for money, and his quarrels with assemblies. He was recalled that year to answer many charges of maladministration brought against him.

The Earl of Bellomont succeeded him. His appointment, with enlarged powers, had been talked of for two or three years. A party of some strength, comprising men of influence in England and the colonies, had urged a consolidated government of all the northern provinces, like that which had existed under Andros. But it was found difficult, if not impossible, to reconcile all their rival interests. Connecticut and Rhode Island, governing themselves under their recovered charters, were peculiarly hard to deal with. Jealous of their rights, which agents in London

The Earl of Bellomont Governor of New York, Massachusetts, and New Hampshire.

carefully watched over, they never willingly submitted to any law meant to be of general application; much less were they patient and obedient when conformity implied subordination. In matters of trade they consulted their own interests, without much regard to the interests of other colonies, or to royal regulations. They bought where they could buy cheapest, and sold where they could sell dearest, without asking leave of either Boston or New York, or consulting always the orders of the Board of Trade. When military aid was needed for defence against the Indians on other frontiers than their own, both colonies reserved the right of judging for themselves of their ability to meet such requisitions. It was in deference, probably, to their chartered rights and independent spirit, that Bellomont, who was appointed Governor of New York, Massachusetts, and New Hampshire, was only made Captain-general over the military forces of the two other New England provinces and of the Jerseys.



The new Governor found awaiting him in New York every kind of irregularity which had grown up under Fletcher's administration, — frauds upon government, systematic violations of the Navigation Laws, and the whole population of the city divided by a bitter feud between the Leisler and anti-Leisler factions. He came with a determination to break up piracy, reëstablish legitimate commerce, and enforce an honest collection of the revenue. To these objects he devoted himself with great energy and zeal during the three years of his administration.

Bellomont's policy.

Bellomont's sympathies were known, before he was appointed a provincial governor, to be with the Leisler party. As a member of a Parliamentary Committee he had heard all the testimony in regard to the execution of Leisler, and had said emphatically, that "he was murdered, and barbarously murdered." The new Governor used his influence at once over the New York Assembly to procure an act of indemnity for the family of that unfortunate victim of party hate; and within a few months of Bellomont's arrival the bodies of both Leisler and Milborne — which had been interred in private ground — were taken up and reburied, with public solemnities, in the Dutch Church, and their hatchments hung upon its walls.

His sympathy with the Leisler party.

The adherents of the murdered Governor were those who had earnestly believed in the wisdom of that revolution which had called William and Mary to the throne; it was their aim to maintain religious freedom, and to secure for the people the right, as far as possible, of popular government. Bellomont's decided course in favor of the popular party meant, perhaps, more to them than he intended. But he could have done nothing more certain to secure the applause of

THE RE-BURIAL OF LEISLER.

the larger portion of the people than this support of the Leisler party. It justified the popular abhorrence of a tyrannical and cruel act, and was hailed as the promise of a just and tranquil government.

Piracy.

The great object of Bellomont's administration, and to this he devoted himself with almost passionate zeal, was the suppression of that form of piracy which in the guise of privateering had almost supplanted honest commerce in nearly all the colonial seaports. The success of the English privateers in the long wars with France bred a race of men — the successors to the buccaneers — who cruised in all latitudes, and became quite indifferent whether the unfortunate ship which they captured was of one country or another. The ease with which commissions were granted for privateering increased the evil. The governor of a province like New York, when it had not ten thousand inhabitants, had no doubts as to his right to commission a rover who might never return to the harbor of New York, and might be a terror in all seas.

Captain Kidd.

It was under such a system of naval lawlessness that New York became a "nest of pirates." The name of William Kidd or Kyd has become prominent among these because political rancor in England seized on his association with some of the great Whig leaders. But Kidd was only one of a class, — a man whose guilt was probably less than that of other men of his calling; but he is remembered where others are forgotten, because he confided too much in his great associates. His name first appears in the troubles of New York, in the midst of the excitement when Leisler held the fort against Ingoldsby. Then "this blaspheming privateer" as he is called, apparently with approval, brought his vessel up to the town, to assist Ingoldsby's party, and in their despatches he is commended for it. For this timely service he afterwards received a grant of a hundred and fifty pounds from the anti-Leisler Assembly.

Kidd commissioned against the pirates.

In 1695, Col. Robert Livingston of New York appeared before the Commissioners of Trade in London, to press against Governor Fletcher a charge for overawing the elections in New York. Among the witnesses against Fletcher called by Livingston was Captain Kidd, who was then in London. Livingston's confidence in him was such that he recommended him to Bellomont as a proper person to be commissioned against pirates; — the English government being already eager to break up the system of piracy, and Bellomont having been already suggested as Governor of New York.

Bellomont acceded to the proposal and a joint-stock company, as we should now call it, was formed for the outfit of the *Adventure Galley* to be placed under Kidd's command. Somers, Halifax,

Shrewsbury, Romney, and Bellomont, were among the chief subscribers; and the King himself was to receive one tenth part of the profits of the adventure. The agreement provides that Kidd should sail in search of pirates who had left America with intent to cruise in the Red Sea and elsewhere. Bellomont and his friends were to provide a proper ship for Kidd's use, paying four fifths of the cost, while Kidd and Livingston paid one fifth. The crew was to be enlisted on condition of receiving for their service not more than one fourth of the prizes taken from pirates. If nothing were taken, Kidd and Livingston were to return the cost of the galley before March 21, 1697. Of the three fourths prize money after the crew were paid, Bellomont for the subscribers was to receive four fifths and Kidd and Livingston the remaining fifth. The King's tenth was to be paid by the stockholders. Kidd was bound in an obligation of twenty thousand pounds, and Livingston in a similar obligation of ten thousand, to fulfil their part of the agreement. The royal commission authorizing the adventure finally passed the great seal on the 26th day of January, 1695–96.

Beside giving leave to cruise against the French, the commission instructed Kidd to seize certain notorious pirates, Tew, Ireland, Wake, and Maze. There can be no doubt that his expedition was supposed to be fitted out against them.

He sails for New York.

Captain Kidd sailed for New York in April, 1696, with a crew of eighty men, taking on the voyage a French ship. In New York he advertised for volunteers, and enlarged his crew to about one hundred and fifty men of so bad repute that, after the issue of his adventures, people remembered it was said that Kidd would never be able to control so desperate a company.

He is next heard of at Madagascar, then a noted rendezvous for pirates, where they made themselves secure and lived in barbaric luxury. Kidd had cruised about for nine months without falling in with a single one of the sea-rovers whom he was commissioned to suppress. It was disobedience of orders to leave American waters for this distant latitude, but in Madagascar he hoped for such good fortune as would condone his disregard of instructions.

But not a single pirate-vessel was there in the ports of Madagascar. Then Kidd sailed for the western coast of Hindostan, almost in despair at his bad luck, aggravated now by scarcity of provisions. He soon fell in with the wreck of a French vessel with some coin on board, and with this he made purchases that relieved his immediate necessities. But still not a pirate was overtaken. Many richly laden Eastern ships were met with which the eager crew urged Kidd to take. He resisted until they fell in with a Mogul fleet under Dutch

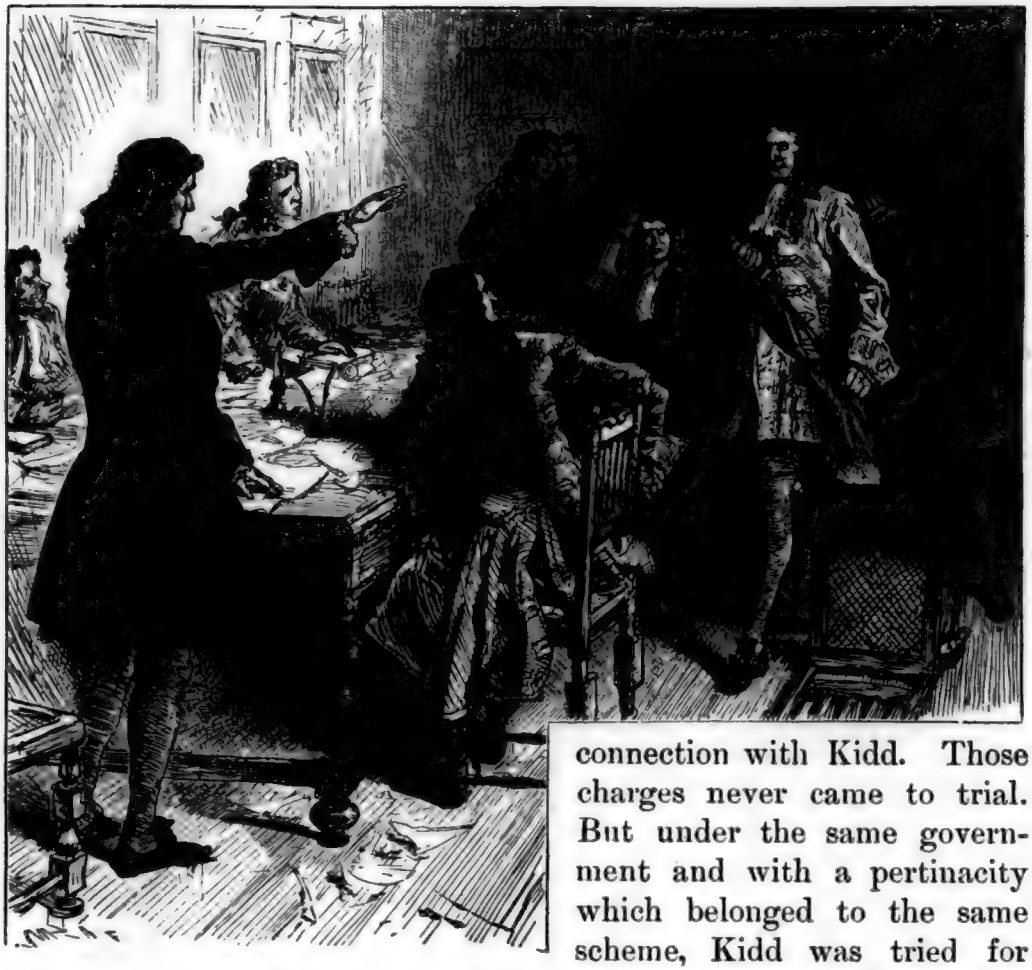
and English convoy; one of the largest of the merchantmen he attacked, was roughly handled and repulsed. His position now was worse than ever; he had virtually fired upon the English and Dutch flags, and that offence must be atoned for by success at any hazard. He was now a pirate by force of circumstances, and his own inability to resist their pressure.

He turns pirate.

In August, 1698, when he was first heard from in New York, news came that he had taken an East Indiaman, called the *Quedagh Merchant*, and transferred his stores from the *Adventure* to that ship, burning his old vessel. Other piracies he also committed; many of his crew nevertheless deserted him for service more to their minds, Kidd still professing to act under the King's commission, and to reserve a large share of his plunder for the noble subscribers, through whose influence he hoped that his offences would be overlooked. But the East India Company had already given notices of his several piracies, particularly of the *Quedagh Merchant*, and orders had been issued for his arrest.

Orders issued for his arrest.

In May, 1699, he was heard from at Nevis. Soon after he was in Delaware Bay with forty men in a sloop; thence he "sailed into the Sound of New York and set Goods on Shore at several Places there, and afterward went to Rhode Island." From Block Island, where his sloop lay, he sent a message to the Earl of Bellomont, who was at Boston. He told him that he had left the *Quedagh Merchant* in a creek in Hispaniola, with goods of great value. On board his own sloop he had, he said, goods worth £10,000. As to the crimes alleged against him — of these, he said, he could prove his innocence. Bellomont showed this letter to the Massachusetts Council. With their approval, he wrote to Kidd "assuring him that if he would make his innocence appear, he might safely come to Boston."



The audacity of Kidd's appearance in Boston is wholly accounted for by the existence of this safe conduct from Bellomont. Robert Livingston came to Boston also. He demanded from Bellomont the surrender of his bond for £10,000, and said that unless this were given up Kidd would never bring in the *Quedagh Merchant* and the wealth she contained. Bellomont says he construed this as a threat, and on the 6th of June, six days after Kidd's arrival, he arrested him at the Council Board. Kidd drew his sword, but was secured and sent to the Boston jail. While in jail he offered to Bellomont to go, as a prisoner, to the West Indies, and bring back £40,000 of treasure which would else be lost. But Bellomont refused the offer.

Kidd goes to Boston and is arrested.

The Admiralty received the news of Kidd's arrest in September, and on the 12th sent a vessel for him and his crew. She was driven

back by stress of weather, and Kidd did not finally arrive in England a prisoner until April, 1700. The delay was thought to be intentional by the critics of the Whigs. He was kept in prison a year. On the 15th of April, 1701, when the great Tory prosecution against Somers, the Whig Chancellor, was begun in the House of Commons, one of the charges against him was his

Kidd taken to England, tried, and hanged.

Arrest of Kidd.

connection with Kidd. Those charges never came to trial. But under the same government and with a pertinacity which belonged to the same scheme, Kidd was tried for murder, and another bill was found for piracy against him and several of his crew.

The report of his trial is one of the melancholy instances of the unjust administration in those days of English criminal law. The evidence brought against him justifies no sentence but one of manslaughter, resulting from the death of Moore, his gunner, from a blow given in a brawl, in which there could have been no previous intention to kill, so far as appeared from the testimony. But Kidd was found guilty of murder. The trial for piracy followed. Kidd claimed that the *Quedagh Merchant* was sailing under a French commission when he took her, and that her capture was, therefore, justified. But this commission, if it existed, was among Bellomont's

papers, and Kidd could not produce it. The government was determined to have him hanged, and he was hanged.

One of the most popular of seamen's ballads [1] has preserved his name, while those of Tew and Bradish and Bellamy are well-nigh forgotten. If a man is innocent unless he is proved at law to be guilty, Kidd must be regarded, in the light of the present legal ruling, as innocent when he was hanged. But his stay in the East was extended long after the period when he promised to return. The capture of the *Quedagh Merchant* in no sense fulfilled the object for which he was sent, and the stealth and concealment of her treasure cannot have been the acts of innocent men. On the other hand Bellomont's correspondence, now fully made public, is consistent all through. He unquestionably believed that the original purpose had been abandoned, and he did not dare, therefore, to sully his hands with the treasure which Kidd gained by that course.

Injustice of Kidd's sentence.

Had such a French commission existed as Kidd pretended, the seizure of the *Quedagh* was lawful, and four fifths of £40,000 of treasure belonged to Bellomont and his associates. It is hard to believe that, without a motive, the Governor sacrificed an innocent man, and gave up wealth which was large to him, merely in obedience to the pressure of political enemies. The true verdict is, probably, that Kidd deserved to be hanged, though never found guilty by a fair trial. It is to be observed that at the time no one pretended that Kidd was innocent. The utmost that the critics of the trial maintained was that Bellomont and his friends were also guilty.

Lord Bellomont died in March, 1701, having passed about one half his term of office in New England. To his administration of the affairs of that portion of his government we shall recur in subsequent pages. At the time of his death Nanfan, the Lieutenant-governor, was absent from New York; and the party known as the "White People" — the "Black People" and the "White People" had become the designations of the Leisler and anti-Leisler factions — seized the opportunity for an attempt to regain possession of power. The timely return of Nanfan, however, defeated this purpose, and the leaders were signally punished. Edward Livingston, who was one of them, was the collector of customs and receiver of quitrents. The Assembly demanded his accounts. Whether disposed or not to obey this order it was out of

Death of Lord Bellomont.

Contest between the Leisler and anti-Leisler parties in New York.

[1] Strangely enough, in the ballad, even in the early editions, his name is made "Robert Kidd." William Moore the gunner is rightly named, as the song is sung in the forecastle to this day: —

"I murdered William Moore,
As I sailed, as I sailed."

his power to do so, for his papers were in the hands of Lord Bellomont's widow, who had gone to England. The Assembly thereupon, whether justly or not, declared him a defaulter, and confiscated his property.

Against Bayard, who had had so much to do with Leisler's death, the feeling was even more bitter than against Livingston. An act, passed while Sloughter was Governor, making it treason "to disturb the peace, good, or quiet of the province by force of arms or otherwise," was largely Bayard's work. To this law he now made himself liable by sending to England complaints of Nanfan's conduct of affairs. He was brought to trial and found guilty. And he would certainly have been punished under the act of his own contriving, had not a new Governor, Lord Cornbury, arrived, whose character and associations led him into immediate affiliation with what in our time would be called the conservative party. Bayard and his friends were again in the ascendency, and Atwood, who had presided at Bayard's trial, rather with the zeal and asperity of a prosecuting attorney than the cool impartiality of a judge, thought it prudent to leave the province for his own safety.[1]

Queen Anne.

The new Governor, Lord Cornbury, was the cousin of Queen Anne — who came to the throne at the death of William in 1702 — and the grandson of Hyde, Lord Clarendon. He was simply a disreputable profligate, and so overwhelmed with debt that he could only escape a jail by quitting the kingdom. As he was to be provided for, his worthless character was not considered a disqualification for a colonial governorship. The summer of his arrival was marked by a dreadful mortality from yellow fever, introduced

Lord Cornbury Governor.

[1] A tradition is preserved that Bayard was respited from time to time by the payment of money to Lieutenant-governor Nanfan. But his children, tired at last of these costly appeals to their filial piety, expostulated with their father for not consenting to be hanged, as the cost of saving him would come to be, they feared, their pecuniary ruin. — *Du Simitiere, N. Y. Hist. Soc. Coll.*, 1868.

from the West Indies, and in ten weeks' time more than five hundred of the population were swept away. Among them were some of the most distinguished citizens, but the Governor escaped by retiring to Jamaica on Long Island.

Cornbury was by no means singular among colonial governors, in that he regarded his office as given him solely that he might enrich himself. He entered upon its duties, with that purpose, with enthusiasm and success. The Assembly was persuaded to appropriate £1,500 under a pretence of fortifying the Narrows at the entrance of New York harbor, in anticipation of a French invasion. The Narrows remained unfortified and the Governor was the richer by £1,500. The lesson was not lost on the Assembly, and they appointed a Treasurer of their own, who was to see that future appropriations were spent in accordance with their intentions. The Governor resented this reflection upon his conduct and interference with his will, and an appeal was made to the Crown. It was a substantial gain to the cause of popular rights that the royal authority sustained the action of the Assembly. The incident is one of many to point the truth of the reflection, that it was ultimately to the advantage of America, that the government in England sent profligate and worthless men to be colonial governors.[1]

His character.

Though destitute of any sense of public or of private virtue, Cornbury was not the less zealous on behalf of the Church. It was a zeal, however, not for religion but for the established Church of England as a part of the State. A dissenter was to him intolerable as a political freethinker who was disloyal to the State, and with whom there was no need of keeping terms of either justice or mercy. When driven from New York to Jamaica by the prevalence of yellow fever, he obtained by the courtesy of Mr. Hubbard, the Presbyterian minister, possession of the parsonage, the best house in the town. When no longer needed for his own residence he delivered it to the few Episcopalians of the village, and the glebe attached was leased for the support of their church. He subsequently forbade that any clergyman or school teacher should preach or teach except by special license. By his persecution of two Presbyterian preachers, McKenzie and Hampton, he elevated them into martyrs, and aroused a resentment which appealed to the love of religious freedom throughout the colonies.

Persecution of Dissenters

No royal governor ever made himself more obnoxious to the whole country. The ambitious and unscrupulous Dudley, who was at this time chief magistrate of Massachusetts, was using all the power which his office gave him, and all the influence he possessed in Eng-

[1] Bancroft's *History of the United States.*

land, to destroy the charter governments. He found a willing ally in Cornbury. Both professed to wish for a union of all the northern colonies under a single governor. Cornbury wrote home "that he was satisfied this vast continent which might be made very useful to England, if right measures were taken, would never be so till all the proprietary and charter governments were brought under the crown." The immediate purpose, however, of the two Governors was that Rhode Island should be annexed to Massachusetts and Connecticut to New York; and it was only by the utmost diligence of Sir Henry Ashurst, the agent in London of Connecticut, and of William Penn, who then represented Rhode Island, that the design was defeated.

Dudley and Cornbury unite against Connecticut and Rhode Island.

The Proprietors of East and West Jersey had united, in 1702, in a voluntary surrender to the Queen of their right of civil government. Cornbury was appointed by a separate commission Governor of that province as well as of New York, for the Jersey Proprietors did not intend, in consenting to receive a governor from the crown, to surrender their provincial independence. Each province retained its own Assembly and was governed by its own laws. But Cornbury resided in New York, making only occasional visits to Perth Amboy or Burlington. Even a governor conscientious in the discharge of his official duty, could hardly have failed, in thus neglecting the inferior province, to sacrifice its interests. Cornbury, who was not conscientious, and who looked upon official duty as only a means for the furtherance of personal ends, considered New Jersey merely as an outlying possession to be farmed for his benefit. Ingoldsby was his lieutenant-governor, and he and other favorites ruled New Jersey in their own and their master's interest, without the smallest regard to the rights and welfare of the people.

Surrender of Proprietary Government in the Jerseys.

In New Jersey, as in the other colonies, the popular party, if not the stronger, was the abler party. It was led by wise and bold men, chief among them Samuel Jenings, a Quaker preacher, — who had been Governor of West Jersey, — and Lewis Morris, — afterwards Governor, — a nephew of Richard Morris, of the Manor of Morrisania, near New York. Of Jenings, Cornbury said, he "had impudence enough to face the Devil."[1] He never hesitated to face Cornbury, whether in or out of the Assembly, of which he was for some time Speaker, with calm and fearless dignity.

If Cornbury was able to enforce submission to harsh and arbitrary rule, the steady resistance of such men as these did not permit the rights of the people to be lost sight of. It was easy to dissolve an

[1] Smith's *History of New Jersey.*

obstinate Assembly, and not impossible to create another more compliant to the Governor's will, by interfering with the freedom of elections, and excluding, on one pretext or another, members who could not be relied upon to do his bidding. But the large minority, who were really the popular representatives, could be neither corrupted nor silenced. The long and sharp controversies between Cornbury and the Assemblies are a significant evidence of the spirit of the people, and the insolent contempt with which their just and dignified remonstrances were met by a royal governor.[1]

Cornbury and the New Jersey Assembly.

Cornbury.[2]

In an address of the Assembly of 1707 it is said: "It were to be wished the affairs of New York would admit the Governor oftener to attend those of New Jersey, he had not then been unacquainted with our grievances; and we are inclined to believe they would not have grown to so great a number." These grievances are recounted, — among them the want of a due administration of justice, and the pardon or permitted escape of convicted murderers; the exorbitant fees of courts, and the exaction of illegal fees generally; the want of an office of the Secretary of the Province, and of a Court of Probate, in the Eastern Division, whereby one half the people were compelled to take long journeys on business of constant occurrence; the keeping of the provincial records, which contained all the evidence of titles to estates, by a person who was not even a resident of the colony, and had given no security for the faithful discharge of his trust; the assumption by the Governor of the right of granting land-warrants, which belonged to the Proprietors; the evasion of quit-rents, and the alleged payment of large sums of money to the Governor for a dissolution of the Assem-

The grievances of New Jersey.

[1] See papers relating to these controversies in full in Smith's *History*.

[2] Lord Cornbury was in the habit of appearing on public occasions, and even, it is said, in the streets of New York, dressed as a woman. He declared that it was proper he should be so clothed the more fittingly to represent his sovereign mistress. The picture in the text is from an original portrait in the Kensington Museum, London.

bly to that end; the granting of an exclusive privilege — history has repeated herself in our time in this form of New Jersey grievance — to cart goods across the province between Burlington and Amboy, then the only practicable route between New York and Philadelphia; and, add the remonstrants, "we cannot but be very uneasy when we find by these new methods of government, our liberties and properties so much shaken, that no man can say he is master of either, but holds them as tenant by courtesy and at will, and may be stript of them at pleasure," and therefore it is that they seek some relief from their manifold burdens. "For," they reflect, "Liberty is too valuable a thing to be easily parted with."

Such men might have been conciliated; they could not be frightened. "I don't know of any grievances," replied Cornbury, "this province labours under, except it be the having a certain number of people in it who will never be faithful to, nor live quietly under any government, nor suffer their neighbours to enjoy any peace, quiet, or happiness, if they can help it." This was ill-judged insolence. They were "apt to believe, upon the credit of your Excellency's assertion," replied the Assembly, that there are a number of people of this kind in the Province; but, they add, "such people are pests in all governments, have ever been so in this, and we know of none who can lay a fairer claim to these characters than many of your excellency's favorites."

In the Assembly were many who were members of the Society of Friends besides Jenings, the speaker. In reply to the respectful request that the Secretary of the Province should have more than one office, and that there should be more than one place where wills could be admitted to probate, the Governor said: "Of all the people in the world, the Quakers ought to be the last to complain of the hardships of travelling a few miles upon such an occasion, who never repine at the trouble and charges of travelling several hundred miles to a yearly meeting, where, it is evidently known, that nothing was ever done for the good of the country, but on the contrary continual contrivances are carried on for the undermining of the government both in church and state." "It is the General Assembly of the Province," rejoined that body, "that complains, and not the Quakers, with whose persons (considered as Quakers) or meetings we have nothing to do, nor are we concerned in what your excellency says against them." Perhaps Friends might think themselves called upon to vindicate their meetings from the irrelevant aspersions which his excellency so liberally bestowed upon them. But those of them who were members of the House, now "begged leave in behalf of themselves and their friends, to tell the Governor they must answer him in the words of

Nehemiah to Sanballat, contained in the 8th verse of the 6th chapter of Nehemiah, namely, 'There is no such thing done as thou sayest, but thou feignest them out of thine own heart.'"

But rebukes were unheeded, as grievances were unredressed. The Assembly determined, as they told the Governor, to appeal to the Queen for protection. Like complaints went up to the throne from all the colonies, and Cornbury was recalled in 1708. He did not, however, immediately leave New York, for so soon as it was known that he was no longer Governor he was arrested for debt. He remained in jail till, by the death of his father, he succeeded to the Earldom of Clarendon, when he was released by the privilege of rank.

Cornbury recalled and imprisoned in New York.

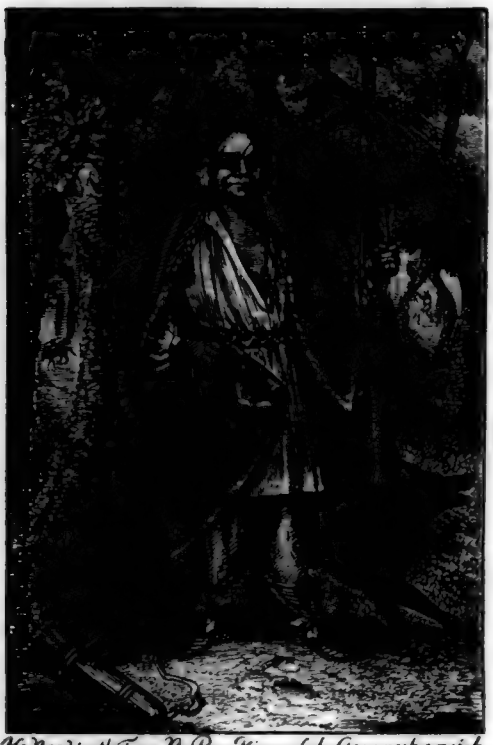
Lord Lovelace, who succeeded Cornbury as Governor of the same provinces, came attended by that good fortune which belongs to all new dynasties when following bad ones. People were sure that nothing could be so bad as that which they had just seen. He arrived on the 18th of December, 1708, and was received with enthusiasm. The Assembly, in its address to him, said: "Our wishes are that measures may be taken to encourage the few inhabitants left to stay in the provinces, and others to come." Unwilling to quarrel with a new Governor they voted to him £1,600 for that year, reserving the privilege of renewing or refusing the grant. Before Lord Lovelace could protest against the restriction he died, on the very day when the bill passed the house.[1]

Lovelace Governor.

Autograph of Lovelace.

His death.

In the interregnum, before the arrival of his successor, Governor Hunter, the administration was in the hands of that Colonel Richard Ingoldsby, who had held the government while Fletcher was waited for, and was more lately the lieutenant and the tool of Cornbury in the Jerseys. The long war between Queen Anne and King Louis was still in progress, and the colony was greatly excited by a new project for the invasion of Canada. In this juncture the first bills of credit, which New York ever issued, were put out, the treasury being wholly empty. But the failure of the English fleet, which was to attack Canada by the St. Lawrence, broke up the whole expedition, to the great mortification of all who engaged in it.



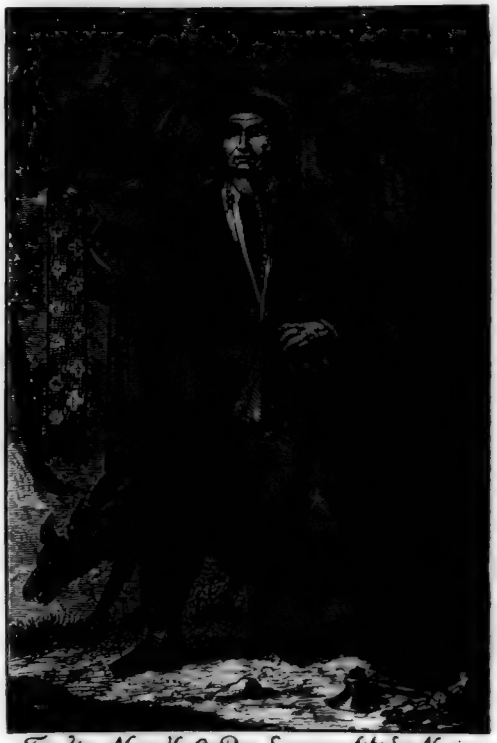
Ingoldsby Governor *ad interim*.

The conquest of the French province, however, was too important to the colonies to be abandoned. The Eastern Indians were easily incited at any moment, to fall upon the exposed frontiers of New

[1] May 5, 1709.

England. At the least rumor of war the little villages and scattered farms, from the Connecticut to the Penobscot, trembled at every unusual sound from the forest lest the war-whoop of the savage should break its silence. The friendship or the subjection of the Five Nations could never be relied upon so long as the French were behind them on the banks of the St. Lawrence. They were the allies of the English now, and the advantage was too great not to be made use of at once. Colonel Schuyler sailed for England, taking with him five distinguished chiefs of the Confederacy. With these living witnesses to the promised faithfulness of their nation he hoped to give irresistible weight to his arguments upon the necessity of the conquest of the French.

Indian chiefs in England.



Ho Nee Yeath Tan No Ron King of the Generechgarich

It was a hundred years since Weymouth's two New England savages had stalked about the streets of London; almost a hundred since Pocahontas and her companions were brought over from Virginia. These Iroquois chiefs from New York[1] were regarded with no less curiosity by the crowds that followed them than Weymouth's stolen savages; were received with no less ceremony and distinction at Court than had awaited the Virginian princess. They made a speech, — or a speech was put into their mouths, — wherein they avowed their devotion to the Queen of England, their hostility to their French.

[1] No. 50 of *The Spectator* — Friday, April 27, 1711 — is an essay suggested by the visit of those Indian chiefs to London, and the essay, in its turn, may possibly have suggested to Macaulay his famous New Zealander, who, in the distant future, from a broken arch of London Bridge, is to sketch the ruins of St. Paul's. "When the four Indian Kings," wrote Addison, "were in this country about a twelvemonth ago, I often mixed with the rabble and followed them a whole day together, being wonderfully struck with the sight of everything that is new or uncommon." Pretending then to have found at their lodgings, after their departure, a bundle of papers, he gives some extracts from the "abundance of very odd observations which I find this little fraternity of kings made during their stay in the isle of Great Britain." Colden in his letters on Smith's History of New York (see *N. Y. Hist. Soc. Coll.*, 1868), declares these Indians were not chiefs, though passed off as such by Schuyler and Nicholson, and so accepted in England. (See also *Mag. Am. Hist.*, vol. ii.)

The portraits are taken from copies in the Rooms of the Antiquarian Society, in Worcester, Mass., of large engravings, published in 1710.

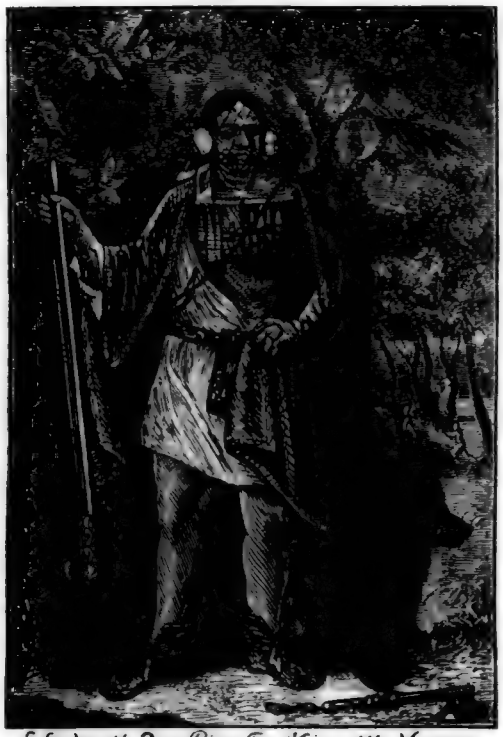
Schuyler gained his end, and the results were more important, perhaps, than he had hoped for. It was not difficult to convince the ministry how great an influence further operations in America might have upon the conduct of the war in Europe. Ships and men were provided for another expedition, and, though the brilliant achievement which crowned it — the capture of Port Royal, related in another chapter — was mainly the act of New England men, Nicholson and Schuyler had good reason to be proud of their share in it.

Tee Yee Neen Ho Ga Ron Emperour of the Six Nations

Robert Hunter, Governor of New York.

Six months before the taking of Port Royal Ingoldsby had been superseded by Robert Hunter as Governor of New York. He and the Assembly agreed on one point, though disagreeing on almost all others, — that no effort was to be spared to carry on the war against the French in America. Perhaps they were emulous of the success of New England in the conquest of Nova Scotia; at any rate, a fresh expedition against Canada, ordered by the home government, received their hearty coöperation. New York supplied six hundred men, in addition to six hundred Iroquois, — brought into the field by the influence of Colonel Schuyler, — as her proportion of the colonial contingent; and another issue of £10,000 in paper money was resorted to for their support. The other colonies were not less energetic. Connecticut and New Jersey added sixteen hundred men to the army of four thousand which Nicholson mustered at Albany for an expedition against Montreal. Massachusetts had nine hundred men in readiness to embark on board the English fleet of sixteen men of war and forty transports which arrived in Boston in the summer of 1711 for an attack upon Quebec. Of this fleet Sir Hovenden Walker was the admiral, and the land force on board, when it sailed for the St. Lawrence in July, was under the command of General Hill, a brother of Mrs. Masham, the favorite of the Queen. Seven English regiments and the Massachusetts reënforcement numbered altogether nearly seven thousand men.

Preparations to invade Canada.



The incompetence of Admiral Walker and the ignorance of the pi

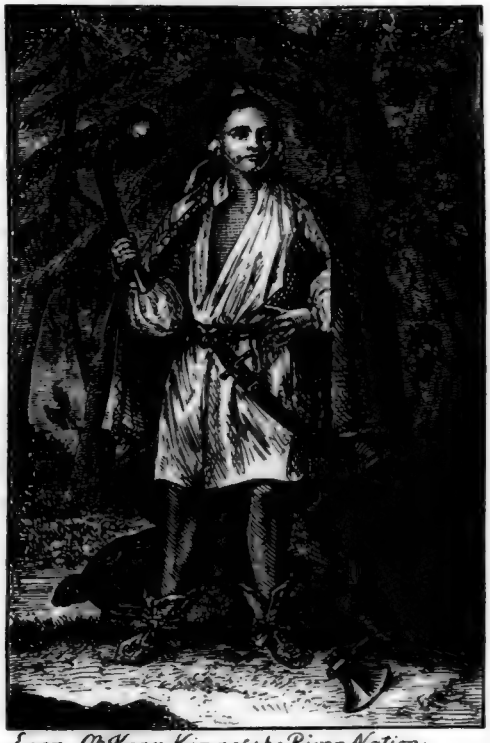
lots brought inevitable disaster. The fleet had sailed only ten leagues up the St. Lawrence when, by some fatal mismanagement, ten or eleven of the ships drifted upon the rocks, where they went to pieces, and a thousand men perished.[1]

Dispersion of Walker's fleet.

Nicholson, meanwhile, had marched from Albany with his army of four thousand men to attack Montreal. Taking the route of the expedition of the year before, and that under Winthrop in 1691, by way of Wood's Creek and Lake Champlain, he had only gone so far as the Lake, when he received the news of the disaster to the fleet. De Vaudreuil, the Governor of Canada, relieved from all fears of an attack upon Quebec, was now free to meet the invasion by land. Nicholson had no alternative but to fall back to Albany. Then the failure of this new attempt at the conquest of Canada — the most formidable that had yet been undertaken — was complete.

Retreat of Nicholson.

Sa Ja Yeath 2ua Pieer Ton King of the Maquas



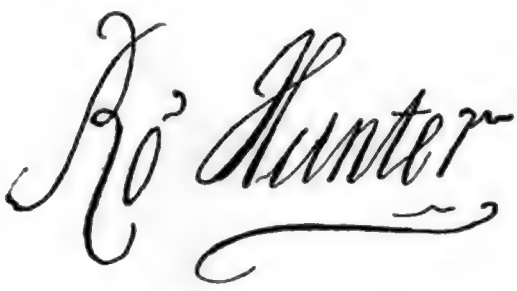
Complete, that is in its direct aim; indirectly, the gain was great to England. De Vaudreuil feared that France would soon cease to hold a rood of soil on the American continent if an army of ten thousand Englishmen should, at the same moment, summon Montreal and Quebec to surrender. Every Frenchman at his command he kept in Canada for a desperate resistance. Castin, the Governor of Nova Scotia, begged in vain for aid to recapture Port Royal. De Vaudreuil understood its importance; the French minister regretted its loss and was anxious for its recovery. But the delay, which the invasion of Canada at first made imperative, was soon past remedy. France was exhausted by the war; the Whig party — the party of peace — had attained to power in England; a few months later Marlborough was deposed and disgraced, and the war was at an end. By the treaty of Utrecht Nova Scotia was ceded to England; — the first substantial success in that long strug-

Cession of Nova Scotia to England.

[1] Charlevoix (*History of New France*) says that the bodies of three thousand men were found upon the beach, but this is unquestionably an error. Dunlap (*History of New York*) repeats it.

gle for supremacy on the American continent, and which was only to cease with the complete expulsion of the French which this acquisition of so large a territory foreshadowed.[1]

When Hunter retired in 1719 the improved condition of the people justified the congratulatory address he made to the Assembly. His relations were more amicable with that body when the necessities of war no longer strained the resources of the colony. But, notwithstanding his avowal of the hope that "as the very name of faction or party seems to be forgotten, may it ever be in oblivion," he left to his successor, Burnet, — the son of Bishop Burnet, — causes enough for dissension.



Eson Ohkoan King of the River Nation

As the friend and correspondent of Hunter, Burnet had the benefit of his experience, and had become, when he assumed the government in 1720, familiar with the affairs of the colony. That he failed to make himself acceptable to the people was not from any want of devotion to its interests. He adopted the doctrine of the statesmen of the time that the presence of the French on the northern border was a perpetual and a dangerous menace to all the English colonies. Where war had failed, other measures, he hoped, might be more successful. The French, he reasoned, drew their chief support from trade with the Indians; and as their commerce with Europe was small, from the long and difficult voyage up the St. Lawrence, they were largely dependent upon the English at Albany for supplies for traffic with the native tribes. To starve out a troublesome neighbor, and to secure, at the same time, complete control of the Indians, Burnet conceived to be the wisest

Governor Burnet and his policy.

[1] One of the political scandals of the time was that the attempted invasion of Canada under Hill and Nicholson, which cost the lives of a thousand men and plunged the colonies into debt, was a job of St. John's, — Lord Bolingbroke, — the Secretary of State. In the bitter controversies of parties no story was deemed too monstrous for belief. Recent researches prove that St. John was grossly wronged by this charge, and that he was exceedingly anxious for the conquest of Canada, believing it would greatly strengthen his administration and perpetuate his power. See Palfrey's *History of New England*, vol. iv., p. 281, note.

policy. He proposed to prohibit, therefore, all commercial intercourse between his own province and the French of Canada. In this he had the support of the Assembly which he found and, for a time, continued in office.

Signature of Hunter.

But selfish interests were stronger than law. The trade with Canada continued notwithstanding a prohibitory act. A strong party was soon arrayed against the policy of the Governor on this subject, led by men who would no doubt be ready enough to fight the French if occasion offered, but who were not to be deterred by law from a profitable trade with the worst enemies. The party in opposition was strengthened by a growing hostility to the Court of Chancery, established by Hunter without the consent of the Assembly, and declared to be injurious to the rights of the people. Personal unpopularity, with which politics had nothing to do, increased the number of the Governor's opponents. His impulsive temper led him into difficulties which a more prudent ruler would have avoided; he thus lost friends and gained enemies by becoming involved in a bitter controversy among the members of the French Church in New York, which led to its division.

His administration, however, was notable in that it did much to strengthen the English alliance with the Indians and to weaken that of the French. A fort was built and a trading-post established at Oswego; advantage was taken of the exasperation of the Indians at the encroachments of the French at Niagara. The Five Nations were induced to convey their country to the English King; the trade with other native tribes was enlarged and extended, and deputations of the Miamies from the Upper Mississippi, and of the Michilimackinacks from the Great Lakes, were attracted to Albany.

The Five Nations at this time had become the Six Nations by the addition of the Tuscaroras from the south.[1] They understood, quite as

[1] In 1689 the population of the Five Nations was estimated at 2,550 men; ten years afterward — in 1699 — it had fallen to 1,230. At the period of the Revolution it was computed that all the men, women, and children of the Six Nations numbered 9,050. These had decreased in 1845, according to Mr. Schoolcraft's estimate, to 6,942, of whom only about one half remained in New York. The politics of this powerful confederacy became of less and less importance as New York grew to be something more than a trading depot for beaver skins and elk skins. Remnants of this as well as of many other of the earlier Indian tribes still linger in the Atlantic States. On the western slope of the continent they still, in undiminished numbers, though under new names, remain as a factor in na-

OSWEGO.
[From an Old Print.]

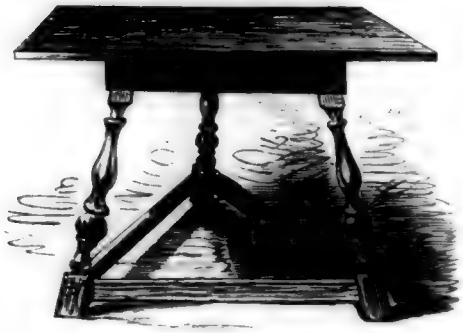
well as either the French or the English, how important they were to both, and that their true policy was to play off their powerful neighbors against each other. To this policy they adhered with what may be called a savage cunning, but which was in fact wise statesmanship, till half a century later, when France was no longer a power in America, and all that was left to England was the comparatively little she had acquired from France.

Confederacy of the Six Nations.

The opposition aroused by Burnet's measures was strong enough to effect his removal. The royal assent was withheld to the act prohibiting trade with Canada. A new Assembly was chosen, a majority of which was hostile to the Governor, and he was transferred in 1727 to Massachusetts Bay.[1] He died in Boston two years afterward from fever brought on by falling into the water when thrown from his carriage on a causeway in Cambridge.

Death of Governor Burnet.

Governor Burnet said of himself, that his genius did not bud till late; — that his father, Bishop Burnet, despaired till he was twenty years of age, whether he would make any figure in life. To the reader, in an age which has wholly forgotten him, the bishop's doubt, through his son's boyhood, seems well founded. But, as compared with other royal governors, it can be well understood how many of the people of New York and of Massachusetts looked back on him with a certain respect. To write poor commentaries on the book of Revelation, as he did, is an occupation more worthy of the lieutenant of the King, than, like Fletcher, to sell licenses to pirates, or, like Cornbury, to steal appropriations made for fortifications. These commentaries, however, were not thought unworthy of condemnation — that highest evidence sometimes of worth. If we may believe Smith, the New Jersey historian, an act was proposed in the Assembly of that province with special reference to the Governor's book. Its title was "An Act against denying the divinity of our Saviour, Jesus Christ, the doctrine of the Blessed Trinity, the truth of the Holy Scriptures, and spreading Atheistical Books." But no other mark appears of any want of harmony between him and the people of that portion of his government. Under him, as under most of the Governors of the viceroyalty of New York and New Jersey, the smaller province was neglected for the larger, and thrived with neglect.



Burnet's administration in New Jersey.

tional politics, still fighting, with their backs to the Pacific, inch by inch for possession of their hunting-grounds.

[1] He was received at the Rhode Island boundary line by a delegation and escorted to Boston with unusual marks of welcome. It is said that he was annoyed by the long graces before meat, and asked when these lengthy ceremonies would come to an end. Colonel Tayler of Boston, one of his escort, replied: "Please your honour, the graces will increase in length until you come to Boston; after that they will shorten till you come to your government of New Hampshire; there you will find no grace at all."

Governor Montgomerie.

John Montgomerie, Burnet's successor, probably owed his appointment to the personal favor of George the Second, to whom he had been groom of the chamber. He is said to have refused to act as chancellor, as his commission bade him, until specially ordered to do so. He arrived on the 15th of April, 1728. His administration was short and uneventful, and he died on the first of July, 1731. After an interregnum of thirteen months in which Mr. Rip Van Dam, as senior member of the Council, acted as governor, Colonel Cosby, who arrived August 1, 1732, succeeded to the office.

Colonial Table.

The Old Capitol at Annapolis.

CHAPTER III.

VIRGINIA AND MARYLAND.

VIRGINIA AT THE CLOSE OF BERKELEY'S ADMINISTRATION. — PHILIP LUDWELL AND GOVERNOR JEFFREYS. — ADMINISTRATION OF LORD CULPEPPER. — WRETCHED CONDITION OF THE COLONY. — OVER-PRODUCTION OF TOBACCO. — THE "PLANT-CUTTERS." — INFLATION OF THE CURRENCY BY THE GOVERNOR. — LORD EFFINGHAM SUCCEEDS CULPEPPER. — A CHANGE FOR THE BETTER UNDER GOVERNOR NICHOLSON. — WILLIAM AND MARY COLLEGE. — NICHOLSON REMOVED TO MARYLAND. — AFFAIRS IN THAT COLONY. — LORD BALTIMORE DEPRIVED OF POLITICAL POWER. — MARYLAND A ROYAL PROVINCE. — CHURCH OF ENGLAND ESTABLISHED BY NICHOLSON. — EDMUND ANDROS, GOVERNOR OF VIRGINIA. — SUCCEEDED BY NICHOLSON. — HIS SECOND ADMINISTRATION, AND CAUSES OF HIS RECALL. — GOVERNOR SPOTSWOOD. — HIS EXPEDITION OVER THE BLUE RIDGE. — SETTLEMENT OF THE SHENANDOAH VALLEY. — GREATER RELIGIOUS TOLERATION. — PROGRESS AND PROSPERITY OF VIRGINIA. — SUCCESSIVE GOVERNORS, TILL THE ARRIVAL OF DINWIDDIE.

THE suppression of Bacon's Rebellion did not necessarily bring tranquillity to Virginia. The leaders on both sides — Bacon and Berkeley — were dead, and a heavy retribution had fallen upon many who had vainly hoped that in an appeal to arms they would find a redress for all their grievances. There was rather sullen acquiescence than cheerful submission in the restoration of order; for many who were too prudent or too timid to give to

Condition of Virginia after Bacon's Rebellion.

LIBRARY
UNIVERSITY OF ILLINOIS

Bacon their open support, no doubt regretted that nothing was gained by the Rebellion.

As in other colonies, the attitude of the Assembly indicated the popular temper. That attitude was one of watchful determination to maintain, within the law, the rights of the people, and resist, so far as it was prudent or possible, their infringement by royal governors. When Berkeley asked that the Assembly would bestow some mark of distinction upon Accomac County for the loyalty of its citizens at the most trying period of the Rebellion, the Speaker, Colonel Warner, answered, no doubt as truly for his colleagues as he did frankly for himself: "He knew not," he said, "what marks of distinction his honor could have sette on those of Accomack, unlesse to give them earmarks or burnt marks for robbing and ravaging honest people, who stay'd at home, and took care of the estates of those who ran away, when none intended to hurt 'em."[1] The Governor could hardly have failed to understand that beneath the sneer was concealed some sympathy for the rebels as well as a rebuke of himself.

It was this Assembly whose remonstrances against his cruel persecution of the late insurgents drove Berkeley at length to seek refuge in England. It was this Assembly also which refused to comply with the demand of the royal commissioners for its journals, notwithstanding the evident disposition of those officers to deal mercifully with the partisans of Bacon. The members conceived it to be incompatible with their honor and their rights, as the representatives of the people, to submit their proceedings to the representatives of the King, and they boldly protested against the act when the journals were forcibly seized by the commissioners.

Continued dissensions between the parties.

The royalists, not unnaturally, presumed upon the success of their cause, and were everywhere avaricious and overbearing. Accomac County claimed exemption from taxes for twenty years, in return for those services upon which Colonel Warner, the Speaker, put so small a value. Sir Herbert Jeffreys — one of the King's commissioners, and, after Berkeley's departure, Lieutenant-governor — found it no easy task to divide the line of truth and justice between the malcontents on both sides. One of the chief of these was that Philip Ludwell who by his daring and zeal had served the loyal cause so effectually, at a critical moment in Bacon's Rebellion, by the capture of Bland and his fleet in the Chesapeake.

The affair of Philip Ludwell.

In spite of the amnesty granted to the late rebels, he sued one of them — George Walklate — for alleged damages done to his property in some rebel raid. The Governor granted protection to Walklate, and refused the writ which Ludwell demanded. "The

[1] Burk's *History of Virginia*.

Governor was a worse rebel than Bacon" — was Ludwell's loud and angry complaint — "for he had broke the laws of the country, which Bacon never did . . . . that he was perjured . . . . that he was not worth a groat in England . . . . and that, if every pitiful little fellow, with a periwig, that came in Governor to this country, had liberty to make the laws, as this had done, his children, nor no man's else, could be safe in the title or estate left them."

If laws are silent in time of war, no less true is it that morals and manners are loosest when war is over. Ludwell, indeed, was brought before the Council to answer for this invective against the Governor; the offence was pronounced treasonable, and it was ordered that the proceedings be sent to the King and Privy Council, that due punishment might be awarded him. But the General Assembly decided, on his appeal to that body, that the defence as well as the accusations should go to England, which was all he could in justice ask. Perhaps the death of Jeffreys in 1678 may have put an end to the suit; perhaps the Lords in Council thought it wiser to lay it and leave it on their table, for Ludwell seems to have gone unpunished. On the other hand his defiance of a royal governor was welcomed apparently as the espousal of the cause of the people, and he is next heard of, a few years later, as the agent of the colony in England to seek a redress of grievances which had grown meanwhile more and more burdensome — grievances, however, which Jeffreys seems to have been sincerely disposed to remove, while they made an ardent patriot of Ludwell only when he found that by patriotism he could best subserve his private interests.

But the incident is of little moment except that it shows how serious were the differences that divided parties in Virginia, and how little even an appeal to arms had done to reconcile them. The administrations of Jeffreys and Sir Henry Chichely, — who soon succeeded Jeffreys as Lieutenant-governor — did little for the colony, except that they secured peace by a treaty with the Indians, brought about chiefly by the influence of New York with the Five Nations. Something more was hoped for from the coming of Lord Culpepper, who, since 1675, had held a commission as Governor for life over the province which, two years before, had been granted to him and the Earl of Arlington for thirty-one years. Culpepper had preferred to remain in England, but the King insisting, at length, that he should assume the duties of his office, he arrived in Virginia in 1680. He brought a proposal for general amnesty and oblivion for past political offences, but only for this one act of mercy from the Crown had the people reason to welcome his coming. "The Lord Culpepper," says a writer of that period, "had a singular dexterity in

Lord Culpepper and his administration.

making use of all advantages to his own interests;"[1] and being "one of the most cunning and covetous men in England," he induced the King to suggest that the salary of the Governor be doubled — hitherto £1,000, — and its perquisites increased to almost as much. This was no slight additional burden to an already over-taxed and impoverished colony. Still harder to accept was another proposed law, that the duties on tobacco and other merchandise, heretofore levied from year to year and the proceeds disbursed as the Colonial Assembly should judge for the public welfare, should now be made perpetual and under the exclusive control of the King. But these and other laws of less consequence, the drafts of which Culpepper brought from England, the Assembly was constrained to accept in consideration of the act of general pardon which came with them.

Governor Culpepper.

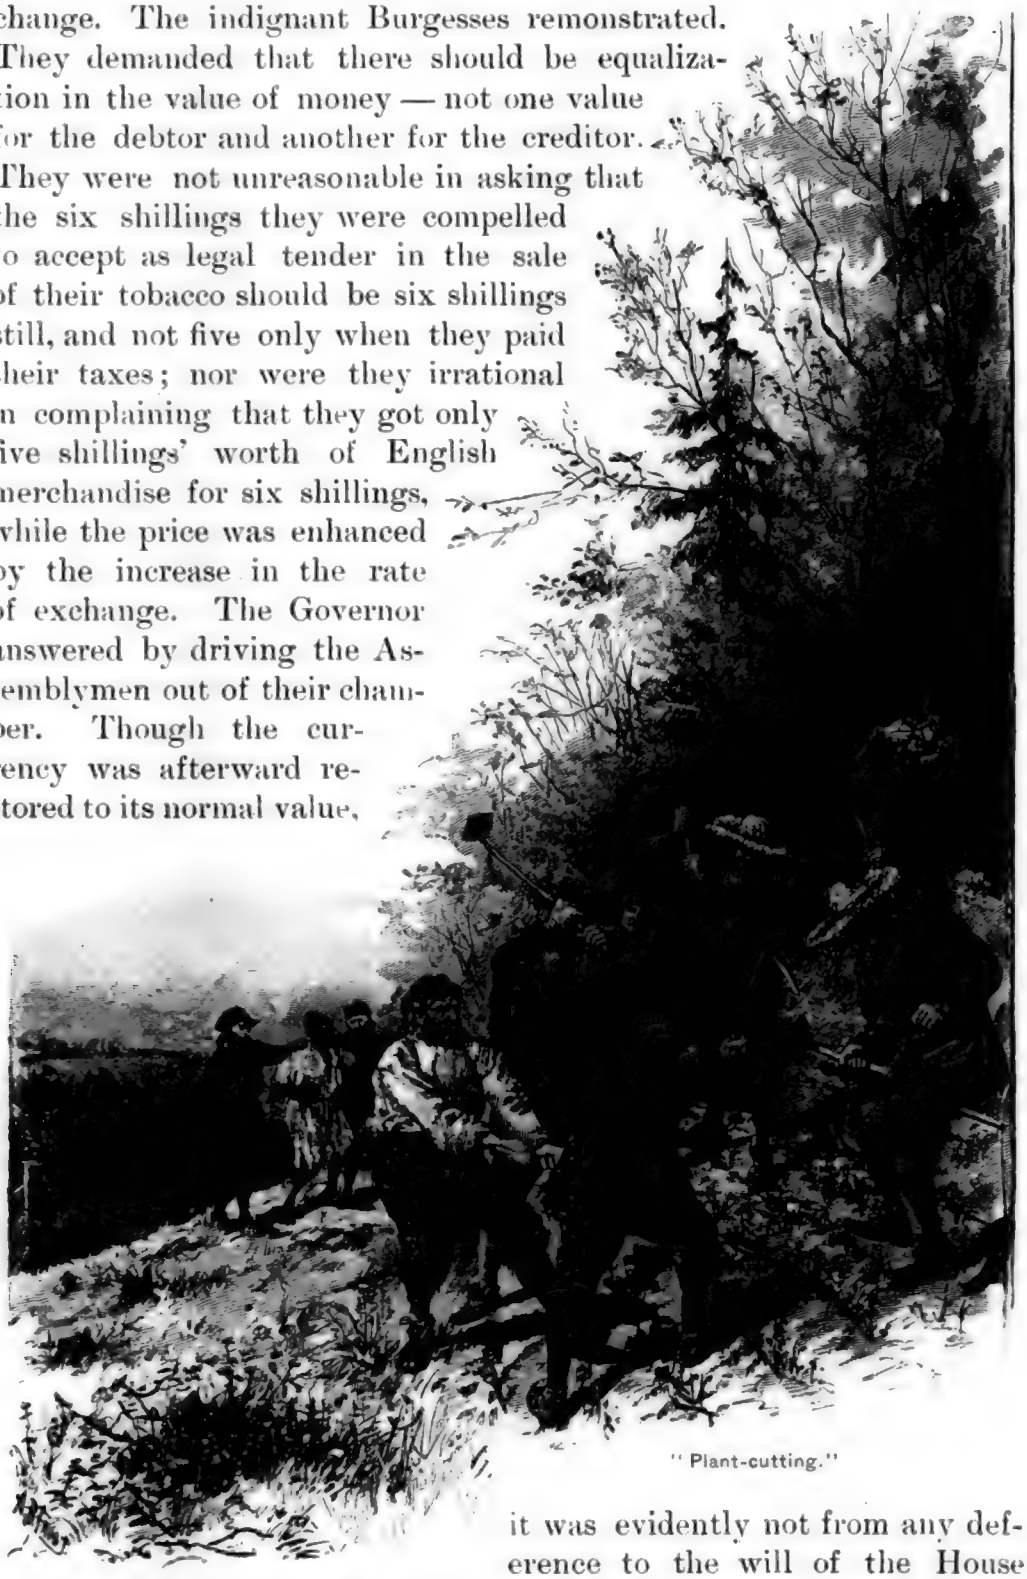
Culpepper returned to England in a few months, leaving behind him these, with the other fruitful causes of discontent of an older growth. The colonists were oppressed with the weight of fresh taxes while at the same time the price of their single staple product — tobacco — was constantly falling. The old remedies were resorted to, with the old results. Fresh attempts were made to regulate the production of tobacco by agreements with Maryland and Carolina to limit the planting, — agreements so easy to make and so sure to be disregarded. It was proposed to encourage the settlement of towns by enforcing the law which forbade that ships should pick up their cargoes by going from plantation to plantation along the banks of the rivers, but should load only at designated points, where, it was hoped, the towns would soon grow. No towns sprung up, for the industrial necessities for their existence were wanting; but many a planter was compelled to add a new item of expenditure to the cost of his tobacco, or, if the distance to the shipping-

Effects of the overproduction of tobacco.

[1] *An Account of the Present State and Government of Virginia.* Written, probably, within the last ten years of the seventeenth century, and first published from the original MSS. in vol. v. of *Coll. of Mass. Hist. Soc.*

point was too great, to leave it to rot at home. Discontent was again growing to desperation. The one fact that everybody could see was, that because there was too much tobacco its price was ruinously low, but that the planter must sell at that price or he and his people starve; the fact nobody would see was, that because the laborers were slaves, the crop most easily raised on great estates was tobacco, and the true remedy was a reform in the tenure of lands and the system of labor.

Another rebellion seemed imminent and would, no doubt, have broken out had another Bacon appeared to lead it. Petitions were sent to the King, praying that the overproduction of tobacco might be prohibited by royal proclamation; Chichely, the acting Governor in Culpepper's absence, was besought to apply, meanwhile, some remedy to the correction of that evil. He would have gladly found one, but he could devise nothing better than to convene the Assembly. The Assembly, fresh from the people, could talk of nothing but the people's wrongs — of misgovernment, of rights withheld, of poverty, of want for which they had no alleviation.



"Plant-cutting."

But, as in all times of popular distress and turbulence, there were men who thought themselves wise enough to discern and apply the remedy. The way, they said, to stop the over-production of tobacco was, to — stop it. Putting themselves at the head of the more violent of the population, they went from plantation to plantation, destroying the young plants when too late for a second growth that season. This earliest American "strike," like most of those of modern times, only brought fresh distress upon those it was meant to aid. The "plant-cutters," as they were called, were too few to damage essentially the staple production of three colonies, but they were enough to bring serious calamity upon themselves and upon all those whose plantations they laid waste.

It was in the midst of these troubles that Culpepper returned from England, and his method of dealing with them was characteristic of the colonial rule of that period. His first measure of conciliation was to hang the leading "plant-cutters," whose grievance was the common one, however little sympathy the planters may have had with the violent conduct of those misguided men; and his first measure of relief was to inflate the currency by permission of the King, declaring silver coins — crowns, rix-dollars, and pieces of eight — of the current value of five shillings, should be legal tender for six shillings, the fractional coins to be rated in like proportion. But the burden of the change was to fall upon the people alone; the five shillings, which were to pass for six in transactions among themselves, were still to be reckoned at five shillings only in the payment

Culpepper changes the value of the currency.

of the Governor's salary, in payment of the heavy tax on tobacco and all other taxes, and in payment of bills of exchange. The indignant Burgesses remonstrated. They demanded that there should be equalization in the value of money — not one value for the debtor and another for the creditor. They were not unreasonable in asking that the six shillings they were compelled to accept as legal tender in the sale of their tobacco should be six shillings still, and not five only when they paid their taxes; nor were they irrational in complaining that they got only five shillings' worth of English merchandise for six shillings, while the price was enhanced by the increase in the rate of exchange. The Governor answered by driving the Assemblymen out of their chamber. Though the currency was afterward restored to its normal value, it was evidently not from any deference to the will of the House of Burgesses or the rights and interests of the people.

"Plant-cutting."

The Governor also brought from England the severest condemnation of the Assembly for its spirited refusal to surrender its journals for examination to the King's commissioners. Beverley, the Clerk, who, like Ludwell, had distinguished himself for his services on the royal side in the late Rebellion, was imprisoned now for the zeal with which he defended the independence of the Assembly. The next, more direct, attack upon the individual citizen, was to take away the privilege of appeal from the decisions of the General Court — that is, the Governor and Council — to the General Assembly, except in cases involving only a small sum of money.

Other arbitrary measures.

Culpepper ceased to be Governor when he ceased to be Proprietary — in 1684 — on the surrender of the patent, which had become vested in him alone, in consideration of a sum in hand and a pension of £600 a year for twenty and a half years.[1] Virginia was so far the gainer, that it became once more a royal province, with a promise that its revenues should be used, in part at least, for its own benefit. The last act of Charles II. relating to the affairs of the colony was the appointment of Lord Howard of Effingham as Culpepper's successor.

But the change of rulers was not a change of policy; it was only to turn loose upon the flock another wolf whose hunger was still to be appeased. Culpepper was mercenary, despotic, cruel, indifferent to the welfare of the colony as he was ignorant of its true interests. Effingham, if not Culpepper's rival in these qualities, was at least his pupil, and bettered his instruction. Those of the ignorant "plant-cutters" whom one had spared, the other hanged. New duties were levied; new fees exacted; new perquisites contrived; new pretences invented for fresh oppression. The struggle between Governor and Assembly was continued, and the measures resorted to by Effingham were more arbitrary than those of any of his predecessors. James had among all his colonial servants no one more swift to catch the spirit of his rule than this Virginia viceroy. Ostensibly by royal authority he repealed laws, or revived those that had been repealed by the Assembly; the members of that body he bought by bribes when that was possible; when that was impossible he coerced them by threats or imprisonment; and when all other measures failed to bend them to his will, he would prorogue or dissolve that branch of the government. Of the Council, always obedient and subservient, he made a Court of Chancery, that he might add to his power as Governor that of a High

Lord Effingham, Governor.

The oppression of the colony continued.

[1] The colony, however, was not altogether rid of Culpepper. In 1671, Charles II. had granted to the Earl of St. Albans, Lord Berkeley, and others, a patent for the Northern Neck, — the region between the Rappahannock and the Potomac, — which Culpepper afterwards purchased, and the right was confirmed to him by letters-patent from James II. in 1685.

Chancellor. More than once, in the course of four years, he was called upon to suppress incipient rebellion; once a slave insurrection threatened the lives of the white masters. The number of the white servants of the colony was increased by the exportation from England to Virginia of many of those prisoners taken with Monmouth at Sedgemoor, but whose lives were spared when Jeffreys made his Bloody Circuit; and these added new strength to the more discontented and turbulent of the population, although the General Assembly prudently neglected to obey the orders of the King to pass a law denying them all power of redemption from servitude for at least ten years.

Ludwell carries the protest of the colonists to England.

Philip Ludwell was sent to England to represent to the King and Council the condition of the province under Effingham's rule. He arrived, fortunately, about the time of the landing of the Prince of Orange, and was enabled to obtain from William and Mary the hearing which James II. would no doubt have refused. Ludwell was so far successful that Effingham — who was also in England — never resumed the duties of his office, though he was permitted to retain both the title and the salary for several years longer.

Nicholson made deputy-governor under Effingham.

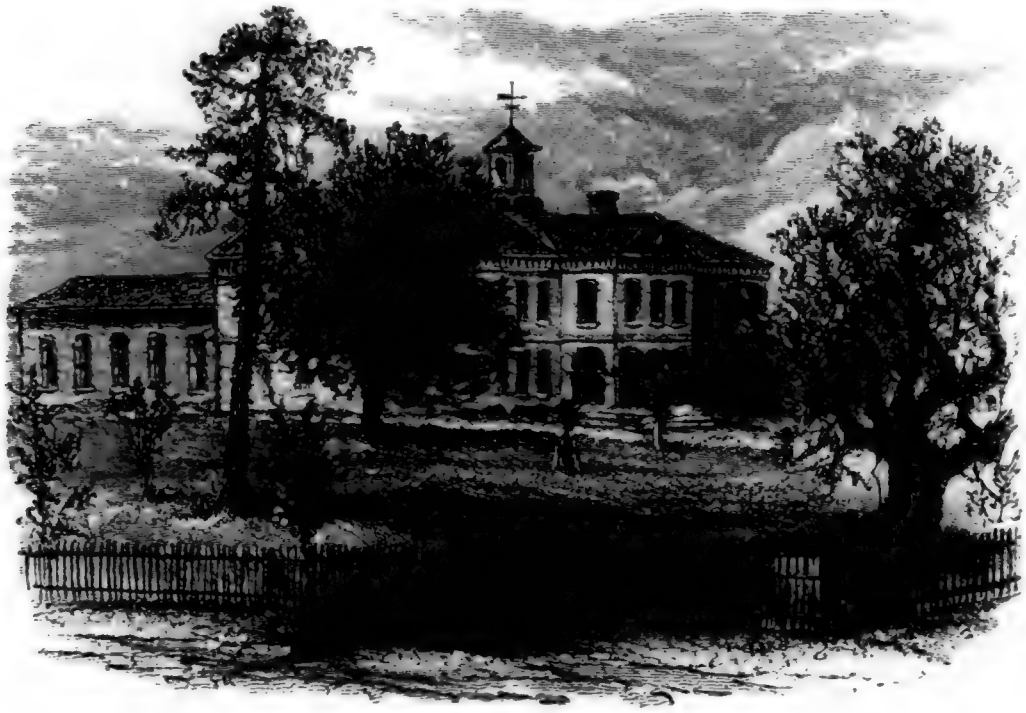
The accession of the new sovereigns excited small enthusiasm in Virginia, when it was known that Effingham still held his commission and that he was to rule by deputy. Colonel Francis Nicholson was appointed Lieutenant-governor. He, indeed, would have much preferred to return to New York as its chief magistrate, and all the influence he could command was used to procure him that position. It would, however, have been hardly prudent, hardly even decent, to impose him upon a colony where he had so recently, either from want of moral courage or from feebleness of judgment, made a popular revolution almost inevitable. But the political amenities, then as now held to be of so much more moment than considerations of mere fitness for office, made him Lieutenant-governor of Virginia.

He showed himself, however, anxious to discharge the duties of his post creditably to himself and for the good of the colony. Perhaps he thought he should best commend himself to the new sovereigns by making his administration as wide a contrast as possible to those which had preceded it; perhaps his late experience in New York had really taught him wisdom, and he had learned to respect the rights of his fellow-citizens. It was, at any rate, a new thing to see a governor in Virginia who thought it worth his while to visit every part of his province that he might observe with his own eyes the condition of the people; who invited them to meet him in familiar intercourse; who gave festivals and established athletic sports to improve and

modify their social relations; who proposed a public post-office, and made a great public road through the most populous portion of the province; who encouraged other industries than that of tobacco-planting, especially the growing of flax, the manufacture of leather, and an unrestricted trade with the Indians in furs, in skins, and other commodities; and who coöperated heartily with the Legislature in the enactment of laws for the purity and peace of society, making drunkenness a misdemeanor with a pecuniary penalty or punishment in the stocks, and enjoining in other respects — such as "swearing, cursing, profaning God's holy name, Sabbath profaning, attending meetings outside the parish, or travelling on that day" — a rigid rule of life more in accordance with the Puritanical government of New England than that of the Established Church in Virginia.

Improved condition of affairs.

The two Assemblies which passed these laws were called by Nicholson, notwithstanding Effingham's injunction that he should not permit the popular representatives to come together. So satisfied was that body with his rule, that at its first session it gave him £300, in addition to his salary; and so anxious was the Lieutenant-governor for the public welfare, or so diligent to gain the public approbation, that he gave one half this sum to aid in the establishment of William and Mary College. The real founder of that college — the second in the colonies, Harvard being the first — was the Rev. James Blair, the Commissary of the Bishop of London, and the head, therefore, of the Established Church in Virginia. But his success was undoubtedly due, in large measure, to the influence used by Nicholson in its favor.



The charter for this seminary — originally intended mainly for the education of young men meaning to be clergymen, and for the instruction of Indian children — was granted in February, 1692, by William and Mary, and by them the college was liberally endowed. Sir Christopher Wren was the architect of the first college building; Blair was the first president, having under him six professors, for the training of a hundred pupils or more; and the college was entitled to one representative in the House of Burgesses. The opposition to the scheme was persistent, often contemptuous and bitter. Seymour, the Attorney-general of England, expressed a common feeling, though with more frankness than courtesy, when ordered to draw up the charter for the college. He declared that it was useless, and protested against the royal endowment as extravagant. Mr. Blair maintained its necessity, especially as it was intended to relieve the religious destitution of the colony in training young men for the ministry. He begged the Attorney-general to re-

Foundation of William and Mary College.

member that the people of Virginia, quite as much as the people of other parts of the world, had souls to be saved. "Souls!" — was the answer — "Damn your souls! Make tobacco!"

Retirement of Nicholson.

Nicholson remained in Virginia only about two years; but why he should have retired from office is not quite clear. Nor is it, indeed, of much importance, except that the reason given by Beverley, and accepted by later historians, rather suggests doubts on other subjects than explains this. It is asserted that the Governor became suddenly unpopular for opposing settlement in towns — "cohabitation," as the term of the time was — which, at

William and Mary College.

first, he had favored. But he could hardly have rendered himself obnoxious for opposing that which nothing could have hindered the people of Virginia from doing if they saw fit, and which they had obstinately refused to do for years. If there really were any difference of opinion between him and them on this subject, there must be some other explanation for the slow and painful growth of the colony than the want of towns, the isolation of planters upon grants of immense tracts of land, and the system of labor and cultivation which grew up with such settlements.

It is more probable that Nicholson returned to England with the hope, perhaps with the promise, of promotion. Before he left Virginia a revolution in Maryland had deposed the government of Lord

Baltimore, and that colony had also become a royal province. Sir Lionel Copley was appointed Governor in 1690. Nicholson may have hoped to supersede him; he was, at any rate, appointed in his place on the death of Copley in 1692.

Affairs in Maryland.

Charles Calvert, the Lord Baltimore who by this revolution was deprived of all political power in his American inheritance, was the son of the second Lord Baltimore, who died in 1675. The fortunes of that family had changed with the changing dynasties of England from the death of Cromwell to the accession of William and Mary. The prosperity of the state is not always — perhaps not often — measured by the struggles of political parties, and Maryland was not an exception to this obvious truth. Sometimes the Catholics, sometimes the Puritans, through these eventful years, gained the ascendency. Fendall, whom Cecil, Lord Baltimore, had made a Governor, turned against his master and put a Puritan Assembly into power; Philip Calvert, Cecil's brother, reëstablished the authority of the Proprietary, and made the way smooth and pleasant for his nephew; and through all these bitter contentions and vicissitudes, however important they might be to individual fortunes and the political ambition of a few men, the progress of the colony was steady and its prosperity undisturbed. In the ten years from 1660 to 1670 the population increased from twelve to twenty thousand. Under the mild rule of the Baltimores, and the spirit of tolerance which, notwithstanding their religious differences, had become the habitual temper of the people of Maryland, the province was a place of refuge for the persecuted of whatever faith. Had the first proprietors of that beautiful, salubrious, and fertile region been so fortunate or so wise as to make it an asylum of political and social, as well as religious liberty, it might have become in time the central seat of the power and the commerce of a great empire.

But the inevitable changes came at last. While on a visit to England, — Thomas Notely acting in his absence as Lieutenant-governor, — Baltimore met and successfully rebutted all complaints brought against him by the opposing party in the colony. But more serious trouble awaited him on his return in 1681; for the restless Fendall, with the aid of one Coode, a disreputable clergyman of the Church of England, was almost successful in arousing the Protestants to armed resistance to the Catholic government. Both the leaders were arrested in 1681, tried, and Fendall, at least, convicted of treason, though neither was punished.

Catholics and Protestants again in conflict.

The remaining years of Baltimore's administration of the affairs of his province were, nevertheless, years of great anxiety and continual contention. In Maryland the Protestant party was diligent and

watchful for an opportunity to seize the government; in England their friends were not less active on their behalf, and all the more that this struggle between religious parties in Maryland could be used to strengthen the anti-Catholic party at home. Even the King, who cared little for the religious faith of any of his subjects, was quite willing to listen to the suggestion that his own revenue from the colony was diminished under Baltimore's rule.

Baltimore's proprietorship in danger.

Threatened on all sides, Baltimore again returned to England, leaving his infant son, Benedict Leonard Calvert, nominally Governor, but committing the province to the care of a Council of Nine, of which William Joseph was president. Charles II. died before the Proprietary reached England, and he probably looked for more favor from the Catholic successor to the throne. But James did not mean to make Maryland an exception in the policy he proposed to adopt for the government of the American colonies. The *quo warranto* which Charles had threatened, moved thereto by Baltimore's enemies, James soon ordered to be issued in accordance with his own general purpose. Whatever his sympathy might be with Baltimore as a Catholic governor in a struggle with Protestant opponents, he had small consideration for him as a colonial proprietary.

Through the few years of James's reign Baltimore was held in that worst of all conditions, a condition of uncertainty; for neither could he get the *quo warranto* against him withdrawn, nor were the proceedings under the writ brought to a conclusion. To him any change was a chance, however desperate, and when William and Mary landed in England he was prompt in offering them his recognition and allegiance. Orders were sent to his deputies in Maryland to proclaim the accession of the new sovereigns; but either these orders were delayed in the passage, or the Council unwisely neglected to obey. Perhaps the result would have been the same in any event; but the delay gave the Protestant party an advantage which they eagerly seized. Rumors were industriously spread, or sprang up naturally and spontaneously, that the Catholics would remain loyal to James and defy the revolution. It may have been only to guard against a popular outbreak, and to be in a position to safely wait events, that Baltimore's adherents made preparations to arm and defend the forts. It was the best thing to do, if they did anything, having committed the first mistake of neglecting to proclaim the accession of the new King and Queen. But it made little difference in the end. The preparations for defence on this side were made the pretext of attack on the other, and had this pretext been wanting, another would have been found. The losing cause in England could not be the winning one in Maryland.

The Protestants, once more under the lead of John Coode, concentrated their strength in an Association to maintain the Protestant religion and the rights of William and Mary as King and Queen over all English dominions. Coode, an Episcopal clergyman, though a man of doubtful character, possessed, nevertheless, the energy which makes revolutions successful. Baltimore's adherents were driven out of the capital; Fort Mattapany, the Government House where they took refuge, was besieged and soon compelled to surrender; and the Proprietary's government was in a few weeks utterly overthrown. In August (1689) a popular Assembly was convened at St. Mary's. A report of late events was prepared and sent to England for the approval of the King, and meanwhile, till a response could be received, the Assembly took upon itself the direction of the affairs of the colony.

A new revolution in Maryland.

Charles, Second Lord Baltimore.

The royal approbation came in due time, to be followed soon after by a royal governor. This was Sir Lionel Copley, who, dying within a year, was succeeded by Nicholson. Lord Baltimore had been compelled at last to answer to the *quo warranto* before the Privy Council, and except that he was permitted to retain the revenue from the lands of Maryland, was deprived of all his proprietary rights.

Baltimore deprived of his proprietorship.

Since his return to England, Sir Edmund Andros, after his discharge from arrest and virtual exculpation for his conduct as Governor of New England, had busied himself in the affairs of Virginia. If it was with the hope of being rewarded with a commission as Governor of that colony, he gained his end. He was appointed in Effingham's place and assumed the duties of his office about the time of Nicholson's return to England. If the King thought him not unworthy of being made again the Governor of an American Colony, the Virginians may have reflected that it was not for them to question his fitness. At any rate, they welcomed him heartily for his recent services, and many of them, no doubt, thought none the worse of him because the Boston Puritans had deposed and imprisoned

Andros Governor of Virginia.

him as the friend of James, and an enemy of the revolution that seated Mary and William upon the throne. His loyalty, however, could not now be questioned. If not a better, he was a wiser man with William's commission in his pocket than when he imprisoned Winslow for promulgating in Boston the news of the landing of the Prince of Orange in England.

It may have been partly because he served a new master that Andros now remembered that a colonial governorship had its duties as well as its privileges. That he was less arrogant and overbearing may have been the result, in some measure, of his past painful experience; and then a more congenial atmosphere than that of Puritan New England had, no doubt, a softening influence upon his temper. Like Nicholson, he came a new man with new things.

Character of his administration.

He brought with him the charter of William and Mary College, in which he professed the strongest interest. Nicholson had already done something to establish post routes and offices. Andros completed the work in aiding Thomas Neale, who held from the crown a patent for establishing a postal service to connect all the colonies. It is Andros to whom Virginia should be grateful that he caused to be collected and preserved all the records of the colony not already destroyed. Nor was he unmindful of the material needs of the people. He encouraged, not without some success, domestic manufactures; that less tobacco might be raised, he introduced the cultivation of cotton, and it was not his fault, but the fault of the climate, that the attempt was a failure.

For the first year or two Andros was a popular Governor, and deserved to be, though popular applause was clearly not his motive of action, however much he may have come to believe that the welfare of the people was worth consideration. He disregarded much grumbling when he sent out vessels to suppress the contraband trade along the coast, and he codified English statutes and promulgated them as the law of Virginia, without paying the slightest heed to appeals to charters, to precedents, to common justice, or to common sense.

Condition of the colony at this time.

His position, however, was unquestionably one of great difficulties. The best intentions and the most vigorous rule, even if directed by a wiser man than Andros had ever shown himself to be, could not, in four or five years, correct the evils which, with the misgovernment of three quarters of a century, had sunk deeply into the social and political structure. "It is astonishing," says a writer of that period, "to hear what contrary characters are given of the country of Virginia, even by those who have often seen it, and know it very well; some of them representing it as the best, others as the worst country in the world. Perhaps they are both in

the right. For the most general true character of Virginia is this: that as to the natural advantages of a country it is one of the best; but as to the improved ones, one of the worst of all the English plantations in America." "As it came out of the hand of God," the writer holds, no region ever had more prospect of becoming a great state. "But . . . . if we inquire for well-built towns, for convenient forts and markets, for plenty of ships and seamen, for well-improved trades and manufactures, for well-educated children, for an industrious and thriving people, or for an happy government in church and state, ... it is certainly for all these things, one of the poorest, miserablest and worst countries in all America that is inhabited by Christians." [1]

This acute observer was quite able to discern some of the causes of the want of prosperity in the colony, — that, for example, the granting of lands in large tracts was a hindrance to the settlement of the country, and that the cultivation of a single staple was an unwise employment of industry. But it was no more revealed to him than to anybody else of that period, — hardly even yet, indeed, is it understood as an axiom of political economy by the Southerner of average intelligence — that beneath these ostensible causes lay the fatal mistake of a reliance upon slave-labor, an evil that no political devices however wise, and no government however well administered, could ever remedy.[2]

There was, nevertheless, marked improvement in the condition and character of the people. A growing jealousy of arbitrary rule by a royal Governor soon made itself visible. It was only a few years since Berkeley had thanked God that there was neither a free school nor a printing-press in the colony; and Culpepper and Effingham had for-

[1] "An Account of the Present State and Government of Virginia." *Mass. Hist. Soc. Coll.*, vol. v.

[2] Slavery was the curse of every colony where it gained a permanent foothold; and this came to be as evident to sagacious men, by the middle of the eighteenth century, as it is held, in the nineteenth, to be a self-evident fact. Said the Rev. Jonathan Boucher, — in 1763, — Rector of St. Anne's Church in Annapolis and at one time tutor of Mrs. George Washington's son by her first husband: "Were an impartial and comprehensive observer of the state of society in these middle colonies asked, Whence it happens that Virginia and Maryland, which were the first planted, and which are superior to many colonies, and inferior to none in point of every natural advantage, are still so exceedingly behind most of the other British American provinces in all those improvements which bring credit and consequence to a country? He would answer: They are so because they are cultivated by slaves." Five and twenty years later, when the American provinces had ceased to belong to Great Britain, William Pinkney, chief among the distinguished men of Maryland, exclaimed: "Eternal infamy awaits the abandoned miscreants, whose selfish souls could ever prompt them to rob unhappy Afric of her sons, and freight them hither by thousands to poison the fair Eden of liberty with the rank weed of individual bondage!" — Cited in Neill's *Terra Mariæ*.

bidden that any printing should be done except for the publication of laws by express permission, in certain cases. The establishment of a college was the fulfilment of those fears which Berkeley hoped would not be accomplished for another hundred years. It was an evidence of increasing intelligence, as well as a promise of future culture, that a seminary of learning should be so soon asked for, even with a limited purpose. It was inevitable that the more it flourished the more certain it was to come into collision with men like Andros, whose idea of government was at bottom the same as that of Berkeley and his immediate successors. The Governor was certain to claim an authority over the affairs of the college which a president like Blair was sure to resist. One contended for his prerogative; the other for the true interests of the institution over which he presided. Though the question at first was one of ecclesiastical precedence between a royal Governor and a commissary of the Bishop of London, it widened into a controversy which gave new strength to the cause of popular government, and finally cost Andros his office. To punish and overcome the firmness of Blair as president of William and Mary College, the Governor arbitrarily removed him as a member of the Council. The political issue thus created went by appeal to England. Andros was defeated and recalled, and Nicholson transferred from Maryland to take his place.

The Governor and the college. — A conflict of authority.

Andros recalled, and Nicholson again appointed.

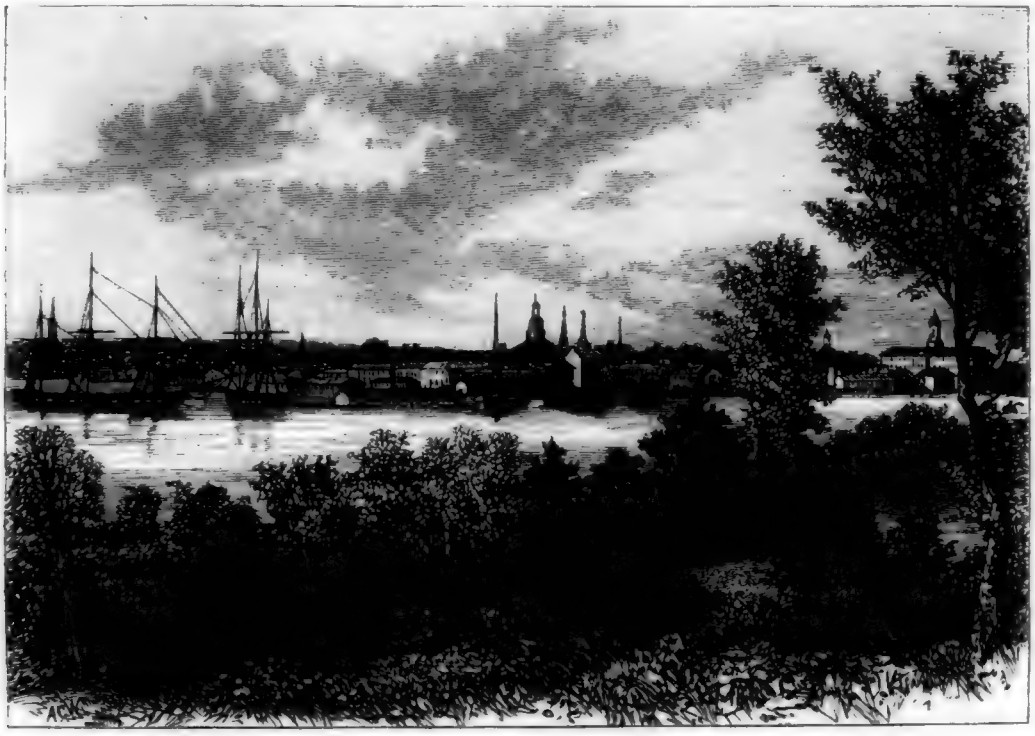
Nicholson had earned this promotion by his diligence and zeal during the four years of his administration of the affairs of the smaller colony. The substitution of the Church of England for the Catholic Church appears to have been his chief business, but that may have seemed to be no easy task. It was not a field ready for the reaper, over which fruitful seed had been cast with lavish hands. Only five years before Baltimore was compelled to surrender all his rights as Proprietary — save only his pecuniary rights — a petition to the King set forth that Maryland was "without a Church or any settled ministry."[1] A church of the regular Establishment, of course, is meant, for Presbyterians and Quakers had liberty of conscience and of worship, under Catholic rule, and of forming religious organizations after their kind. That there were no "churches," was because of the fewness or lukewarmness of churchmen. To bring the new royal province within the pale of the Established Church of England; to do away with the assumed evil of toleration; to establish religion by Litany and Prayer-book; — this was the policy of the King, and the first duty of the Governor.

One of the earliest acts of the Assembly, after the arrival of Cop-

[1] *The English Colonization of America.* By Edward D. Neill.

ley, was a law for the establishment of the Protestant religion, and for dividing the ten counties of Maryland into twenty-five parishes. The Friends and the Catholics were, however, sufficiently numerous to disregard the act for a while with impunity. Plainly, the want of churchmen was a serious difficulty in the way of building up the Church. When Nicholson came, however, he brought with him six clergymen; in two years their number was increased to fifteen; public worship was forbidden to the Catholics; five or six church edifices were built in various places; and all that law and intolerance could do was done to force the Established Church of England upon an unwilling or an indifferent people. The more rigid of the Puritans, to whom any recognition of Episcopacy was a necessity very bitter and hard to bear, had, at least, the consolation of seeing their old enemies, the Catholics, suffer, — perhaps aiding in their persecution when it could be done consistently with their own professions of non-conformity.

His government of Maryland reviewed.



President Blair.

This enforcement of a state religion upon the colony brought with it some advantages. Nicholson caused a law to be passed for the establishment of a school in each county of the province. This, it was declared, was to secure a perpetual provision of clergymen for the churches; but the design, no doubt, was broader, or would almost inevitably become so. King William's School, as that opened at Annapolis — which in 1694 was made the capital — was named, received from Nicholson material aid and countenance, and may have served as a model for others. There, "arithmetic, navigation, and all useful learning" were to be taught, as well as theology. This, at least, was an improvement on the times of the Baltimores, when there was no provision for schools of any kind. Such a measure could not be without marked influence in the progress of society. It was not long before every one of the thirty parishes had a small parochial library,

averaging about fifty volumes each, exclusive of that of Annapolis, which contained about eleven hundred volumes. Twenty-five hundred well-chosen books, accessible to every person in the community, would be an important fact in any American province in the beginning of the eighteenth century.

His second Virginia administration.

But of Nicholson's long career in America, the five or six years of his second term of office in Virginia are the least creditable. Something of the reputation attending that administration must be attributed to the evident prejudice of his contemporary, Beverley, the historian of Virginia, whose assertions have been

General View of Annapolis.

accepted for the most part by later writers. Much, nevertheless, of all alleged against him must be true. He was self-willed, and opposition may have often led him to be overbearing and violent. That his sense of duty as a royal Governor should have sometimes clashed with the true interests of the colony and the determination of its leading men to maintain them, does not, however, necessarily imply that Nicholson was a bad or an unscrupulous man. Virginia had become second in importance of all the colonies; her House of Burgesses represented a population of 40,000; these representatives did not readily yield their own convictions, and there could be a perfectly honest difference of opinion between them and the Governor, which might, nevertheless, lead to bitter contention.

It was the policy of the King, and the interest of all the colonies,

that there should be unity of action for defence against the French and Indians. The Virginians felt that they had little to fear now from the tribes upon their own borders, and declined to contribute anything for the building of forts for the protection of the Northern provinces. Nicholson disagreed with the Burgesses on this point, and visited New York to consult with the Northern Governors, declaring that he would pay the Virginia quota from his own means rather than the colony should be disgraced by refusal. The Burgesses were obstinate, and the Governor made arrangements to fulfil his promise. Beverley intimates that, if the contribution was made at all, it was done at the cost of the King's revenue. Then the breach between the House and the Governor was widened when he openly avowed that the colonies ought to be united in a single confederation, under a single governor, with a standing army. More than one royal governor had warmly urged this policy in earlier years; nowhere could it arouse more indignation than in Virginia, where the House of Burgesses was rapidly growing in power and influence, as the representative of a people growing more and more tenacious of their rights.

Quarrels with the church vestries.

Nicholson's devotion to the Church involved him in a controversy which did much to add to his unpopularity, and finally cost him his place. Though he had not, as in Maryland, to establish the State Church, he proposed to increase its strength. The clergyman in Virginia was entirely dependent upon the vestry of his parish, who controlled his stipend, and bestowed or withheld it by an annual vote. Whether wisely exercised or not, it was then and there a wise limitation of the tenure of the clerical office.

Character of clergymen of the English Church.

The ordinary clergyman of the Established Church, at that period, even in England, was not a very reputable character. Intellectually he was but little, if at all, superior to those over whom he was set to teach; if he were free from the contamination of worldly vices, it was more from want of means than want of inclination; socially he was rather beneath the farmers who tilled the land of the great proprietors, and hardly above the servants who served at their tables; his wages were wages of service and not a return for productive industry, though over the household servant who jostled him as he approached their master he had this one advantage — that his wages, though small, were permanent and not dependent upon the caprice of anybody.

But in Virginia he neither had nor deserved this advantage. Low as the clergy were as a class in England, the clergy of the colony were generally the mere refuse of the order. Bankrupt in purse they could not be, for that would imply that somebody had once trusted

them; but most of them were bankrupt in everything else that could have made them respectable at home, and they sought in Virginia an asylum for freedom to serve the devil with as much zeal as ever moved Puritan to fly to the wilderness for freedom to worship God. It was well that these wolves, to whose care the flocks were intrusted, could always be held in some restraint by the will of the vestry.

When Nicholson proposed that this power should be taken away from the vestries, the disgust was almost universal. The clergymen, on their part, gave a lively and characteristic evidence of their sense of the favor to be bestowed, and their fitness to be trusted uncontrolled with parochial duties. Most of them met together at a public banquet and got uproariously drunk and broke each other's heads in honor of an ecclesiastical reform. There were a very few decent men among them, however, who were unselfish enough to oppose a measure which could only do harm, and at the head of these was the Bishop's Commissary, the President of the College, Mr. Blair, and a Rev. Mr. Fouace.

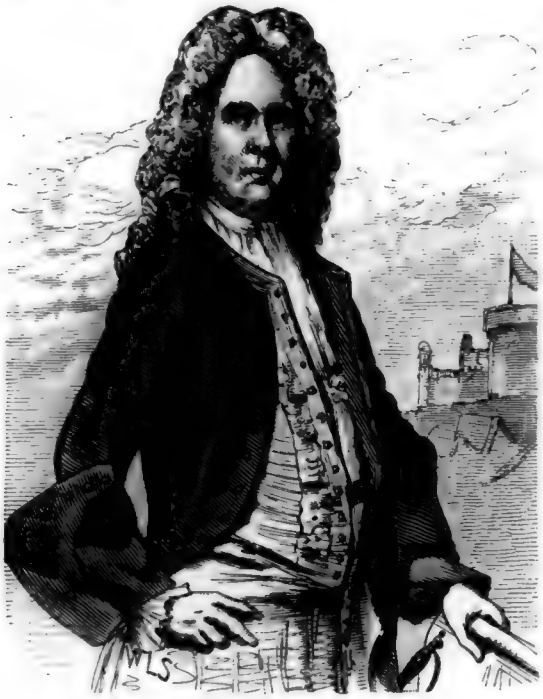
Complaints were sent to England against the Governor. An error of judgment, grave as his conduct was on this subject, might, perhaps, have been overlooked. But other charges of neglect of official duty, misuse of official power, and of private misconduct, were brought against him. A scandal in relation to a Miss Burwell, whom he wished to marry, was made great use of, and probably not without good reason. This lady and her friends had rejected the suit of the Governor; he nevertheless persisted in it, threatening the lives of her father and brothers, involved himself in a quarrel with the clergyman of the parish — Mr. Fouace — and with Mr. Blair, and pursued with bitter enmity for years all who opposed him. The matter became of sufficient importance in the colony to be the subject of a long memorial to the government at home; and as it was the subject of many bitter private animosities, so it undoubtedly had much to do with intensifying the acrimony on public questions.

A new capital.

Nicholson gave to Virginia, as he had given to Maryland, a new capital. Jamestown had never recovered from its almost complete destruction by Bacon and his adherents after the flight of Berkeley; the malaria of the surrounding lowlands had always made it unwholesome, and to abandon it was a wise measure. The Governor chose Middle Plantation, where the college was built, for the new seat of government. The town was laid out in the form of a W, — an arrangement which convenience, however, soon overruled, — and was named Williamsburg in honor of the King. The second year of its settlement was commemorated by the first Commencement — 1700 — of William and Mary College — an event of so

much interest that planters in their coaches with their wives and daughters, surrounded by negro servants on horseback, came from all parts of the colony; visitors came by sea from other colonies to do honor to the occasion; and here and there, mingled in the crowd, giving color and picturesqueness to the novel spectacle, was many an Indian in the bravery of his brightest paint and most brilliant and graceful feathers. It was a pleasant picture of colonial prosperity and progress in this oldest of the American colonies; but a reflective spectator could hardly have failed to remember that it was nearly sixty years since the first Commencement-day at Harvard College in Massachusetts was celebrated, or fail to remark in that fact the essential difference in the character of the peoples of the two leading colonies.

First Commencement of William and Mary College.



Ruins of President's House, William and Mary College.

Virginia was about to begin a happy — perhaps the happiest — period in her colonial history. On the recall of Nicholson in 1705, the governorship of the colony was given as a sinecure to the Earl of Orkney. The appointment of governors and a portion of the salary were his; but beyond the enjoyment of these perquisites he interfered no further in the affairs of the province, and his deputies were called, and really were, the governors. For five years it so happened that the colony was left to manage its own affairs under the Council, — of which the presiding member was Edward Jenings, — for Edward Nott, Orkney's first nominee, died a few months after his arrival in Virginia, and the second, Robert Hunter, never arrived at all, being taken by a French cruiser on his outward passage. With the exception of a few months, therefore, there were five years of tranquillity and self-government, which prepared the way for a wiser and more prosperous administration than Virginia had ever known under any of her royal governors.

Colonel Spotswood appointed Governor.

The new Governor was Colonel Alexander Spotswood, who arrived in June, 1710. It was accepted as a happy augury of his rule that he was ordered to extend to Virginia the privilege of the writ of Habeas Corpus, which had hitherto been withheld. The great satisfaction with which this was received by the people, and possibly the evident necessity of such a protection to their rights, may have turned the attention of the Governor to the condition of the laws. It is, at any rate, remarkable that he, a young man, bred to arms from his boyhood, should have at once introduced much-needed reforms in the constitution of the courts, in the general administration of justice, in the character of the revenue laws, and in the collection of taxes.

Governor Spotswood.

In all these measures he had the hearty coöperation of the Assembly and the commendation of the people. Both were wanting when he overstepped the boundary line between royal prerogative and popular rights. Five years of popular government had greatly strengthened the House of Burgesses, and that body was always ready to withstand, firmly and unhesitatingly, any encroachment of the Governor upon their privileges. In the second year of his administration the House refused to provide the means he asked for, to aid in repelling an apprehended invasion of the French from Canada; compelled him to ask the government in England for assistance in the preparations which he thought necessary and they thought useless, for defence against the Indians; and declined to concur with his proposals for the discharge of the public debt, except by a tariff upon British merchandise and discriminating taxes against British ships and in favor of Virginian vessels. Notwithstanding these and other less important differences between him and the people and their representatives, his popularity for years was undiminished. He proved his sincere interest in the welfare of the colony by his exertions on behalf of the college; by assisting to raise a large fund for its support, and by restoring the building, which was burnt several years before his arrival and left in ruins; by establish-

Differences between the Governor and the Assembly.

ing a school for the education of Indian children; by insisting upon a rigid economy in all the offices under his control, and by giving a hearty support to every measure conducive to the general prosperity.

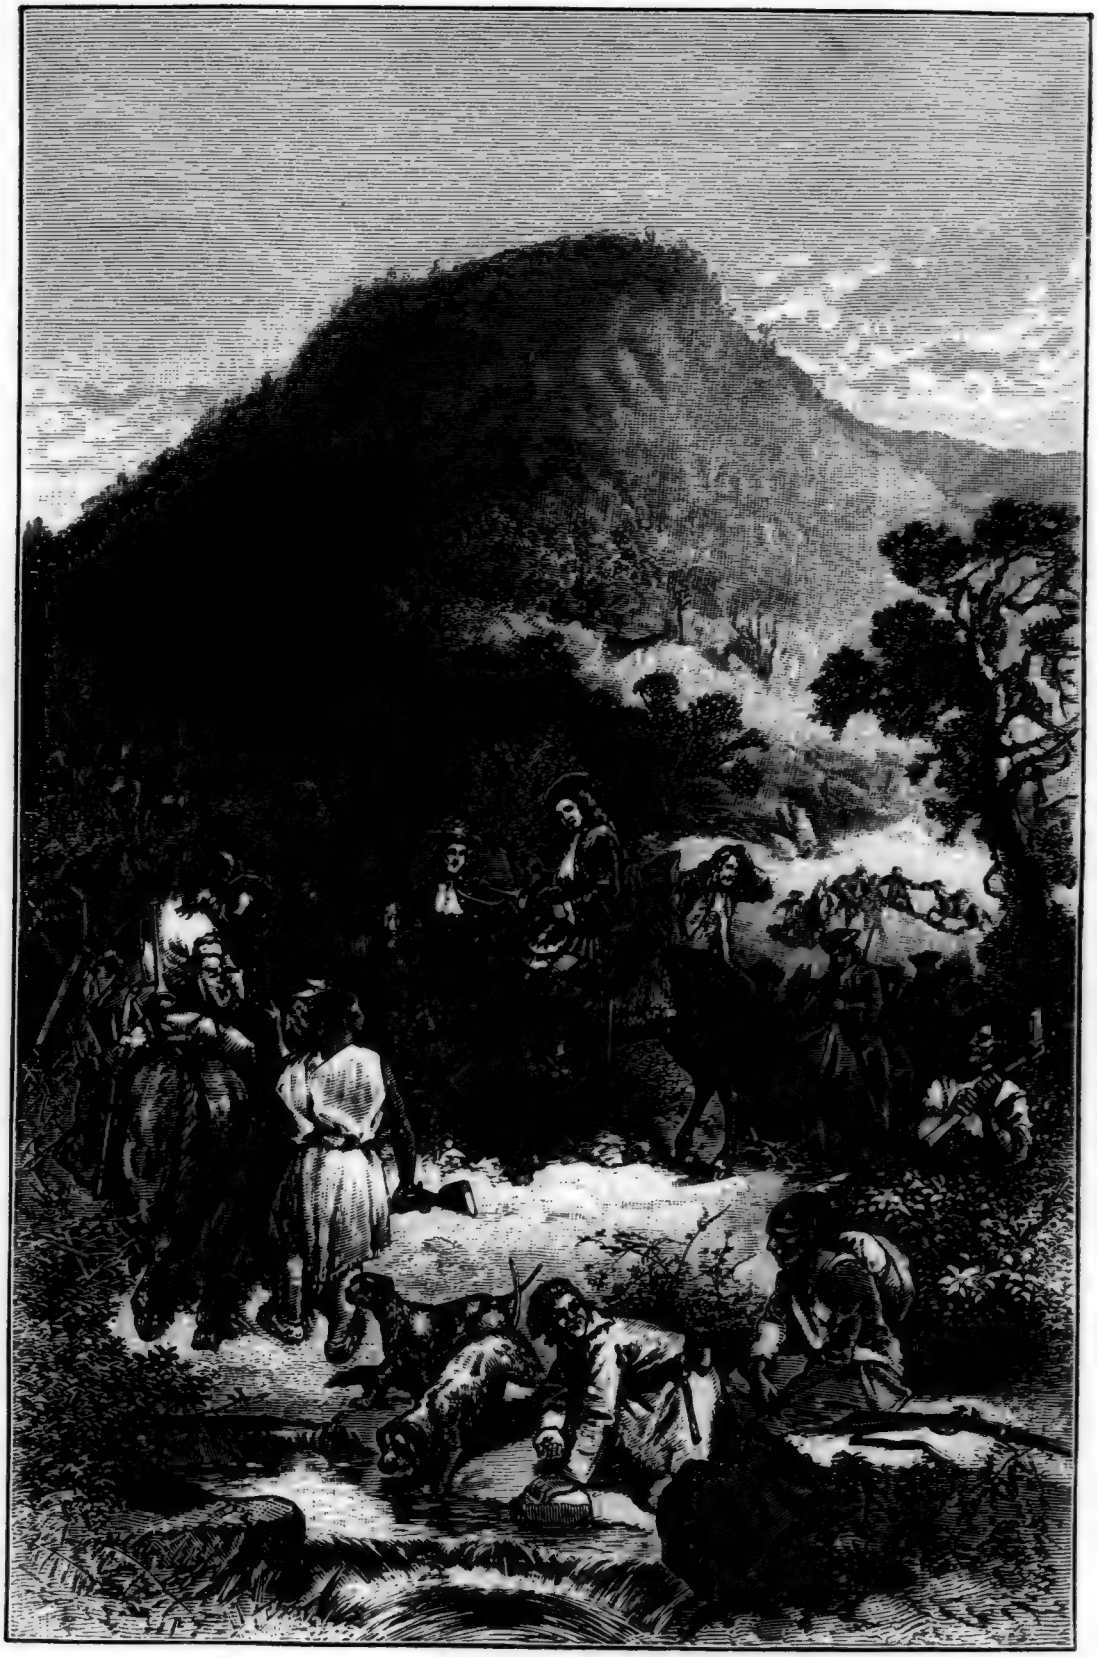
Spotswood's ardent curiosity about this new country in which he had come to live, led him into long expeditions that he might learn more of its extent and character. One of these was to explore the way to the country beyond the Blue Ridge Mountains of the great Appalachian chain. He started in August, 1716, from Germantown, on the Rappahannock, with a company of gentlemen well-mounted and armed, led by Indian guides, surrounded by a troop of white hunters, rangers, and servants leading horses laden with provisions and all other things necessary for such an expedition. These extraordinary preparations were a safe-guard against any of the perils or hardships of the adventure. But none were encountered. No savages dared, even if they were disposed, to attack a party so well appointed. The spoils of the chase were enough for their support. The march by day was a hunt; for the first time the solemn forest resounded, and the mountain peaks echoed and re-echoed with the clang of trumpets and the sound of guns. There was no want of song and laughter and merry-making around the camp-fires at night as they cooked their suppers of game, and drank of "white and red wine, usquebaugh, brandy-shrub, two kinds of rum, champagne, canary, cherry punch, and cider," which were among the stores they took to beguile the weariness of the way. No enemy, whether man or beast, ventured to approach with hostile intent this hilarious invasion of the wilderness.

Expedition over the Blue Ridge.

The most elevated summit they reached was named Mount George, where they drank health to George the First and the royal family. The next in height was called either Mount Spotswood or Mount Alexander, in honor of the Governor. They crossed the dividing ridge of the mountains where the waters parted, one stream running westward, the other to the east; they descended the western slope, marched seven miles into the valley beyond, and crossed a fordable stream which they named the Euphrates. On its farther bank, with such ceremony as their resources permitted, — the firing of salutes, the blowing of trumpets, the free use of that extraordinary list of liquors with which the expedition was provided, — possession was taken of the country in the name of George the King, and a bottle was buried containing a written attestation to that possession. It was, probably, the number of empty bottles that suggested this certain method of concealing the fact from any future explorers.

The expedition occupied six weeks, and the distance travelled was more than two hundred miles. About the middle of September the

party returned to Williamsburg and rode triumphantly into the town, preceded by its own trumpeters, and welcomed by the towns-folk. To commemorate the event, Spotswood instituted a Tramontane Order, to encourage future expeditions, presenting to each of his companions a small golden horseshoe, to be worn as a badge, choosing that emblem, it is said, because of the number of horseshoes — little used in the soft loam and sand of the lowlands of Eastern Virginia — required for that mountainous journey.



The adventure was altogether picturesque and spirited, but that was all. No migration immediately followed in its trail. The Tramontane Order could not exist long on a single past achievement; and the golden horseshoe, which no one was entitled to wear who had not drunk the King's health on the top of Mount George, soon came to be only a pretty memento, well enough to have won, but not worth the winning anew. Sixteen years more passed before the axe of the settler was heard in the Shenandoah Valley, and then, first, not where Spotswood and his jolly companions had entered it, but near its northern extremity. In 1732, one Joist Hite took up forty thousand acres of land near the present town of Winchester, and entered upon possession with a colony from Pennsylvania. Others soon followed to the same region, some pushing farther west over the mountains till they descended into the valley of the Monongahela. John Lewis, an Irishman with a Scotch wife, and their children, founded Staunton, the oldest town in the Shenandoah Valley; and one Burden, an agent of Lord Halifax, following him, obtained a grant of five hundred thousand acres of land, on condition that he should settle upon them a hundred families. These and more he brought out from the north of Ireland, Scotland, and the border counties of England. In the course of ten years, from 1730 to 1740, Friends, Scotch-Irish Presbyterians, and Germans from Pennsylvania, as well as emigrants to Virginia direct from Germany and Ireland, scattered themselves through this rich and beautiful valley from its northern to its southern extremity.

Settlement of the Shenandoah Valley.

In 1744 the Six Nations consented, in consideration of the sum of four hundred pounds, to relinquish their title to all that country lying between the western boundary of Virginia and the Ohio River. Twenty-two years before, Spotswood had secured a treaty with those tribes whereby they bound themselves to abandon all the region east of the Blue Ridge and south of the Potomac. Both treaties prepared the way for this steady and irresistible progress of colonization westward, to be pushed a few years later into the valley of the Ohio.

Treaties with the Indians.

In the year of this treaty — 1722 — Spotswood ceased to be Gover-

SPOTSWOOD'S EXPEDITION OVER THE BLUE RIDGE.

nor; but he lived for eighteen years longer as a private citizen of Virginia, and must have seen with gratification the enlargement of the area of the province, which was the object of his expedition across the mountains. It was a continuation of that prosperity to which his long administration had given so strong an impulse. The welfare of Virginia was sincerely his aim, and his efforts were often successful, notwithstanding the serious conflict of purpose and opinion between a royal Governor and a provincial Assembly, so sure to manifest itself in the course of a dozen years. The Burgesses were slow and cautious, often obstinate, sometimes stolid, but always honest. The Governor, conscious of his own integrity, and slow to see that there could be any legitimate conflict between royal prerogative and popular right, was very often imperious and contemptuous. The people had made a mistake, he said to the House of Burgesses on one occasion, in the choice "of a set of representatives whom heaven has not generally endowed with the ordinary qualifications requisite to legislators," and who put at the head of standing committees men who could neither "spell English nor write common sense." The statement of fact no doubt was true; but neither that nor the terms used to convey it were pleasant to hear, or likely to have a conciliatory influence. Patriotism would not be less stern and uncompromising in men treated with such hearty contempt, and they often made the Governor understand that bad English and a poor style were not at all incompatible with a clear comprehension of their rights and a vigorous defence of them. They took the ground — specially with relation to postal laws, but as a general principle — that Parliament could not enforce a tax in the colony without the assent of the Assembly; and the essential thing was, not that they were not able always to carry out this doctrine against the Governor, but that they should assert and maintain it as a fundamental rule of conduct. Taxation without representation was a phrase to remember for near three quarters of a century, though it might be forgotten that when first loudly asserted in Virginia it was provoked, perhaps, by a colonial governor declaring that the House of Burgesses was a house of blockheads.

Of all the conflicts, however, in which Spotswood was involved, none was more earnest and bitter than the old one in regard to church patronage. The Governor, like his predecessors, claimed that the presentation to pastoral livings was a privilege of his office, and that any interference by the vestries was mere usurpation. There was just as little disposition now as in the time of Andros and Nicholson to relinquish the control of the individual churches over their clergymen. As in former years, the Reverend Mr. Blair came forward to lend the weight of his character and ability to the cause

of the vestries; and, as in former years, the victory was with them. With the aid of this controversy the enemies of Spotswood prevailed against him, and he was removed in 1722.

Spotswood removed.

As an influential private citizen he was, perhaps, of more service to the colony than he had ever been as its governor. On his domain of forty thousand acres he found beds of iron ore, established a furnace and foundry, and gave to Virginia a new and important industry.[1] This identity with the interests of the colony, from his long residence in it, brought him at length to juster and more liberal views of the rights of the colonists. In ceasing to be Governor, however, he did not retire altogether from public life. From 1730 to 1739, he was Deputy Postmaster-general of the colonies, and through him Benjamin Franklin was appointed postmaster of the Province of Pennsylvania. When Virginia was called upon to furnish troops in 1740 to aid in the expedition against Carthagena, Spotswood was called upon to take command, and he died — at the age of sixty-four years — while attending to the active duties of the embarkation at Annapolis. Lawrence Washington — a half-brother of George Washington — was a captain in this expedition, and he afterward named his family-seat in Virginia Mount Vernon, in honor of the admiral under whom he served.

Lawrence Washington.

From the beginning of the century to about the end of Spotswood's administration, the population of Virginia doubled. It doubled again within the next five and twenty years, a period through which Hugh Drysdale — first after Spotswood — and William Gooch, from 1728 to 1749, were governors. This increase was inevitable in the addition of a third to the settled area of the province by the occupation of the region beyond the Blue Ridge. Of still more moment was it that the emigrants attracted to that

Progress of the colony.

1 He did not, however, as has been stated, introduce the manufacturing of iron into the colonies. Two brothers, named Leonard, were the first manufacturers in the town of Raynham, in Massachusetts, in 1652. *Mass. Hist. Soc. Coll.*, vol. iii.

lovely valley, differed in many respects from those who first settled upon the bottom lands of lower Virginia, and from their descendants who still lived there. There were fewer among them who came to America with the hope of acquiring fortunes; more who came that they might find permanent and peaceful homes; fewer who sought for large tracts of land for plantations; more who were content with enough to give them prosperous farms; fewer who depended upon the labor of slaves and servants; more who tilled the earth with their own hands, and were willing to eat their bread in the sweat of their own faces; fewer who prided themselves on gentle blood; more who were satisfied to remember that they came of the stock of English yeomen, and that neither they, nor their fathers, nor their mothers, were among those raked out of the prisons of England, and the gutters and stews of London, to be sent to grow tobacco in Virginia; fewer who from habit trusted for spiritual guidance to the rollicking parsons of the Established Church as the respectable religion of the time; more who had broken away from a formal worship which seemed to them to be without sincerity or vitality, and who cherished, instead, profound religious convictions, acquired by long and earnest reflection, and made the rule of life.

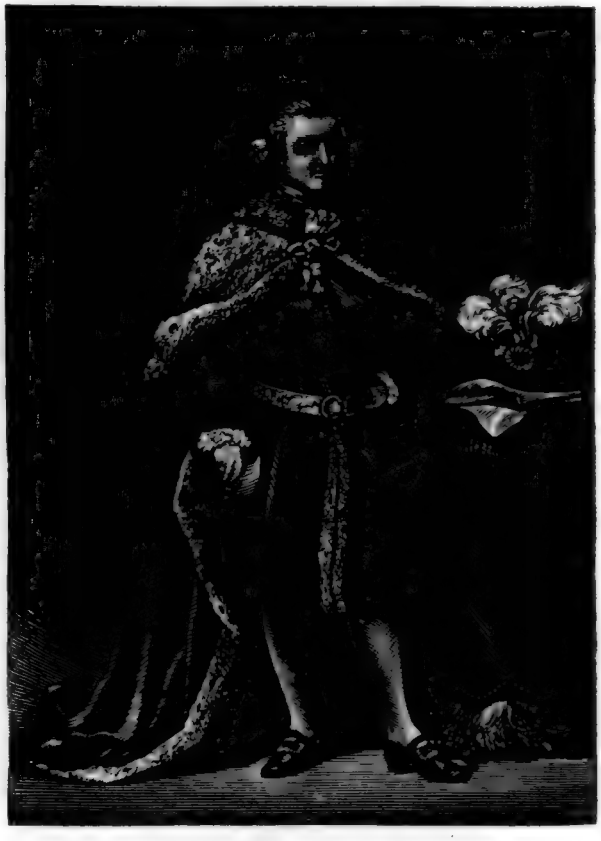
The dissent which began at this period to assume a bolder tone in the older part of the province, must have been strengthened by the influence of the Quakerism and Presbyterianism of these later emigrants. But as the prosperity of the colony increased, some portion of the new element was absorbed by Eastern Virginia as its population slowly crept up the eastern slope of the Blue Ridge from the alluvial region between that and the sea. Greater freedom of thought and a larger religious toleration went step by step with the material progress of the colony. Governor Gooch was much more troubled in the later years of his administration with the frequency of itinerant preaching, and the gathering of dissenting churches, than with the old question of the power of vestries in the Established Church. What was the purpose of a pulpit, and what manner of man should occupy it, came to be questions of more moment than how a man should be put into a pulpit which the state had built. Whitefield was as warmly welcomed on his first visit to Virginia as among the Puritans of the northern colonies, not because he was in orders, but because of his power as a field-preacher. The New Lights were a terror to the soul of Governor Gooch; but commissary Blair invited the founder of the Methodist Church in America to preach at Williamsburg.

At Williamsburg, that which Berkeley had so deprecated, and Culpepper and Effingham would not tolerate. had already come to pass. A printing-press was set up in 1736, and William Parks published a

weekly newspaper. The growing wants of a growing people found their own remedy. Towns which legislation had tried so long in vain to create, sprung up where they were needed. Increasing commerce wanted new ports; increasing production new centres of traffic. Norfolk was incorporated near the entrance to Chesapeake Bay; Fredericksburg and Falmouth at the head of tide-water on the Rappahannock; at the Falls of the James, partly upon land that once belonged to Nathaniel Bacon, William Byrd, an eminent and wealthy citizen, laid out a town to be called Richmond, and on the Appomattox another to be called Petersburg. New counties were made, — among them Albemarle, so called from the Earl of Albemarle, who was appointed the titular Governor on the death of Orkney in 1737, — and in these, the convenient neighborhood of two or three log-houses, as at Winchester and Staunton, speedily grew to county-seats and market towns.

New towns and counties.

Gooch relinquished his office in 1749 and returned to England. Three successive presidents of the Council, John Robinson, Thomas Lee, and Lewis Burwell, discharged the duties of Governor till the arrival of Robert Dinwiddie in 1752. Under his administration Virginia, in extending her rule still farther westward, was led into new and momentous relations to the general welfare of the American colonies.



Accession of Governor Dinwiddie.

For the first twenty years of this century there had been little change in the neighboring province of Maryland, except that it was restored once more to the Baltimore family. Charles, Lord Baltimore, died in 1714; his son, Benedict Leonard Calvert, had surrendered his Catholic faith, had accepted a pension from Queen Anne, and had educated his children as Protestants. He died not long after his father, and to his son, Charles, then a child, were restored those political rights as Proprietary which had been taken from his grandfather at the accession of William and Mary. John Hart, the last royal Governor, was continued in office as Baltimore's lieutenant for twelve years. Except for two years, the Proprietary governed his colony by deputies, till, at his death, Frederick, his son, succeeded him in 1751. This, the sixth and last Lord Baltimore, left the province, by will, to his natural son, Henry Harford, in 1771.

The rule of the Protestant Baltimores was as gentle and as just as that of their Catholic predecessors had been, and it is sometimes remarked that the prosperity of the colony seemed suspended under the royal governors. But, in truth, as no marked difference in the character of the government of Catholic and Protestant Baltimores is visible, so no lasting influence can be traced in the administration of proprietary and royal governors. Maryland, like Virginia,

like the other colonies at a certain period, emerged from the time of struggle and dependence to enter upon another of ease and strength; and Maryland, more, perhaps, than any other colony, was left free to grow and achieve prosperity, while the rule of royal governors was too brief to permit of any serious innovation upon that popular independence which the Proprietaries had submitted to, and had, in some measure, permitted and encouraged.

There was, indeed, here as elsewhere, the same contention between Governor and Assembly, but it belonged to both royal and proprietary government. This, however, though it might delay, was not a serious bar to the progress of the colony. If very often the colony would have been happier without any governor, so, no doubt, it could sometimes have well spared an Assembly. That, for example, which in 1733 provided by a single act for the issue of ninety thousand pounds of paper money, inflicted upon the colony an injury not easily recovered from. It was more than a pound to every inhabitant of the province, and it was distributed among them partly by expenditures upon public buildings, and partly by loans. The bills, ere long, sunk to one half their nominal value, and, to provide a fund for their ultimate redemption, the colonists were compelled to submit to a heavy export tax upon their great staple, tobacco. But Maryland was not singular in the committal of this financial blunder. There was not a colony that did not believe, and act upon its belief, that a pound and a paper promise to pay a pound were of equal value; not a colony that did not find the belief a fallacy when the time came to pay the pound.

Frederick, last Lord Baltimore.

But for all this Maryland flourished. By the middle of the century her people numbered about a hundred and thirty thousand; her average annual export of tobacco was thirty thousand hogsheads, and she

sent abroad also largely of wheat, and flour, and Indian corn. A number of furnaces and forges were in successful operation, notwithstanding the effort of the British Government to cripple this industry by offering a bounty on the importation of English iron — a measure met by the Maryland Legislature by granting a hundred acres of land to any one establishing a furnace or a forge. There were manufactories also of woollen and of linen, and tanners, shoemakers, and smiths were encouraged by an export duty on the raw material of their trades. One third of the people, however, were slaves, and their unskilled labor was inevitably forced into the over-production of a single staple. Baltimore was laid out in 1729, on lands belonging to Charles Carroll, and Frederick was founded sixteen years later. Other towns were projected, but were of slow growth where they grew at all; for, as in lower Virginia, large plantations and slavery enforced a rural population and a restricted industry.

CHAPTER IV.

THE CAROLINAS.

GOVERNOR MOORE'S MILITARY EXPEDITIONS AND THEIR RESULTS. — TROUBLES UNDER THE ADMINISTRATION OF SIR NATHANIEL JOHNSON. — REPULSE OF A FRENCH AND SPANISH INVASION. — DISSENSION IN NORTH CAROLINA. — CONTEST BETWEEN CARY, GLOVER, AND HYDE FOR THE GOVERNORSHIP. — INTERFERENCE OF GOVERNOR SPOTSWOOD. — INDIAN OUTBREAK IN NORTH CAROLINA. — THE YEMASSEE WAR IN THE SOUTHERN PROVINCE. — INDIFFERENCE OF THE PROPRIETORS. — THE BUCCANEERS OF THE CAROLINA COAST. — THEIR SUPPRESSION, AND DEATH OF THE PIRATE-ADMIRAL, BLACK BEARD. — REVOLUTION IN SOUTH CAROLINA. — DEPOSITION OF GOVERNOR ROBERT JOHNSON. — SIR FRANCIS NICHOLSON PROVISIONAL GOVERNOR. — PURCHASE OF THE CAROLINAS BY THE CROWN. — ROBERT JOHNSON REAPPOINTED AS ROYAL GOVERNOR. — CONDITION OF THE PROVINCE.

THE unfortunate expedition of Governor Moore of South Carolina against St. Augustine, related in another chapter,[1] had consequences of more moment than belonged to it as a merely military disaster. It fastened a public debt of £6,000 upon a colony of only about five thousand people, created by the first issue of paper currency, in that province, in the usual form of bills of credit; and this was followed, in due time, by the inevitable depreciation and consequent distress which, sooner or later, always attended that desperate expedient in every one of the colonies. The creation of this debt was a question of grave difference of opinion among the people, and this divided them into two parties, whose hostility grew more bitter from year to year, as new occasions and new opportunities arose to widen the breach and strengthen either one side or the other.

Effects of Moore's St. Augustine expedition.

An administration that entailed such results as the issue of ambition or imbecility, might well be called an unmitigated evil, had not Moore, after his return from Florida, undertaken that other and more fortunate enterprise, by which a new southern frontier was gained at the expense of the Spaniards, and more territory secured for future colonization. But even this service did little to reconcile the opposition. Moore was accused, and probably with justice, of serving his own private ends on this expedition, by

Campaign against the southern Indians.

[1] See vol. ii., p. 559.

holding his Indian prisoners as slaves on his plantation, and in exporting them for sale to the West Indies. It was not forgotten that he had, not long before, dissolved an Assembly for withstanding his attempt to get the whole trade with the Indians into his own hands, that he might, it was said, the more easily kidnap or buy the savages for that foreign slave-market. Perhaps he was not so bad as he was painted; but so little harmony was there, at any time, between him and the representatives of the people, that Charleston was for several days given over to riot when the question of raising funds to meet the expense of the unsuccessful expedition against St. Augustine came before the Assembly.

Sir Nathaniel Johnson as governor.

This confusion was still worse confounded when Sir Nathaniel Johnson was appointed to office in Moore's place, at the accession of Queen Anne. Of this man Johnson, John Archdale, the former Quaker Governor and a Proprietor, said, that he "by a Chimical Wit, Zeal and Art, transmuted or turn'd this Civil Difference into a Religious Controversy."[1] It was a religious controversy, however, only so far as religious differences could be used to compass a political end.

The official party, the friends and servants of the Lords Proprietors, were of the Established Church; their opponents, who were largely country people, were dissenters. Dissent, however, was with many of them more a matter of tradition than conviction. The generation then native of the soil, and living upon isolated plantations, had grown up in ignorance, destitute of schools and of churches, but inheriting a feeling that no church at all was better than the Church of England. Many, it is said, went farther than this, and had lost all religious faith. Ostensibly to punish these unbelievers, Johnson's first Assembly passed an act depriving of their civil rights all who blasphemed the Trinity, or questioned the Divine authority of the Bible, and condemning them to three years' imprisonment.

Acts of the Assembly against dissenters.

It is hardly credible that there could be many in the province obnoxious to this law. Infidelity is not often an intellectual conviction or assertion with the merely ignorant; they cling rather to a religious belief of some sort, though their faith may be little better than an unreasoning superstition. If, however, the act of the Assembly was meant as a blow at the opposition party, it evidently failed of its purpose, and was therefore speedily followed up by another, which was more effectual. This law required that any citizen chosen as a member of the Assembly should conform to the religion of the Church of England, and should partake of the sacrament of the Lord's Supper in accordance with the rules of that

[1] Archdale's *New Description*, etc. Republished in Carroll's *Hist. Coll. of S. C.*, vol. ii

church. The act was passed by a single vote; the election to the Assembly of many of the majority was disputed as carried by corrupt and arbitrary measures; yet, by this law, every dissenter in the colony was virtually disfranchised, and the popular party — which embraced all the dissenters, and far outnumbered their opponents — was left completely at the mercy of the minority who represented the Lords Proprietors, and who governed the colony, not for the good of the people, but for their own profit.

The disfranchised party sent an agent — John Ashe — to England to represent their grievances to the Proprietors. He escaped with some difficulty, when his errand became known, from Carolina; and he might as well have remained there, so far as any redress awaited him in London. Archdale, in his place at the Board of Proprietors, maintained the rights of the colonists with the same zeal and integrity that he had shown when their governor. But the majority was against him, and Lord Granville, the "Palatine," cut short the debate by exclaiming: "Sir, you are of one opinion, I am of another; our lives may not be long enough to end the controversy. I am for the bills, and this is the party I will head and support."

Action of the Proprietors.

Granville was a bigoted churchman, and cared much more for the religious than the political aspect of the question. A proposal to build a parish church in each county of the province, and to compel the people to worship therein, would with him condone a multitude of political sins, even if, in his estimation, the political purposes concealed beneath the religious pretense were sins at all. The Governor received the assurance that the Lords Proprietors approved of the "unwearied and steady zeal" with which he had prosecuted a "great and pious work" for "the honor and worship of Almighty God." With this success the zeal of Johnson and his party was redoubled. Churches were to be built and pastors provided, and lest this last duty should be neglected, the ecclesiastical government of the colonial church, which rightfully belonged to the Bishop of London, was vested in a commission of twenty laymen to be appointed by the Governor. The quarrel, in this aspect of it, was essentially the same as that which, about the same period, agitated Virginia, and ousted three governors successively from their seats.

The dissenters, who were about two thirds of the population, had been contending chiefly, thus far, for the right of keeping in the Assembly; they were now forced to contend also for the right of keeping out of the parish church, if it so pleased them. A new agent — Joseph Boone — was sent to England, but this time to look for redress in higher quarters than from the Proprietors.

Successful protests of the dissenters.

The appeal was made directly to the House of Lords. That body condemned in terms positive and emphatic the act relating to religious worship, and that which excluded dissenters from the Assembly; and they referred the petition of the complainants to the Queen, with a prayer that their wrongs might be righted, and that those persons

Granville and Archdale.

should be punished who were guilty of so flagrant and oppressive a misuse of power. Anne responded by declaring the objectionable laws to be null and void, and forthwith ordered the law officers of the Crown to take immediate steps for the revocation of the charter.

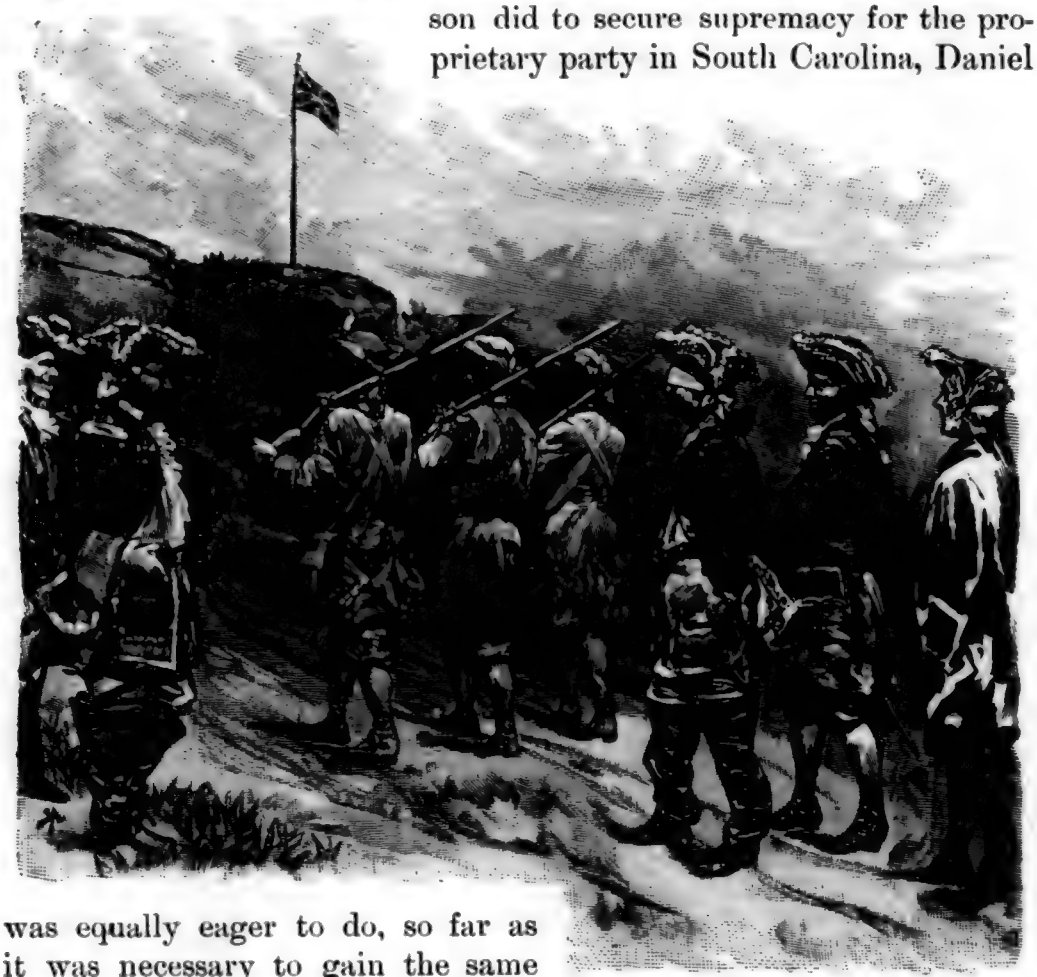
The issue of a writ of *quo warranto* and the proceedings under it were never, as we have so often seen in the case of other provinces,

measures rapidly disposed of. Lord Granville died a few months after the Queen's decision, and Lord Craven, a man of less arbitrary temper and of better judgment, stepped into his place as Palatine. A few months afterward, toward the close of the year 1708, Colonel Edward Tynte was appointed Governor in Johnson's place. He came with instructions from Craven so conciliatory and considerate that differences were reconciled and animosities subdued for several years. It was only for a few years, however. The seeds of dissension sown in Johnson's administration had taken too deep a root to be easily eradicated. They bore fruit an hundred fold, as we shall see presently, and Carolina ceased to be a proprietary colony.

An interval of quiet.

Before Johnson's removal, however, one opportunity occurred to him of showing that, at least as a soldier, he was worthy of being entrusted with the command of a province. Intelligence reached him that an attack was to be made upon Charleston by the French and Spanish, partly as a war measure against the power of England on the American continent, partly in support of the old Spanish claim to Carolina. His preparations to meet the threatened invasion were prompt and vigorous. Fort Johnson — still standing, and under the same name — was built on James Island in Charleston harbor; redoubts were thrown up on that exposed front of the city since known as the Battery; and a corps of observation was placed on Sullivan's Island to give the earliest possible notice, by signal fires, of the approach of an enemy.

Invasion of South Carolina.



The invading fleet consisted of a frigate and four smaller vessels, under the command of a Captain Le Feboure, a Frenchman. He sailed from Havana in August, 1706, touching at St. Augustine to take on board some Spanish recruits, and in due time appeared in Charleston harbor. The Governor had ordered all the militia of the province under arms, reinforced by all the friendly Indians within reach; guns and ammunition were hurried on board six merchant vessels in the harbor, and these put under the command of William Rhett as admiral. Everything was done that could be done by a prudent and brave commander. When Le Feboure sent a flag to demand a surrender, the summons was received with defiance; the messenger was taken blindfolded from fortification to fortification, to be shown a well-appointed force in each. The men were quietly marched from one point to another, in advance of the unsuspicious Frenchman, who supposed that he was brought face to face with a new company whenever his eyes were uncovered. Every attempt of Le Feboure to make good a landing was repulsed. Rhett's little fleet of merchantmen were handled like men-of-war, and the end was that the

Its repulse.

French retired in a few days, completely baffled and disheartened, and a ship with ninety men on board, sent to reinforce Le Feboure, which arrived soon after he left, remained as a prize in the hands of the Carolinians.

North Carolina affairs.

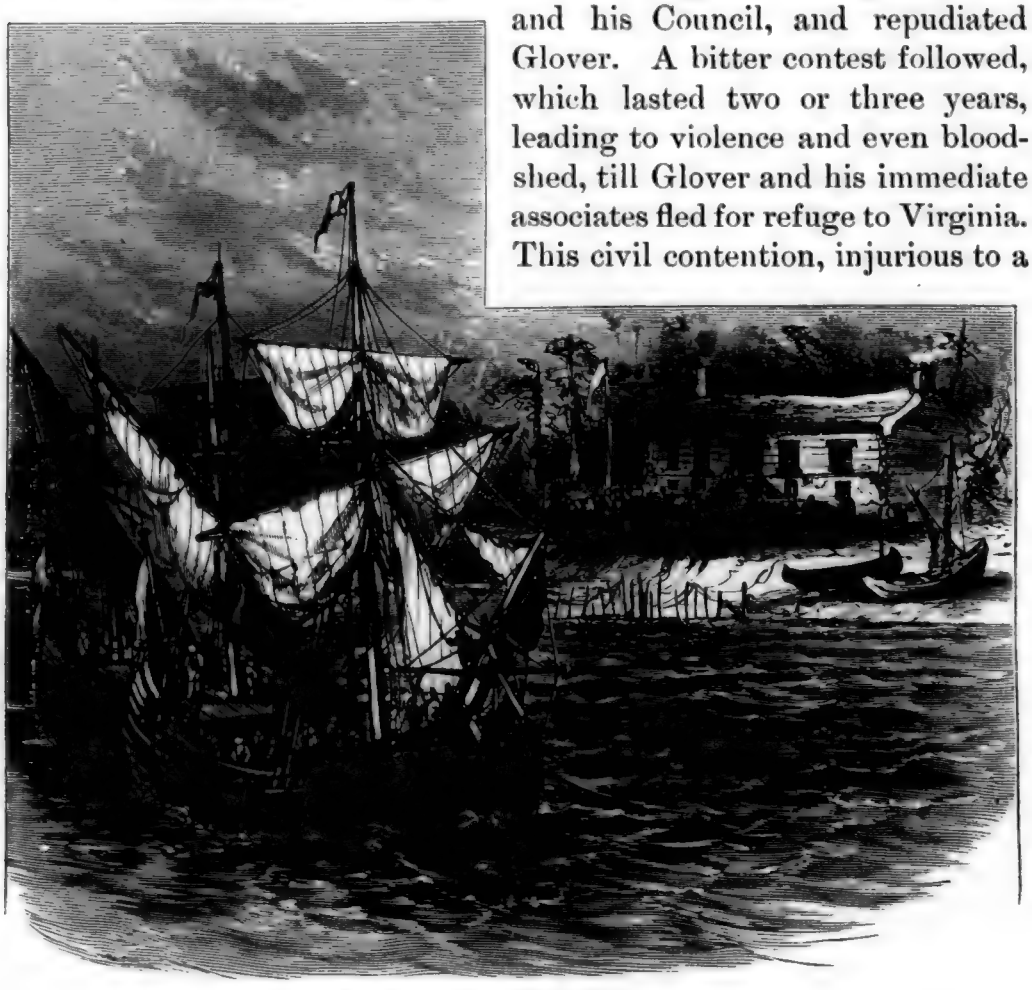
In 1704, Henderson Walker, who as President of the Council was acting Governor of North Carolina, died, and Johnson was directed by Lord Granville to appoint some one to take that office. He named Colonel Robert Daniel, who, it may be remembered, was engaged with Moore in his unlucky expedition against St. Augustine. Daniel, like Johnson, was a churchman; whatever Johnson did to secure supremacy for the proprietary party in South Carolina, Daniel was equally eager to do, so far as it was necessary to gain the same end, within his jurisdiction. When, therefore, John Ashe passed through North Carolina on his way to Virginia, to find a passage to England, he was received with open arms by the Quakers and other dissenters of the province, who felt that the cause which he represented was theirs also. They accordingly empowered one Edmund Porter, a Friend, to join Ashe in his mission to England, to represent to the Lords Proprietors how grievously they were wronged by this new Governor whom Johnson had appointed to rule over them.

The French Messenger at Charleston.

For some reason, not now apparent, Porter was more successful than his colleague, and the Board of Proprietors directed Johnson to remove Daniel and make a new appointment. He selected Thomas Cary, who soon became as obnoxious as Daniel had been, and especially so to Friends, whom he would not admit to seats in the Assembly, or to any other office, without exacting an oath, to take which was forbidden both by their consciences and the discipline of their society. Porter was once more dispatched to England, to ask redress, and was once more listened to with favor. Archdale's influence with the other Proprietors was sufficient not only for the removal of Cary, but to take from Johnson all the power that had been left in his hands as Governor-general of the two provinces, and to give to the Council of North Carolina — a body nominated by the Lords Proprietors — the right to elect a chief magistrate for that colony.

Thomas Cary, Governor of the northern colony.

The Council — to which several new members had been appointed, some of whom probably, through Archdale's influence, were Friends — assembled when Porter returned, and elected William Glover Governor. But Glover was also a churchman, and no more disposed than his predecessor to admit Friends to office without the legal formality of the oath. The Council thereupon reassembled, deposed Glover, and elected Cary. The natural conclusion is, that a compromise had been made between Cary and the Friends, inasmuch as Cary, when in office before, had insisted upon the oath, while now Friends were permitted to affirm instead of swearing.



Removal and restoration of Cary by the Council.

But the important question was, who was the rightful Governor? On one side it was asserted that Glover's election had been illegal because the Council had come together before the time appointed for their meeting; on the other, it was declared that Cary had no right to the office, because some of the old delegates, who had been superseded by new appointments, had been admitted to the meeting which elected him and deposed Glover. There is no conclusive evidence now attainable from which a positive judgment can be pronounced on this question; but it is a case where testimony as to previous character has great weight. So far as that may influence the verdict, the Cary party were in the right. Whatever may have been his motives, those of the Friends were pure; for they at least were contending for religious toleration, freedom of conscience, and their civil rights; and there is nothing in the history of that sect, either in North Carolina or anywhere else, to justify the supposition that they would condescend to any dishonest measures to attain an end, however just and desirable. That the end does not justify the means

Disputes caused by these changes.

is a fundamental principle of their faith, and one to which as a society they have been generally true. The result, nevertheless, was disastrous. Both Glover and Cary assumed to be the legitimate Governor; the Council was divided between them, and both assumed, with their adherents, to represent the Proprietors; and both issued writs for the election of representatives to a new Assembly.

Here, however, Cary proved to be the stronger; the people were on his side; the Assembly, when it came together, recognized him and his Council, and repudiated Glover. A bitter contest followed, which lasted two or three years, leading to violence and even bloodshed, till Glover and his immediate associates fled for refuge to Virginia. This civil contention, injurious to a

Cary before Hyde's House.

colony still struggling for existence, was the prelude, perhaps in some degree the cause, of still further disaster.

Hyde's appointment.

It was not till 1710 that the Lords Proprietors in England gave any sign of consciousness of the strife with which this portion of their dominion was torn. Then they appointed Edward Hyde as Governor, and sent orders to Tynte at Charleston, as titular Governor-general, to issue a commission to him. When Hyde arrived Tynte was dead; the only proof, therefore, of his appointment that the new Governor could exhibit was that contained, it was said, in

some private and unofficial letters from individual Proprietors. Cary at first hesitated, and then refused, to accept this as sufficient evidence. How far he was justified in this course it is impossible to judge now, as we know nothing of the character and the number of the alleged letters. That Hyde had no official commission, and Cary, therefore, acted within the law, is acknowledged. He seemed to apprehend violence, and fortified his house against a possible attack; then, growing more confident, as he found that his own party did not fall away from him, he armed two vessels, filled them with soldiers, sailed into Chowan Sound, and attempted to land at a place where Hyde and his Council were assembled, apparently with the purpose of seizing Hyde. Baffled in this, he retired to Pamlico and proposed to make a stand at the house of one Roach. This Roach was a trader recently arrived from England, and the agent of a commercial house in which John Danson was a partner. The fact has its significance, for Danson was a son-in-law of Archdale's, to whom Archdale had two years before conveyed all his right and title as a Proprietor of Carolina.[1] From Roach Cary received material aid in arms and ammunition, as well as a welcome to his house. The trader understood, probably, the wishes and the interests of his employers, and in aiding Cary in Carolina represented truly the Quaker, or non-conformist, element in the Board of Proprietors in England.

Cary opposes him.

In this crisis of affairs Hyde repeatedly appealed to Spotswood of Virginia for help. It was finally granted, for Spotswood was a royal Governor, and to him all who arrayed themselves, for whatever cause, against constituted authority were only a "mutinous rabble." His Council agreed with him in the necessity of suppressing an "insurrection" which might prove of evil influence among the discontented of their own colony; even the House of Burgesses assented to his interference, while they showed that they were not without sympathy for the popular party by refusing to grant all the men and money that he thought the occasion demanded. But for this, perhaps, he would not have condescended to negotiation.

Negotiation, however, was first tried; naturally nothing but delay came of it. Both parties had gone too far to yield to anything but force. The Governor of Virginia then called out the militia of the border counties to march into Carolina, and bring that force to bear upon Cary; but the militia did not respond to this summons. The people of those counties were almost all Friends, and if they could at any time be induced to take up arms, it certainly was not now, when they were to be used against their own brethren. Spotswood asked that a sufficient force from some naval

Spotswood interferes in the dispute.

[1] Hawks's *History of North Carolina*, vol. ii.

vessels, which just then happened to be in Virginia, might be put under his orders; but their commanders refused, on the plea that such a service was beyond the line of their duty. There was one other resource left to the Governor: he ordered out the marines on board the guard-ships of Virginia, and sent them to Carolina. Their number must have been small, but they proved to be sufficient. At their appearance, Cary and the few followers by whom he was surrounded dispersed without a blow. When it came to a question of serious armed resistance or submission, he knew that he had no alternative but to submit.

Why? Not because the party which had sustained him were cowards, but because they were Friends. In numbers they far exceeded their opponents; Cary and his immediate associates, it is plain, were ready enough to lead them to the utmost extremity of armed revolt; the successful issue of such a revolt was by no means hopeless. But Cary knew that he and his half dozen followers could not carry on a civil war alone; he knew that to their ambitious personal aims — if they had any — the great body of the people who had thus far sustained him were utterly indifferent; he knew that that support was given for the cause of religious freedom as the Quakers understood it; but not even for that cause would these people take up arms in violation of their profoundest religious convictions There seems to be no other rational explanation of this sudden collapse of a promising rebellion. It entered upon a new stage with the appearance of troops who represented a government determined to suppress it by force of arms. In that last resort the Friends had no response to make; the weapons with which they fought the good fight were not carnal weapons.

Cary's submission.

What this may have had to do with subsequent events it is impossible, from the meagre records of the time, to tell. Cary and two or three others were arrested and sent to England as prisoners by Spotswood, but they were never brought to trial. A universal pardon was proclaimed for all except the half dozen leaders, but even these seem to have escaped punishment. In 1714 we hear of Cary residing in, or visiting, North Carolina,[1] unmolested. This forbearance may have been due, in some measure, to the indifference of the Proprietors to the affairs of a colony which it was more profitable to let alone than to care for. But it is also probable that the conciliatory spirit of Friends, prompting them rather to suffer than to do evil, was not without influence. All, at any rate, that they could have gained by violent resistance was soon accorded them. In 1713 Charles Eden

[1] "Colonel Cary is gone for the West Indies but intends in again this Fall." Letter from Governor Pollock to Governor Spotswood. Cited by Hawks from Pollock MSS.

was appointed Governor by the Proprietors, and from his time, though the Church of England was established by law, religious freedom was also acknowledged as the right of every man, and the affirmation of a Quaker was accepted in place of an oath.

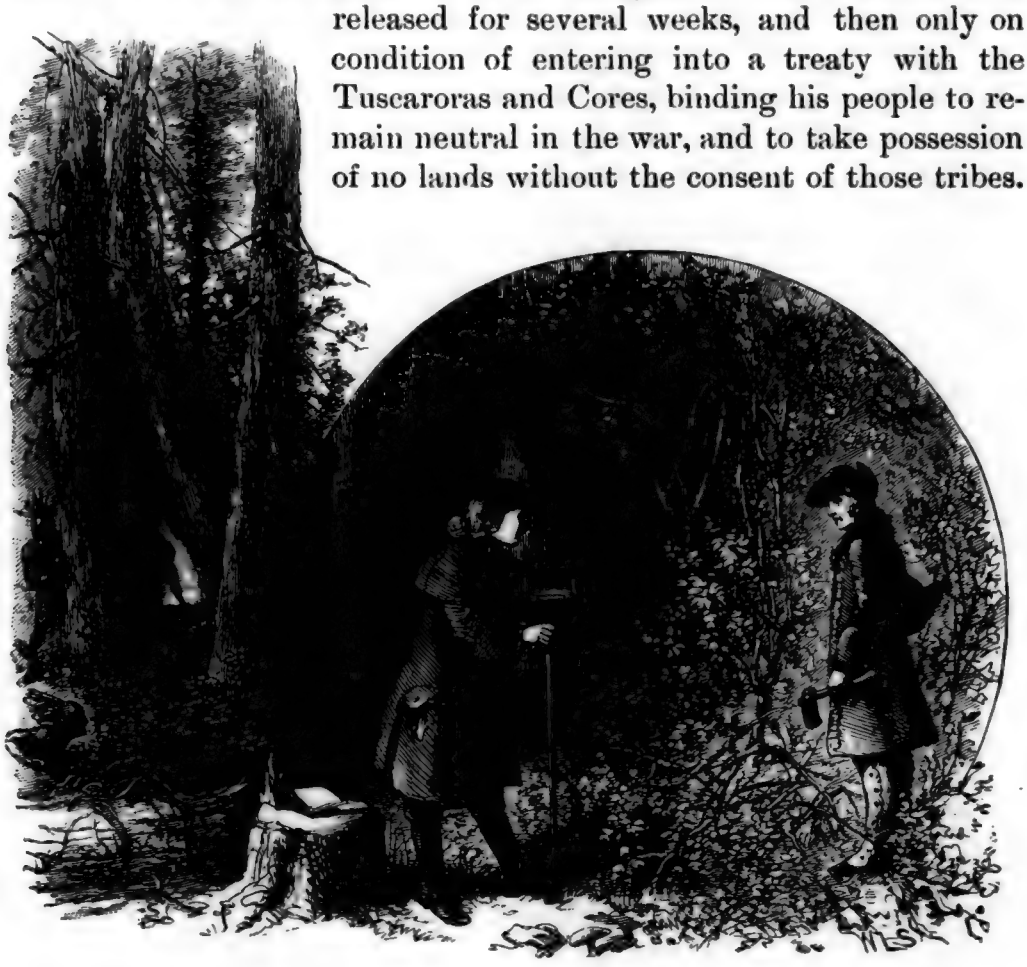
Success of the Quakers.

Among the accusations made against Cary was one which, if true, should have brought him to condign punishment, but which, as he was not punished at all, was probably known to be an invention of partisan animosity. Hyde was hardly in quiet and undisputed possession of his office when he was called upon to meet a new and more terrible calamity. An Indian war suddenly broke out and swept over the colony. Cary, it was said, had sent emissaries among the Tuscaroras and incited them to hostilities to create a diversion in his favor. It is far more likely that the savages, observing the anarchy resulting from the dissensions among the colonists, hoped that an opportunity had come for their annihilation.

Cary and his adherents had dispersed early in July, 1711; the appointed day of the massacre planned by the Indians was not till September. To suppose that Cary could have had anything to do with it, is to assume that he could resort to measures simply diabolical to satiate his vengeance upon political enemies.

War with the Tuscaroras in North Carolina.

The Tuscaroras had induced all the smaller tribes to unite with them in a general conspiracy against the English; the half-tamed savages who lived in the neighborhood of the whites, and those who were servants in their houses, agreed to join in the work of slaughter at the hour appointed. And they kept their word. From every dwelling where these trusted servants had their homes came the signal war-whoop, at break of day, to the bands who the night before had concealed themselves in the vicinity of every settlement of whites along the Roanoke, the Neuse, and the Pamlico. Hundreds were slain within an hour, and those who escaped fled from their burning houses to seek a shelter in the woods.



Massacres along the Roanoke.

None of the sudden outbreaks of savage hate which from time to time had burst upon the several colonies was ever more furious or more fatal than this. For three days it swept unchecked over the province from its southern to its northern extremity, and then only ceased for the want of more victims when not a man, woman, or child was to be found outside of the shelter of a house garrisoned for a siege.

Among those who suffered most were a company of Swiss and Germans whom persecution had driven from the Palatinate to England, and thence to find new homes in Carolina. The leader of these people was the Baron De Graffenried, a Swiss gentleman from the Canton

of Berne, and in his honor the town in and near which they settled was called New Berne. A few days before the outbreak, De Graffenried and John Lawson, the Surveyor-general of the colony and its earliest historian, had gone up the Neuse to learn how far it was navigable, and to select and survey lands for new settlements. They were taken prisoners by the Indians, and Lawson was soon put to death with horrible tortures. Had their captivity been known, it would have been a warning to the colonists of the hostile purposes of the savages; but the baron was not released for several weeks, and then only on condition of entering into a treaty with the Tuscaroras and Cores, binding his people to remain neutral in the war, and to take possession of no lands without the consent of those tribes.

The Swiss and German settlement at New Berne. Fate of Lawson and De Graffenried.

Lawson and De Graffenried.

He was faithful to this agreement, and was enabled thereby to save the remnant of the Palatines whom the massacre had spared; he was better able, moreover, to serve the colony at large by the information he gained, while the war continued, from friendly Indians, than if he had taken up arms.

Meanwhile Governor Hyde appealed to Virginia and South Carolina for aid. The generous and impulsive Spotswood was restrained by the cautious Burgesses, and was compelled to content himself with

interceding with the Indians. But more immediate help came from Governor Craven of South Carolina. Colonel Barnwell, at the head of a small body of militia and several hundred of the Yemassees, made a toilsome march through the wilderness from Charleston to the Neuse, and there joined the small force Governor Hyde had gathered to await their coming. The Tuscaroras had built a fort about twenty miles from Newbern, and had retired there in great numbers. Here they gave Barnwell battle in the open field, but lost three hundred killed, and a hundred taken prisoners; the rest were driven back to their fortifications, with many wounded.

Aid from South Carolina.

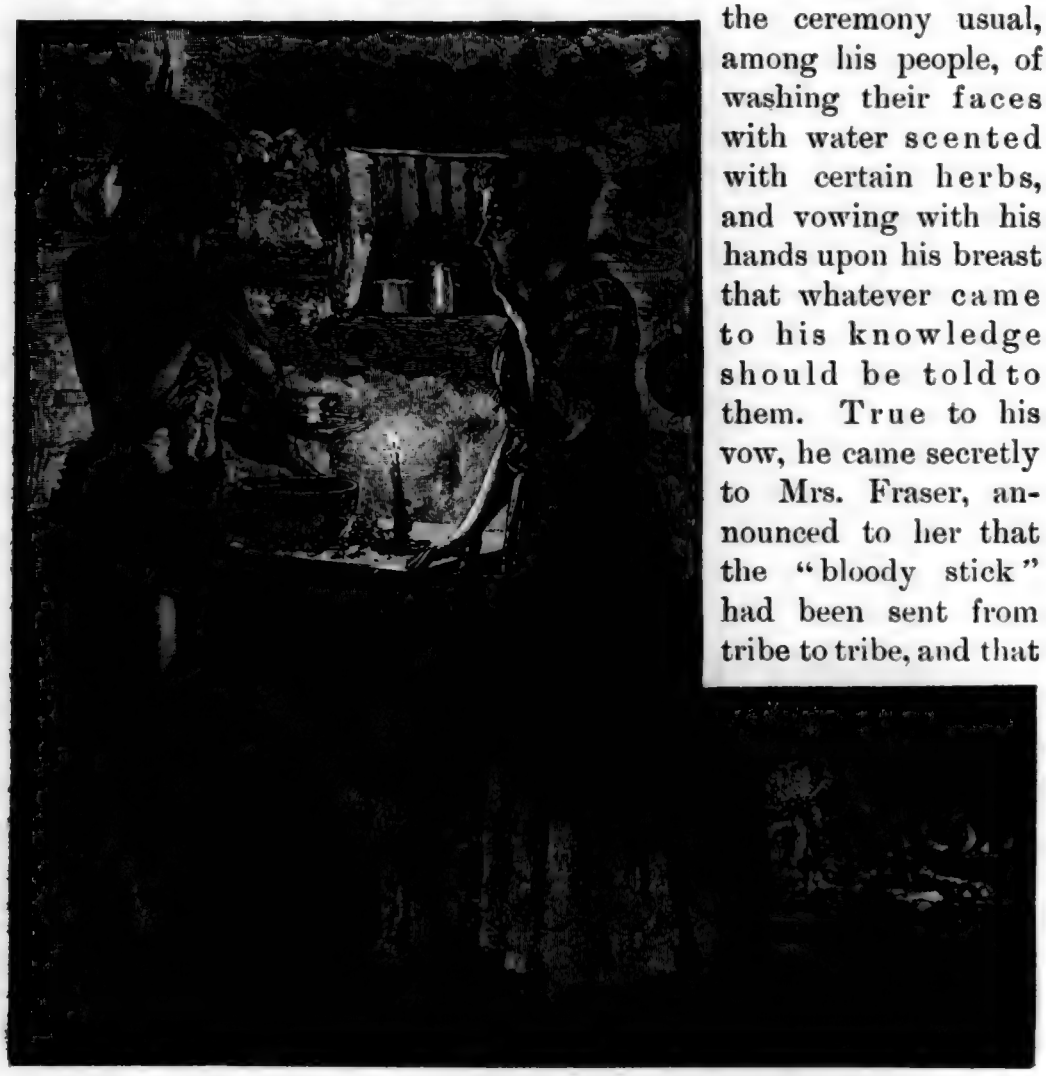
But this did not happen till within a day or two of the end of January. For more than a third of a year the North Carolinians had been shut up in their garrison houses. Their crops were lost; their farms and villages, through the southern portion of the province, were destroyed; in almost every family there was the sound of lamentation for dead relatives or friends; the living were reduced to poverty, even to absolute suffering for the want of food; it was a long winter of sorrow, of terrible fear, of continual privations, that this victory of Barnwell's broke in upon, and without that relief the colony would have soon ceased to exist.

The siege of the Tuscarora fort was not a long one. Barnwell was wounded; he found it difficult to feed his men; his Indian allies were restless and impatient, as Indians always are of any work requiring steady and quiet persistence. He raised the siege, made a treaty, and returned to South Carolina. The North Carolinians bitterly complained that he had abandoned them; for the Tuscaroras broke the treaty, renewed hostilities, and sought an alliance with the Senecas, of the Five Nations, to carry on the war. The summer was spent by both parties in preparations for a renewal of the struggle.

In the autumn Hyde died, and Colonel Pollock, a man of more energy, was chosen Governor. A general Indian war was dreaded in all the southern colonies; the Virginia House of Burgesses gave a more hearty support to Spotswood's measures of defence, and South Carolina sent a larger force, under the command of Colonel James Moore, to the relief of the northern province. Pollock, meanwhile, sowed division among the Tuscaroras, and seduced Tom Blunt, an influential chief, from his allegiance. Moore overtook the remainder of the tribe, with others who had entered into alliance with them, in a fortified camp near the present village of Snow Hill, on an affluent of the Neuse, in March, 1713. His attack was so vigorous that the war was then and there virtually ended. A large number of the enemy were slain, and eight hundred were taken prisoners, most of whom the southern Indians carried back

Pollock Governor. The Indian war ended in the north.

to South Carolina as slaves. A remnant of the Tuscaroras fled northward, and the Five Nations from that time became the Six Nations by the absorption of the tribe. The submission of all the Indians remaining in North Carolina was absolute. They had staked everything on this final contest. But if affairs with them were desperate, they were hardly less so with the English. An estimate of the resources of the colony, made a few days after the battle, showed that there were but thirty-two barrels of meat and eight hundred bushels of corn in the whole province.



The "Bloody Stick."

The force led to the suppression of this Indian war in North Carolina, first by Barnwell and then by Moore, was composed almost entirely of Yemassees. Could these Indians have looked forward for only two years, and acted on that foresight, it is quite possible that not a white man would have been left south of the Virginia boundary. An alliance between the Tuscaroras and the Yemassees would have been too formidable to be met with any hope of successful resistance. But when the destruction and dispersion of the Tuscaroras made such an alliance impossible, then the Yemassees undertook to do alone that which they had just prevented the northern tribe from doing, — that which by their combined strength could have been so easily accomplished.

For, in the spring of 1715 the southern Indians sent the "bloody stick," as a signal for war, from Cape Fear to the St. John's River,

carrying dismay through South Carolina from the frontier to the coast. In a single instance only was there any warning of the calamity. Sanute, a Yemassee chief, had become warmly attached to a Scotch settler on the frontier, named Fraser, and to his wife, a beautiful woman whom the Indian regarded with great reverence. To both he had sworn eternal fidelity, confirming his oath by the ceremony usual, among his people, of washing their faces with water scented with certain herbs, and vowing with his hands upon his breast that whatever came to his knowledge should be told to them. True to his vow, he came secretly to Mrs. Fraser, announced to her that the "bloody stick" had been sent from tribe to tribe, and that they must flee for their lives. It may have been a part of the agreement that any secret communicated by the Indian to his friends should not be revealed to others; at any rate, though the Frasers accepted the warning for themselves, and fled to the coast, they gave no hint of the coming danger to the scattered settlers, whose houses they passed in their flight.

Insurrection of the Yemassees.

Sanute and Mrs. Fraser.

For a few days even Charleston trembled for its safety, as the few who escaped the sudden outbreak fled to the town from the outlying

plantations. The massacre, however, soon ceased, for the want of defenceless victims. The Indians were now compelled to meet an organized force led by Governor Craven, who defeated them in a general fight near Port Royal. The victory was so complete that the savages were driven through the wilderness across the Florida border, and the province relieved altogether from a people far more to be feared than trusted, notwithstanding their past services. They left behind them the ashes of hundreds of homes, and the bodies of more than four hundred of the victims of their barbarity and hate. The outbreak was supposed to be instigated by the Spaniards; but whether this was true or false, the savages were received with welcome and applause in Florida, and encouraged in future raids. These, however, were sufficiently guarded against by two or three military outposts along the southern frontiers.

Final defeat of the Indians.

Two years only had passed away since the existence of North Carolina seemed merely a question of hours. Both colonies, had their enemies united, might have been destroyed between sunrise and sunset. Now, rather through savage fatuity than the prowess of the whites, these remained in quiet possession of that broad domain, while the powerful tribes who claimed it as theirs were scattered north and south, separated from each other by almost half the length of the continent. The beautiful forests, the lovely islands, the noble mountains, of their old homes, above all the graves of their fathers, were to be to them henceforth only a tradition. In all the colonial history of North America there is no more remarkable instance of how events, not brought about by the English, but of which, nevertheless, they knew how to take advantage, served to dispossess the Indians of their country and give it into the hands of a new people.

In all these years the Proprietors in England had left the colonies, for the most part, to prosper or to perish, as events, which they made little or no effort to control, should determine. Or rather, if an earlier historian [1] is right, the Proprietors did far worse by the colonists than to neglect them; for their affairs were left to the management of a secretary, so far as they were managed at all, and this man was moved in all that he did by Nicholas Trott, of South Carolina. Trott was Chief Justice for years, Judge at the same time of the Vice-admiralty Court, President of the Council, sometimes acting Governor, — always in office, always using the proprietary secretary for his own purposes and those of his party. But so far as the Proprietors acted at all, of their own volition, in the affairs of the colonies, it was to neglect them where their inter-

Course of the Proprietors during this period

[1] Hewit's *History of the Rise and Progress of the Colony of South Carolina.*

ference would have been a help, — to interfere when neglect was of all things to be most desired. They were left to defend themselves as best they could against their savage enemies; to reconcile the strife of factions; to stagger under the load of debt which war created, a burden added to by the attempt to relieve it by the issue of bills of credit. But any scheme for adding to the revenue of the Proprietors by an increase of taxes was certain of their approbation; any oppressive measure contrived by their officers they were sure to sustain. To acts of the Assembly of South Carolina to regulate trade with the Indians, and to secure a free and general election of representatives — both of imperative necessity for the public welfare — the Proprietors refused their assent. When the lands vacated by the Yemassees were taken possession of by the colony, and opened to the use of settlers, they were seized by the Proprietors for their own use, and hundreds of new emigrants ruined by demands, for rent and purchase-money, impossible to meet. Craven's successor, Robert Johnson, a son of the former Governor, Sir Nathaniel Johnson, received instructions that took from the Assembly almost all voice in the government of the colony, the Proprietors declaring that all legislation should be submitted to them, and that they should reject and repeal all laws as they saw fit. A royal order in Council was about the same time received, requiring the repeal of an act levying ten per cent. on all British goods imported, from which came almost the only revenue for the support of the colony, except direct taxation.

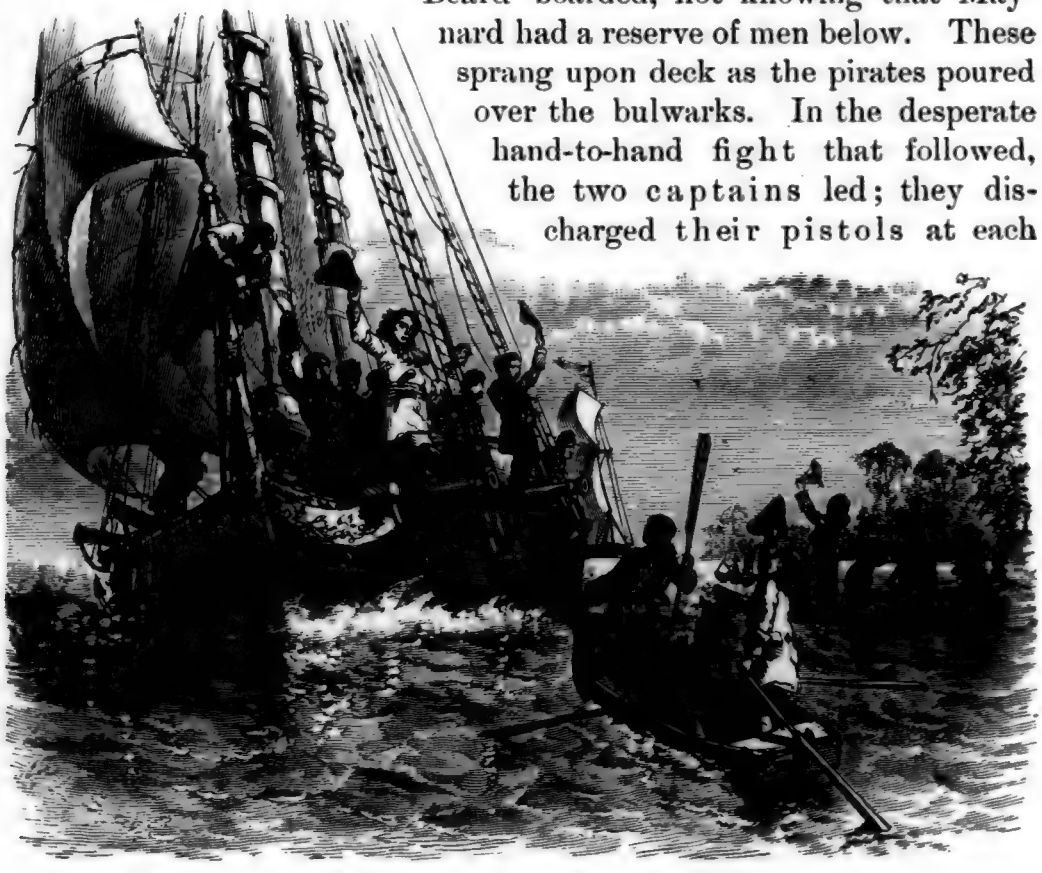
The public debt was augmented soon after Johnson's accession, by a necessary public service, and this added burden fell, as usual, upon the colonists. The pirates who had always, more or less, lurked along the Carolina coast, had become so bold that they could be tolerated no longer. The island of Providence, one of the Bahamas, had long been a convenient rendezvous for these buccaneers, but driven thence by an expedition under Captain Woodes Rogers, who took possession of the island in the name of the King, they had found convenient hiding-places in the sounds and inlets of the Carolinas, particularly about Cape Fear. They were the ruin of all legitimate commerce, and the terror of all honest sailors. So well armed and manned were their vessels that they did not hesitate to capture merchantmen within sight of the town of Charleston, and extort a ransom from the government for any prisoners of note that fell into their hands. The admiral of these rovers, one Teach or Thache, — but universally known by the more romantic name of Black Beard, — hoisted his flag upon a ship of forty guns, and the squadron under his command consisted of six vessels. Three of his

Piracy on the Carolina coasts.

captains, Vane, Worley, and Steed Bonnet, were as well known, and almost as much dreaded, as himself.

The harbor of Charleston was kept under constant blockade by one or more of these vessels, in turn, from the convenient station in the mouth of Cape Fear River. Hardly a merchantman bound in or out, could escape them, and so serious was the injury to the commerce of the port that Johnson determined to put an end to it at all hazards. He sent out a ship under command of William Rhett, and Steed Bonnet awaited him outside the bar at the mouth of the harbor, till he saw that the enemy was stronger than he dared encounter. Then he sailed for the station at Cape Fear. Thither Rhett followed, attacked and took the pirate with a crew of thirty men. Returning with these to Charleston, they were speedily tried, and twenty-nine of the thirty as speedily hanged.

Capture and execution of Steed Bonnet



Worley, another of the pirate captains, soon afterward appeared in defiance at the mouth of the harbor, and the Governor, taking command of his ship in person, went out to meet him. Worley's sloop carried six guns and was ready for battle. The engagement was desperate; no quarter was asked or given; every man on board the pirate, save the captain and one of the crew, was killed, and these two refused to surrender, though they could fight no longer. Johnson sailed back to town, in sight of which the battle was fought, and lest his two wounded prisoners should cheat justice by dying of their wounds, they were hanged immediately.

And of Worley.

The loss of two vessels, of two of his bravest captains, and of so many men, so crippled and alarmed Black Beard that he went with twenty of his comrades before Governor Eden, of North Carolina, and took advantage of a royal proclamation made some time before, promising pardon to all pirates who would surrender. He remained for a while on shore, living a riotous life upon his ill-gotten gains, finding among his neighbors on Pamlico River a young woman who consented to be his thirteenth wife. This rural leisure and domestic bliss — though probably his wives were numbered with the ports where he refitted — he soon relinquished, and took to the sea again. For a while he kept within the law, by bringing in vessels, found, he said, deserted at sea, for condemnation in the court of admiralty. There were grave suspicions that in this sort of salvage the Governor, the secretary of the colony, and the admiralty judge had a share of the profits. But even this pretence of an honest employment of his time by Black Beard was soon abandoned, and he returned to his old ways.

Either because Governor Eden wanted the strength or wanted the will, to undertake the suppression and punishment of these bold buc-

caneers, Governor Spotswood was asked to send a naval force to the relief of the North Carolinians. The Virginia Governor offered a large reward for the pirate captain's head, and two armed sloops, under the command of Lieutenant Maynard of the royal navy, were ordered to Pamlico River. It was intended to take the pirate by surprise, but Black Beard was informed of their coming, and was prepared to fight if he could not escape. On board his vessel were twenty-five desperate men. When Maynard overtook them, the pirates opened the battle with a broadside, swearing that they would neither give nor take quarter. Maynard's vessel, unfortunately, ran aground, and, unable to manœuvre, was so exposed to the fire of the enemy that twenty men were shot down at a single broadside. Then Black Beard boarded, not knowing that Maynard had a reserve of men below. These sprang upon deck as the pirates poured over the bulwarks. In the desperate hand-to-hand fight that followed, the two captains led; they discharged their pistols at each

Maynard's Return.

other's heads without harm; then each rushed upon the other with his dirk and fought with skill, courage, and desperation till Teach fell. The boarding-party had numbered seventeen; nine, besides the pirate captain, lay dead upon the bloody deck; the other seven were mortally wounded. Then Maynard, in his turn, boarded the pirate vessel, made prisoners of the rest of the crew, and was just in time to seize a negro who stood with a firebrand at the magazine, with orders from the captain to blow up the ship in case she should be taken.

So the victory was complete, and the law erelong gave the pirates who survived the fight to the gallows. There is hardly a more conspicuous figure of that time in all the colonies than that of the brave young lieutenant, as he sailed through Pamlico Sound and into Chesapeake Bay, with the ghastly head of the dreaded pirate Black Beard dangling at the end of his bowsprit.

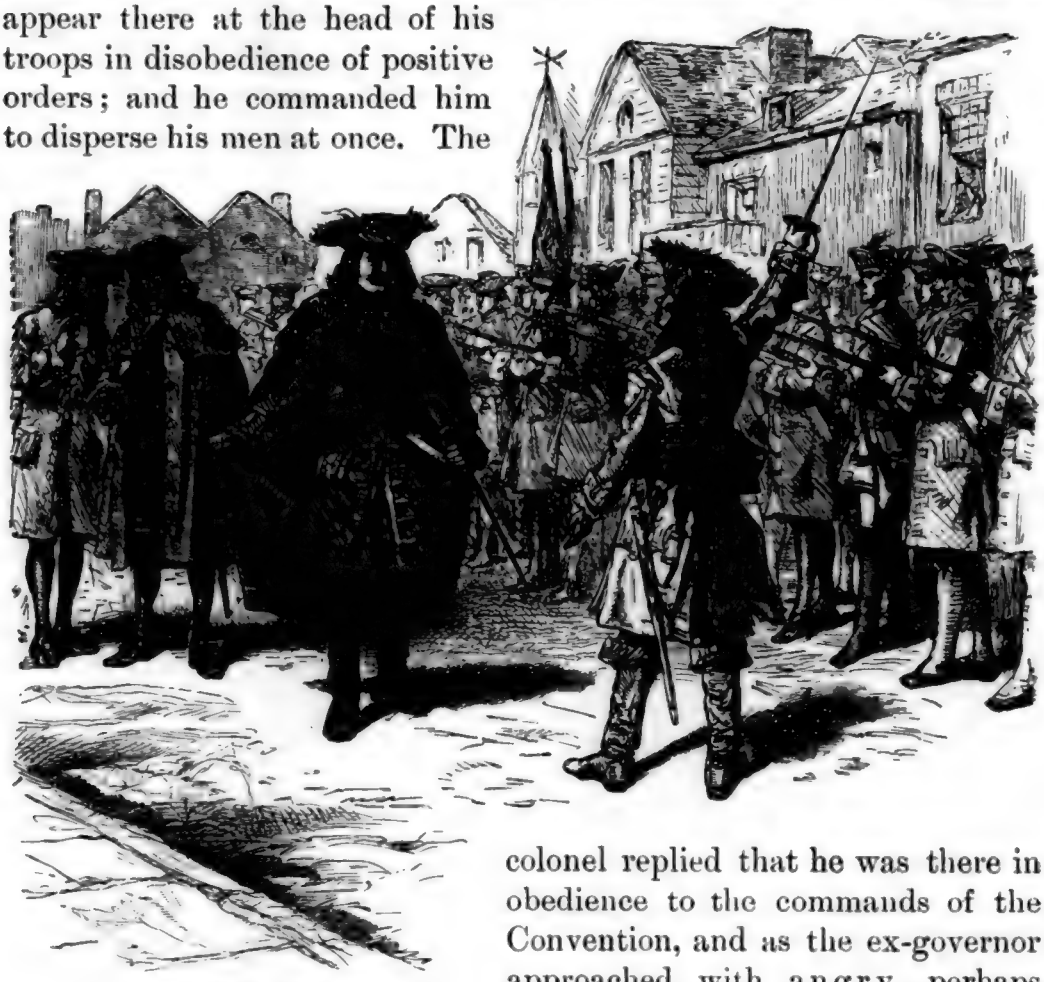
South Carolina's share in the extermination of this formidable band of buccaneers cost her ten thousand pounds,— a serious increase of her public debt — a serious addition to the tangle of difficulty and discord to be cut by the sword of revolution. The conduct of Trott, the Chief Justice, had become so intolerable that the Governor and Council united with the bar and the Assembly in demanding his removal, and one of the Council, Francis Yonge, was sent to England to represent the condition of the colony to the Proprietors. The mission was a failure. If no redress could be obtained on the representations of an officer of the government, it was plain that the popular party had nothing to hope from any further remonstrance. In the dispatches which Yonge brought back, the Governor was rebuked for being too lenient to the colonists; he was ordered peremptorily to enforce the prerogatives of the Proprietors; to dissolve the Assembly, to repeal their objectionable laws, to insist upon the payment of taxes, to increase the number of councillors, to forbid any increase of the popular representation in the Assembly, — in short, to enforce with more severity than ever the rule which the colonists believed would prove their speedy ruin.

A new mission to England.

The point was reached at which almost any public exigency would be sure to bring about a collision between the government and the people. It came with the apprehension of a Spanish invasion which the Governor learned was in preparation at Havana. He called the Assembly together, represented to them the exposed condition of the province, and asked for means of defence. The Assembly declared that the tax upon imports was sufficient to meet the emergency. The Governor replied that the Proprietors had repealed the law. The repeal, the Assembly said, would be disregarded, and whoever refused to pay the duties would be compelled to obey the law. Thereupon Chief Justice Trott pronounced judgment in advance, by declaring that in any such suits brought in his courts he should decide in favor of the defendants. The crisis had come in which one party or the other must yield absolutely.

Governor Johnson, however, that there might be some preparation to repel the expected invasion, ordered out the militia regiments of the province for review, and appointed a day for general inspection. The members of the Assembly, on their part, quietly held meetings

in different places in the country, formed an association, and prepared for revolution. At the appointed time the militia regiments mustered; the revolutionary leaders seized the opportunity, produced the articles of association to the soldiers, and they were eagerly signed by almost every man in the colony capable of bearing arms. Happily there was no Spanish invasion, but the Lords Proprietors, nevertheless, then and there lost a province.



For Johnson himself there was the utmost respect. The revolt was not against him, but against his masters. The members of the Assembly, resolving themselves into a convention of the people, issued a declaration of reasons for what they had done, declined to recognize the proprietary government under the Governor and his illegal Council, but besought Mr. Johnson to remain in office as royal Governor until the will of the King could be known. He refused, addressing to the Convention a long and able message, setting forth the rights of the Proprietors, his own duty under their commission, and the illegality of the proceedings of the Convention. "We beg leave to tell you," replied the Convention, "that the paper your honor read and delivered to us we take no notice of, nor shall we give any further answer to it, but in Great Britain." But they assured him "that it is the greatest satisfaction imaginable to us to find throughout the whole country that universal affection, deference, and respect the inhabitants bear to your honor's person, and with what passionate desire they wish for a continuance of your gentle and good administration," and therefore they again earnestly desired and entreated him to remain as Governor "in his majesty's name, till his pleasure shall be known." True to his sense of duty the Governor was unmoved.

Contest between Governor Johnson and the Convention.

But however great their respect for his private character, the Convention now owed it to the people to be firm in their disregard of the Governor's authority. He issued a proclamation dissolving the House; the representatives would not permit it to be read, and ordered it to be torn from the hands of the marshal. A new Governor, Colonel James Moore, was elected, and the day on which Johnson had previously ordered the militia to assemble in Charleston was selected by the Convention as a fitting time for the inauguration of Moore. Johnson had subsequently directed the commander of the military, Colonel Parris, to countermand his order, but this, Parris, who was on the popular side, had neglected to do. On the appointed day Johnson, coming into Charleston from his plantation, found the town alive with preparations for the celebration of a joyful event. The colors were flying from the flagstaffs of the fort; every bit of bunting at their command decked the vessels in the harbor; the peo-

ple had culled out a holiday, and put on their best attire, and in the great square in the middle of the town were drawn up in imposing array the citizen-soldiers of the whole province.

Astonished, indignant, but not in the least intimidated, the ex-governor faced this unexpected situation. Seeking out the leading men, he expostulated quietly but earnestly with some who, he believed, were honestly pursuing a mistaken course; others he accused of basely abandoning their duty, and forgetting their oaths. These he threatened with punishment. Of Colonel Parris he demanded how he dared appear there at the head of his troops in disobedience of positive orders; and he commanded him to disperse his men at once. The colonel replied that he was there in obedience to the commands of the Convention, and as the ex-governor approached with angry, perhaps with some threatening gesture, the troops were ordered to present their guns, and he was warned that he came nearer at the peril of his life.

The Muster at Charleston.

Charleston at that early and rude period of her history was used to riots as the easiest way to carry an election or suppress a party, and either there must have been at this juncture unusual self-restraint exercised by the people, or the affection they bore their late Governor was his efficient protection. For, he stood alone, looking into the faces of the soldiery; not one of

Moore proclaimed Governor.

the officers of the proprietary government — toward whom, perhaps, there would have been less forbearance — came to his side; in the multitude around him there was not one personal enemy, but among them all he saw not one who was a friend to his cause. Persuaded, at length, that further contention, under such circumstances, was useless, he consented to retire, and was led away courteously and kindly by one of the gentlemen of the opposition. The interest of that gala day — an interest all the greater that it was unexpected — faded away as he turned his back upon the soldiers into the muzzles of whose guns he had looked without flinching. It was the Governor deposed, not the Governor proclaimed, who had become the central figure of that celebration. It so often happens that it is more effective to be dramatic than to be right.

This was in December, 1719. Thenceforward South Carolina was in fact a royal province, though Johnson for a year or more longer endeavored by one device and another to maintain his authority. His last desperate effort was made in the winter of 1721, when two men of war were ordered to Charleston to repulse another apprehended Spanish invasion. Relying on the aid of these ships, whose captains brought their guns to bear upon the town, Johnson took the field at the head of a hundred men. Two shots over their heads dispersed them, and it was plain at last, even to him, that the cause of the Proprietaries was hopeless.

Meanwhile both parties sent representatives to England. A revolution so serious and so complete could not be ignored there. The Proprietors were charged with having forfeited their charter by misgovernment, and the Attorney-general was once more instructed to take the proper steps to test the question. A provisional Governor of the province was appointed, and soon after Johnson's final attempt to reinstate the proprietary government, Sir Francis Nicholson arrived as the representative of the King.

Appointment of Nicholson as provisional Governor.

It was Nicholson's good fortune to be sent to Carolina, as he had previously been sent to Virginia and Maryland, at the moment when the colony was about to emerge from the long and bitter struggle with hardship, poverty, ignorance, and misgovernment, and was in a condition to enter upon a new era of success and prosperity. It was his own good sense and sound judgment that enabled him to see the necessities of the people, and to understand what measures were requisite to take advantage of new conditions. The presence of a royal governor ended all immediate strife between the contending parties, and with the consciousness of royal protection came a period of tranquillity, content, and hope throughout the colony. War had

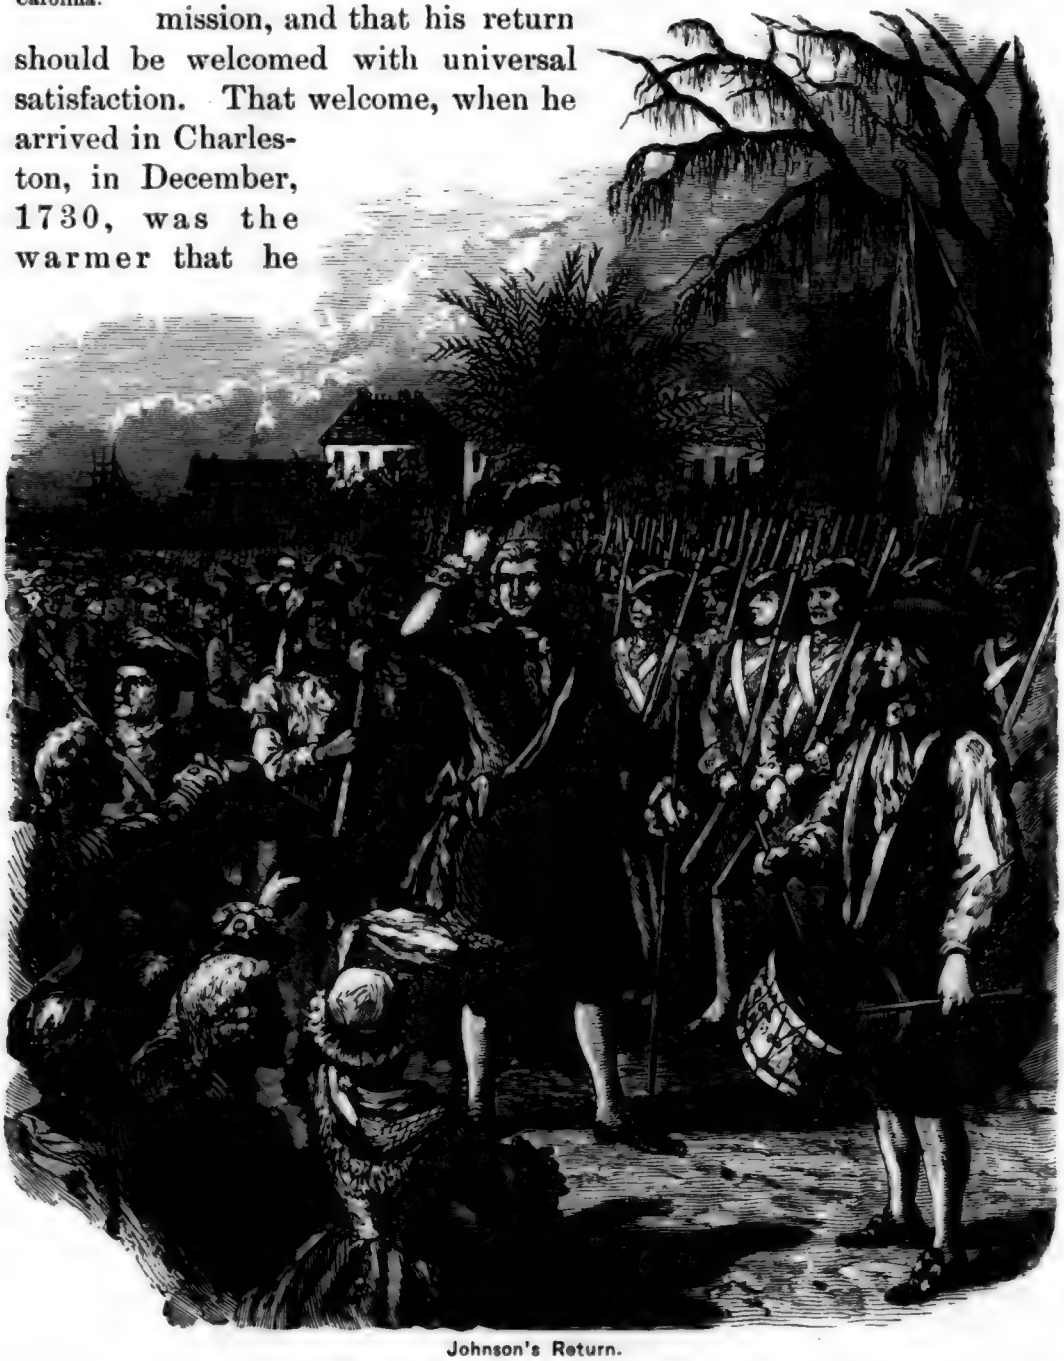
ceased between England and Spain, and Nicholson's first care was to avail himself of the peace to deliver the colony from the fear of Indian hostilities. He sought and secured peaceful relations with both the Spaniards and the Yemassee tribe in Florida. With the powerful nations of the Cherokees and the Creeks on the western and southwestern borders of the province he concluded treaties of peace and of commerce, guarantying to them the possession of their own hunting-grounds, and receiving a promise in return that the English settlements should be unmolested, — agreements kept like all Indian treaties, so long as the reasons for keeping were stronger than the reasons for breaking them.

Nicholson, if not a devout man in his private life, was too wise a statesman to underrate the value of religious influences. No other American colony was so destitute of churches as South Carolina, and nowhere else was there so marked an absence of any sense of religious feeling and responsibility. When heretofore it had showed itself at all, it took on, as we have seen, a political aspect, and was made to play an important part in the strife between the Proprietary party and its opponents. The robe of the saint was stolen only to serve the devil in. But the new Governor, through the four years of his administration, labored with great zeal to relieve a destitution which — if he deprecated it for no other reason — he felt to be an obstacle to the welfare and growth of the state. He laid down the boundaries of parishes; encouraged and aided the people to build church edifices; and interceded with the Society in England for the Propagation of the Gospel, to provide them with pastors. The church he labored for was, of course, the Established Church; there was hardly religious feeling enough in the province, at that period, to seriously suggest any question of conformity or dissent.

Whether it was that the people were irreligious because they were ignorant, certainly ignorance and irreligion went hand in hand among them. Nicholson was equally earnest in his efforts to overcome both. There was not a single public school in the province at the time of his arrival. He aroused the people to some sense of the importance of education, and aided them to secure it for their children with his private means as well as with the weight of his official influence and authority.

It is strong evidence of the excellence of his administration that, for the four years it lasted, the Proprietors seem to have submitted without a murmur to their loss of authority. But both they and their party in Carolina showed signs of life again when Nicholson returned to England, leaving his office in the hands of Arthur Middleton, the President of the Council. The writ against the charter had

not been issued; in the colony the strife of parties, which had begun to show itself before Nicholson left, had become threatening. The Proprietors assumed the right of appointing a Governor, and named Colonel Samuel Horsey for that office; if other officers were appointed by the Crown, they claimed that the nominations should be submitted to them for their approval. But the contest was too unequal to be long sustained on their part, and they offered to surrender their proprietary interest for a pecuniary consideration. The prayer was granted, and in 1729 both the northern and southern colonies were purchased by the Crown — including territory and arrearages of quit rents — for twenty-two thousand five hundred pounds sterling. To this agreement, however, Lord Carteret was not a party. A one-eighth interest in the property was retained by him, which about twenty years later was set apart from the rest by giving him all the territory from 34° 35′ to the boundary line of Virginia, and from the Atlantic to the Pacific Ocean.



Purchase of the province by the Crown.

From the date of the purchase of the colony by the Crown, North and South Carolina became in law, as they had long been in fact, two separate provinces. Thenceforward there was no pretence of the authority of a governor-generalship to be exercised over the northern colony by the governor of the southern, — an authority which, for many years, had been merely nominal, or only exerted at times by special order of the Proprietors for some special purpose. The last proprietary Governor of North Carolina was Sir Richard Everhard, who had displaced George Burrington. Burrington, in his turn, as the first royal Governor, displaced Everhard. The years of the official tenure of these men were marked by little else than their personal quarrels. Burrington was evidently a ruffian of a low order, and was indicted by the grand jury for an assault upon Everhard while he was Governor. The indictment gives many of the terms of obloquy and defiance which Burrington publicly hurled at his opponent: that "he was no more fit to be governor than a hog"; that he was a "calve's head;" that "I (the said George himself meaning) will scalp your damned thick skull (the said Sir Richard's head meaning)"; and other equally "scandalous, opprobrious, and malicious words," which even then seem to have been considered as hardly compatible with the dignity of an ex-governor. He was nevertheless reappointed when the province passed to the Crown, for his family, it is supposed, was in favor at Court. As royal Governor his conduct was so outrageous that he thought it prudent to leave the province, and he was murdered not long after, in a drunken brawl in London. Gabriel Johnston, who was appointed in 1734 as Governor of North Carolina, remained in office for the next twenty years.

North Carolina governors.

Johnson re-apppointed Governor of South Carolina.

It was a singular testimony to the estimation in which Robert Johnson was held, both in England and in South Carolina, that the Governor whom revolution had deposed should be sent back with a royal commission, and that his return should be welcomed with universal satisfaction. That welcome, when he arrived in Charleston, in December, 1730, was the warmer that he

Johnson's Return.

brought with him six Cherokee chiefs returning from England. So important was the friendship of that powerful nation held to be by the government, that almost its first act after the purchase of the colony was to send an embassy, under Sir Alexander Cumming, to

these Indians. Six of their chiefs he had taken back with him to England, a sight of the Tower of London and the King on his throne being thought then as certain to soothe the savage breast, and induce the warrior to turn his tomahawk into a reaping-hook, as it is now believed these pleasant consequences come from a sight of the Capitol at Washington and of a President in the White House. These fallacious hopes were not, indeed, of long duration. Beyond the Cherokee and Choctaw countries were the French on the Gulf and the Mississippi; and whether in trade or in war, the Indians knew too well how important their position was between the rival powers. There were, however, more immediate dangers requiring the presence of a governor in South Carolina. Johnson's report, a few months after entering upon the duties of his office, was that no taxes had been collected, and not a court of justice had been held in the province for four years, — not, in other words, since Nicholson's departure.[1] To restore harmony and order where discord and anarchy reigned was the work to which he addressed himself, with a large measure of success, for the four remaining years of his life.

But it was no easy task. In no other colony was there so mixed a population, including English, French, Scotch, Irish, and Spanish, unused for years to much restraint from either law or gospel, and too ignorant to be safely left to be a law to themselves. There were from six to seven thousand of these white people, and in addition to them about twenty-two thousand African slaves. This heterogeneous population lived, for the most part, upon isolated plantations of large tracts of land; here the labor of the slaves was chiefly devoted to the production of a single staple, rice, though to this the cultivation of indigo was soon added. The laboring whites were indented servants, and, with labor degraded and cheapened by slavery, their condition was quite hopeless. To their servitude there came in time an end, but the degradation of their class has been perpetuated in the "poor whites," who are even yet a distinctive feature in the society of South Carolina and Georgia. The colony, moreover, was overwhelmed with debt, and the repeated issue of bills of credit had borne its legitimate fruit in the depreciation of the value of currency. That value was necessarily brought to the test of exchange on England, and it required about this period seven hundred and fifty pounds of South Carolina currency to buy a bill on London for one hundred pounds.[2] It had been the policy of the Proprietors to escape the burden of a great public debt by limiting the issue of these bills of credit; the people, on the other hand, both to provide a

Condition of the province.

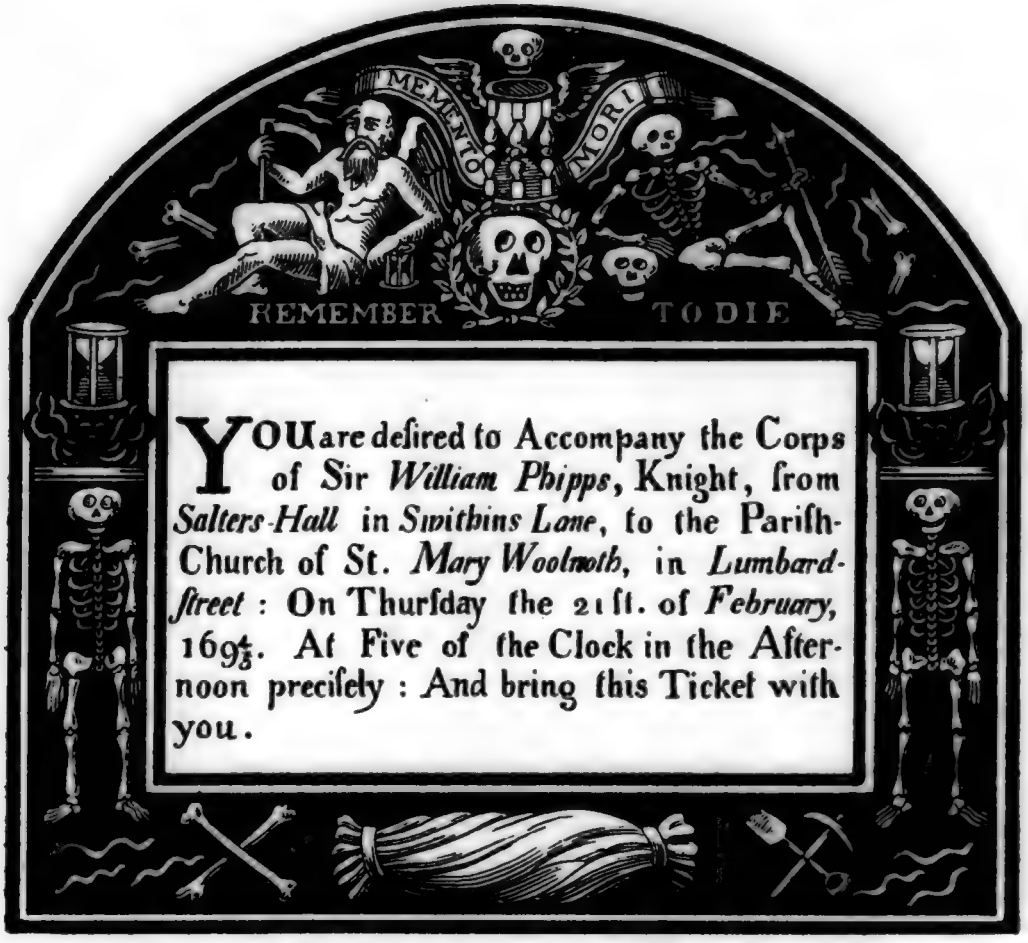
[2] The condition of the currrency in the several colonies in 1748, as measured by the rate

revenue for the support of government and to check the increase of slaves, had insisted that a heavy duty should be levied upon their importation. Unhappily, in the struggle of parties both measures were nullified, either of which would have been a blessing to the commonwealth.



The establishment of the royal government under Johnson, however, gave a new impulse to the energies of the colonists, and fresh interest was aroused in England in the domain south of Carolina, the only region along the Atlantic coast now unoccupied by Europeans. The Governor was ordered to lay out eleven new townships on the banks of several rivers, to be divided into small farms as an inducement to the emigration of poor but industrious persons. The project was defeated, at least in the southern part of the province, by the prëoccupation of the lands in large tracts by planters, who found an abundant supply of labor in the increasing importation of slaves. But this southward movement of the Carolinians was soon checked by a project to plant a new colony on the further side of the Savannah River.

of exchange on London, is tabulated in Douglass's *Summary, Historical and Political, etc., of the British Settlements in North America,* as follows: —

CHAPTER V.

THE ROYAL GOVERNORS IN NEW ENGLAND.

MASSACHUSETTS A ROYAL PROVINCE. — THE TROUBLES OF RHODE ISLAND. — ARBITRARY INTERFERENCE OF LORD BELLOMONT. — ADMINISTRATION OF DUDLEY. — INDIAN HOSTILITIES. — ATTACKS ON DEERFIELD AND OTHER PLACES. — WAR IN MAINE. — CAPTURE OF PORT ROYAL. — MASSACHUSETTS EARLY IN THE EIGHTEENTH CENTURY. — INOCULATION FOR SMALL-POX. — GOVERNOR SHUTE IN MASSACHUSETTS AND NEW HAMPSHIRE. — THE ROYAL PREROGATIVE IN FORESTS. — FINANCIAL POLICY OF THE COLONIES. — BENJAMIN FRANKLIN AND THE "NEW ENGLAND COURANT." — SETTLEMENTS IN NEW HAMPSHIRE AND MAINE.

THE charter which was brought back by Sir Williams Phips converted Massachusetts into a royal province. The first Parliament which assembled in the reign of William, manifested a willingness to pass a bill restoring to the colony its original charter, but this intention was defeated by the Court. The partial discontent which met Phips in the colony when he returned as

Massachusetts a Royal Province.

Governor under the new charter was considerably increased by the hostility of persons who had been connected with the witchcraft trials. When he died at London, it became necessary to select another royal Governor. The appointment was neglected, however, in the more imperative necessities of the new reign; for three years the unpopular Stoughton acted as Governor, and party feeling became much embittered. A fresh distraction came in the renewed attacks of the Indians upon frontier towns, stimulated by the French, with whom England was at war.

New Indian hostilities. — Hannah Dustin of Haverhill.

New Hampshire and the Province of Maine suffered this time more severely than Massachusetts. An attack upon Haverhill was memorable for the subsequent exploit of Hannah Dustin, who, with an infant only a few days old, a boy named Samuel Leonardson, and another woman, was carried off to an Indian camp on an island in the Merrimack, near Concord, N. H. The

Hannah Dustin's escape.

infant, as usual, was killed against the trunk of a tree. The sight of this prepared the mother's heart for her bloody reprisal. One day when the boy was at work chopping for the Indians, he casually asked one of the savages how and where he struck a man with a hatchet. The Indian, pleased to show that bit of sylvan skill, told him. That night the three captives with hatchets slew the ten sleeping guards, and Hannah, remembering her infant, scalped them. Then they dropped down the river in a canoe to Haverhill.

Joseph Dudley, the Puritan courtier of the King, had been sent with Andros to England, where the King released him. To appease somewhat his hunger for official station, he was appointed Chief Justice of New York. Tiring of this contracted sphere, he returned to England and was made Lieutenant-governor of the Isle of Wight. In the mean time Lord Bellomont had been appointed Governor of New York, Massachusetts, and New Hampshire. There was nothing in the brief period of the Earl's administration of fourteen months to mar the cordiality with which he was welcomed in Boston, in 1699. His High-Church principles were overlooked in the deference he paid to the Congregationalism of New England; but the General Court abated nothing, notwithstanding the esteem in which he was held, of their jealous care for their chartered rights. They refused to vote him a fixed salary, while they made the liberal appropriation of nearly ten thousand dollars in little more than a year for his use.

Lord Bellomont, Governor.

Rhode Island, however, was less fortunate during his administration than those colonies of which he was the actual Governor. He was only the commander-in-chief of her militia; but he evidently did not forget that she also would have been under his rule had the discussion upon making him Governor-general of all the northern colonies, which so long delayed his coming, been decided the other way. The unfortunate condition of Rhode Island gave him the opportunity for the exercise of an authority over that colony which his military commission did not warrant; his zeal for the suppression of privateering and piracy and the enforcement of the Navigation Laws, supplied a motive.

Affairs in Rhode Island.

Circumstances, quite as much as choice, had made Rhode Island a maritime community. Her undisputed possessions were nearly limited to the island within the waters of Narragansett Bay, for on the mainland she was met by rival claimants on all sides. The harbor of Newport was more open to the sea than either that of New York or Boston. And it was never closed. When the tortuous channel and shallow flats of Boston harbor were covered with miles of solid ice, and the bay of New York was a firm roadway from Fort George to Staten Island, the mighty current of the Gulf Stream, sweeping in upon the Narragansett coast, tempered the cold currents from the north with the warm waters of a southern climate. This advantage of situation, when commerce was chiefly carried on in small coast-wise vessels, made Newport always an easy port of refuge, while from its central position it was a convenient point of trade. Lawful privateers in time of war could find nowhere else a place where they could so easily refit, where they could so easily run in

Her maritime advantages.

with their prizes or land their plunder; and when peace turned privateers into pirates, courts of admiralty were not always mindful of nice inquiries as to manifests and bills of lading, even if the legal existence of the court itself was beyond question.

The interests of the people were marine, and that made them sailors. Block Island, now only known as a pleasant resort for summer visitors, was toward the end of the seventeenth century famous as a rendezvous for sea-rovers, who put in there to recruit, or hovered off shore to intercept some ship, worth taking, bound in or out. And more than once, during those years, when a Frenchman was seen in the offing, a well-manned ship hurried out of Newport harbor in pursuit, and, after a gallant fight, sailed back again with a prize in tow.

So for many years, in the uncertainty of her territorial domain, Newport, with the tribute which Newport drew from the sea, was the chief reliance on which Rhode Island depended for prosperity and wealth. Massachusetts had never forgiven her for presuming to exist at all, and the boundary between the two colonies was a source of perpetual conflict till the middle of the eighteenth century. A similar controversy existed with Plymouth, and this lost none of its acrimony when that colony became a part of Massachusetts during the administration of Sir William Phips.

Rhode Island boundary questions.

But the question of the western boundary was still more serious, for it involved all that portion of the present State of Rhode Island which lies between Narragansett Bay and Pawcatuck River, and south of the latitude of Warwick. This came to be known as the King's Province because of that solemn act of submission of the Narragansett chiefs to the King which Gorton and Holden took to England in 1644.[1] The territory was claimed both by Connecticut and Rhode Island as covered by their respective patents. And in fact it had been granted to both, though the grant to Connecticut was a blunder.

It was one of the frequent blunders of that early period arising partly from geographical ignorance, partly from carelessness in the administration of colonial affairs. The patents secured by John Winthrop for Connecticut in 1662, made the Narragansett River the eastern boundary of the colony.[2] John Clarke of Rhode Island was then in England soliciting a charter for his people, and he exposed the wrong that would be done them by this encroachment upon territory which they claimed as theirs under the older patent. So obviously just was his protest that Winthrop was finally convinced of it, and when Clarke, the next year, sent home the Rhode Island charter granted by Charles II. — Winthrop acceding

Conflict of Connecticut and Rhode Island charters.

[2] Vol. ii., p. 254.

to it as the Connecticut agent — it made the Pawcatuck River the western boundary of Rhode Island, expressly reciting that "the sayd Pawcatuck river shall bee alsoe called alias Narragansett river; and to prevent other disputes, that otherwise might arise thereby, forever hereafter shall be construed, deemed and taken to bee the Narraganset river in our late graunt to Connecticut Colony mentioned as the easterly bounds of that Collony."

Nothing could be plainer; the Pawcatuck had been mistaken for the Narragansett, and the Rhode Island charter corrected and limited

Mouth of the Pawcatuck.

that given the year before to Connecticut. Connecticut, nevertheless, refused to abide by that limitation, and continued, for many years, to maintain her title to the King's Province as part of her territory, and at the later period claimed as far north as Providence. Winthrop, she declared, had ceased to be her agent and had no right to acquiesce in such a compromise. But it was the King who had granted the patent, not Winthrop. Rhode Island accused her neighbor of securing a charter by "underhand" measures; Winthrop exonerated himself by acknowledging that a wrong had been done; if those he represented had not committed a fraud, they proposed, at any rate, to take advantage of a blunder — which supreme authority had attempted to correct.

Nor was this the only territorial complication which embarrassed and impoverished the Rhode Islanders. A company, called the Atherton Company, — from that Humphrey Atherton who was one of

the Massachusetts commissioners sent to break up the Gorton settlement at Shawomet in 1643[1] — had purchased large tracts in the Narragansett country on the Bay about "Smith's trading house," now Wickford, from the Indians. Another company had taken possession of lands, under authority from Massachusetts, — who claimed them by right of conquest of the Pequot country, — on

The Atherton Company.

Wickford, R. I.

both sides of the Pawcatuck River at its mouth. The township laid out by them was called Southertown, now Stonington. Its eastern division on the east side of the Pawcatuck was within the limits of the Rhode Island patent, and some Newport men settled upon it and called it Westerly. Thenceforth raged a feud, always bitter and sometimes bloody, between the two settlements.

Settlement of Southertown and Westerly.

It is an interesting fact, worthy of passing notice, that in that part of this old town of Westerly, now called Charlestown, reside all that are left, in New England, of the tribe of Narragansett Indians, though there is not among them one of pure Narragansett blood. In numbers they are about one hundred and twenty persons. In condition they are reduced to dependence upon the State, which provides for their wants when the fruits of their own toil, as common laborers and as basket-makers, are not sufficient for their subsistence. The land they live upon is reserved for their special occu-

Indian Reservation in Charlestown.

[1] See vol. ii., pp. 79 *et seq.*

pation; and when portions are conveyed to individuals for their sole use, as is sometimes done, the title passes by the ancient ceremony of presenting to the new owner a bit of turf and a twig from the land. The tribal government is still preserved, their local affairs being managed — subject to the Legislature of the State — by a council chosen yearly from among themselves.[1] A republic has displaced the line of kings, the royal dynasty ceasing, probably about a century ago, with King Tom — a rather disreputable monarch and much given to drink — and his Queen, Esther. The burial-place of the royal family is on a hill, within the reservation, where the pensive Indian may recall — if he remembers them — the traditions of his race as he looks out over many miles of lovely landscape, once happy Indian hunting-grounds; over, as far as Montauk point, the blue waters of the Bay, whose surface, not many generations ago, was never disturbed save by the swift canoes of savage fishermen and warriors. On the horizon, seaward, rises the rocky coast of Block Island where Endicott landed, in spite of wind and waves, to punish the natives and to destroy their corn, their wigwams, and their boats; near by, inland, within the reservation of the tribe, rises Fort Neck, where Mason passed the night and held counsel with the famous Narragansett chiefs, Canonicus and Miantonomo, on his way to the destruction of the Pequot Fort and tribe. It is historic ground. Does the half-breed pauper, standing upon the graves of the kings of his race, ponder upon departed glories? Do no old savage instincts stir his blood as he turns from the sight of his home of civilized penury to look upon thriving villages and mills and farms; upon the sea dotted with the glistening sails of commerce; upon the smoky pennants streaming across the sky from passing steamers? No scalps now hang in his wigwam; no squaw pounds his corn; no deer bounds through the forest to fall by his swift arrows; no enemy lurks in its recesses to be followed with stealthy tread and brought to sudden death. The wigwam of fragrant boughs, gay with many-colored deer-skins, is a board shanty: the squaw, once picturesque in scanty garment and untrammeled limbs, a plaything and a slave, is a hard-worked woman weaving wicker baskets; in the woods and swamps the son of the warrior and the hunter cuts cedar posts[2] and fire-wood. There are only the graves on the quiet hill-side to remind him of the past. But that one spot, at least, is sacred; no common dust is permitted to mingle there with the dust of kings, and even tradition fails to preserve the memory of the last burial. The blood of this royal race

The last of the Royal Narragansetts.

flows now only through the veins of one living person — Esther, an old woman in Westerly, living apart from her people, the only representative of the ancient Narragansett chiefs, and though not quite of the pure blood, the purest living of the Narragansett tribe.

Esther, the last of the Royal Narragansetts.

But — to resume the history of the boundary question — "underhanded" certainly were the measures sometimes resorted to, that Rhode Island might be deprived of territory which was justly hers, and her colonial power be limited to the narrowest bounds. The animosities engendered in those earlier times when Massachusetts banished Williams, ravaged Shawomet, and carried Gorton and his companions triumphantly to Boston, imprisoned Clarke and punished Holmes with many stripes, for the manifold heresies intolerable to the Puritans, — those bitter memories had, no doubt, much to do with this later hostility to the struggling little colony. That questionable Narragansett patent of 1643,[1] whereby Massachusetts might have set up a claim to all Rhode Island, was sometimes, though cautiously, appealed to as an argument in defence of the Atherton purchase.

The Atherton Company was composed of some of the most influential men of Massachusetts and Connecticut; but its affairs were chiefly managed by that Edward Hutchinson who was among the earliest settlers of Rhode Island, but afterward returned to Massachusetts and was restored to favor. Perhaps he bore no good will to the early associates whom he abandoned; at any rate, he seems to have been more considerate of the interests of his Company than scrupulous of the rights of the colony, of a portion of whose domain the Company proposed to take possession.

Hutchinson found a facile tool in that Captain John Scott who was soon afterward conspicuous in the affairs of New Netherland just before its surrender to the English Commissioners,[2] and of whom Governor Nicolls said two years later — when the Duke of York conveyed New Jersey to Berkeley and

Captain John Scott as agent for the Company in England

[1] See vol. ii., pp. 100 *et seq.*

[2] See vol. ii., pp. 257 *et seq.*

Carteret — "I must charge it upon Captain Scott, who was born to work mischief as far as he is credited, or his parts serve him."

Captain Scott was in England acting as Hutchinson's agent, when Winthrop and Clarke were soliciting charters for their respective governments. That to Connecticut was granted in April, 1662; that to Rhode Island in July of the following year, after the points of difference between these agents had been discussed and an attempt at settlement made by a board of referees. One of the points pronounced upon by that board was, that the Narragansett people — the company was now called the Narragansett Company, Major Atherton having been killed by a fall from his horse the year before — should choose for themselves to which of the two governments they would be attached.

If the eastern boundary of Connecticut was to remain as provided by its blundering charter, — on Narragansett Bay, — this proposed compromise was unnecessary, for the Narragansett people were, in that case, already under the jurisdiction they preferred. But the transfer of that boundary to Pawcatuck River — "*alias* Narraganset," — would leave these people, where they did not wish to be, within the bounds of Rhode Island. Connecticut accepted their offered submission, while she rejected the new boundary of the Rhode Island charter on the ground that her agent had no longer power to act; accepted, that is, as much of the compromise as suited her; Rhode Island declined to surrender to another government jurisdiction in the very heart of that country which the new charter decided to be hers. The terms of this charter unquestionably were the only legal and proper basis of settlement, and those most interested knew it.

About three weeks after the meeting in London of the referees who thought they had settled this vexed and troublesome question, Captain Scott wrote a letter to Mr. Hutchinson, for the first time published a few years since by Mr. Arnold in his admirable history of Rhode Island.[1] Mr. Winthrop, he writes, was "very averse to my prosecuting your affairs, he having had much trouble with Mr. Clarke, whiles he remained in England." Perhaps he meant that Winthrop, having already brought the affair to a satisfactory conclusion, was impatient of any interference; and certainly, if he was at all aware of Scott's proposed method of interference, he, as an honorable man, might well be "very averse" to any such companionship. For so soon as Scott was assured that Winthrop had fairly left England, he took, he says, "into the Societye a Potent Gentleman," sent in a petition against Clarke and his associates of Rhode Island, and did not doubt "of effecting the premises in convenient tyme."

Captain Scott's management.

[1] Arnold's *History of Rhode Island*, vol. i., chap. ix., appendix.

And his method "in order to accomplish the business" was this: "I have bought" he wrote, "of Mr. Edwards a parcel of curiosityes to the value of £60, to gratifye persons that are powerfull, that there may be a Letter filled with Authorizing Expressions to the Collonyes of the Massachusetts and Connecticut," who should thereby "joyntlye or severallye have full power to doe us Justice to all intents as to our Naraganset concernes." The "potent gentleman" made good use of the sixty pounds' worth of curiosities to be given to powerful persons, and in return came a royal letter addressed to the United Colonies of New England, commending the Narragansett people to their kindness and protection.[1] The letter thus procured, and signed by the King probably in ignorance and indifference alike of the fresh difficulties in which it might involve his subjects in Rhode Island, was granted only seventeen days before the new charter was issued to her. That charter was dated the 8th of July; the agreement in regard to it between Winthrop and Clarke was concluded on the 7th of April; "I cannot deeme," wrote Scott to Hutchinson, "those termes Mr. Winthrop made with Clarke any way to answere your desires, were there a certaintye in what Clarke hath granted." Here was the motive for procuring the mandate of the King to the United Colonies — Rhode

A letter from the King in favor of the Narragansett Company.

Map of Rhode Island, showing the disputed Boundaries.

[1] In the letter of the King, as published in the *Collections of the Rhode Island Historical Society*, vol. iii., the name of this "potent gentleman" is given as Thomas Chissick. In the discussion on the Narragansett Patent before the Massachusetts Historical Society (*Proceedings*, June, 1862), Colonel Aspinwall says he was Thomas Chiffinch, "the Court pimp; the willing abettor of every vile Court intrigue; the man who to furnish assurance of the royal sanction, contrived the interviews between Charles II. and Dangerfield, the assassin from Newgate, hired to murder the discarded Premier Shaftesbury; and who afterwards stealthily admitted the Catholic confessor to the dying monarch."

Island, it will be remembered, was excluded from that Union — for the protection of the Narragansett Company; and it was necessary to bribe some persons about the King to secure his signature to a letter in direct collision with the Rhode Island charter, decided upon a few days before, and signed a few days afterward. Thus harassed on all sides — at Southertown, by the Narragansett Company, and along the boundary lines of Massachusetts, Plymouth, and Connecticut — for years the colony could assert no authority, nor collect a dollar of revenue, without dispute or resistance, anywhere beyond her little island.

Implicit obedience to imperial authority was by no means a colonial habit, and it did not in the least avail Rhode Island that in the course of successive years that authority was exercised on its behalf. Two of the royal commissioners, Carr and Maverick, decided in its favor, and declared the Atherton purchase of the Indians null and void; Andros was equally positive as to the justice of the cause of Rhode Island, although he suspended her charter; in 1694 the Board of Trade in London, by advice of the Attorney General, sustained all the claims which the province insisted upon under that charter which at the fall of Andros had again become its constitution of government; and the same Board decided against the claim of the heirs of the Duke of Hamilton to the Narragansett country, notwithstanding it took precedence of all others, as it was founded upon a purchase made of the old Plymouth Company early in the century.

Decisions of the boundary questions in Rhode Island.

But all this availed nothing; there were conflicting decisions enough, meant to be authoritative, to keep the question an open quarrel; and it was not till 1703 that Connecticut consented to accept the Pawcatuck as her eastern boundary, and not till nearly half a century later that Massachusetts would agree to any compromise whatever.

These protracted disputes were a source of perpetual anxiety to the colony, hindering her growth as well as interfering with her freedom of action. It was an encroachment upon her rights under the charter to give to Phips, and to Stoughton of Massachusetts, and to Fletcher of New York, the command of her militia. The case was still worse when the same power was given to Bellomont, who was Governor of two other colonies, and Captain-general also of the forces of Connecticut and the Jerseys. He was the representative of the party who believed it to be for the interest of the Crown that all the northern colonies should be united as a single province, and his conduct was not likely to be questioned if he went beyond the letter of his commission. Should he see fit to exceed his legitimate powers by interfering with civil affairs in Rhode Island, she had small capacity of resistance.

Bellomont's course towards Rhode Island.

He did interfere, to her great alarm and injury, by upholding the pretensions of her opponents. To carry out his purpose in the suppression of piracy and privateering, and the enforcement of the Navigation Laws, he needed more power over Rhode Island than his military commission gave him. This question of boundaries was a weapon he did not hesitate to use. When she declined or neglected to obey his military requisitions, whether because she could not, or because she would not, he forbade her to levy taxes or exercise any other authority within the disputed territories. Though received at Newport with cordiality and such hospitality as the people could command, his attitude was hostile, and his judgment severe. In a letter to England he declared her government to be "the most irregular and illegal in their administration that ever any English government was." Her worthy chief magistrate, Samuel Cranston, he denounced as "conniving at pirates, and making Rhode Island their sanctuary."

It was not that the little colony was so much worse than her neighbors, but that being driven to the sea for a subsistence, she made the most of it. That one is a good sailor is not, indeed, a good reason for being privateersman or pirate; but surely that favorite argument so often urged on behalf of the Puritan — that he was not the less a most estimable man and exemplary Christian when hanging Quakers, or drowning witches, or whipping Anabaptists, because such was the fashion of his time — may palliate those evil-doings of the Rhode Islanders. Of New York, Bellomont said: "The people have such an appetite for piracy and unlawful trade that they are ready to rebel as often as the government puts the law in execution against them." The Governor may have thought that because of the weakness and friendlessness of Rhode Island she, at least, might be easily brought to obedience and good behavior. His accusations, at any rate, were unsparing, and were met with difficulty by her agent in England; and had the Earl lived long enough to push them to a conclusion, Rhode Island might have been compelled to answer to a *quo warranto*, and have lost her charter.

Administration and death of Stoughton. — Dudley again active.

After the death of Bellomont, Stoughton again became acting Governor, but he too died in four months and left an opportunity for Dudley which he was not slow to seize. Cotton Mather warmly espoused the cause of a man who in England cultivated piety and Puritanism so sedulously as to win the Congregational heart. Dudley's active party was chiefly in England; Massachusetts had not forgotten his subservience to Andros, and his complicity in the composition of the new charter. His intrigue was so skilful and persevering that the King was prevailed upon to appoint him Governor of Massachusetts and New Hampshire.

This happened just before William's death. The appointment was confirmed by Queen Anne, and Dudley came to Boston, satisfied at reaching the point of an ambition which was inspired partly by patriotic and partly by personal considerations.

The first token of his unpopularity appeared when, according to instructions from the Court, he demanded that the province should vote permanent salaries to the Governor, his deputy, and the Crown judges. Massachusetts refused, insisting upon its custom of annual grants, and the General Court voted Dudley about one half of the sum which was paid to Bellomont. His governorship.

In May, 1695, a Board of Trade had been organized in London, for the regulation of colonial commerce. Its function lasted until the American Revolution, and being inspired chiefly by private interests, it was a constant source of vexatious interference. The old laws of trade were revived, and Randolph was sent out as Surveyor-general.

Governor Dudley.

Dudley, besides favoring the Board of Trade, undertook to carry into effect the most unpopular article of the new charter, that, namely, which clothed the governor with authority to reject the nominations of the General Court, or Assembly, for members of his council. He also, without a shadow of authority, endeavored to put creatures of his own into the Speaker's seat. He even went so far as to express hostility to all charters. His son wrote to England: "this country will never be worth living in for lawyers and gentlemen till the charter is taken away. My father and I sometimes talk of the Queen's establishing a court of chancery here." A strong party, headed by Cotton Mather, who was not so influential with Dudley as he expected to be, and including the leading clergymen of the province, was formed, and made persistent but unavailing attempts to oust Dudley from office. But he skilfully created a party of his own, and kept it in active cohesion by catering to the interests of its members. Au-

thorities accuse him of conniving at the illicit trade of his party during the war with France, and he was suspected of sharing in its profits; for Dudley was a lover of money for the sake of the power which it could buy.

The Peace of Ryswick, which was transmitted to the colonies in October, 1697, put an end for a time to French and Indian hostilities.

Queen Anne's War.

But when, in 1702, after the death of William, Louis XIV. determined to espouse the cause of James's son, the Pretender, England declared war. Indian atrocities of a frightful kind, directed and stimulated by the French, were wreaked upon Massachusetts and New Hampshire. De Rouville, with three hundred French and Indians, came down from Canada by the Connecticut valley to surprise Deerfield. That village, con-

Massacre at Deerfield.

Williams House, Deerfield, Mass

taining about two hundred inhabitants, suspected an attack and was vigilant. But one morning in February, 1704, the savages, hiding in the woods till the sentries retired at daylight, surprised the half-awakened people. Fifty persons were killed, and a hundred prisoners, including women and children, were taken and carried off to Canada. It was the policy of the Jesuits to get hold of as many children as possible, in order to rear them in the principles of Romanism. Many of

them thus became Catholics, and some of the women, married to Indians, began the race of half-breeds which, together with the unions of Frenchmen and Indian women, filled Canada and the Northwest with able guides and trappers.

Among the Deerfield captives were the minister, Williams, his wife, and five young children. The youngest had been only a few days born; and while the poor mother, finding that she was too weak to travel through the snow, knelt down in prayer, an Indian tomahawked her. Some twenty years after, a woman in an Indian dress walked into Deerfield. The people did not recognize a daughter of Williams, who had married an Indian in Canada and refused to desert her children. The minister ordered a public fasting and prayer that her resolution might be changed; but the new ties were more religiously observed than the old ones, and she returned. Indeed, many children made captives in this manner, who afterwards came back to the settlements, could not submit to the restraints of civilized life, and declared that the Indian way was the best.

In the course of the year Lancaster met a similar fate. The war, with the French element of subtle intelligence to guide, was even more barbarous than Philip's. The colonists, in scattered parties, sought to defend a long frontier against an enemy who knew how to avoid striking till the stroke promised to be fatal. At Lancaster.

The French, claiming the whole coast of Maine as far as the Kennebec, had established, not long before, a trading and missionary post among the Norridgewock Indians on the upper waters of that river. The Indians, ever the warm allies of the French, were ready always to oppose any settlement of the English east of the Kennebec, while the French men-of-war seized every English fisherman who was found in Acadian waters. The province was equally stimulated by hostility to the French and dread of the Indians, and Dudley recognized the importance of protecting the frontier against both. He went to Casco and induced the representatives of various Eastern tribes, including the Norridgewocks, to meet him in council. French advisers had carefully instructed the chiefs to assume a spirit of neutrality. The Governor was presented with the customary belt of wampum and assured that an intention to go to war was as distant from their minds as the sun was above the earth. Then two cairns of stones were piled up, both parties assisting, in token of amity and fraternity. All this time a plot existed among them to seize the Governor and his suite and turn them over to the French; and it was only frustrated by the failure of a French party to arrive in time.

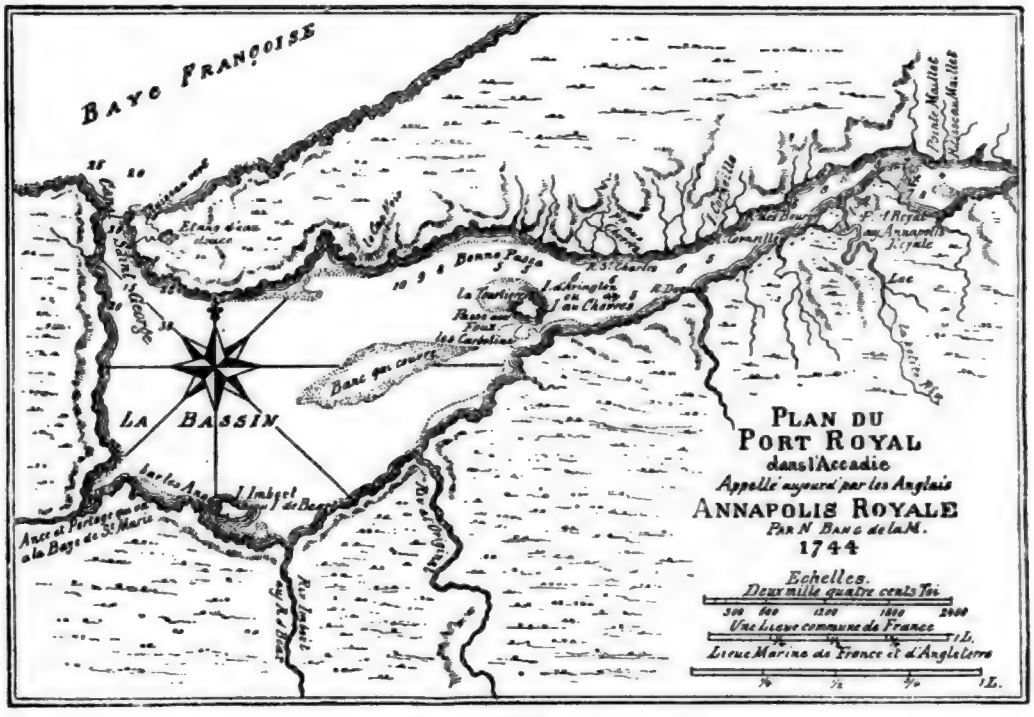
In less than six weeks after this scene of pretended sincerity, attacks were made upon the settlements between the Kennebec and the

Piscataqua, and the whole region was filled with terror. Families took refuge in garrison houses, and no work in the fields could be done without armed protection. Detachments of troops were sent out to intercept the savages, but they were not to be found. Winter expeditions, undertaken upon snow-shoes, were no more successful.

Hostilities in the Northeast.

Colonel Church was sent, in 1704, from Massachusetts with over five hundred men to succor these harassed settlements on the eastern frontier. He destroyed some villages, and met and killed some of the enemy, both French and Indian, on the Penobscot, but with no important result. In the winter an attack was made by New Hampshire men upon Norridgewock, and the wigwams and French chapel were burned. These reprisals only exasperated the savages. They struck back with terrible and cruel blows wherever they found the English off their guard. That year and the next, Haverhill, York, Exeter, Dover, Sudbury, Groton, and other places in Maine, New Hampshire, and Massachusetts, were fallen upon and some of them destroyed. The savage enemy was so successful in attacking where there was no chance of defence, or, where defence was made, in eluding pursuit, that it was computed each Indian slain cost the provinces a thousand pounds.[1] Scalps were at a premium. Massachusetts offered fifteen pounds for the hair of any male Indian who was over twelve years of age; eight pounds was offered also for each child or woman captured.[2] The French also attempted to stimulate their Indian allies by offering a scale of bounties for English scalps; but the savages generally preferred to take prisoners and transport them to Canada, partly inclined to this by the Jesuit priests, who desired to make converts of Protestants, and partly by the pleasure which they felt in finding that a good many youthful captives were disposed to adopt their mode of life and to intermarry with their own young women. Thus the years of Queen Anne's War, glorious to England in the great campaigns of Marlborough and Peterborough, the splendid victories of Blenheim, of Barcelona, of Ramillies, of Oudenarde, were to the colonies years of inglorious Indian warfare and savage onslaughts upon the peaceful homes of women and children, — inglorious, but often heroic in brave deeds and braver endurance of torture and bereavement.

Through all, the colonial authorities held steadily to the purpose of the conquest of Canada and the expulsion of the French from their



[1] Penhallow's *Indian Wars*.

[2] This scale of bounties for scalps advanced so rapidly that when Lovewell's volunteers took the war-path in 1724, a man's scalp was worth one hundred pounds, and one of a child or woman brought fifty pounds to persons in the public service, and the double of each sum to volunteers.

northern borders. In 1707, Dudley sent a force of a thousand men, under Colonel March, raised in New Hampshire, Massachusetts, and Rhode Island, to reduce Port Royal. In two campaigns, extending through the winter into the following spring, the thousand men were reduced to less than two hundred, chiefly by hardship and disease, and the fort was not taken. Nicholson's first campaign from New York, though not so disastrous, was quite as unsuccessful; but neither these nor other misfortunes, the uncertainty of the friendship of the Five Nations, the certainty of the hostility of all the Eastern savages, abated the courage or determination of the colonies.

Expeditions against Port Royal.

In 1710, however, the place was taken by the aid which Schuyler and Nicholson had induced the ministry to give to the war in America. In September, a fleet of six ships of war and about thirty

Plan of Port Royal, Nova Scotia.

transports, carrying five regiments of troops, sailed from Boston harbor. Five of the war vessels belonged to the English navy, the sixth, a galley, to Massachusetts. Two of the five regiments were New England men; the fifth was a regiment of English marines. General Nicholson of New York was the commander-in-chief. Sir Charles Hobby and Colonel Tailer of Massachusetts, Colonel Whiting of Connecticut, and Colonel Walton of New Hampshire, led the troops of their respective colonies.

Port Royal — named afterward Annapolis Royal in honor of the

Queen — was still under the command of Subercase, who had so successfully repulsed March and Wainright, two or three years before. With less than three hundred men, he could make little defence against the formidable force which now approached. The people outside the fort opposed the landing of the English troops, and killed a few of them; but Subercase yielded when summoned to surrender. One transport was wrecked on entering the harbor, and twenty-six men were lost; fourteen or fifteen were killed in the advance to the fort; but at this cost of only forty lives Nova Scotia became an English province, for the capture of Port Royal was virtually the conquest of all that portion of New France. The proposed invasion of Canada by land and sea at the same time, under Hill and Nicholson, which failed so signally the next year, prevented — as we have shown in a previous chapter — the sending of any aid to Castin, and the treaty of Utrecht gave to England the province which the New England troops had conquered.

Its surrender.

With the accession of George I., August 1, 1714, to the throne, the doctrine of passive obedience which the Tories maintained against the Whigs was understood to have been defeated. At the same time the friends of Governor Dudley, who were principally Tories, lost their influence, and it was easy for his enemies to procure his removal. For twelve years he had, for the most part, misgoverned Massachusetts, planting in the soil seeds of enmities which grew to have a protracted life. Cotton Mather, who expected to make of him a supple instrument, was foiled by his own weapons in the hands of an adroiter man; he became, therefore, an implacable foe, and carried great numbers of the clergy with him. They sympathized with the accession of Whiggery to power, because it was understood, though mistakenly, to be more favorable to provincial principles. Their friends at court were strong enough to procure the removal of Dudley, when the Massachusetts Assembly declared, soon after the death of the Queen, that the office of governor was vacant.

Dudley removed.

In New Hampshire Dudley was less unpopular than in Massachusetts, for he espoused the cause of the actual settlers upon the land against the Mason claim. This was still the paramount question to the people of that province, and anxious to win over to their side the influence of the Crown, they voted the permanent salaries which Dudley was instructed to exact, but which Massachusetts refused to grant. When, therefore, the Crown allowed Allen, the representative of the Mason claim, to take possession of all common and unenclosed land, and he summoned Dudley to appear at the trial on writs of ejectment to sustain the royal instructions, the Governor managed on various pretexts to delay his journey and not to

New Hampshire Affairs.

reach Portsmouth at all. So it was easy for him on several occasions to persuade that province to send addresses on his behalf to the Queen. One of these was sent to George I., in 1715, earnestly praying for Dudley's continuance in office.

Massachusetts then contained about 94,000 inhabitants, and of these 2,000 were Negro slaves, and 1,200 civilized Indians. The population of Boston was probably about 10,000. As early as 1690, Indians were employed as field-hands at one shilling a day and their board. The Negroes were chiefly house-servants in the larger towns. The price of a slave in provincial currency was equivalent to about $80 of our money. If the slaves ran away, which occurred but seldom, for their servitude was not severe, Indians were employed for their recapture. The labor of white workmen was worth two shillings a day.[1]

Population and condition of Massachusetts in 1715.

The province owned at that period 190 vessels of various kinds and of 8,000 tons in all, sailed by 1,100 men. There were employed in the fisheries 150 smacks, with crews in all of 600 men. A few manufactories of hats and cloths existed, which were a perpetual source of jealousy to England, whose exports in English products to all American ports were valued at £1,000,000 sterling. Exports from all American plantations were valued at £800,000. During a period of great commercial activity, from 1714 to 1717, Boston cleared for the West Indies alone 518 vessels, and for all the ports of her trade 1,247 vessels; and 232 vessels were cleared at Salem.[2] The colonial policy of self-protection was in continual struggle with the English policy of restriction which affected everything, iron-work, hats, woolens, and linen.

The scourge of this colony was small-pox. Four times it had been epidemic in Boston at different periods, and it appeared again in the spring of 1721. Nearly six thousand persons, more than one half the population, were attacked, of whom nearly nine hundred died. Inoculation was introduced at this time in America by Dr. Zabdiel Boylston, and its efficacy was proved in the next serious visitation from this pestilence, thirty years later, when out of the 5,544 who took the disease the natural way, 514 died, while

Small-pox and inoculation.

[1] In England at that time the rates of wages were as follows: cook-maids and dairy-maids £2 10 a year; mowers of corn and grass 1 *s.* 2 *d.* a day without meat and drink, and only 6 *d.* with food; male haymakers 10 *d.* a day without food, 5 *d.* with; female haymakers 6 *d.*; rough masons, carpenters, ploughmen, bricklayers, plasterers, and tilers 1 *s.* 6 *d.* from Lady Day to Michaelmas, and 1 *s.* from Michaelmas to Lady Day. If they were fed they had only 8 *d.* a day all the year round. Gardeners and thatchers were paid at the same rate. Tailors earned 6 *d.* a day with food, 10 *d.* without; spinners earned only 4 *d.* daily without food. This schedule of wages lasted into the reign of George I.

[2] Barry's *History of Massachusetts*, Part ii., p. 107.

of the 2,113 who were inoculated only 31 died. The remedy was first used in England by Lady Mary Wortley Montagu, who had observed its effect at Adrianople, and had the courage to try it upon a child of her own. The medical faculty were bitterly opposed to it. The clergy preached against it from their pulpits and advised the people to hoot at her as an unnatural mother who had put the life of her child in peril. The four physicians who were appointed by the government to watch the experiment upon her daughter were so rancorously hostile, so maliciously incredulous, that she never left them alone with the child. As in old England, so in New; the hatred of innovation was stronger than the fear of the most loathsome of diseases and the strong probability of death.

Cotton Mather — who was somewhat of a lay practitioner of medicine — was warmly interested in this bold attempt to mitigate human suffering, and became, in consequence, so obnoxious that his house was assaulted and an attempt made upon his life. Increase Mather, his father, then a very old man, published a tract in favor of the remedy, in which he quoted the Negro slaves as averring that it had always been practised with success in Africa, whence, perhaps, the Turks had obtained their knowledge of it. About two hundred and fifty persons were safely inoculated by Dr. Boylston, — seven only dying — who began with his own children and servants. The brave man stood almost alone in his own profession; but among the clergy, though the opposition was general and bitter, the Mathers were supported by some of the more eminent of the brethren, — as the Rev. Drs. Colman of Boston, Walter of Roxbury, a son-in-law of Increase Mather, and Wise of Ipswich.[1]

Dudley's successor was nominally one Colonel Burgess, chiefly known and esteemed as a soldier. He valued his appointment, however, so little that he was easily persuaded to surrender his commission for £1,000, raised by subscription among friends of the provinces who doubted his fitness for the office of governor. It was given then to Samuel Shute, also a soldier; but till his arrival the duties of the office were discharged by Colonel Tailer, who had been made Lieutenant-governor in reward for his services in the capture of Port Royal.

Governorship of Samuel Shute.

Governor Shute was fated to discover that party spirit could rage as violently as an epidemic. Before he became involved in a controversy which arose from the depreciation of the currency, he got into trouble from a zeal like that of Dudley's to promote the prerogative of the Crown. In fact, much to the surprise and disappointment of the province, he was disposed to favor Dudley's old party. This first dispute turned upon the en-

[1] *Mass. Hist. Soc. Coll.*, passim.

forcement of the acts of Parliament on the right to the forests, and the exportation of naval stores from the colonies.

When the Earl of Bellomont came out as Governor, nearly twenty years before, his instructions upon this subject were very positive. It was believed that the colonies could be made to contribute largely to the support of the royal navy and relieve England from its dependence upon Norway for ship timber and other stores. But the supply was to be enforced by arbitrary and inconsiderate acts of Parliament, not as the result of a legitimate commerce. The Earl had faithfully devoted himself to the fulfillment of his instructions. He died before his plans were so matured as to influence his own popularity; but they were so definitely fixed, and were so confirmed by subsequent laws that his successors had only to enforce an established policy.

Disputes as to the export of timber.

The vast primeval forests along the Atlantic coast had become to the colonists a source of commerce with Spain and Portugal. This profitable trade was interdicted, that England might pick and choose the choicest timber for the wooden walls of the royal navy — "to be the mast of some great ammiral" — and in so doing little regard was paid to the rights of private owners. The assertion of a royal privilege first bred discontent, then violent resistance. It was not easy to prevent the shipping of timber to foreign countries — a trade which the hardy lumberers of Maine and New Hampshire maintained as a right wrested from nature herself by toil and privation. Quite as difficult was it to prevent the farmers from felling trees on lands to which they had a legal title by grant or purchase — their own trees which the King's surveyors marked with a broad arrow that they might be reserved for the King's use. The curious explorer in those eastern forests may even now find occasionally upon pine trees which the centuries have spared, these arrow-marks cut more than a hundred years ago — the King, his mark, upon a domain to which the Revolution secured a quit-claim deed.

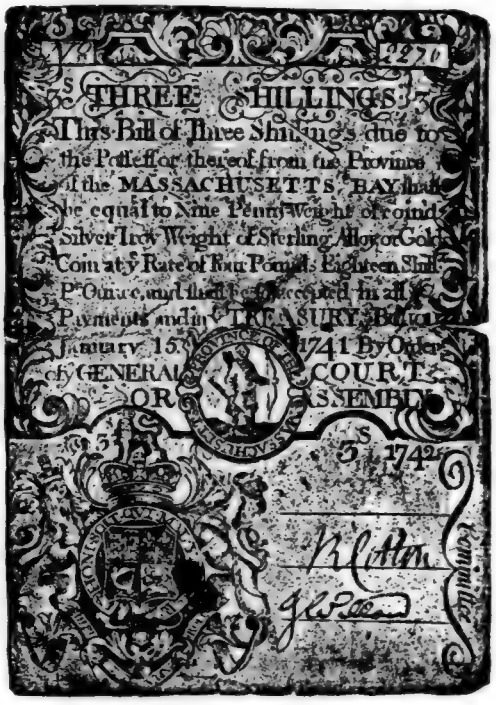
John Bridger was, as he had long been, Surveyor-general when Shute assumed his office. Wherever the surveyor and his men saw fit, they carved the emblem of royal ownership. The settlers resisted this assertion of a right over lands held by titles which should be good even against the King, and for which they had risked their scalps, and endured the extremity of hardship, that this savage wilderness might be turned to the uses of civilization. The loss of their tallest and most shapely trees moved them to righteous anger; hardly less did they resent the act of Parliament which denied a trial by jury on any question of ownership that it was thought worth while to listen to, but left it to the decision of a judge of admiralty appointed

by the Crown. The products of the soil they owned were theirs, they maintained, to do with as they would, to use or to sell — to sell even to the King, if he wanted their tar and timber. Still the surveyors went on carving the broad arrow-heads with indifference or contempt. Every stroke of the axe in the clearings was a blow in the long conflict between provinces and Crown.

Remonstrance and indignant complaint against Bridger found their way to Portsmouth and Boston, and the Governor sided with the surveyor. Elisha Cooke, a member of the Massachusetts Council, showed the justice of the settlers' claims, and the irascible old soldier deprived him of his office. Thereupon the General Court sent a remonstrance to the Governor which he forbade them to print. They printed it nevertheless, establishing thereby a parliamentary privilege, never again questioned, of printing what they pleased.

The General Court offended the Governor still further by electing Cooke as Speaker. Shute stood upon his prerogative, refused to confirm their choice, and dissolved the Court. When compelled to call a second, that body declined to grant certain appropriations he asked for. He indignantly prorogued them also. A third voted him an insignificant sum, but, at the same time, they patiently and firmly thwarted his obnoxious measures. The old quarrel was fastened upon him when he attempted, like Dudley, to have a fixed salary attached to his office. To manifest its rooted policy upon this point, the Assembly quietly reduced year by year the annual grant which it allowed him, and voted a sum so small to Lieutenant-governor William Dummer that he disdained to accept it.

All this time another cause of bitter variance flowed out of the deplorable financial condition of the province, which was suffering all the evils of gambling speculation that belong to periods of paper money and depreciated currency. The infection of speculation had something of the virulence of John Law's Mississippi scheme and the subsequent English South Sea Bubble, though these manias did not directly implicate the provinces. Queen Anne's War was responsible for a resort to a financial policy which so readily buys immediate supplies, and so fatally contracts a public debt for another generation to repudiate or pay at heavy cost. The provinces were drained of gold and silver; and as a desperate remedy recourse was had to a fresh supply of paper money. It was called currency, but nothing could make it current. Land and merchandise increased nominally in value, but actually depreciated.



Paper money.

The province was divided into three heated parties, — one that proposed a speedy return to gold and silver; another, much larger, that sought to defeat resumption by the establishment of a private bank

for the issuing of unlimited paper; and a third that perceived the necessity for a public bank that should steadily labor to pay the public debt, and issue paper but restrain the abuse of it. There was great agitation in every town and village. The acrimony of theological difference was never more bitter than this discussion over a question of finance which was little understood. It divided parishes and families like a civil war. At length the project of a public bank was successful. It was a great misfortune, the result of unreasonable neglect and parsimony on the part of England, that the provinces, which had lavished their life and treasure upon various wars, were left, thus impoverished, to pay the bills. Under this ingratitude of the mother country, for whose continental policy the provinces bled as well as for their own welfare, they may be pardoned for finding no resource save in the frequent issue of bills of credit.

Financial projects.

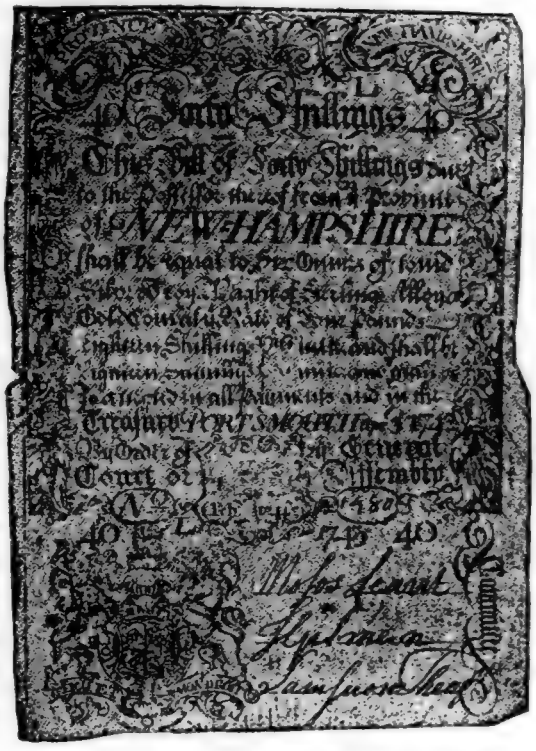
The Council generally, from 1710 downward, favored a public bank; but the Assembly was pretty evenly divided. Boston, being a lively centre for speculative operations, was eager for a private bank. When the project for a public bank finally prevailed in 1721, a loan of £50,000 in bills of credit was placed with a board of trustees for five years at five per cent., and one fifth of the principal was to be paid in yearly. Colonel Burgess, who sold out his appointment as Governor, was among those who asked for the establishment of a private bank; its supporters were highly incensed when they discovered that Governor Shute favored the public bank. But no financial plan could resist the demoralizing effect of frequent issues of bills of credit. When the five years had expired in which the principal was to have been paid, the issue of these bills had increased to £100,000. In that year, 1727, £60,000 more were voted by the Assembly, and when Dummer, who was acting Governor till Burnet arrived, vetoed the measure, the Assembly simply refused his grant of money until he signed the bill.

Three-Shilling Massachusetts Bill of 1741.

In 1722 bits of paper representing five pounds were struck off for

small change. The penny was round, the two-pence square, and the three-pence angular. In 1728, £340 in this fractional currency was issued; in 1730, £380, the specie value of which was only £100. In 1733, by a vote of the General Court, bills to the amount of £75,500 were issued to pay the public debts; and in 1737, £20,000 of the new tenor "to exchange for old bills at the rate of one new for three old."

Two-pence, 1722.

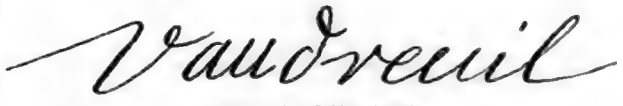


Governor Belcher, who was opposed to all the schemes which steadily depreciated the currency, stated, in 1740, that the issue of bills up to that time amounted to £260,000, of which £70,000 were yet unredeemed.[1] In the previous year a number of private individuals undertook to establish a land bank with a capital of £150,000. Notwithstanding the popularity of this step, it failed to procure the sanction of Parliament, and the company dissolved. The different parliaments of the eighteenth century which eagerly voted enormous sums to sustain England's continental wars, could seldom be influenced to reimburse the colonies for their heavy expenses incurred in expeditions against France and the West Indies. When in 1741 England was organizing an expedition against the island of Cuba, the American provinces were called upon to furnish 3,600 men, with the bounties, provisions, and transports. The quota of Massachusetts was five hundred men; their outfit and transportation cost £7,000, not a shilling of which was ever reimbursed. Five years after the fall of Louisburg in 1745, the expenditure of the colonies in that expedition was remitted to Boston by the home government in specie, and this was the beginning of a return to specie payments. But in 1748 the existing currency could only purchase one eighth the value which the same nominal sum would buy in 1700, and exchange on London stood at £1,100 currency for £100 sterling. A measure toward resumption which steadily grew popular in spite of all interested opposition, was in two years confirmed by an act of Parliament commanding the colonies to call in all their bills of credit and to issue no more that were not to be discharged within a year. And no further issue of paper money was to be made save in extraordinary emergencies.

The colonies burdened with war expenditures.

Specie was at one time so scarce in New Hampshire that paper currency was issued for half a crown, and an ordinance was passed to allow the payment of taxes in tar that was rated at twenty shil-

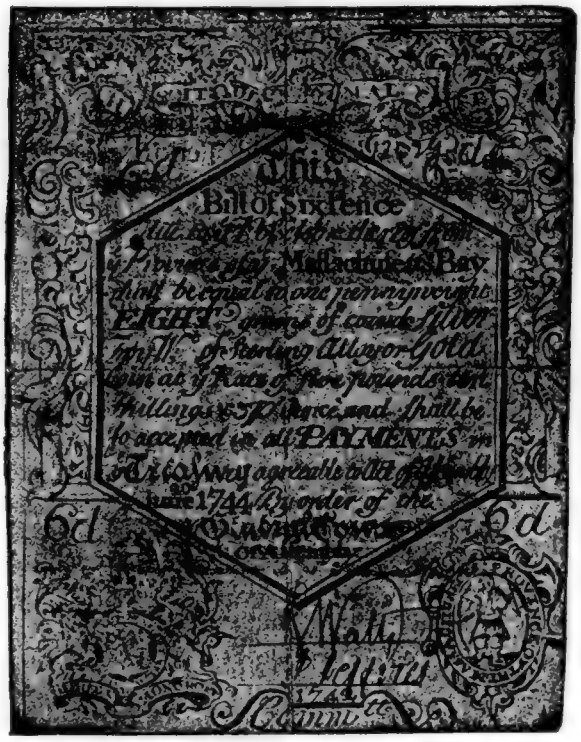
[1] Felt's *History of Ipswich*, p. 105.



lings to the barrel.[1] The soldiers who were engaged in the various campaigns against the French and Canada after 1755 were paid in paper bills that were issued on the plea of emergency. A bill bearing the face of fifteen shillings was worth a dollar. Of this money the soldiers received £13 10*s*. a month, and as the paper steadily depreciated their pay stood in the course of the same year at £15, in 1756 at £18, in 1757 at £25. But sterling money soon recovered its status as the standard, and the paper value followed the price of silver in all contracts and exchange. This digression will serve to group the financial interests of the province for a considerable period. In other colonies similar measures of a resort to the issue of paper money to meet public exigencies had like results.

New Hampshire Bill of Forty Shillings, 1742.

The Indian difficulties during the administration of Governor Shute became another source of serious embarrassment. With the connivance of Count Vaudreuil, then Governor of Canada, the French secretly stirred up the half-slumbering ill-will of the Indians, in spite of the treaty, on the pretext that France possessed the coast of Maine as far as the Kennebec. It was not difficult to inflame the temper of the savages when they observed the inevitable encroachments of the English upon domains which had been purchased from them. They did not at first foresee the practical effect upon themselves, — upon their hunt-



Indian difficulties during Shute's Governorship.

Autograph of Vaudreuil.

[1] The *Provincial Papers of New Hampshire* contain frequent records of legislation against the counterfeiting which can be so easily practised in an era of paper currency. One day in January, 1756, £95 of counterfeit bills were brought into the Assembly, and there ordered to be burnt in the presence of the members. This was done with sufficient solemnity. At one time the counterfeiters got possession of unfilled blanks of currency, left over from the printing, and proceeded to imitate them at their leisure. Then each officer of the government and each member of the Assembly was furnished with such blanks, that they might be compared with the bills in circulation. In 1730 the punishment for counterfeiting in Pennsylvania was death; but that proved to have little deterring power, and a conviction was seldom obtained.

ing, fishing, and planting, — of the more elaborate and persistent methods of the white man, who was not very scrupulous in observing the bounds of the tracts which had been ceded to him for an insignificant remuneration. Naturally all this civilizing movement began to be clear to them, and the French made it clearer. Claims and counter claims, disputes, ill-blood, quarrels, were inevitable. The Governor had an excellent plan of building trading-houses in the eastern territory to supplant the French by direct traffic with the Indians for their furs. These trading-posts were to have been under the direct control of the provincial government. The constant turmoil of provincial politics prevented their establishment; so that the private traders as usual, then and at present, fleeced the Indians and made their business operations easier by the demoralizing effect of liquor. The Governor anticipated that trouble would result from the complication, and endeavored to arrive at some friendly understanding with the chiefs. He made, however, the mistake of pressing upon them a Puritan minister to reside among them, hoping thus to observe and counteract the Jesuit intrigues. The Indians favored the religion of France as well as its politics, and no minister was allowed to settle where a Jesuit ruled.

Six-pence, 1744.

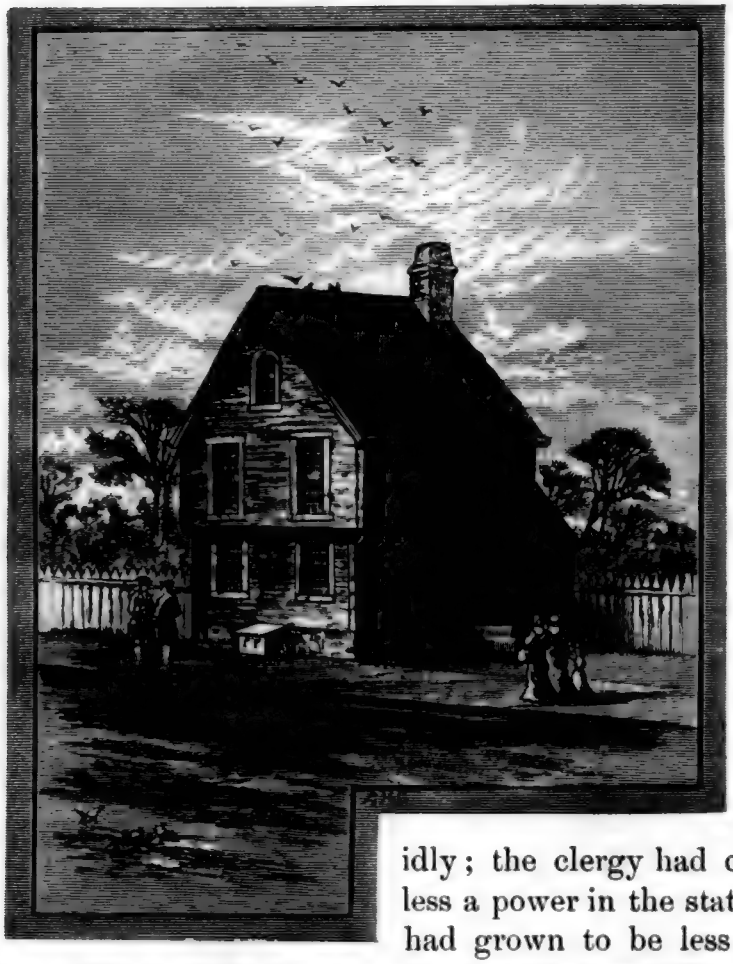
When the war impended, the General Court gave additional umbrage to Shute by encroaching upon his power as commander-in-chief of the provincial forces. The officers who were attached to the first expedition were instructed to communicate, not with the Governor, but with the General Court as the representative of the people who were taxed to support the war. This was clearly an illegal measure, which provoked bitter wrangling, and the Governor found himself involved in a fresh dispute.

Conflicts between the Governor and the General Court.

The provincial temper exhibited such an increase of animosity toward the royal government that Shute sailed for England in disgust.

He spent the time there in explanation of his course and in urging a decisive policy against the province. As the result of his activity, a remonstrance was sent to the General Court in 1723; it enumerated the complaints brought by the Governor of interference with his prerogative, and demanded explanations. At first the General Court treated the charge with an aggravating nonchalance, contenting itself with a vote that an agent should be appointed to manage the vindication of its conduct. When the Provincial Council stoutly non-concurred with this, the General Court undertook the more prudent course of returning specific answers to the complaints. The provincial agents found the Court obstinately bent upon enforcing the provisions of the royal charter, especially on the points of cutting timber, the Governor's power to negative the selection of Speaker, and interference with military operations.

The result. — A supplementary charter.



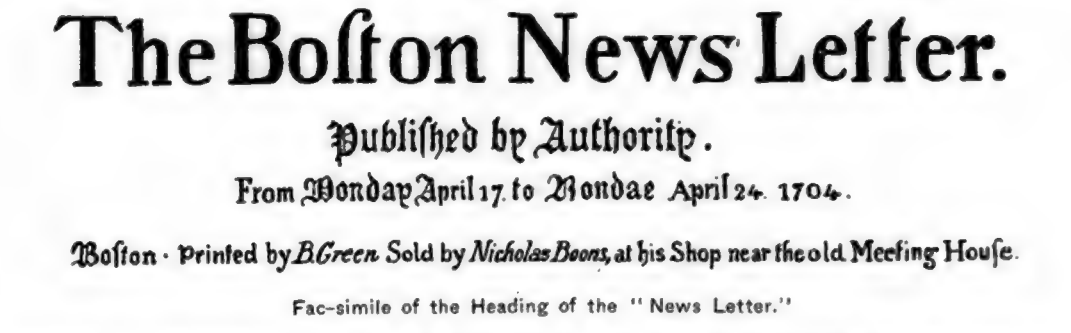
The judgment of the Board of Trade and the law-officers of the Crown was clearly against the province. A supplementary charter intended to enforce the most important points at issue was sent to Boston in August, 1725, and laid before the General Court. After some preliminary discussion and voting, during which a great deal of popular opposition was developed, this explanatory charter was finally accepted by a majority upon a joint vote of the House and Council.

Governor Shute was now confirmed in his power to negative the selection of Speaker of the House, and he proceeded to work for another concession, — that of a permanent salary for the Governor and Lieutenant-governor. Put off and disappointed, he was on the point of returning in 1727, greatly to the discontent of the province, whose affairs had been judiciously administered by the Lieutenant-governor, William Dummer. Just at that crisis George I. died; new intrigues sprang up under a new reign; new men came into prominence; new favorites clamored for office and had to be provided for. In consequence of this, Shute was pensioned, and the government of Massachusetts and New Hampshire was conferred upon William Burnet.

Theological matters in Massachusetts.

It is worth noting that the disposition of the clergy of Massachusetts had been slowly softening in matters of theology. Even the intolerant Cotton Mather preached a tolerant discourse on the occasion of the establishment of a Baptist Church in Boston during Shute's administration. It was within the memory of living men that the whipping-post or the stocks was thought to be the proper place for those who doubted the efficacy of infant baptism; in a controversy of half a century before upon the rightfulness of admitting to baptism the children of those who were not mem-

bers of the Church, the father and the grandfather of Cotton Mather had taken different sides. The times had greatly changed. They had changed still more since Roger Williams said that Cotton was the high priest of Boston, when the priest was the head of the State as well as of the Church. In country towns the clergyman was still indeed chief among men; looked up to as fittest of all to guide in worldly as in spiritual affairs; as absolute in the town-meeting as in the pulpit; always revered and often beloved by those of mature age, and always feared by the young, who would fly from before his face and hide from that austere and reverend presence. But in larger places the influence of the growth of political freedom asserted itself more rapidly; the clergy had come to be less and less a power in the state; liberty of thought had grown to be less and less a civil offence; religious differences were more tolerated, and free discussion of all subjects was beginning to be possible. Journalism, with something of the meaning which later times attach to that term, made its appearance.



Birthplace of Franklin.

Newspapers established in Boston.

The first newspaper was printed in Boston, in the autumn of 1690, and was meant to be a monthly, with occasionally more frequent issues, should the demand warrant it. A single number, however, only appeared. In 1704, the "Boston News Letter" was established, — a weekly paper which long held its own, but which never, till a rival appeared, was anything but a mere digest of news. In 1719, the "Boston Gazette" was started, of which James Franklin was the printer. Two years later — August, 1721 — Franklin established the "New England Courant," partly, it was thought, because the

printing of the "Gazette" had been taken from him.[1] The publisher of the "Gazette," Philip Musgrave, was also postmaster, and in the first number of the "Courant" Franklin attacked him for official incapacity. Of the "News Letter" the "Courant" said it was only "a dull vehicle of intelligence." The new journal was evidently to be a thing as yet unheard of — a paper in which politics and religion, morals and manners, were to be freely discussed. Its editor indeed soon wrote himself into prison, and in about six years it

was discontinued; but its appearance and its character mark an era in intellectual progress and in the freedom of thought and speech in Massachusetts. A club of gentlemen contributed essays on various subjects, and these writers were called by conservative people, sometimes "Free Thinkers," sometimes the "Hell Fire Club." Benjamin Franklin was the younger brother of James, and wrote paragraphs as well as set type for the paper. He was about sixteen years of age, having been born opposite the Old South Church on January 6, 1706. He was the carrier of the paper, and wrote the carrier's addresses. Curiously enough, the paper opposed inoculation, and perhaps its popularity in this respect, especially with the physicians, who had the free use of its columns, procured toleration for its more offensive matter.

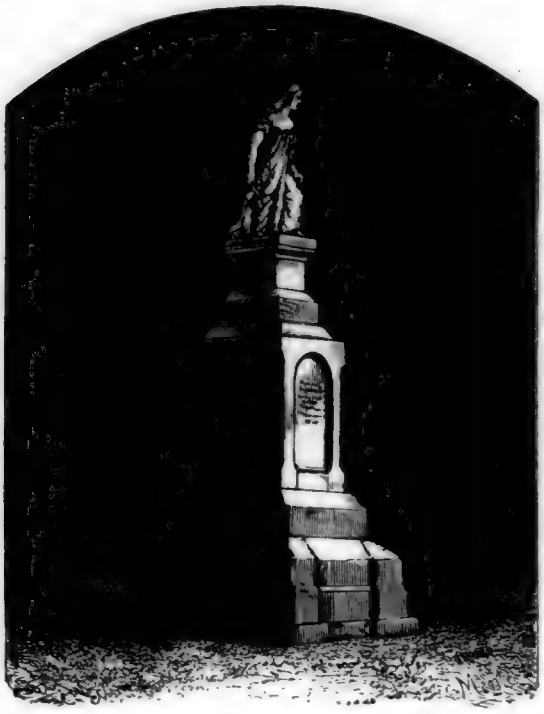
Benjamin Franklin.

The paper was only a year old when the publisher was bound over to be of good behavior, in the sum of £100, in consequence of "many passages . . . . published, boldly reflecting on His Majesty's Government, the Ministry, Churches, and College." It was at the same time ordered that no number of the paper should be printed till it had been submitted to the Secretary of the Council, and permission granted. When afterward the elder Franklin was imprisoned for continued contumacy, the management of the paper fell into young Benjamin's hands. When James was ordered to cease the publication he obeyed,

[1] Benjamin Franklin probably shared his brother's resentment against the proprietor of the *Gazette*. In his autobiography he ignores its existence, and asserts that the *Courant* was the second newspaper established in America, the *News Letter* being the first.

so far as his own name was concerned; but the paper came out, nevertheless, with Benjamin as publisher. There was no abatement of the freedom of comment upon public affairs, while the journal commended itself for family reading by a selection of the best hymns of one Dr. Watts. James seems to have been jealous of his younger brother's success, and they quarrelled. Then Benjamin ran away; and the loss to Boston was a gain to Philadelphia, till the whole country claimed the services of one of the wisest and best of her sons.

New Hampshire under Shute's administration.

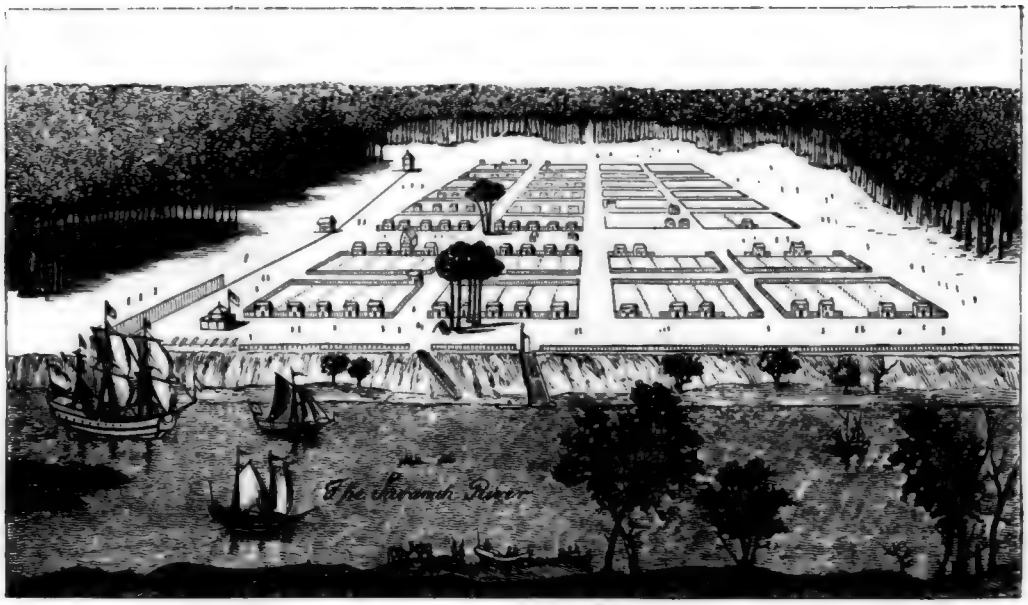


Shute was no happier in his administration of the affairs of New Hampshire than of those of Massachusetts. The Assembly would never vote him a permanent salary, and this standing grievance of the royal governors in all the colonies precluded the possibility of any cordiality of feeling between him and the popular representatives. He removed several members of the Council and appointed others, who represented the local interests of Portsmouth, to the prejudice, the country people thought, of their own. He called the Assembly to a conference with the Council, regarding the issue of bills of credit, but without condescending to inform its members of his reason for convening them. When the two Houses resented this treatment, he dissolved them. On one point, however, they agreed; the Assembly supporting him in the suspension of Vaughan, the Lieutenant-governor, who assumed the exercise of supreme authority during Shute's absence in Boston. The removal of Vaughan was justified also by the Crown, and John Wentworth was appointed in his place.

Scotch Presbyterians settle at Londonderry, N. H.

The emigration of some Scotch Presbyterians to New Hampshire, in 1718, while Shute was Governor, was much more important in her history than these political quarrels. These people, who undertook to better their condition in America, were descendants of the colonists who had been transferred by James I. to the North of Ireland, where their condition, from penal laws against Protestants and from local taxation, had become intolerable. Arriving first in Boston, they dispersed in various directions; but sixteen of the families, holding together, settled upon lands a few miles northwest of Haverhill. The boundary between New Hampshire and Massachusetts had not, at this time, been determined, though the two provinces had more than once appointed commissioners to draw it, who could not agree. Massachusetts informed these new settlers, when they applied for a grant, that they were out of her jurisdiction. In New Hampshire the disputed title to the land gave them some trouble, but under the protection of Wentworth they remained upon the spot of their choice, and, being joined from

time to time by other families, they called their place Londonderry, in 1722.



Their minister, MacGregor, informed Governor Shute how offensive it was to them to be confounded with the Irish against whom they had fought always for the defence of Protestantism. But the New Hampshire people were jealous of these new-comers, who entered into quiet possession of the soil at a time when their own lands were threatened with litigation. These Presbyterians did the province the good service of introducing the manufacture of linen by the spinning-wheel, and the cultivation of the potato. That vegetable was first planted at Andover, whose inhabitants began with boiling the balls instead of the bulbs, wondering, when the result was served up at their simple tables, that a potato was considered to be an esculent.

Mrs. Dustin's Monument, Concord, N. H.

The prosperity attending these new colonists led other people to petition for grants of land for townships. They took possession before their charters were made out, and began to fell the trees, incurring the usual dispute with the King's surveyor. In 1722 charters for four townships, Chester, Nottingham, Barrington, and Rochester, were drawn up, including a reservation during the pendency of Allen's suit, and signed by Governor Shute, which was his last official act in the province. From 1713 to 1720 some attempts were also made to settle tracts of land in Maine. On Shute's departure for England in 1723, Wentworth became acting Governor of New Hampshire.

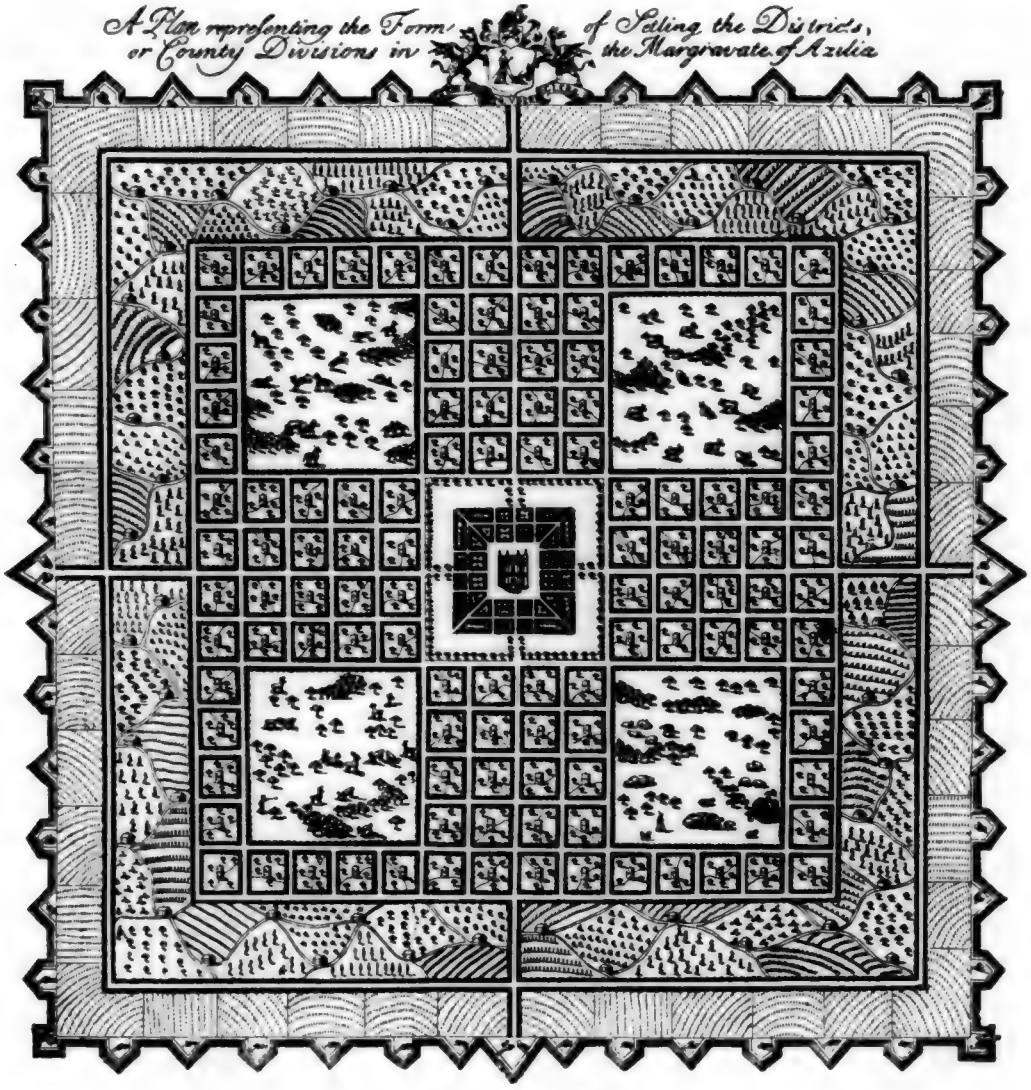
Proposed settlement at the south by Sir Robert Montgomery.

It was proposed as early as 1717 by Sir Robert Montgomery, a Scotchman, to plant a colony on the Savannah River, and it is quite possible that the failure of his plan was partly due to the revolution in South Carolina. Adventurers may have been deterred from trying their fortunes in the vicinity of a colony torn at that time with internal dissensions, and the more

exposed, therefore, to attacks from their Spanish and Indian enemies on the southern border. Perhaps it was better, however, for the future settlement of the beautiful region between South Carolina and Florida that it should be left a while longer to its virgin solitude, rather than be made the scene of the fanciful schemes of this visionary Scotchman.



Montgomery purchased the territory of the Proprietors on condition that he should occupy it within three years. "My Design," he said, in a "Discourse" commending it to public attention, "arises not from any sudden Motive, but a strong Bent of Genius I inherit from my Ancestors," one of whom, a century earlier, had been interested in some plans of colonization in Nova Scotia. "The Humour, however," he continues, "Descended and ran down with the Blood: For my Father was so far of this Opinion, that together with Lord Cardross, the late Earl of Buchan, and some other Gentlemen, he entered into Measures for Establishing a Settlement on Port Royal River in South Carolina, and Lord Cardross went thither in Person."[1]

The projector of the new colony proposed to call it by the grandisonous title of the "Margravate of Azilia." It was generally agreed, he said in his "Discourse," that "Carolina, especially in its Southern Bounds, is the most amiable Country of the Universe; That Nature has not bless'd the World with any Tract which can be preferable to it; that *Paradise* with all her Virgin Beauties, may be modestly suppos'd at most but equal to its Native Excellencies." His fanciful plan of colonization was not dependent upon any proposed community of labor or of property; and it paid no heed to the practical difficulties in the way of contiguous blocks of farms laid out for cultivation, regardless of soil or situation, as city blocks are planned for residence and trade. The country was to be divided into districts, as population increased, each district to be twenty miles in length and width, surrounded by a square of fortifications. These were to be defended by garrisons who should maintain themselves and the Margrave by the cultivation of a strip of land one mile in width running around the square within the walls. Inside of this another strip, two

The Margravate of Azilia

[1] See vol. ii., p. 360. The "humour descended and ran down with the blood" also in the Erskine family. The great-grandson of the Lord Cardross here alluded to — the eccentric sixth Earl of Buchan, whose faith in metempsychosis was so profound that he believed all his ancestors lived in his own person, and who might have said, "when I was at Port Royal," as he would say, "when I was at the battle of Agincourt," — this descendant of Lord Cardross was deeply interested in America, and his sympathies warmly enlisted on behalf of the colonists in the American Revolution. He entered into correspondence with some of the leading men, and sent them his engraved portrait. One of these, presented by the Earl to James Otis, is in the possession of the author, and bears the autograph inscription, "As a mark of my attachment to the cause of Liberty and its friends."

miles in width, was to be reserved to furnish these defenders with farms of their own, rent free for life, after their term of service should be over. Of the remaining land, the most was laid out in one hundred and sixteen smaller squares of one mile each, "bating only for the highways which divide them; and in the centre of each square should

The Margravate of Azilia.

stand its owner's dwelling: "these are the estates belonging to the Gentry of the District." Finally, in the middle of the whole there was a large square for a city, and at the corners there were others for great parks — each four miles square — in which were to be kept the stocks of cattle and of game. Like a holy of holies, at the city's central point was to be built the Margrave's house — his constant residence.

But this ingenious scheme of a great rural city, portrayed by picture

JAMES OGLETHORPE.

(After a contemporary engraving.)

as well as described in words, failed to excite the admiration and enthusiasm its designer hoped for. Not an emigrant offered to avail himself of the beauties and advantages of the promised "Paradise." The provisional three years expired, and the Proprietaries resumed their ownership of the country. For fifteen years longer it remained a sort of debatable land between the English and the Spaniards of Florida, a hunting-ground and refuge for a few hundred Indians, till, purchased by the Crown of the Proprietors, it was once more selected as the site of a colony.

Failure of the scheme.

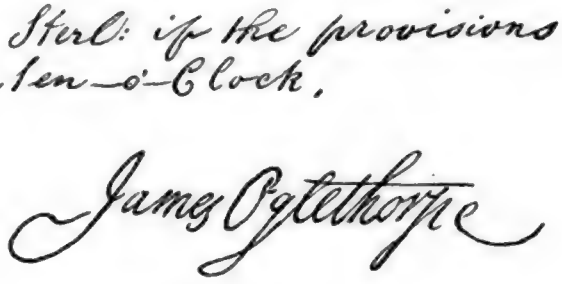
A humane movement about this time for the reformation of English jails — where, it was notorious, the most shocking abuses existed — enlisted the sympathies and the energies of James Oglethorpe, a member of Parliament. His experience as a member of a parliamentary committee, appointed with reference to this subject, led him and others to wider observation and reflection upon the condition of the poor generally, and his committee suggested, in a report to the House, that "there were great numbers of indigent persons burthensome to the public, who would be willing to seek a livelihood in any of his Majesty's plantations in America, if they were provided with a passage and means of settling there." They asked that lands might be given them, as Trustees, in the southern part of South Carolina, for the planting of such a colony. The subject was deliberately and carefully discussed for two years after the report was made, and on the 9th of June, 1732, a charter was granted to twenty Trustees, for the benefit of the poor of the kingdom, and for the protection of the southern frontier of the American colonies, of all that region between the Savannah and Altamaha rivers.[1] The new colony was to be called Georgia, in honor of the King, George II.

A new movement.

Oglethorpe was at this time little more than forty years of age, and his life had been full of action and adventure. His family had been well known in courts and camps for generations. His great-grandfather and his grandfather had held positions in the royal household; and his father — that Sir Theophilus Oglethorpe referred to in a paragraph of "Guy Mannering" as one who "held orgies with the wicked Laird of Ellangowan" — had been a well-known general under James, but at the time of the Georgia founder's birth, in 1688, had retired to live as a quiet country gentleman in Surrey. Oglethorpe was sent to Oxford at sixteen; and at twenty-one entered the army as an ensign. He subsequently took service under the great Prince Eugene, was

[1] The Trustees were Lord Percival, Edward Digby, George Carpenter, James Oglethorpe, George Heathcote, Thomas Tower, Robert Moor, Robert Hucks, Roger Holland, William Sloper, Francis Eyles, John Laroche, James Vernon, William Behtha, John Burton, Richard Bundy, Arthur Beuford, Samuel Smith, Adam Anderson, and Thomas Coram.

made an officer of his staff, and for several years shared in the most famous fighting of the time, serving at Peterwardein and at Belgrade, and not returning finally to England until peace was made with the beaten Turks in 1718. This military experience was not the least among the qualifications that fitted him for the post of governor of a frontier colony.



Oglethorpe's military career in Europe.

The project of the Georgia Trustees was received with a good deal of enthusiasm. Subscriptions on its behalf were numerous. Parliament made generous grants, and the Bank of England and other public institutions led long lists of contributors. All the Trustees themselves gave money, besides gratuitous service. They adhered rigidly to their original design; selecting their first body of colonists carefully from the destitute inhabitants of large cities; from deserving insolvent debtors, whose creditors were generally willing to forego their worthless claims on the payment by the company of a small sum; and from well-disposed laborers out of employment. Their aim was to exclude from the company all idlers and vicious persons, and all married men who were disposed to leave their families behind.

Settlement of Georgia.

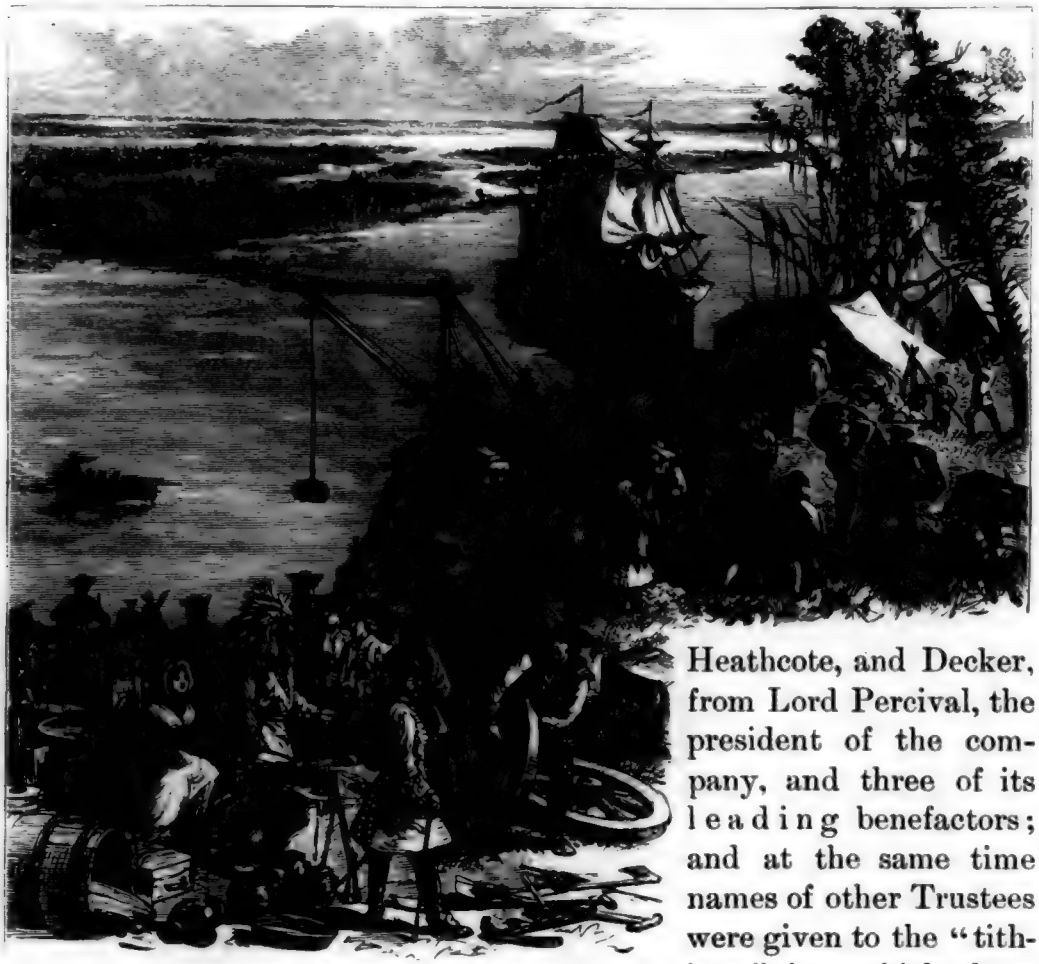
On the 17th of November, 1732, Oglethorpe sailed from Gravesend in the ship *Anne*, with the first company of emigrants, — thirty-five families, containing in all one hundred and fourteen persons. On the 13th of January she arrived in the lower bay of Charleston, where she remained only a day, while Oglethorpe went up to the town to confer with Governor Johnson. Then the *Anne* sailed for Beaufort, and the people were landed to recruit after their long voyage; but Oglethorpe, accompanied by Mr. Bull of Charleston, — subsequently the Governor of South Carolina, — went up the Savannah River to select the place for their future home. The city of Savannah now stands on the spot he thought best adapted to his purpose.

Arrival of emigrants.

Fac-simile from a Note of Oglethorpe, ordering Provisions.

He rejoined his people at Beaufort, and the next Sunday was observed as a day of thanksgiving. "There was," says a contemporary narrative, "a great resort of the Gentlemen of that neighborhood and

their families; and a plentiful Dinner provided for the Colony, and all that came, by Mr. Oglethorpe; being 4 fat hogs, 8 turkies, besides fowls, English Beef, and other provisions, a hogshead of punch, a hogshead of beer, and a large quantity of wine; and all was so disposed in so regular a manner, that no person was drunk, nor any disorder happened."[1] In the course of the week the company, charmed with their first experience of the new country, and full of cheerfulness and hope, were taken to the place their leader had selected. Oglethorpe's first care was to obtain the consent of the nearest Indian chief, one Tomo Chichi, to his occupation of the land. In this he was aided by Mary Musgrove, the half-breed wife of an Indian trader whose post was in the neighborhood. This woman, who acted as interpreter, persuaded the Yamacraw chief that the settlement of an English colony at that spot would be an advantage to his people, and he agreed to use his influence with the Creeks, to whom the territory belonged.



For the first week the people were employed in landing their goods. When this was done they were divided into three parties: one to prepare land for cultivation; another to fell the trees on the proposed site of the town, — Oglethorpe, however, wisely sparing some of the finest of them; a third to build palisades. Their poor shelter, and exposure to the malaria from the low banks of the river, caused some sickness, but their progress was rapid. All worked with a will; "there are no idlers here," wrote a visitor from Charleston; "even the boys and girls do their part." "Our people still lie in tents," Oglethorpe wrote to the Trustees on the 10th of March, "there being only two clapboard houses built, and three sawed houses framed. Our crane, our battery, cannon, and magazine are finished. This is all that we have been able to do, by reason of the smallness of our number, of which many have been sick, and others unused to labor; though, I thank God, they are now pretty well, and we have not lost one since our arrival here."

With the aid of Captain Bull, of Charleston, who had returned thither and brought back hired laborers and settlers, Oglethorpe laid out the place on that symmetrical and excellent plan which makes the present city of Savannah so beautiful. The broad avenues, with little parks at the alternate crossings, still bear witness to Oglethorpe's good taste and judgment, and many of the streets retain the names — Bull, Drayton, Whitaker, Abercorn — which he then gave them from his associates, or from American or English patrons of the enterprise. Several months later, when the

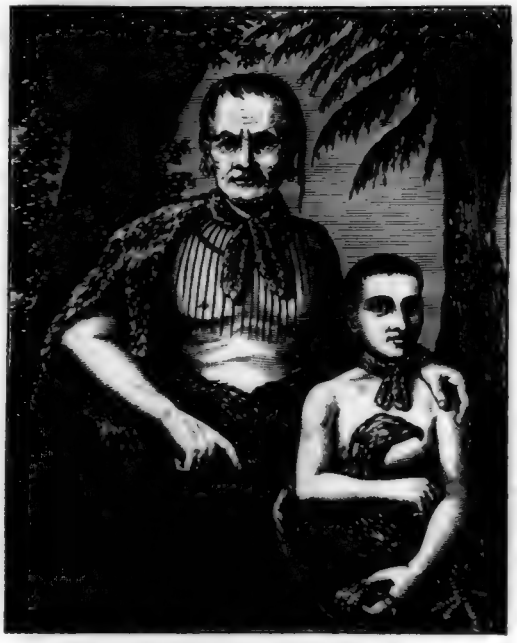
Laying out Savannah.

[1] *A Brief Account of the Establishment of the Colony of Georgia*, etc., a contemporary narrative first published in *Force's Tracts*, vol. i.

number of the colonists was increased by fresh arrivals from England, the four wards of the town received the names of Percival, Derby, Heathcote, and Decker, from Lord Percival, the president of the company, and three of its leading benefactors; and at the same time names of other Trustees were given to the "tithings" into which these wards were subdivided. The divisions and their names were officially announced on July 7,— a day specially set apart for the establishment of the local government, and kept by all the people as a holiday.

The Landing at Savannah.

Treaty with the Indians.



In May a council of the chiefs of all the nearer Indian tribes was held at Savannah, and the treaty first made with Tomo Chichi was confirmed. Oglethorpe assured them that he did not mean to dispossess, or to injure their people in any way, and that whatever land they would grant for the convenience of the English should be fairly paid for. "We are persuaded," said a sachem of the Lower Creeks, "that the Great Spirit who dwells above and around all has sent the English hither for our good; and therefore they are welcome to all the land we do not need." "When these white men came," said Tomo Chichi, "I feared that they would drive us away, for we were weak; but they promised not to molest us." Then in acknowledgment of corn and other supplies which the Englishmen had given

them, he offered presents in return, and besought the strangers for continued kindness. "Here," — he went on with that figurative eloquence in which the North American Indian has always so loved to clothe his speech — "Here is a buffalo skin adorned with the head and feathers of an eagle. The eagle signifies speed, and the buffalo strength. The English are swift as the eagle, and strong as the buffalo. Like the eagle, they flew hither over great waters, and like the buffalo, nothing can withstand them. But the feathers of the eagle are soft, and signify kindness; and the skin of the buffalo is covering, and signifies protection. Let these, then, remind them to be kind and protect us." [1]

Speech of Tomo Chichi.

Between the new colony and its nearest English neighbor there was the utmost harmony. South Carolina came to Oglethorpe's help with large public and private subscriptions, and on a visit to Charleston he cordially and feelingly acknowledged these in an address to its Assembly. At Savannah the first rude shelter of boughs of trees, and the clapboard houses, were soon displaced by substantial dwellings. A public garden was planted as a nursery, with many kinds of fruit trees, and especially with mulberry trees; for it was proposed to make the manufacture of silk a principal industry of the colony, and for this purpose some skilled workmen from Italy were sent out among the earliest emigrants. On Tybee Island, near the mouth of the Savannah, a light-house to be ninety feet in height was begun; on the river bank below the town, a battery was built for its protection. On the Ogeechee River, Captain M'Pherson with a company of Highlanders built a fort and called it Fort Argyle, as a defence against the Spaniards. When Oglethorpe returned to England after fifteen months' stay, he left his colony in a prosperous and promising condition. He had brought to it a little more than one hundred persons; in the first year and a half it increased to very nearly five hundred.

Progress of the colony.

Tomo Chichi. (A Portrait painted in London.)

Every ship that had come from England had brought small parties of emigrants, most of them of that class for whose benefit especially

[1] The English found the buffalo in immense numbers in Georgia.

the colony was projected. Not all, however; Highlanders came from Scotland under their petty chiefs, who, at different times, settled at Fort Argyle and at Darien on the Altamaha, — men well-trained, by their lives at home, for the new life of the wilderness, whose love of arms and the hunt, whose picturesque garb and the wild music of their bagpipes commended them to the enthusiastic admiration and warm friendship of the natives. And in absolute contrast to these was still another class who, like the Fathers of Plymouth the century before, were truly Pilgrims, fleeing from religious persecution, and who prized above all earthly things freedom of belief and of worship; a devout, humble, long-suffering, and industrious people, certain to remain as a distinct community apart from the general population with whom they had so little in common.

The Highland emigrants.

These were the Salzburgers, descendants of those Piedmontese Waldenses who, as early as the twelfth century, were, as Pope Innocent III. lamented, "carried along by an immoderate desire of knowing the Scriptures," and who came, therefore, under the ban of the church. Through the centuries, down to the time of the Reformation, persecution followed them, and then, as they became distinguished for their adherence to the tenets of Luther, the church determined that they should be exterminated from the face of the earth. They were hunted like wild beasts; some were scourged till they died; some were burnt to death in the flames of their own houses; some were blown up with gunpowder. Ingenuity was exhausted in devising methods of pain and terror; their ministers were tortured till death released them; the head of one of their most beloved teachers, Anthony Brassus, was nailed in mockery to the pulpit from which he had preached. But they were not quite destroyed; a remnant escaped and fled to the valley of Salzburg, then a province of Bavaria.

The Waldenses and their descendants.

Here, in obscurity, they found safety. They had preserved their organization and, though without ministers, kept alive their religious zeal, holding their meetings in the depths of the forests and in the dark recesses of mines. For three quarters of a century they were unnoticed and unmolested, handing down from generation to generation an inheritance of the memory of centuries of wrong and suffering, and of the steadfast faith which had sustained their fathers, and would sustain them.

As their numbers increased, the eyes of the church searched them out, and again the church stretched out its hands against them. Their belief was denounced and derided, and their worship forbidden. They were summoned before ecclesiastical courts for trial; many were left to languish in prisons, their limbs

Persecution of the Salzburgers.

loaded with chains, while their souls were vexed with priests who labored to confound their belief and frighten them into apostasy; others were driven from their homes, their possessions seized or destroyed, husbands and wives separated, the children taken from both to be nurtured in the bosom of the church. It was only by the protests of Protestant Germany, and especially of Frederic William, the Elector of Brandenburg, that there came, toward the end of the

The Salzburgers at Frankfort.

seventeenth century, some mitigation of their many trials and sorrows, and the wretched Lutherans were left for a season in peace.

But it was only for a season. In 1728, Leopold, the Archbishop of Salzburg, alarmed at the spread of heresy within his diocese, determined that it should be suppressed. He renewed the persecution of the unhappy people with a resolute will and a relentless spirit, and suc-

ceeded in three or four years in driving thirty thousand of them into exile. Twenty thousand found a refuge in Prussia; the other third fled to Holland, to England, anywhere where their faith and their sufferings entitled them to sympathy and welcome.

Nowhere was there a warmer interest aroused on behalf of this people, who had endured so long and so much for conscience' sake, than in Protestant England. In Oglethorpe's scheme for planting a colony in America, the Society for the Propagation of Christian Knowledge saw the opportunity for providing an asylum for some of those who were still exposed to persecution. Arrangements were made to provide the necessary aid to a limited number, and a proposition to emigrate to Georgia was accepted by about fifty families of the village of Berchtesgaden, a few miles south of Salzburg.

Their pilgrimage in Europe.

The way was toilsome and long through Germany to the northern coast. But in the autumn of 1733 the villagers started, most of them on foot, carrying only the young and infirm with their household goods in rude carts. At Augsburg they remained awhile to rest, though the Catholic authorities at first refused them entrance even to the town. As they dragged on through their weary journey, they were scoffed at and sometimes maltreated, when in Catholic districts; but among Protestants they found everywhere hospitality and kindness, the peasants taking the tired women and children in their arms to carry them from one village to the next. At Frankfort-on-the-Main the citizens came forth to meet them and led them into the city in a sort of triumphal procession, to the music of Lutheran hymns. Here their long march ended, as they took boat upon the Main. Here, also, they were met by two clergymen, Bolzius and Gronau, who were to lead them as their pastors to the promised land.

Arrival in Georgia.

It was not till March of the next spring that these way-worn pilgrims by land and by sea reached Charleston, their voyage alone having taken more than a hundred days. Oglethorpe was on the eve of departure for England, but he gladly turned back with them to Savannah. They came without wealth; their only arms were their Bibles and prayer-books, for the non-resistance to violence, which discretion had so long taught a hopeless minority, had grown to an abhorrence of all violence; but Oglethorpe well knew that these virtuous, harmless, and industrious people, long acquainted with privation, self-denial, and submission, must needs be a valuable acquisition to a new colony. Lands were given them on the Savannah, selected by themselves because the hills and valley bore some remote resemblance to the home they would never see again. The place they called Ebenezer, for, they said, "Hitherto hath the Lord helped us;" and the name was retained when two or three years afterward they

removed a little farther inland, — retained by their descendants ever since.

In the winter of 1735–6 Oglethorpe returned from England, where the report of the first success of the colony, and the presence of Tomo Chichi and several other Indian chiefs whom he had taken with him, had renewed the public enthusiasm. He brought an addition of about three hundred persons, a few of whom were of a better class than the beneficiaries of the Trustees; some were Salzburgers, others were Moravians, with the Baron von Rick and Captain Hermsdorf, from Germany, at their head. Charles Wesley came as the Governor's secretary; the elder brother, John, was sent by the Trustees as a missionary to the Indians. This second voyage is known as the Grand Embarkation, from its importance to the colony, and the distinction is not misapplied. Hermsdorf, as a brave soldier, was of signal service in the contests with the Spaniards which soon threatened the existence of the colony; the Wesleys, though then young and unknown men, whose stay in Georgia was short, made in this visit the first step that led to important results in the religious history of the country.

The Grand Embarkation.

Charles Wesley quarrelled with Oglethorpe, promulgating a scandalous story which it was base to repeat if he did not believe it; and if he did believe it, the cordial friendship of subsequent years is not creditable to Wesley. His stay in Frederica was short, and judicious people had quite as much reason to rejoice at his departure as he had in going. The career of his brother John at Savannah was longer and his course even more reprehensible. He permitted his disappointment in a love affair to influence his conduct as a clergyman; he showed more zeal than charity or good judgment in censorious criticism (from the pulpit) of public affairs and public men; "he drenched them," says Southey, "with the physic of an intolerant discipline."[1] Perhaps it was not altogether his own fault that he failed to commend Christianity to the Indians, though he might have succeeded better had he sought them outside of the English settlements; for, when he strove with Tomo Chichi to lead him to a new faith, the clear-sighted savage, who measured precept by practice, said — "Why, these are Christians at Savannah! Those are Christians at Frederica! Christians get drunk! Christians beat men! Christians tell lies! Me no Christian!"

The Wesleys in Georgia.

But the Wesleys were young men then, and the zeal and ardor of youth ran before knowledge. This episode in their lives would have been forgotten had there not come in after years the abounding grace, the eloquence that moved multitudes to bow before it as the forest

[1] Southey's *Life of Wesley*, vol. i.

bends before the storm, the wisdom that could lay deep and strong the foundations of a great ecclesiastical organization to rule millions, which made them among the most marked and most influential men of their century. It may be that the painful experience of failure in positions whose duties were then beyond their strength fitted them for other and higher duties which, had they remained in a young and feeble colony, they would never have found. But their departure prepared the way for the coming of another whose immediate influence upon his time was equal to if it did not exceed theirs, both in England and America.

George Whitefield.

This was George Whitefield, who was sent to take John Wesley's place at Savannah. Wesley had left there in secrecy, shaking off, as he said, the dust of his feet against it; for, there was an indictment for libel hanging over his head on complaint of the husband of the woman whom he, at one time, had hoped to marry. To him Savannah had become not a pleasant place to live in, and it is to be presumed that he was truthful enough and humble enough to know that this was, in part at least, his own fault. How else could he urge Whitefield to take the place he had run away from, and in such terms as these? "Do you ask me what you shall have? Food to eat, and raiment to put on, a house to lay your head in such as your Master had not, and a crown of glory that fadeth not away." He surely could not have meant to deceive his friend. For it was no common tie that bound them together; even the bitterness and acrimony of theological difference — and nothing will make men hate each other so cordially — failed in later years to separate them permanently. They had been fellow-students

John Wesley.

at Oxford; had suffered together, with a few others, ridicule and persecution for a religious enthusiasm incomprehensible to those about them. The more they were divided from the world in those days, the more closely they were bound together, and in behavior and belief alike they had set themselves apart. It was to this Oxford time that Whitefield alluded once when he said — "I myself thought that Christianity required me to go nasty." And it was also of that time, or soon after, that the father of the Wesleys, himself a clergyman, said of his son John — "I sat myself down to try if I could unravel his sophisms, and hardly one of his assertions appeared to me to be universally true." These "sophisms" were beginning to be a puzzle to many by the time Whitefield came to Georgia in 1738. On his arrival at Charleston, the Rev. Alexander Gordon, the Episcopal clergyman, warned his people against this disturber of the peace of the church, preaching from the text — "Those who have turned the world upside down are come hither also." Whitefield answered him, and his text was — "Alexander the coppersmith hath done me much evil; the Lord reward him according to his works."

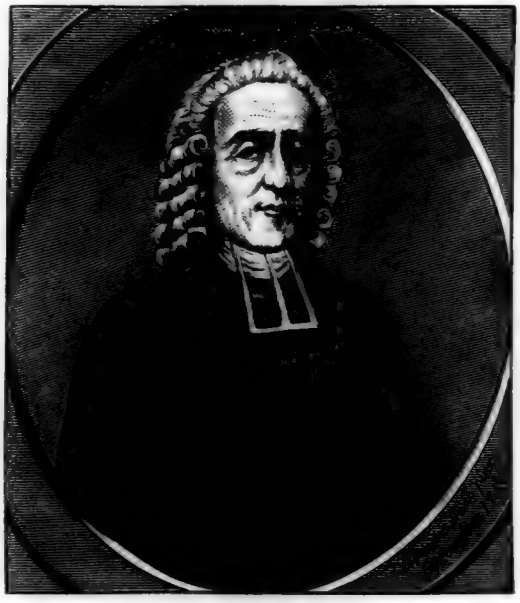
At this second coming to Georgia, Oglethorpe brought with him two acts of Parliament of a novel and radical character. It would be a subject of curious speculation what the future history of the country would have been, could these acts have been permanently enforced. But as both were from the outset evaded; and as it was difficult, probably impossible, under the circumstances of time and situation, to build up a commonwealth from such foundations; they remain only as a remarkable instance of failure to establish a purely moral government. One of these acts prohibited the introduction of spirituous liquors into the colony; the other forbade the holding of slaves. In the one case the Trustees hoped to encourage and aid dependence upon free white labor, which they believed, and believed truly, could never flourish in competition with the labor of slaves; in the other case they knew that a free traffic in rum led to drunkenness, and that this was an unmitigated evil to rough emigrants necessarily freed, in large measure, from the ordinary restraints of law in older communities, and an exterminating curse to the savage tribes by which they were surrounded. But appetite and avarice were far stronger than acts of parliament or local laws. The most profitable trade in Carolina was the trade in rum; such wealth and prosperity as Carolina had, she derived from the use of slave labor. The law was powerless to keep rum out of Georgia, where on one side of an imaginary line were a people determined to buy, and on the other side a people determined to sell. Equally futile was it to attempt to keep out slavery. For a brief period the prohibition

Prohibition of slavery and the importation of rum.

of the ownership of slaves was evaded by hiring them in gangs from South Carolina. But even this soon ceased to be necessary.

The tenure of lands.

For a time, also, there was another grievance which was a real and serious injury. This was the descent of lands to sons only. Widows and daughters were debarred by law from any share in the real estate of husband and father, who had no right of devise of lands to any person whatever. The tenure was strictly and inalienably in tail male. The Trustees, however, were wise enough to see at an early period, that such a system in a new colony was impracticable and ruinous. But the progress of the colony was seriously interfered with from these various causes. It had besides to contend with the hostility of the Charleston tradesmen, who were disgusted with Oglethorpe's determination to control the traffic with the Indians within the boundaries of Georgia. The Governor was quite willing to grant licenses, but it was on condition that no rum should be sold to the natives. The trader looked upon this as a double wrong; not only was he deprived of his best customer for rum, but he also lost the advantage, when he in his turn became a customer for peltries, of having a drunken Indian to deal with. The merchants of Charleston were at a loss for words to express their indignation and contempt for such an interference with free trade. In Georgia the malcontents and the friends of the Trustees gave and took hard blows in a skirmish of pamphlets. In one of these, in a dedication to Oglethorpe, it was said with what was meant to be fine irony: "The valuable Virtue of Humility is secured to us by your Care to prevent our procuring, or so much as seeing, any *Negroes* (the only human Creatures proper to improve our Soil) lest our Simplicity might mistake the poor *Africans* for greater slaves than ourselves: And that we might fully receive the Spiritual Benefit of those wholesome Austerities, you have wisely denied us the Use of such Spirituous Liquors as might in the least divert our Minds from the Contemplation of our Happy Circumstances." [1]



Whitefield, on one of his early visits to the colonies, says, in a letter to the people of Maryland, Virginia, and Carolina: "I was sensibly touched with a fellow feeling for the poor Negroes." He wonders "they have not more frequently risen up in arms against their owners." "And though I heartily pray God," he adds, "they may never be permitted to get the upper hand, yet should such a thing be permitted by Providence, all good men must acknowledge the judgment would be just." But this "fellow feeling," unhappily, did not last long. The clamor for the introduction of slavery into the colony carried him along with it.

[1] *A True and Historical Narrative of the Colony of Georgia*, etc. Republished in *Force's Tracts*.

In accordance with a plan of Oglethorpe's and Charles Wesley's,[1] he had established near Savannah an orphan house, and in all his wanderings and preachings through America and Great Britain he never forgot to beg of the charitable for means to support his Georgia orphans. But he cut off from one end of his mantle of charity to piece out the other. He discovered what clear gain it was to rob the poor of their wages; how safe and expedient a thing to do if the law would sanction it; how much easier to support those poor orphans, the constant theme of his eloquence, if there was nothing to pay for the labor on which they depended. The law forbade it in Georgia; but there was nothing to prevent his holding slaves in Carolina. He bought a plantation there for that purpose, and, while thanking God that the investment was profitable, he complained in pathetic terms to the Trustees of the inconvenience of that law which compelled him to have his slaves and his orphans in separate provinces. It is a pitiable record of inconsistency and weakness. Before he was himself tempted to become a slaveholder, he had, in his expostulation with the colonists, reminded them of "God's taking cognizance, and avenging the quarrel of the poor slaves;" that "God is the same to-day as He was yesterday, and will continue the same forever. He does not reject the prayer of the poor and destitute, nor disregard the cry of the meanest negroes. Their blood which has been spilt for these many years in your respective provinces, will ascend up to Heaven against you. I wish I could say it would speak better things than the blood of Abel." Now his eyes were blinded, and he could not see that the blood was on his own hands. So far as the influence of his character and example went, no man did more than he to fasten slavery upon Georgia.

Bolzius.

The destination of the larger portion of the Grand Embarkation under Oglethorpe, was to build a new town upon the Island of St. Simon's, at the mouth of the Altamaha. Darien, farther up that river, the new Ebenezer of the Salzburgs, and

New towns built.

[1] *Life and Travels of George Whitefield.* By J. P. Gledstone, London, 1871.

Augusta — both on the Savannah — were begun at about the same time, but it was to Frederica, on St. Simon's Island, that the Governor gave his chief attention. The town itself and the approach to it were defended with military prevision by forts and batteries at different points on St. Simon's and Cumberland Island, for, as Georgia was to be the protection of Carolina against the Spaniards of Florida, Frederica was to be so formidable that no Spanish force would venture to leave it in their rear, should an invasion of the settlements north of it be undertaken. The Governor made it his base in the unfortunate expedition against St. Augustine, — already related in the chapter on Spanish colonization.[1] But this was not till after he had made a second visit to England, and returned, for the third time, with a military commission which included South Carolina as well as Georgia.[2]

Map of the Georgia Coast.

That he was enabled to hold, after his repulse from Florida, all the places he had built and fortified on the southern frontier, was due largely, if not alto-

[1] See vol. ii., p. 560, *et seq.*

[2] His commission was that of colonel, and not major-general, as we inadvertently said in the account referred to, though he was called by courtesy General. He went through the various gradations of military rank on his final return to England, till he was for years the senior general of the British army. His last military service was in the suppression of the Rebellion of 1745 under Charles Edward, the Pretender.

gether, to the friendly relations he had established with the Creeks, Choctaws, and Chickasaws. He learned, in the summer of 1739, that the Spaniards were making overtures to these tribes, and attempting to alienate them from the English; and that their success was not impossible, as many of the chiefs were exasperated by the disorder created among their people by the introduction of rum by traders from Carolina, who had gone among them without licenses. A grand council was to be held in August at the Indian town of Coweta, three hundred miles northwest of Savannah, and Tomo Chichi and other chiefs begged Oglethorpe to attend it.

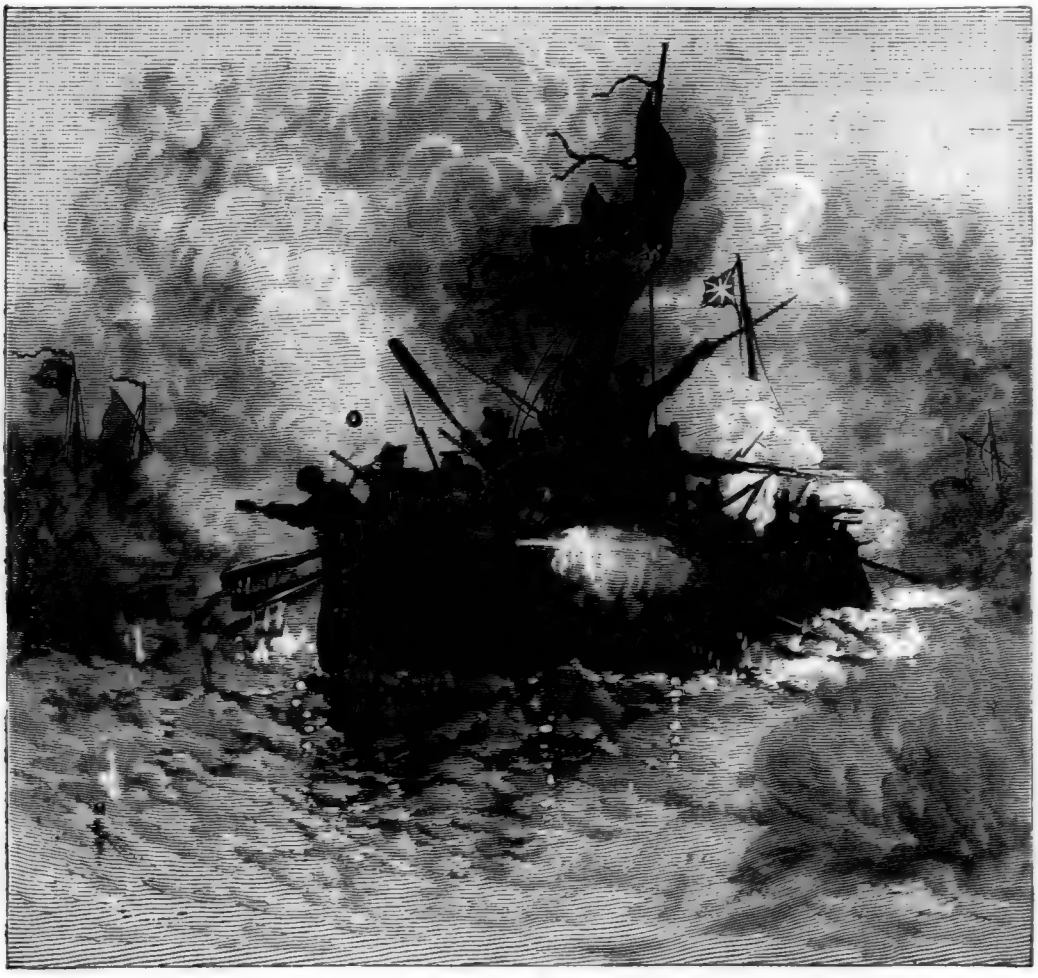
With only three or four attendants he made this arduous journey through the unbroken wilderness, into which, except for the first few miles, not a settler had penetrated, making his way through forests and swamps, crossing rivers, when wading or swimming was impossible, upon rafts built for the emergency, exposed by day to the heat of a southern summer, by night to dangerous malaria, sleeping upon the ground without shelter, or upon heaps of branches where the ground was wet. It was a journey of nearly a month each way; and so completely did the party pass out of the sight and out of the reach of their countrymen, that either they would bring back the tidings of their own safety, or never again, in all probability, be heard of. The courage to encounter, the energy to overcome the difficulties of such an enterprise, and the complete reliance upon the good faith of the Indians evinced in undertaking it, were virtues certain to command the enthusiasm and admiration of the savages. Chiefs of various tribes, who together could bring into the field 7,000 warriors, met Oglethorpe at Coweta. The personal influence he gained over them was of the utmost importance to him so long as he remained in Georgia, and to the colony long after he had surrendered its care into other hands.

Oglethorpe's journey into the interior.

It was not Indians only, however, whom the vigilant and determined enemy of the English, the Spaniards, endeavored to stir up against them. The slaves of Carolina were encouraged to escape to Florida, where they were organized into military companies, and to their officers were given the same rank, the same uniform, and the same consideration that distinguished the officers of Spanish regiments. It was fortunate for the five or six thousand whites of Carolina that their forty thousand slaves had no allies in Georgia at this critical period, when Spain was determined upon the conquest of these English provinces. Oglethorpe had scarcely recovered from the fatigue and serious illness which followed his long journey to the West, when tidings of a formidable servile insurrection in South Carolina reached him. The number of the in-

Servile insurrection in South Carolina.

surgents constantly increased as they took up their march toward Florida, devastating plantations and killing the whites as they made their way southward. But they were without discipline or organization. Giving themselves up, at last, to a carouse upon the liquor which they had brought away from some of the houses they had plundered, they were surrounded by a body of militia, attacked, some killed, some taken prisoners, and the rest dispersed. Oglethorpe issued a proclamation for the arrest of any fugitives who should be found in Georgia, and for any Spanish emissaries discovered in the province, and sent out a body of troops to enforce his orders. The wide frontier of free territory between the Savannah and the Altamaha, thus vigilantly guarded, was an efficient protection to slave-holding Carolina against the designs of the Spaniards.



Admiral Vernon.

How efficient was to be made evident when in the summer of 1742, two years after Oglethorpe's failure to take St. Augustine, the Spaniards in their turn, as we have briefly related in a former chapter, determined to invade the English provinces. Don Manuel de Montiano, who was still Captain-general of Florida, having been reënforced from Havana, appeared off St. Simon's Island with a fleet of more than thirty vessels and a force of five thousand men.[1] Reports of this proposed invasion had reached Oglethorpe some weeks before, and he had sent dispatches, asking for aid,

Invasion of the Spaniards.

[1] *A Memoir of General Oglethorpe.* By R. Wright. *A Sketch of the Life of General James Oglethorpe.* By Thomas Spalding. Hewit, in his *Historical Account of South Carolina and Georgia,* estimates the force at three thousand.

to the Governor of South Carolina, and to Admiral Vernon in command of the English fleet in the West Indies. But no assistance came in time from either. He called in his Highland troops from Darien; summoned those of his Indian allies who were within reach; released indented servants, and so mustered a force of about eight hundred men. There appeared first eleven galleys, probably in what is now

Fight of the Galleys.

called St. Andrew's Sound, between Jekyl and Cumberland islands. It was necessary to reënforce Fort William on the southern extremity of Cumberland Island, and to do this Oglethorpe started with three boats carrying two companies of men. As they crossed the Sound the Spaniards bore down upon them, and one of the three boats, under Lieutenant Folson, was driven back. But Oglethorpe, with the other two boats, pushed on through the fleet of galleys, delivering his shot right and left as he passed, with such effect that four of them afterward foundered, and the rest were seriously disabled. Pulling to leeward of the smoke of the battle, he escaped without the loss of

a man, while those who had watched the engagement from St. Simon's Island supposed — as Folson had also reported — that he and his men were utterly destroyed. He landed at Fort William, however, the troops requisite for its defence, removed thither the men and guns from St. Andrew's Fort, at the upper end of Cumberland Island, and then returned in safety to his fleet in St. Simon's Sound. This gallant action, and the immediate arrest of Folson for cowardice, aroused an enthusiasm and determination in his little army without which their situation would have been desperate and hopeless.

Fort William reënforced.

The enemy's fleet of thirty-two vessels, a few days later, ran into St. Simon's harbor with a brisk breeze, and were received with a heavy fire from the batteries on shore. To meet them on the water, Oglethorpe had only a merchant-vessel of twenty guns, on board which he put one hundred and ten men, and two schooners of fourteen guns and eighty men each, all with springs on their cables. On eight "York sloops" in the harbor he put one man each, with orders to sink or run them ashore in case they were likely to be taken. The object of the Spaniards was to get up the river, rather than destroy these vessels. Twice, however, they attempted to board the larger ship, the *Success*, and one of the schooners, but were repulsed with a loss of twenty men after four hours' fighting. Oglethorpe was everywhere at the right moment; sometimes on the vessels encouraging his men, sometimes on shore directing the batteries. When this hot work was over, and the Spanish fleet had fought their way through the fire of the batteries and the resistance of the three English vessels, then Oglethorpe ordered his troops ashore, thanked the sailors for their brave conduct, and ordered them to escape to Charleston. That nothing might be left behind to fall into the hands of the Spaniards, he dismantled his shore-batteries, spiked their guns, destroyed all the provisions, and fell back upon Frederica in good order.

Approach of the Spanish fleet.

The military skill with which the defences of Frederica had been laid out now became apparent. The town, well fortified, was at the head of a bay of difficult navigation; at one point, called the Devil's Elbow, no ship could pass without "going about," and batteries were so planted that as she made that manœuvre, she could be raked at once from three directions for three quarters of a mile. The Spaniards lacked the courage to expose themselves to so formidable a fire, and the fleet came to anchor at a point, about four miles below the town, called Gascoin's Bluff. Here the whole force of about 5,000 men was set ashore, that the attack might be made by land and in the rear.

But neither here had Oglethorpe's prevision been wanting. The road running southward from the town reached, at a distance of two or three miles, a marsh, along the edge of which it continued, with an impassable morass on one side and a dense and tangled wood on the other. A mile or two farther on, this road took a crescent shape with a width of only about sixty feet, making a defile dangerous to be caught in, with an enemy concealed at the inlet and outlet, and in the wood on one side, while over the morass, on the other, escape was impossible.

The road to Frederica.

This crescent terminated in a wood, where Oglethorpe, when he fell back the day before to Frederica, had left a small detachment of troops with some Indian allies. At dawn of day the Spaniards attacked this handful of men, and drove them through the woods to the entrance of the crescent. Speedy information was sent to the General, who, with such force as he could rally on the instant, galloped to the front, met the Spaniards and attacked them with such impetuosity that he drove them through the wood into the open ground beyond. Then placing a reënforcement to resist any farther advance of the enemy, he hurried back to Frederica, apprehensive that this movement in his rear might be a feint to distract his attention and draw off his men from an attack on the town by the fleet.

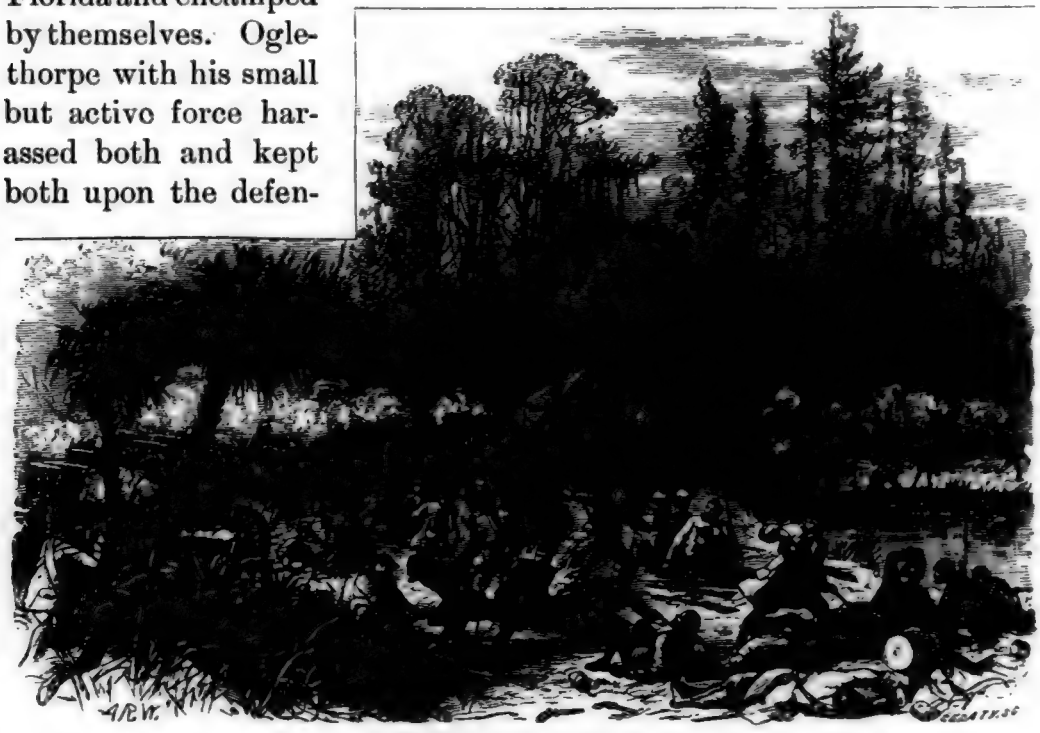
The Spaniards repulsed.

There was no movement, however, from the ships, and he moved down the road again with a larger force to meet the Spaniards in case of another advance in that direction. Before reaching the crescent he met the troops which he had left in the woods beyond, in disorderly retreat. The Spaniards — veteran troops selected from the army and brought from Cuba for this important service — outnumbered the English, probably six or seven to one. Oglethorpe's men, knowing how perilous their position would be should the enemy be able to get possession of the pass and cut off their retreat, swept through it in too great a panic to remember that they might make a successful stand there against their pursuers. They had already left it a mile or two behind when Oglethorpe met, rallied, and turned them back. They, as well as he, knew that should the enemy once pass through the crescent and up the road to the open prairie in the rear of Frederica, the chance of a successful resistance of 800 men against 5,000 was hopeless.

The Spaniards had pursued the panic-stricken Englishmen into the pass and marked by the retreating footsteps that they had fled precipitately through the farther entrance. The victory seemed complete, and the road beyond open to an advance at the pursuers' leisure. Their present position could be easily held against any attack in front, and

from the rear there was, they thought, no possibility of danger. On one side they observed the perfect protection of the impassable morass; on the other, what seemed to be an impenetrable wood. Confident in security, and exultant in success, the tired and hungry soldiers stacked their arms, threw themselves upon the grass for rest, and prepared to break their fast, for they had not as yet that day taken food. There were within the curve of the road probably from two to three hundred men.

The defile held by the English.



When the English had fled in utter confusion before the Spaniards into the defile, the rear guard was a company of Highlanders under the command of Lieutenants McKay and Southerland. They followed without being in the least touched by the panic which had seized their fellow-soldiers in advance, and when in the bend of the road they swept out of sight of the pursuit, the Highland lieutenants halted their men. A brief and hurried consultation resulted in a rapid movement. Before the Spaniards had again come in sight, every Highlander, and a few Indians with them, had sprung silently into the dense woods bordering one side of the road, and disappeared. Not the flutter of a single plaid, not the rustle of a single footstep upon the dried leaves of the forest, revealed to the Spaniards that they were leaving behind them a detachment of the troops whom they had seen only a few moments before in rapid retreat.

Slaughter of the Spaniards.

Stealthily and silently the Highlanders and Indians crept through the underbrush. McKay and Southerland placed their men so as to command both ends of the pass, and the whole of the sweep of the crescent. Without impatience, motionless as the trunks of the trees which hid them, they watched the movements of the enemy. When the arms were stacked and the Spaniards were dispersed in groups taking the needed food and rest, hilarious at success achieved, buoyant with the hope of success to come, there appeared suddenly, among the green foliage, the concerted signal of two Highland caps, raised in the air at different points. Instantly a volley of bullets was poured in among the Spaniards; then another and another. The wildest panic seized all who were not killed by these first discharges. Some plunged into the woods, only to be cut down by the broadswords of the Highlanders; some fled to the entrances, to be met there by death from an unseen foe. On one side were a few men, cool, collected, out of sight; on the other, there were many more, but in the open roadway, crazed with fear, unarmed, hopeless of escape, falling with every shot. The disparity of numbers counted for nothing. Oglethorpe was near enough to hear the din of battle, but not near enough to take part in it. The firing had ceased

before he reached the defile; as he rode rapidly into it at the head of his men, he was received with the shouts of the victorious and triumphant Highlanders and the yells of the Indians, who stood wiping swords and tomahawks, surrounded by the dead and dying Spaniards, of whom hardly a man had escaped.

No further attempt to approach the town by land was made by the Spaniards, and an advance two or three days afterwards, by water, in boats, was easily repulsed by the batteries, and by a judicious disposition of men along the shores of the bay. Disaster produced dissension among the invaders; the Havana troops separated from those of Florida and encamped by themselves. Oglethorpe with his small but active force harassed both and kept both upon the defen-

The Spaniards surprised.

sive. A proposed assault upon one of them with six hundred men at the dawn of day, was defeated by a Frenchman, who gave the alarm by a premature discharge of his gun and made his escape into the Spanish camp. The misfortune was the greater that the man knew exactly the condition and resources of the English, and it was of the last importance that of these the Spaniards should be kept in ignorance. By the boldness and energy of Oglethorpe they were persuaded that he was much stronger than he really was; he might be overwhelmed by mere force of numbers, should the Spanish commanders know that their fleet of thirty-two vessels and force of 5,000 men were opposed by only 800 men. To meet this new emergency he resorted to a desperate bit of strategy, suggested by the treachery of this Frenchman.

He immediately wrote a letter of instructions to the French deserter which assumed him to be a spy sent into the Spanish camp. He ordered him to do all in his power to persuade the Spanish commander that the English could muster only a few hundred men, and that Frederica was really almost defenceless; and he was to offer to pilot the fleet up the river that it might thereby be detained, if only for three days longer. For, the spy was to let drop no hint of the immediate approach of reënforcements of 2,000 men from Charleston, according to dispatches which, it was declared, had been received since his departure; nor that an English fleet was off the coast bound to Frederica, and that Admiral Vernon was on the way to attack St. Augustine. Should the Frenchman strictly and skillfully obey these directions, he was assured that the reward already paid him should be doubled. This dispatch was put into the hands of a Spanish prisoner, who was liberated and heavily bribed on condition that he would faithfully deliver it to the Frenchman on his arrival in the camp of the enemy. This man, as Oglethorpe had presumed he would be, was taken before the Spanish commander when he reached the Spanish lines, was questioned as to his escape, and, on giving some confused account of himself, was searched and the letter taken from him.

Oglethorpe's stratagem.

Desperate as the expedient was, it happened to be well-timed and successful. A stratagem was suspected, but so much credence was given to the intercepted letter that the Frenchman was put in irons, and the Spaniards delayed all movements, awaiting further tidings. Meanwhile, in the course of two or three days, some passing vessels were seen off the coast, which the Spaniards at once believed to be the advance guard of that English fleet which, as the letter hinted, was approaching. The Spanish general permitted himself to doubt no longer; his whole army was hurried on board his vessels; all sail was crowded for St. Augustine; Oglethorpe, audacious to the last, chasing them out of the sound with his few boats — too few and too small to venture upon an attack.

Retreat of the Spaniards.

So the formidable invasion came to this sorry and almost ludicrous conclusion. But the brave and skilful defence of Frederica, nevertheless, had saved two provinces to the British Crown, and while it covered the Spanish commander with disgrace and ridicule, it gave great military renown to the English general. It was the last serious attempt of Spain to establish her assumed right to territory north of the Altamaha River, though for the twenty years longer that Florida remained a Spanish province, hostilities occasionally broke out — as when in 1743 Oglethorpe again carried the war to the very walls of St. Augustine.

A year after that expedition he returned to England — recalled by his own request. Calumnies had gone before him from enemies in Charleston; one Cook, whom he had made a lieutenant-colonel at Frederica, but who had deserted his command on the plea of illness just before the late invasion, had followed with accusations which jealousy and malice had at length formulated. The General's pecuniary affairs also demanded his personal presence in London, as they, not through any fault of his own, but through the official stupidity at the war-office, had become entangled.

Oglethorpe's final return to England.

That there was nothing in all these complications that he could not and did not satisfactorily answer, is plain enough from the fact that Cook was dismissed from the service when his accusations were brought before a board of generals, and that Oglethorpe in the course of two years was raised to the rank of major-general and two years later to that of lieutenant-general. He did not again return to Georgia, but his warm interest in the colony, to the end of his long life of ninety-six years, never wavered. And to the very end of his days he preserved the vigor of character which always distinguished him, though he gradually retired from public life. Not long before his death Horace Walpole wrote of him: "His eyes, ears, articulation, limbs, and memory would suit a boy, if a boy could recollect a century backwards;" and added — "two years and a half ago he challenged a neighboring gentleman for trespassing on his manor." This vigorous old man was often a

Oglethorpe in 1785. From a Sketch from Life.[1]

[1] The inscription on the old print from which this is copied, states that the sketch was made at the sale of Dr. Johnson's library, Feb. 18, 1785, "where the General was reading a book he had purchased, without spectacles."

conspicuous figure in the literary society of London in the last quarter of the eighteenth century; and it is an interesting fact that the venerable Samuel Rogers, the poet, whom many living persons knew, remembered that when a young man he met General Oglethorpe, the founder of the last English colony on the Atlantic coast of America, at the sale of Dr. Johnson's library.

After Oglethorpe's return to England the Trustees appointed a president, — William Stephens, who had been the colonial secretary, — with a council of four for the government of Georgia. The population at this time numbered only about fifteen hundred persons, and these were, for the most part, poor and not prospering. If their energy and industry had not been misdirected in the attempt to make silk and wine the staple products of the country, they were at least disappointed and depressed at the failure of the experiment. No great degree of prosperity, moreover, was possible so long as the settlers were harassed with a constant dread of their Spanish and Indian neighbors, and were so frequently engaged in active warfare. The tenure of land, though the laws of the Trustees were modified from time to time, continued unwise and burdensome; and the discontent was almost universal at the prohibition of the use of slave labor, which was so obviously a source of wealth in the neighboring province. There was little agriculture, almost no commerce, an impoverished people, and a feeble government. The brilliant promises of the early days, if they were still promulgated, were no longer believed in, and few new emigrants sought homes in a colony where, though prosperity was possible, it was certain that a struggle with many difficulties awaited them.

Condition of the colony.

In 1752, the Trustees, convinced at length, by an experience of twenty years, of their inability to govern profitably for themselves or wisely for the colonists, voluntarily surrendered the charter to the Crown. An incident had occurred, however, five years before, at Savannah, which came near making this surrender a barren concession. A new claimant appeared to a portion, if not the whole, of the territory of Georgia, and had the title been established the province would, probably, have passed out of the control of the Trustees.

Surrender of the charter.

That Mary Musgrove, the half-breed Indian whom Oglethorpe had made his interpreter on his first arrival, had, after losing successively two English husbands, — John Musgrove, Jr., and Jacob Mathews, — married the Rev. Thomas Bosomworth, a clergyman of the Church of England, at one time a missionary of the Society for the Propagation of Christian Knowledge, and a chaplain to Oglethorpe. He relinquished these clerical duties for the more

An Indian insurrection.

profitable calling of the propagation of cattle, and ran in debt for large herds in South Carolina. The islands of Ossabaw, St. Catherine's, and Sapelo, and some portion of the mainland, had been reserved to the Creeks by treaty. Bosomworth induced the Indians to cede these lands to him for the accommodation of his herds. But the enterprise was a failure, and it is conjectured that he then resorted to a desperate measure to relieve himself from debt. It is quite as likely, however, that the acquisition of so much influence over the Indians as to induce them to part, for a trifling consideration in merchandise, with three islands, extending nearly half the length of the coast of Georgia, suggested the more ambitious scheme to be accomplished by their help.

Mary Musgrove, Mary Mathews, Mary Bosomworth, — as she was known by the surnames of her successive husbands, — was a woman of mark, as an interpreter and a trader, and had acquired, in both callings, great power over the Indians. She had as well, it seems, the respect and confidence of Oglethorpe, who, on leaving Georgia, presented her with a diamond ring. Apparently she was quite content for years to act as the common friend of both races, being allied to both by blood, — serving one by selling it peltries, the other by selling it rum.

But as the wife of Bosomworth, and probably at Bosomworth's instigation, she aspired at length to higher things. She was, or pretended to be, descended from a royal race of Creeks, and, calling the chiefs of that nation together, she persuaded them to acknowledge her as their queen. She asserted her sovereign right to all the territory of the Upper and Lower Creeks; she disavowed all allegiance to the King of England, whose equal she assumed to be; and she sent a messenger to Savannah demanding from President Stephens a recognition of her claims, and threatening, in case of refusal, the extirpation of the colony. Queen Mary.

If all this had, at first, a ludicrous aspect, it became serious enough when Mary approached the town at the head of a large body of Indians. The whole militia of the province — which numbered, however, only a hundred and seventy men — had been hastily called together. A company of horse was sent out to meet the invaders, who were so far overawed by the determination of the English that they agreed to lay down their arms before entering Savannah. But the approach of this Indian host, though unarmed, was quite enough to excite the utmost apprehension among the people. At the head of this formidable procession marched Bosomworth, in his canonical robes, and Mary the queen. These royal persons were followed by the principal chiefs of the Creek nation; and behind them came the tumultuous, hideous, howling, raging mob of naked savages.

The courage and sagacity of President Stephens and his council were sufficient for the emergency. No signs of fear were seen in Captain Jones and the provincial militia as, drawn up in the public square, they received the warriors, who so many times outnumbered them, with an artillery salute of fifteen guns. It is questionable, however, whether a general massacre could have been long averted had not the savages been induced to lay down their arms at the outset. In the course of the negotiations, which continued for several days, there were moments of exasperation and fury, when Bosomworth, enraged at imprisonment, and Mary, wild with drink, could easily have led their followers, had they been armed, to carry out the threat of extermination. But the leaders were separated, as much as possible, at first by persuasion and then by force, from the chiefs, and these at length were brought to a calmer and more rational state of mind. A judicious use of presents is never without influence upon the contemplative Indian, and Stephens brought it to bear with great skill upon the Creek chieftains. Then he reminded them — of what they must have known even better than he — that there was no strain of royal blood in the veins of Mary, but that this daughter of some common squaw by some obscure white man was, when "in a poor, ragged condition, neglected and despised by the Creeks," raised into consideration by Oglethorpe, as an interpreter. Bosomworth stormed and threatened when he saw his followers fall away from him; Mary, in a drunken rage, stamped upon the ground which, she swore by her Maker, was all hers; she cursed Oglethorpe and his treaties, and devoted to speedy death all these white intruders. More than once there was imminent danger that the Indians, inflamed by these appeals, would put the threats in execution; but the chiefs, at last convinced that the claims of this half-breed impostor to be their queen were preposterous, and that her husband was a liar and a cheat, consented to disperse.

The insurrection suppressed.

The province remained in the hands of the English without further molestation from the Bosomworths, who, however, seem to have been, in later years, persons of some consideration, notwithstanding their attempt to set up a throne for themselves within the dominions of the King. It is quite possible that they still retained so much influence over the Creeks as to be too formidable for punishment, while the colony remained too feeble to risk a struggle.

The growth of the colony was slow even for ten years after it became a royal province. When, in 1754, a convention of delegates from the several colonies assembled at Albany and resolved to form a union, Georgia was not represented; and in the apportionment of representation in the proposed Congress under that plan, no members

were assigned to that province. It was only, probably, because the colony was too insignificant for recognition. It was not till at the Peace of Paris, in 1762, when Florida was ceded to England, and Georgia relieved from the presence of a dangerous neighbor, that it gave much promise of prosperity.

Penn's return to America.

WHEN William Penn returned to his colony in December, 1699, it was after an absence of fifteen years. The Meetings of Friends in England parted from him with the warmest assurances of their respect and affection, and on his arrival in the colony he was received with enthusiasm. It was not thought too trifling an incident by a Friend[1] to record in his journal that some young men — belonging, no doubt, to the world's people — determined to salute the arrival of the Governor at Chester by the firing of cannon. So unseemly a demonstration was forbidden by the magistrates; the salute, nevertheless, was made with two small field-pieces, but done so clumsily that the premature discharge of one of the guns so mutilated the young man who was loading it that he afterward died. It is an evidence of the paternal relations which Penn maintained with his people, that in the Proprietary Cash Book of that period are several entries of sums paid "for B. Bevan, of Chester, who lost his arm," closing with one of "April 20th, for his funeral charges."

The colony was not yet nineteen years old. Penn was thinking of it as he last saw it, when, before embarking in England, he said he was about to return to "the American Desart." But he found a province of more than twenty thousand inhabitants, "a noble and beau-

[1] Thomas Story's *Journal*.

tiful city" of "above two thousand houses, and Most of them stately and of Brick, generally three stories high, after the Mode in London." There were "curious wharfs," as "Chestnut Street Wharf, High Street Wharf, Mulberry Street Wharf, Vine Street Wharf," and from one of these the goods were carted into the city "under an Arch over which part of the street is built." There were many lanes and alleys leading from Front Street to Second Street; and some of the principal streets were named Walnut, Vine, Mulberry, Chestnut, Sassafras, "taking their names from the abundance of those Trees that formerly grew there."[1] Those familiar with Philadelphia will observe how accurately names and localities have been preserved for nearly two centuries. Penn took for his town residence the "Slate Roof House," as it was called, in Second Street, at the southeast corner of Norris's Alley. In this house was born John, the oldest son of his second wife, Hannah Callowhill, — the only one of his children born in this country, and called therefore, by way of distinction, "The American." But his principal residence, to which he removed in the spring, was his country-seat, Pennsbury Manor, four miles above Bristol, on the Delaware River.

Aspect of Philadelphia.

The "Slate Roof House,"
as it appeared just before its demolition in 1868.

Birth of John Penn.

Eighteen years before, during his first visit, a mansion had been built at this place, spacious and well appointed, and worthy of its surrounding domain of about six thousand acres. Here he lived in a style to which, as an English country gentleman, he was accustomed, and here he exercised the large hospitality and influence becoming a provincial proprietor and governor. From the gen-

Pennsbury Manor.

[1] *An Historical and Geographical Account of the Province and Country of Pennsylvania, etc.* By Gabriel Thomas.

tle eminence on which the house stood, an avenue of poplars led from the broad porch down a terraced bank to the river; the grounds were laid out in lawns and gardens; here and there were planted trees from other parts of the country, not indigenous to Pennsylvania; there were nurseries of carefully selected fruit and forest trees, and shrubs imported from England to enrich the native flora; and the most beautiful of the native flowers were gathered together in beds. Only a few acres of the surrounding land were cultivated, and the old woods were preserved, except where it was necessary to cut a road, or where some added charm could be given to the landscape by opening a vista to a stretch of the river, or to a distant view. In the river, at the foot of the poplar avenue, swung with the current the barge of the Governor. Near the house were buildings for all the convenient offices of such a residence, — a detached kitchen and larder; a wash-house; a brewery, that there should be no want of the national English beverage, of more universal use at that period, at all meals, than tea and coffee are now; stables for imported blooded horses, and English carriages. In the spacious rooms of the mansion, where Hannah Penn — described as "a delicate, pretty woman, sitting beside the cradle of her infant" [1] — bore gentle sway, were signs of luxurious living not then quite common in the colonies, in satin-covered and plush-covered cushions, in damask and camblet curtains, in silk blankets, in plate and Tunbridge ware, and blue and white china, and in damask table-cloths and napkins, in high-backed chairs and spider-legged tables of solid oak.[2] Everywhere, without and within, were the evidences of cultivated tastes, and, combined with them, the purpose was apparent of so using wealth that it should conduce to the enjoyment and the good of others. For, there was no ostentation and no assumption of superiority. In the great hall of the house were always standing long tables, at which a hearty welcome awaited all comers, whites or Indians, whether of high or low degree. There is a tradition of one entertainment given to the Indians, when they were so numerous that it was necessary to lay the tables out-of-doors, in the great poplar avenue, and one hundred roasted turkeys were provided as a part only of the ample bill of fare.[3] When among the Indians, in their own villages, Penn ate of their simple food with as much heartiness as he entertained them at his own more elaborate feasts. Nor did he disdain, on such occasions, to join in their sports, to try a fall with their athletes in a wrestling match, or to put his agility against theirs in a contest in running or jumping. No English-

His hospitality.

man ever so gained their good-will, affection, and respect, and there was no more affectation or condescension in the familiarity with which he associated with them, than there was want of sincerity in the uniform policy of absolute justice which he made the rule of all his dealings with the natives. A perfectly sincere simplicity in all his social intercourse was a marked trait of Penn's character. He was, apparently, incapable of comprehending that mere worldly position made any difference between him and his fellow-men. So well was this understood among those who saw his

His relations with the Indians.

Penn and Rebecca Wood.

daily life, that only a stranger would remark upon it, as a thing worthy of notice, that Penn rode up to the Darby Meeting with a young girl, — Rebecca Wood, — whom he had picked up on the way, sitting behind him on the bare back of the horse, her naked legs and feet dangling down by the well-clothed limbs of the Governor. Yet he was by no means indifferent to personal appearance and presence; the ladies at Pennsbury Manor wore silk gowns and jewelry; its master was careful of the texture of his garments,

Personal habits.

and, if his coat was plain, it probably fitted nicely to his shapely figure; he did not think it essential to the purity of the inner man that the outer man should be clothed in the leather breeches of George Fox; in one year, while in America, he bought four wigs, at a cost of twenty pounds.

Return to England.

Pennsbury Manor he, no doubt, sincerely hoped would be his permanent home for the rest of his days, and that there he could devote himself to the government of his province, and the development of its resources. Within two years, however, he was

Pennsbury Manor.

recalled to England, where his presence was absolutely necessary to defend his proprietary rights against a proposition introduced by bill in the House of Lords, to bring all the provinces under the direct government of the Crown. "My heart is among you," he said, in a speech to the Assembly, "as well as my body, whatever some people may please to think: and no unkindness or disappointment shall (with submission to God's providence) ever be able to alter my love to the country, and resolution to return and settle my family and posterity in it." But now, he thought, he could best serve the colony and himself on the other side of the ocean. It was, however, a final leave-taking. He never again saw his beloved Pennsylvania; anxiety, perplexity, and pecuniary embarrassments vexed the remainder of his days, and of the last twenty years of his life he doubtless looked back to the two years passed at Pennsbury Manor, as the only happy ones.

Nor did he ever cease, so long as disease left him the power of volition, to long for a return to that tranquil residence on the banks of the Delaware, and to hope that he might escape to it from the cares and vexations which beset his declining years.

He left the colony late in October, 1701, and, though his visit had not been long, he had reason to reflect with satisfaction, upon the good that had resulted from it. Many laws were passed at his suggestion, which were directly conducive to the welfare of the people, and where his influence was less direct, it was not less permanent. A minute of the Philadelphia Monthly Meeting in 1700, says: "Our dear friend and Governor laid before the meeting a concern that hath laid upon his mind for some time, concerning the negroes and Indians." He had, in the spring of that year, attempted to procure the passage of a law, — which the Assembly rejected, — for regulating the marriage of negroes; for his theory seems to have been, that a care for the moral well-being of the slave was the imperative duty of the master — a theory which was the high-road to doubting whether the relation of master and slave was not itself immoral. That it was absolutely unchristian, inhuman, and impossible of existence in a high state of civilization, had no more occurred to Penn, as a self-evident proposition, than to anybody else a hundred and eighty years ago. He was himself an owner of slaves; the very possibility of such a relation, however, seems to have impelled him, instinctively and irresistibly, to be rid of it. In a will, written just before he sailed for England, he gives freedom to his blacks, but from the phraseology in which the bequest is conveyed, it is apparent that it was meant, not to confer a new benefit, but to guard one already bestowed. The benefit of the doubt, in his mind, — if he had only come to the point of doubt, — as to the morality of slave-holding, he gave to his slaves.[1]

Penn a slaveholder.

Twelve years before this date, the German Friends about Germantown had sent to the Monthly Meeting a strong though quaint remonstrance against "the traffic of men-body." "We hear," they said, "that the most part of such negroes, are brought hither against their will and consent, and that many of them are stolen. Now, though they are black, we cannot conceive there is more liberty to have them slaves, as [than] it is to have other white ones. . . . . But to bring men hither, or to rob and sell them against their will, we stand against. . . . . Pray, what thing in the world can be done worse toward us, than if men should rob or steal us away, and sell us for slaves to strange countries; separating husbands from their wives and children. Being now this is not done in the manner we

Friends and Slavery.

[1] See Janney's *Life of Penn.*

would be done at, therefore, we contradict, and are against this traffic of men-body." The memorial was referred to the Quarterly Meeting, and by that to the Yearly Meeting of Philadelphia. This body declined to give a positive judgment upon the question of the "unlawfulness and lawfulness of buying and keeping negroes."

Discussion, however, was not silenced. Eight years afterward — 1696 — in response to the remonstrances of subordinate meetings, the Yearly Meeting advised, "that Friends be careful not to encourage the bringing in of any more negroes; and that such as have negroes be careful of them, bring them to meeting, and have meetings with them in families, and restrain them from loose and lewd living, as much as in them lies, and from rambling abroad on first days [Sundays]." So also about the same time the schismatics who followed George Keith, charged Friends that "they should set their negroes at liberty, after some reasonable time of service."[1]

Growth of opposition to slavery.

The minds and the consciences of Friends had been thus prepared for a further consideration of the condition of the Africans, when the subject was again brought before the Yearly Meeting and the Assembly by Penn. It may have been partly because there was no precedent for such legislation as he proposed, that the Assembly declined to accede to his wishes. The good seed, nevertheless, did not perish, though it was of slow growth. It was observed by Clarkson, that when, in later years, the preponderating influence in the Assembly was on the side of the Proprietary and the Friends, legislation leaned to mercy.[2] But so long as Pennsylvania remained an English colony, every attempt to interdict the importation of African slaves was promptly suppressed by the English government.

The convictions of Friends, however, and their action in Yearly Meetings, were beyond the reach even of the Crown. For the next half century these bodies "bore their testimony;" first, upon the responsibility of those Friends who were slaveholders, for the moral condition of their slaves; then, against any increase of their number by importation or purchase; and finally, in 1755, a rule of discipline was adopted for the disownment of all members of the Society who persisted in the practice of buying negroes. Three years afterward, Friends were advised to manumit their slaves; in 1776 this advice was enforced by discipline, and Friends were no longer permitted to retain their membership if they continued slaveholders.

To this final and conclusive step, the Society was gradually led by

the persistent and earnest preaching and writing, through many years, of Burling, Sandiford, Lay, Woolman, Benezet, and other earnest persons, though the forerunner of them all was William Southeby, a Roman Catholic, of Maryland, who wrote against slavery before 1700, and in a petition to the Assembly, in 1712, prayed for the abolition of slavery in Pennsylvania. It may be that others preceded or followed Friends in that humane work, but, as a religious society, they were the earliest Abolitionists. It was impossible, moreover, that the agitation among them, which continued for three quarters of a century, till a Quaker could no longer be a slaveholder, should not influence the character of the people at large, and the legislation of the province. As the feeling against slavery grew stronger year by year in the Yearly Meeting, so from time to time hostility to the slave trade showed itself in the Assembly; and at length in 1780, Pennsylvania, first of all the States, passed an act for the gradual emancipation of all the slaves within its jurisdiction.

Early Abolitionists.

Abolition of slavery in Pennsylvania.

But if generations of the unfortunate Africans were to perish before the benevolent purposes of Penn bore perfect fruit, his policy in regard to the Indians was firmly established before he left for England. A new treaty was made in April, 1701, with the assembled chiefs of all the leading Indian tribes within his territory, securing to them and all their subjects the protection and the privileges of the colonial laws, without restriction. "That the said Indians," it promised, "shall have the full and free privileges and immunities of all the said laws, as any other inhabitant; they duly owning and acknowledging the authority of the Crown of England and government of this province." And "that if any of the said Indians, by means of evil-minded persons and sowers of sedition, should hear any unkind or disadvantageous reports of the English, ... such Indians shall send notice thereof to the said William Penn, his heirs or successors, or their lieutenants, and shall not give credence to the said reports till by that means they shall be fully satisfied concerning the truth thereof; and that the said William Penn, his heirs and successors, or their lieutenants . . . . do the like by them." The immediate cause of this treaty was a question as to the title of lands on the Susquehanna which Penn had purchased of the Five Nations, through Governor Dongan, of New York. The Susquehanna and the Conestoga Indians denied the right of the Five Nations to sell these lands; but by this treaty Penn's title was confirmed, and a bond of friendship established between these tribes and the Pennsylvanians, which remained unbroken for more than half a century.

Renewed treaty with the Indians.

A new charter.

Before his departure, the Governor gave to the colony a new charter, under which it continued to be governed till it ceased to be a proprietary province. It gave to an annual Assembly, consisting of four persons out of each county, power to propose bills, a privilege hitherto belonging to the Governor, to judge of the qualifications and elections of their own members, and to "sit upon their own adjournments," with "all other powers and privileges of an Assembly, according to the rights of the free-born subjects of England, and as is usual in any of the King's plantations in America." With great reluctance, Penn affixed to this new constitution his consent that the province and the territories — the lower counties, now the State of Delaware — should have separate legislatures, in case they should not afterward "agree to join together;" but he made one last effort, just before his going, to reconcile the two, and sent to the representatives of both an appeal which was as strong as it was brief.

The Delaware counties.

Andrew Hamilton.

"Friends," he wrote, "your union is what I desire; but your peace and accommodating one another is what I must expect from you: The reputation of it is something; the reality, much more. And I desire you to remember and observe what I say: Yield in *circumstantials* to preserve *essentials;* and being safe in one another, you will always be so in esteem with me. Make me not sad, now I am going to leave you; since it is for you, as well as for your Friend and Proprietary and Governor, William Penn."

Special charter to Philadelphia.

One more act remained before his leaving — the grant of a special municipal charter to the town of Philadelphia. This done, and Andrew Hamilton appointed deputy, with Penn's warm friend, James Logan, who had come with him from England, as secretary, the founder of Pennsylvania sailed down the Delaware as the first year of the new century drew to a close, and looked his last upon the field of his "Holy Experiment."

It was December when he reached home. In February the King died, and with the reign of Anne, the daughter of the man who had

never been false to Penn, whatever treachery he showed to others, the Quaker came again into court favor. The proceedings against his charter were soon put aside; and had political opposition at home been all he had to fight against, he would have gone back to America completely victorious and prosperous.

But he had still worse things to face. New tidings reached him continually of the dissensions which had been renewed in Pennsylvania as soon as he had left it. The old dispute between the legislatures broke out still more violently; and, besides this, he was overwhelmed with complaints from the people of petty grievances. The new municipal government of Philadelphia did not work well; there was great opposition to the payment of the quit-rents now falling due; Deputy-governor Hamilton died at the end of 1702, and was succeeded the next year by John Evans, whose earlier administration proved eminently unsatisfactory; in brief, for several years Penn heard little else than bad news from the province, or from Philadelphia, or from personal friends; while his private affairs prevented his returning to restore the prosperity his presence might have brought about.

Complaints from Pennsylvania.

John Evans, Governor.

For, from a long accumulation of causes, his private property was found to be embarrassed almost beyond remedy. The steward, Philip Ford, to whom he had intrusted his affairs in England, had died just after Penn's arrival at home, and out of the confusion in which the property was left, it soon became clear that Penn had been defrauded of large sums. But the worst feature of the matter only appeared when Ford's widow — apparently a woman with as few scruples as her husband — brought forward a lien on the American province, which Penn had given her husband as security for money advanced at the time of the second voyage to America. This indebtedness Penn had paid off by installments, but these Ford had carefully refrained from crediting in the accounts, while the apparent indebtedness had been increased to £12,000, by computations of compound interest every six months, at six and eight per cent. The accounts, which Penn had carelessly received without examination, would not — wrote Thomas Callowhill, a merchant of Bristol, and Penn's father-in-law — "had they been corrected in time, have amounted to a tenth part of what they now are." But evidence of Penn's payments was wanting, and when the widow and the son of Ford brought an action against the proprietor, judgment was given in their favor. Penn was arrested, and lodged in the Fleet Prison, where he remained for nine months. The object of the Fords was to get possession of the province, but despairing of that after several hearings before the Lord Chancellor, they consented

Penn's troubles with the Fords.

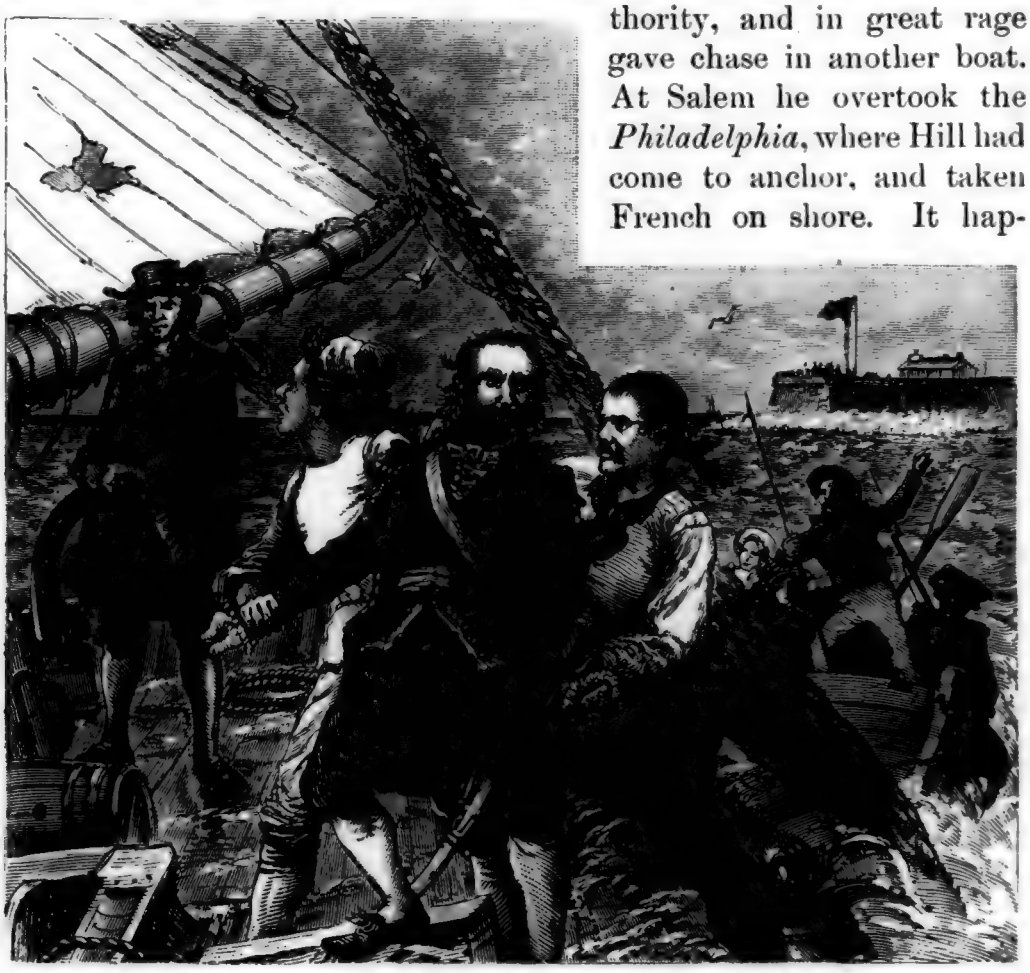
Penn in Fleet Prison.

to a compromise. To meet the payment of the sum agreed upon — which was nearly eight thousand pounds — Penn mortgaged the province to several of his friends, and entered into negotiations for its sale to the Crown. These dragged on for several years, and were about to be concluded, when an attack of paralysis, from which he never recovered, though he lived several years longer, rendered him incapable of business, and the negotiations came to an end.

Proposes to sell his province.

The disappointments and anxieties of this period, which covered the last vigorous years of Penn's life, were aggravated by the unsatisfactory condition of affairs in the colony. Evans's administration was unwise and oppressive. He refused to pass a reasonable judiciary bill, presented by the Assembly; he undertook to enroll a militia force, and foolishly aroused the people of Philadelphia by a false alarm of the approach of a French fleet, keeping the town under arms for two nights, and pretending that the consternation of the inhabitants was the best proof of the necessity for military preparations; he imposed burdens upon commerce, by compelling all vessels to report at New Castle, and those inward bound to pay an impost duty; he granted a commission for privateering; and finally he brought reproach upon the colony by the scandals of his private life. A vigorous opposition party was aroused against him, of which David Lloyd, a Quaker lawyer, was the able, but not always scrupulous leader. He united all who were not Friends, and many who were, against the proprietary party under Evans. And it was a Quaker who resisted and effectually put an end to the Lieutenant-governor's attempt to raise a revenue by subjecting vessels coming up the Delaware to a tonnage duty.

Administration of Governor Evans.



An Opposition party.

Richard Hill, who was one of the Council, determined to test the question, and went down the river in a vessel of his own, bound to Barbadoes. As he approached the fort at New Castle, two of his friends, Isaac Morris and Samuel Preston, who had embarked with him to carry out his purpose — both also Quakers, and merchants of great respectability — went on shore and informed the commander, John French, that Hill's vessel was standing out to sea, and would refuse either to report to him or to submit to the fine for not reporting. French attempted to bring the vessel to by opening fire from his guns, and a shot tore through her mainsail. But Hill himself had taken the helm, and the *Philadelphia* stood steadily on her way. French threw himself into an armed boat and pursued her, and as he came alongside, Hill ordered a rope to be thrown him. As the commander stepped on deck he was secured and taken to the cabin as a prisoner, and his boat was cut adrift.

Contest on the Delaware.

French begged to be released, and appealed to Hill's pity by declaring he was ill. "If that be the case," answered the Quaker, "why didst thou come here?"

From the fort, Evans himself had witnessed this defiance of his authority, and in great rage gave chase in another boat. At Salem he overtook the *Philadelphia*, where Hill had come to anchor, and taken French on shore. It hap-

Passing New Castle.

pened that Lord Cornbury of New York was at that place, who, as Governor of New Jersey, claimed to have jurisdiction over the waters of the lower Delaware. The parties appeared before him, and his decision, that the free navigation of the river should not be interrupted, was submitted to, because it could not at the moment be resisted. Logan, the secretary of the province, afterward waited upon him, and he wrote to Penn, "I entered fully into the matter, and protested, in thy name and behalf, against these proceedings, as being not only against thy inclinations, but evasive of thy rights. I found he had resented the matter to our Governor, and will resent it home to the Lords of Trade." But Hill's summary method of resentment had already settled the question. Others followed his example. He, with a large number of the merchants of Philadelphia, waited upon the

Assembly, and that body unanimously adopted an address to the Governor, in which they declared that the "arbitrary actions and oppressions complained of," were an abuse of the Queen's authority, an open defiance of the royal grant, that they "obstruct our lawful commerce, and invade our liberties, rights, and properties, and under the pretence of fortifying the river for the service of the Queen, commit hostilities and depredations upon her liege people." The Delaware was henceforth free of any exactions from Governor Evans.

Complaints against James Logan.

"These are very cloudy times indeed, and to us a day of severe trial," Logan wrote to Penn. The secretary was a man of great integrity, and too wise to approve in all things of the course and character of Evans. But his official relations to the Lieutenant-governor, and his efforts to maintain the rights of the Proprietor, made his position one of great difficulty. He was accused of having aided Evans in his senseless scheme of spreading the alarm of the approach of a French fleet, when the inhabitants of Philadelphia were thrown into so great a panic that many abandoned their houses to escape into the country, injuring and destroying their household goods in attempting to conceal them. For this and other wrong-doings of Evans, Logan was made the scape-goat. An indictment was found against him, and though nothing came of it in the end, it was a cause of great vexation both to him and his warm friend, the Proprietor. But though the "cloudy times" pervaded all this period of Penn's life, there were intervals of sunshine. The conduct of the opposition sometimes produced reaction, and the proprietary party would attain again a majority in the Assembly. Thus, David Lloyd overshot the mark when he sent to England — to Penn and other Friends there — a memorial setting forth the real grievances of the colonists with great exaggeration and more bitterness; and this he signed as Speaker of the Assembly, though it had never been submitted to that body. It had been proposed to send an official remonstrance to the Proprietor, and to ask for the redress of certain wrongs; but when it became known that Lloyd had taken advantage of this purpose to address

James Logan.

Lloyd's letter to Penn.

Penn in a tone that the facts did not justify, and with an assumption of authority that did not belong to him, the revulsion of feeling was very great, both in England and in Pennsylvania.[1]

Conduct of William Penn, Jr.

But through all this period, Penn's heaviest trial was, doubtless, a private grief, — a private grief, however, that carried with it much public scandal. This was the conduct of his eldest son, William, whom, two or three years after his return to England, he had sent to America. This youth had given great promise of future worthlessness at home, but his father hoped that new associations and surroundings, and a removal from old temptations, might work a change in him. He changed his skies, but not his morals. The sober influence of Logan and other friends of his father in the colony weighed nothing with young Penn, while, for his name's sake, he received for a while more tender consideration than should have been accorded him in his many offences against society. In the Lieutenant-governor, Evans, he found a boon companion after his own heart, and a useful friend in bringing him safely through many an awkward dilemma. Strange and disgraceful stories were told of his conduct — women in men's dress in the streets; midnight orgies; his increasing following and evil influence among the young men of the town — until at last he was engaged in a tavern brawl, and arrested for beating a constable. Evans was his companion on this occasion, and getting the worst in the fight, sought safety by declaring his rank. His assailant had already recognized him, but pretending that he did not believe the assertion, beat him all the more for scandalizing the Governor by suggesting the possibility of his being engaged in such disgraceful proceedings. Evans, however, managed to escape, and attempted afterward to rescue Penn by proposing to exercise his official authority over the court. But the court disregarded this, and brought an indictment against Penn. The young man, in a rage, declared he would have nothing more to do with Quakers or with Pennsylvania; he renounced the Quaker doctrines; he denied the right of the provincial magistrates to try him; and shortly afterward was allowed — probably very willingly by those who loved his father — to sail for home, leaving creditors everywhere behind him, and selling, before his departure, all the property his father had given him in the colony.

[1] Great use is made in the *Historical Review of Pennsylvania* — attributed to Franklin — of this assumed memorial or letter of the Assembly. No intimation is given that Lloyd had put his name as Speaker to a document of his own writing, which the Assembly had never seen, which had, indeed, no existence till after the House was dissolved. Yet it seems hardly possible that the author of the *Review* should not have known that the document, so far as it pretended to have any other authority than that of Lloyd alone, was little better than a forgery.

Penn lived till 1718, but the last six years of his life were passed in a childlike tranquillity, on his estate at Ruscombe, his mind seriously impaired and his physical vigor almost destroyed by the slow progress of disease. By his will he left all his property in England and Ireland to his son, William, in spite of his misconduct; but the proprietorship in the American colony he left to three trustees, "to dispose thereof to the Queen, or any other person, to the best advantage they can;" and to pay over the proceeds to still other trustees, for the benefit — after the payment of all debts and the conveyance of some land to each of William's children — of his children by his second wife. To her he left his personal property, and made her sole executrix. As might have been expected, William entered on a contest of the will; and the whole matter, going into chancery, resulted ultimately in the confirmation to the younger branch not only of the part the will had left to them directly, but of the right of government as well, which had been left to be disposed of to the Crown. The proposal to surrender the province was never seriously revived again; and John, Thomas, and Richard Penn, the heirs, and their mother, the executrix, became proprietors in the political as in the ordinary sense, till the American Revolution dispossessed the survivors.

Penn's death and will.

Ruscombe.

The colony, meanwhile, had grown in prosperity and numbers, — a growth never seriously checked by the political dissensions between Governor and Assembly, which continued, not only so long as Penn lived, but till his sons were old men and Pennsylvania became a State. These dissensions had their root in differences hard to reconcile, — the vital principles of Friends in regard to oaths and the lawfulness of war, and the conflicting interests of Proprietaries and people. The conflict was more or less determined, more or less successful on one side or the other, as the Quaker element was sometimes stronger or weaker in the Assembly, or as the Governor might possess strong powers of persuasion, or command re-

Political dissensions of Pennsylvania.

spect and obedience by weight of intellect or will. Evans possessed none of these qualities, and it was a relief to the colonists when Charles Gookin succeeded him in 1709. His administration was, at least, without scandal, but the differences to which we allude marked it from its beginning to its close.

The Governor was uncompromising in character, uncompliant in temper. In obedience to the Queen, he made, soon after his arrival, a requisition upon the Assembly for the quota of the province in men, to be used against the French, or their equivalent in money. The Assembly, with every assurance of their devotion and loyalty to the Crown, were constrained, in obedience to the religious scruples of the larger portion of the people of the province, to decline contributing directly for the support of war; but they were willing, on their part, to make a present to the Queen. By this, or some similar device, the colony continued to do its part in support of war measures, for many years; but any Governor with a weakness for casuistry could find in the subject, as Gookin did, an opportunity for controversy which could be made to last, if he chose, a man's natural life. "We did not see it," said Isaac Norris, "inconsistent with our principles to give the Queen money, notwithstanding any use she might put it to, *that* not being our part, but hers." There was little of this conciliatory spirit and common-sense view of the subject on the Governor's part; he demanded more than the Assembly thought the province could afford to give, and his demands were always an unpleasant reminder to Friends that he was asking them to violate their principles, and not merely to contribute to the support of government.

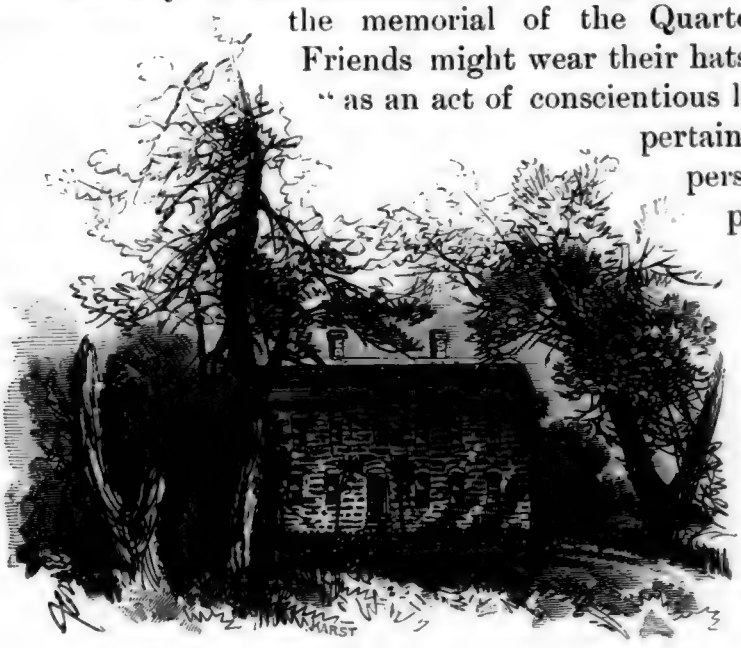
Governor Gookin's military requisitions.

Grave of Penn.

He raised subsequently a more serious question, by refusing to accept an affirmation instead of an oath from Quakers. Nowhere in the whole range of history could a moot-court find a question with so many points for the exercise of ingenuity, with so many unanswerable arguments on both sides, and one so abso-

The question of oaths.

lutely impossible of settlement by any process of reasoning on either one side or the other. The charter granted by Charles II.; acts of Parliament in the seventh and eighth of William III.; orders of the Queen in council under Anne; act of Parliament in the first of George I.; acts of the Colonial Assembly of Pennsylvania; decisions by the Governor and the Chief Justice of New Jersey, — from all these sources were drawn arguments, precedents, confirmations, inconsistencies, and incompatibilities, by a judicious and skilful use of which it could be shown that one side was perfectly impregnable till the other side was shown to be equally so, and that neither, according to the laws, had a leg to stand upon. As a question of controversy, moreover, it had this great charm: practically it was of the smallest consequence, if let alone, but, if meddled with, its capability of mischief could only be measured by the possibility of its interminable discussion. Gookin fortunately retired in 1717, silenced, though not convinced, by the last message on the subject from the Assembly. Sir William Keith, the next Governor, had the good sense not to reopen it; Friends went on quietly as before, affirming instead of swearing, when an oath was required as a qualification for any civil position; and in 1725 the question was once more taken up, but only to be settled forever by a positive act of the Assembly, confirmed by an act of Parliament, permitting affirmation, and releasing Friends from oaths.



Sir William Keith.

Keith, either because his sympathies were really with the Friends, or because he thought it politic to govern his conduct in accordance with the known wishes of a majority of the people, yielded gracefully, rather than contended, on these vexed questions. For, that Friends would yield nothing on a question of conscience, they gave him to understand at the outset of his administration. The Assembly joined with him, at his accession, in an address to the King, which was written in the style used by subjects when speaking to a sovereign. But they were also careful to note upon their minutes, that, though they agreed "as to the matter and substance of the said address," they excepted to "the plural term you;" they would have preferred to say, "thy most dutiful subjects," rather than "your Majesty's;" — "may

it please thee to know," rather than "may it please your Majesty." The Governor clearly had not forgotten this significant evidence of the sturdy persistence of Friends, when, some years afterward, the Quarterly Meeting sent him a remonstrance upon an incident in the Court of Chancery. He had ordered the hat to be lifted from the head of John Kinsey — an eminent Quaker lawyer, and afterward Chief Justice — before he was permitted to address the court. Keith had the good sense to see that ceremony had better yield to conscience, and thereupon ordered, in response to the memorial of the Quarterly Meeting, that Friends might wear their hats where they would, "as an act of conscientious liberty, of right, appertaining to the religious persuasion of said people." The determined and independent spirit shown in these affairs of comparatively small moment, marked the character of the people in the long and almost monotonous struggle of later years between successive Governors and Assemblies. The time came when the province had little other history than the constant demand of chief magistrates for means to aid in the general defence of the colonies in the French and Indian wars, and the firm purpose of the Assemblies to contribute to that end in their own way, and to compel the Proprietaries to bear their share of the burden.

Adherence of Friends to their own principles.

Keith's Mansion House. Græme Park, near Philadelphia.

That struggle began during Keith's administration, in a proposition from him to raise money by the issue of a paper currency, in 1723. The project was discussed with great thoroughness, and its possible consequences wisely foreseen. It was difficult in the then condition of the colonies to avoid a resort to this measure, and still more difficult, when the first step was taken, to avoid the inevitable evil consequences. The Assembly of Pennsylvania was cautious. "It was provided," says a report made to the Crown fifteen years later, and after several other issues had been made on the same plan, "that a real estate, in fee simple, of double the

Paper money.

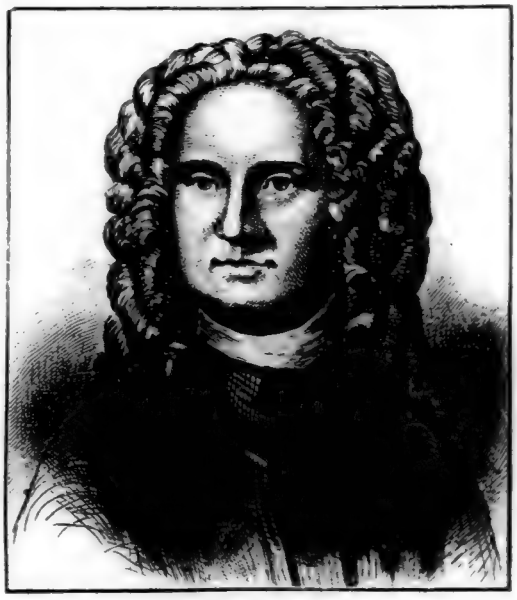
value of the sum lent out, should be secured in an office created for that purpose; and that the sums so let out should be annually repaid into the office, in such equal sums or quotas as would effectually sink the whole capital sum of forty-five thousand pounds within the time limited by the aforesaid acts." In 1739, when this report was made, the amount of these bills that had been issued was altogether about £87,000, of which some £80,000 were outstanding in the province; yet so favorably did they stand in comparison with some other colonial paper money, that the £80,000 of provincial currency had a value of £50,196 in sterling money. This comparative value, however, steadily decreased in later years with the additional issues of paper currency.

Keith's removal.

Keith was removed from the office of Governor in 1725, but he remained a citizen of the province, and was chosen a representative to the Assembly. If he had lost the confidence of the Proprietors, the people seem to have believed that his administration of the affairs of the colony was for its good.

Prosperity of Pennsylvania.

It was a period of great prosperity, so great that it does not seem to have been retarded by an act passed in the fifth year of Patrick Gordon's administration, which succeeded Keith's. By this act it was attempted to impose restrictions upon immigration,[1] by taxing every immigrant five shillings on his settlement in the province. It was ostensibly designed "to prevent poor and impotent persons from being imported," but is said to have been dictated by alarm at the large numbers that arrived from Ireland and from Germany, and seriously threatened the supremacy of the Friends in the colony which they regarded as especially their own. That the prosperity of Pennsylvania was great enough to bear without injury this check to population, appears from a statistical account published this year (1731). "That Pennsylvania," the writer says,[2] "which has not any peculiar staple (like Carolina, Virginia, and Maryland), and was begun to be planted so late as 1680, should at present have more white inhabitants in it than all Virginia, Maryland, and both the Carolinas, is extremely remarkable. And although the youngest colony on the continent, they have by far the finest capital city of all British America; and the second in magnitude;" and adds, after a long enumeration of the colony's products and profitable industries: "The Pennsylvanians build about 2,000 tons of shipping a year for sale, over and above what they employ in their own trade, which may be about 6,000 tons more. They send great quantities of corn to Portugal and Spain, frequently selling their ships as well as cargo; and the produce of both is sent thence to England, where it is always



[1] Grahame, vol. iii., pp. 134 and 135.

[2] Cited by Proud, vol. ii., p. 203.

laid out in goods and sent home to Pennsylvania. . . . . They receive no less than 4,000 to 6,000 pistoles from the Dutch isle of Curaçoa alone, ... and they trade to Surinam, ... and to the French part of Hispaniola as also to the other French sugar islands. . . . . From Jamaica they sometimes return with all money and no goods. . . . . And all the money they can get . . . . is brought to England, ... which has not for many years past been less than £150,000 per annum." The Pennsylvania trade with the other colonies this writer estimates at £60,000 a year.

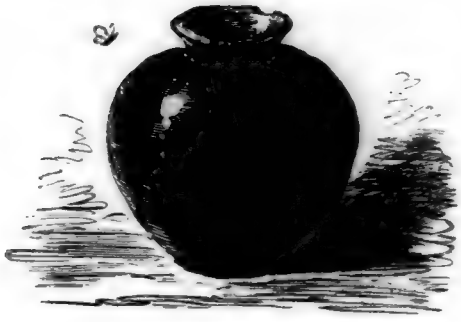
Visits of the younger Penns.

In 1732, Thomas Penn, the founder's second son by his second marriage, arrived in Philadelphia; but, though the people received him cordially, and he lived for years among them, he was never popular, and had but little personal influence. The case was very different with his elder brother John — the senior Proprietor — who came in 1734. His personal magnetism, cordial interest in the province, and exceptional ability, recalled his father; but a renewed attempt by the Baltimores to revive the old claim to Delaware, called him again to England, as William Penn had once been called, after a year's residence, and he did not return. In the year after his departure (1736), Governor Gordon died; and after an interval, during which the venerable Logan acted as chief magistrate, George Thomas followed in the governorship in 1738, — beginning a nine years' administration, which, while it showed his own ability to be inferior to Gordon's, was not more eventful or less quietly prosperous.

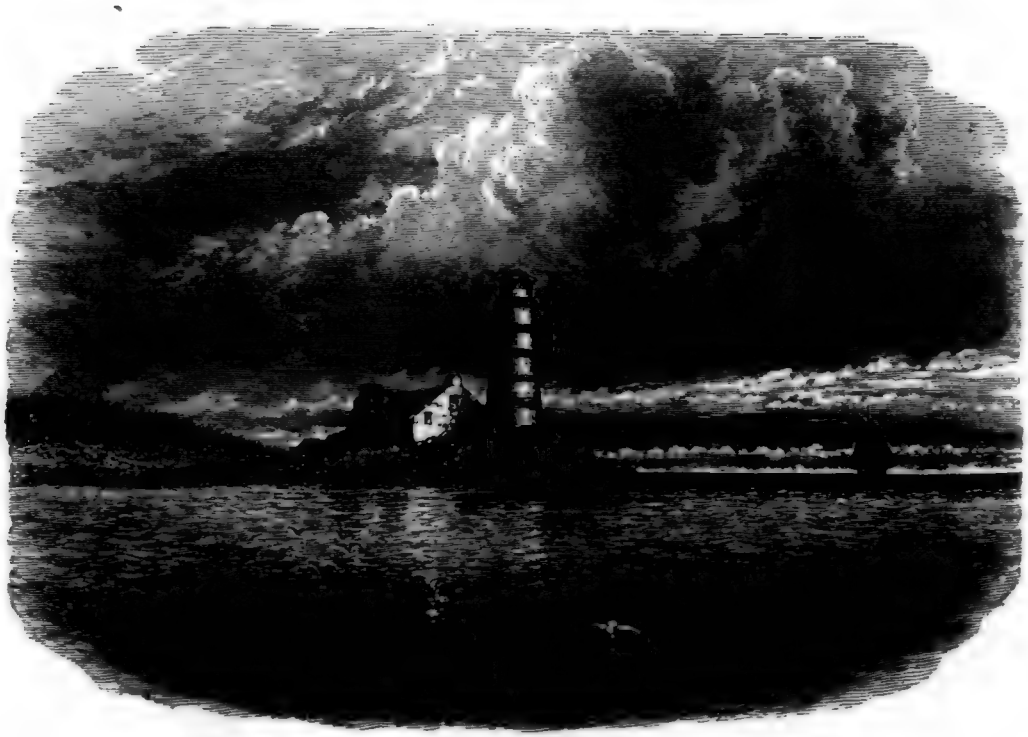
Patrick Gordon.

If the general annals of the province yield but little which it is of interest to trace, much happened in the Quaker city — "the finest capital of British America" — during these quiet years, that was as important as though it had come under the head of political events. One of the foremost characters in American history was coming into public notice, and beginning his career in ways as various as his abilities. Benjamin Franklin, — whose first visit to the town had been made when his quarrel with his elder brother at Boston had sent him out, a printer's-boy of seventeen, to seek his fortune, — had returned to Philadelphia in 1726, and made it his

Benjamin Franklin in Pennsylvania.



home. The story of his first short stay there is familiar; his arrival on a Sunday morning in 1723, and his traditional walk through the streets eating his breakfast of a roll of bread; his unprosperous engagement with the printer Keimer; his encouragement by Governor Keith, and his voyage to London, only to find there that he had been deceived by the Governor's promises. His second arrival in the Pennsylvania capital was very different. He came with employment assured him; and from this time all that he did prospered. In 1728 he was a partner in establishing the "Pennsylvania Gazette," a newspaper which had a life of a hundred and twenty years. He sprang almost immediately into prominence. His activity was ceaseless; he improved the printing press, and printed paper-money for his own and other provinces; he founded a cheap library; and wrote usefully on all manner of subjects. He published the first edition of the famous "Poor Richard's Almanac" in 1732. The Assembly appointed him its clerk in 1735; and under Thomas's administration he was the provincial postmaster. What Philadelphia owed to his sound sense and public spirit, can hardly be over-estimated. Every part of the city administration profited by his suggestions. He founded the American Philosophical Society in 1744; and two years afterward began the series of experiments in electricity which led him to such great achievement. From his election to the Assembly four years later, his political life belongs to other chapters of the history of the time; and to those greater strug-



Franklin entering Philadelphia.

gles on which his adopted colony was now, like the rest, about to enter.

The history of Pennsylvania begins to merge into the history of that colonial union which the events of the next ten years so thoroughly cemented. James Hamilton, a native of the colony, and the son of Andrew Hamilton, Penn's former deputy, succeeded Thomas in the fall of 1748; and by the close of his administration, the shadow of a coming war had forced the Quaker province, like its neighbors, into active preparations for defence.

Penn's Brewing-jar.

CHAPTER VIII.

NEW ENGLAND AND THE FRENCH.

THE THIRD INDIAN WAR IN NEW ENGLAND. — NEW HAMPSHIRE A SEPARATE PROVINCE. — GOVERNOR BENNING WENTWORTH. — ADMINISTRATION OF GOVERNOR BELCHER OF MASSACHUSETTS. — FINANCIAL CONDITION OF THE COLONY. — APPOINTMENT OF GOVERNOR SHIRLEY. — GEORGE WHITEFIELD'S FIRST VISIT TO NEW ENGLAND. — THE REVIVAL PERIOD. — WAR AGAIN DECLARED BETWEEN ENGLAND AND FRANCE. — THE SIEGE AND CAPTURE OF LOUISBURG. — COLONEL WILLIAM PEPPERELL. — LOUISBURG RESTORED TO FRANCE. — AN ENGLISH PRESS-GANG IN BOSTON. — THE TOWN-HOUSE ASSAULTED. — INSURRECTION SKILFULLY AVERTED.

The third Indian war in New England.

IN the third Indian war, which broke out in 1722, in the Northern provinces, the strife was most deadly and the destruction most complete along the Eastern border, in the disputed territory claimed both by the English and the French and their Indian allies. But it was not confined to that region. Bands of savage warriors crept along the frontiers of Maine and New Hampshire, watching with unwearied vigilance for a chance to fall suddenly upon some sleeping village or defenceless farm-house, disappearing again like the shadows of the night, before the next day's sun arose upon heaps of mangled bodies and the smouldering ashes of desolated

homes. In 1723, Dover, New Hampshire, and its vicinity, suffered from the over-confidence of the inhabitants, who were careless in retiring at night-fall to their garrison-houses. Many narratives of heroic conduct belong to this period. For instance, Aaron Rawlins, at Newmarket, had a daughter twelve years old; her mother saw her own father killed by the Indians in 1704, and the recollection mingled with the blood of this daughter. Late in August, 1723, the house of Rawlins was attacked by a band of eighteen Indians. His wife and two children, going out by chance, were seized, the father and the youngest daughter being left within. He barred the door, and both made such a defence by rapid firing that the people in the garrison-house were afraid to send assistance, concluding by the frequent reports that the Indians were in great force. At length the father was killed, and his daughter's head cut off. The captive son was adopted by the Indians, and never cared to resume the English life; and the captive daughter married a Frenchman.

Fate of the Rawlins family.

In 1724 a few persons were killed, but the vigorous movements of scouting parties prevented great disasters. In Dover, there were several Quakers, who would neither use arms for the defence of their families, nor avail themselves of the shelter of the garrison-houses. The Indians could neither understand nor respect their scruples; a few were killed, and the families taken to Canada. These outrages led to the expeditions of the two provinces of Massachusetts and New Hampshire, against Father Rasle and his Eastern Indians. If it be true, as Belknap says, that a half-breed son of the priest was killed at Oyster River in the summer of 1724, his bitter plotting against the English involved a personal feeling.

Father Sebastian Rasle had lived among the Indians for thirty-seven years, accommodating himself with the usual French facility to their habits of life, building his own wigwam, planting corn, and preparing his meals in their method, adopting their language, and devoting himself to their temporal and spiritual improvement. He was a polished scholar, who had surrendered all the preferments of the Church to occupy this outpost in the wilderness. Age and privation had not blunted a single faculty of his intelligence, and he devoted it, together with a rare diplomatic talent, to the service of Rome and of France. A truly remarkable pioneer, a perfectly unselfish man, as the Jesuits generally were, — a man whose delight was in the commanding influence which he had fairly earned, — his record has been not altogether appreciated by the men whose hate he naturally incurred. In him the Governor of Canada found an agent more potent than his troops.

Father Rasle.

The first act of violence was committed by the Indians upon some

traders at Canso, in August, 1720; their goods were plundered, and several persons were killed. Then the Eastern Indians, who began to muster with fresh threats against the frontier towns of New England, were again met by Governor Shute's agents, and with difficulty dissuaded from their purpose of attempting to recover, as they said, the territory which by natural right belonged to them. Their abandonment of the attempt was a sore disappointment to Father Rasle and Vaudreuil, the Governor of Canada, who had hoped to reanimate the hostility of the Indians. This intrigue was suspected, and a demand was made upon the Indians at Norridgewock to deliver up their favorite priest. Their consent ought not to have been expected; but, on their refusal, Colonel Westbrook was sent with a party of men to arrest the priest, who had notice in time to escape, but his flight was so precipitate that he left behind the compromising correspondence with Vaudreuil. This was in 1722. The plunder of their village and attempt upon the Father so enraged the Norridgewock Indians that they led the other Eastern tribes in fresh attacks upon the frontier, and plunged the provinces into a serious and costly defence.

The first hostilities.

The Indian settlement at Norridgewock had greatly flourished under the supervision of Father Rasle. Every political and theological motive inspired the provinces with jealousy and dread of this success at civilizing their worst enemies, and of the establishment of a frontier post which would be a constant menace. Two attempts had been made to break up this settlement by the capture of its master-spirit. On the 12th of August, 1724, a third attempt succeeded.

The settlement at Norridgewock.

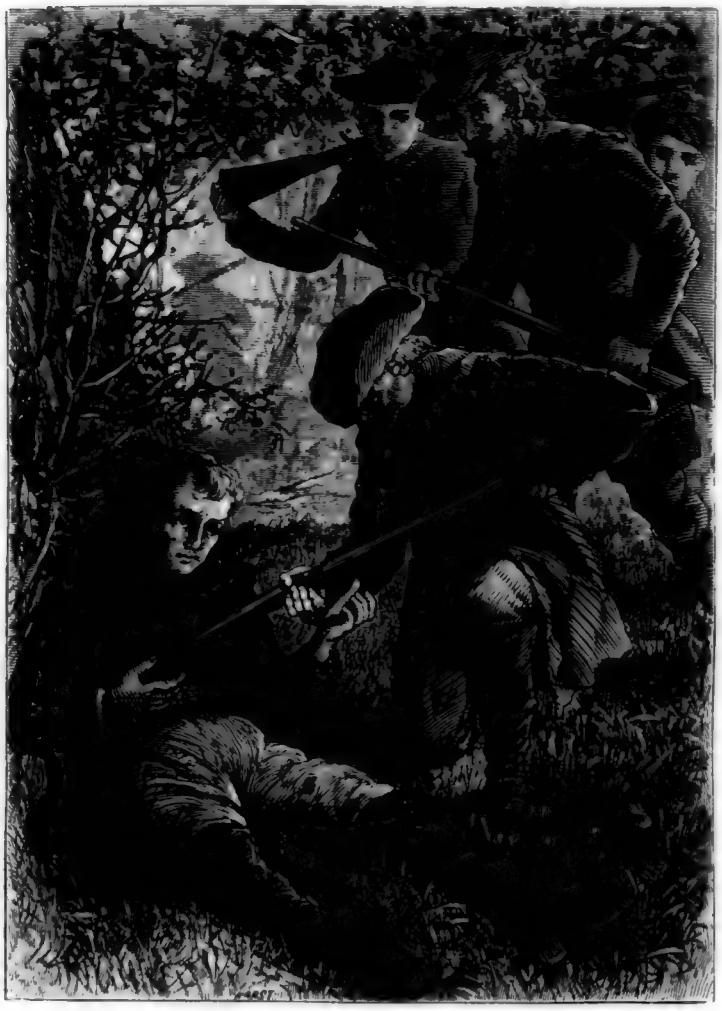
The place was surprised by an expedition of two hundred men, at a time when few Indian fighters were at home. The survivors of the attack fled into the forest with their wives, and Father Rasle was slain in advancing toward the English in order to divert their attention from his flock. The victors pillaged the chapel, and tore down the crucifixes and other symbols of worship which the Indians had learned to reverence. When they returned to their devastated village, the beloved priest was found all hacked with wounds, scalped, and with mud crammed into the persuasive mouth. It is said that strict orders had been issued to capture but not injure the father; but that when a soldier summoned him to surrender, he refused, and was slain. The body of the priest was buried underneath the altar at which he had ministered to his converts, with savage vows of vengeance for a funeral service.

Its capture and pillage.

In the same year, Captain John Lovewell, with a company of volunteers numbering eighty-seven, made a successful expedition against

a party of Indians who were coming from Canada, well equipped with snow-shoes and moccasins for the captives whom they expected to carry back. Stimulated by this success, by the large bounty offered for scalps, and by the liberal pay, it was easy for the Captain to organize another expedition. Each man received two shillings and sixpence a day during his term of volunteering. Starting in April, 1725, Lovewell determined to strike the Pequawkett (Pigwacket) Indians, whose village was near a pond in the present township of Fryeburg, Maine, a small

Lovewell's expedition.



Death of Father Rasle.

sheet of water two and a half miles long and a mile wide. When they reached Ossipee Pond, a stockade was erected, to afford a place of shelter in case of a reverse. Here eight men were left; the rest pushed forward about twenty miles, and came to the pond, where they encamped.

The next morning, May 8, an Indian who was hunting ducks disturbed them by the report of his gun. They left their packs on the ground and pursued him, expecting to come upon a body of the enemy; he was killed, and the men, finding no trace of other savages, returned to their camping-ground. In the mean time a party of Indians, under a noted sachem, Paugus, came upon Lovewell's track,

and, counting the packs, discovered that his own force was superior in numbers. He placed an ambush, and when the men returned for their packs they received a fire which instantly killed Lovewell and eight more, and wounded three. The rest, only twenty-three in number, retreated to a pine grove upon a point which ran into the pond. Here they maintained themselves all day without food, and delivered so deadly a fire that the savages, toward nightfall, retreated, carrying away many of their dead and wounded.

Only nine of the men remained unhurt. They, and the wounded who could walk, began their retreat toward the stockade, leaving on the well-fought field the mortally wounded, one of whom — Lieutenant Robbins — asked that a musket be left with him, hoping to have one more shot before he died. They had struggled to the stockade with incredible suffering, only to find it deserted; for a man who had run away at the first volley had so alarmed the little garrison with his report that they fled. In the march homeward, three wounded men died. The survivors were amply honored and rewarded, for this fight of theirs was the most determined and audacious recorded in the earlier Indian warfare. Paugus was killed, and the tribe had suffered so severely that the remnant deserted the spot, and went to settle on the head-waters of the Connecticut.[1]

Robbins's Last Shot.

[1] There was a legend connected with this fight, long believed but now somewhat discredited, that John Chamberlain and Paugus went down to the water to clean out their guns,

It was high time that the provinces should attempt to restrain this deadly warfare in a time of peace, by proceeding to the headquarters in Canada of the French instigation. Vaudreuil was at Montreal, where he received the provincial commissioners with a deal of blandness and courtesy, and professed to be surprised at their charge of his intrigue through Father Rasle. Whereupon the commissioners quietly produced his correspondence, at the sight of which he was struck with mortification and a sense of guilt at having disturbed the relations established by treaty between France and England. But he was still so much swayed by the influence of the Jesuit priests who were around him, that the commissioners found difficulty in bringing him to any terms. They noticed that, whenever a priest was present at their conferences, the Governor was stubborn; but when they addressed him alone, he was disposed to consider the justice of their complaint. At length he did interfere so far as to procure the release of several captives at a moderate ransom, and to promise to counsel the Indians to cease hostilities. After a while, the Eastern tribes did solicit peace, when they discovered that the provinces were preparing to pursue them still more vigorously. A treaty was made with them at the close of 1725. The English set up trading-posts on the St. George, Kennebec, and Saco, toward which they succeeded in attracting the Indians by underselling the French. The policy was not financially profitable, and the posts had to be sustained by special appropriations, but the period of tranquillity that was thus secured lasted, with few interruptions, till the war between England and France which began in 1755.[1]

English commissioners at Montreal.

A treaty of peace.

which had become fouled by firing. In this process, each gesture which they made was simultaneous, as they taunted each other and threatened death; but the musket of the Englishman had a habit of self-priming, and while Paugus was filling his pan, Chamberlain shot him. True or false, the story is a happy hint of the benefit of that shortening of method attained in the modern revolver. If the story be true, Chamberlain's gun, probably, only had the trick of priming itself — not uncommon, as sportsmen know, with the old-fashioned musket — from an enlargement of the vent in the pan. But it is a curious coincidence that something like the modern revolver had already been invented in Boston. Penhallow [*Indian Wars*], speaking of the reception given there to some chiefs of the Six Nations, a few months before Lovewell's fight, says: "They were entertained with the curious sight of a gun that was made by the ingenious Mr. Pim, of Boston; which, although loaded but once, yet was discharged eleven times following with bullets, in the space of two minutes, each of which went through a double door at fifty yards distance."

[1] The coast of Maine and its rivers were very sparsely settled by the English, notwithstanding this accommodation with the Indians, for their treachery was held in lively remembrance, and a well-defended trading-post offered the only security. From George's River to the St. Croix, there was not one white habitation till the first permanent settlement was made by Governor Pownall, of Massachusetts, on Penobscot Bay, in 1759. At that time, hardly six hundred of the once dreaded Penobscot Indians remained. Belfast was first settled by Scotch Presbyterians from Londonderry and Antrim, in Ireland, in 1769.

Lieutenant-governor Wentworth.

The counsel of Wentworth, the Lieutenant-governor of New Hampshire, through these years of border warfare, was as sagacious as were his measures for defence. The province prized his executive ability, and gladly voted him grants of money. During his administration, New Hampshire first acquired the royal assent to an act establishing a limited local self-government. He favored the popular movement for triennial Assemblies, for fixing the qualification of an elector at real estate worth £50, and of a representative at a freehold estate worth £300, though he was not bound to be a resident in the town which voted for him. The selectmen and the moderator of the town meeting were to decide if a candidate were properly qualified, but their decision was subject to an appeal to the House of Representatives.

Questions of New Hampshire government.

The controversy between Shute and Vaughan, on the question of absentee governors, had widened till it divided the province into two parties: one proposing that New Hampshire should be absorbed by Massachusetts; the other, that it should have a governor and administration of its own. But the province was still poor. Its export trade was chiefly confined to fish and lumber, and though that in lumber was profitable, it was small and precarious, and trammelled ever by royal regulations. An independent administration could not yet be maintained, but the provincial politics tended decidedly in that direction. It was partly from this motive that New Hampshire steadily pushed its claim to townships over which its neighbor had pretensions. A great deal of acrimony attended this controversy over the boundary-line. New Hampshire sent its agents to England, who well knew how to inflame the jealousy which continually existed between the Crown and Massachusetts. Belcher, who succeeded Burnet in 1730, was especially anxious to preserve harmony between his two provinces, each of which was a desperate claimant for territory. It might have

Governor Benning Wentworth.

Territorial claims.

been foreseen that the Privy Council would favor New Hampshire. In 1740, its final decision took from Massachusetts a tract of territory fourteen miles in width and fifty in length, which was more than New Hampshire had ever asked for. The persistent effort of one province to have this decision modified, and of the other to have it maintained, bore such fruits of ill-feeling, and of embarrassment to the Crown, that it yielded to the party which desired a separate administration, at the same time reaffirming the decision of the Council.

Thus New Hampshire at length took the administration of affairs into her own hands, and attained to the dignity of a Governor of her own. Benning Wentworth, a son of the Lieutenant-governor, was the first incumbent of the office, and in his hands it lost none of the importance attached to a thing so long

Governor Benning Wentworth.

Wentworth's House.

and so earnestly desired. The Governor was fond of display. His splendid coach, surrounded by a troop of guards, became a feature of Portsmouth; and in the panelled rooms of his ample house he affected an almost vice-regal state. There were not wanting, however, those who charged corruption upon his administration, and accused him of appointing his own relatives and friends to office, with little regard to their qualifications.[1]

[1] In his domestic service was a pretty girl, the daughter of one Shortredge, whom he desired to marry after the death of his first wife. When her father objected to the match, the Governor had him press-ganged and sent to sea. When Shortredge returned, he told

When Shute retired in disgust from the perplexities and dissensions which had beset his term of office — leaving Boston for England almost in secrecy — the administration of affairs devolved upon William Dummer, the Lieutenant-governor. Of a more conciliatory temper than some of his predecessors, he had less trouble with the General Court, and the more leisure, therefore, to devote to that Indian warfare upon the Eastern border, the main incidents of which we have just related. Burnet, who relieved him in 1728, was less fortunate. If he indulged in illusions fed by his flattering reception, they were dissipated when he came into collision with the House upon the old variance respecting a permanent salary. The House steadily adhered to its policy of voting an annual grant, of a sum strictly calculated upon the Governor's popularity. Burnet refused to accept the first grant which was voted by the House; whereupon that body expressed its regrets and quietly dispersed at the end of the session. Then a formidable meeting of the citizens took place, and Boston approved the act of the Assembly. This so nettled Burnet, that when the next House assembled, whose members manifested an increased aversion to fixed salaries, he did not dissolve it, but resorted to a measure which he thought would bring it less dangerously to terms; he adjourned it to Salem, and then refused to sign a warrant for the payment of its expenses there. This did not improve its temper. The expenses were paid by private subscriptions, and Burnet wrote to England he could do nothing with the representatives. They retorted that Burnet's measures were arbitrary and unconstitutional, and that he was eager to extort money. He was, indeed, deeply in debt when he first left England, and was always scheming how to repair his broken fortunes. When the next House assembled, he recurred to his last unfortunate expedient and adjourned it to Cambridge.

Lieutenant-governor Dummer.

Governor Burnet. His controversy with the General Court.

But the disposition of the General Court was not affected by this change of place. The House at length sent two agents to explain its attitude to the King. Frederick Wilkes, a merchant, and Jonathan Belcher, hardware merchant and member of the Council, were selected. But when the House voted a grant to defray the expenses of its agents in London, the Council refused to concur, so that resort was had again to a private subscription. When the agents arrived in London they found, of course, that the Board of Trade supported the Gov-

the odious story of his disappearance, and it was remembered against Wentworth in the dawning of the Revolution. The girl persisted in saying No for the three years of her father's absence, having left the Governor's service. Finally she married him. Mr. Longfellow's charming poem celebrates the circumstances of the wedding. Shortredge was captain of the first company raised at Portsmouth for the Continental army. — Hayes's *MS. Traditions.*

ernor's measures, particularly in that matter of the salary. The House was not discouraged, but stood out obstinately for the policy of annual grants. So this opposition to the Governor went on till he died, September 7, 1729.

Dummer became again the acting Governor till the appointment of Jonathan Belcher, who was a Boston man and personally popular. He arrived in August, 1730, with the old instructions to insist upon the salary, which he did most faithfully. The House, with equal pertinacity, proposed its annual grant. Belcher refused to accept it, and dissolved the House. The next one which assembled proved so refractory that Belcher resorted to bribing the more accessible members, and succeeded by various influences in getting a measure of compromise introduced, to the effect that a bill for an annual grant of £1,000 sterling, or some fixed sum, should pass, with the understanding that it should continue annually, provided that no future House should be bound to the bill as a precedent. The friends of the Governor were not powerful enough to secure the passage of this bill. The King had instructed Belcher to leave the province and return to London in case of the failure of the House to vote the required salary; but he preferred to remain and exercise what influence he could command, till he succumbed at the failure of his last measure, when he addressed the King with a frank statement of the difficulties of his situation, explained the temper of the people, and said the resolution of its representatives would never, in his opinion, be overcome. He asked for a modification of his instructions. The House backed his solicitation with an address, drawn up at his own request, praying the King to permit the Governor to accept such grants of money as might be voted. This the Court prudently yielded. It was an important victory for Massachusetts, involving graver interests than that of payment of money, because it threw the administration of the royal governors more directly upon the appreciation or dislike of the people, and secured a measure of deference. On the other hand, it confirmed a spirit of liberty; distance and the difficulties of intercourse alone postponed the epoch of the Revolution.

Governor Belcher.

Settlement of the salary question.

The conciliating action of Governor Belcher in the contest upon the salary procured for him a considerable degree of popularity, until he began to oppose the financial scheming which broke out in 1739. He had received strict instructions to permit no further issue of bills of credit for any term beyond 1741, which was the limit in time for those already in circulation. The Land Bank, which was started in 1739, was a scheme of speculators to evade this prohibition of the Crown. The Governor's hostility to their proj-

Financial schemes in Massachusetts.

ect threw many of them into the arms of his old enemies, who were secretly plotting for his removal. Conscious of the general excellence of his administration, which he had conducted without one sordid motive, and in a spirit of as much impartiality as any man at the time could exercise between an obstinate Crown and an unconciliating province, he took no measures of defence, but relied upon his record. Certain intrigues among the dissenters in England who had been led to believe in his hostility to Congregationalism, in connection with other grievances, procured his recall in 1741. He went to England, and completely reinstated his character, but it was too late to receive the thorough vindication of a return to his government, for another person had been appointed, the Court not being willing to face his provincial unpopularity. But he was made Governor of New Jersey in 1747, where his administration was prosperous.

Belcher recalled Governor Shirley.

He was succeeded in Massachusetts by William Shirley, an English lawyer who had lived eight years in Boston. One of his earliest measures, which at least showed a prudent and adaptive policy, was to neglect the royal instructions forbidding any issue of fresh bills of credit after 1741. This he was constrained to do by the evident reluctance of the General Court to tax the province in order to take up the old bills of credit. Perhaps he was flattered by the action of that body in voting that his annual grant should never fall below a thousand pounds sterling. He was the first of the royal governors who established a fair understanding between himself and the province, helped in this by a spirit of moderation and a just estimate of the old difficulties which might recur.

Governor Shirley.

George Whitefield in New England.

The great religious awakening which began in 1740 with the labors of George Whitefield in New England, continued into Shirley's administration. The most brilliant events of the reign of George II., whether of war or of peace, yield in importance, some wise men think, to that religious revolution in England, begun by the preaching of

the Wesleys and of Whitefield.[1] But except that the preaching of Whitefield laid the foundations of a sectarian Church, to become, in the course of a century, the largest in the United States, this revival was less remarkable and of less moment in this country than in England. It was not compelled to encounter that frank skepticism which, Priestley says, was so prevalent in France that every philosophical person he was introduced to in Paris was an unbeliever in Christianity, or even an atheist, some of whom told him that he "was the only person they had ever met with of whose understanding they had any opinion, who professed to believe in Christianity." This want of religious faith prevailed hardly less in England, at that period, but it was the result of indifferentism rather than of philosophy. John Wesley and his followers appealed to men dissatisfied with negations, weary with the coldness of unbelief, eager to welcome any reaction, even one which would dispel doubt by mere force of bold and fervid assertion. They preached also to hearts numb and almost desperate and dead with suffering, arousing a sense of a divine love and care, and holding out a promise of compensation for the utter wretchedness of this life. But in America there was little absolute infidelity, and there was not then, any more than now, that brutish lower order so wretched from poverty, so degraded by the want of any social consideration, so cut off from all opportunity of intellectual culture, as to be hardly responsible for its ignorance of moral law, and its insensibility to any obligation of religion. In New England Whitefield had only to breathe upon the slumbering fires of Puritanism to fan them into a flame; and in the middle colonies, and, to a certain degree, farther south, he was sure of ready and sympathizing listeners among those whose religious life was a protest against the formalism, the worldliness, and the want of spiritual emotion in the Established Church. Successful as that remarkable religious movement was in England, it was accomplished through enormous exertion, much tribulation, and many perils, which it was not compelled to encounter in America. No wonder that Whitefield loved to return again and again to that comparatively peaceful field of evangelical labor, as he did more than a dozen times, where at length his brief and eventful life ended.

A religious revolution.

There had been, nevertheless, a great falling off in New England from the rigid religious discipline of the earlier times, which punished in this world, as well as threatened punishment in the next, for any departure, mental or material, from an established rule of faith and conduct. Generations had come and gone since the ministers of the

[1] See the admirable chapter on "The Religious Revival" in the second volume of Lecky's *England in the Eighteenth Century*. Also Gledstone's *Life and Travels of George Whitefield*.

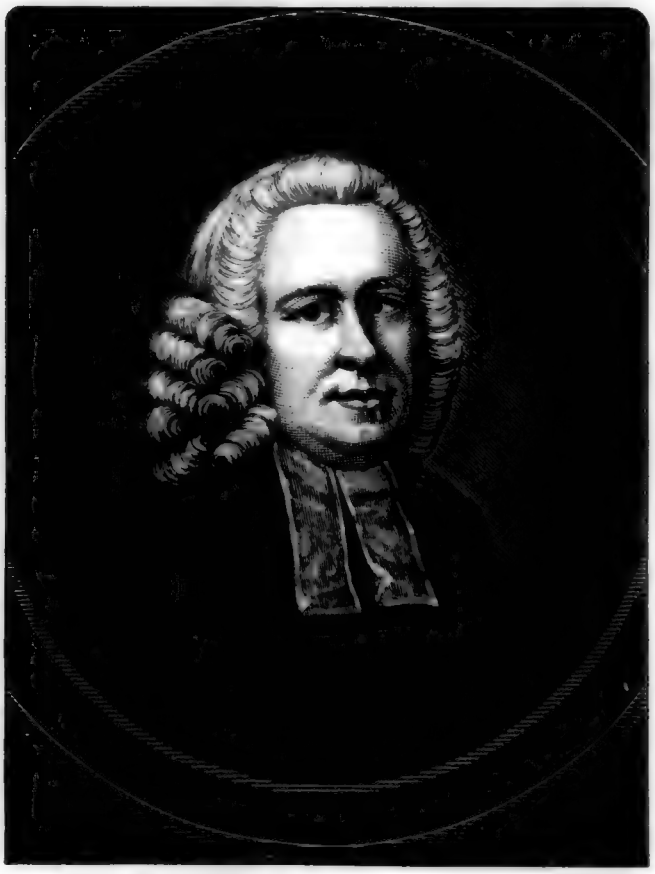
churches had ceased to be the chief power in the State, and since only church-members in good standing were thought worthy of political enfranchisement. Diverse sects had crept in with every wave of emigration, and had established the right to freedom of opinion. Of later years many new comers from England had brought with them the laxity of thought and observance upon religious subjects which were there so general. Godliness had been displaced by indifference, or at least by a worldliness which was more concerned with present prosperity than so to live and believe as to prepare for and deserve a life of eternal happiness in the world to come. This unregenerate condition was observed and lamented as almost hopeless. When, "on the night after the Lord's day, October 29th, 1727," says Trumbull, "the Almighty arose, and so terribly shook the earth through this great continent," though many men sought the ministers and the meeting-house, it was more "from fear than conviction, or through change of heart." Six and seven years later, when an epidemic, called the throat distemper, prevailed throughout the colonies, — though most severely in New England, — even the frightful ravages of that disease, carrying off, sometimes, whole families of children in a few days, produced, it was remarked, no religious change in the people.[1] Professors continued lukewarm, young people were so "loose and vicious" as to seek amusement in social intercourse on Sunday evenings and the evenings of lecture-days; the Thursday lectures were thinly attended; there was great want of strictness in the keeping of the Sabbath, neighbors greeting each other and indulging in conversation upon worldly matters in the intermissions of divine service; many of the clergy were known to be content with inculcating from the pulpit the duty of leading pure and virtuous and unselfish lives, while they neglected to enforce the inherent depravity of all born of women, and salvation by the grace of God.[2] The good time had passed away when all things were subordinated to religious belief; when life hereafter was surely eternal damnation, and life here was hardly worth having, and hardly permitted, to him convicted of heterodox notions upon sanctification, justification, and a covenant of works.

Irreligion in New England.

It was believed that the Lord had permitted the sowing of such seed

[1] The throat-distemper, as it was called, prevailed as an alarming epidemic in many places, at intervals of about thirty years, throughout the last century. The modern diphtheria is unquestionably the same disease, as the characteristics, course, severity, and age most liable to attack, are precisely the same in both. So far as the few bills of mortality of those periods show, the disease is quite as fatal now as it was then. Medical science, however, has discovered that it is the result of bad drainage, and not a special evidence of divine wrath. (See Belknap's *History of New Hampshire.*)

[2] Edwards's *Narrative*, and Prince's *Christian History*, as cited in Trumbull's *History of Connecticut.*



that there should be a harvest of revivifying grace. For such a harvest the laborers were ready. For the first quarter of the eighteenth century, Northampton in Massachusetts had been, under the ministry of the Rev. Solomon Stoddard, a central point of occasional revivalism. Moved by the influence of that example, the flame of religious excitement broke out at times in various places in New England, like signal-fires, to warn the church of its lukewarmness, and to arouse its zeal. Not long before the death of Mr. Stoddard, his grandson, Jonathan Edwards, became his colleague. The mantle of the older prophet fell upon the younger and stronger shoulders, and in 1733, and the two following years, a revival, more remarkable than any that had preceded it, came — in the language of that time — as in "a rain of righteousness," and as "the dews of heaven" upon Northampton and the neighboring towns. A "Narrative of Surprising Conversions," written by Mr. Edwards, and published both in Boston and London, was widely read, arousing everywhere a deep religious fervor, and preparing the way for a fresh revival in 1740. Even sober Rhode Island did not escape the universal excitement. As, for example, it is related that in Westerly, where "there was not one praying family," where they treated "even with scorn and ridicule" the doctrines of the total depravity of the human heart, of regeneration, and of justification by faith, there was soon gathered a church of thirty or forty members. So in other places the tranquillity of all alike, whether devout or indifferent, was broken up, sometimes to good purpose, sometimes to not so good. The churches were stirred as they had never been before, and have never been since; new ones were gathered; old ones were increased, and the pious rejoiced that though New England was the centre of this movement, its influence extended even to the remotest southern colonies.

Religious revivals.

But this rejoicing had its limit. There were some who indeed from the beginning had questioned the healthfulness of this emotional outbreak; had doubted whether, in the long run, the cause of religion did not receive more harm than good from sudden conversions brought about by sympathetic and uncontrollable excitement rather than by calm appeals to reason and conscience. These, however, were a small minority, and they were silenced, if they were not convinced, by being denounced as enemies of the true faith, and as Arminians, — a term then so obnoxious as to be almost a sentence of banishment from the society of pious people. But events justified the judgment of these doubters in some degree, even with many of the most zealous of the revivalists. The movement at length got beyond the control of the more rational of the clergy in many places, and its progress was marked with extravagances and excesses, over which

Reaction follows.

the judicious grieved and the scoffers triumphed. Not only were the phenomena of uncontrollable emotion, of bodily contortions, of epileptic prostrations, of hysteric weeping and wailing, common in this as in all epidemics of religious revivalism; but there came divisions in the churches. Lay preachers, men and women, took the work of grace out of the hands of ordained ministers. Fanaticism and extravagance sometimes crept out of the pews, and up the pulpit stairs, and clergymen led their parishioners into the devious ways of the "New Lights." To the churches of Connecticut, where the movement spread the widest, and struck its roots the deepest, it was a time of peculiar trouble. Ecclesiastical trials divided ministers and peoples, and social relations were disturbed past all patience and forbearance. It came at length to be questioned more and more by many good people whether this work was the work of God or of the devil.

George Whitefield

The influences which had such consequences were already at work when Whitefield arrived, in the autumn of 1740, at Boston. There were at that time, in the town, nine Congregational churches, three Episcopal, one Baptist, one French, and one Scotch Presbyterian. The stated lectures were thinly attended, and the ministers generally complained of the lukewarmness of their congregations. Whitefield, whose fame as a preacher had preceded him, was warmly welcomed. His power of oratory has probably never been surpassed in the world; not so much for what he said, as for the way in which he said it. He had strong emotional force, and marked dramatic ability, which some training as a strolling actor in early life had, no doubt, helped to perfect. Over his voice, which was rich and musical, he had perfect command; his gestures were frequent, but always graceful, and every

Whitefield's preaching.

motion of the head, every sway of the body, was a gesture. His imagination, probably, was rather redundant than rich, for his imagery seems commonplace, and his thoughts do not appear to have been either profound or original. His mastery was a mastery over words and the way of using them. Garrick used to say that he could plunge an audience into tears by merely varying his pronunciation of Mesopotamia. Chesterfield, decorous, self-possessed, cynical, skeptical, — as he heard Whitefield describe a sinner as an old man, blind, trembling, staggering upon the brink of a precipice, over which in a moment he would be dashed into pieces, — was so lifted out of himself and out of reality, that he sprang forward with the cry, "Good God! he is gone!" When he preached on Boston Common, it was to audiences of fifteen to twenty thousand people. Franklin was once cool enough, as he listened to him in Philadelphia, to walk backward till he was out of the reach of distinct hearing, and then, by calculation of distances and the number of persons who could stand in the given area, he came to the conclusion that that rich and powerful voice could be made to penetrate through the open air to thirty thousand persons. Nor was the philosopher himself proof against its persuasive tones. His judgment did not approve of that Orphan House in Georgia which was so dear to Whitefield, and he went to a meeting where its claims were to be urged upon the audience, determined to give nothing. His pocket was full of money — copper, silver, and gold. His determination soon yielded so far as to gain his own consent to give the copper; then, as the preacher went on, he was willing that the silver should follow the copper; before the sermon was over, copper, silver, and gold were all emptied into the contribution-box. But Franklin thought it was a mistake to publish Whitefield's sermons. They were nothing if not heard.

Wherever Whitefield preached, he aroused the deepest feeling. As he went through New England, he did not hesitate to proclaim that many of the ministers were unconverted men, and ought to be deserted; yet they flocked to hear him nevertheless, and he found no such admiration from clergymen in any part of the country as in Boston. But at the annual convention of the clergy of Massachusetts in 1743, the tide turned, and a "Testimony against the Disorders in the Land" was framed and printed. The revivalists rallied at a meeting of their own in Cambridge, and issued a counter-testimony, which declared that the converts were "epistles of Jesus Christ, written not with ink, but by the Spirit." In 1744, Harvard College appeared with a testimony against the errors of Whitefield, signed by every member of the Faculty. When, in 1745, the ministers who still supported the revival called another meeting, only twenty-eight were

present. The result of so decided a reaction in the public mind was to strengthen the uncalvinistic tendencies, against which the clergy hoped to make Whitefield their instrument.

War between France and England.

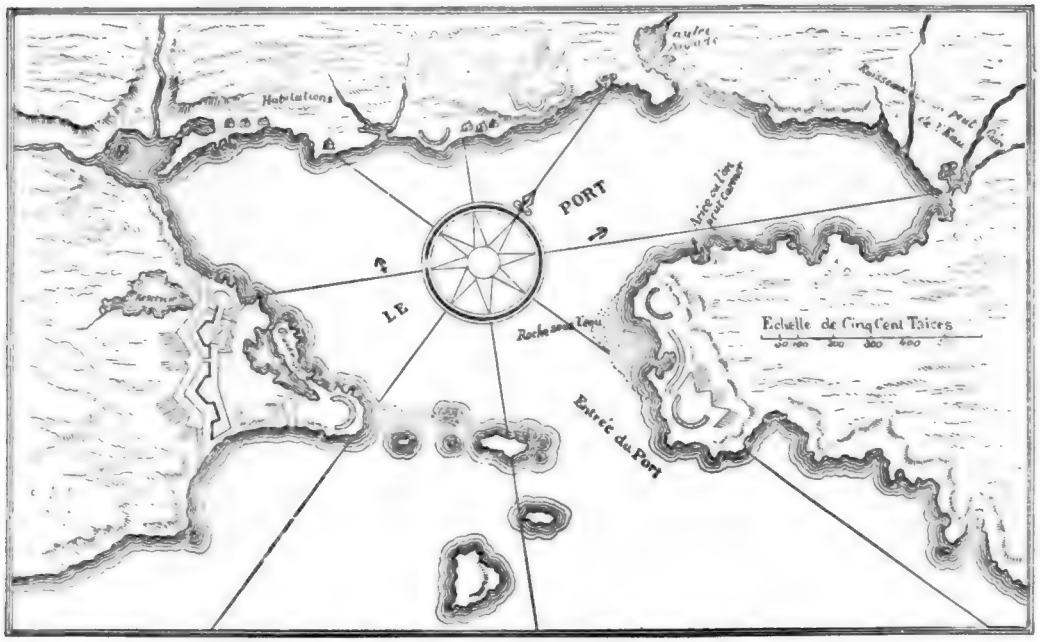
The Peace of Utrecht, which had been continually disturbed in the colonies by French Canadian intrigue, was definitely broken by a declaration of war in the spring of 1744, resulting from the hostile continental politics of France and England. The news of this reached Duquesnel, the Governor of Cape Breton, before it was known in the colonies, and he took advantage of it to strike an unexpected blow. The French viewed with jealousy the settlement of fishermen on the island of Canso, whose small garrison might be captured by a surprise, and perhaps the fishing interest of the English in those waters might be broken up by attacks on other places. The undertaking was intrusted to Duvivier, who was sent from the fortress of Louisburg with nine hundred men. He was successful at Canso, captured all the inhabitants, and sent them to Louisburg, but he failed at Placentia; and at Annapolis, after a desperate fight, he was forced to retreat, for Shirley had reënforced the garrison just in time. Although the French were not yet in condition to follow up the first attacks, their privateers took many prizes, especially of fishing vessels, all of which were brought into Louisburg, and the fishing business was completely paralyzed.

These operations of the French roused the indignation and alarm of New England, and a corresponding zeal for war animated the inhabitants. Governor Shirley was found to be adequate to the emergency. First taking vigorous measures to protect the frontier, he sought to organize and direct the earnest popular conviction that Louisburg, a formidable neighbor and perpetual threat to the interests of New England, must be captured. From fishermen who had been released, and from other sources, he drew sufficient information about the fortress to perfect a plan for taking it; but as the success of it depended upon secrecy, he desired the House then in session, January, 1745, to receive a private message from him, under an oath not to divulge it. Fully confiding in Shirley's patriotism, the House consented.

Shirley's proposal.

The plan was of such magnitude, involving so many difficulties and such expense, that the members at first brought little but amazement to its discussion. It was considered to be an undertaking beyond the means at their command, even if all the provinces should unite. The information which Shirley communicated, regarding its feasibility, did not seem to the House so conclusive as it did to the ardent Governor. It was discussed for a few days, then referred to a committee, who reported adversely, and the report was accepted. One of the mem-

bers who favored the enterprise was a bold deacon who made it a subject of family prayers. His startled and curious listeners gave him no peace till he explained the design for which he invoked the divine blessing, — waiving his oath as a legislator to his peace as a family man. The Governor's purpose was soon made known to everybody, and received the popular approbation. Petitions, signed by prominent merchants and ship-owners, were sent in to the House from various places. The public opinion thus bearing on the members, they became more evenly divided, and a resolution in favor of the enterprise passed by the casting vote of Speaker Hutchinson.



The expedition against Louisburg decided on.

In some respects, the time was favorable. Duquesnel, an officer of great ability, had died, and his successor was old and a man of mediocrity. The officer who captured Canso had returned to Europe to solicit help for the garrison in troops and supplies. It had been reported to Shirley that the men were ill-fed and in no temper to make a protracted defence. The winter was unusually mild; the harvest had been abundant, and provisions were plenty; the unemployed fishermen were eager to enlist. In the autumn, a French ship, that was hastily fitting out to relieve the starving and discontented garrison, was broken in launching. Shirley also counted upon the coöperation of the English fleet in the West Indies. He had petitioned the ministry, without broaching to them his scheme, to send Commodore Warren to Boston to protect the fisheries and the general interests of England. He had, in the mean time, solicited the Commodore for aid, who declined for want of orders; but the day after this refusal, instructions from the ministry to repair to Boston reached him. On his way a vessel gave him the news that the provincial ships had sailed for Canso, whither he shaped his course, and arrived just in time.

The defences of Louisburg.

But Louisburg, under every temporary disadvantage, was a formidable place, and was styled the Gibraltar and the Dunkirk of America. A much stronger power than a dependent colony might well hesitate to attack it. Shirley's secret, though well kept from France, was scented by the Indians, who communicated it to the French in Canada, where it was received with ridicule and general incredulity, so confident were the people that the fortress was impregnable. The place had been twenty-five years in building, and had cost France thirty millions of livres. In 1713 a walled town was begun at the southeastern extremity of Cape Breton, two miles and a half in circumference, with a stone rampart over thirty feet high behind a ditch that was eighty feet wide wherever the place was liable to an attack. The entrance of the harbor was defended by a battery of thirty twenty-eight-pounders upon a small

island. Just opposite, on the harbor's inner edge, was a formidable battery of twenty-eight forty-two-pounders, and two eighteen-pounders. The entrance to the town was over a drawbridge which a circular battery of thirteen twenty-four-pounders commanded. The batteries and six bastions could mount one hundred and forty-eight cannon: sixty-five of this number were mounted, and sixteen mortars. The town was laid out in squares, and contained valuable magazines of naval stores. Many of the houses were substantially built of stone. This was the rugged nut that Shirley meant to crack.

Defences at Louisburg, from a contemporary French Plan.

He addressed circulars to every American province, asking for its aid. Every one out of New England shrunk from the formidable enterprise. But New England possessed fourteen armed vessels mounting two hundred and four guns, and nearly a hundred sail of transports. The quota of troops was 3,200 for Massachusetts, including 150 New Hampshire men; 300 for Rhode Island; 350 for New Hampshire, and 500 for Connecticut. The New Hampshire regiment, under Colonel Samuel Moore, sailed in transports belonging to that province, directly for the rendezvous at Canso. They were under convoy of an armed sloop carrying thirty men, commanded by Captain John Fernald, and this vessel afterward did good service as a cruiser. The Rhode Island troops did not reach Boston till after the fleet had sailed, but they arrived in Louisburg in July, just in time to relieve those who by that time had captured the place.

The New England forces.

Colonel William Pepperell, a merchant of Kittery, New Hampshire, was appointed to command the expedition, but he naturally hesitated.

He sought counsel of Whitefield, who was then lodging at his house, and who told him that the scheme did not look promising; if it should not succeed, the widows and orphans of the slain would reproach him, and if it should succeed, he would become an object of envious hostility. He must therefore undertake it with a motive so pure and strong as to deserve success. When Pepperell yielded to the solicitations of Shirley's messengers, Whitefield gave him as a motto for his flag, NIL DESPERANDUM, CHRISTO DUCE. The great revivalist was urged to countenance the enterprise, that his followers might be encouraged to enlist; accordingly a great enthusiasm arose among them at this dedication of a standard, and the expedition put on something of the aspect of a crusade. One clergyman armed himself with a hatchet wherewith to smite the Romish images. Old Parson Moody, the famous preacher of York, — whom Pepperell made chaplain, — when there was a call made in that place for volunteers, stepped to the drum-head and put down his name. None held back after that example. From Berwick and Kittery the male inhabitants, almost to a man, followed Pepperell. Besides his services he gave to the expedition £5,000.[1] His second in command of the expedition was Roger Wolcott, the Lieutenant-governor of Connecticut.

Sir William Pepperell.

It is remarkable that the French should not have suspected the purpose of all these preparations. But every province refrained from sending vessels in the direction of Louisburg. Not a copy of Shirley's order to the captains of train-bands was allowed to be taken. In eight weeks four thousand three hundred men were enlisted, and all

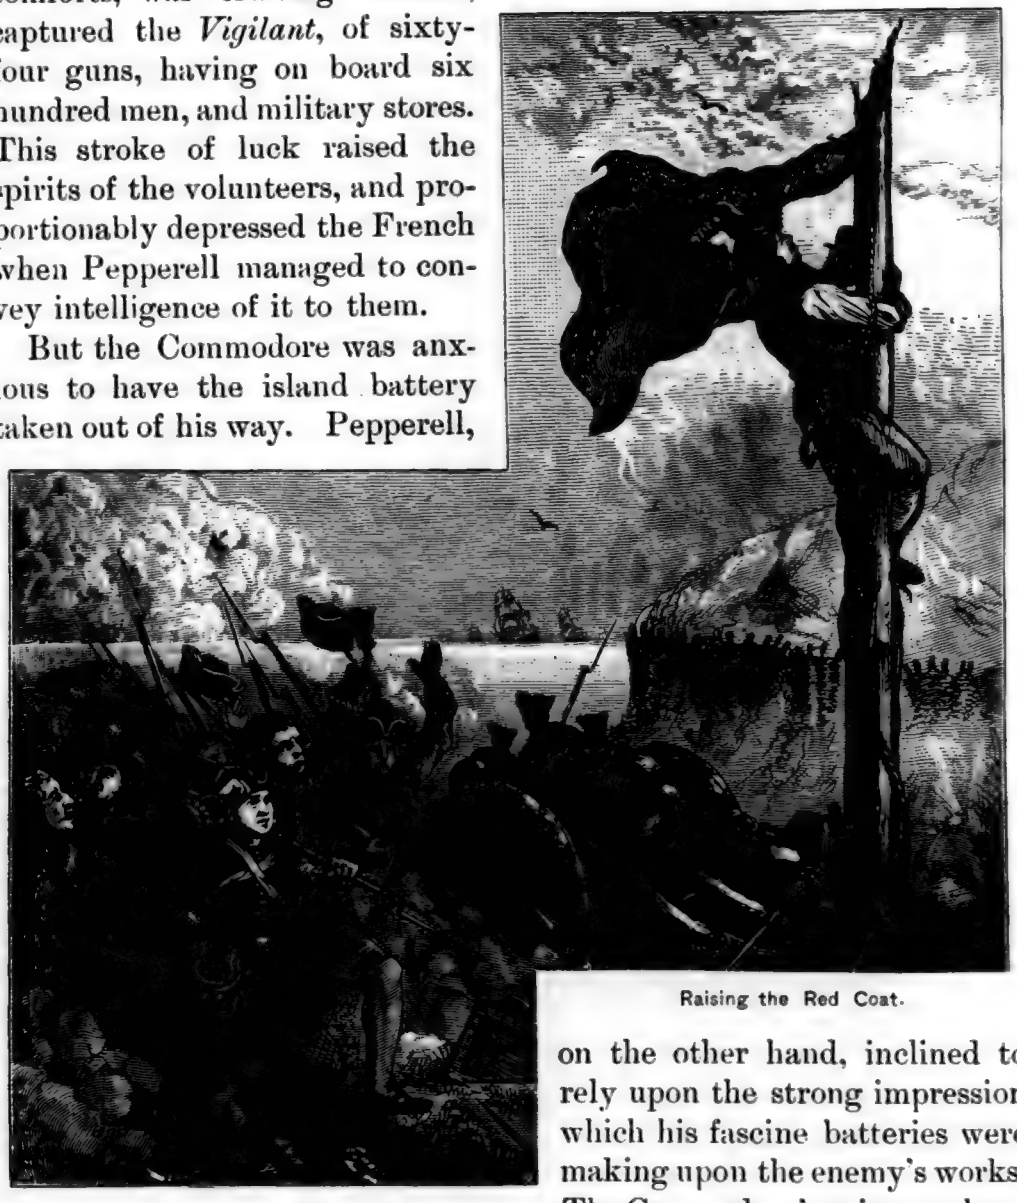
[1] Governor Wentworth of New Hampshire was ambitious and did not relish Governor Shirley's preference of Pepperell for the command of the troops destined for Louisburg. After Pepperell had accepted, Shirley sought the coöperation of Wentworth by writing to him a politic letter to the effect that it would have been a great satisfaction to all, and a great advantage to the expedition, had not the gubernatorial gout prevented him from taking the command. Whereupon Wentworth denied the gout and offered his services. Shirley was then compelled to acknowledge that he had given the command to Pepperell.

the preparations were complete, New York loaning a few cannon, and New Jersey and Pennsylvania contributing some provisions and clothing.

The rendezvous at Canso.

The fleet collected at Nantasket Roads; a day of fasting and prayer was ordered through the province, and one evening each week for special prayer. Then the Massachusetts vessels sailed, March 24, for Canso. The New Hampshire troops were already there; those from Connecticut arrived about April 10. The ice around the shores detained the fleet till April 29, when it weighed anchor for Cabarus Bay at Cape Breton. Not a French vessel of observation was encountered; the appearance of a numerous fleet, the following morning, was actually the first advertisement of Pepperell's destination which reached the garrison. This element of surprise was very effective. A feint of landing at one place favored the putting ashore of a detachment at another, where a tardy attack was easily repulsed. The French retreated within their lines; half the troops were landed, and the rest upon the two following days. Some large warehouses filled with inflammable stores and spirits were set on fire, the smoke of which as it drifted inland so alarmed the French that they spiked the guns of the powerful battery at the bottom of the harbor, threw the powder into a well, and retreated in boats to the town.

The next morning Colonel Vaughan, a soldier of admirable conduct, reconnoitering with thirteen men, discovered that the battery was deserted, took possession, and sent to Pepperell for reënforcements and a flag. Meantime a soldier went up the flagstaff with a red coat in his teeth, and nailed up the symbol of possession. The French soon attacked Vaughan with a hundred men under cover of a fire from the city, but his thirteen held out till reënforcements arrived, and the French gave up the attempt. Ample war material was found in the battery; the guns were unspiked and did good service against the town during the siege.



The siege.

By May 5, Pepperell had thrown up three batteries by night, the third being only seven hundred yards from the city.[1] The labor of bringing up guns and munitions was great; everything had to be dragged by hand through morasses, consuming fourteen days. A fourth fascine battery was thrown up within two hun-

[1] It is worth noting that the man to whom Pepperell entrusted the planning of his batteries was the Colonel Gridley who marked out the lines of the redoubt on Bunker Hill in which Warren fell. Many of the bravest officers of the Revolution served under Pepperell at Louisburg, where New England men began to have a salutary contempt for their enemies' lines. "When Gage was erecting breastworks across Boston Neck, the provincial troops sneeringly remarked that his mud walls were nothing compared with the stone walls of old Louisburg." — Parsons's *Life of Pepperell.*

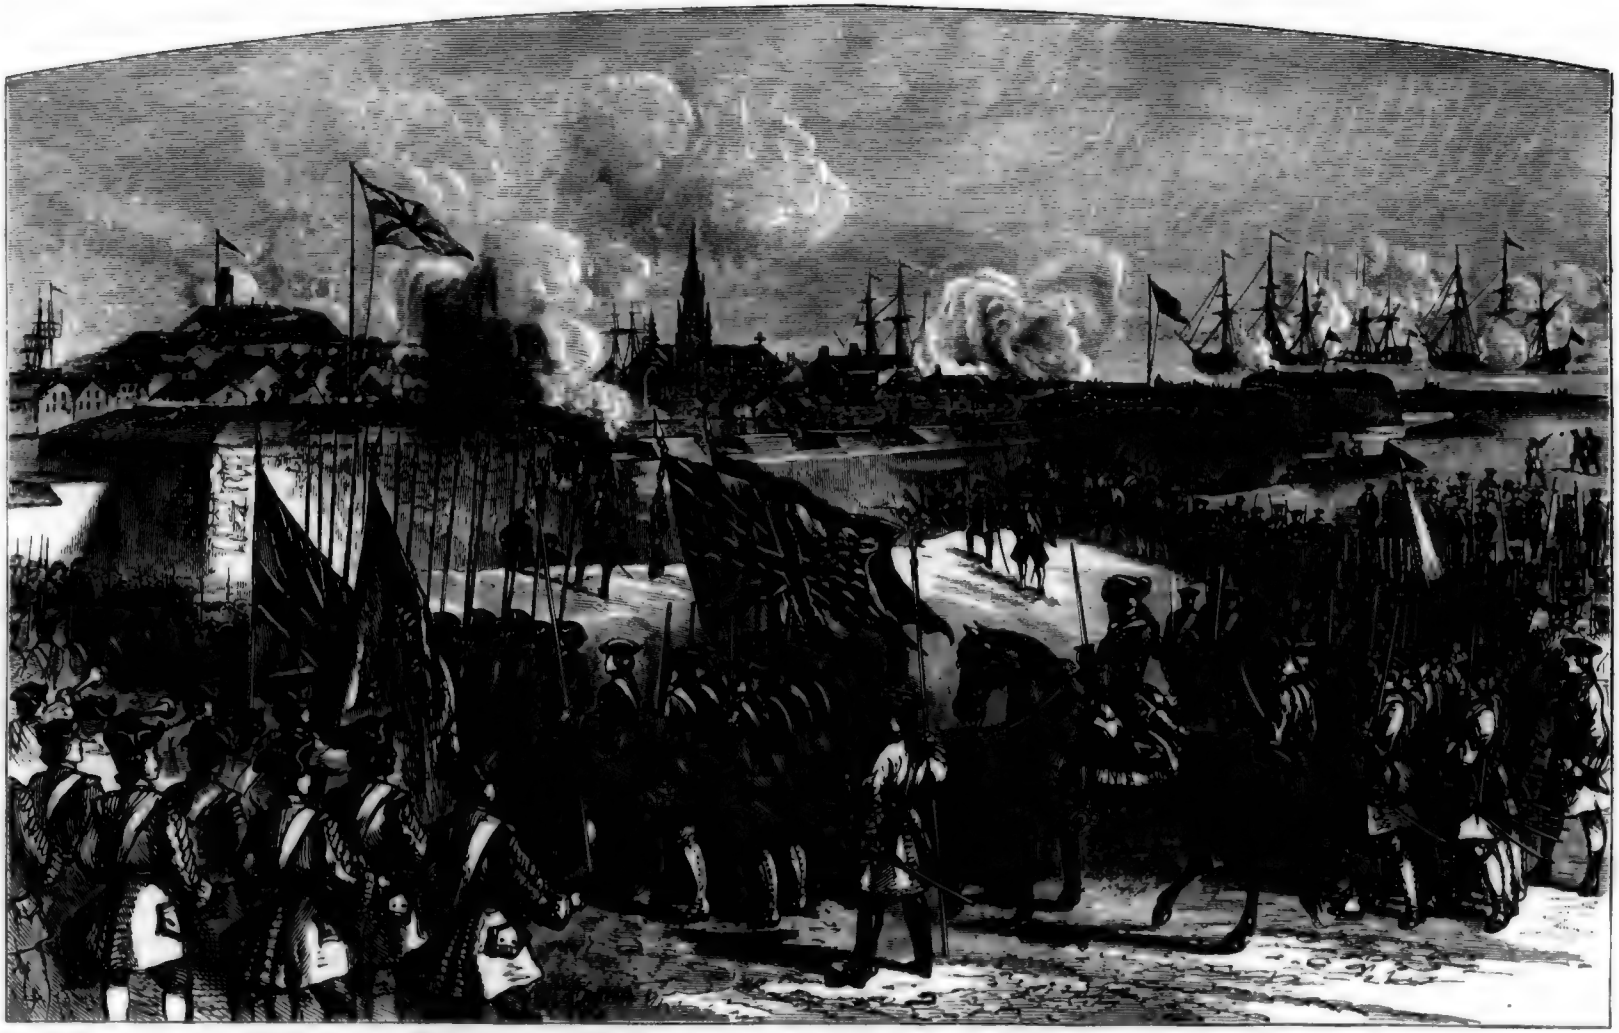
dred and fifty yards of the drawbridge. It was evident that to capture the island battery the fleet must come into the harbor. This dangerous movement was not popular among the volunteers; and so much dissatisfaction reigned that a council of war thought best to postpone it. On May 20, Commodore Warren, who, under great discomforts, was cruising outside, captured the *Vigilant*, of sixty-four guns, having on board six hundred men, and military stores. This stroke of luck raised the spirits of the volunteers, and proportionably depressed the French when Pepperell managed to convey intelligence of it to them.

But the Commodore was anxious to have the island battery taken out of his way. Pepperell,

Raising the Red Coat.

on the other hand, inclined to rely upon the strong impression which his fascine batteries were making upon the enemy's works. The Commodore's prisoners happened to let out the fact that a number of war vessels were nearly due; his crews were falling sick, and no fresh provisions could be procured. So Pepperell consented to a night attack, which was made by four hundred men with scaling-ladders; but the boats were observed and fired upon, the muskets of the men were wetted in landing, and the attack was repulsed with the loss of sixty killed, and one

hundred and twelve, with the wounded, taken prisoners. Amid considerable depression the regular business of the siege was resumed, under volleys of cheering from the French which were more galling than their fire.



Pepperell maintained a constant communication with Governor Shirley, from which we learn that he was frequently short of ammunition, and there were not trained gunners enough to man his batteries. He borrowed powder of the Commodore, hoping to turn against the enemy several French cannon, found under water; but these, for want of balls corresponding to their calibre, were useless. His largest mortar and one or two cannon burst. He could do little, for want of ammunition. By the first week in June fifteen hundred men were on the sick list, and a call for reënforcements followed that for powder.

Meantime, while French war ships were expected, the garrison kept vigorously pounding away at the works of the besieging forces. The fog also settled down upon the batteries and disturbed the effective use of their guns and communication with the fleet outside.

Yet even in June the French in Quebec were utterly incredulous as to any expedition against Louisburg; so uncertain was the water intercourse of those days, and so watchful were the English cruisers. But the Commodore's fleet, though strengthened by the arrival of several ships, could not venture past the island battery to make with the land forces a joint attack upon the town. During the siege the provincials were shelterless, and many died of fever, while the French were snugly ensconced beneath their roofs. The French, however, who were trained soldiers and began by underrating this little army of tradesmen, fishermen, backwoodsmen, and mechanics, had omitted from their reckoning one element of the temper of a New Englander, —that when he is the worst baffled he is the most obstinate and dangerous. So Pepperell grimly held on to all his positions, and threw up another battery, which got the range of the dreaded island battery and seriously annoyed it. He had also succeeded in silencing all the guns except three in the drawbridge battery, and that was nearly a heap of ruins.

Under these circumstances a combined attack seemed to the Commodore more practicable. Every arrangement to that effect had been made, his fleet was drawn up in line, eleven ships of forty guns each; the land forces were in position to attack, and Pepperell and the Commodore, and no doubt Parson Moody also, were stirring them up with appeals to their courage and sense of duty. It was the fifteenth of June, 1745. Governor Duchambou rapidly surveyed his prospects. No French vessel could enter the harbor; his

The surrender.

THE SURRENDER OF LOUISBURG.

island battery was dominated; several breaches had been made in his bastions; his soldiers, worn out by the incessant strain by night and day for seven weeks, could only feebly stand to their guns. Pepperell's forces outnumbered by five times his own.

In the afternoon he concluded to ask for terms of capitulation. During a suspension of hostilities the island battery was delivered up to the Commodore, and his fleet entered the harbor. Honorable terms were offered and accepted by the Governor, and although the articles of capitulation were not signed till the 19th, Pepperell disregarded the formality, as if to anticipate a memorable date. On the seventeenth of June he entered the fortress at the head of his volunteers. Shirley's nut was cracked, and the troops who did it were astonished to discover the strength of the shell. Shirley soon arrived, and received the keys from Pepperell. Six hundred and fifty regular troops, thirteen hundred militia-men, six hundred sailors, and two thousand inhabitants were sent to France. Cannon, stores, provisions, and property to an enormous amount were taken, for which the English paid by the death of only 130 men. The French lost 300. All the bells in the provinces rang their joy-peals when the event was known; all England broke into illuminations and bonfires; and Europe, not excepting France, was astonished. General Pepperell became the first American baronet; he and Shirley were commissioned as Colonels in the British army; Warren was promoted to be an Admiral. Still further honors awaited Pepperell; within the next three years the city of London presented him a silver table and a service of plate, and the King made him, at Pitt's suggestion, a Lieutenant-general.[1]

Surprise in Europe.

While Louisburg was garrisoned for a year by New England troops, the other provinces, which had declined to share in the expedition, manifested a noble spirit of gratitude and admiration towards those who had taken the place, and sent abundant store of necessaries to the troops. The news of its fall was carried to France by Duvivier, who was on his way in July, with a squadron of seven ships, for the recovery of Nova Scotia. When in mid-ocean he learned from a captured vessel — on board which was ex-Lieutenant-governor Clarke of New York — that Louisburg was in the hands of the English. He

[1] After the surrender, Mr. Moody preached a sermon in a Jesuit chapel. At a dinner given by Pepperell, Moody was the senior chaplain, and therefore entitled to say grace. The officers dreaded to annoy the guests with one of his long-winded addresses, but no one dared to counsel the rather irritable parson. He seemed on this occasion to be anxious for his dinner, and the grace was simply, "O Lord, we have so many things to thank thee for, that time will be infinitely too short to do it; we must therefore leave it for the work of eternity. Bless our food and fellowship upon this joyful occasion, for the sake of Christ our Lord. Amen."

returned to bear the evil tidings to France, abandoning his design against Nova Scotia, which now seemed hopeless.

Vigorous measures of the French.

France was aroused to fresh and more extensive preparations to recover all it had lost, and to add to its dominion in America. It contemplated the possibility even of conquering the whole country from Maine to Georgia, and the utmost alarm spread through the colonial seaports as rumors reached them, from time to time, of the designs of the French. The next summer a fleet of eleven ships of the line, with thirty smaller vessels of from ten to thirty guns each, and transports carrying over 3,000 troops, sailed from Rochelle. To these were to be added four ships from the West Indies; and an army of nearly two thousand Canadians and Indians was already in arms to join the land force on its arrival.

Their failure.

The colonists trusted to the fleet at Louisburg and to reënforcements from England — which did not come — to meet the French on the coast. On land, preparations were made, under the energetic leadership of Shirley, to counteract the French invasion by a fresh attempt upon Canada, and troops were collected from the several provinces to that end. But the naval expedition of the French was from the beginning attended with disaster. The ships were separated at sea by storm; some were disabled and abandoned, or returned to France. The Admiral, the Duke d'Anville, soon after his arrival in the bay of Chebucto, in Nova Scotia, suddenly died. The Vice-Admiral, D'Estournelle, worn with anxiety at the non-arrival of many of the fleet, and by a fatal sickness which broke out among the men, himself fell ill of fever, and in a fit of delirium ran his sword through his body. Jonquiere, the Governor of Canada, who had joined the expedition, succeeded to the command, and set sail for an attack upon Annapolis, though half the men were already dead. But a storm overtook and dispersed his fleet; the enterprise was abandoned, and the ships made their way back to France.

The treaty of Aix-la-Chapelle. — Cape Breton restored to France.

More than a year had passed, and with the signs of approaching peace, there was relaxation of effort on both sides. The one brilliant result of the war in America was the capture of Louisburg; but it was after all a barren victory to the provinces, save that it taught them a well-remembered lesson, — that the rough colonial life was no bad school for the training of soldiers who would be a match for the best of regular troops. No share of the prize money of £600,000 from captured French ships, which the expedition threw into the hands of the English fleet, fell to the army on shore. Notwithstanding Pepperell's just claim, Warren and his sailors took the whole of it. When peace was made between England and France, in April, 1748, Cape Breton was restored

to France by the treaty of Aix-la-Chapelle. The people of New England had expended costly lives and much treasure in the capture of Louisburg, and they saw with disgust this cession, for which no equivalent was received that benefited either England or the colonies. Pepperell had hoped that Cape Breton and its dependencies would be annexed to the Crown, and converted into an American colony.

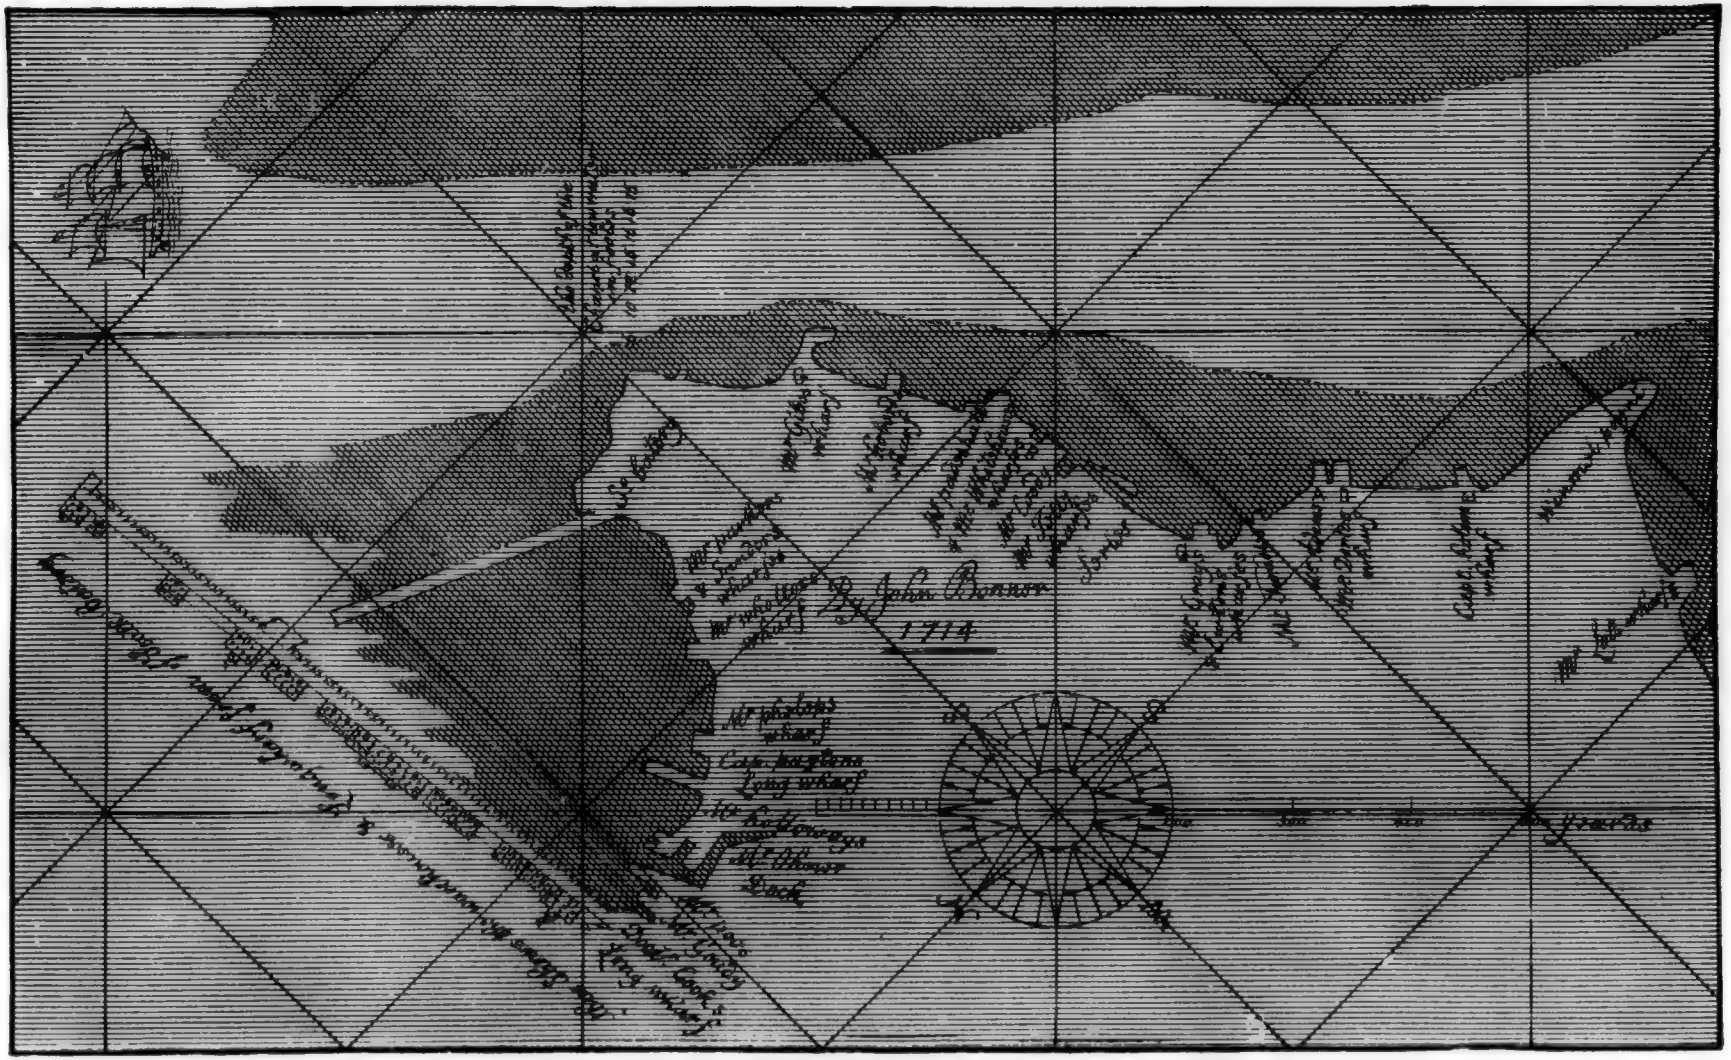
When the New England regiments which garrisoned Louisburg were disbanded in consequence of this peace, Sir William was obliged to send money to the troops for the payment of debts and to transport them to their homes. He forwarded 1,420 silver dollars, and silver was so scarce that he could only procure it by paying from fifty to fifty-two shillings in currency for each dollar. But the Provinces, who saw the dearly bought Cape Breton taken from them, could now demand more earnestly, and with the more reason, the reimbursement of their expenses. In the summer of 1749, Parliament voted the sum of £183,649 sterling to liquidate this demand. In consequence of the urgent representations of prominent merchants who were opposed to the existing paper currency and desired to retire it, that sum was transmitted in metal. Six hundred and fifty-three thousand ounces of silver and ten tons of copper were landed at Long Wharf, in Boston, — more coin than was ever seen there before. It was divided between the four New England Colonies. Massachusetts received the greatest share, and that of New Hampshire amounted only to $16,000. Before this arrival the paper currency of Massachusetts stood at the rate of eight to one in silver; it was now redeemed at one fifth less than the current value. The colony had learned from hard experience that a promise to pay was not paying; that the increment of promises was only an increment of debt. It profited by that lesson, and now proposed to make real money, not a fluctuating paper substitute for money, the measure of values. To this end it prohibited the circulation, within its own jurisdiction, of the paper currency of neighboring provinces, while it redeemed its own. The wholesome result of this wise policy was the sound financial condition and consequent prosperity of Massachusetts till in the struggle for independence she again resorted to a paper currency and accepted bankruptcy as a part of the price to be paid for civil liberty.

New England finances after the war.

The colonies were compelled, at this period, almost to exhaust their resources and energies to defend themselves and to secure to England her American possessions. They were left, for the most part, to fight their own battles, to work out their own safety, with little or no aid from the parent government. American affairs were, not altogether without reason, of secondary importance

Relations of England and the colonies.

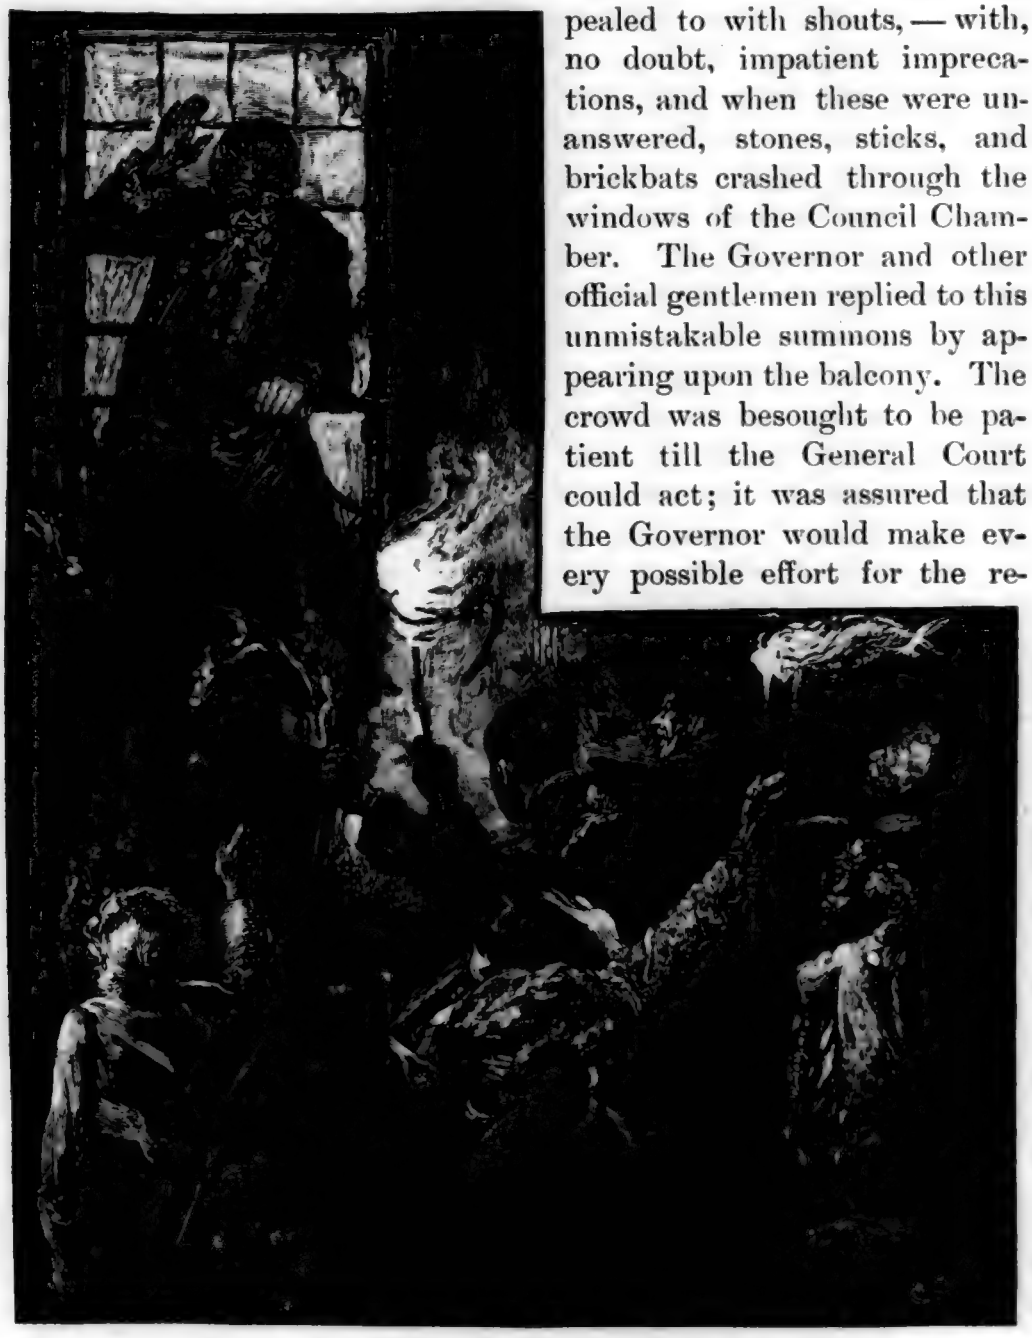
to England. Deeply involved in a war in which all Europe was engaged, and harassed by the machinations of the Pretender, Charles Edward, — whose claim to the throne was a perpetual menace to the peace of the kingdom, till his disastrous campaign in Scotland, in 1745, — the difficulties and the dangers of the distant colonies were of comparatively small moment. The sense of neglect and the feeling of resentment — though often from opposite causes — were not new moods in the colonial temper; but they were strengthened quite as much by indifference to the welfare and safety of the colonies as they had ever been by any seeming or real attack upon them. With this discontent, however nurtured, grew the spirit of independence, ready to show itself on any provocation.



A provocation came in Boston in 1747. A number of sailors had deserted from some English men-of-war, then in that harbor, under the command of one Commodore Knowles. To supply their places the Commodore ordered, as he would have done in England, that a press-gang should take from merchant vessels and on the wharves of Boston, as many men as were needed. He did not know, perhaps, or, if he did know, did not care that a law of the realm, passed in the reign of Anne, forbade impressment in the colonies, except of deserters from naval vessels. But certainly he could not have understood that no man in Boston, however humble, could be made against his will to serve even the King.

An English press-gang in Boston.

When it was known, one day in November, that Knowles's boats had come up early in the morning from the fleet in Nantasket Roads, had visited all the vessels in the harbor, had taken the crews even of those just ready for sea, had swept the warehouses and the wharves of laboring men and mechanics, — then the town broke out into a blaze of excitement and fury. A mob armed with clubs and stones, and whatever other weapons they could suddenly lay their hands upon, filled the streets. The Governor's house, where some of the officers of the English ships happened to be, was soon surrounded by an angry crowd. An assault was threatened, and the officers armed themselves to defend their lives. Influential citizens mingled with the mob, exhorting them to refrain from violent measures. A deputy sheriff, more courageous than prudent, ordered them, in the name of the law, to disperse. Him they seized, bore off in triumph, and set in the stocks. The ludicrous spectacle of his discomfiture turned angry oaths and cries, for a while, into jibes and laughter, and served to lure the crowd from the Governor's house.



Tumult in the city.

But it was only a diversion. When evening came, the people swarmed into King (now State) Street from all parts of the town, defiant, irresistible, determined that the wrong should

BOSTON WATER-FRONT.
[From an Old Print.]

be righted. The Town-House at the head of the street, where the General Court was in session, was surrounded, and that body appealed to with shouts, — with, no doubt, impatient imprecations, and when these were unanswered, stones, sticks, and brickbats crashed through the windows of the Council Chamber. The Governor and other official gentlemen replied to this unmistakable summons by appearing upon the balcony. The crowd was besought to be patient till the General Court could act; it was assured that the Governor would make every possible effort for the release of the men, whose kidnapping he disapproved of, while, at the same time, he deprecated these violent outbreaks. But even so popular a man as Shirley talked in vain; deeds, not words merely, were wanted; "it was thought adviseable," says Hutchinson, "for the Governor to withdraw to his house.'

Attack on the Town-house.

The citizens demanded that every officer in town, belonging to the

fleet, should be seized and held till the kidnapped men were released. In the course of the evening a rumor that a barge had come up the harbor from the fleet spread through the crowd. A rush was made to the waterside, a boat was seized, — only it happened to be the wrong one, — dragged to the front of the Governor's house, then to some more open place, and burnt. The blood of the town was up, and it was fearfully in earnest.

Serious aspect of affairs.

The next day the Governor ordered out the militia by beat of drum; but the drummers were silenced by orders more potent than the Governor's, and the militia-men refused to appear. This was giving to affairs so serious an aspect, that Shirley retired to the Castle in the harbor, not, probably, in fear, but as the most serious and dignified protest he could make against the riotous subversion of civil authority.

From the Castle he appealed to Commodore Knowles, protesting against the outrage which had been perpetrated by his orders and had thrown the town into a state of insurrection. The Commodore would accept no terms and offer none, except this: that unless his officers, who had been arrested and detained in Boston, were set at liberty, he would bombard the town. Whether he would really have proceeded to that extremity, or thought the threat would be enough, he was supposed to be in earnest, and several of his ships weighed anchor and sailed up the bay.

Things had come to that pass that a settlement of some sort was inevitable. Though the General Court continued in session, for three days the naval officers had been held in custody, or on parole, by no other authority than that of rioters. Though these rioters were laboring men and mechanics, it was thought that they were instigated and upheld by many influential people. It was seriously discussed whether the Governor's retreat to the Castle was not an abdication; whether Massachusetts Bay had any longer a government.

Thereupon the General Court passed a series of Resolutions. These tumultuous and riotous proceedings, they declared, tended to the destruction of all government and order; it was incumbent on the civil and military officers to suppress them "whensoever they may happen;" and that the house would "stand by and support with their lives and estates his excellency the Governor and the executive part of the government;" but they were also careful to add that "this house will exert themselves by all ways and means possible in redressing such grievances as his Majesty's subjects are and have been under," which were the cause of those recent disturbances. A town meeting was also held, where it was resolved that the General Court should be sustained.

All this, of course, was eminently proper; and care had been taken that it should also be eminently safe. The militia were now again called out, and the summons was obeyed with great alacrity. Governor Shirley, under the assurance that government was to be supported, returned from the Castle in great state and dignity, and was received with military honors. The British naval officers were released, and permitted to return to the fleet unmolested. Had there been then, after all, only a riot of depraved and misguided persons, demanding an unreasonable thing in an outrageous manner, who were only to be put down? Negotiations of state are not always recorded, and history is left to guess from events by what solemn agreements they may have been brought about. The peace and order which had fled before riot, were restored with much ostentation; but at the same time the sailors, the ship-carpenters, the sail-makers, and the laborers, who had been seized and carried on board the British vessels, quietly returned to their homes with none to hinder. All Boston hurried down to the wharves to huzza lustily as Commodore Knowles's fleet got under way and sailed out of Nantasket Roads for England, for there was not one Boston boy on board. The General Court ordered the windows of the Council Chamber to be mended, and asked no further questions. Commodore Knowles, no doubt, made due report at the Admiralty Office in London of the indignity put upon the King's colors and uniform; but evidently it was thought best not to reopen a dispute with a people who had not been moved in the least by a threat to knock their town about their ears, had abated nothing of their assertion of the sacredness of personal liberty, had gained all they asked for, and in return had given nothing.

Order restored.

Significance of the incident.

CHAPTER IX.

NEW YORK.

Governor Cosby's Administration. — Controversy with Van Dam. — The Zenger Libel Suit. — Struggles of Political Parties. — George Clarke, Lieutenant-governor. — The Negro Plot of 1741. — Growth of the Colony in a Half Century. — Early Settlements on the Mohawk and Susquehanna. — The City of New York at several Periods. — King's College established. — Position of the Colony by the Middle of the Eighteenth Century. — Appointment of Governor Clinton. — The Perplexities of his Administration. — Preparations for a Double Expedition against Canada. — The Treaty of Aix-la-Chapelle. — Sir Danvers Osborn's Inauguration and Death. — Chief Justice De Lancey succeeds as Lieutenant-governor.

Arrival of Governor Cosby.

Colonel Cosby, who arrived in New York in August, 1732, came, like others who had preceded him, to make a fortune from official service. He entered at once into a controversy with Van Dam, the acting Governor, demanding an equal partition of the salary and perquisites received by that gentleman in the interval between Cosby's appointment and arrival. The result was a suit in equity, in which not only all the lawyers of the colony, but most of the people, were deeply interested. The popular party sympathized with Van Dam; the aristocratic party, with the Governor. Out of this suit grew that trial of John Peter Zenger for libel, which is so distinctive a mark in the history of American jurisprudence.

The Zenger libel suit.

Zenger was the publisher of a newspaper, — "The New York Weekly Journal," — and he made it the mouth-piece of the opposition to the Governor and his supporters. It was ordered by the Council that four obnoxious numbers of the paper, together with two printed ballads which were considered libellous, be publicly burned by the common hangman, or the whipper at the pillory; and the magistrates of the city were required to preside at that ceremony. The magistrates refused, but the order to burn the papers was, nevertheless, obeyed. Zenger was afterwards arrested and brought to trial.

His counsel, at a preliminary hearing, filed objections to the legal-

ity of the warrant, and to the trial of the case before Judges De Lancey and Philipse, inasmuch as they held their places by appointment from the Crown. "You have brought it to that point," said Chief Justice De Lancey, "that either we must go from the bench or you from the bar." And the lawyers were dismissed from the bar, the court assigning in the case before them counsel of their own choosing.

Rip Van Dam.

The defendant, however, engaged Mr. Andrew Hamilton, an eminent lawyer of Philadelphia, to appear on his behalf. The case came before a jury. Hamilton boldly took the ground that the defence might prove the truth of the libel in justification, and that the jury were to determine both the law and the fact. The publication was acknowledged; but "you will have," said Hamilton, "something more to do, before you make my client a libeller; for the words themselves must be libellous, that is, false, scandalous, and seditious." "Our constitution," he said, "gives us an opportunity to prevent wrong by appealing to the people." The jury followed this reasoning, and responded to the appeal. The prisoner was acquitted; the people approved the verdict; the corporation presented Hamilton with the freedom of the city in a gold box, and when he left the town, to return home, a salute was fired in his honor. The trial gave the last blow, in public estimation, to the Exchequer Court, and objections were again raised, such as had been made against Montgomerie, to the Governor's sitting as Chancellor.

Death of Governor Cosby.

Cosby died in March, 1736, soon after his defeat in this memorable trial. Van Dam, who had given him so much trouble, claimed by right to be his temporary successor as the oldest member of the Council. He had, however, absented himself for some time from the meetings of that body, a majority of which were the partisans of the Governor. It was declared, moreover, that Cosby, not long before his death, had removed Van Dam from the Council, and the Board thereupon recognized George Clarke as the old-

est member, and appointed him Lieutenant-governor. The popular feeling was warmly in Van Dam's favor, and nothing was expected from his opponent but a continuation of the arbitrary and selfish policy which had made Cosby's administration so obnoxious to the people.

George Clarke appointed Governor.

The contest was warm and bitter; both men assumed the functions of the office, and Clarke, who held the Fort, took measures for its defence. The struggle, which seems to have risen nearly to the dignity of a rebellion, was only ended when Clarke's claim was confirmed by a commission from England.

Character of his administration.

The political tranquillity of his seven years' government shows that, if there was not much to blame him for, so there was little reason for praise. Perhaps he had less disposition than some other colonial rulers to encroach upon the rights of the people; perhaps he was only wise enough to understand that the people would not tolerate encroachment. "We beg leave to be plain with your honor, and hope you will not take it amiss," said the first Assembly he met, "that you are not to expect that we will either raise sums not fit to be raised, or put what we shall raise into the power of a Governor to misapply, if we can prevent it." They assured him further that they would only make up such deficiencies as seemed to them just; that such revenue as they thought fit to raise would be provided from year to year, and that they did not "think it convenient to do even that, until such laws are passed as we conceive necessary for the safety of the inhabitants of this colony."

Each successive Assembly showed a similar spirit, which was not to be shaken by the remonstrances of the Governor, even when he warned one of them of "the jealousy prevailing in Great Britain that the colony wished to be emancipated from the Crown." Perhaps it was because he knew what serious ground there was for that "jealousy," that he was so careful not to try the impatience of the people by any other provocation than reproaches, and sometimes by an adjournment of the Legislature.

The Negro Plot of 1741.

During his administration, however, occurred an event which marks an era in the history of New York, as sombre with tragic interest as that given to the annals of Massachusetts by the Quaker and witchcraft persecutions of the previous century. But New York went mad in a senseless panic, and burned negroes at the stake eighty years after the last Quaker was hanged on Boston Common, and half a century after it was believed in Massachusetts that an old woman, accused of witchcraft, would drown when thrown into a pond, if she was innocent, but would float like a cork, if she was guilty, to be saved only to suffer death at the hands of the public executioner.

The origin of this tragedy was almost contemptible. In February, 1740–41, one Mrs. Hogg, who kept a small shop in Broad Street, was robbed of some goods and money. A few days before, she had heedlessly opened a drawer containing some silver coin, in the presence of a young sailor of the name of Wilson. This Wilson was in the habit of frequenting a low ale-house on the North River, kept by one John Hughson, a place of resort, probably, of dissolute persons of all sorts, but especially of idle servants among the negro slaves. To three of these, Cæsar, Prince, and Cuffee — they had no other names, but were known as Vaarck's Cæsar, Auboyneau's Prince, and Philipse's Cuffee — to these three Wilson told how he had seen the money in Mrs. Hogg's drawer, how easily the shop could

Its origin.

View in Broad Street, about 1740.

be entered in a way he knew of, and the prize secured. On this hint, the burglary was committed; but, whether Wilson repented of his share in it, or whether he hoped to secure impunity for himself by betraying his comrades, he, a few days afterward, assured Mrs. Hogg that he had seen a square piece-of-eight, described as among the stolen coin, in the hands of Cæsar, at John Hughson's dram-shop.

This evidence was confirmed by Mary Burton — an indented servant of John Hughson's, a girl of fifteen years — who confessed to a neighbor that she knew who committed the robbery, and showed a piece of the stolen money, which she said the negro Cæsar had given her. On further examination, she implicated one "Margaret Sorubiero, *alias* Salingburgh, *alias* Kerry, commonly called Peggy, or the Newfoundland Irish beauty," a disreputable young woman of one or two and twenty, who lodged at

Mary Burton's evidence.

Hughson's house, and was reputed to be the kept mistress of Vaarck's Cæsar. Then some of the goods were found under the kitchen floor of Vaarck, the baker — Cæsar's master — to which access could be had from a low drinking-place, next door, kept by John Romme. Romme fled on this discovery, and the assumption was, that he was an accomplice in the burglary. The other persons accused, including Hughson and his wife, were arrested, Hughson acknowledging that he had received and concealed some of the stolen goods. It was a commonplace crime, and there was no lack of evidence to convict the criminals. The incident would have been soon forgotten, had not unexpected events presently given historical interest to the dram-shops of Hughson and Romme, to the negroes Cæsar, Prince, and Cuffee, and to the young white women of questionable character, Mary Burton and the Irish beauty, Peggy.

Arrest of Hughson and his family.

A fortnight after the accused persons were committed to prison, a fire broke out in the roof of the Governor's house, within the Fort, about one o'clock in the afternoon. The house, the adjoining chapel, the barracks opposite, and the secretary's office over the gate of the fort, were all burned to the ground. The furniture of the government house and the colonial records, kept in the office of the secretary, were saved; and it was thought most fortunate that the fire occurred in the daytime, as therefore, probably, it did not spread beyond the walls of the fort. There was naturally for a few days a good deal of excitement in the town, rather, however, from the character of the buildings burned, than from the extent of the fire or any doubt about its origin. A plumber had been engaged upon the roof of the Governor's house during the morning, in soldering the leaden gutter between it and the chapel, carrying with him from place to place a furnace of hot coals. The wind was very high; the roofs of the two buildings were covered with wooden shingles; with such a concatenation of circumstances, the result was almost inevitable. At first there was no thought of any other than this obvious explanation; and again, but for subsequent events, an incident of no great moment would have soon ceased to be of the slightest interest to anybody.

Fire in the fort.

About a week afterward, also in the middle of the day, a fire broke out in the roof of Captain Warren's house near the bridge in the southwestern part of the town. Sparks from a foul chimney had caught upon old and dry shingles. It was put out with little difficulty, and there was no doubt about the cause of it while men's minds were cool.

Other fires in the town.

On the East River side of the town, was an old wooden storehouse, belonging to Mr. Van Zandt. It was filled with boards and hay, and

was burnt down about a week after the fire at Warren's. This also happened in the daytime. The proximity to the river made it easy to prevent the flames from spreading; and everybody believed that the carelessness of a smoker, known to be within the building, who dropped sparks from his pipe among the hay, was the origin of the fire. These two fires, following within a week of each other, kept up the excitement which that at the Fort had caused. The town, which contained about twelve thousand people, was compactly built, still covering only that end of the peninsula below Wall Street. Three fires, two of which were serious, within so short a period, were, no doubt, unusual, and prepared the way for the panic that presently followed.

Ferry House on East River, 1746. — From an Old Print.

The day after the burning of Van Zandt's warehouse, some hay was found to be on fire in a cow-stable, belonging to one Quick, on the east side of the town. This was easily suppressed; but it was scarcely done, when another alarm was sounded from the west side, where smoke was seen coming from the kitchen-loft of Ben. Thomas's house near the city market and "next door to Captain Sarby." It was traced to two beds between which fire had been put, and which was the sleeping-place of a negro.

Early the next morning — on Sunday — some coals were found under a hay-stack near John Murray's stables in Broadway. But they had gone out without doing any damage. The next forenoon an alarm came from Serjeant Burns's house, opposite Fort Garden; but if there was any cause for it, it was only the burning of a foul chimney. An hour or two later it was discovered that the roof of Mrs. Hilton's house — which adjoined Sarby's on the east side, as Thomas's

did on the west — was on fire. Here was pregnant matter for suspicion, and it grew into fury when some flax was found near by, which, it was thought, was used to kindle the flames. Then a cry arose in the streets — "The Spanish negroes! the Spanish negroes! Take up the Spanish negroes!"

Spanish negroes apprehended.

There was, as it happened, a Spanish negro in Captain Sarby's house, whom he had recently purchased, and who was one of nineteen belonging to a Spanish vessel taken at sea and brought not long before into New York as a prize. A Court of Admiralty had condemned them as slaves, in spite of their protest that they were freemen in their own country. It is evident that these unfortunate blacks had not quietly submitted to their fate; had probably complained angrily, and perhaps threatened; for, this first public outbreak of panic pointed to them as men who had a motive for some signal act of vengeance. Sarby's servant was at once seized, and orders were given for the arrest of all who came in the same ship.

In hot haste the magistrates came together at the City Hall. Sarby's negro was still under examination when again the alarming cry of fire was heard. Looking from their windows, Mayor Cruger and the rest saw a streak of flame running up the roof of Colonel Philipse's storehouse — the work, this time, possibly of an incendiary, for there was no chimney in the building. It was hardly extinguished — which was done speedily — when the crowd was turned in a new direction by a fresh alarm, which seems, however, to have been groundless. But soon after some chips were found burning in a baker's cellar; and trifling as this common incident was, it served to feed the popular excitement.

Fears of insurrection.

A negro was seen to jump from a window of Philipse's warehouse. He may have been there for no unlawful purpose — certainly not to kindle a fire that was already extinguished. But frightened men do not stop to reason. A shout arose — "The negro! the negro! the negroes are rising!" — then, "Cuff Philipse! Cuff Philipse!" A frantic rush was made for Philipse's house, where Cuff was found quietly sitting in the kitchen. He was seized upon, nevertheless, and hurried to jail; an order was issued that all negroes in the streets should be arrested. There were many about who had been diligently assisting in passing buckets of water in the line with the whites; but this circumstantial evidence of the absence of any evil purpose among them seems not to have been thought of. To be black was *prima facie* evidence of being a conspirator.

The air was heavy with rumors. Only the day before Mrs. Earle had seen, from the window of her house in Broadway, three negroes on their way to Trinity Church. As they passed, one of them ex-

claimed: "Fire, Fire! Scorch, Scorch a little! damn it! By and by!" then he "threw up his hands and laughed." At these terrible words and alarming gestures, "the woman conceived great jealousy," and repeated them to her next-door neighbor, Mrs. George. They watched for the return of the negroes from church, and Mrs. George recognized the man whom Mrs. Earle pointed out, as Mr. Walter's Quaco. The two women went to an alderman, and the alderman went to the other magistrates, and Quaco was soon under lock and key.

Mrs. Earle and the Negroes.

Quaco said on examination — and brought the other negroes to prove it — that they were talking of Admiral Vernon's capture of Porto Bello — the news of which had just been received — and what he would do by and by to the Spaniards. The man's explanation, confirmed by his companions, was accepted then, and he was released, — though he was hanged not long afterward. But the story, nevertheless, flew like wild-fire about the town. The magistrates as yet had not taken leave of their senses, but everybody else believed that it was New York Quaco was talking about; that it was only "scorched" a little now, but "damn it by and by" it was to be laid in ashes; with other dreadful things, as it appeared later.

The jail — a part of the City Hall — was soon full of terrified negroes, and among them were Hughson with his wife and daughter, Mary Burton his servant, Peggy the prostitute, who had lived in his house, and one Arthur Price, a thief, under arrest for stealing at the fire in the Fort, who was to play an important part in the coming tragedy. The Governor issued his proclamation offering rewards for

any disclosure that should lead to the detection of incendiaries — to whites, money; to free negroes, money and pardon; to slaves, money, pardon, and freedom. On a day appointed, the troops were called out to patrol the city, while the aldermen and councilmen, attended by constables, ransacked every house of their respective wards for stolen goods and concealed strangers. Neither were found in a single instance. Yet, it was confidently said, that the panic-stricken people, as they moved from place to place to escape the neighborhood of threatened fires, had been plundered without mercy of their household goods. The goods, it was plain, were not in the possession of the negroes, but there was no pause to consider of how much weight that fact was worth, nor whether the stolen property could be anywhere else than in the houses of the blacks. Mercy had already fled; men had lost their reason.

The Supreme Court was convened;[1] a grand jury was summoned; every member of the bar, without a single exception, volunteered his services on behalf of the government, leaving the accused, — who, from their ignorance and friendlessness, were peculiarly in need of counsel, — without the possibility of making a defence.[2] As we have said, the first outbreak of frenzy was directed against the Spanish negroes, — the few poor fellows whom the Admiralty Court had reduced to slavery. Next came the vague, thoughtless, but terrible fear of a negro insurrection, — terrible in the dread of vengeance for the innumerable and unutterable wrongs suffered by a slave, but of which the slave himself is so often less conscious than he who inflicts them. Not only did the negroes in prison deny all knowledge of any plot, — that they would have done in any case, — but there seems to have been a destitution of any evidence against them, in their conduct at home or abroad, — an absence of all signs of any unusual consciousness of discontent, — a want of any appearance of exaltation as at some coming, longed-for period of freedom and happiness. They huddled together in the jail, appalled, despairing, helpless; outside of it,

Signature of Horsmanden.

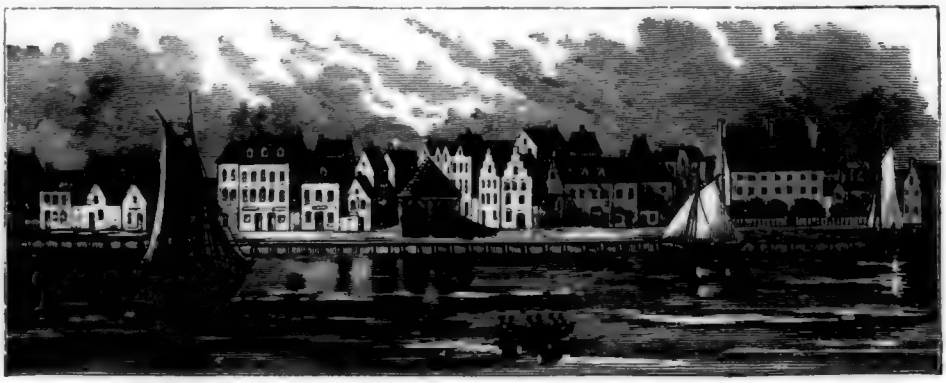
[1] It is to a Justice of this court, — Daniel Horsmanden, — that we are indebted for a complete and curious record of these events. He sat on the bench at most, if not all of the trials, — a position for which he was eminently unfit, from his ludicrous narrow-mindedness, timidity, and want of sound judgment. His book is entitled *The New York Conspiracy, or History of the Negro Plot.* It is a scarce work, of nearly four hundred pages; minute, entirely one-sided, and reflects faithfully the credulity and abject fear which, for months, overcame the common sense and manliness of the people.

[2] New Yorkers will be interested to know the names of the lawyers of the city a hundred and thirty-eight years ago. They were Messrs. Bradley, — who was Attorney-general, — Murray, Alexander, Smith, Chambers, Nichols, Lodge, and Jameson.

they were in continual dread of accusation which might fall anywhere, and against which innocence was no defence.

The robbery of Mrs. Hogg's shop had occurred on the last day of February; but it was not till toward the end of April that the case came on for trial, at the moment when the town had gone wild with affright at the repeated fires and rumors of insurrection. There was an interval of weeks between the robbery, concerning which Mary Burton was the principal witness, indeed the only witness, — for Wilson seems to have disappeared, — and

Commencement of the trials.



Mary Burton before the Grand Jury.

the first fire. In all this time Mary had given no hint of any knowledge of a plot. But now, whether instigated by others, or impelled by the hope of a reward of £100, and release from her term of servitude, she insinuated that she could tell as much about the fires as about the burglary. Of course she was urged to tell the truth; but the truth assumed was, that the negroes had entered into a horrible conspiracy to burn the city, to rob and to murder the inhabitants, and to commit any other atrocities that the most heated imagination could conceive of. "The grand jury," says Judge Horsmanden's narrative, "was very importunate and used many arguments with her,

in public and private, to persuade her to speak the truth, and tell all she knew about it." When she hesitated, apparently from fear of evil consequences to herself, she was promised protection; she was reminded of "the heinousness of the crime she would be guilty of if she was privy to, and could discover so wicked a design," and would not; that "she would have to answer for it at the day of judgment," and that "a most damnable sin would be at her door."

Mary Burton as a witness.

No wonder that an ignorant child of fifteen years yielded, at last, to such importunities and arguments, in the official and solemn presence of seventeen of the most respectable gentlemen of the town. On the one hand, her gain would be great; on the other, she had little to fear now from her late master and mistress, John Hughson and his wife, or from her late companion, Peggy, whose certain punishment, even she could see, was a foregone conclusion.[1]

The Meal Market. — From an Old Print.

The wonder is, rather, that seventeen sensible and sober men could heed her story. Even on the robbery, her testimony conflicted with that she had at first given, and if either statement were true the other was false. But the stealing of Mrs. Hogg's spotted linen and pieces-of-eight was of trifling moment compared with the revelations of a conspiracy that the witness now made.

She said that Cæsar, Prince, and Cuffee were not merely thieves but arch-conspirators, and their common talk was of burning the Fort, and of going to the Vly and burning the whole town. They were to do this in the night, and as the white people came to put out the fires, the three negroes were to put them all to death. To this plot John Hughson and his wife assented and

The evidence of the plot.

[1] The Grand Jury was composed of seventeen gentlemen, all designated as merchants. Among them are names well known at this day in New York, and held in the highest esteem. They were: Robert Watts, Jeremiah Latouche, Joseph Read, Anthony Rutgers, John McEvers, John Cruger, Jr., John Merritt, Adoniah Schuyler, Isaac De Peyster, Abraham Keteltass, David Provoost, Rene Hett, Henry Beekman, Jr., David Van Horne, George Spencer, Thomas Duncan, and Winan Van Zandt.

promised to give their aid. It was "in their common conversation" that when all this was done, Cæsar was to be Governor, and Hughson was to be King. Sometimes, she declared, there were large meetings of twenty or thirty negroes at her master's house, who would not dare, the three leaders declared, to disobey their orders. But there were no white people — she said then — except the Hughsons and Peggy at any of those consultations; and the preparations made for the insurrection were eight guns and some swords, — three pistols and four swords, she added afterward.

All this, meagre, inconclusive, and absurd as it was, we are told by Judge Horsmanden, "was most astonishing to the grand jury," and "could scarce be credited." It was not that so incredible a tale should be invented, and men in their sober senses be asked to accept it as true, that astonished them; but that "white people could confederate with slaves in such an execrable and detestable purpose." The gross absurdity of the story, — that three black men and one white, with a doubtful following of about twenty more, without even arms enough for the leaders alone, had conspired to destroy a city of twelve thousand inhabitants, only a sixth of whom, bond and free, were negroes, that one of the conspirators might be made a Governor and another a King, — the absurdity of such a story told by a child of fifteen years, whom seventeen grave gentlemen had alternately tempted by rewards, and frightened by threats of terrible punishments in this world and the next, seems to have occurred to nobody.

Causes of the panic.

But the fear of insurrection is an ever-present terror wherever slavery exists. This dread had been touched to the quick by the rapid succession of alarms of fire; rumors, none too absurd for belief, fed the popular excitement. There was war with Spain, and in the town were a score of Spanish negroes held as slaves, but who claimed to be freemen; the jail was full of blacks, arrested, not because they were, but because they might be, dangerous; fear was lashed into frenzy, and demanded victims; here at hand was a band of thieves; what more likely than that they should be a band of conspirators also, contriving riot and arson, murder, rape, and all conceivable atrocities, proposing the conquest of a province and to make of their leaders kings, and governors, and captains? The Grand Jury believed in all this wickedness and folly, from the tale of a foolish or a cunning child, and went with it to the grave judges of the Supreme Court. They also listened and believed. The whole bar of the city was summoned in consultation in so serious an emergency; it was determined that the trials should be conducted in the highest court, and the Governor was asked for a special order to prolong the session, about to close, for that purpose.

There came forth presently another swift and artful witness — Price — under indictment for stealing goods saved from the Governor's house at the fire in the Fort. He was right if he believed that his own crime would soon be forgotten, could he help fix the far more monstrous crime of premeditated insurrection upon any of his fellow-prisoners. It was easy for the inmates of the ill-contrived and over-crowded jail to hold intercourse with one another, and Price was soon ready to repeat real or invented conversations.

The witness Price.

The first of these was with Peggy, Hughson's lodger; the second, a few days later, with Sarah, Hughson's daughter. These people were absolute strangers to Price, yet Peggy — if he was to be believed — had twice come voluntarily to the wicket in his door, and, in the most extraordinary way, reposed in him entire confidence. Except that the language, which he said the woman used, was to the last degree profane and vile, and might, therefore, well have been hers, the internal evidence in his statement shows its falsehood. But it was ingenious; as in Mary Burton's testimony, there was the innuendo indirect about the fires, substituted for the proof direct about the robbery; and while it was assumed that this was true, it was suggestive of the wildest suspicions of the truth of the other. He made no pretensions of having obtained any information from Sarah Hughson by voluntary confession; on the contrary, she denied, he said, all knowledge of any plot; but in the expression of her fears of what might befall her parents and herself, and in her comments on the fires, when induced to talk of them, she betrayed — or was represented as betraying — how intimate her knowledge of a plot was.

If Mary Burton had told the truth, here was the most remarkable confirmation of her story, coming at exactly the right time; on the other hand, if the imagination of the child had been stimulated by persuasions the most tempting, and by threats the most appalling, this suspicious story was clearly an invention, suggested by hers and told with a selfish purpose. It was certainly clumsy, contradictory, and incredible; it was related by a thief who, unless he could commend himself to mercy in this way, was certain of heavy punishment; was certain, if he could so commend himself, of reward as well as pardon.

From so slight a beginning of wrong-doing, first made fortuitously conspicuous, then tortured into something that it was not by low cunning, transparent falsehood, and intense credulity, there grew a strange scene of terror and outrage. For its disregard of all rules of legal evidence, for its prostitution of the forms of law for the perpetration of cruelty, for popular credulity and cowardice, for the abnegation of all sense of mercy, for the oppression of the weakest and most defenceless, it was without precedent, and has had no parallel in

any civilized community. There were, indeed, Judge Horsmanden acknowledges, "some wanton, wrong-headed persons amongst us, who took the liberty to arraign the justice of the proceedings, and set up their private opinions in superiority to the court and grand jury," and who "declared with no small assurance (notwithstanding what we *saw* with our eyes, and *heard* with our ears, and every one might have judged of by his intellects, that had any) *that there was no plot at all!*" But these were only a wretched minority. The popular mind was not in a state to weigh nice points of evidence, or even points that were far from nice, to detect motives in cunning and interested witnesses, to consider probabilities calmly. Except by the few, the tales of Mary Burton and Price were caught up with avidity and accepted without question. The man Hughson, Peggy, and the three

The Negroes Sentenced.

negroes were speedily brought to trial, convicted, and sentenced to be hanged. They were tried, indeed, for the robbery — the negroes for committing the act, the whites for receiving the stolen goods; — but when Cæsar and Prince were brought up for sentence, the judge exhorted them to discover their confede-

Execution of Cæsar and Prince.

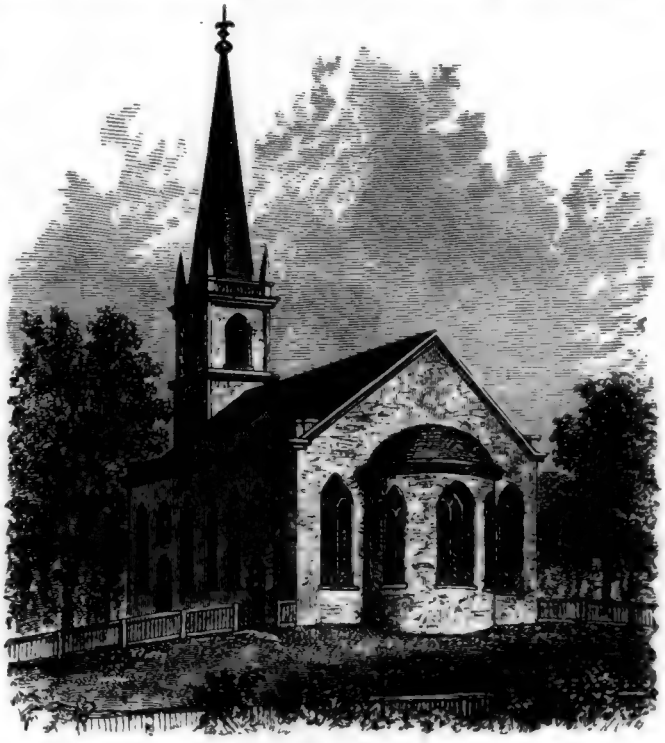
rates "in designing or endeavouring to burn this city and to destroy its inhabitants," as he was "fully persuaded" it was in their power to do if they would. But there was no delay in their execution, in the hope that their speedy punishment might bring others to confession. To the last they denied that they knew of any conspiracy.

The Hughsons and Peggy were spared a little longer, to be indicted for the plot. Peggy had stoutly and indignantly denied, up to this time, that there was any truth in Price's story. But now, in the hope of saving her life, she made a pretended confession. If what she said was true, Mary Burton's tale was false, for she shifted the headquarters of the plot from Hughson's to Romme's, charging him with being a receiver of goods stolen by negroes, with inciting them to insurrection, and promising to take them all, when enough had been stolen, to another country. She said nothing of the two negroes who had just been hanged, but she implicated a number of others, all of whom were immediately arrested.

Peggy's confession.

The 13th of May, designated a month before by Lieutenant-governor Clarke as a day of public fasting and humiliation, was so observed with great solemnity. The excitement grew more intense, sanctioned thus by religious observance, and the highest example in the State, and fed with constantly new revelations. At Hackensack, on the other side of the Bay, in New Jersey, some barns had been burnt, and suspicion fell, of course, upon the negroes. Two were apprehended and tried, confession was extorted from one of them, and both were burnt at the stake.

A public Fast ordered.



The Burton child was equal to any demands that could be made upon her. With that "remarkable glibness of tongue," which even Judge Horsmanden — who, no doubt, would have cheerfully burned any negro in the colony — was compelled to acknowledge, distinguished her, she could confirm any accusation brought against anybody. Romme, she now remembered, was intimate with Hughson, and often conferred with him; the negroes whom Peggy accused, Mary had frequently seen at Hughson's house. When, soon after, with Hughson and his wife, Peggy was hanged, declaring, with her last breath, that there was not a word of truth in her previous confession, and that she was totally ignorant of any plot, having hoped only to save herself by accusing others, Mary's testimony — which that pretended confession had suggested — was still held as conclusive by the Court.

And so in all subsequent proceedings, the trembling slaves — wild with fright — sometimes when arrested on mere suspicion, or when standing at the foot of the gallows, or about to be bound to the stake where the ready fagots were piled to consume

Character of the evidence.

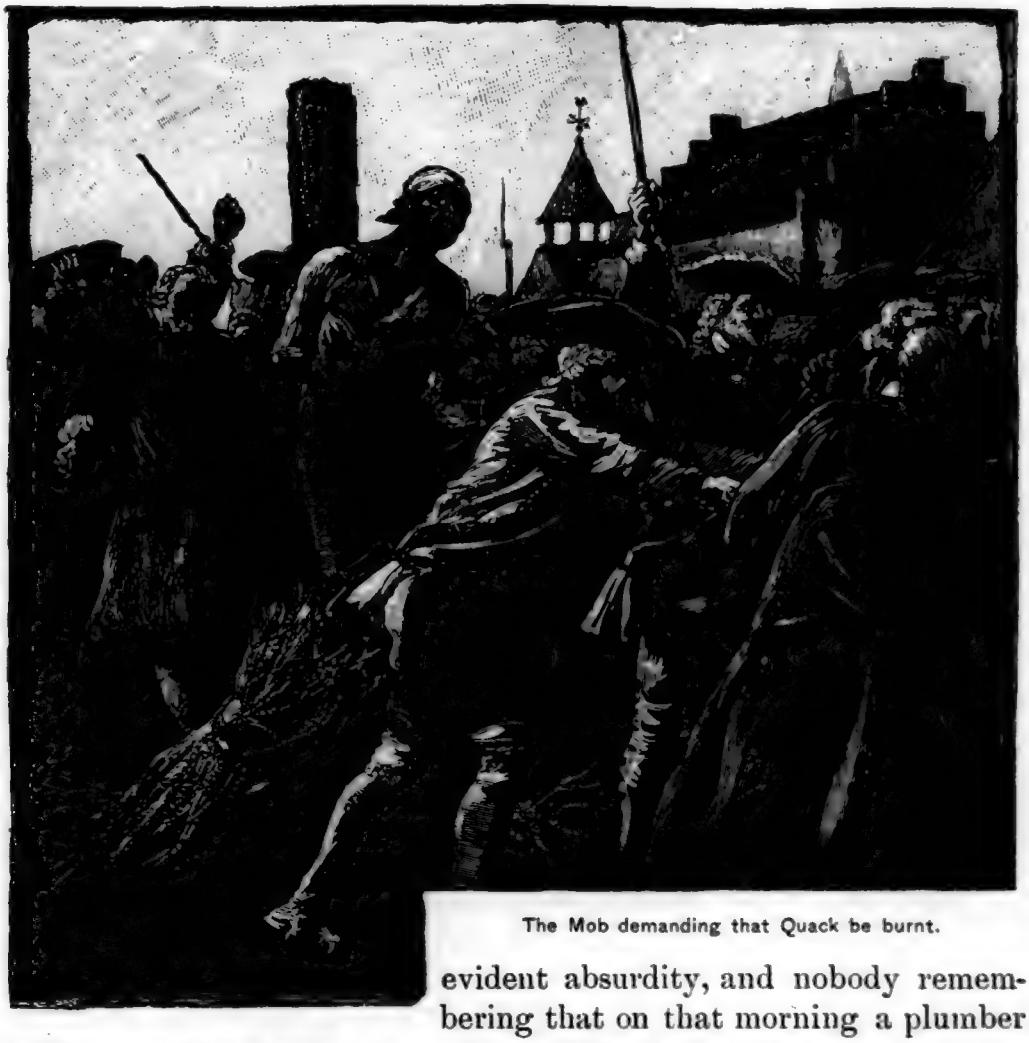
presently their living flesh, — were only too eager, as the frenzy grew, to confess to anything, to avow the wildest and most improbable designs, to impute to others the most horrible purposes, that so they might appeal to the mercy of the Court, and save their own wretched lives. To Mary Burton any new revelation was a fresh impulse to her own recollections, and her evidence was always forthcoming in proof of anything that needed confirmation. Price, within the walls of the jail, was equally useful, so long as the unsuspicious negroes would consent to hold intercourse with him. That he might lead his victims into unwary talk, to be turned against them, the authorities furnished him with liquor, that he might first make them drunk.

No stories, however absurd, were held by the Court or by the people as incredible. None of these confessions extorted by fear, sometimes at the gallows' foot, or at the stake in the hope of reprieve, and often recalled when hope was no longer possible, — none of these pretended to any concerted plan, which could secure success to an insurrection, or prevent its immediate suppression by the most ordinary method of preserving the peace. There was only the vague purpose of burning and killing, for which the provision of arms was the eight guns, three pistols, and four swords which Mary Burton declared were concealed at Hughson's.

Trinity Church, 1741.

This baldness of detail, and the evident poverty of imagination which gave no heed even to probabilities, showed that the mere abjectness of fear prompted these confessions, while no outside evidence supplied the essential element of proof. It was accepted as true that there was an understanding between Hughson and Romme — who supplied negroes with liquor and received their petty thievings — and the Spanish Government for the capture of the city, and this ridiculous supposition was suggested no doubt by the presence of the score of Spanish negroes probably held unlawfully

Character of the alleged plot.



as slaves. It was seriously believed that a few negroes meant to watch at the doors of Trinity Church with the expectation that the congregation, as it came out from service some Sunday morning, would quietly submit to be killed one by one; that a handful of discontented blacks meant to murder their masters and take their mistresses for their wives, in the expectation that their fellows would at once follow their example when a few should begin the work of murder and rapine — that thus a small minority of the population, ignorant, degraded, unorganized, and unarmed, could compel the most servile submission from a community, intelligent, well-ordered, strong in civil and military government, outnumbering these besotted insurgents — even if they were joined by every negro in the city — five to one; and that in such a community there could be grave reason for fearing that one of the vilest of the lowest class of whites had seriously proposed to make himself King, his wife Queen, the slave Cæsar Governor, with the prostitute Peggy as the head of a governor's household.

In the great dread that all these absurd and impossible things were impending, the Supreme Court, countenanced and aided by the whole bar of the city, applauded and urged on by the most enlightened and influential citizens, in the course of two or three months, imprisoned more than a hundred and fifty negroes — four of them women; convicted over a hundred of these as conspirators; burnt twelve of them alive at the stake; hanged eighteen, and transported seventy-two — some of whom were probably freemen — to be sold as slaves in other countries. The accused were in all cases without counsel; whenever their masters appeared on their behalf to give testimony as to their good character, or to show by alibi, or other circumstances, that the accusations were necessarily false, the evidence was disregarded. That a conspiracy existed, was assumed to be true; accusation was accepted as proof, and this was held to be none the less conclusive although the so-called confession on which it rested was subsequently declared to be false by him who had made it with the hope of saving his own life, because he repented of having borne false witness against the innocent.

Quack's confession and execution.

One instance may be given of the method pursued in the trials and the character of the confessions that obtained credence. Roosevelt's Quack was charged with being one of the conspirators, and with having set fire to the Governor's house. When bound to the stake, the hope of a pardon was held out to him, if he would tell all he knew. With the fagots piled about the wretched negro, what else could he do but confess anything that was charged against him? The essential point was, did he set fire to the Gov-

ernor's house? He declared that he did; that the night before, he took a brand from the kitchen fire and placed it on a beam beneath the roof. But as nothing came of it, he, the next day — twelve or thirteen hours afterwards — went again to the garret, quickened the still burning brand with his breath, and the fire caught the roof. The confession was accepted as true, nobody, apparently, observing its

The Mob demanding that Quack be burnt.

evident absurdity, and nobody remembering that on that morning a plumber had been employed upon the roof in a high wind, with an open furnace of live coals. But it was too late to save his life; the mob howled for his execution, and the fagots piled about the stake to which he was bound were soon ablaze.

But among the accused were some who were not black, besides the Hughson and Romme families. As the panic spread, there sprang up the fear of Papacy. The town was searched for Catholic priests; none were found; but an obscure schoolmaster, one John Ury, was arrested on suspicion. Extorted confessions, after his arrest, were made to implicate him as one of the con-

Arrest of and accusations against Ury.

spirators at John Hughson's house. Sarah, Hughson's daughter, who was repeatedly reprieved and finally pardoned, had become a swift and willing witness against any prisoner whose conviction was determined on. Ury, hitherto unheard of, and about whom many who had gone to their deaths had said no word, appeared now as a chief instigator of the plot. It was he who presided at banquets at Hughson's; he who kept a list of the conspirators; he who swore them to secrecy by drawing a circle on the floor with chalk, into which each negro put his foot as he took the oath; he who administered the sacrament and absolved from all sins — confessing Peggy among the rest, who was often, it was said, his bed-fellow. Mary Burton, who was never wanting, who at first swore she had seen no white persons at Hughson's house, except themselves, but who remembered Romme as soon as he was arrested, now also remembered Ury. She had witnessed these ceremonies; had seen the chalk-circle, and "black things" — the negroes' toes, it was conjectured — going in and out; had been offered absolution by Ury. All this, forgotten before, was now recalled vividly by this swift and willing witness.

Ury was hanged. All testimony from those who knew him well, and who showed him to be a harmless and humble teacher, was rejected. He protested, on the gallows, with an appeal to God, that he "never knew Hughson, his wife, or the creature that was hanged with them;" that he "never saw them living, dying, or dead;" that he "never knew the perjured witnesses but at his trial;" that he "never had any knowledge or confederacy with white or black as to any plot;" and he declared that he was not a Catholic, but a non-juring minister of the Church of England.

Governor Oglethorpe's letter.

On his trial was produced a letter from Governor Oglethorpe to Governor Clarke, in which the writer said he had received "some intelligence of a villainous design of a very extraordinary nature and, if true, very important." It was that "the Spaniards had employed emissaries to burn all the magazines and considerable towns of North America," and that for this purpose "many priests were employed who pretended to be physicians, dancing-masters, and other such kinds of occupations." It was thought certain that Ury was one of these priests. Then there was one Corry, a dancing-master, already in custody, suspected of being a Catholic — whom Mary Burton, of course, recognized at once, as one of the company at Hughson's, when Corry "stoutly denied it and declared he had never seen her before, at which the girl laughed." There was also great search for one Holt, another dancing-master and supposed Catholic, but he, fortunately for himself, had left the town. Oglethorpe's letter produced a profound sensation, though it

does not seem to have been observed that he closes it by saying that he had no faith in these rumors and failed to find any confirmation of them from Spanish prisoners. They firmly believed, in New York, in pretended schoolmasters and dancing-masters, who were Catholic priests in disguise, and who were conspiring with slaves to burn American cities.

Some soldiers stationed at the Fort were also taken into custody, apparently on no other ground than the suspicion that they were Papists. One of them was frightened into a confession, and his testimony was much relied upon to convict Ury. The Burton child professed to know all about these men also — to know so much, indeed, that she had often been sent, she said, to bring a dozen soldiers at a time to Hughson's house.

Arrest of supposed Catholics.

But it seems to have been suspected, at last, that these stores of knowledge, held in reserve by this ingenious young person, might become embarrassing. She talked of many white persons coming to Hughson's house, and "some in ruffles;" that these ruffled gentlemen would often send letters to Hughson, with money in them, which she judged, by the feeling, to be "milled Spanish pieces-of-eight;" she gave "the names of several white persons beyond the vulgar who sometimes resorted at Hughson's;" and she said that attempts had been made to bribe her to silence by offers of silk dresses and promises of gold. Of all this, Judge Horsmanden, who sat upon all the trials, says, "the Recorder did not care to be over-solicitous, for some reasons."

But Judge Horsmanden was himself the Recorder. His solicitude for the extreme punishment of negroes and obscure Catholics had been intense, and there can be little doubt as to his reasons for hesitating to enter upon the wider field of exploration to which Mary Burton was ready to lead the way. The fervor of the persecution was burning itself out; the opinion of those "wanton, wrong-headed persons" who, as Judge Horsmanden said, always declared "there was no plot at all," was making its way among sensible people; the testimony of the infatuated and evil-minded child — whose story had grown so rapidly from the imputation of some vague talk of insurrection by two or three thieves and the receiver of the stolen goods, to a plot including gentlemen of standing, with wealth at their command, and in which soldiers by the score had already enlisted — such testimony would prove too much, if accepted, and would presently make everybody ridiculous who lent an ear to it. The natural revulsion of a panic came at last. Of the twenty white persons committed, four were hanged and others banished from the colony. But with Ury the tragedy ended; the town

Revulsion of popular feeling.

recovered from its insane and cowardly terror by the end of summer; though for months timid people heard in every alarm of fire a threatened conflagration, and so long after as March of the next spring, a futile attempt was made to revive the belief in insurrection by hanging a negro idiot accused of arson. As the proceedings began with a Fast, so now the Governor and Council appointed the 24th of September as a day of public Thanksgiving to God for his mercies in delivering the colony from "this horrible and execrable conspiracy." To many persons the presence of an avenging Providence had been visible in a miraculous manner, in that the body of Hughson, which had been hung in chains, was believed to have turned black, and the body of Cæsar — also hung in chains on Ellis's Island, in New York harbor — to have turned white.

A day of Thanksgiving.

Ellis's Island.

This melancholy exhibition of the unmanly and abject fear which may seize upon an intelligent and vigorous community in the presence of a servile race, ignorant and powerless, seems to have been confined chiefly to the city. There were two or three cases of the punishment of blacks for some alleged connection with the plot — one we have already mentioned on the Jersey side of the Hudson — in the vicinity of New York; but everywhere, except in the town, the proportion of blacks to whites was probably too small to admit of any serious apprehension of a negro insurrection.

The population of this province had increased, in the half century between Leisler's death and the accession of Clinton, who succeeded Clarke as Governor, from ten thousand to more than sixty thousand people. "We are," said a memorial of the Council to the Govern-

ment at home in 1692, "the key and centre of all their majesties' plantations in this main." Although, as the memorial complained, "the East and West Jerseys, Pennsylvania, the lower counties on the Delaware, and that part of Connecticut which is to the westward of the Connecticut River, were lopped off,"[1] the province was large enough and its advantages obvious enough to attract emigrants. Presbyterians from Ireland, and Protestants from France, came in considerable numbers towards the end of the century. In 1710 three thousand of the Protestants who had fled to England at the invasion of the Rhenish palatinate by Louis XIV., crossed the ocean, and many of them planted new homes along the upper waters of the Mohawk and Schoharie Creek. In 1737 several hundred Dutch families made their way to the valley of the Mohawk. Within the next two years Scotch and Scotch-Irish, under the leadership of John Lindesay, pushed over the hills which border the Mohawk on the south, and settled on the banks of Cherry Valley Creek upon a grant of land made by Governor Clarke to four associates — among them his own representative.[2] These hardy pioneers brought with them the best elements of civilization, and were as robust and vigorous of character as they were strong to encounter the hardships of the wilderness. By them were built the first church and school-house in which the English tongue was spoken and taught west of the Hudson.[3] Among the earlier settlers in the Mohawk Valley was William Johnson — afterward Sir William — who came as the manager of his uncle, Admiral Sir Peter Warren, to whom a large land-grant had been made in that region. So along the Susquehanna and the Mohawk and their tributaries was scattered from time to time through the first half of the eighteenth century, the seed that was to bloom in later years into the rich harvest of Central and Western New York.

Growth of the province.

In the interminable records of disputes which royal governors maintained with their councils and assemblies, the reader vainly searches for some glimpse of the life of the men and women who were unconsciously building up an empire through the uneventful detail of their daily duties and pleasures. But a bit of a journal from the pen of an adventurous woman who went on horseback from Boston to New York in 1704, to collect some debts due to the estate of her husband, supplies a little picture of domestic life in that prosperous hamlet by the seaside, which has now become a city of a million inhabitants. "The City of New

Life in New York early in the eighteenth century.

[1] See *Documents Relating to the Colonial History of the State of New York*, vol. iii., 836

[2] *New York Colonial Documents*, vol. vi.

[3] *Central New York in the Revolution.* By Douglass Campbell. 1878.

York," she says, "is a pleasant, well-compacted place, situated on a Commodious River which is a fine harbor for shipping. . . . . The Bricks in some of the Houses are of divers Colors, and laid in Checkers; being glazed, look very agreeable. The inside of them are neat to admiration, the wooden work, for only the walls are plastered, and the Lumoners and Joist are planed and kept very white scoured, as so is all the partitions if made of Boards. . . . . The hearths and staircases were laid with the finest tile that I ever see, which is ever clean, and so are the walls of the kitchen, which had a Brick floor. . . . . They are Generally of the Church of England, and have a New England Gentleman[1] for their minister, and a very fine church, set out with all Customary requisites. There are also a Dutch and Divers Conventicles, viz.: Baptists, Quakers, &c. They are not strict in keeping the Sabbath as in Boston and other places where I had been, But seem to deal with great exactness, as far as I can see or Deal with. . . . . The English go very fashionable in their dress. But the Dutch, especially the middling sort, differ from our women in their habit, go loose, wear French muches, which are like a Cap and head-band in one, leaving their ears bare, which are set out with Jewels of large size and many in number, and their fingers hooped with Rings, some with large stones in them of many Colors, as were their pendants in their ears, which you should see very old women wear as well as young.

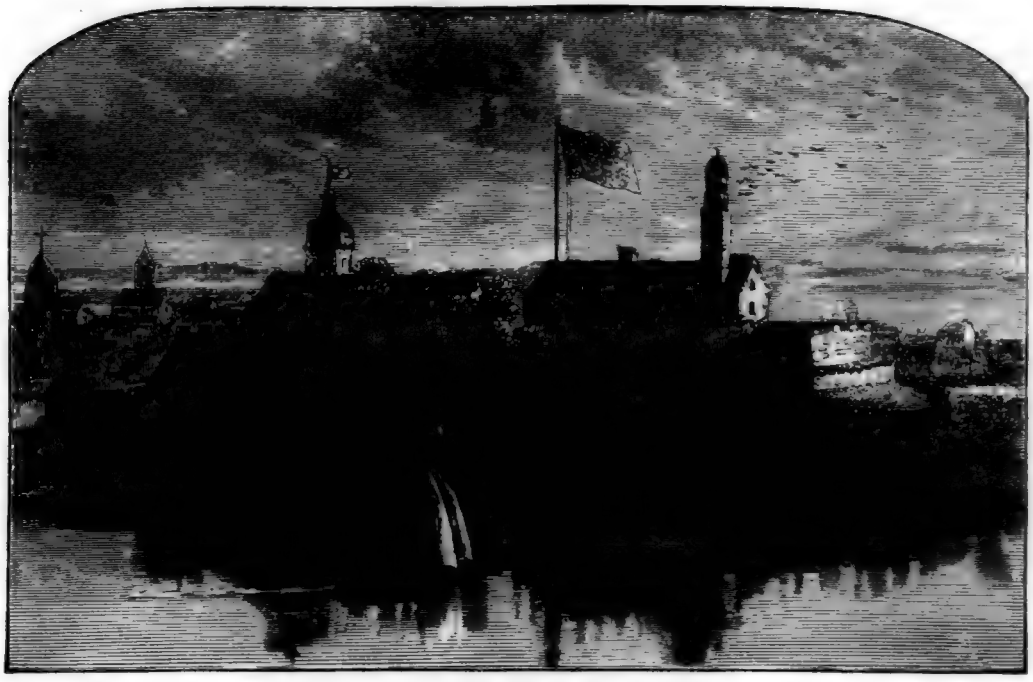
The houses described.

Female costume.

"They have Vendues very frequently, and make their Earnings very well by them, for they treat with good Liquor Liberally, and the Customers Drink as Liberally and Generally pay for it as well, by paying for that which they Bid up Briskly for, after the sack has gone plentifully about, — though sometimes good pennyworths are got there. Their Diversions in the Winter is Riding Sleighs about three or four Miles out of Town, where they have Houses of entertainment at a place called the Bowery, and some go to friends' Houses, who handsomely treat them."

Vendues.

In 1724, when Benjamin Franklin was returning from his first visit to Boston, after he had made his home in Philadelphia, the captain of the sloop which brought him to New York spread the intelligence that his passenger had "a trunk full of books." So large a cargo of an article so rare excited surprise, and in consequence the printer lad received a message from Governor Burnet that he would be glad to see him, and Franklin accordingly waited on the Governor. A long narrative of the interview is preserved, which closed with a cordial invitation from the Governor to Franklin to visit him again. This incident is valuable as showing the utter sim-



Anecdote of Franklin.

[1] Mr. Vesey.

plicity of life in the colonial seaport, where books and men who had read them were so few that the King's representative was glad to hold an hour's literary conversation with a printer's boy.

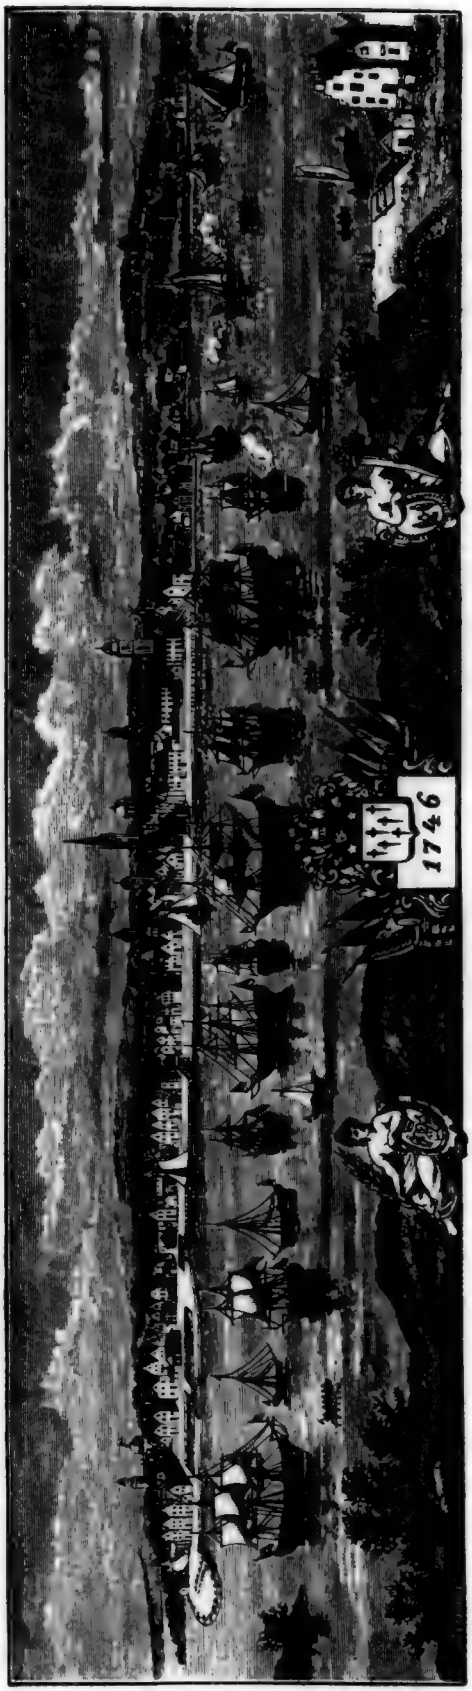
The Governor lived within the lines of the Fort, near the upper end of what is now the Battery, and his official residence was called Fort George. It was burned down, with tragic consequences, as we have already related, in the fire of 1740. The Governor's report of that date shows that it was roofed with cedar shingles. Most of the large buildings at that time were covered with tiles, and it is said that no roof in New York was slated till after the beginning of the nineteenth century.

The Governor's house.

Fort George in 1740.

An amusing passage in one of Governor Clarke's despatches shows how far the city, in 1738, had drifted from the decorous pretences of loyalty. He complains that many of the principal people of the town refused to follow his example in putting on mourning for the death of Queen Caroline, "pretending that they had made themselves the joke of the town for doing it on the late king's death."

Decay of loyalty.



The population of New York city, which was hardly 3,000 in 1689, was about 12,000 in 1756. In the face of the perpetual difference, common to all the colonies, produced by the desire of the governors to make their own salaries a permanent charge on the colonial revenue, the matchless advantages of the seaport asserted themselves

in a growth so quiet and steady as to be hardly noticed. Their complaints that their territory had been diminished, to the advantage of Connecticut and the Jerseys, showed their ignorance of the laws of trade; for the products of those provinces came to New York as steadily as ever. New Jersey, as we have seen, hoped to make of Perth-Amboy the most important provincial seaport. But natural laws are stronger than legislation, and it is difficult now to believe that the pretty seaside village on the Jersey coast could ever have been supposed to be a formidable rival to the great commercial city of our time.

Growth of the city.

As the trade in furs became less important, the exportation of naval stores increased. But down to 1740 the attempts to manufacture potash — now one of the products most readily furnished by forest regions in America — had not been successful. Dreams of making a wine country of the valleys of the Hudson and Mohawk appear in some of the governors' despatches. Some iron was made from the rich bog ores; but neither the people of New York nor the grantees of Pennsylvania knew the value of the coal which was yet to be found on the upper waters of the Delaware and Susquehanna. In general, it may be said that the manufactures of the province were unimportant. That colonial policy of England which Chatham succinctly stated when he said he would not have a hob-nail made in

Manufactures.

New York. East Side.

the colonies, had full sway. In 1700 "a coarse pair of yarn stockings," which cost 9*d.* in London, cost 3*s.* 6*d.* English in the city of New York; and a pair of shoes which cost 3*s.* 6*d.* in London, cost 7*s.* 6*d.* in New York. But ship-building flourished steadily, and vessels were sent abroad loaded with provincial products, and sold at once in foreign harbors.

Colden's navigation scheme.

Cadwallader Colden, the Surveyor-general, who was one of the few American men of science at that time, in attempting to show the existence of a feasible route for trade to the Mississippi, finds it by the upper waters of the Susquehanna, which he proposed to reach by Cayuga Lake, thence through the Juniata by portages to the Alleghany River, and so through the Ohio.

Talk of a college.

As early as 1703 a delegation waited on Lord Cornbury to ask in what part of the "King's farm" he wished to have the college [King's, now Columbia] built. The King's farm included all the region west of Broadway, and north of Cortland Street. But no happy answer of Cornbury founded a university by a grant out of that princely domain. In 1738 Lieutenant-governor Clarke sent home "an act for the further encouragement of public schools for the teaching of Latin, Greek, and mathematics." The encouragement was the appropriation for this purpose of a tax on peddlers and hucksters.

Healthy growth of the colony.

From a perusal of council records, or governors' reports, of the condition of the colony during the first half of the eighteenth century, one would suppose it was shaken by disease in every limb, and only preserved each year from instant death by the most heroic stimulants. But in truth it was gaining with that sturdy health which a temperate climate, a matchless system of water communication, boundless forests, fertile soil, and a frugal, religious, and industrious people almost compelled. Before the half century was over, which began when Sloughter, in a drunken fit, hanged Leisler, the representative of popular rights, the people of New York had discovered their own real power, and in their own quiet way had asserted it. The misdeeds of the King's governors did little toward arresting the healthy growth of material prosperity. Education and the ornaments of civilization followed, perhaps with somewhat unequal step, on the accumulation of wealth, and before the middle of the century the province had established itself as "the key of the system of American colonies." Though it did not know it, New York was already well forward on the path of empire.

Since 1737 Lord Delaware had held the sinecure office of Governor-general over New York and New Jersey; but in 1743 a separate jurisdiction was established in each, George Clinton being appointed

Governor of the former, and Lewis Morris of the latter province. Clinton was the second son of the Earl of Lincoln, and an admiral in the British navy. He remained in office ten years; and if, as has been charged against him, he carried back to England eighty thousand pounds as the fruit of his ten years' service, he may have thought himself sufficiently compensated for an official career of more than ordinary trials and vexations. If the post was bestowed upon him through family influence, rather than because of any personal fitness, he served his royal master at least with zeal, even if he gained small credit for ability.

George Clinton Governor.

His administration was one long struggle in defence of the royal prerogative. The result was an enforced concession to the colonists of rights for which they had long contended, but which by previous governors had been in some measure successfully withstood. Clarke, the late Lieutenant-governor, had retired from office worn out with contention with the popular party, and the most influential leader of that party was James De Lancey, the Chief Justice. This able man Clinton, nevertheless, at his accession took for his adviser, and for the rest of his term repented of his weakness. It had long been a vital point with the party which De Lancey represented, that the Governor should be under the control of the Assembly, by making his salary depend upon an annual appropriation. Hunter had in his time defeated this policy, by inducing or constraining the Assembly to extend the limitation to five years, and this had held good through the administrations of successive governors to the time of Clarke, Clinton's predecessor. In the contest with Clarke the popular party had been successful; the rule was changed, and the salaries of the Governor and other official persons were to be determined from year to year by the will of the Assembly.

Influence of De Lancey over him.

De Lancey persuaded Clinton to continue this concession; to accept, that is, the precedent lately established under Clarke, and not to insist upon that which several preceding governors had made the rule. He took a still greater advantage afterward of the Governor's ignorance of civil affairs, by persuading him to consent to another and more serious innovation. The Assembly sent the Governor an appropriation bill, in which, instead of appropriating certain sums for the salaries of incumbents of certain offices, they provided that those salaries should be paid to certain persons named who then held those offices. The Governor signed the bill, and the advantage once gained the Assembly never relinquished. They had reduced him at the outset to pecuniary dependence, by getting into their own hands the power of making his salary what they pleased from year to year, or even of withholding it altogether; and

Advantages gained by the Assembly.

he practically surrendered the appointing power when he permitted them to bestow a salary upon a person named in the appropriation bill; for the pay expired with his term of office, and the next incumbent was without pay till the Assembly saw fit to provide it. It was a short step from refusing to pay anything to an officer nominated by the Governor, to dictating whom they chose to have him nominate.

Experience soon taught the Governor how skillfully he had been led to put himself almost entirely under the control of the Assembly. His letters to the Government at home are filled, from the first year of his administration to the end of it, with complaints of encroachments upon the royal prerogative by an insolent, malicious, and flagitious "faction," which aimed at getting the whole power of government into its own hands, and would be satisfied with nothing less than making the colony independent of the Crown. Whether from want of regard to the man, or indifference as to the affairs of the colony, and incredulity as to the growth of this popular spirit, the Board of Trade and the Secretary of State seem to have given little heed to these constant and bitter complaints of the Governor. He soon quarrelled with De Lancey, and took Cadwallader Colden as his chief adviser; the result was only to add to the hostility of the Assembly the hostility of the Council. When the war with France was over and the public exigencies were lessened, he attempted to retrieve his early errors, by refusing to sign money bills till the Assembly would consent to make the support of the Governor permanent, and to attach salaries to offices and not to officers named. But the Assembly was quite as firm as he, and could afford to refrain from appropriating money much longer than he and the Government could afford to do without it. A dead-lock of two years ended in his unconditional submission, and he signed the bills at last with their objectionable features unchanged. He prorogued Assemblies and removed councillors, but the faction did not abate in the slightest degree its opposition to him and his plans and policy. The Government at home

Cadwallader Colden.

Clinton's weakness.

paid so little heed to his complaints, that it sent out to De Lancey a commission as Lieutenant-governor. Clinton put it in his pocket and kept it there for a year or two, making the while pathetic appeals to Government that he might not be compelled to submit to the humiliation of appointing his bitterest enemy to a place of trust second only to his own, — a humiliation, nevertheless, which he was compelled to submit to when he left for England, and was constrained, on the eve of departure, to install De Lancey as his successor.

This bitter contest between Clinton and the Assembly, underlies all the public events of this period of ten years in the history of New York, — a contest not merely personal, remarkable as it was in that respect, but between the incongruous forces of arbitrary rule and the rights of the people.[1] The renewal of war between France and England was known in New York in July, 1744, and Clinton was at that time in Albany making preparations in expectation of that event. The treaty with the Six Nations was renewed; circular letters were sent to the governors of the other provinces, that measures might be concerted for the common defence, and the Governor some time before had ordered a double garrison to Oswego, which the traders had deserted, to hold that important post. He was already face to face with the difficulties which were for years to perplex and harass him. The Assembly was urged by repeated messages to provide for the safety of the province, but he writes to the Duke of Newcastle, Secretary for the Colonies, — to whom he sends his messages and the replies, — "Your Grace will see how backward they are in their deliberations, and that it is with the utmost difficulty to bring them to any tolerable resolution for the service of the publick." The Assembly chose to judge for itself, of the necessities of the occasion; the treasury was under their control; they would not submit to dictation from the Governor, and they were largely influenced by the jealous caution, — common to all the colonies, — lest their expenditure for defence should be of more benefit to some other province than their own. It was a question, moreover, with many persons whether the wiser policy was not for the colonies to maintain neutrality in the war, and thus be safe from attack from either French or Indians; and from this came the most serious accusation which Clinton made, as year by year the difference between him and his opponents grew wider and deeper, that there was a strong party at Albany with whom the trade in peltries and rum was of far more moment than their allegiance to the King or the safety of the colony, — an accusation which was hardly thought worthy of contradiction.

War with France.

Independence of the Assembly.

[1] *New York Colonial Documents*, vol. vi.

The next year Governor Shirley, of Massachusetts, asked for aid in his proposed expedition against Louisburg. It was, Clinton thought, of quite as much importance to New York as to New England that this attempt should be successful. But the Assembly did not agree with him. They refused to send men, and in money appropriated only £3,000. Even this was done with great deliberation and evident reluctance, while they were not in the least moved to emulation when the Governor sent off at his own expense some cannon to assist in the siege. They turned a deaf ear to his earnest demands for active measures of defence and offence, till at length, wearied with a hopeless struggle, he dissolved the House, and ordered a new election. Though the news of the probable success of the siege of Louisburg induced this body to vote £5,000 additional in aid of that enterprise, it soon showed itself as uncompliant as its predecessor. "The dispatch of business," wrote the Governor, is

Aid to expedition against Louisburg.

Smith's Vly. — From an Old Print.

"greatly neglected by the Assembly." "They are selfish, and jealous of the power of the Crown, and of such levelling principles that they are constantly attacking its prerogative." That his complaints were not altogether unreasonable, is plain enough.

In November of this year the fort and twenty houses at Saratoga were destroyed, thirty persons killed, and sixty made captives by the Indians.

Crown Point on Lake Champlain was a position of great importance to both French and English, as it commanded the frontier line and the ordinary road of communication between Canada and Albany. In 1746 orders came from England for the capture of Canada, in ac-

cordance with Shirley's plan, to follow up the taking of Louisburg; and all the colonies, as far south as Virginia, were to furnish troops for that purpose. An advance was to be made from Louisburg against Quebec, and another from Albany towards Montreal by way of Crown Point. The Six Nations again promised to take up the war hatchet against the French, and that they would not permit their priests to come among them any more, declaring, "on the contrary, should any now dare to come, we know no use for him or them but to Roast them." As the rendezvous of the troops was at Albany, within the jurisdiction of Governor Clinton, the command devolved upon him, when Lieutenant-governor Gooch, of Virginia, who had been appointed to that position by the commissioners of the several provinces, declined to accept it.

Proposed invasion of Canada.

Clinton called to his aid William Johnson, who was already well known for his knowledge of the Indians and his influence over them. The Mohawks made him one of their chiefs, and he had married an Indian woman, the sister of Joseph Brant, who was the head of that tribe. Through Johnson's efforts the alliance with the Six Nations was confirmed, and other tribes in Pennsylvania and New England had promised to go upon the war-path. But all these formidable preparations were destined only to involve the unfortunate Governor in fresh difficulties. D'Anville's fleet off the coast of Nova Scotia arrested the movement from Louisburg. General St. Clair, who was to be commander-in-chief of the expedition against Canada, did not come with the promised reënforcement of British troops. Delay was inevitable; the Indians, disgusted with inactivity, began to disperse. The colonial troops remained idle, without pay, and poorly fed, at Albany, through the autumn and winter. The Assembly, in spite of Clinton's appeals and protests, refused to make any appropriation for their pay, and the Council, with the exception of Mr. Colden and one or two other members, sustained the Assembly. The troops clamored and broke out at last into open mutiny, and the Governor was only able to extricate himself from serious difficulty by drawing upon England for large sums. Johnson attempted to take Crown Point with an inadequate force and failed, and then came advices from England that the expedition against Canada was abandoned, to be followed soon after by a general peace and the treaty of Aix-la-Chapelle.

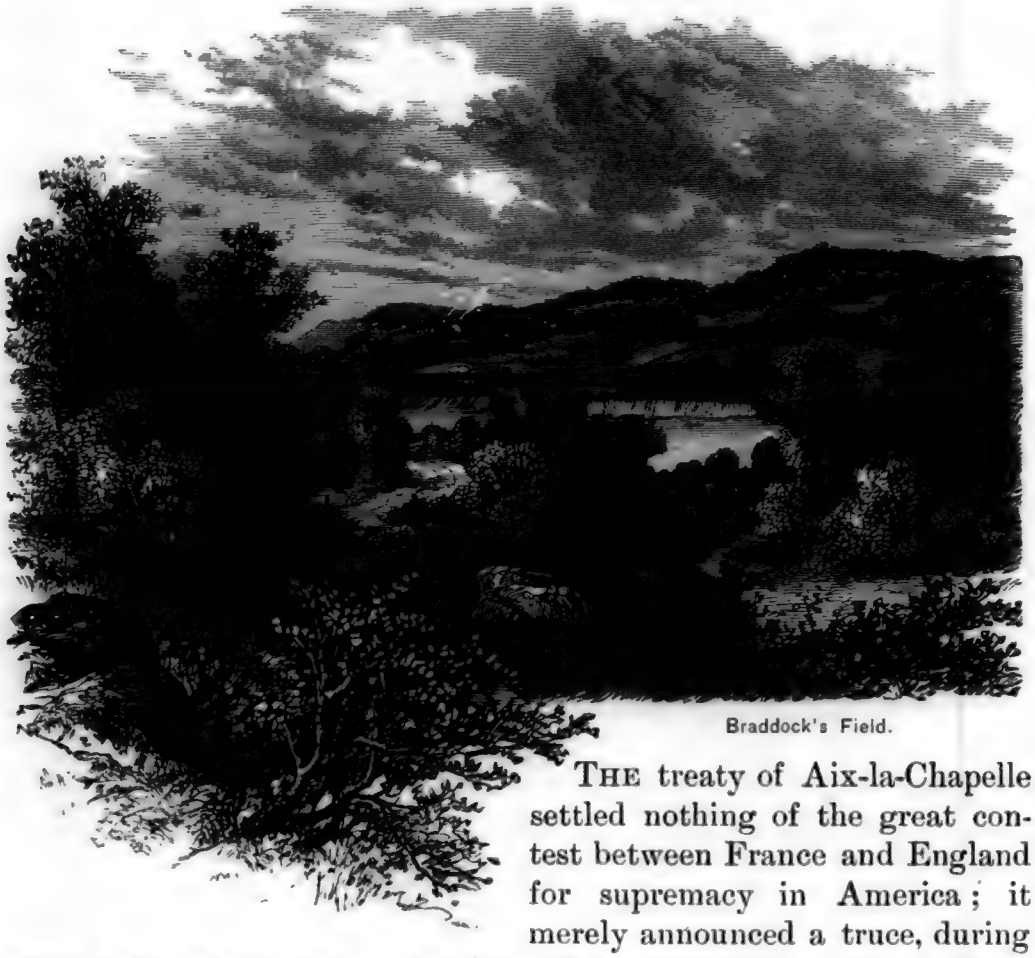
William Johnson.

When the news reached the Governor that the offensive movement against the French was given up, and that the troops were to be disbanded, he proposed to put his own province upon the defensive. He deemed it necessary that a force of eight hundred men should be retained and sent to the frontier, but the Assembly refused to provide

the means, and declined to do anything further for the support of the Indians. The Governor thereupon ordered the colonels of the militia of the several counties to hold themselves in readiness to march at a moment's notice. He called out the regiment and independent companies of the city of New York to parade, and his order was read at the head of the ranks. "But," he writes to the Duke of Newcastle, "every man unanimously refused to obey any orders from the Crown, unless an Act of Assembly

Disregard of Clinton's orders.

East River Shore, 1750. — From an Old Print.



was passed in the Province for that purpose; which shows how well my opinion of their levelling, and the republican principles, has been grounded from time to time." And he adds pathetically in a postscript — "nothing has encouraged ye faction so much as this, that I have not been able to obtain any thing to show to them, signifying His Majest^s^ approbation of my conduct, or displeasure of theirs." It was not his fault that he was compelled for several years longer to endure these humiliations, for he asked repeatedly, but in vain, to be recalled; and the final mortification — the necessity of giving to De Lancey his commission as Lieutenant-governor — was, no doubt, the keener that he had hoped to escape it when Sir Danvers Osborn arrived in 1753, to supersede him as Governor. But that gentleman, who was in a condition of morbid mental depression, took his own life two days after his inauguration; and Clinton had then no alternative but to deliver formally to De Lancey the commission which he had so long withheld, and had so repeatedly urged the Government in England to recall.

Suicide of Sir Danvers Osborn.

CHAPTER X.

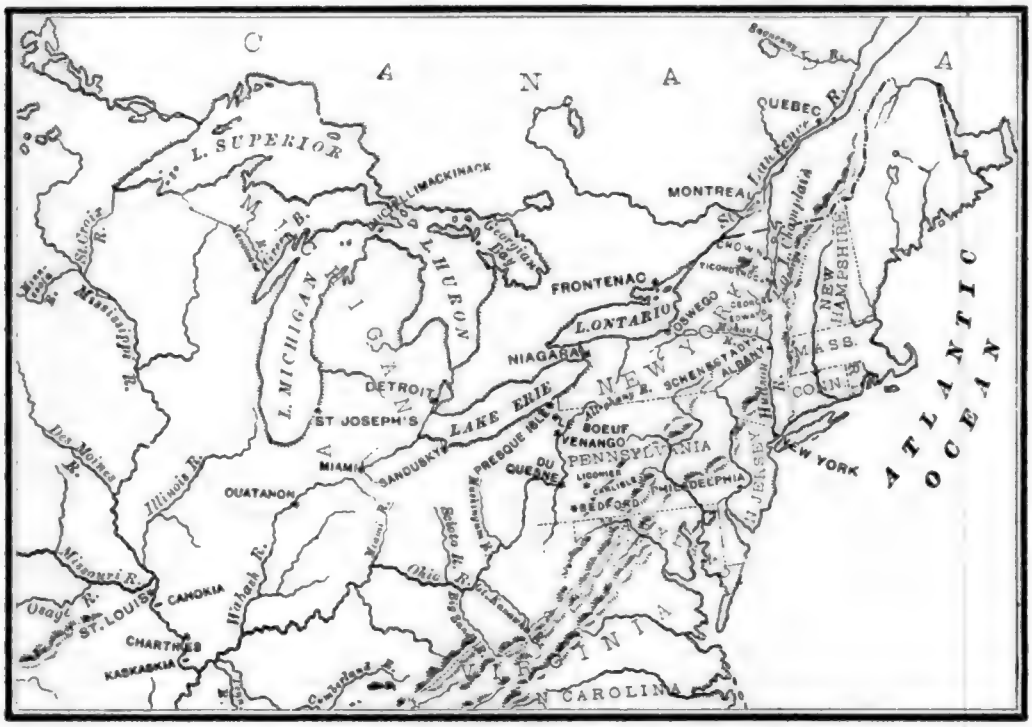
OPENING OF THE FRENCH WAR.

CONTEST BETWEEN ENGLAND AND FRANCE FOR TERRITORY IN AMERICA. — FRENCH MOVEMENTS INTO THE VALLEY OF THE OHIO. — LINE OF FRENCH FORTS AT THE WEST. — PROGRESS OF ENGLISH SETTLEMENT WESTWARD. — THE OHIO COMPANY. — MAJOR WASHINGTON. — HIS FIGHT WITH JUMONVILLE. — SURRENDER AT FORT NECESSITY. — CONVENTION AT ALBANY AND PLAN FOR COLONIAL UNION. — ARRIVAL OF GENERAL BRADDOCK. — HIS EXPEDITION. — FRANKLIN'S ADVICE. — BRADDOCK'S DEFEAT AND DEATH. — OPERATIONS IN NOVA SCOTIA. — THE QUESTION OF BOUNDARIES. — SETTLEMENT OF HALIFAX. — EXILE OF THE ACADIANS.

Braddock's Field.

THE treaty of Aix-la-Chapelle settled nothing of the great contest between France and England for supremacy in America; it merely announced a truce, during which both parties, recovering from their exhaustion, made provision against an inevitable and decisive conflict. In America petty hostil-

ities on the border were scarcely interrupted between the date of the treaty (1748) and the resumption of open war in 1755. As we have seen, Governor Clinton, of New York, thought it absolutely necessary, — though the Assembly did not agree with him, — that on the disbanding of the troops in 1748, a force of eight hundred men should be in readiness to march at a moment's warning to the defence of the frontiers. The Governors of other provinces sympathized with Clinton's apprehensions, and not without reason.



The two centres of interest for both nations were the country about the Gulf of St. Lawrence, and the valley of the Ohio. In 1749, De Celoron, the French commander at Detroit, made an expedition to the Ohio River, claimed the country as belonging to the French King, commanded all English traders to leave it, and wrote to the Governor of Pennsylvania that if such "traders should thereafter make their appearance on the Beautiful River, they would be treated without any delicacy." Some who did not obey were afterward arrested near the lake of Otsanderket (Sandusky) and were detained as prisoners. A few months later, several Mohawk chiefs assembled at the house of Colonel Johnson, and asked of him an explanation of a leaden tablet which was to have been buried on the banks of the Ohio, but had been taken by some of their tribe from a French interpreter. It bore a Latin inscription claiming ownership of all that region of country for France.[1] The French built a fort at a commanding point above Niagara Falls, the Governor of Canada maintaining their right to encroach thus upon the lands of the Iroquois, who, he declared, were not subjects of England, but, if subjects at all, of France. There were constant alarms of bodies of Frenchmen making their way southward from the lakes to the Ohio valley; and of their determination to possess and hold that region, there was no room for doubt. The aim of both nations was the same, to be compassed, however, for different purposes and in different ways. The French meant, by a series of fortifications, to connect the St. Lawrence with the Gulf of Mexico; the English proposed the establishment of colonies westward of the Alleghanies, which should be outposts of defence for the seaboard settlements, and bases for

French and English plans in the West.

[1] Translation: In the year 1749, during the reign of Louis XV., King of France, we, Celoron, commander of a detachment sent by Monsieur the Marquis de la Galissoniere, commander-in-chief of New France, for the restoration of tranquillity in some villages of Indians of these districts, have buried this plate at the confluence of the Ohio and Tchadakoin, this 29th July, near the River Ohio, otherwise Beautiful River, as a monument of the renewal of possession which we have taken of the said River Ohio, and of all those that therein fall, and of all the lands on both sides, as far as the sources of the said rivers, as enjoyed or ought to be enjoyed by the preceding kings of France, and as they therein have maintained themselves by arms and by treaties, especially by those of Riswick, of Utrecht, and of Aix-la-Chapelle. — *Documents Relating to Colonial History of New York*, vol. vi.

further advances into the unknown western country. Each put forth claims resting upon discovery or purchase, but each knew also that possession was the strongest title, and it was inevitable that the struggle for possession should come first upon those who actually stood upon the disputed territory.

The course of the French can be traced by the successive posts which they established along the chain of great lakes and upon the

Map showing the Positions of French and English Forts and Settlements about the beginning of the French War.

highways of the river system. As early as 1670 and 1671 the Jesuits established missions at the outlet of Lake Superior, at the head of Green Bay, and upon the northern shore of Lake Michigan; and the Sault Ste. Marie, La Baye, and Michilimackinac became centres of Indian trade, rendezvous for the *coureurs de bois*, and garrisons for French troops. A little later, a line of forts was established, guarding the passages of the great lakes, Frontenac, — where the St. Lawrence issues from Lake Ontario, — Niagara, and Detroit. These places became by degrees the centres of little settlements that grew up under the protection of their walls, but military occupation continued to be the chief aim. Then the access to the Mississippi was controlled by Fort St. Joseph near one of the sources of the Illinois, and still more by the older fort at Green Bay, on the Wisconsin River. The valleys of the Miami and the Wabash were held by Fort Miami and Fort

Ouatanon, a little below the present site of Lafayette, Ind., while the southern shore of Lake Erie was guarded by Forts Presqu' Isle, Le Bœuf, and Sandusky. Along the natural highways to the Mississippi and the Ohio were stockade settlements at Vincennes, at Kaskaskia, at Cahokia; and on the banks of the Mississippi were solitary stations marking the course of French arms and trade. Coming closer to the frontier of British settlements, communication was open from Fort Niagara to Presqu' Isle, on the site of the present town of Erie, thence to Fort Le Bœuf on a branch of the Alleghany, from which there was direct passage by water to Venango, and to the entrance of the Alleghany into the Ohio, where stood the farthest outpost of the French, in this quarter, Fort Du Quesne. It will thus be seen that the French could march their troops by natural highways from the stronghold in Canada, at the back of the New York, Pennsylvania, and Virginia settlements, and were rapidly getting control of that great artery, the Mississippi itself.

The English, on the other hand, were pushing their colonies from the Atlantic coast westward, by irregular lines, across the rugged Alleghanies, with little help from river courses. From those mountains and from the country on the farther side, incursions from Indians were always threatened, and it was early seen that there was need of establishing settlements upon that frontier country which should serve as a protection to the thinly scattered homes lying between the mountains and the sea-coast. But the English life was that of settlers, not of traders and hunters, and the measures taken were for occupation of the country, not for simple military control. It was partly the movements of the French that suggested to Spotswood of Virginia the extension of the Virginia settlements westward, to intercept the communication between Canada and Louisiana; and three years later Governor Keith of Pennsylvania urged upon the Lords of Trade the erection of a fort on Lake Erie. From time to time, during the next thirty years, warning voices were raised by sagacious observers, and plans suggested for the systematic action of the government.[1]

The first organized attempt at possession, was the formation of the Ohio Company in 1748, by an association of gentlemen in Virginia and Maryland, with a representative in London. Thomas Lee, one of his Majesty's Council in Virginia, was the original projector; and Lawrence and Augustine Washington, elder brothers of George, were largely interested in the enterprise. Five hundred thousand acres of land were granted to the Company by the King, to be

The Ohio Company.

[1] These considerations, with others, were set forth at a later date by Franklin in his defence of the Walpole Grant, which asked for an immense tract of country south of the Ohio, for purposes of settlement.

taken chiefly on the south side of the Ohio, between the Monongahela and Kanawha rivers, and west of the Alleghanies. One of the principal objects of the Company was to make use of the river communication by the Potomac and the eastern branches of the Ohio, and thus connect the new country with Virginia and Maryland, rather than with the rival colony of Pennsylvania. The road over the mountains from Cumberland to what is now Pittsburg, was laid out by Colonel Cresap, one of the Company, chiefly through the agency of a friendly Indian, Nemacolin. Exploring parties were sent out in 1750 and 1751 under Christopher Gist, and Gist himself, who had been appointed surveyor of the Company, formed a settlement, with eleven other families, in the country between the Monongahela and Youghiogheny rivers.

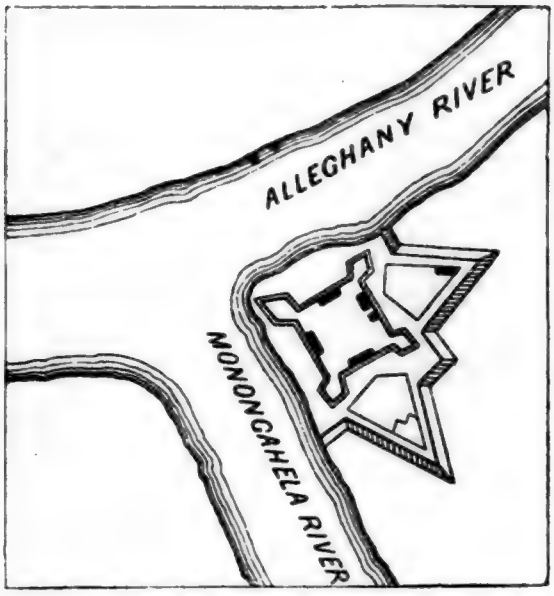
But the country which the Ohio Company proposed to occupy, though granted by George II., had other owners. When Penn made his first settlement, he found on the banks of the Delaware the Lenni Lenape (Original Men), known by the English then and afterward as the Delaware Indians. They had been reduced to submission by the Iroquois, and they afterward sold their lands to Penn, and lived amicably by the side of the settlers. But little by little the whites crowded back the Indians, Penn's successors not always dealing with them according to his precept and example, till the Delawares were driven to the western slopes of the Alleghanies and the adjacent valleys. The Shawnoes, who had also been subdued by the Six Nations, were their neighbors.

The Company's plans of settlement.

The Ohio Company petitioned the government of Virginia to invite the Indians to a treaty. A meeting was called at Logstown, a trading-post about seventeen miles from the present site of Pittsburg, on the north side of the Ohio. The traders and the French alike threw obstacles in the way of a good understanding between the government and the Indians, and it was not until a second call was given in 1752, that Mr. Gist, as agent of the Company, Colonel Fry, and two other commissioners from Virginia, met the Indians and effected a treaty, by which the Indians agreed not to molest any settlements that might be made on the southeast side of the Ohio. But the Indians were careful even now to refuse to recognize any English claim to the land. The Company constructed a fort, built some roads, and brought goods for trading; a few families settled about Gist's place, but before the country had been fairly occupied, their vigilant adversaries, the French, had pushed southward from Lake Erie by the highway of the Alleghany, and were preparing to establish themselves, not by colonies, but by forts, in the heart of the disputed territory. In the autumn of 1753 they had intrenched

themselves at Venango (now Franklin, in Venango County, Pennsylvania). When this was known in Virginia, it was determined to send a commissioner to investigate the proceeding, since Venango was on territory claimed by that colony. Governor Dinwiddie selected for this duty a Virginia surveyor, about twenty-two years of age, who had already shown a marked capacity for dealing with Indians and for backwoods life, and whose brothers had been closely identified with the movements of the Ohio Company, — Major George Washington. The young commissioner, accompanied by Mr. Gist and a few attendants, set out from Fredericksburg, October 30, 1753, and making friends at Logstown with some Delaware chiefs, took them with him to Venango, which he reached early in December. The officers whom he found there sent him on to the

George Washington appointed commisioner for the Company.



Washington on his Journey to the French Forts.

commander at Fort Le Bœuf, to whom he delivered the letter of Governor Dinwiddie. He brought back an evasive reply, but the object of his expedition was really accomplished in his observations of the movements and plans of the French and their dealings with the Indians.

The report made by Washington on his return, January 16, 1754, led to prompt action on the part of Virginia. The Assembly voted £10,000 for fitting out an expedition, which was to erect necessary fortifications at the confluence of the Alleghany and the Monongahela to protect the Ohio Company in its operations. The provinces of North Carolina, Pennsylvania, and Maryland were called upon for aid, but the jealousy between the provinces, and the disputes between the people and Proprietary in Pennsylvania, prevented any very vigorous

assistance, so that the main burden fell upon Virginia. Washington was made second in command, under Colonel Joshua Fry, and the active work of organizing the little army at Alexandria was mainly his. Meanwhile, in advance of the action of the Burgesses, a company of men under Ensign Ward had been sent forward in haste to secure the position. Washington, in command of the main body, had reached the camp at Will's Creek, near Cumberland, when he learned that the French under Contrecœur had appeared in force before the works which Ward and his men had begun, and had demanded an immediate surrender. On the 17th of April, 1754, Ward surrendered, and that date has been taken as the beginning of actual hostilities in this final struggle of the French and English for supremacy in America. Ward himself brought the intelligence to Washington, who at once sent expresses to the Governors of Pennsylvania, Maryland, and Virginia, asking for reënforcements, and then pressed forward with his men, without waiting for Colonel Fry, who had not yet arrived. Contrecœur proceeded, after Ward's surrender, to complete the works which the English had begun, and named the place Fort Du Quesne, in honor of the Governor of Canada.

Hostilities begun by the French.

Plan of Fort Du Quesne.

It was Washington's plan to proceed to the junction of Red Stone Creek with the Monongahela, thirty-seven miles from the French position, and there intrench while waiting for reënforcements; but before he reached that point he learned, at a place called Great Meadows, not only that the French force had been increased, but that a party was in the woods approaching him. He took advantage of the night to surprise the scouting party in advance of the main body, and captured more than half their number. In the attack M. de Jumonville, the commander, was slain. Washington then hastily erected earthworks at Great Meadows, naming the place Fort Necessity, and waited anxiously for the reënforcements which he had been told were on the way. Before these came, however, on the 3d of July, he was attacked by a large body of French and compelled, after a gallant struggle, to capitulate, upon

Washington's surrender.

terms which, through the ignorance or duplicity of the interpreter, proved to be less favorable than was at first supposed.

The French seized upon this affair as a pretext for diplomatic negotiation, behind which they concealed more active measures. The English pushed forward their preparations with less diligence. The government had already sent instructions to the colonies not to permit encroachments by the French, — which was precisely the course Virginia had been pursuing, — to form a confederacy for mutual support, and directed the Governor of New York to call a Council of Indian chiefs, to conciliate them by presents, and win them to the British interest. The imminent peril in which the colonies found themselves was a powerful auxiliary to these instructions, and on the 19th of June, 1754, twenty-five delegates from seven northern colonies assembled at Albany, and there met delegates from the Six Nations.

Rapid progress toward war.

Franklin, who was sent from Pennsylvania, relates, in his "Autobiography," that, on the way to Albany, he drew up a plan for a union of all the colonies under one government, and found, on his arrival, that several of the commissioners had done the same thing. There was a general belief in the necessity of such a union for the better defence of the colonies, and the subject was discussed with great deliberation. The plan finally adopted, based upon that proposed by Franklin, provided for a federal government, consisting of a President-general and a Grand Council. The President was to be appointed by the Crown, with a veto power over the acts of the Council; the Council was to be a popular Congress, composed of a designated number of delegates chosen by the Assembly of each colony. The Congress was to meet annually, and oftener if summoned by the President, and the term of service of members was to be three years.[1] This constitution of government was submitted in due time to the Board of Trade in England, and to the Assemblies of the several provinces, but was rejected by both. In England it was thought to give too much power to the people; in America the fear was that too much was granted to a royal President.

Proposed union of the colonies.

[1] The delegations of the several provinces were fixed as follows, and they show the relative importance of each at that time: —

Massachusetts Bay	7	Pennsylvania	6
New Hampshire	2	Maryland	4
Connecticut	5	Virginia	7
Rhode Island	2	North Carolina	4
New York	4	South Carolina	4
New Jerseys	3		

Nova Scotia and Georgia were not included in the plan. For a full report of the Convention, see *New York Colonial Documents*, vol. vi.

The Convention, however, devoted itself with great zeal to strengthening the alliance with the Indians, and impressing upon them how disastrous it would be to their welfare, should they permit the French to build forts upon the Ohio. The Indians replied: "The Governor of Virginia and the Governor of Canada are both quarrelling about lands which belong to us, and such a quarrel as this may end in our destruction."

Arrival of General Braddock.

In September, 1754, Edward Braddock was commissioned as Commander-in-chief of all the forces in North America, and with him, as next in command, were associated Governor Shirley and Sir William Pepperell of Massachusetts. It was the design of the government to make a fourfold movement against the French possessions. The French forts in Acadia were to be taken; expeditions were to proceed against Crown Point and Niagara; and Braddock himself was at once to dislodge the French from Fort Du Quesne and the other forts in the Ohio valley. After reducing those places, he was to move on to Niagara and join the expedition which was at the same time to attack that stronghold. The provision made for this comprehensive plan was liberal. Six thousand troops were provided by the Crown, equipped for service, and large sums were placed at the disposal of the provinces, which were encouraged to raise a provincial army. Braddock himself arrived with his expedition in Hampton Roads, in February, 1755. The French, after reënforcing Fort Du Quesne, in expectation of an early attack, had withdrawn their troops during the winter, and there were now not over two hundred men, French and Indian, in occupation. But the movements of the English were speedily known, and the commander of the fort, on guard against surprise, was able to summon something less than a thousand men from the neighboring forts. Two months after Braddock landed in Virginia, a formidable squadron sailed from Brest, carrying three thousand men to Canada. It seems almost as if the English had become befogged by their own diplomatic manœuvres, when, instead of attacking at once an armament whose destination and purpose were unequivocal, they sent Admiral Boscawen, with a force half that of the enemy's, to lie in wait for the squadron off the Banks of Newfoundland, and some time after sent an insufficient reënforcement to support him in the face of another powerful detachment of the French fleet. Mirepoix had declared that the first gun fired at sea in a hostile manner should be taken as a declaration of war. Boscawen captured only two French ships, and war was now opened in dead earnest.

War begun.

The Commander-in-chief of the British forces in North America was a soldier of acknowledged training and personal bravery, but a self-

confident and obstinate man, a martinet who held in high esteem the traditions of the Coldstream Guards, of which he had been Lieutenant-colonel. Upon his arrival he called a convention of the Governors of the different colonies to meet him for conference, and urged upon them, in the same letter, the formation of a common fund with which to assist in carrying on operations. The convention met on April 14, at Alexandria, and the intervening months were spent by the General in discovering the difficulties which lay in his way. He found himself representing the British power, but unable to overcome the obstinacy or indifference of Assemblies and Governors. The affair of the Ohio lands had been taken up by Virginia, and Virginia, therefore, showed most alacrity in supporting the English General; Pennsylvania was dilatory, not from want of interest, but because of the interminable quarrel between the Governor and the Assembly as to the amount of money to be raised and the best way of raising it. The most direct road led through that province, and contemporary as well as later judgments unite in deploring the error which led Braddock to make Virginia, rather than Pennsylvania, his starting-point;[1] but the choice was not singular, when Virginia had been all along the moving colony, and the previous expeditions had followed the road that had been blazed from Hill's Creek.

Braddock's expedition.

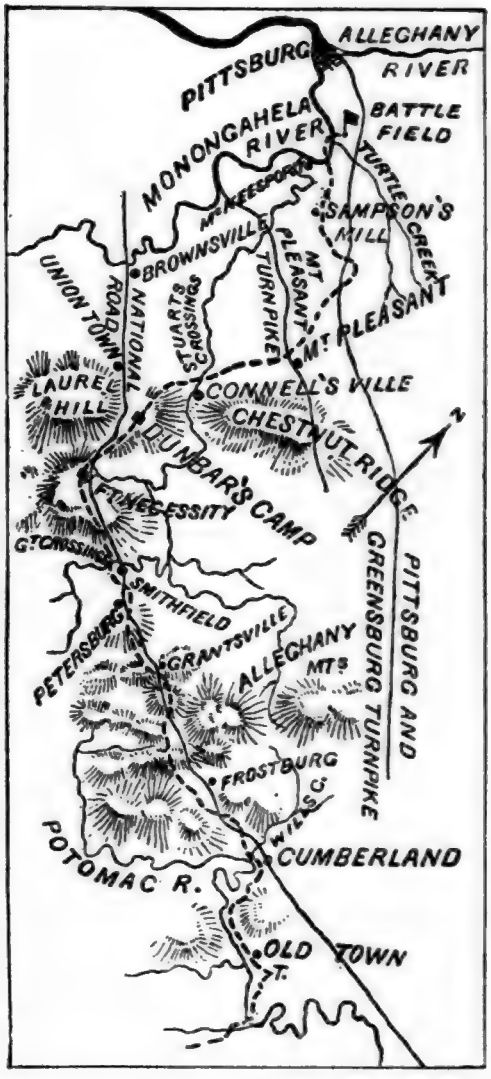
At the meeting of Governors, General Braddock earnestly urged those points in the campaign which formed the basis of his instructions. He called for the establishment of a common fund; but they replied that they had in vain endeavored to persuade the several Assemblies to take measures for this. He proposed that a treaty, with presents, should be made with the Six Nations, and that Colonel Johnson should negotiate it. They assented to this, promised to raise eight hundred pounds for presents, and also agreed to place the expedition against Crown Point under Johnson's command. He proposed the reënforcement of the fort at Oswego, and the building of two vessels on Lake Ontario, to which they also agreed; and after full instructions to Johnson, — who was at first reluctant to accept his trust as plenipotentiary to the Six Nations, because of the lack of faith heretofore shown toward the Indians, but finally was persuaded to accept in consideration of Braddock's known integrity, — the council broke up, and the army began its movements.

On the 24th of April Braddock was at Frederick, Maryland, impatiently awaiting the arrival of the wagons which he had ordered for

[1] Entick, i. 142. Franklin's *Autobiography*, in Bigelow's *Life of Benjamin Franklin, written by himself*, i. 317. *The Olden Time*, ii. 540. "It was computed at the time that had he landed at Philadelphia, his march would have been shortened by six weeks, and £40,000 wou'd have been saved in the cost of the expedition. — Sargent's *Braddock*, pp. 161, 162.

transporting his stores. In the old barracks, still standing, he received Washington, whom he had invited to join his military family as aid-de-camp, and Franklin, who at this time was Postmaster-general of the colonies. Franklin gave him immediate and important aid. When the efforts to procure wagons had signally failed, he came forward with a proposal to obtain them from Pennsylvania, and by a most adroit advertisement and address, added to his personal influence, the necessary conveyances were promptly secured. He might have been of far greater service if Braddock could have been prevailed upon to take warning from the words of this shrewd American. The English General, who had already discussed with the naval commander the best course to be pursued with the French whom he should capture at Fort Du Quesne, and had laid out his journey through the backwoods as confidently as if expecting to march from London to Greenwich, said to Franklin, in an off-hand way, that he should only stop a day or two at Fort Du Quesne, and then go on to Niagara and Frontenac. Franklin ventured only to say: "To be sure, sir, if you arrive well before Du Quesne with these fine troops, so well provided with artillery, that place, not completely fortified, and, as we hear, with no very strong garrison, can probably make but a short resistance. The only danger I apprehend of obstruction to your march is from ambuscades of Indians, who, by constant practice, are dexterous in laying and executing them; and the slender line, near four miles long, which your army must make, may expose it to be attacked by surprise in its flanks, and to be cut like a thread into several pieces, which, from their distance, cannot come up in time to support each other." "He smiled at my ignorance," adds Franklin, "and replied: 'These savages may, indeed, be a formidable enemy to your raw American militia, but upon the King's regular and disciplined troops, sir, it is impossible they should make any impression.' I was conscious of an impropriety in my disputing with a military man in matters of his profession, and said no more."[1]

Braddock's plans.



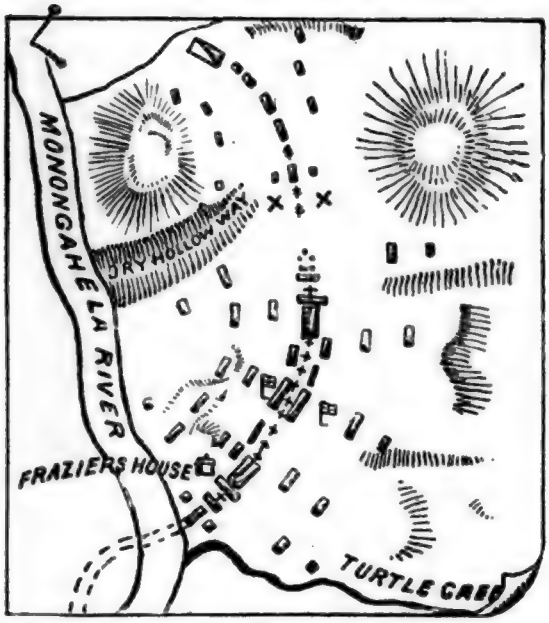
Old Barracks, Frederick.

[1] Bigelow's *Life of Franklin*, i. 324, 325.

The same fatuous reliance on "regular troops" led Braddock to receive so coldly and disdainfully the overtures of Croghan, the interpreter, and his hundred Indians, that they fell off from him. Washington knew the value of these men, and urged them upon the General; but though he seems to have been drawn to the young Virginian, he was incapable, as Washington himself says, "of giving up any point he asserts, be it ever so incompatible with reason or common sense."

His forces.

The rendezvous for all the forces was at Fort Cumberland on Will's Creek, and here, on the 7th of June, Franklin's wagons and horses having been gathered, the expedition made its final start. It consisted of 1,000 regulars, brought over by Braddock, 30 sailors, and 1,200 provincials, besides a train of artillery, and with them, at the start, were a number of friendly Indians. The road followed was that originally made by Nemacolin, over which Washington had passed, now slowly widened by the axes of the advance guard. On the third night after starting, the encampment was only five miles beyond Fort Cumberland. A week later, when they had effected the crossing of the Great Savage Mountain, they entered upon the gloomy tract known as the Shades of Death. Dense woods of enormous white pines covered this region, and the stillness of the forest only sharpened the ear more intently for the sudden crack of the Indian's rifle.



Braddock's Route

When the expedition emerged from this, at Little Meadows, where an advance detachment had thrown up some rude fortifications, a council was held, to consider how best to meet the growing difficulties. Washington's urgent advice was, to push on with twelve hundred men, lightly equipped, leaving about half the men and all the baggage and horses that could be spared. His advice was taken, and again the army

moved forward, now more compact, but growing worn and exhausted by the unwonted labors.

His march.

Now began also, as they plunged deeper into the wilderness, desertions of the Indian allies, the picking off of stragglers by hostile savages hovering on the flanks of the train, and sudden apparitions of dusky forms at night. The tactics of the army were still those of European warfare. They halted, as Washington impatiently declares, "to level every mole-hill and to erect bridges over every brook, by which means we were four days in getting twelve miles." It was with difficulty that Braddock could persuade any of the Indians still remaining with him, to act as scouts, while his own movements were constantly watched and reported to the French commander. At length on the 8th of July the army encamped two miles from the Monongahela, near what is known as Crooked Run. They were on the same side of the river as the Fort, but the passage for two miles was by a narrow defile, having the river on the left, and a high ridge on the right. It was determined, therefore, to take advantage of two fords on the Monongahela; to cross at the first ford not far from the camp; then, proceeding along the south side, to recross at the other, at the mouth of Turtle Creek, distant, as the crow flies, from Fort Du Quesne, only about eight miles; thence to march upon the fort and invest it.

Map of Braddock's Field.

Action of the French.

The progress of Braddock's march had been reported from day to day to Contrecœur, the commander at the fort. The number of the army, whose line extended sometimes four miles, was greatly exaggerated, and Contrecœur, looking upon his feeble garrison, not a thousand in number, of which four fifths were Indians encamped about the walls, resolved not to hazard a battle, but to seek an honorable surrender. The Indians shared his apprehensions; but one of the captains of the regulars, De Beaujeu, well versed in Indian warfare, begged to be allowed to lay an ambuscade and intercept the British on their march. To do this, the consent of the Indians had to be obtained, and it was only upon the morning of the 9th, when a runner brought word that the army was in

motion again, that Beaujeu could bring them to resolution. Appearing at their council, he burst out, "I am determined to go out and meet the enemy. What! will you suffer your father to go out alone?" From timidity and unfeigned reluctance they passed suddenly to fierce confidence and headlong haste. In a moment the war-paint was on, and the whole body of French and Indians were frantic for action.

Braddock broke camp early on the morning of the 9th, and having sent detachments to hold both fords, moved his army across the river. He ordered the march to be made as if on dress parade, and in this manner, with splendid uniforms, colors flying, and martial music, the soldiers eagerly looking forward to the end of their toil, the whole army passed along the southern bank from the first ford to the second, the sunlight falling on the brilliant colors and gleaming steel.[1] Washington and Gates, Gage, Morgan, and Mercer, — names that were to be famous in another war, — were there.

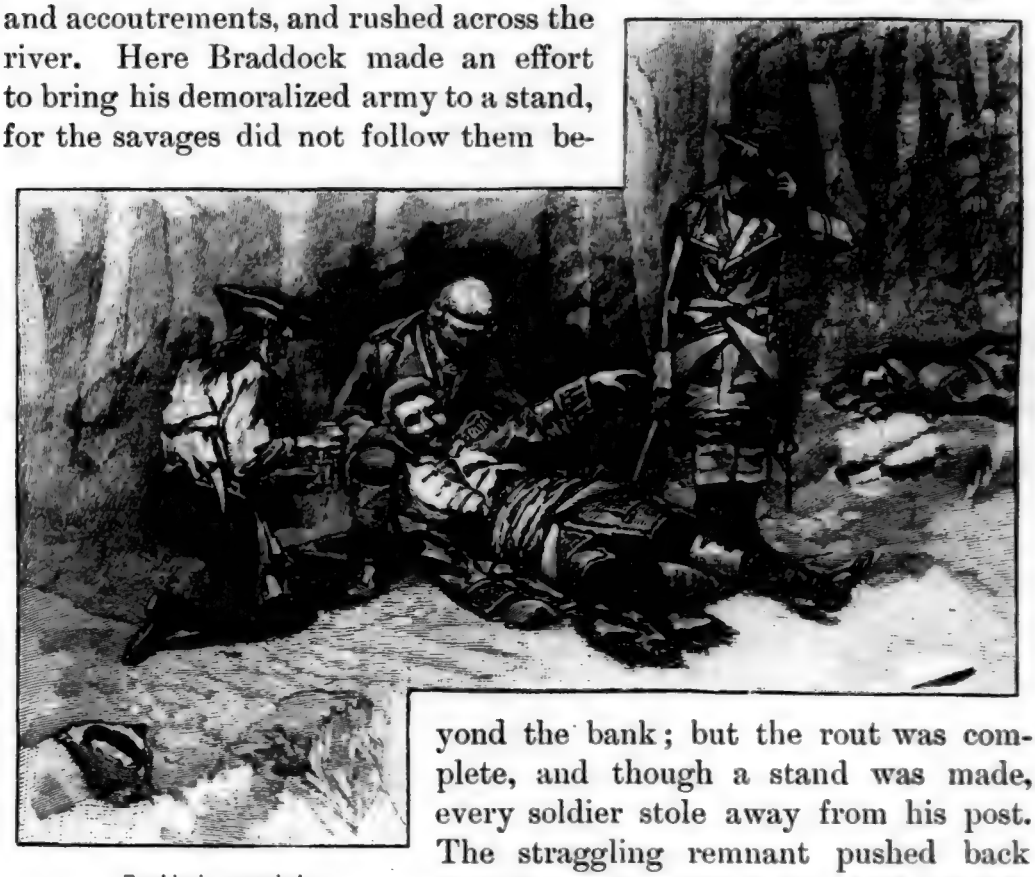
By two o'clock most of the troops had crossed the second ford. From the gentle slope of the river bank, covered with an open wood of walnut trees, the land rose abruptly into high hills from which fell off three deep ravines, dense with a rank growth of trees and underbrush. The march was over these rounding hills and diagonally to the ravines which now began to disclose themselves. Suddenly, when the troops were separated by the nature of the ground, one of the engineers, who was marking out the road, looked up and saw a man, gayly dressed in a fringed hunting-dress, wearing a silver gorget on his breast, come leaping down the hill-side. It was Beaujeu. Behind him, following with bounding steps, the motley array of French and Indians came pressing on. He stopped, and swung his hat about his head, when suddenly the savages disappeared, the French only remaining in sight and pouring a murderous fire upon the English. In a moment from the ravines on either side came volleys accompanied by unearthly yells and shrieks such as never before had saluted the ears of the regulars. Gage's men, who held the advance, stood their ground and were presently reënforced by St. Clair's working party. They returned the fire of the French, and Beaujeu fell dead.

The ambuscade.

The Indians began to fly, but Dumas and De Ligueris, companions of Beaujeu, rallied the savages, and from their posts behind the trees rapidly picked off the regulars, who continued to fire with great noise and fury into the forest, which now seemed transformed into a

[1] "Washington was often heard to say, during his lifetime, that the most beautiful spectacle he had ever beheld was the display of the British troops on this eventful morning." — Sparks's *Washington*, ii. 469.

troop of devils, each tree sending its murderous bullets into the ranks of the regiment. Scarcely a man was to be seen, but the deadly fire was unerring and incessant. Braddock, who was with the rear still at the river bank, hearing the engagement, sent forward the bulk of his forces, leaving four hundred to protect the baggage at the river. They had formed and were advancing, when Gage's party fell back upon the advance, and the mass of men, struggling in confusion, became almost a mob, into which the French and Indians, hovering about as if in the branches of the trees, plunged their deadly fire. In vain Braddock, rushing hither and thither, sought to rally his



Beaujeu's Advance.

men and form them; in vain he urged them forward. Four horses were shot under him; he mounted a fifth, and with his officers flung himself in advance to inspirit his men. But they could not be rallied. The provincials, indeed, who throughout maintained more coolness than the regulars, better understanding the nature of the warfare, quickly took positions behind trees. Washington urged Braddock to

give the word for the men to adopt this method, but instead, the infatuated commander himself drove men from out of their skulking-places, as he thought them, and insisted that the battle should be waged according to established rules. In the confusion the men fired upon their own comrades. Braddock himself was wounded, but while lying upon the ground he continued to give orders, and the army, trained to obedience, while it could not advance, could at least stand and be shot down.

At length, when they were surrounded and even the baggage was attacked, and all hope of victory was gone, he ordered the drums to beat a retreat. In a moment, the retreat became a panic, and it was only by the bravery of a few devoted men that Braddock himself was borne off the field. The men threw aside guns and accoutrements, and rushed across the river. Here Braddock made an effort to bring his demoralized army to a stand, for the savages did not follow them beyond the bank; but the rout was complete, and though a stand was made, every soldier stole away from his post. The straggling remnant pushed back over the road by which they had so lately advanced, and on the 11th the camp of reserves was reached. The army was utterly disorganized, and no effort was made to save anything. The stores were destroyed, and the straggling troops fell back at last to Fort Cumberland.

The panic

Braddock wounded.

Braddock continued giving orders so long as strength remained to him, but kept utter silence otherwise. On Sunday, the 13th, as the shattered army lay at Great Meadows, he gave his final orders, and

committed affairs to Washington, for whom he had formed a strong attachment. During the retreat he is said to have spoken only to give his commands. Now, his sole allusion to the terrible discomfiture which had broken up his army and destroyed his military reputation, was in the half-muttered words, "Who would have thought it! Who would have thought it!" He turned to Orme, his faithful lieutenant, and said, "We shall better know how to deal with them another time." But Braddock's one chance had been lost through his own obstinacy and wrong-headedness. He died, and was buried at Great Meadows, where his grave is still pointed out. The army, under Dunbar, finally reached Philadelphia at the end of August.

Results of Braddock's defeat.

The miserable conclusion of an expedition which had set out so vainglorioously, brought a train of evils in the devastation of the back country of Virginia and Pennsylvania by the Indians, who had no fear of this defeated enemy; it brought also one unsuspected good in the knowledge that regulars were not invincible, and the British power not blindly to be relied upon. The conduct of the provincials in the fight, showed clearly the mettle of the country troops, and their superiority in fighting methods. The breaking down of the foreign army led at once to the creation of a militia organization, and out of Braddock's defeat grew that confidence in themselves which sustained the Americans in the subsequent conflict with Great Britain. The immediate effect, nevertheless, upon the minds of English and Americans was one of bitter chagrin and disappointment.

In Nova Scotia, the news of the disaster was received at a moment so critical to operations in that quarter, that imperative orders were given to prevent its reaching the French inhabitants. The English occupation of that province since its cession by France in the treaty of Utrecht, in 1713, had been very meagre, and such population as the peninsula held was mainly French, while the boundaries of the province were the subject of long and minute controversy, a controversy only ended by the conquest of Canada itself.

Boundaries of Nova Scotia.

The question of boundaries was considered for more than three years at Paris by a Board of Commissaries. The range of the discussion included the consideration of ancient limits and the identity of Nova Scotia and Acadia, and conclusions differed widely. But both governments practically recognized the popular understanding that Nova Scotia or Acadia corresponded with the present limits of the peninsula. The French acknowledged that the people about the Basin of Minas were British subjects, and the English confined their efforts at colonization to Nova Scotia proper.

The importance of the peninsula, and the necessity of planting it

with Englishmen, if it was to be anything more than nominally English, were beginning to be seen. Scarcely any organized effort had been made by the English to occupy the country, while the French settlements about Annapolis Royal and the Basin of Minas had grown into compact communities who were rapidly accumulating wealth. Not the nationality only, but the religion of these French settlers held them together and made them a foreign body, all the more dangerous in the eyes of Englishmen that they were both French and Roman Catholic. "The zeal and attachment of these Nova Scotians to the Romish faith," writes a vigorous pamphleteer of that day,[1] "will always prevent the settlement of Protestants in the country, unless it be done in compact bodies and under the cover of fortifications; but till this is accomplished, it can no more be said that the Province belongs to the Crown of Great Britain, because it is possessed of Annapolis Royal, than of the kingdom of Spain from our possession of Gibraltar. It is therefore absolutely necessary for the safety and interest of the Northern colonies that some speedy and effectual measures are taken to put these Nova Scotians on a definite footing, or to remove them; the last cannot well be done, and the first in nothing better than by encouraging a considerable number of foreign Protestants and others to settle amongst them."

Condition of the Acadian Peninsula.

This encouragement was soon given. An advertisement in the London "Gazette," dated at Whitehall, 7th March, 1749, was issued by the Lords Commissioners of Trade and Plantations, offering special inducements to recently dismissed officers and privates of the army and navy, as also to carpenters, shipwrights, smiths, masons, joiners, brickmakers, bricklayers, "and all other artificers necessary in building or husbandry," by which passage was given to Nova Scotia, grants of land made, and subsistence promised for a year. So popular was the enterprise and so prompt the movement that, early in May of the same year, Colonel Edward Cornwallis — uncle to that Lord Cornwallis whose name occupies so conspicuous a place in the annals of the American Revolution — led an expedition of about twenty-five hundred persons into Chebucto Harbor in Nova Scotia.[2]

Inducements to English settlers in Nova Scotia.

The name of Halifax was given to the settlement which was then begun, in honor of the President of the Lords of Trade and Plantations, Lord Halifax, who was exceedingly interested in the success

[1] *The State of Trade in the Northern Colonies considered: with an Account of their Produce, and a particular Description of Nova Scotia.* By Otis Little.

[2] Haliburton's *Historical and Statistical Account of Nova Scotia* makes the number much larger; but Akins's *Selections from the Public Documents of Nova Scotia* gives a list of those who came with Cornwallis.

of the enterprise. The country about Chebucto Harbor was densely wooded, and the nearest settlement was that of the French about the Basin of Minas, twenty miles distant, but a cattle-path already connected the two points. Cornwallis at once set his colonists to work, clearing the ground in preparation for the winter, and at the end of four months could report "there are now three hundred houses covered in at Halifax, which I hope will be tolerably comfortable for the winter." The removal of the garrison from Louisburg added both to the force and to the stores of the young colony, and French and Indians were hired to labor upon the public works.

Halifax founded.

Earl of Halifax

Cornwallis had the poorest possible opinion of the military resources at Annapolis. "My Lord," he writes to the Duke of Bedford, who had now become Secretary for the Colonies, "these Companies are as prepared for service as a Regiment raised yesterday. The whole management in this Province, both with regard to the Inhabitants and these Companies, has been such that 't is scandalous the Crown should be so served. It has been called an English Province these thirty-four years, and I don't believe that the King had one true subject without the Fort of Annapolis. I cannot trace the least glimpse of an English Government." He wrote repeatedly of the way in which the French were inciting the Indians to make war upon the colony, openly and by stealth: "The French have not only set on the Indians, but have acted in conjunction with them; they have entered and took possession of part of the Province, drove off the Inhabitants, forced them to swear allegiance to the French King, and in short acted with as much vigour and done as much harm to us as they could have done in open war."

Relations of the English colonists with the French.

There was hardly a pretence, indeed, of a cessation of hostilities. A French settlement had recently been made at the mouth of the St. John, and an expedition had been sent to occupy the isthmus between Nova Scotia and the mainland. Throughout the whole win-

ter Halifax was in constant apprehension of attack, and was incessantly annoyed by predatory bands of French and Indians. To strengthen the Province, Cornwallis believed first of all in military measures; but he recommended also the introduction of foreign Protestants, especially from among the Swiss, whose influence over the French Catholics, he hoped, would be beneficial.

The problem of dealing with the French inhabitants.

But some more direct interference with the inhabitants seemed necessary. The troubles of the colonists could be traced directly to the machinations of certain priests and intriguing men amongst them; and in event of an open war with France, which was steadily becoming more probable, there could be little doubt that the French settlers would, openly or secretly, side with the French cause. To banish them from the Province was only to turn them into open enemies and increase the strength of Canada and Cape Breton. That peril had been early foreseen, and repeated allusions to it recur in the correspondence between Cornwallis and the home government. On the other hand, there was no time, in the face of the gathering storm, to make English citizens of them. The introduction of French Protestants was an experiment which might easily work in the opposite direction from what was intended, and fan the flame of religious hatred.

Difficulties of the question.

In tracing the relations between the English and French which led to the deportation of the Acadians, it becomes necessary to note how constantly the English government, both at home and in the Province, were reminded that the persons with whom they were dealing held but a paper loyalty to them. By the terms of the treaty of Utrecht, in 1713, the French residents in Acadia, then ceded to the English, were allowed a year in which either to take the oath as British subjects, or to leave the country. But while the French in Canada urged them to remove, and threatened them with the fate of rebels if they did not, the English were aware that not only would their removal greatly increase the importance of the rival colony of Cape Breton, but leave Nova Scotia almost entirely depopulated. It was hoped, moreover, that in process of time the descendants would become Anglicized by intercourse with English emigrants. But English emigrants came slowly, while the French remained, assuming the position of Neutrals, a name, indeed, which was frequently applied to them. They claimed that to the oath of allegiance, which they finally took, there was a reservation which exempted them from taking up arms against their own blood. Like all neutrals, they were suspected by both sides — by the French, because they owed allegiance to the English; by the English, because their blood, their sympathies, and their religion were French.

From the settlement of Halifax in 1749, to the outbreak of the war in 1755, the French Acadians, either personally or by delegates, were repeatedly summoned to meet the English authorities, and the one condition imposed upon them, of taking the oath of allegiance without reserve, was evaded or refused with an ingenuity which confirms the common judgment of the English at that time — that behind these simple people were French emissaries, especially the priest Le Soutre, who used them with great dexterity for their own purposes. When every other argument failed, the Acadians would announce their resolution to leave the country; but that was precisely what the English were bent on preventing, although the project of removing them began to present itself as the only satisfactory method of solving the problem. The position which the English claimed for themselves is very forcibly set forth in the reply which Cornwallis made to the deputies of the French district, when, at the beginning of his rule as Governor, they appeared before him and presented a letter signed by one thousand persons, having in it this clause: "The inhabitants in general, Sir, over the whole extent of this country, have resolved not to take the oath which Your Excellency requires of us; but if Your Excellency will grant us our old oath which was given at Minas to Mr. Richard Phillips,[1] with an exemption for ourselves and for our heirs from taking up arms, we will accept it. But if Your Excellency is not disposed to grant us what we take the liberty of asking, we are resolved, every one of us, to leave the country." In his reply, Colonel Cornwallis said, with great emphasis: "Gentlemen, you allow yourselves to be led away by people who find it to their interest to lead you astray. They have made you imagine it is only your oath which binds you to the English. They deceive you. It is not the oath which a king administers to his subjects that makes them subjects. The oath supposes that they are so already. The oath is nothing but a very sacred bond of the fidelity of those who take it."

Cornwallis's statement of the English position.

The crisis seems to have been reached in the summer of 1755, when memorials were presented from the people of Minas and Pisiquid (now Windsor), praying for the restoration of the arms which had been

[1] This oath, given in 1727–28, was the oath of allegiance, qualified by the insertion of a clause in the margin that the Acadians were not to be obliged to take up arms against France. There is no evidence that Governor Phillips tendered such an oath, but it does appear that Governor Armstrong in 1727 allowed the modification in certain cases, and was severely reprimanded by the home government for so doing, and that Ensign Wroth repeated the blunder the next year in other cases. He also was summoned before the Council and reprimanded, on the ground that "the articles and concessions" granted by him were "unwarrantable and dishonorable to H. M. government and authority, and consequently null and void." See *Akins*, p. 78. The Acadians clung to this modified oath with the greatest persistency.

taken from them, and for exemption from the required oath. These memorials were offered at a time when it was rumored that a French fleet was in the Bay of Fundy, and the commander in charge at Minas reported an immediate change of temper in the people from submission to insolence. The deputies who presented the memorials were brought before the Council, July 3, 1755, and a long conference was held, at the close of which the deputies asked permission to return and consult the body of inhabitants; but the request, clearly to gain time, was refused, and they were required to give a definite answer to the demands of the Council the next day.

The crisis.

The next day came, and the deputies refused to take the oath, whereupon they were ordered into confinement. The Governor[1] now issued an order for all the French inhabitants to send at once to Halifax new deputies with the "general resolution of the said inhabitants in regard to taking the oath, and that none of them should for the future be admitted to take it after having once refused so to do, but that effectual measures ought to be taken to remove all such recusants out of the Province." Two hundred and seven inhabitants of Annapolis River sent thirty deputies, with instructions to contract no new oath; one hundred and three inhabitants of Pisiquid, Minas, and the river Canard, presented a memorial by deputies, utterly refusing to take any but the reserved oath, and asking that those who had been detained at Halifax be set at liberty; two hundred and three inhabitants of Minas and the river Canard clung to the oath which they believed they had taken under Governor Phillips, and called for the release of the prisoners in Halifax. The deputies presenting these memorials appeared before the Council and refused the oath. "Whereupon," says the record of the Council, "they were all ordered into confinement. As it had been before determined to send all the French inhabitants out of the Province, if they refused to take the oaths, nothing now remained to be considered but what measures should be taken to send them away, and where they should be sent to."

The force requisite for this purpose was at hand. Besides the small body of troops in the Province, a regiment of two battalions, consisting in all of two thousand men, had been enlisted in Massachusetts by Lieutenant-colonel John Winslow, of Marshfield, great-grandson of Edward Winslow, one of the founders of the Plymouth settlement. This expedition, sailing from Boston on the 20th of May, had arrived at Annapolis Harbor five days later, and on the 1st of June moved forward in a fleet of forty-one vessels

A force sent to Acadia.

[1] Cornwallis had been succeeded by Peregrine Thomas Hopson in 1752, and he by Charles Lawrence, as Lieutenant-governor, in 1754, and Governor-in-chief in 1756.

to Chiegnecto, the district now known as Cumberland, where a narrow isthmus separates the waters of the Bay of Fundy from Northumberland Strait, and connects the peninsula of Nova Scotia with the continent. Here the French had established themselves in three fortified places, with a view to command the land connection and give free passage into the district occupied mainly by the French Acadians. Winslow's force was enlarged by the addition of three hundred regulars, with a small train of artillery, and the whole expedition was under the command of Lieutenant-colonel Monckton. The success of the expedition was unequivocal. The French fortifications were taken; the garrison of Fort Beau Séjour were sent to Louisburg on condition of not bearing arms in America for six months; the Acadians and Indians were disarmed, the Acadians being pardoned, in one instance at least, as having been pressed into the service.

Lieutenant-colonel Winslow.

It was this force on which Governor Lawrence now relied for the deportation of the Acadians. The whole number for which provision was to be made was about three thousand.[1] In a letter to Colonel Monckton, Governor Lawrence had already advised that the whole affair should be conducted as a stratagem: "It will be necessary to keep this measure as secret as possible, as well to prevent their attempting to escape, as to carry off their cattle, etc.; and the better to effect this, you will endeavor to fall upon some stratagem to get the men, both young and old (especially the heads of families), into your power, and detain them till the trans-

Measures for carrying away the French colonists.

[1] Minot's *History of Massachusetts* says: "The whole number of persons collected at Grand Pré finally amounted to 483 men and 337 women, heads of families, and their sons and daughters to 527 of the former, and 576 of the latter, making in the whole 1,923 souls."

ports shall arrive, so as that they may be ready to be shipped off; for when this is done, it is not much to be feared that the women and children will attempt to go away and carry off the cattle. . . . . As their whole stock of cattle and corn is forfeited to the Crown by their rebellion, and must be secured and apply'd towards a reimbursement of the expense the government will be at in transporting them out of the country, care must be had that nobody make any bargain for purchasing them under any colour or pretence whatever; if they do, the sale will be void, for the inhabitants have now (since the order in Council) no property in them, nor will they be allowed to carry away the least thing but their ready money and household furniture."

The mode of procedure being left to Colonel Winslow and Captain Murray, they agreed upon the issuing of a proclamation to call the people together, which should be ambiguous in statement, but positive in its object. The paper was accordingly drawn up and distributed in the several communities. It ordered all the inhabitants, "both old men and young men, as well as all the lads of ten years of age, to attend at the church at Grand Pré, on Friday the fifth instant, at three of the clock in the afternoon, that we may impart to them what we are ordered to communicate to them;" declaring that no excuse will be admitted on any pretence whatever, on pain of forfeiting goods and chattels, in default of real estate.

The purpose of this meeting does not seem to have been suspected by the inhabitants, for it was not the first time they had been summoned to appear before their rulers to discuss their relations to the government. At any rate, they assembled at the appointed time, to the number of four hundred and eighteen able-bodied men, in the church at Grand Pré. The church was put under guard, and was continued thenceforth as a guard-house. They were not kept long in suspense as to the meaning of this reception. Colonel Winslow, surrounded by his officers, took his place in the centre of the Assembly. They were called together, he told them, to hear "his Majesty's final resolution" in regard to a people who "for almost half a century had had more indulgence granted to them than any of his subjects in any part of his dominions," though, he added, "what use you have made of it, you yourselves best know." The duty that had devolved upon him, he continued, "though necessary, is very disagreeable to my natural make and temper, as I know it must be grievous to you;" but his business was to deliver "his Majesty's orders and instructions, namely — that your lands and tenements, cattle of all kinds, and live stock of all sorts, are forfeited to the Crown, with all other your effects saving your money and household goods." So far as the capacity of the transports permitted, they were to be allowed to carry

their household goods with them; families, it was promised, should be kept together, and the removal should be as easy to them as it was possible to make it. He concluded with the expression of a hope "that, in whatever part of the world you may fall, you may be faithful subjects, a peaceable and happy people."

Winslow reading the Decree of Expulsion.

They were surrounded by the troops, and escape was impossible. But they begged that certain of their number might be retained as hostages, leaving the rest free to attend to their families and make the necessary provision for removal. Colonel Winslow would not grant this, but he permitted ten to be absent at a time, and, as the ten returned, others took their

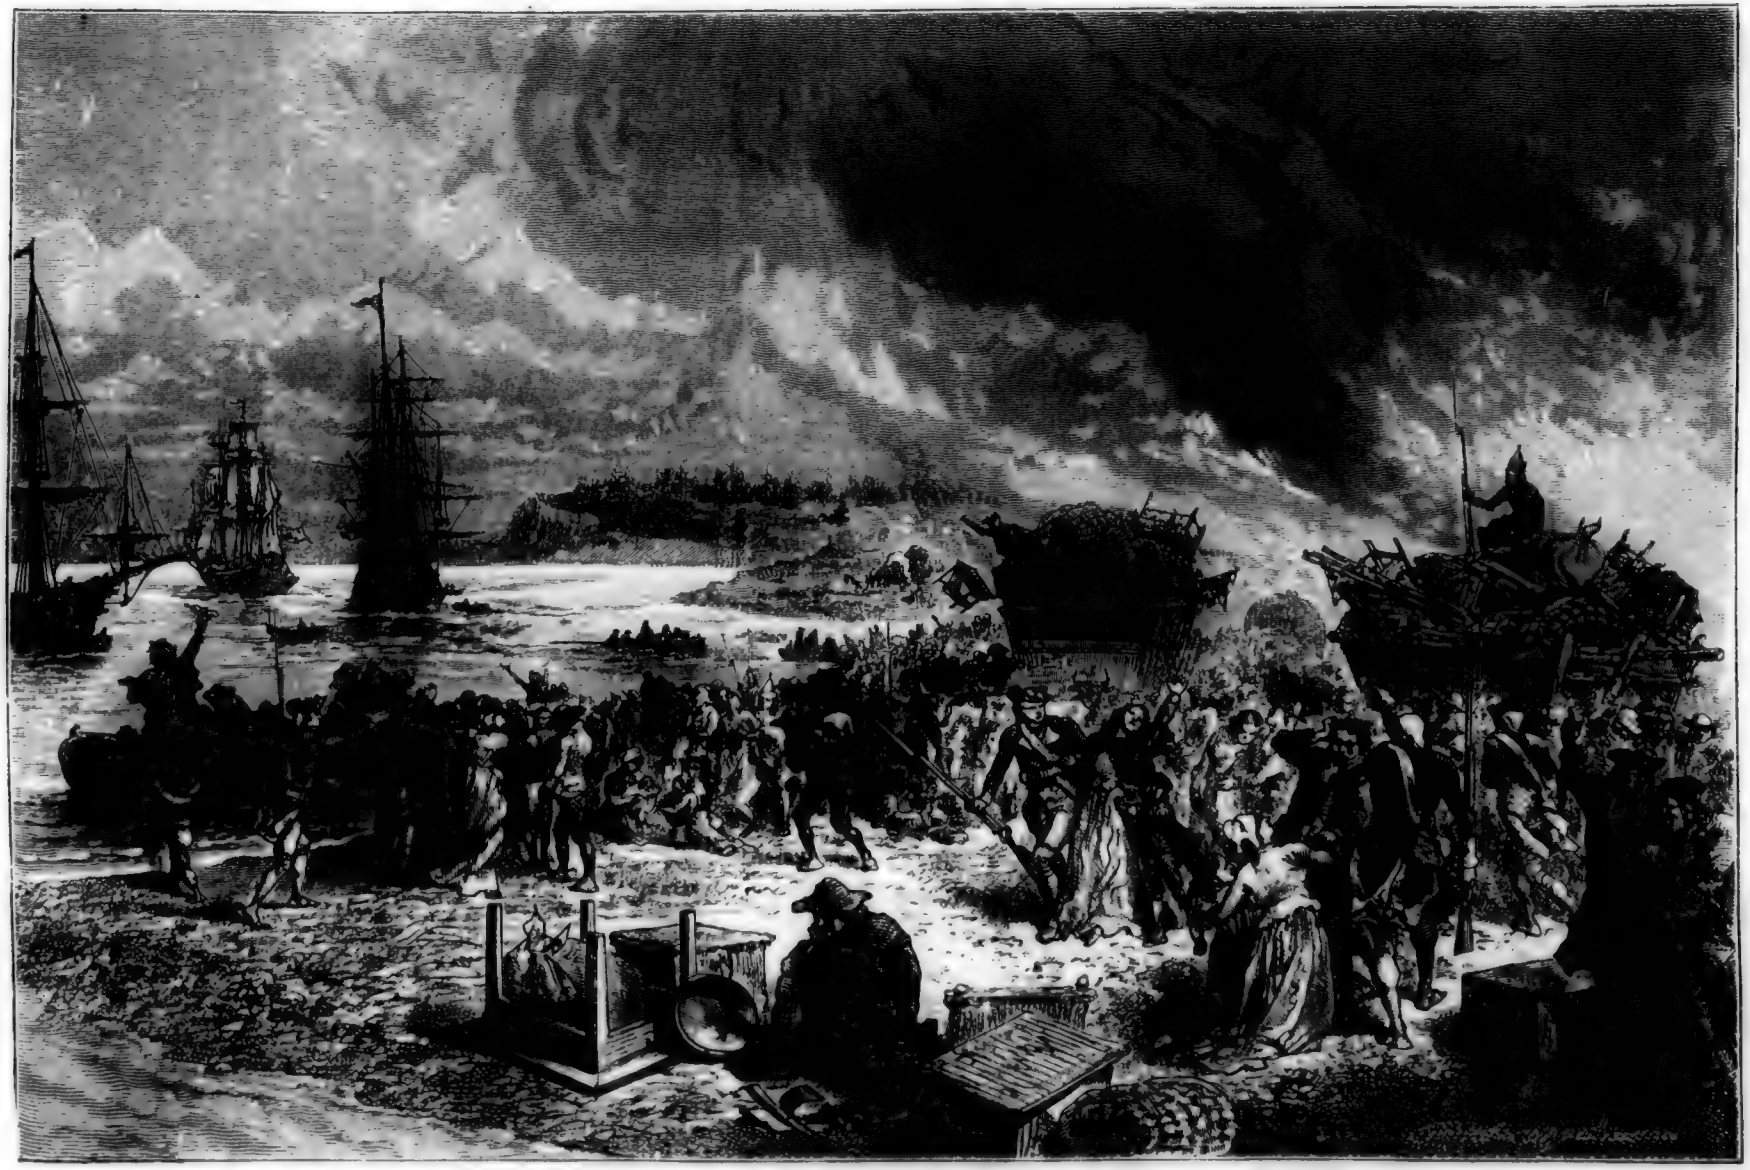
places. But even this privilege he was soon compelled to deny them. He saw, or fancied he saw, some suspicious movement among the prisoners. The transports had not arrived, and it was determined that other vessels in the harbor should be used, instead of the church, as a temporary place of detention. Orders were given for the removal to these vessels, first, of all the young unmarried men, and then of the young married men, leaving on shore only the old and feeble. The scene of the separation was one of great lamentation. At first

Embarking the Young Men.

the young men refused to march, but the prick of the bayonet, and Colonel Winslow's personal handling of the foremost, brought them into line, and they filed down to the boats, weeping, praying, and singing hymns, while a great company of women and children knelt by the way, and added their cries to the voice of the men. It was many weeks yet before the transports arrived which were to remove the families, and meanwhile the cares of Colonel Winslow increased. He was not inhuman nor even needlessly severe

The parting scenes.

in the performance of the task imposed upon him; but he was a man of decision, and the delays fretted him. "It hurts me," he writes, September 29, "to hear their weeping, wailing, and gnashing of teeth;" and on the same date he expresses an ardent wish "to be rid of the worst piece of service that ever I was in."



The transports did not arrive until the 10th of October, but, in anticipation of their arrival, Colonel Winslow, on the 6th, ordered the families to be in readiness for embarkation. "Even then," he says, "I could not persuade them I was in earnest." Meanwhile twenty-four of the young men deserted from the vessels, but twenty-two of these returned. On the 21st of October, the transports were filled with their unhappy passengers, and ready to sail. Orders were given, in accordance with Winslow's promise, that families should not be separated; but in the confusion of embarkation, and from the preliminary dispersion of the younger men among the vessels of the harbor for safe-keeping, the rule was sometimes disregarded, though not by design.[1]

The exiles were scattered through the several colonies, and their names are found in many places to this day, though often sadly corrupted. Many were merged in time in the English population. Two separate villages, however, near Bordeaux, in France, are filled with descendants of Acadian exiles who found their way thither. Some families went to Guiana; ten years later, enough of them retained their social and religious relations to plant a colony in the western parishes of Attakapas and Opelousas, in Louisiana, where the corrupted name of "Cajeans," and the primitive habits and simplicity of the people, still testify to their pure descent from the Acadians of Nova Scotia.

The larger portion of these exiles were sent to Massachusetts, where they were distributed among the several towns. The two volumes of records in the State House at Boston[2] contain varied testimony respecting the unfortunate exiles. They were often subjected to harsh treatment. Their children were forcibly taken from them; the provision for their support was denied; and they were shifted impatiently from town to town. The tenacity with which they clung

[1] The number of persons expelled from Acadia has commonly been set down as about 7,000. This is the estimate of Haliburton, Graham, Parkman, and others. Probably the origin of the statement is in the circular letter from Governor Lawrence to the governors of the several colonies to which the exiles were sent: "As their numbers amount to near seven thousand persons," he writes, "the driving them off, with leave to go whither they pleased, would have doubtless strengthened Canada with so considerable a number of inhabitants." Seven thousand probably represents with sufficient accuracy the total French population of Acadia in 1755, but the entire number of those exiled did not exceed, if Minot be correct, two thousand, of whom many subsequently returned to Acadia.

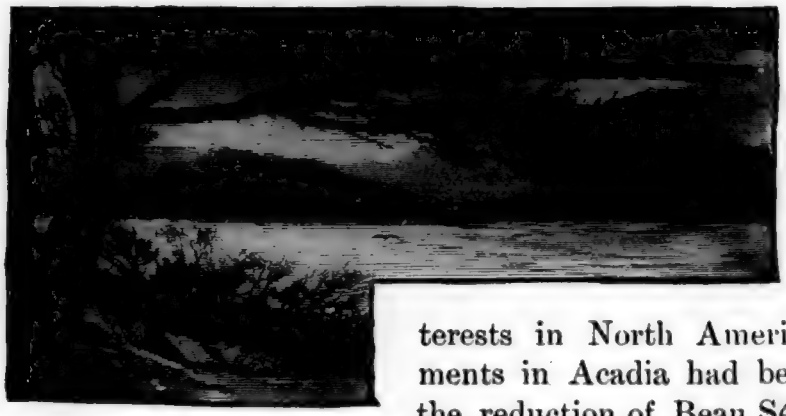
[2] *French Neutrals*, 23, 24.

THE EMBARKATION OF THE ACADIANS.

to their faith seems to have annoyed their persecutors. One town sends in its bill for "keeping three French pagans." There were instances, however, of friendly protection shown by individuals, and the more generous sentiment found expression in a report, though it was not accepted, by a committee appointed to consider certain complaints of ill usage, wherein the selectmen of the towns complained against are "expected to show common acts of humanity." In Pennsylvania, a somewhat similar disposition of the exiles was made in a distribution among the country towns, and provision was made for them from time to time, amounting in all to about £7,500.[1]

Until they ceased to continue as a distinct body in the several colonies, there is almost unvarying witness to their submission and gentleness. The whole body of testimony regarding them deepens the sense of their harmlessness, and when the poet sang of their wrongs, he at once touched the latent feeling regarding them when two or three generations had removed their history from the arena of war and politics.

[1] See Hon. W. B. Reed's paper, "The Acadian Exiles, or French Neutrals in Pennsylvania," *Memoirs of the Historical Society of Pennsylvania*, vol. vi., 1858, in which he clearly refutes Judge Haliburton's charge that the Acadians were offered for sale in Pennsylvania.



Braddock's Grave.

CHAPTER XI.

CONTINUATION OF THE FRENCH WAR.

PROPOSED OPERATIONS UNDER SHIRLEY AND JOHNSON. — BATTLE OF LAKE GEORGE. — WAR DECLARED BETWEEN ENGLAND AND FRANCE. — LORD LOUDOUN COMMANDER-IN-CHIEF IN AMERICA. — MONTCALM IN CANADA. — LOSS OF FORT OSWEGO. — LOUDOUN'S PLANS AND FAILURE. — FORT WILLIAM HENRY TAKEN BY THE FRENCH. — MASSACRE OF THE GARRISON. — DISCOURAGEMENT IN THE COLONIES. — THE WAR AT THE SOUTH. — GENERAL CONDITION OF THE COLONIES AND OF CANADA. — WILLIAM PITT. — AMHERST SUPERSEDES LOUDOUN. — CAPTURE OF LOUISBURG. — DEFEAT OF ABERCROMBIE. — CAPTURE OF FORTS FRONTENAC, DU QUESNE, AND NIAGARA. — TICONDEROGA TAKEN BY AMHERST.

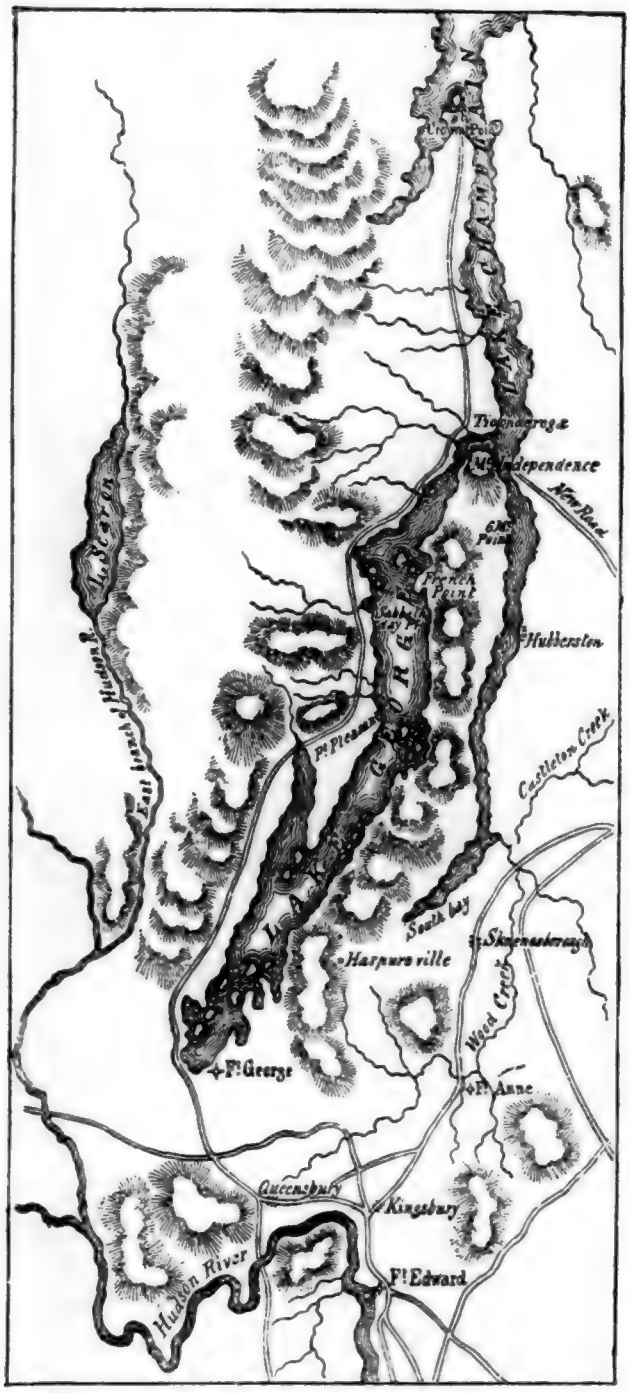
View on Lake George.

BRADDOCK'S ill-starred expedition was only part of a general scheme for establishing the supremacy of the British interests in North America. The movements in Acadia had been successful by the reduction of Beau Séjour, and by the silence of the depopulated and wasted villages about the Minas Basin and Annapolis Royal. We have seen that Braddock purposed, after capturing Du Quesne, to push on and join the forces sent to take Niagara. Albany was the rendezvous for the two expeditions, the one against Niagara under General Shirley, and the other against Crown Point under General Johnson, and in June an army of nearly six thousand men, raised by the northern provinces, was assembled there and in the neighborhood. They were mainly provincials, ill-disciplined and impatient of delay, and Indians, who never could be brought under even the ordinary rules of the camp. It was Shirley's plan to take his forces to Oswego, by way of the Mohawk River and Oneida Lake, and thence to Niagara. There was delay in the arrival of the troops; and when, at the end of July, the last regiments were embarking at Schenectady, the news of Braddock's defeat ar-

The expedition against Niagara.

rived, and so discouraged the men, already dispirited by the evident lack of generalship, that great numbers deserted, and many of the batteau men especially, on whom the expedition was so dependent, refused to go farther. It was the 18th of August before Shirley reached Oswego, and another month before he could make sufficient provision for the attack upon Niagara. The stormy season then set in, and after waiting nearly a fortnight, and seeing the force reduced steadily by sickness and by desertion, it was determined in council to abandon the attack this year, to leave Colonel Mercer with a garrison of seven hundred men at Oswego, and that General Shirley should return with the rest of the army to Albany.

There was another reason why Shirley hesitated to attack Niagara, and determined instead to strengthen Oswego, though it would have moved a man of more martial zeal to prosecute his first purpose with greater activity. Intelligence had reached him of an intended movement against Oswego. The French expedition which had sailed from Brest in the spring had lost six hundred men and two ships of war in a dash made by Admiral Boscawen; but it had substantially increased the military resources of Canada by landing a thousand men at Louisburg, and fourteen hundred at Quebec. The first duty imposed on Baron Dieskau, in command of these forces, was the reduction of Oswego. Forts Frontenac and Niagara commanded the two extremities of Lake Ontario, but so long as Oswego was held by the English, the communication between Canada and the Ohio Valley was always liable to interruption. Moreover, the capture of General Braddock's papers had disclosed the plans of Shirley. Accordingly, Dieskau, proceeding to Montreal, prepared at once for a movement up the river to Fort Frontenac. It was a rumor of this movement that came to Shirley, and he hesitated, when he should have taken active measures either for a vigorous attack or a prudent defence.



A French movement against Oswego diverted to Crown Point.

But when Dieskau was on the eve of moving, information reached Montreal that the other expedition, designed to reduce Crown Point, had already been put in motion, and Dieskau was importuned to abandon his original intention and meet this more imminent danger. He consented with reluctance, and led his troops, numbering about two thousand men, up Lake Champlain to Fort St. Frederick at Crown Point, and there awaited the arrival of the English.

The forces collected at Albany for the northern campaign were sent forward, without artillery or batteaux, under General Lyman, early in July. These were occupied in building Fort Lyman, afterward Fort Edward, on the east bank of the Hudson, until General William Johnson should arrive with the neces-

English expedition against Ticonderoga.

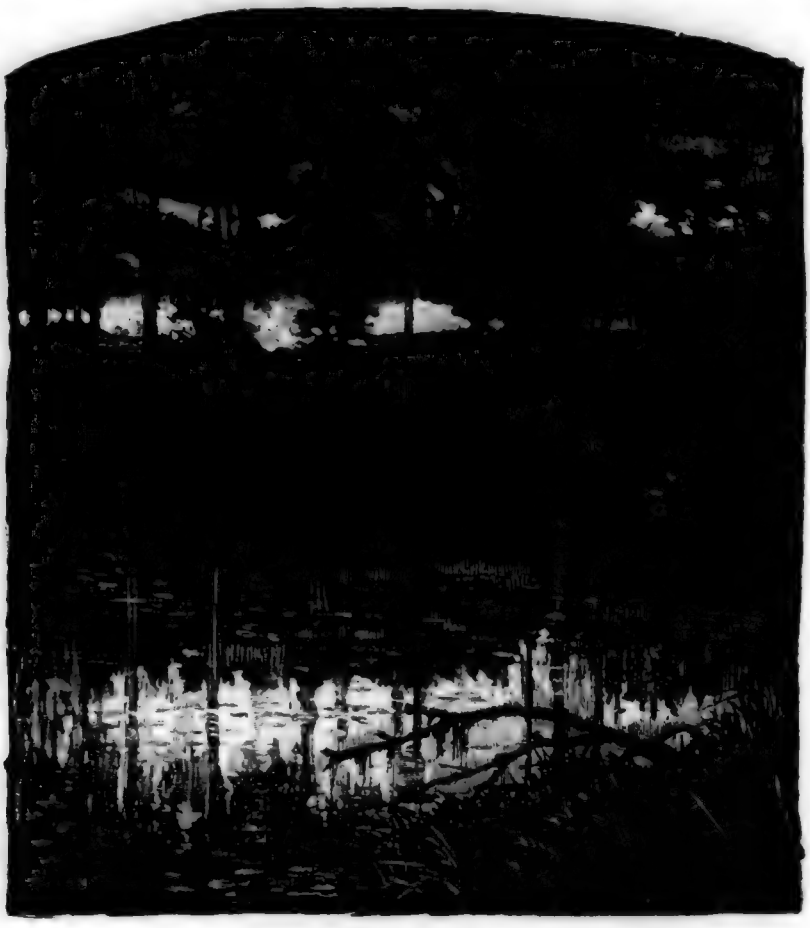
sary equipments and provisions. It was the 8th of August before Johnson set out and joined Lyman at the fort, which was at the beginning of the "carry" of fourteen miles, to Lake St. Sacrament — named soon afterward, by General Johnson, Lake George, in honor of the King, George II.

Map of Lake George and part of Lake Champlain.

Marching leisurely northward, he encamped at the south end of the lake in a strong position, covered by swampy ground and woods on the sides not protected by the lake. Here he proposed waiting for his batteaux, building a fort meanwhile, when he would proceed to Ticonderoga, fifteen miles below Crown Point, a strong military position not yet occupied, to make that his base of operations against Fort St. Frederick. He expected to be joined here by a large number of warriors from the Six Nations, and was mortified and disappointed that they did not come. The old chief, Hendrick, attributed this to Shirley, who, he declared, had spoken with great contempt of Johnson to the Indians, and had urged them to go with him to Oswego, and not to Crown Point. This, no doubt, was true, for there was no cordiality between the two generals. Johnson had already complained to the Board of Trade of Shirley's attempts to undermine his influence with the Six Nations, and his unwarrantable interference with

him as their superintendent, to which post Johnson had been appointed by Braddock. The Indians, however, came in day by day, though in small companies, and took an active share in the campaign.

Dieskau, leaving a large force at Crown Point, pushed on with six hundred Indians, seven hundred Canadians, and two hundred regulars, by way of Lake Champlain to South Bay, now Whitehall. Here he learned from an English prisoner that the fort which Lyman had built was without cannon, and that Johnson, in his camp, was also almost without artillery. The French commander then proposed by a sudden movement to seize Fort Lyman, thus cutting off Johnson from his supplies, and to occupy a position from which he could either descend upon Albany and intercept the communication with Oswego, or attack the New England border. The scheme seemed perfectly feasible. Dieskau marched his army to within a short distance of the fort, on the road leading directly to Lake George, where he halted and sent a party of Indians to reconnoitre. They quickly returned, bringing word that Johnson had learned of their approach, and had sent warning to the fort. Johnson was indeed aware of the imminent peril in which both his little army and the fort were placed. Early in the morning of the 7th of September a council was held, in which it was decided to despatch a thousand troops and two hundred Indians on the road to the fort, to meet the enemy. Hendrick, the Iroquois Sachem, alone dissented from the decision. "If they are to fight," he reasoned, "they are too few; if they are to be killed, they are too many." But he was overruled. The march was begun, the provincials headed by Colonel Williams, the Indians by Hendrick himself, whose weight compelled him to ride.



Dieskau marches on Fort Lyman.

Meanwhile Dieskau, whose aim it was to capture the fort first, found himself balked by the reluctance of his Indians, who had a terror of fortified places, and believed that the fort was supplied with the dreaded cannon. They refused to make the attack, but were ready to march against Johnson's camp. Dieskau accepted the situation, and at once moved toward Lake George, encamping near the southern spur of the French Mountain. On the 8th, learning of the approach of the English, he prepared an ambuscade in a defile of the road less than four miles from Johnson's camp. On his left, where his line extended half a mile, a natural breastwork, covered with trees and shrubs, concealed the men from the road; the right line bent like a hook across the road for a quarter of a mile to where swampy ground covered with a thick growth of trees and brush afforded perfect concealment. The ambush formed thus a horse-shoe-shaped trap, and if the enemy should enter it, it would be

He ambuscades the English.

possible, by bringing round the long left line, to enclose the whole body and open an attack on the rear.

Into this trap marched Colonel Williams and Hendrick with their men. Williams had halted two and a half miles from the camp, near the entrance of the defile, to wait for the other divisions, but by a strange neglect in so experienced an officer, had not sent forward scouts. The Indian, Hendrick, now took the lead, and the division pushed forward. The old warrior had advanced beyond the extremity of the shorter line of the ambuscade when he was suddenly hailed by

Bloody Pond.

an Indian who appeared near him. "Whence came you?" was the challenge. "From the Mohawks. Whence came you?" "From Montreal." At this a musket-shot, fired, contrary to orders, by some impatient man before the entire division had entered the fatal circle, brought on the engagement. From the thick woods on either side, and in the rear, volley after volley fell upon the entrapped soldiers. The old Indian chieftain was one of the first to fall, shot through the back. Williams also fell,[1] and the

Death of Hendrick and Colonel Williams.

[1] Colonel Ephraim Williams, a brave soldier and earnest patriot, by his will founded

command devolved upon Lieutenant Whiting. The men, who fought bravely, rushed to the right of the road where Dieskau's long left was hidden behind the natural breastwork. The French and Indians rose suddenly and fell upon them, doing great execution. But the men fell back, notwithstanding, in good order, till another stand was made near a small pond,[1] where reënforcements, sent forward by Johnson, gave them new confidence and covered the retreat to the camp.

Arrived at the camp, they clambered over the hasty barricade of fallen trees which Johnson had begun to raise after sending out Colonel Williams's party in the early morning. He had also dragged up his cannon from the lake, and had disposed them where they could be most serviceable in case of attack. Dieskau following the retreating soldiers came into full view of the camp, and the sight of the cannon at once damped the ardor of the Indians, who skulked into the woods. The quarter-hour which was spent in bringing back the stragglers and forming his lines, was a breathing-time for the English, who were now behind their slight defences and under the command of their officers.

Johnson's camp was protected in the rear by the lake; in front the hastily thrown-up breastwork afforded a slight bulwark. Three guns were posted in front of the road which led to the camp from Lyman's fort, and other cannon were placed near the ammunition close by the lake. It was half after eleven o'clock. Down the road came the regulars of the French army, forming in line as if for parade, their white uniforms gleaming and sharp bayonets glistening; on either flank the Indians and Canadians had dispersed themselves in the swamps. The Mohawks at the first alarm had fled with their squaws and pappooses to their own camp, and had not returned when the battle opened.

The attack on the breastwork.

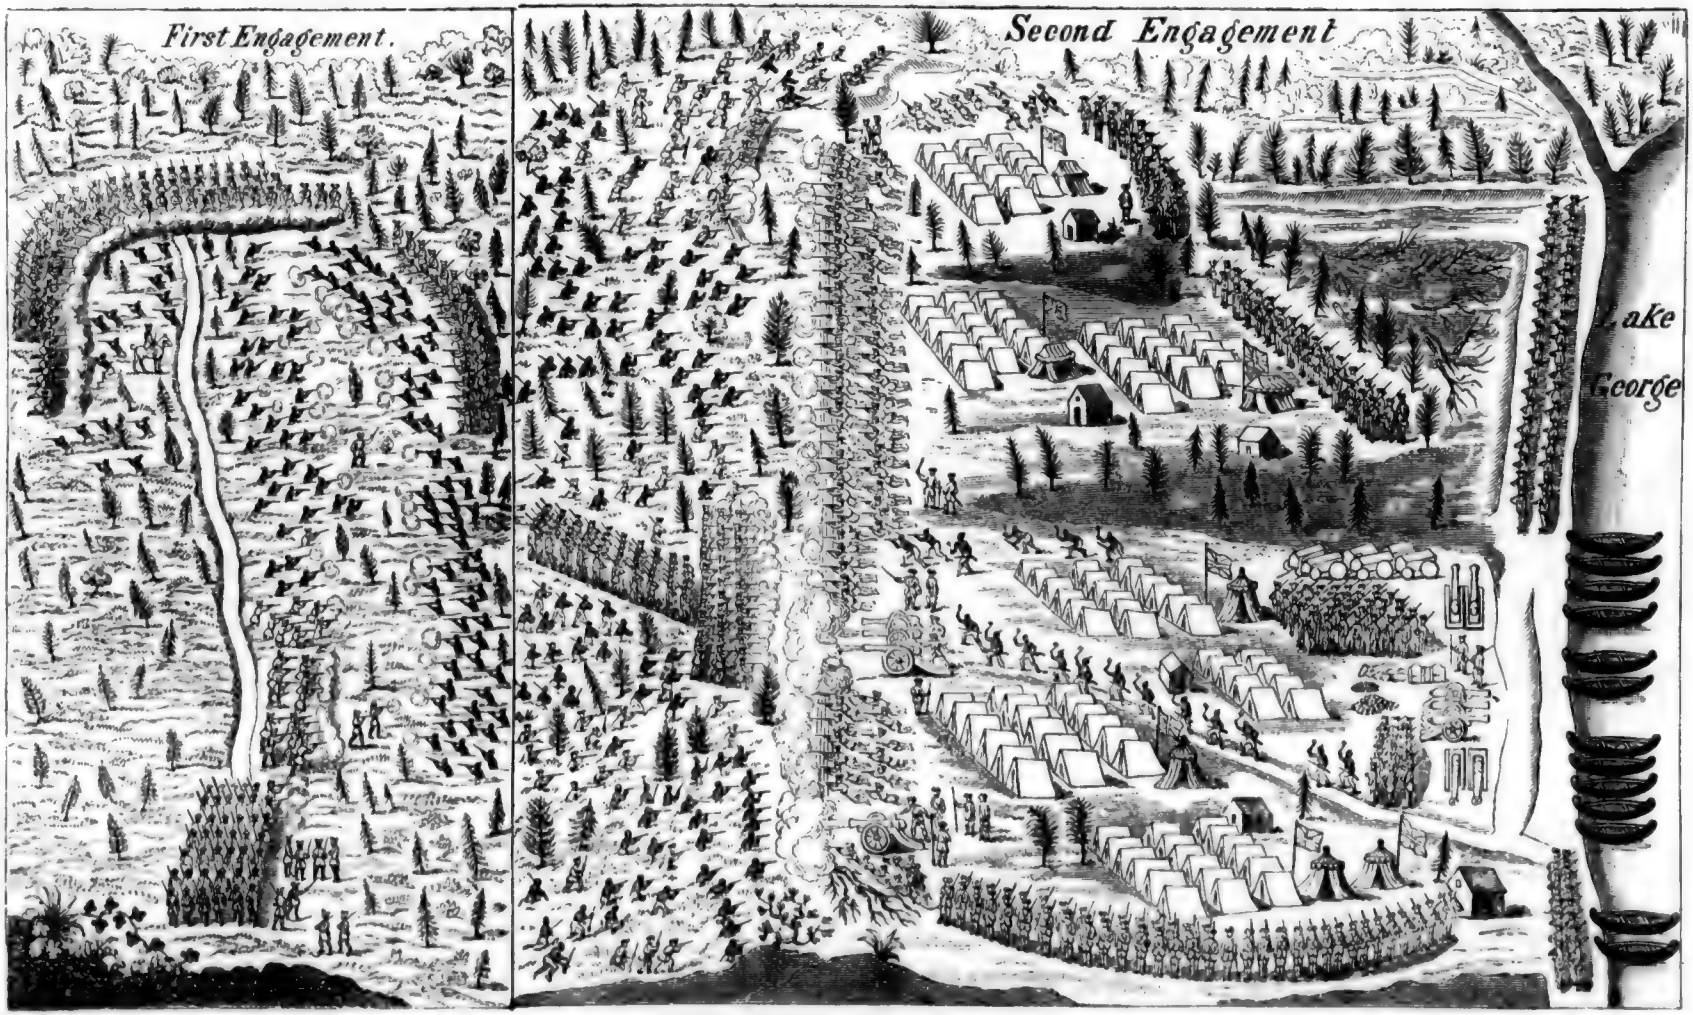
These New England and New York men had known little of fighting in the presence of solid ranks of trained soldiers. Dieskau halted the regulars, who opened fire by platoons, while the Canadians and Indians kept up a sharp rattle on the flanks. The three guns at first only made reply; but presently the provincials, finding themselves as yet unhurt, regained their courage and began, from behind their breastwork, picking off the regulars before them. Unable to hold their position in this cleared place, the regulars took to the woods like the savages. Dieskau led his men to Johnson's left, but without effect, and then passed to the right, where the Indians had done the fiercest fighting. Johnson, wounded at the outset, had been carried to his tent,

Williams College, in Massachusetts. The Alumni of the College have erected a monument over his grave

[1] Bloody Pond, still pointed out as holding in its depths the bones of the men who fell in that fight.

and Lyman took command, placing himself in the most exposed position and showing the utmost bravery. The Mohawks had returned and engaged in the fight, which now became a hand-to-hand contest over the breastwork. The provincials, no longer in fear, fought, as Dieskau said, like devils, and leaping the breastwork, clubbed their muskets and dashed furiously at the enemy. The guns at the same time were brought to bear upon a party of Canadians and Indians concealed in the morass, and did such execution that the enemy was dislodged from a position of much advantage. The Indians and Canadians were scattered right and left; the regulars were speedily overcome at close quarters with the provincials, who struck at them as with sledges, and pounded them to death, so that scarcely one escaped.

Retreat of the French.



The retreat was a disorderly flight. Dieskau, who had already been severely wounded, was shot by one of his own men as they left the field; he was carried into the general's tent, and treated with consideration. Lyman was for pursuing the enemy, but Johnson gave orders to call back the men. But the garrison at Fort Lyman had heard the noise of the engagement, and had sent a detachment of two hundred New Hampshire troops to the field. These suddenly came upon the remnant of the French army at dusk, resting by Rocky Brook, where, half-starved, they were making a hasty supper. Lyman's men fell upon them, and completed the rout, capturing the baggage and ammunition. Of the English forces, the loss during the day was between two hundred and three hundred. The French lost, by different estimates, not far from a third of their number, or about five hundred.

Fort George, or William Henry.

That the whole expedition was not captured, was due apparently to the extreme caution or hesitation of the wounded general, Johnson. But the success was otherwise so complete, and the news of it so inspiriting, after Braddock's defeat two months before, that the colonies rang with rejoicings. Johnson, besides being rewarded with a gift of £5,000 from the English Government, was made a baronet. His part in the fight was not to be overlooked, but in his own account of it he seems to have slighted General Lyman's services.[1] The escape from peril was a real one, and the danger was even more imminent than from the defeat of Braddock; for, had Dieskau captured Fort Lyman and defeated Johnson, he would have been able to march at once upon Albany, and leave behind him an open road to Canada.

BATTLES OF LAKE GEORGE.
[From an Old Print]

While the English built a strong fort at the south end of Lake George after Dieskau's repulse, — Fort William Henry or Fort George, — and garrisoned that and Fort Edward, — as Fort Lyman was re-named, — the French took possession of the important pass at Ticonderoga, and at once proceeded to fortify it. After the death of Braddock, Governor Shirley was at the head of the English army in America. He called a council in the autumn of this year (1755), in which the campaign for the ensuing spring and summer was laid down upon precisely the lines adopted for the late campaign. That is, Fort Du Quesne and Crown Point were to be the objects of attack; Oswego was to be reënforced, and Niagara and Frontenac to be assailed from that point. Ticonderoga was to have been attacked in front from the frozen lake, but this project was defeated by the mildness of the winter. In the almost palsied condition of the British administration of that day, all action seemed perpetually waiting upon some special movement which, after all, was not of vital importance. War had been actually declared at length by the British Government on the 17th of May, 1756, and by the French Government on the 9th of June following. The campaign in America now waited on the arrival of the new Commander-in-chief, Lord Loudoun, and Lord Loudoun waited for somebody else. He was "a mere pen-and-ink man," as the Earl of Shelburne styles him,[1] one of the Duke of Cumberland's school, forever getting ready to start.[2]

Both parties fortify.

Shirley's campaign.

The declaration of war.

Lord Loudoun Commander-in-chief.

A very different man was at the head of the French forces. Louis Joseph, Marquis de Montcalm de Saint Veron, had arrived in Canada with three thousand men and abundant stores with which to prosecute the war. The management of military affairs in Canada had not been of the best, but the French rarely lacked men ready to seize the opportunity, and Montcalm brought great ability and experience to his task. While the English were waiting and hesitating, or quarrelling about rank and precedence, the French were actively engaged in cutting off the supplies intended for Oswego, in making dashes at the English, capturing small forts and taking prisoners, and in winning the Six Nations so far as they could from the English alliance. The siege of Oswego was early determined upon, and a strong corps of observation was posted by Montcalm at what is now Six-Town Point, in Henderson, Jefferson County, New York, on the shore of Lake Ontario. Fort Niagara also was strengthened and reënforced.

Montcalm in Canada.

[1] Fitzmaurice's *Life of William, Earl of Shelburne*, i. 81.

[2] Franklin, who was vexed at Loudoun's indecision, quotes a witty characterization of the Earl by one Innis: "He is like St. George on the signs, always on horseback, and never rides on."—Autobiography in Bigelow's *Life of Benjamin Franklin*, vol. i., p. 356.

On the 3d of July, when Colonel Bradstreet, who had been charged with the conduct of a convoy of provisions and stores down the Onondaga to Oswego, was returning to Schenectady, he was suddenly attacked about ten miles from Oswego, and had a sharp skirmish with a body of Canadians and Indians, followed by a more serious engagement, in which Bradstreet routed the enemy, but was unable to follow up his advantage. From one of the prisoners the movements of the French against Oswego were learned, and promptly reported to General Abercrombie, who, awaiting Lord Loudoun's arrival, was commanding at Albany and Fort William Henry a force of about ten thousand men. The General ordered a regiment of regulars to the relief of Oswego; but before they could be moved, Lord Loudoun appeared, and through his dilatory action it was the 12th of August before the relief set out from Albany.

Oswego besieged

On that very day the last of the forces intended for the investment of Fort Oswego arrived in camp, and Montcalm at once opened fire upon Fort Ontario, on the right bank of the river. The garrison was under the command of Colonel Mercer. As the enemy brought their batteries nearer and nearer, Colonel Mercer, whose ammunition was already expended, spiked his guns, destroyed his provisions, and ordered a retreat across the river to Fort Oswego, distant four hundred and fifty yards. Here a brisk fire was opened upon the fort he had just abandoned. A portion of his force, however, had ascended the river four and a half miles to a hill, where Colonel Schuyler was intrenched, whence they could have harassed the enemy; but Montcalm perceived the manœuvre, and while keeping up an active fire on the fort, sent a large body of Canadians and Indians to cut off communication between it and the hill. On the 13th Colo-

And captured.

nel Mercer was killed by a cannon ball, and the garrison gave up the struggle, and surrendered to Montcalm,[1] though the common soldiery were still ready to continue the fight. The French loss was trifling. The English lost as prisoners of war sixteen hundred men, including eighty officers, one hundred and twenty-one pieces of artillery, and a great store of ammunition, together with seven armed ships and two hundred batteaux which had been preparing for a descent upon Niagara and Frontenac. The forts at

[1] Montcalm was a little surprised at the quickness with which he had accomplished his object. "The celerity of our operations in a soil which they considered impracticable, the erection of our batteries, completed with so much rapidity, the idea these works gave them of the number of the French troops, the movements of the corps detached from the other side of the river, the dread of the savages, the death of Colonel Mercer, commander of Chouaguen [as the French called Oswego], who was killed at eight o'clock in the morning, doubtless determined the besieged to a step which we had not dared to expect so soon.' Montcalm's Journal of the Siege of Oswego, in *New York Colonial History*, x. 443.

Oswego had been built in the territory of the Six Nations. Several of these Indians were present at the battle, and Montcalm, immediately upon the surrender, destroyed the forts in the presence of the Indians; an act which had a two-fold significance, as marking the superiority of the French to the English and the friendliness of the French to the Indians.

General Webb, meanwhile, with his reënforcements, was slowly making his way to Oswego, and had reached the great portage, when he heard the news of the capture of the forts. The great portage was now the most advanced post held by the English in the Iroquois country, and as if to aid the French in their schemes, General Webb proceeded to destroy the fortifications which had been begun there in a naturally strong position, and to retreat with the garrison and his own men to Schenectady and Albany. The English had now apparently abandoned the Six Nations as well as lost the key to Lake Ontario.

Webb's retreat.

There still remained an opportunity to turn the forces assembled at Albany against Crown Point, and so retrieve the ill-fortune. But the paralysis of inaction continued. In the long delay the seven thousand men who had been collected had dwindled by desertion and sickness to four thousand; the success of Montcalm, instead of quickening the English, seemed to discourage them, and the expeditions against Ticonderoga and Du Quesne were abandoned. Forts William Henry and Edward were strengthened, and the grand campaign which had been planned was turned into an ignoble defence. Montcalm, anticipating an attack on Ticonderoga, hurried thither from Oswego: but no enemy appearing, he strengthened the fortifications there and returned to Montreal for the winter.

The campaign for the next year was begun by assembling another council of generals and governors. With more men and with a naval armament, Lord Loudoun proposed to confine active hostilities to a single expedition. The posts already held were to be strongly fortified, and a combined attack by land and sea to be made against Louisburg, a place which New England coveted above all others. It was partly on this account, doubtless, that a requisition for four thousand men was readily complied with. New York and New Jersey added their quota, and in July Admiral Holbourne arrived at Halifax with a squadron and a reënforcement of five thousand troops. Halifax was the rendezvous, and Loudoun arrived there from New York with six thousand regulars. There he learned that Louisburg was held by six thousand regulars, in addition to the provincials, was guarded by seventeen line-of-battle ships in the harbor, and a French fleet that had lately sailed from Brest was looked

Loudoun's plans.

A fiasco at Louisburg.

for daily. It was quite in accordance with his usual method to return to New York with the Admiral the last of August, putting off the capture of Louisburg for a year.[1]

When Montcalm learned that Loudoun had left New York for Louisburg he proceeded to carry into execution the plan which he had formed for attacking Fort William Henry. The French had been unceasing in their efforts to win over the Indians of the Six Nations to their side, and the repeated defeats of the English, together with the policy of the French emissaries, had at length produced so strong an impression upon the Indians that by parties and tribes they deserted the English and attached themselves to the successful and more sympathetic French. The fort which had been erected on the spot where Johnson and Lyman had repulsed Dieskau was badly placed on the shore of Lake George, with low land all about it, and overlooked by hills on the west and northwest, by one of which at least it was perfectly commanded. At this time it was garrisoned by two or three thousand regulars under the command of Colonel Monroe, while at Fort Edward was stationed an army of four thousand men under General Webb. At both forts a descent from the upper waters was constantly looked for, and this summer had already brought with it several warnings. As early indeed as March 18, an attempt had been made by Rigaud to surprise Fort William Henry, and though he was obliged to return to Ticonderoga he succeeded in destroying more than three hundred batteaux, several buildings, and a quantity of provisions. A skirmish had taken place near the end of July at Harbor Island, a little south of Sabbath Day Point; a raid almost to the walls of Fort Edward had resulted in the loss of thirty-two of the English and Indians; and a few days later a party sent from Fort William Henry to reconnoitre fell into an ambush, and almost the entire party of three hundred were either killed or captured, twelve only escaping.

Fort William Henry.

Montcalm, with fifty-five hundred Canadians and regulars, and sixteen hundred Indians, was now making his way from the rendezvous

[1] How these performances were viewed in England, which was fretting under the gross mismanagement of affairs, may be inferred from Walpole's letters. "Shortly after came letters from the Earl of Loudoun, the commander-in-chief in North America, stating that he found the French twenty-one thousand strong, and that, not having so many, he could not attack Louisburg, but should return to Halifax. Admiral Holbourne, one of the sternest condemners of Byng, wrote at the same time that he having but seventeen ships and the French nineteen, he dared not attack them. Here was another summer lost! Pitt expressed himself with great vehemence against the Earl; and we naturally have too lofty ideas of our naval strength to suppose that seventeen of our ships are not a match for any nineteen others." Walpole's *George II.*, vol. ii., p. 231. Entick (ii., 392) declares that there was no such formidable force at Louisburg, but that the enemy adroitly managed to let the English capture some fictitious despatches, giving these impressions.

View from Old Fort, Lake George.

at Ticonderoga across the portage to the upper waters of Lake George. Here a division was made. De Lévis, with twenty-two hundred French and Canadians, escorted by six hundred Indians, toiled by land down the narrow trail at the west of the lake; the rest, with all the baggage, were transported in batteaux and canoes. The Indians had been brought together from wide distances. On the morning of the 3d of August the besieging army landed on the west side of the lake, about two miles from the fort. The guns were immediately placed in position, and Montcalm despatched a letter to Colonel Monroe, calling upon him to surrender, and intimating that he might not be able to restrain his Indians in case the English resisted and the fort should be taken. But the English commander relied not alone upon his own forces. General Webb, at Fort Edward, was only fifteen miles

The fort besieged.

distant with four thousand men, and Monroe replied briefly that he would not surrender. Montcalm's approach was not unknown to Webb. Sir William Johnson also had heard of the movement as soon as the French General left Ticonderoga, and at once hastily gathered Indians and militia, and marched to Fort Edward, which he reached on the second day of the siege. Israel Putnam, making a reconnoissance on the lake with a body of rangers, discovered Montcalm's approach, and had, it is said, notified Webb, urging him to oppose the landing; Webb, who was near Fort William Henry, enjoining secrecy upon Putnam, hastily returned to Fort Edward.

In the investment of the fort, De Lévis occupied the right and held the road leading to Fort Edward. On the 4th of August, the second day of the siege, a messenger from the fort to Colonel Monroe was intercepted, and a letter found from the imbecile Webb, advising Monroe to surrender, as he dared not send any reënforcements until he should himself receive aid from below. The messenger was sped on his way. Johnson did come, apparently that same day, and begged to be allowed to take volunteers to the support of Monroe. Webb gave consent reluctantly, but when the entire body of provincials sprang forward ready to follow Johnson, he withdrew his consent, and left Monroe to his fate.

The siege lasted six days, when Monroe, with half of his guns useless and nearly all his ammunition expended, hung out a flag of truce and obtained liberal terms from Montcalm. But the confidence which he placed in the French General's word that the English should march to Fort Edward under guard of a detachment, was not justified. Montcalm, in the terms of surrender, stipulated that a hostage should be held by him until the safe return of the escort from Fort Edward. The peril did not lie with them, but with the unhappy men whom they escorted, for scarcely had they begun their march when the Indians, wild with liquor and the hope of plunder, fell upon the English soldiers, and killed them, without mercy. A panic seized the English. Some fled to the French for protection, others took to the woods, and many were held captive by the Indians. Montcalm, like other commanders in similar situations, had sown the wind, and the whirlwind was reaped. It was easier to excite the Indians to a pitch of frenzy than to control them when thus excited, and it has been necessary ever since that day to defend a general whose fault lay not in a deliberate connivance with his savage allies, but in his reckless use of material which served his purpose in war. When the news of this massacre was spread through the country, the provincials flocked to the defence of the frontier. But Montcalm, after burning the fort, returned to Canada with the stores.

And captured.

Massacre of the garrison.

The close of the year 1757 marked the most discouraging period in the contest of the colonies with France. At the extreme south indeed there was peace and moderate prosperity. A firm hand held the government in Georgia, where Governor Ellis, finding the colony distracted, factious, and disordered, speedily succeeded in restoring good feeling, protecting the coast and frontier, effecting amicable relations with the Creek Indians, and making the colony a refuge for many families that fell back from the dangerous frontiers farther north. To South Carolina, also, there had been an exodus of families from Virginia, Maryland, and Pennsylvania, after Braddock's defeat; but here the often-repeated story of English mismanagement of the Indians was approaching a terrible conclusion. In 1753, Governor Glen had made a treaty with the Cherokees, by which that tribe had agreed to keep the peace with the Creeks, and also to concede large tracts in the upper country to the English. At least, this was the English interpretation of the treaty, and, amid the murmurs of a people among whom the French had already begun to intrigue, they proceeded to build forts, notably Fort Prince George near the headwaters of the Savannah, and Fort Loudoun, at the head of navigation on the Tennessee, about thirty miles from Knoxville.

Review of affairs in 1757.

The French had already penetrated to the centre of East Tennessee, and had trading-houses convenient to the over-hill Cherokees, and these Indians, like the other tribes, were vacillating between the two powers, uncertain which was the more deadly enemy. These forts, meanwhile, though far removed from the base of supplies, gave encouragement to settlers in the back country and in the western parts of the two Carolinas. But farther north, the country west of the Blue Ridge had been rendered uninhabitable for whites. The Indians and French had carried fire and sword up and down the valley. Fort Loudoun, at Winchester, was the chief protection of the western frontier. Dinwiddie, the somewhat visionary and capricious Governor of Virginia, had urged on the Board of Trade the erection of a cordon of forts from Crown Point to the country of the Creeks, and Washington had advised that Virginia should erect forts along her frontier at distances of fifteen miles; but the cries of families flying before the Indians continued to be heard, and the military resources of Virginia had been reduced by the policy of Loudoun in drawing off soldiers for his great and utterly ineffective army. Fort Du Quesne was still in the hands of the French, and the English had lost Oswego. Acadia was still in their possession, but a powerful armament at Louisburg threatened not only Halifax, but the New England colonies. Bitter conflicts in the management of internal affairs were distracting Pennsylvania and New York, and although the people everywhere,

especially on the frontier, made vigorous by the hard experience of life in a new country, were equal to any emergency, there was no one in England or America who so commanded the universal respect and confidence as to be able to unite for any common purpose the separate strength inherent in all the colonies.

The French, on the other hand, though Canada was suffering from gross official peculation and was brought to the verge of a distressing poverty, appeared at this time singularly strong and victorious. They had achieved almost uninterrupted military success; they had been fortunate in their commanders; and, though the history of that province had been the history of a military and ecclesiastical despotism, there was a concentrated force now under control which could strike quickly and effectively. But New France, nevertheless, was approaching a point of exhaustion. The very advantage which it held as a military power carried with it the disadvantage of having no allies in an agricultural and self-reliant people. The base of supplies was in France, not in the colony, and thus, as the war continued, the gathering force of the English and American resources began to tell. In the long run the English would have worn out the French; the wavering line of frontier settlements would have been slowly pushed forward from behind. But the issue was to come quicker, and the disadvantages under which the colonies had labored were to give way before the genius of a single man.

William Pitt.

Pitt had been forced upon the King by his own impetuous nature and by the complaints of a disappointed people. The Secretary of State, who was one of the Council, became substantially prime minister. His measures for prosecuting the war in America met at once the obstacles which before had stood in the way of success. He had faith in the men of the colonies, and he dealt with them frankly and honestly. England should furnish arms, ammunition, and all necessary equipments; the colonies were to raise, clothe, and pay the men. England would furnish from her trained soldiers the generals and upper officers; but the colonial troops might choose their own colonels and subordinate officers, and these should rank with English officers of the same grade. To Pitt's policy at this time is largely due not only the success in arms but the independent spirit of the colonies. They responded at once to the call for men and money.

The campaign of 1758.

The objective points in the coming campaign were the same as they had always been — Louisburg, Ticonderoga and Crown Point, Du Quesne, — these were the keys of the French military system. Instead of Admiral Holbourne and the Earl of Loudoun, who had been recalled, Admiral Boscawen and Sir

Jeffery Amherst were placed in command of the naval and land forces which were to attack Louisburg. On the 2d of June, 1758, the combined forces, acting in perfect harmony, arrived before Louisburg, and on the 8th, the first favorable day, landed in the face of the enemy, making their way through heavy surf and up steep acclivities. The decisive work was done with the landing; after that it was a question of time, as the English parallels rapidly advanced. On the 25th of July the garrison surrendered upon demand, threatened by a final assault, for which preparations had been made with great vigor. Nearly six thousand prisoners were taken, and sent to England and France, and the victory was not only complete, but left a substantial result in the possession of the coveted fortress, which at once became a standing menace to Quebec. The moral effect of the capture was in every way important. New England was awakened to new enthusiasm by the recapture of a place which she had once taken, and whose restoration to France by England she had never ceased to regret. The brilliancy of the assault, in which Brigadier-general Wolfe played a conspicuous part, revived the sinking spirits of men who had seen action paralyzed under the feebleness of Loudoun and Webb.

Capture of Louisburg.

William Pitt.

While Amherst was prosecuting the siege, General Abercrombie, who had succeeded Loudoun upon his return to England, was aiming at the second great object of the campaign — the capture of Ticonderoga. The officer next in command, Lord Howe, was the ruling spirit of the army. Before Abercrombie reached the camp, Howe had sent Rogers with his rangers, who, winter and summer, had scoured the woods and lakes of the country, on a reconnoissance, and thus had secured a plan of the French works at Ticonderoga, and a survey of the neighboring district. The fortified town and camp of Carillon, as the French called the place, was upon a point of land washed on the north, east, and south by the waters

Attack on Ticonderoga.

of Wood's Creek, the entrance to Lake Champlain, and the entrance to Lake George. On the west only was there approach by land, and here, on either extremity, was low, wet land, while the country occupied by the French was hilly and broken. Montcalm was in command, with about three thousand effective soldiers, and De Lévis, who had been sent to relieve Fort Frontenac, which was threatened, was hastily recalled, as the news came that the English, twenty-five thousand strong, were setting out for Carillon. The fortifications of the place were not very strong, but the ground to be passed over by an investing force offered excellent opportunities for defence. Here, therefore, intrenchments were hastily made, with an abattis of felled trees. Yet Montcalm, even on the day of the attack, hesitated whether to attempt to hold it or retire to Crown Point. He finally decided that he would await the attack of the enemy who were before him, since if they could not carry the works by storm there would needs be two or three days before they could bring up the artillery.[1] Abercrombie had not twenty-five thousand, but only fifteen thousand troops, regulars and provincials.

It was the 5th of July when he left his camp at the foot of Lake George and ascended the lake with batteaux and rafts, — a brilliant spectacle, made more picturesque by the bright plaids of his Highlanders. Two bodies of French troops had been sent out to dispute the landing of the English; but when, the next day, the enemy appeared in force, they at once retreated; one division went safely back; the other, making a detour, became involved in the tangled woods, and suddenly came upon a body of English troops, equally bewildered. It was the centre column, headed by Lord Howe, and the two parties at once began firing upon each other. The provincials with Howe fought bravely, and almost the whole French detachment of three hundred and fifty men was slain; but Howe fell at the first fire, and his loss was irreparable. Abercrombie knew nothing of fighting but by rule; he refused the advice of the provincial leaders; he showed caution when dash would have succeeded, and was obstinate in attack when obstinacy was failure and defeat. The French labored incessantly at their defence, cheered by Montcalm, who worked with the rest. De Lévis arrived, and gave them fresh courage. Meanwhile the English lost precious time in securing a position which was unnecessary, whether they were to succeed or to fail.

Death of Howe.

The attack was made on the 8th. Abercrombie, ignorant of the formidable character of the abattis, though warned by Stark, of New

[1] Pouchot's *Memoir upon the Late War in North America*, translated by Franklin B Hough, 1866, i. 115, 116.

Hampshire, sent his obedient regulars again and again to the attack. For five hours the battle raged; the English were dogged and obedient, the provincials cool and alert. They tried now the centre, now the flanks; they hurled themselves against the sharp, ugly barrier, and could scarcely see the shouting line behind that poured a murderous fire into their ranks. A French officer hung a red handkerchief on the end of a musket, and beckoned the enemy on. Some thought it a flag of truce, and rushed up crying quarter. The French, seeing them come with their arms held against their breasts, were at first puzzled, and then fired furiously at the intrepid men who were breaking through the hedge.

Field of Abercrombie's Defeat.

At sunset the hopeless attempt was abandoned, and the troops withdrew to the lake. But the final confession of failure, with the terrible scenes of the day, broke down the spirits of the men, and those who had made the attack without flinching at last took to precipitate flight. The darkness of the night and the ignorance of the French saved them from pursuit, and the shattered force encamped again on the ruins of Fort William Henry, having lost more than two thousand men, and left the dead and wounded along their track.

The retreat.

Immediately after the ill-starred attack on Carillon, Bradstreet, with a detachment of three thousand men, nearly all provincials, marched rapidly to Oswego, and, taking passage to Fort Frontenac, quickly reduced it, and captured its little garri-

Reduction of Fort Frontenac.

son and abundant stores. He destroyed the fort and the vessels that lay there, and returned to Albany to join the main army.

Meanwhile the remaining expedition, for the recovery of Fort Du Quesne, succeeded through the weakness of the French, and almost in spite of the English commander. It had been placed under the command of Brigadier-general Joseph Forbes, who, with nearly seven thousand men, was five months in crawling to the Ohio, and was even abandoning the object at the last moment, when a happy fortune disclosed the weakness of the enemy. General Forbes had left Philadelphia with his command early in July, and listening to Pennsylvania advisers, who were suspected of wishing to secure a new road, determined not to use Braddock's road, but to make another, which would be shorter, from his rendezvous at Raystown, now Bedford. Colonel Washington joined him with the Virginia troops at Bedford, greatly dissatisfied with the course which had been pursued. He was sent forward in advance of the main army to take command of a division employed in opening the road, against which, as a useless waste of time, he had vainly protested.

At Turtle Creek, twelve miles from the Ohio, a council of war was called, on the 24th of November, for the situation seemed well-nigh desperate. Provisions were almost exhausted, and the general opinion was, that a retreat was imperative. Forbes, who from his unbending will had earned the name of the Head of Iron, swore that he would take Du Quesne or die in the attempt. But that night clouds of smoke were seen above the fort, and the sound of a heavy explosion reached the camp. It was conjectured — as Forbes soon knew from his scouts was the fact — that the French were abandoning the place. In the morning the army moved cautiously forward; no enemy opposed them; in a few hours they entered the fort, but it was only to take a heap of ruins.

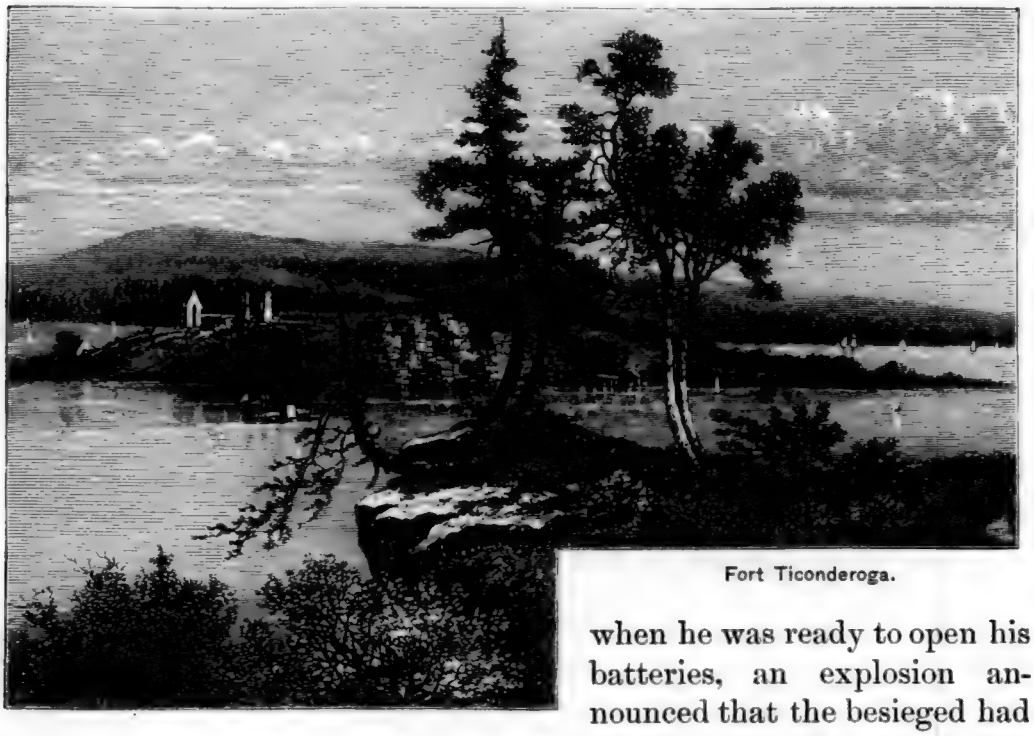
The French had retreated down the river, and the Indians had dispersed. That the works had been destroyed, was of little moment; the important thing was, that the valley of the Ohio was recovered to the English. But it might, perhaps, have been done at less cost had Forbes been as sagacious as he was undoubtedly brave. A rapid march by the old road would have led to the same result and would have precluded one disaster. While the army halted at Raystown, waiting for the new road to be made, the General sent Bouquet with two thousand men to occupy the Loyalhanna (now Ligonier, Pennsylvania). Here Bouquet entrenched, and sent forward Major Grant with eight hundred men, as a preparatory movement toward taking the fort, which he believed he could do without waiting for Forbes. On a hill — still called Grant's Hill — overlooking Du Quesne, Grant

was surprised by a sally of seven or eight hundred Frenchmen, with a host of Indians, and, though he fought with great bravery, his command was almost destroyed. It consisted chiefly of Highlanders; and as, on the 25th of November, their countrymen under Forbes moved through an Indian path in approaching the fort, their rage and their grief were beyond control when they saw the remains of their old comrades exposed to every indignity that savage ingenuity could invent. To bury these, as he had already buried the whitening bones that still strewed the field of Braddock's fight, Forbes esteemed a sacred duty.

Reënforcements from England.

Pitt, aware of the growing weakness of Canada, was pouring men and material into America, in preparation for a campaign which it was hoped would be final. Amherst had displaced Abercrombie, and was to mass his forces in an attack upon Ticonderoga and Crown Point, and then proceed by the northern route. Wolfe, who had shown his skill and courage at Louisburg, was to conduct an expedition up the St. Lawrence against Quebec, and General Prideaux, in command mainly of provincials and Indians, was to lay siege to Fort Niagara, and then, descending the St. Lawrence, meet the other two armies before Montreal.

Fort Niagara was being strengthened by Pouchot, who had been sent in command, and who complained bitterly of the inadequate support given him. He was going to a distant post in the midst of Indians who were fast coming under the control of the English, and only about a hundred and fifty men were allowed him. He intimates that M. de Vaudreuil, Governor of Canada, was so sure the place would be captured, that he withheld a larger body from him. Nevertheless, he proceeded on his errand, and even entertained the project of retaking and destroying Fort Du Quesne. He reached Niagara on the 30th of April, and busied himself in repairing the fort, in communicating with the other posts, and in using every exertion to detach the Indians from the English alliance.



Capture of Fort Niagara.

General Prideaux's division, marching rapidly to Oswego, embarked at once, and appeared before Niagara on the 6th of July. The work was pushed forward with great vigor, but Prideaux was killed by the carelessness of one of his soldiers very early in the siege, and the command devolved on Sir William Johnson. Pouchot summoned to his aid the forces from Detroit, Venango, and Presqu' Isle; for it was clear that the fort could not stand a long siege, and that their only hope lay in a repulse of the English. That hope was speedily destroyed. About nine o'clock in the morning of July 24, the garrison heard distant firing and saw a com-

motion which they could not understand. It was explained to them shortly by the arrival of a messenger, bringing a summons to surrender, and the intelligence that the little army sent to raise the siege had been met, and in a spirited battle of an hour had been completely routed. Pouchot refused to believe the calamity, but when it was made clear the garrison surrendered.

Ticonderoga taken by the English.

Meanwhile the centre division was encountering the delays which seemed to attend every movement on Lake George. On the 22d of July, after a month's delay, — for disaster had inculcated prudence, — Amherst appeared with an army of about eleven thousand men before Ticonderoga, and occupied the outer lines which had been abandoned by the French. Four days later,

Fort Ticonderoga.

when he was ready to open his batteries, an explosion announced that the besieged had blown up the magazine and evacuated the fort. Amherst took possession of the works, and, still cautious, groped his way to Crown Point, only to find that Fort St. Frederick had also been abandoned, and that the French had retreated to the Isle aux Noix, at the northern extremity of Lake Champlain. He spent the rest of the season in strengthening Ticonderoga and building massive works at Crown Point, which consumed millions of money, apparently only to give pleasure to the idle tourists who now saunter about the ruins. Amherst indeed made preparations for a flotilla which should command the lake and give means for attack on the French army; he opened a road also to the Connecticut River, and he sent the daring

Rogers on an expedition against the Indian village of St. Francis, an expedition marked by some of the most exciting passages of the ranger's perilous life. But the army which had been gathered with so much care remained inactive, while Wolfe was conducting his part of the campaign before Quebec with untiring energy.

General Wolfe undertakes the capture of Quebec.

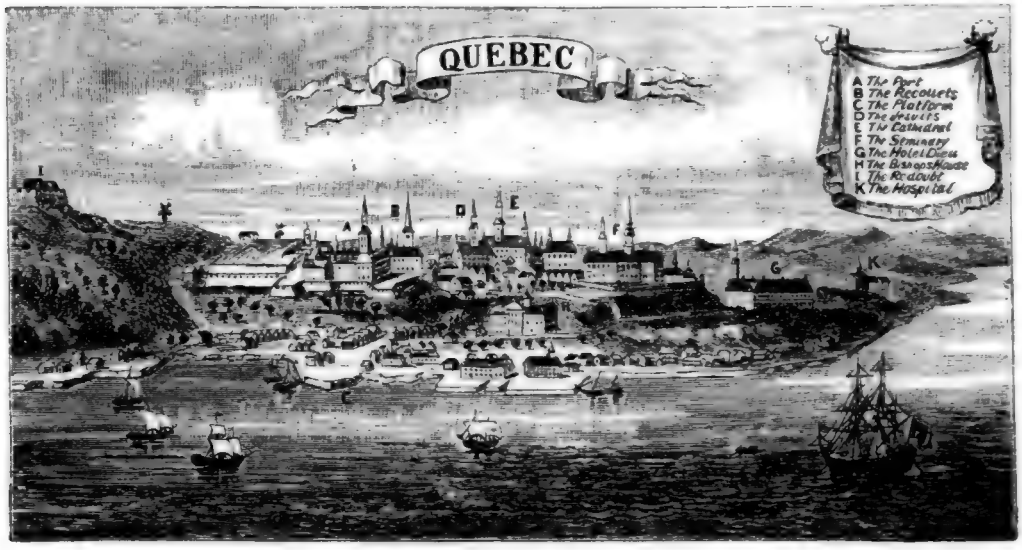
AFTER the capture of Louisburg, Wolfe had returned for a season to England, but, with all his bodily weakness, he had the invincible spirit of a soldier, and a loyalty which borrowed pathos from a presentiment of death in the field. Louisburg was the rendezvous for the land and sea forces, amounting to about eight thousand, with which Wolfe undertook the capture of Quebec. He was ably seconded both by Admirals Saunders and Holmes, and by the three Brigadiers — Monckton, Townsend, and Murray. They left Louisburg toward the end of June, 1759, and dropped anchor in the St. Lawrence, below Quebec, making the principal camp on the Isle d'Orleans, but presently occupying also the promontory of Point Levi, on the southern shore of the river and nearer Quebec. Montcalm had been advised of the approach of the enemy, and gathering all the forces which could be spared from Montreal, Three Rivers, and the fields of the starving Canadians, had disposed them in such a way as to fortify those approaches to the citadel not then deemed naturally impregnable. The city, rising with rocky front between the St. Lawrence and the St. Charles, had been unapproachable by the Indians, who for a hundred years and more had scalped their victims almost at its base; it had defied the formidable squadron under Sir William Phips, and it seemed now to need only abundance of provision and a few disciplined soldiers to hold out against a siege until the hard northern winter should again encircle it with the protection of frost and storm.

The city and its defences.

But Canada was assailed by more dangerous enemies than the Eng-

lish, and when the great fleet with its profusion of resources lay before Quebec, Montcalm must have grown bitter over the corruption which had eaten away the strength of the place. He had lined the shore, from the St. Charles to the Falls of the Montmorenci, with fortified camps, containing, with the garrison in the city, about thirteen thousand men of varying degrees of military discipline and with unequal equipment. A boom had been built across the St. Charles, with vessels sunk behind it, and barges in front. On the south side of the city, the land fell off precipitously to the St. Lawrence, here a rapid river, a mile wide, the ascent of which was guarded by the small naval force, consisting of two frigates under Captain Vauquelin. Steep paths led from the shore to the plains above, and small bodies of troops stationed here could serve easily as pickets in a place so admirably fortified by nature. Wolfe planted his batteries along the opposite shore, and began a severe cannonading on the city walls — harmless as regarded the citadel, but rendering the lower town almost uninhabitable. His forces were not equal to Montcalm's in numbers, and it was evident that he must gain the advantage either by strategy or by the powerful assistance of the fleet. The French maintained the defensive, except that they made two futile attempts, one to destroy the enemy's fleet by fire-rafts, the other to dislodge Monckton, shortly after he had taken up his position at Point Levi. Wolfe resolved to attack Montcalm's extreme left, which rested on the banks of the Montmorenci. He had already occupied the left bank of

General Wolfe.



that river, and he had there the advantage of overlooking the lower right bank, with the French intrenchments. Below and above the Falls were fording-places; by these Wolfe proposed to send detachments, while a division from Point Levi, crossing in barges, was to land on the strand, west of the Falls, where the landing was to be covered by the *Centurion*, a sixty-gun ship anchored below.

Attack on the French left.

The day chosen for the movement was the 31st of July, and the basin swarmed with barges bearing Monckton's detachment, and flying back and forth between the several camps. It was a sultry day, and the movement did not begin until after noon. De Lévis, in command of the extreme left of the French army, had disposed his troops at the two fords, and, having the inside, could readily mass the defence at either point. It was Wolfe's intention that the three parties, after landing and crossing the river, should meet upon the Courville road, and immediately advance upon the French redoubt, and it was an important part of his plan that the landing and the two crossings should be made simultaneously, in order to divide the enemy's defence. There was a redoubt near the point where Monckton's division was to land, and not far from the lower ford, and when this was taken the ranks were to form for an attack upon the intrenchments behind.

The plan was intricate and bold, and there was no lack of courage in the assailants. There was, however, apparent lack of discipline and concentration. At the upper ford the British were driven back, and De Lévis's men, accomplishing this, made haste to reënforce those who were awaiting the attack of the troops which, landing on the strand, were now hurrying pell-mell across the ground from the redoubt that had been immediately evacuated, toward the intrenchments. There was irregularity and want of concert both in the landing and in the attack. The abandonment of the redoubt may have misled the English into a contempt for the enemy. But they were quickly undeceived. The Canadians, waiting behind the intrenchments, suddenly, as the troops came rushing upon them, opened fire, so sure and so rapid that the attack was arrested. At that moment a thunder-storm burst overhead. Over the slippery ground the English fled precipitately to their boats, their retreat hidden by the blinding rain. When the storm cleared, the Canadians saw the enemy bearing their wounded to the boats, a part recrossing the lower ford and regaining their intrenchments on the left bank of the Montmorenci, and part returning in the barges to the camp at Point Levi. The victorious Canadians harassed the retreating soldiers with their guns, while their Indian allies hovered about them with their tomahawks. The British kept up their cannonading all night, but the expedition was a sorry failure. About five hundred men had been lost by the attacking party.

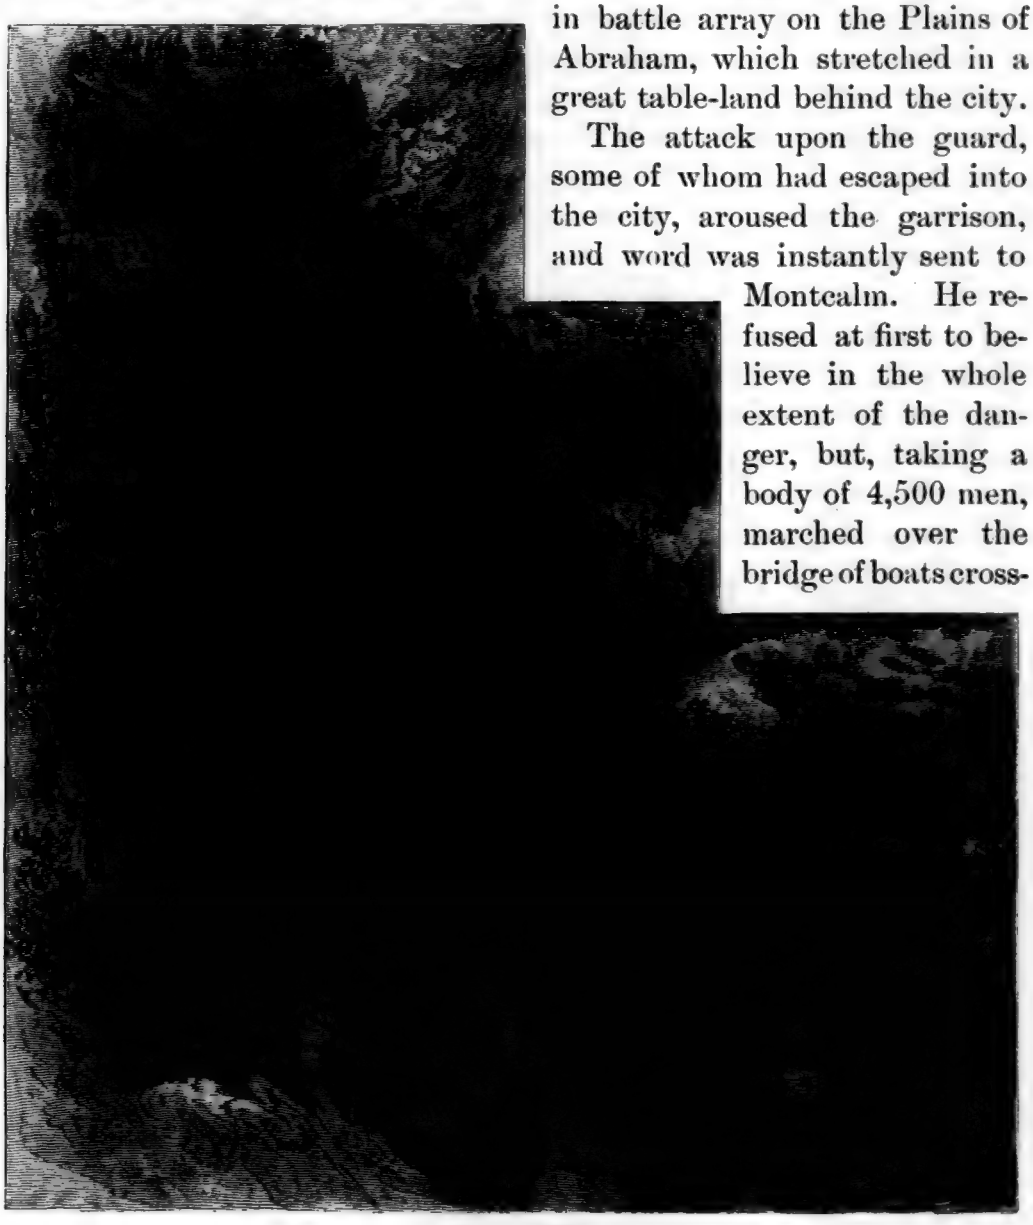
The siege was prolonged for another month, and an expedition was sent up the river, but with little effect, except, it may be, to familiarize the officers with that side of the city which was now to witness the triumph of the British army. Wolfe, sick and discouraged, called a council of his officers and invited new plans for the capture of Quebec. The plan proposed by the council involved the reëmbarkation of the army, to be conducted up the river to the south side, above the town, where they should cross, gain the rear of the works, and compel Montcalm to meet them, while at the same time they cut off his communication with Montreal. The preparations for this new approach excited great uneasiness in the city, and Montcalm was urged to anticipate the movement by a new disposition of his troops. But he was confident that a handful of men could defend the ap-

Quebec in 1730.—From an Old Print.

proach to the city in the narrow passes leading to the river, and moreover he had strong doubts that the enemy intended anything more than a feint, as demonstrations were still continued at the mouth of the Montmorenci. However, Bougainville with a body of men was stationed up the river, and was now reënforced, while the guards along the steep bank were cautioned to be on the lookout.

Wolfe, lying almost helpless in his chamber, caught at a plan which commended itself to his own courageous spirit, and the troops were transferred to the fleet. A detachment was sent forward to reconnoitre during the 7th, 8th, and 9th of September, and news was brought by two deserters from the French that a convoy of provisions was to arrive from up the river, and seek to gain the port in the darkness of the night of the 12th–13th. The city was much distressed from lack of provisions, which were slowly brought with great

difficulty by land, and it had been determined to run the risk of dropping barges noiselessly down the river with the flood. Wolfe seized upon the fact to further his own purposes. Holmes's fleet had passed the town, receiving a fire from the fortress, which it could not return, and was now anchored above the port. A detachment had been sent beyond Cape Rouge in order to hold Bougainville's attention, while a show of operations was still kept up at the Montmorenci, to engage the vigilance of De Lévis. There was no moon on the night of the 12th, but the air was clear and the sky was bright with stars. Wolfe rose from his sick-bed and led the perilous expedition in person. In the depth of the night, some thirty boats, bearing sixteen hundred soldiers, fell silently down the river toward the little cove which had been chosen for the debarkation. As they floated down the stream, Wolfe repeated in a low voice stanzas from Gray's "Elegy," one verse of which, it has been often remarked, was so appropriate to the fate about to befall him: —



The successful assault.

> "The boast of heraldry, the pomp of power,
> And all that beauty, all that wealth e'er gave,
> Await alike the inevitable hour:
> The paths of glory lead but to the grave."

"Gentlemen," he said to the officers who had listened to him, "I would rather have written those lines than take Quebec to-morrow."

The boats drew near the landing-place beneath the overhanging wooded heights. The sentinel, peering out from the darkness, heard rather than saw the objects in the water. "Qui vive?" he called. "La France!" replied a Highlander in the foremost boat, plans having been laid for those familiar with French to answer the demands. "A quel régiment?" continued the sentinel. "De la Reine," was the reply, the name of a regiment under Bougainville's command. This boat and others, being under too much headway, shot beyond the landing-place. Again one of the barges was challenged. "Qui vive?" "Ne faites pas de bruit, ce sont les vivres," ("Hush! the provisions,") was the half-whispered rejoinder. Then some of the boats grated on the beach at the cove, and the Highlanders of Fraser's regiment sprang ashore. Wolfe had turned his boat back, and was one of the first to land. A guard-house stood at the head of the cove, and a narrow path led up the steep from this point. The guard was instantly surprised, and the Highlanders sprang up the path, catching at bushes and roots and trees to help them. A small guard was at the head of the pass, commanded by an officer who had already shown himself unworthy, and who now was in bed. These made a hasty defence, but were overpowered by the foremost Highlanders, while up the path, hastened by the sound of musket-shots above,

men came crowding and pushing one another. The pass was held, and in the breaking day the men could see the ships coming to anchor opposite the cove, now known as Wolfe's Cove, when fresh troops clambered up the path. As the sun rose, the English army stood in battle array on the Plains of Abraham, which stretched in a great table-land behind the city.

Landing of Wolfe.

The attack upon the guard, some of whom had escaped into the city, aroused the garrison, and word was instantly sent to Montcalm. He refused at first to believe in the whole extent of the danger, but, taking a body of 4,500 men, marched over the bridge of boats crossing the St. Charles, and passed through the city to the Plains beyond. It was eight o'clock in the morning, and Montcalm, fearful lest the British should intrench themselves, as indeed they had already begun to do, determined, against the advice of his generals, to make an immediate assault. The enemy had been able to bring up but one gun, and in case of defeat would inevitably be subjected to terrible punishment, for there could be no orderly retreat from the position

they had taken, while Bougainville's division, which had been ordered up at once, would receive them in rear and flank. Montcalm was driven to desperation as he saw the British in a position which he had first declared it was impossible for them to take, and that to take it was of the greatest peril to the city. He ordered an attack, and the Canadians, crouching in the corn and copse, kept up a brisk fire, while the regulars began to advance rapidly in three divisions, the English still maintaining an unbroken front. The French advance was broken and irregular, the men already fatigued by their march to the city, but it was quick and resolute, and the platoons delivered a determined fire as they pushed forward. Still the British line did not reply. When at length the French were only forty yards distant, the word was given to fire, and in an instant the muskets, doubly charged, mowed down the French ranks, so that these, already disorderly, became confused and irresolute. Wolfe saw his opportunity. He flung himself before the grenadiers, and charged upon the amazed Frenchmen. They turned and fled, and the shouting Englishmen leaped after them, driving them headlong and felling them to the ground. In the first rush of this impetuous charge a ball pierced Wolfe in the side. He staggered forward, when another struck his breast, and he fell. He was borne to the rear and laid on the grass. The charge was still tumultuous, and one of the officers excitedly cried out, "See how they run!"

Death of Wolfe and Montcalm.

"Who run?" asked Wolfe, who had lain as if in a deadly swoon, but roused himself now.

"The enemy, sir; they give way everywhere."

"Then," said Wolfe, "tell Colonel Burton to march Webb's regiment down to Charles River, to cut off their retreat from the bridge. Now, God be praised, I shall die in peace." And turning on his side, he passed into the shadow at the end of the path of glory. By a tragic coincidence, Montcalm also fell at the head of his troops, as he sought to rally them after the first fierce attack. He was borne to the hospital, and refused to give any more orders. He had words for the bravery of his opponents, and for the last offices of religion, but the fight he gave up instantly. He had a soldier's burial, at his own desire, in a cavity of the earth formed by the bursting of a bomb-shell.

The French were driven behind the walls of Quebec. Within a few days, terms of capitulation were proposed, which General Townsend acceded to, and on the 18th of September the British entered the city. The winter passed in enforced inactivity on both sides, the French withdrawing their troops to Montreal, and the English sending away a portion of their army in the fleet.

When the river opened in the spring, De Lévis, with an army of about seven thousand men, moved down from Montreal. General Murray had not three thousand men in garrison, but he sallied out at once to meet the enemy, and a second well-fought battle upon the Plains of Abraham followed. The English, however, were repulsed, and the French made immediate preparations for a siege. Both commanders were hoping for speedy reënforcements, and in May they came, but to the English only. De Lévis threw his heavy guns into the river and retreated. Vauquelin withstood an attack, but, after a stout defence, was compelled to leave his two frigates in the hands of the enemy.

Montcalm.

It was plain that the French could do little now but await events. The approach to Montreal was guarded at the Isle aux Noix by Bougainville; the rapids above were held by a small force, as were those on the upper St. Lawrence. Fresh reënforcements to the English were looked for by all these routes. From the south came Colonel Haviland, with an army from Crown Point; Amherst, with his own division of ten thousand regulars and provincials, reënforced at Oswego by a thousand Indians under Sir William Johnson, came from Lake Ontario; and these, with General Murray from the east, met before Montreal. On the 8th of September the city surrendered, and in the terms of capitulation were included Detroit, Michilimackinac, and other posts held by the French farther west. The French fleet, which arrived upon the coast soon after, but too late, was met by a British squadron and completely destroyed. New France was soon wiped out from the map of America.

Peace, indeed, was not definitively concluded between France and Great Britain till the autumn of 1762, when Canada, Nova Scotia, and Cape Breton were ceded to Great Britain, France retaining

New Orleans and the region west of the Mississippi, which she immediately conveyed to Spain. The contest, meanwhile, was continued in America, not by the French, but by the Indians, who foresaw the certainty of their own subjugation when they could no longer command the friendship and protection of one of the two great powers. A few months after the surrender of Quebec, Major Robert Rogers, a native of New Hampshire, a noted ranger, was sent by General Amherst to carry the news of the capitulation to Detroit, and take possession of that and other western posts on the frontier. In November, 1760, they encamped at the mouth of the Cuyahoga, where the city of Cleveland now stands, to wait for fair weather. Here they were visited by a party of Indians,[1] who announced that they came from Pontiac, the chief who claimed all that country, and whose orders were, that the English should proceed no farther till they had received his permission. A few hours later he entered the camp in person.

Conditions of peace.

Pontiac was chief of the Ottawas, whom he was said to have commanded at Braddock's defeat, and in 1746 he and his warriors had defended the French at Detroit against an attack by some of the northern tribes. His mother was an Ojibwa, and the Ojibwas and Pottawotamies were in alliance with the Ottawas, he being the principal chief of the three tribes. He was now nearly or quite fifty years of age, and is described as unusually dark in complexion, of medium height, of powerful frame, and of haughty bearing. Subtle, patient, cruel, with much more than the ordinary capacity of his race, he possessed all of their few good qualities and most of their many bad ones.

Pontiac.

Pontiac demanded of Major Rogers his reasons for being at that place, and why he presumed to pass through the country without his permission. He was told in reply of the conquest of Canada by the English, that the party were on their way to receive the surrender of Detroit, and that it was hoped a general peace and friendly relations might immediately follow. Pontiac took a night for the consideration of intelligence with which probably he was already familiar, and the next day in a second speech declared that he wished to be at peace with the English, and would let them remain in the country so long as they treated him with due consideration. He was, perhaps, at that moment sincere. His old friends, the French, were conquered, and he may have hoped, by an early declaration of friendship for the

[1] In the relation of the Indian warfare of this period, the historian has only to follow faithfully and gratefully *The Conspiracy of Pontiac*, by Francis Parkman, one of the most exhaustive, as well as interesting and instructive monographs, that have ever been contributed to American history.

English, to secure an influence that would give him a complete ascendency over the other tribes. His good-will was further shown when Rogers and his two hundred rangers arrived at Detroit River, where four hundred Detroit Indians were lying in ambush. They were persuaded by Pontiac to relinquish their design of cutting off the English.

His friendship.

The Indians who witnessed the surrender of Detroit, November 29, 1760, marvelled that the stronger garrison should tamely lay down their arms to a force so much inferior, and could only account for it by attributing to the English a superhuman prowess. No such belief, however, found lodgment in the mind of their wiser chief. He hated the English, and did not believe them to be invincible; he dreaded their supremacy, and feared that they meant to conquer his own race, as they had conquered the French, and would drive them from their hunting-grounds or make them slaves. His ears were open to idle tales which soon reached him from the Canadian traders — that his father, the French King, was old and had been asleep, but that he had aroused himself, and a great army was coming to the help of his dusky children; his fleet of great canoes, it was rumored, was on its way up the St. Lawrence River. He took counsel, therefore, of his thirst for vengeance, and not of any fear of the prowess or the numbers of the hated enemy. He pondered over these things for months alone in the depths of the forest, or in the silence of his wigwam, where none dared to interrupt the thoughts of the grim and melancholy savage. His plans, at length, were fixed. In a single day all the forts should be attacked and their garrisons put to the sword; all the frontier settlements should be laid waste; then, with the aid of the French, he would move upon the older ones, and the English should be exterminated or driven across the sea.

Pontiac's plan of extermination.

Near the close of 1762, Pontiac sent ambassadors to the several nations, to lay his plan before them and propose the next spring as the time for its execution. These ambassadors, bearing a red-stained tomahawk and a wampum war-belt, visited every tribe between the Ottawa and the Lower Mississippi. The only nation of the Iroquois that joined in the conspiracy was the Senecas, the others being restrained through the influence of Sir William Johnson. But all the Algonquins, with few exceptions, the Wyandots, and some of the Southern tribes, entered into it, as well as the three immediately under the control of Pontiac. The time was fixed at a certain change of the moon in May. Each tribe was to dispose of the garrison of the nearest fort, and then all were to turn upon the settlements.

His negotiations with other tribes.

Although within two years several smaller conspiracies of this nature had been discovered and thwarted, most of the commanders of the forts appear to have been almost stupidly unsuspicious and negligent. In March, Ensign Holmes, commanding Fort Miami, where Fort Wayne, Indiana, now stands, was informed by a friendly Indian that the neighboring tribe had received a war-belt and were preparing to capture his post. He at once called them together, and accused them of it. They confessed the truth, pleaded that they had been over-persuaded by another tribe, and renewed their old protestations of friendship. Holmes wrote to Major Gladwyn, the commander at Detroit, saying: "Since my last letter to

Holmes discovers the plot.

Scalp-Dance.

you, wherein I acquainted you of the Bloody Belt being in this village, I have made all the search I could about it, and have found it out to be true. Whereon I assembled all the chiefs of this nation, and after a long and troublesome spell with them, I obtained the Belt with a Speech as you will receive enclosed. This affair is very timely stopt, and I hope the news of a peace will put a stop to any further troubles with those Indians who are the principal ones of setting mischief on foot. I send you the Belt with this packet, which I hope you will forward to the Generál." Gladwyn did send the information to Amherst, but said he believed it to be a trifling matter which would soon blow over.

Pontiac called a great council, at a point on the river Ecorces, not

far from Detroit, which was held on the 27th of April, 1763, and was very fully attended. He delivered a long oration, in which he recounted the wrongs and indignities that the Indians had suffered at the hands of the English. The French, he told them, were their friends, and he repeated the stories he had heard that the King of France would soon sail up the St. Lawrence with his great war-canoes to assist his children. Above all he pointed out to them the probability that unless something was done, their extermination was inevitable. Then he told them of a tradition, which he could hardly have invented, that a Delaware Indian had been admitted to the presence of the Great Spirit, who told him his race must return to the customs and weapons of their ancestors, throw away the implements they had acquired from the white man, abstain from whiskey, and take up the hatchet against the English, — "these dogs dressed in red, who have come to rob you of your hunting-grounds and drive away the game."

Pontiac's council.

His speech.

The time fixed for the insurrection was the 7th of May. Pontiac was to lead in person the attack on Detroit. On the 1st he visited the fort with forty warriors, and danced the calumet-dance before the officers. A few days later he called a final council of a hundred chiefs, and laid before them his specific plans. With weapons concealed in their blankets, they were to go to the fort and demand a council with the commandant. Being admitted, Pontiac was to make a speech, and when he presented the wampum-belt wrong end foremost, it was to be the signal for the chiefs to fall upon and slaughter the officers. At the sound of this, the Indians who waited at the gate, or lounged about the streets, were to massacre the soldiers and citizens.

The plan at Detroit.

On the 5th the wife of a settler, visiting an Ottawa village to buy maple sugar and venison, observed many of the warriors cutting off the barrels of their guns with files. When she returned home and reported this, the blacksmith of the post remembered that the Indians had recently come to his shop to borrow files and saws, refusing to tell the purpose for which they wanted them. Those who understood the native character, knew at once that this could only mean that the guns were to be shortened for easier concealment beneath their blankets, and this could only be for some treacherous purpose. But Gladwyn was not convinced till the next day, when he received a visit from his mistress, an Ojibwa girl, said to be very beautiful, whose unusual manner, and reluctance to depart when the gates were about to be closed, led him to question her. After considerable hesitation she revealed the plot with all its particulars.[1]

Its discovery.

[1] Parkman traces the fate of this girl. She was probably seized by the Indians and

Description of the fort.

The fort at this time consisted of a square inclosed by a palisade twenty-five feet high, with a wooden bastion at each corner mounting a few light pieces of artillery, and block-houses over the gateways. Within were barracks, a small church, and about a hundred houses, mostly of wood, divided from one another by narrow streets, but all separated from the palisade by a wide space. The garrison consisted of one hundred and twenty men, and there were about forty others capable of bearing arms. Two armed schooners were anchored in the river. Estimates of the force under Pontiac vary from six hundred to two thousand. When, at ten o'clock on the morning of the 7th, the great chief entered the gate with his sixty chosen warriors, all plumed and painted, and closely wrapped in gaudy blankets, he saw at once that his design was known. The garrison was under arms and posted in readiness for immediate orders, while every officer had a sword and two pistols in his belt. "Why," said the chief, "do I see so many of my father's young men standing in the street with their guns?" Gladwyn answered carelessly that he had ordered them out for exercise. With many misgivings, knowing what they themselves would have done had they discovered such treachery on the part of pretended friends, the Indians took the seats assigned them, and with much embarrassment Pontiac began his speech. He appeared to debate in his own mind whether it would not be best, even now, to attempt carrying out the plot. Once he seemed about to lift the wampum-belt, when a slight gesture from Gladwyn was instantly answered by the rattle of arms at the door, and the warning roll of a drum. Pontiac seemed confounded at this evidence of the discovery of his purpose, and that the English were in readiness to resist the proposed onslaught, was silenced, and sat down. After a pause, Gladwyn made a short reply, assuring the warriors of his friendship so long as they deserved it, but telling them that instant vengeance would be taken for any hostile act. The council presently broke up, and the discomfited conspirators were conducted to the gate.

Pontiac baffled.

The next day Pontiac and three of his chiefs returned to present Major Gladwyn with a calumet, and to assure him that "evil birds had sung lies in his ear." He knew that Gladwyn knew it was he who lied, and when, the following day, he came with a large crowd of warriors, he found the gates barred, and was told that he alone might enter. Then he made instant declaration of war. His followers gave the war-whoop, and running to the houses of two

He declares war.

taken before Pontiac, who punished her with his own hands, beating her with a kind of racket club which the natives used in their ball-play. But her life was spared. She lived to be an old woman, and was at last scalded to death in a kettle of boiling maple-sap into which she fell when drunk.

or three defenceless English outside the palisades, murdered them and shook their bleeding scalps at the soldiers of the fort.

Pontiac ordered the Ottawa village to be moved across the river to the Detroit shore, where it was pitched at the mouth of Parent's Creek (afterward called Bloody Run), a mile and a half northeast of the fort. He had been joined by the Ojibwas, and on the 10th established a determined siege. From behind barns, fences, and trees, and from inequalities in the ground, the savages opened fire, and kept it up for six hours. This was returned whenever one of the dusky forms could be seen. A group of outbuildings which sheltered a large number of them was set on fire with red-hot spikes shot from a cannon, and burned down. When the day closed, no impression had been made upon the fort, except that five of the garrison were wounded.

The siege begun.

Gladwyn greatly underrated the extent and seriousness of the plot, and on the 11th he opened negotiations with the Indians, through an interpreter and two Canadians. The chief replied that he wished to hold a council with the English, and asked that Major Campbell, who was second in command, be sent to him. The Major went, accompanied by Lieutenant McDougal, — rather against Gladwyn's will, however, — and both were detained as prisoners. McDougal escaped a few weeks later, but Campbell was afterward murdered by a savage to revenge the death of his nephew, who had been killed in a skirmish.

Campbell and McDougal betrayed.

On the 12th, Pontiac compelled the Wyandots to join him, and renewed the siege. By midnight sallies and other expedients, the garrison gradually removed all buildings, fences, and orchards that interfered with the sweep of their guns, or gave shelter to the enemy in their approaches to the fort. The cannon-shot, of which, in common with all Indians, they had great dread, kept them at a distance ; but they could still shoot their arrows tipped with burning tow upon the roofs of the houses within the palisades. The supply of water was inexhaustible, but it needed unwearied watchfulness to guard against this terrible danger. Every man in the fort was constantly under arms ; no possible precaution was overlooked ; the provisions were wisely husbanded ; and friendly Canadians across the river brought over considerable supplies under cover of darkness. On the other side, the assailants, who had expected a speedy victory, had exhausted their scanty stores of food, and they sought to replenish them by robbing the Canadian farmers of the neighborhood. When these complained to Pontiac, he replied that he was fighting for their interests no less than his own. Theft, he promised them, should be stopped, but he substituted for it regu-

Pontiac's commissariat.

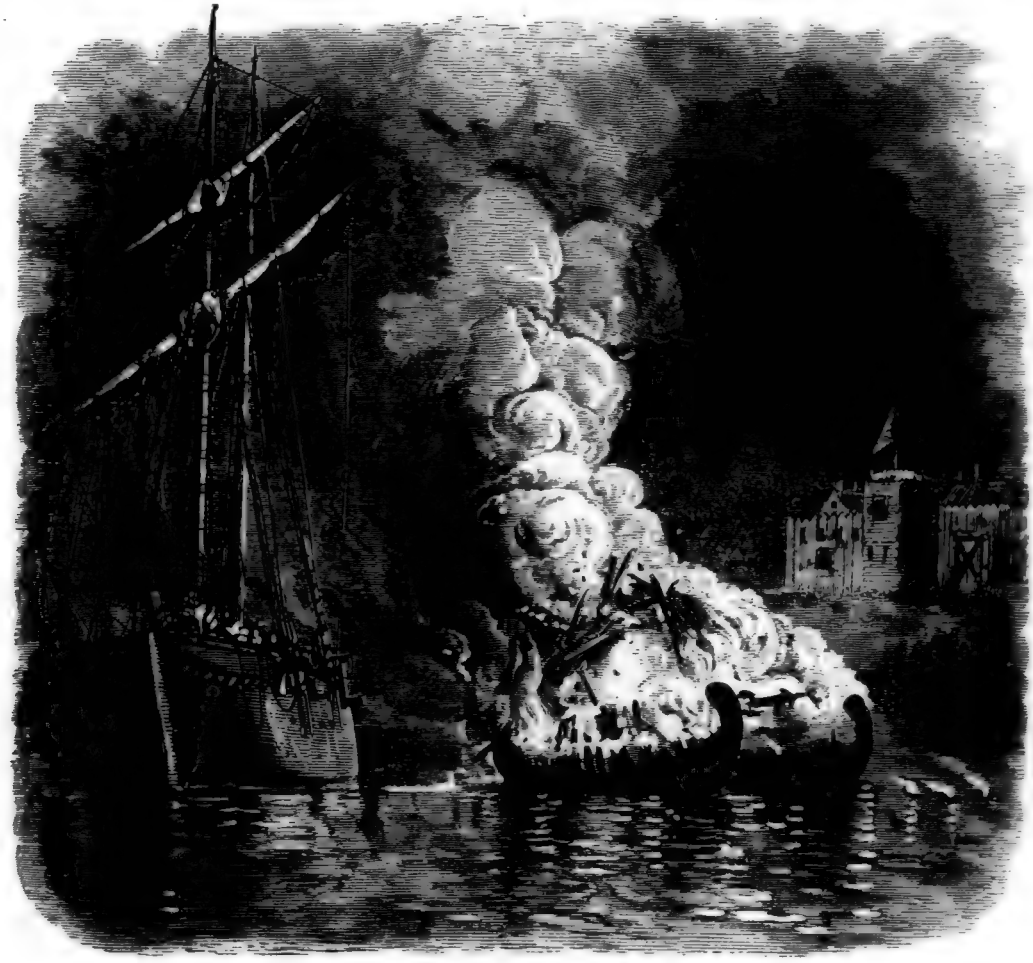
lar requisitions upon them for supplies, and gave them in payment promissory notes drawn on birch bark, and signed with the figure of an otter, — all of which, it is said, were redeemed.

Gladwyn knew that reënforcements and supplies for his own and other posts were on their way up Lake Erie, and one of the schooners was sent to meet the boats and hurry them forward. Unfortunately she missed them, and they approached leisurely along the shores of the lake till they reached the mouth of the Detroit River, quite unsuspicious of any danger. While they were making preparations to encamp for the night, a band of Wyandots surprised and routed the party. About sixty men were killed or taken prisoners, two only of the boats escaping, in one of which was Lieutenant Cuyler, the commander of the expedition, and about forty men. The other boats the Indians compelled their prisoners to row to Detroit, where their approach was hailed with delight till it was discovered that they were filled with savages. They had concealed themselves in the bottoms of the boats, and had hoped to enter the fort by stratagem. The disappointment in the fort was almost unbearable, when they discovered, by a fight in one of the boats between an Indian and a white soldier, that the whole convoy had been captured, and that the hoped-for relief was only so much additional strength to the savages, in arms, ammunition, and provisions.

Night attack on a schooner.

When Cuyler reached Niagara and told his story, another expedition of relief was started in Gladwyn's schooner, which had arrived at that place in safety. On the 23d of June she came in sight of Detroit, but for lack of a breeze was compelled to drop anchor. That night the Indians, in their canoes, attempted her capture; but when they came within a few yards of the prize, a broadside of grape-shot, with a shower of musket-balls, tore through the fleet of birch bark, killing fourteen Indians, wounding as many more, and scattering the remainder. Several days afterward she succeeded in ascending to the fort, giving the Wyandot village a broadside of grape as she passed, and came to anchor beside her consort. Besides food, ammunition, and reënforcements, she brought news of the Treaty of Paris.

But Pontiac still clung to his purpose, gained a few recruits among the floating and adventurous population of the Canadian villages, and pushed the siege. The schooners were a serious annoyance to the Indians, as their fire swept the approaches to the fort, and their guns were frequently turned upon the camp of the besiegers. Several attempts were made to destroy them by means of fire-rafts, but with no success.



The Wyandots and Pottawotamies now sued for peace, and ex-

changed prisoners with Gladwyn; but the Ottawas and Ojibwas still watched the fort and kept up a desultory fire. Meanwhile a reënforcement of two hundred and eighty men, with artillery and supplies, was coming from Niagara in twenty-two barges, under command of Captain Dalzell. On the morning of July 29, favored by a heavy fog, they ascended the river; but as they passed the villages of the Wyandots and Pottawotamies a heavy fire was opened upon them and fifteen men were killed or wounded.

Two tribes sue for peace

The siege continued by the Ojibwas.

Dalzell, whose arrival was hailed as a promise of salvation to the exhausted garrison, soon proposed a rash plan for a night attack on Pontiac's camp. Gladwyn, who better knew the numbers and re-

The Fire-rafts in Detroit River.

sources of the Indians, consented only with great reluctance and many misgivings. At two o'clock on the morning of July 31, two hundred and fifty men, led by Dalzell, left the fort and marched silently along the shore toward the Indian camp, which was on the farther bank of Parent's Creek. They were accompanied by two large batteaux, each

carrying a swivel gun in the bow. But some Canadians had learned of the intended attack and betrayed it to Pontiac, and the Indians had made the mile and a half of road that lay between the fort and the camp one long ambuscade. They were behind every tree and fence and house, silently watching their victims as they unsuspectingly marched by. No resistance was offered till the van reached the bridge over the creek, when a destructive fire was opened in front, and half of the advance guard fell. Dalzell, conspicuous for his bravery and coolness, prevented a rout and led on his men through the darkness. But no enemy was to be found in front; the English knew nothing of the ground beyond this point, and a retreat became inevitable. Then from every shelter along the roadside flashed the guns of the hidden savages, and the whole retreat, though marked by many acts of brave devotion, became little more than a sickening detail of helpless slaughter. Those who straggled or fell were quickly scalped as the exultant enemy closed in upon the retiring column. Dalzell, already twice wounded, turned back to rescue a wounded sergeant, and was shot dead. Major Rogers with a strong party covered the retreat by taking possession of a strong house, which was already crowded with refugees, the cellar being full of women and children, and the aged master of the house standing upon the trap-door that led to it, to keep out the hardly less frightened soldiers. Here, while the remainder of the troops reached the fort, Rogers and his men were besieged by two hundred Indians till the batteaux, which had gone down laden with the wounded, returned and drove off the assailants by a fire from the swivels that swept the whole ground about the house. In this battle, known as the fight of Bloody Bridge, the English lost fifty-nine men killed or wounded; the Indians probably not more than twenty.

Battle of Bloody Bridge.

Death of Dalzell.

One of the schooners, sent down to Niagara with despatches, was returning with a crew of ten men, besides the captain and mate, when she was attacked in Detroit River, on the night of August 4, by more than three hundred Indians, who silently surrounded her in their canoes, and were clambering up the sides with their knives between their teeth, when the alarm was given. The crew sprang to the gunwales with spears and hatchets, and despatched more than a score of the assailants. But the captain was killed, several of the crew disabled, and the vessel in the possession of the savages, when the mate roared out an order to fire the magazine and blow her up. A few of the Indians knew enough English to understand this order, and in an instant more the whole party leaped overboard and swam off in every direction.

A desperate fight on the river.

Notwithstanding the supply of provisions brought by the schooner,

it was soon necessary to place the garrison on short allowance. But now the Indians, whose own provisions were failing, began to tire of the siege, and were further discouraged by news that strong reënforcements from Niagara were coming to the relief. But this expedition, under command of Major Wilkins, was overtaken by a disastrous storm on the lake. Seventy lives were lost, besides all the stores and ammunition, and the survivors returned to Niagara.

On the 12th of October, all except the Ottawas sued for peace. Gladwyn replied that he had no power to make peace, but would grant a truce. This was finally accepted, and he took advantage of it to gather in a good supply of provisions for the winter's use. The Ottawas maintained their hostile attitude till the 30th of October, when a French messenger arrived with a letter from M. Neyon, commanding Fort Chartres on the Mississippi, in which Pontiac was informed that he could have no help from the French, as they were now at peace with the English, and he was advised to discontinue hostilities at once. Pontiac sullenly raised the siege, and went off into the country bordering the Maumee, where he vainly endeavored to organize another movement.

The siege raised.

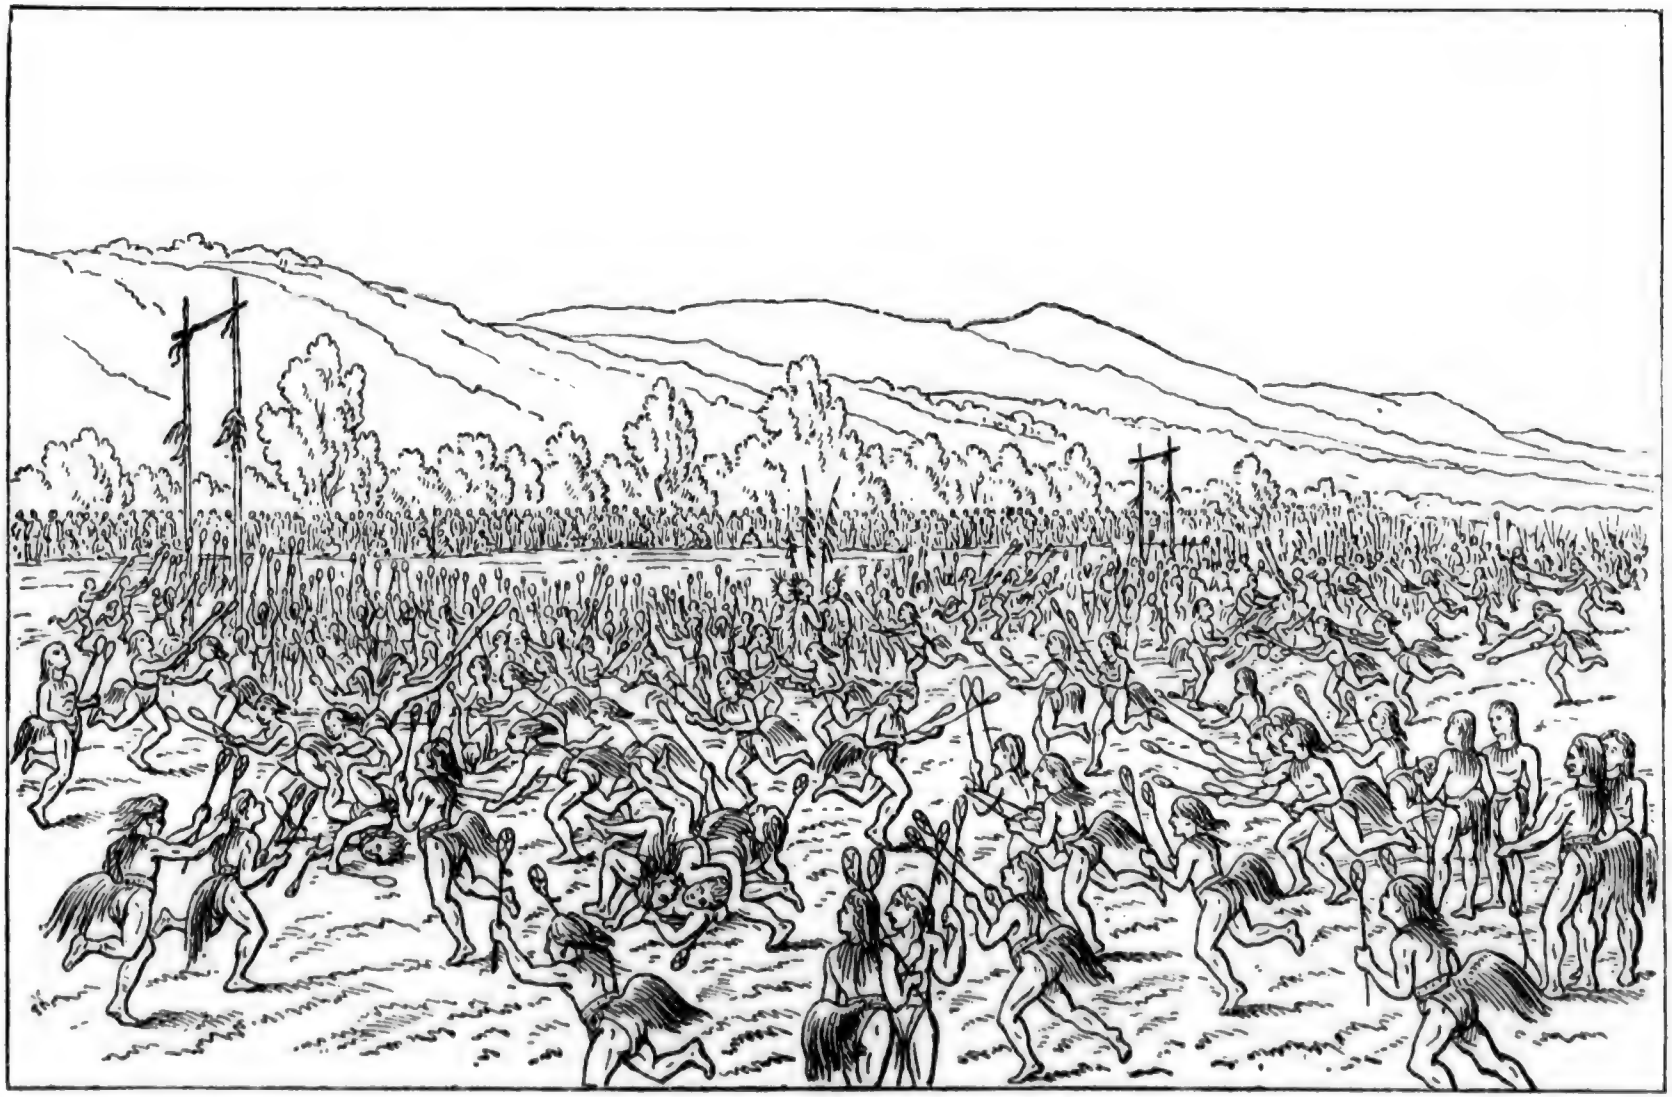
Though the originator of this plan of extermination had failed to carry out his own part in it, his allies who attacked the other English posts were almost uniformly successful. On the 16th of May, seven Indians appeared at Fort Sandusky, commanded by Ensign Paully, and asked for a conference. They were admitted, and, at a signal, seized Paully and bound him. At the same instant, shots and shrieks were heard without, and in a few minutes the fort was in the hands of a band of savages, and most of the garrison were slain. They burned the fort, and carried off Paully with the intention of torturing him to death; but an aged Indian widow offered him the alternative of marriage, which he accepted, and after a time made his escape. On the 25th of May, a large party of Pottawotamies appeared before Fort St. Joseph, on the southeastern shore of Lake Michigan, at the mouth of St. Joseph River. This little work was held by Ensign Schlosser with fourteen men. The Indians, crowding in under pretences of friendship, suddenly fell upon the garrison, and in less than two minutes killed all but Schlosser and three men, quickly plundered the fort, and carried its commander to Detroit. At Fort Miami, on May 27, Ensign Holmes was decoyed from the fort by a story of a sick woman in the Indian village who wanted medical assistance. On arriving there, he was shot dead. The fort was then summoned to surrender, with a promise of mercy if no resistance was made. Discouraged by the loss of their commander and the numbers

Attack on Sandusky.

On St. Joseph.

Miami.

of the Indians, the garrison made haste to surrender. Fort Ouatanon, on the Wabash, near the present site of Lafayette, was also captured by stratagem; but the lives of Lieutenant Jenkins and his men were spared through the intercession of some French traders.



Ouatanon.

At Michilimackinac the Chippewas assembled in great numbers, but aroused no suspicion of the purpose of their visit, so harmless at first was their behavior, and so earnest their protestations of friendship to the English. On the 4th of June, these were invited to witness their game of ball on the plain in front of the fort. The whole garrison looked out upon the sport, from open doors and windows, and were thrown entirely off their guard by the eagerness with which the savages followed the ball, intent apparently to drive it either to one goal or the other. The game continued from early morning till noon. Just outside the gate stood Captain Etherington and Lieutenant Lester, careless and unsuspicious of any sinister design. But the savages, in all their racing and shouting, were warily watching for the favorable moment. At length, about noon, the ball was thrown near the gate as if by accident; there was a sudden rush, — the two officers were bound and hurried away, and the savages poured into the fort. Their squaws were already there, with weapons concealed in their blankets, which the warriors snatched from their hands. So sudden was the movement that the scattered and unprepared soldiers were incapable of defence. Seventeen were instantly killed, and the five or six who were taken prisoners, were only reserved for a more cruel death. All the English traders were robbed of their goods and they themselves led away into captivity. But there was no molestation of the French, who had calmly witnessed, and, for the most part, probably approved of the massacre.

Michilimackinac.

At Presqu' Isle, near the site of the present town of Erie, Pennsylvania, was an unusually strong block-house commanded by Ensign Christie, with a courageous and skillful garrison. On the morning of June 15, it was surrounded by two hundred Indians, most of whom had come from Detroit. The garrison at once retired to the block-house, where they held out against an assault that had no cessation for two days and a half. The Indians threw fire-arrows and balls of flaming pitch, and again and again the house was set on fire, but amid showers of bullets the flames were extinguished by the cool courage of the soldiers. Rude breastworks were piled up by the savages on a ridge that commanded the fort, whence they could fire in comparative safety. Some of them, growing bold, attempted to cross an open space and take shelter under the walls, but were shot down in the attempt. Then they resorted to mining; and

Attack on Presqu' Isle.

INDIAN GAME OF BALL.
[After Catlin.]

while this work was going on the water in the fort became exhausted, and the soldiers, the well in the parade-ground being out of their reach, dug a new one inside the fort. The mine reached the house of the commanding officer, which the assailants at once set on fire, nearly stifling the garrison with the smoke and heat, for it was close to the block-house. Through the night and all the next day the intrepid garrison fought without a moment's rest against fire, and the incessant and fierce assaults of the enemy. When it was evident that the mine had reached a point beneath their feet, and that further resistance was hopeless, they surrendered, but only on condition that they should be permitted to depart unmolested. The promise, however, was broken; they were all bound and taken prisoners to Pontiac's camp, whence Christie soon escaped and found refuge in the fort at Detroit.

Three days after this attack on Presqu' Isle, Fort Le Bœuf, a dozen miles south of it, was surrounded and set on fire. Ensign Price and his garrison of thirteen men cut a hole through the rear wall of the block-house, and silently escaped, while the howling savages in front believed them to be perishing in the flames. About half of them reached Fort Pitt, the remainder dying of hunger by the way. Fort Venango, still farther down the Alleghany, was captured by a band of Senecas, who gained admittance on some friendly pretext. They butchered the entire garrison at once, tortured Lieutenant Gordon to death by slow process, and then laid the whole work in ashes. Soon afterward the same band made a futile demonstration against Niagara. Fort Ligonier, forty miles southeast of Fort Pitt, was attacked by a strong force, but was successfully defended till relieved by the advance of Bouquet's expedition. Fort Augusta, at the forks of the Susquehanna, was only threatened — perhaps because of its situation so far east.

Burning of Fort Le Bœuf.

Venango.

Ligonier and Augusta.

At Fort Pitt, where Captain Ecuyer commanded three hundred and thirty soldiers, traders, and woodsmen, when news of some of these disasters arrived, the most vigorous measures were taken for defence. The walls of the fortification were repaired and strengthened, a larger supply of water provided for, and an efficient though rude steam-engine was built. On June 23 a few Delawares appeared, called a parley, and with the usual professions of friendship, said that six great Indian nations had captured all the other forts, and were now marching against this. "You must leave this fort," said their chief, "with all your women and children, and go down to the English settlements, where you will be safe. There are many bad Indians already here, but we will protect you from them." Ecuyer, who was quite as cunning as the Indians, thanked them warmly, but

Fort Pitt.

declined to go. He told them, he said, "in confidence," as a return for their kindness, that an English army of six thousand men was on its way thither, while another of three thousand had gone to attack the Ottawas and Ojibwas, and a third, on the frontiers of Virginia, would be joined by the Cherokees and Catawbas, "who are coming here to destroy you. Therefore take pity on your women and children, and get out of the way as soon as possible." The frightened Indians withdrew for a time, but returned on the 26th of July, and repeated their proposition, but were defied. At night they began the attack, many of them digging holes in the river bank, where they could shelter themselves and fire at every soldier who appeared.

Bouquet's expedition.

Colonel Henry Bouquet, by birth a Swiss, an able and experienced soldier, who had entered the English service and was now in command at Philadelphia, was ordered to march to the relief of Fort Pitt, with all the force he could muster. With five hundred men, mainly Highlanders, he set out, and about the 1st of July reached Carlisle, where he found the population in a state of terror. Many of the settlements in Western Pennsylvania had been laid waste, and those of the settlers who had escaped the tomahawk were crowding into the villages farther east. There were more in Carlisle than could be sheltered, and they were encamped in the fields all around it. About the 18th, Bouquet was ready to leave Carlisle, and, sending forward thirty chosen men to Fort Ligonier, he took both that and Fort Bedford on his line of march, and dispersed the Indians who had gathered about and beleaguered them for weeks. Thence he passed on over the ground traversed by Braddock eight years before. But Bouquet was as familiar with the Indian character and Indian methods of warfare as Braddock had been ignorant. The vigilance of his men, on the march or in camp, was never relaxed for a moment; on such perpetual watchfulness he knew that safety depended, and that he could best encounter Indians with Indian tactics.

Battle of Bushy Run.

At one o'clock on the 5th of August, they had reached within a mile of a small stream called Bushy Run, by the side of which it was proposed to encamp and give the needed rest to troops who had been on the march since daybreak. Bouquet was not taken by surprise when suddenly a fierce attack was made upon his advanced guard. Sending forward troops to their support, he brought together his horses, cattle, and wagons, to secure their safety, surrounding them with a reserved corps. As the battle in front evidently grew more furious, he led forward this force, who, with rapid discharges from their guns and at the point of the bayonet, drove the Indians before them and relieved their comrades. Then came fresh assaults upon both flanks, and upon the convoy in the rear, and the

troops fell back to meet the tide of battle from these unexpected quarters. The little army was surrounded; the woods were full of Indians, who, fighting from behind trees and under-brush, poured a deadly fire into the troops collected in one spot. The maddened horses, — there were nearly four hundred of them in the inclosed space, — bewildered and unmanageable with fright at the firing and the yells of the savages, plunged about wildly and created inextricable confusion. But the men stood firm. They delivered their fire with precision, or charged steadily with the bayonet, whenever a chance was offered to strike a blow at the enemy; though the chances were few, for the Indians fled to their hiding-places at every charge, to appear again from all sides, and to pour in again their deadly fire, as the soldiers fell back into line. So the conflict continued all the afternoon, till the friendly darkness hid assailants and assailed alike.

The situation seemed desperate, and Bouquet wrote that night to Amherst in a tone that showed, though he had not lost courage, he had little hope that he and his command would survive the next day's battle. Already he had lost sixty men, and many were wounded. The camp was on a hill, and they had no water. The suffering, especially of the wounded, from thirst was almost intolerable, — "more intolerable," wrote Bouquet, "than the enemy's fire." But they had only to wait through the long night, weary and faint with waiting and watching, for what another day would bring forth. Any attempt to move the camp in the face of the enemy would be fatal. They must conquer or die where they were.

The day renewed the fight. With the first light, the forest resounded with the yells of the savages; through the branches and leaves bullets rattled like hail. It was a question of hours only, as to how long it would be before every soldier would be shot down, as all stood, a conspicuous target to enemies who surrounded them on all sides, and who took a deadly aim, each man from his own particular hiding-place. To return their fire was to fire at shadows; to charge was to charge upon dusky phantoms who flitted singly from tree to tree, or faded out of sight in the dim light of the forest. Bouquet was hopeless of any successful resistance, unless he could bring these scattered and agile opponents into one compact body, to remain so long enough to receive the crushing blows he knew the English could deal them. To do this, he resorted to a stratagem which completely answered his purpose. He feigned a retreat. Two companies of light infantry were ordered to fall back into the circle which was Bouquet's central point of defence. On the right and left the troops opened their files to receive them, and then closed up in their rear as if to cover the

retreat of the central circle. Two other companies drew up as if in aid of this proposed retreat, when the Indians, completely deceived by these skilful and careful movements, and fearing that their prey was about to escape them, rushed headlong, wild with rage, and — that which the English so longed to see — in a compact body, to the attack. It was a fierce, a terrible and destructive onslaught, as it must needs have been; but out of it came safety. Had the Indians watched more warily, they would have seen there were movements from, as well as toward, the central circle. Two companies, under cover of the hill, were so placed that, as the savages threw themselves on the main body, determined to destroy it by one united and concentrated blow, these two companies poured in upon their flanks, dealing death by bullet and bayonet upon the foe at last within their reach. As the Indians turned to fly, two other companies met them in front, and the rout of the few who were left alive was complete. No savage had time to fire his gun more than once; he was either dead or flying for his life before he could load a second time. The Indians who were on the other flank made no attempt to help those on whom such swift destruction had fallen, but fled with the utmost precipitation. The English lost, in the two days, eight officers and one hundred and fifteen men, and the Indian loss was somewhat smaller. The march was resumed; the enemy made but one attempt to interrupt it, which was easily repulsed, and on the 15th of August the troops entered Fort Pitt.

Arrival at Fort Pitt.

There came, not long afterward, general submission and universal peace. Bradstreet, along the lakes, and Croghan and Bouquet, in the valley of the Ohio, had pacified the most warlike of the tribes, compelled the surrender of all English prisoners, and induced the chiefs — Pontiac among them — to assemble at Oswego to meet Sir William Johnson, where a treaty was concluded in the summer of 1766.

Treaty of 1766 at Oswego.

But for many months, along the borders of all the midland colonies, the people lived in perpetual fear of savage incursions, subjected often to atrocities that seem almost incredible, and retaliating with as little mercy when the chance was offered them. Two thousand of the whites were killed, and as many families were driven from their homes. It is hardly to be wondered at that the peaceful tenets of the Friends — who would not believe that all the fault was on the side of the untutored savages, who were fighting for the lands which had belonged to them and their fathers — exasperated the backwoodsmen whose life was a perpetual warfare. Some of these on the Susquehanna — who came to be known as the "Paxton Men," from the name

of their settlement — were restrained by no considerations of mercy or of justice. Believing that some Indians at Conestoga were more faithful to their own people than to the Christians whose faith they had accepted, the Paxton Men forced an entrance into a house where these Indians had been put for safety, and murdered them in cold blood. When others were taken to Philadelphia for protection, the borderers marched on the city, swearing vengeance on Quakers and Indians alike. For a day or two the city was almost in a state of siege from a mob of several hundred of these rough men, who had gathered at Germantown, and peaceful Friends took up arms, turning their meeting-house into barracks, in defence of the innocent and helpless. The frontiersmen were at length induced to disperse and return to their homes. Much of their exasperation was undoubtedly due to the interminable dispute between the Proprietary Governors and the Assemblies, — in which there was usually a large Quaker element, — the latter always sturdily maintaining their right to tax themselves in their own way, and that an equitable portion of that taxation should be borne by the Proprietaries. And this difference was also aggravated by the jealousy of the Presbyterians of the influence of Friends.

The Paxton Men.

Sir William Johnson's House.

Pontiac's conspiracy had failed in its grand object. But it had resulted in the capture and destruction of eight out of the twelve fortified posts attacked, generally by the massacre of their garrisons; it had inflicted upon the English the wreck of several costly expeditions, and had carried terror and desolation into some of the most fertile valleys on the frontiers of civilization. This able chief afterward succeeded in rallying some of the tribes of the Illinois country, and was joined by a considerable number of French traders; but his followers gradually fell away, and in 1766

he gave in his formal submission to Sir William Johnson. In 1769, a Kaskaskia Indian, being bribed by an English trader with a barrel of liquor and a promise of additional reward, followed the great chief into the forest, where East St. Louis now stands, and assassinated him.

The Province House in Boston.

The end of war is, of course, a period of universal congratulation; yet all nations have learned that it brings with it a series of changes in social, financial, and commercial arrangements, involving great difficulties even after victory. The peace of 1763 was attended with such results both in England and in America. True, France was humbled and disgraced, and there were court flatterers enough in England to say that her power was broken forever. But the wise Count de Vergennes, one of the ministers of France,

Results of the peace of 1763.

read the future well enough to see and to say that the loss of Canada by France involved the loss to England of her American colonies. Since the event, many similar prophecies have been found in the words of Englishmen, Frenchmen, and Americans of that time.

Value of Canada to France and England.

Both countries over-estimated the immediate value, to either crown, of the province which was lost and won. The French Government did not know how to administer colonies. It had given away the whole valley of the Mississippi to the King of Spain, for mere want of skill to make it worth the trifle which it cost the French exchequer. Canada, though longer held, was not more profitable. For the bureaux of administration, under all dynasties, have a foolish way of valuing possessions or departments according as they are a charge on the treasury or yield it a profit. To England, Canada was of value, because its possession secured peace to the English colonies, — but hardly for its own sake. Even under the false "Colonial System" it could hardly be claimed that the furs or timber or naval stores of Canada were any more valuable to English trade than those which could be obtained in her other colonies.

What was perfectly clear, however, both in the colonies and in England, was, that the first duty of peace was, to pay the expenses of war. The American governments, fortunately for themselves, had had so little credit in Europe that they had not attempted to borrow largely there. But their home debts were considerable. That of Massachusetts alone was nearly £200,000, not funded, — a large sum for those days, — and the province had determined on a system of taxation which should repay it in five years. In other colonies, the embarrassments caused by debt, in especial by paper currency, were considerable. The national debt of England, almost doubled by the war, was now £145,000,000.[1] What had been gained by the war? Safety to the American colonies, and additional territory. True, the new territory had but a few hundred thousand inhabitants, and much of it was inaccessible wilderness. But on the map, at least, it doubled the English dominions in America, and the thought was naturally suggested that America must pay a part of the enormous debt, to justify which American provinces were the largest visible acquisitions.

A habit had grown up, indeed, of justifying the subsidies paid to German powers, and the other expenses of war upon the Continent of Europe, by saying that England could "conquer America in Germany." It was not simply the cost of the campaigns of Braddock, Abercrombie, and Wolfe, which was to be repaid; it was those more doubtful expenditures which had left the memories of Minden and

[1] Private correspondence of that time is full of terrors regarding it, and a belief that the nation is bankrupt is constantly expressed.

Fontenoy, that were to be met, if possible, by the colonies now freed from the dread of French rivalry or of savage war. The money grants made to all the American colonies in the war were only a little over a million pounds.[1] But the charge of the army and the navy, it was said, should be borne in part by them. The colonists considered that they had borne their share in maintaining their own contingents of troops, and they had lost nearly thirty thousand of their young men in the war.

Wealth of the American Colonies.

Meanwhile, the rapid increase of the American colonies, both in numbers and in wealth, was forced upon the attention even of the most careless. It is said that, between 1765 and 1775, two thirds of the foreign commerce of Great Britain was that which she conducted with America. Between 1700 and 1760, the value of property in England increased fifty per cent., and Pitt declared this was wholly due to the American colonies. Speaking in 1766, he said, "The profit to Great Britain from the trade of the colonies is two millions a year. This is the fund that carried you triumphantly through the last war. You owe this to America." Let it be remembered that Great Britain supplied three millions of people in America with almost every manufactured article which they needed; that she received from her colonies the tobacco and much of the fish, indigo, rice, naval stores, and other productions which she required; that, with her growing strength in the West Indies, she used her colonies on the main land to feed her islands, — and it will be understood that English merchants and those who had to deal with them in England conceived high ideas of the wealth to be derived from America. From 1760 to 1775, Great Britain sent to New England, New York, and Pennsylvania alone, goods amounting in value to about £2,000,000 annually. The exports of the thirteen colonies to Great Britain alone, as appeared from the public statistics, were often more than a million pounds a year. In 1773 they were as much as £1,369,232. The comparison supplies us with an estimate of the result of the trade of the colonies with the West Indies and the Mediterranean, from which trade by bills of exchange, or other methods, the English merchants were paid what the direct exports did not provide. There was a constant drain of specie, which compelled the colonies to resort to the issue of paper currency as a circulating medium among themselves, and in its turn increased their burdens. Sir Robert Walpole said he supposed that if the colonies should gain £500,000 in trade, half of it would, in two years, pass by indirect channels into the English exchequer. There were sound commercial, as well as political, reasons for colonial resistance to any taxation in the benefits of which they were to have no share.

[1] The precise sum was £1,031,066 13*s.* 4*d.*

The Navigation Act.

In the vast enlargement of the commerce of England and of the colonies, and in the movements of armies and navies in the war, the strictness of the "Navigation Act" sustained many severe strains. Exceptions were made to its principles by statute. In particular, such exceptions permitted direct commerce with Catholic countries, which the colonies supplied with fish for Lent, and with the islands of the West Indies. More than this, however, — the revenue officers had been permitted, and were even expected, to overlook violations of the act in certain classes of trade, where the national interest seemed to require its relaxation. But on the whole these laws were sustained, and with the return of peace a greater stringency was observed. Every province felt it, and the annals of every state contain accounts of popular indignation against the officers of the customs. In Boston, they were ordered to procure from the Supreme Court general warrants authorizing them to search where they would for smuggled goods. The collector directed his deputy at Salem to obtain one of these Writs of Assistance, as they were called. The question of legality was raised, and the Superior Court decided to hear argument before granting the writ. James Otis, Jr., was Advocate-general, and it was his duty officially to appear on behalf of the Crown. He refused, resigned his office, and at the trial in Boston, in February, 1761, appeared, with Oxenbridge Thacher, a leading lawyer, on behalf of the popular side. "Then and there," says John Adams, "American Independence was born." "Otis was a flame of fire. With a promptitude of classical allusions, a depth of research, a rapid summary of historical events and dates, a profusion of legal authorities, a prophetic glance into futurity, and a rapid torrent of impetuous eloquence, he hurried away all before him. American independence was then and there born. . . . . Every man of an immense, crowded audience, appeared to me to go away as I did, ready to take arms against writs of assistance." In this case, the court took time to consult the English practice, which, as it proved, permitted the issue of the general warrants. But the warrants, though granted, were never used.

James Otis, Jr.

In the interval between the petition for the writ and the hearing before the Supreme Court, Chief Justice Sewall, who had doubts of the legality of granting the power of search, died. Hutchinson, who was Lieutenant-governor, a member of the Council, and a Judge of Probate, was also appointed Chief Justice, as Sewall's successor, by Governor Bernard. There was little doubt what the decision of the Court would be under this new Chief Justice. The appointment was made, it was supposed, to secure a decision in favor of the Crown; and the indignation and disgust were the greater that the choice

JAMES OTIS.

(After the portrait by Blackburn.)

should have fallen upon one who already held three other important offices. In reply to the bitter animadversions upon such an appointment, it was retorted that Otis had resigned his position as Advocate-general, not from any patriotic motive, but because the office of Chief Justice was not given to his father, James Otis, a distinguished lawyer of Barnstable, and a member of the Provincial Assembly. The calumny was a baseless invention, and John Adams afterward expressed his surprise, in writing upon these events, that anybody should "have swallowed that execrable lie, that Otis had no patriotism."[1]

Grenville's plan of stamp-duties.

When the popular hatred had driven Lord Bute from the ministry in 1763, George Grenville succeeded him as prime minister. On the 10th of March, 1764, Grenville moved, on an amendment to the Sugar Act, a resolution which contained these words: "It may be proper to charge stamp-duties on the colonies and plantations." The issue of these fatal words has been so important, that every effort has been made to trace the origin of the suggestion. As early as 1734, Governor Cosby, of New York, had proposed to the Assembly "a Duty upon Paper to be used in the Law, and in all Conveyances and Deeds," as a convenient method of taxation; but the Assembly did not accept the proposition, though it was intended as a colonial measure. That such a tax should be levied by act of Parliament, seems to have been first suggested ten years later by Lieutenant-governor Clarke, of New York. In December, 1744, Governor Clinton wrote to the Duke of Newcastle: "Mr. Clarke, the Lieu[t] Governor, lately showed me two printed scheimes which he said were sent him from England." One was of a general character in relation to trade; but the other was a proposal "for establishing by Act of Parliament dutys upon stamp papers and parchment in all the British and American Colonys." "I must beg leave," adds the Governor, "to make a short observation upon them," — and it was the wisest observation he ever made. "The People in North America," he continues, "are quite strangers to any duty, but such as they raise themselves, and was such a scheim to take place without their knowledge, it might prove a dangerous consequence to His Majesty's interest."[2] The next reference to the project is found in the English Archives, under date of July 5, 1763, in a note from Hugh McCulloh, a treasury clerk, in which he says the stamp-duty on vellum and paper in America would produce upwards of £60,000 a year. The plan must have been considered, therefore, immediately after Grenville took the reins. For the Earl of Bute had resigned on the 8th of April, 1763.

First suggestion of the plan.

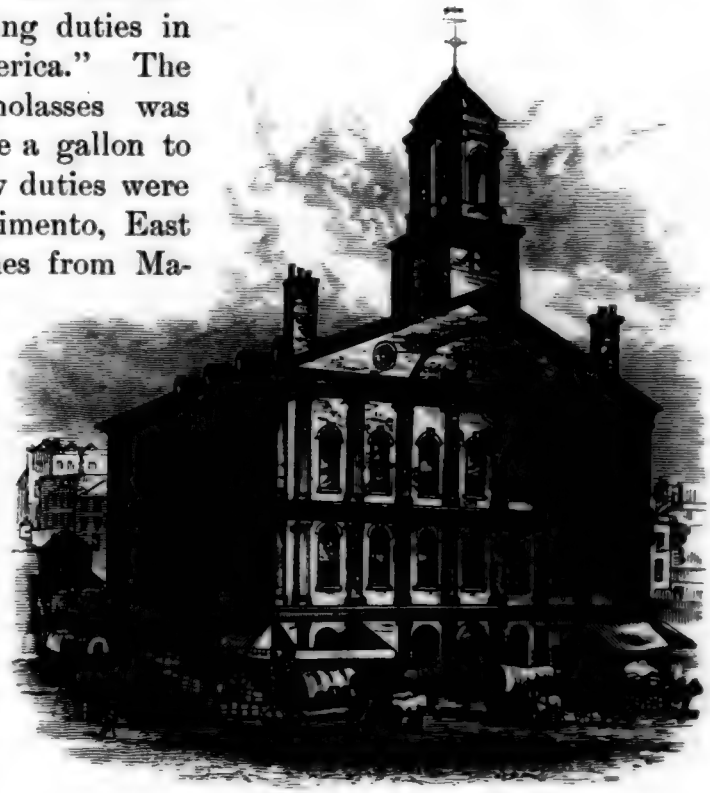
The King and "the King's friends."

According to an anecdote of a later period, told on the authority of Benjamin West, George III., when he came to the throne, wished to have a new palace, which might rival the palaces of the Continent. It is said that the ground for this new Versailles was selected in Hyde Park, and that nothing was needed but the money to build it. To obtain for the treasury a larger revenue became thus a personal wish of the King and the courtiers, and to gratify that wish also the scheme of a revenue from the colonies was determined on. There is probably some foundation for this story. It is not necessary, however, to go far to find the reasons why the ministers of great nations wish to increase the receipts of the treasuries they control. This is certain, — that the knot of courtiers who, at this time, took the name of "The King's friends," always favored, as the King himself did, all proposals for taxation.

George III.



Grenville and the Colonies' agents.

The cautiously worded clause introduced by Grenville into a sugar bill only committed Parliament to what might be necessary, and attracted but little observation in London, except among the agents of the colonial Assemblies. The custom had become general for each Assembly to maintain an agent constantly in London, who represented its interests. This custom illustrates the relations of the colonies to the Crown, and shows how little the Assemblies trusted their own Governors as mediators between them and England. The agents instantly told Grenville that any scheme for internal taxation would be intolerable to America. He replied that he should have carried through the measure that year, instead of indicating it by a resolution, if he had not himself thought it advisable that the Assemblies should have notice of the intention, and an opportunity of proposing another mode of contributing to this charge, if any other should be more agreeable to them.[1]

[1] There was afterwards much discussion, even in Parliament, how far this overture of Grenville's to the agents went. A comparison of the statement in Franklin's letters, and

The Sugar Act, which, by Grenville's amendment, obtained a place so important in American history, was first enacted in the sixth year of the reign of George II. (1734). In order to protect the English sugar colonies, a duty, so high as to be practically prohibitory, was laid upon all sugar and molasses from foreign colonies introduced into American ports. This act expired in 1764. In renewing it, Grenville wished to make it remunerative instead of prohibitory, and accordingly changed both text and title. The old title was, "An act for the better securing the trade of his Majesty's sugar colonies in America;" the new one was, "An act granting duties in the colonies of America." The duty on foreign molasses was changed from sixpence a gallon to three pence, and new duties were imposed on coffee, pimento, East India goods, and wines from Madeira and the Western Islands. Importations direct from these islands to the colonies were permitted, by one of the numerous exceptions to the Navigation Act. The colonies had conceded the right of the government to protect trade with a prohibitory tariff; but when the preamble of the new bill declared that it was "just and necessary that a revenue should be raised there," and it was proposed that this be done by a tax virtually direct, which would burden almost every business transaction in the daily life of the citizens, it aroused a storm of universal indignation. It was an assumption by Parliament of a power which

The Sugar Act.

Faneuil Hall, 1879.

Hutchinson's account of Bollan's advices to Massachusetts, shows that the fact is as given above. Hutchinson's statements are always open to suspicion, because he wrote after the result. But in this case, the Assembly's letter in reply to that of their agent, Jasper Mauduit, makes it certain that Hutchinson rightly represents its contents. That letter was written by James Otis, June 13, 1764. It says distinctly: "The kind offer of suspending the stamp-duty, in the manner and upon the condition mentioned, amounts to no more than this, that if the Colonies will not tax themselves as they may be directed, the Parliament will tax them."

the Colonial Assemblies had long maintained was inherent in the colonies themselves, and considerations of private interest now gave strength to a principle of public policy.

When the news reached Boston that it was proposed to impose a stamp act upon the colonies, a meeting was called in Faneuil Hall, and instructions to the representatives of the town in the General Court — written by Samuel Adams — were adopted. "There is," said this paper, "no more room for delay. We therefore expect that you will use your earliest endeavors in the General Assembly that such methods will be taken as will effectually prevent these proceedings. . . . . But what still heightens our apprehensions is, that these unexpected proceedings may be preparatory to more extensive taxations upon us. For if our trade may be taxed, why not our lands? Why not the produce of our lands, and in short everything we possess or make use of? . . . . If taxes are laid upon us in any shape, without our having a legal representative where they are laid, are we not reduced from the character of subjects to the miserable state of tributary slaves?" And the instructions concluded with this suggestion, — the germ of the union of the provinces, — that "as his Majesty's other North American Colonies are embarked with us in this most important bottom, we further desire you to use your endeavors that their weight may be added to that of this Province; that by the united applications of all who are aggrieved, all may obtain redress."

This document the House adopted essentially as its own, and sent it, with James Otis's pamphlet on the "Rights of the Colonies," as instructions for the guidance of Mauduit, the Massachusetts agent in London. About the same time, a committee to correspond with other colonies "upon measures which concerned their common interest" was appointed, as Adams's original report to the town meeting had suggested.

The letter to Mauduit, the English agent, undoubtedly drawn by James Otis, was explicit. It set forth the expenses which Massachusetts also had sustained in these wars, carried on for the benefit of the empire. "Granting the time may come, which we hope is far off, when the British[1] Parliament shall think fit to oblige the North

[1] Once for all in these pages, it may be said here that the use of the word "British" was the custom of the time on both sides of the water. After the union with Scotland, it had been made a fashion, which had at last taken root everywhere. In literature, in Parliament, and in correspondence, the "British army," the "British Parliament," and the "British Constitution" were spoken of, — of course correctly, if the feelings of Scotland were to be considered. This habit has died out in England, and the custom of to-day speaks of the "English Parliament" and the "English Army." Readers of Sir Walter Scott will remember how unwilling he was to yield to this habit. Ignorant Englishmen, — as ignorant of the literature of their own country as of everything else, — have come to regard the use of the word "British" in American writers as a provincialism. The truth

Americans not only to maintain civil government among themselves, but to support an army to protect them, can it be possible that the duties to be imposed, and the taxes to be levied, shall be assessed without the voice of an American parliament? If all colonists are to be taxed at pleasure, without any representation in Parliament, what will there be to distinguish them, in point of liberty, from the subjects of the most absolute prince? If we are not represented, we are slaves." Colonial protests.

This is the same ground which the House of Representatives had taken two years before, in a remonstrance also prepared by Otis. In that case, Governor Bernard, in a recess of the Assembly, had incurred a small expense, and made a contract for the future, which he asked the Assembly to assume. The House of Representatives then replied that their most darling privilege was the right of originating all taxes. They said, "It would be of little consequence to the people whether they were subject to George or to Louis, — the King of Great Britain, or the French King, — if both were as arbitrary as both would be, if both could levy taxes without Parliament." [1]

Other colonies were not less alarmed, and some of them not less emphatic in their protests against the proposed tax. In October, the General Assembly of New York addressed a memorial to the House of Commons, in concluding which they said they had "no desire to derogate from the power of the Parliament of Great Britain; but they cannot avoid deprecating the loss of such rights as they have hitherto enjoyed, ... the deprivation of which will dispirit the people, abate their industry, discourage trade, introduce discord, poverty, and slavery." And they also at the same time appointed committees to correspond with the agent of the province in London, and with the Assemblies, or their committees, in the other colonies. Rhode Island, Connecticut, and Virginia instructed their agents to ask for a hearing before the House of Commons, and Pennsylvania sent a moderate but firm protest to Franklin, to be presented to Grenville.

On the 11th of August, however, the Earl of Halifax had sent instructions to all the Governors in the colonies, that they should at once transmit to him "a list of all instruments made use of in public transactions, law proceedings, grants, conveyances, securities of land or money, within your government, with proper and sufficient descriptions of the same; in order that, if Parliament should think proper to pursue the intention of the aforesaid resolution, they may thereby

is, the American writers follow the custom of the period when their ancestors were still the subjects of the "Best of Kings."

[1] Adjourned session, September, 1762.

be enabled to carry it into execution in the most effectual and least burdensome manner."

So soon as the Massachusetts Assembly received these tidings, it prepared an address, drawn up by Hutchinson, to the King, Lords, and Commons. There was much difficulty in framing it so that it should be acceptable at once to the people, who were represented in the Assembly, and to the more courtly Council, which had been selected by the Governor from the candidates sent up by the House. At last, however, an address was agreed upon. When it arrived in England, the Board of Trade seems at first to have refused to forward it to the King.[1] Edmund Burke and Governor Hutchinson both speak of the refusal to receive this and other memorials. But at the end of the year, perhaps in response to some unofficial instructions, this memorial, with Otis's pamphlet and the New York protest, was sent to the King by the Board of Trade, with the letter of the Massachusetts Assembly to Mauduit, their agent. The Board said, "We humbly conceive that in this letter the Acts and Resolutions of the Legislature of Great Britain are treated with the most indecent disrespect, principles of the most dangerous nature and tendency openly avowed, and the Assemblies of other colonies invited in the most extraordinary manner to adopt the same opinions. We think it our duty humbly to lay these votes before your Majesty, together with a book referred to therein, printed and published in Boston, and since reprinted and published in London."

The Legislature of Virginia met so late in the year that its resolutions were not among those thus coolly condemned by the Board which sent these memorials to the King. When it met, in November, 1764, a memorial was drawn by Pendleton or Bland, which remonstrated with Parliament against taxation without representation. The language was moderate in comparison with that of after years, but it did not lack for distinctness in its assertion of the principle for which her sister colonies were contending.

With such warnings, Grenville introduced the Stamp Act, which was passed on the 22d of March, 1765. It was debated hotly, and was opposed earnestly in a full House; but the majority for the measure was very large — 294 to 42. By this act, every business document was declared illegal and void unless written on paper bearing the government stamp. The cheapest stamp was one shilling, and for the more important documents the prices ranged upward from this sum.

The Stamp Act.

[1] Judge Marshall says the ground was taken that petitions against money bills interfered with the privilege of the House of Commons. Neither Burke nor Hutchinson alludes to this excuse. If it was made, the claim was extraordinary.

The colonies had been wholly prepared for this by the intimations of the previous year, and their indignation was all the greater because their remonstrances were unnoticed. Protests against parliamentary interference in taxation, which for a century and a half had been made on separate occasions, were now called forth at the same moment by one act, of which for a year they had had warning. Every colony spoke in reply, and with no uncertain sound. The news arrived in Massachusetts before the annual "election day" in May. The House of Representatives did not so much as compliment the Governor by an answer to his speech, but sent letters, in the name of the House, to every Assembly as far as South Carolina, proposing a general congress to consult on the circumstances of the colonies, and the difficulties to which they would be reduced by parliamentary taxation, and to "consider of a general, united, dutiful, loyal, and humble representation to the King." The day proposed was the first Tuesday in October. In Rhode Island, where the Governor was elected by the people, Ward, who held the office, refused to swear to carry out the act. In Connecticut, the Governor, Fitch, took the fatal oath, fell from popular favor at once, and was never reëlected.

A Royal Stamp.

The Legislature of Virginia had also met in May. According to Patrick Henry's recollections, when he was an old man, there was a certain aversion on the part of the leading members to come forward. Observing this, he wrote, on the blank leaf of an old law-book, four resolutions which became celebrated. The third and fourth are in these words: — Henry's resolutions.

"Resolved, That the taxation of the people by themselves, or by persons chosen by themselves to represent them, who can only know what taxes the people are able to bear, or the easiest method of raising them, and must themselves be affected by every tax laid on the people, is the only security against a burdensome taxation, and the distinguished characteristick of British freedom, without which the ancient constitution cannot exist.

"Resolved, That his Majesty's liege people of his most ancient and loyal colony, have without interruption enjoyed the inestimable right of being governed by such laws respecting their internal polity and taxation, as are derived from their own consent, with the approbation of their sovereign or his substitutes, and that the same has been constantly recognized by the King and people of Great Britain."

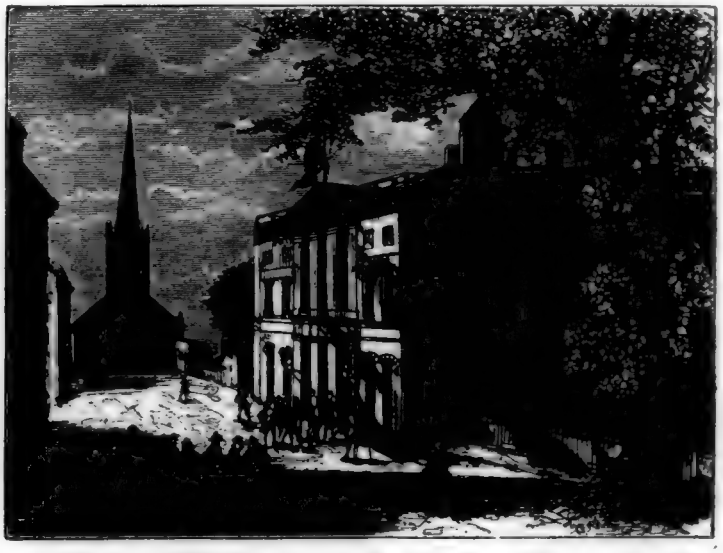
These resolutions were opposed, with great earnestness, by all the

more prominent members. They said the same thing had been expressed in more conciliatory form, in the resolutions of the previous year, to which no answer was yet received. Henry supported his resolutions with all the fire of his eloquence. It was in the midst of this debate that he exclaimed, "Cæsar had his Brutus, Charles the First his Cromwell, and George the Third —" ("Treason!" cried the Speaker. "Treason! treason!" echoed from every part of the house.) Henry faltered not for an instant, but rising to a loftier attitude, and fixing on the Speaker a look of determination, finished his sentence with the firmest emphasis — "*may profit by their example.* If *this* be treason, make the most of it."

The resolutions passed by a very close vote; the last of the series by one majority only. It was afterwards remembered that the messenger who carried to Massachusetts these resolutions of Virginia, passed on the way, and conversed with, the messenger who carried to Carolina and Virginia the invitation of Massachusetts to a Continental Congress.

Patrick Henry.

The resolutions of Virginia were passed on the 29th of May, 1765. The Massachusetts Assembly met the same week. As the summer passed, the arrival of bales of stamped paper and the commissions for the new officers who were to sell the stamps, was the signal in each seaport for the expression of popular indignation. The collectors were hung in effigy; they were "waited on" by mobs, and compelled to decline. As successive Assemblies met, they pronounced the Stamp Act illegal. And nine Assemblies appointed their delegates, in answer to the invitation of Massachusetts, to the First Continental Congress. It met in the city of New York on the first Tuesday of October, 1765. Twenty-eight delegates constituted the Assembly. They chose General Timothy Ruggles, of Massachusetts, President.[1] This Congress was composed of some of the most distinguished men in the colonies. They had been chosen, also, with the wish to have the colonies fairly repre-



Congress of delegates held in New York.

[1] He did not concur in the conclusions of the Congress.

sented. On the roll are found the names of some who, in the final issue, sided with the Crown. But their resolution was decided; it satisfied the most eager; it surprised the royal Governors; it probably surprised the government in England. The resolves which the Congress agreed upon should be studied for a precise view of the position in which at that moment the country stood, now united for the first time. They are in the following words: —

Their protest.

"The members of the Congress, sincerely devoted, with the warmest sentiments of affection and duty, to his Majesty's person and government, inviolably attached to the present happy establishment of the Protestant succession, and with minds deeply impressed by a sense of the present and impending misfortunes of the British Colonies on this continent, having considered, as maturely as time will permit, the circumstances of the said colonies, esteem it our indispensable duty to make the following declaration of our humble opinion respecting the most essential rights and liberties of the colonies, and of the grievances under which they labour by reason of several late acts of Parliament.

Old City Hall, Wall St., where the First Continental Congress met.

"I. That his Majesty's subjects in these colonies owe the same allegiance to the Crown of Great Britain that is owing from his subjects born within the realm, and all due subordination to that august body, the Parliament of Great Britain.

"II. That his Majesty's liege subjects in these colonies are entitled to all the inherent rights and liberties of his natural-born subjects within the Kingdom of Great Britain.

"III. That it is inseparably essential to the freedom of a people, and the undoubted right of Englishmen, that no taxes be imposed on them but with their own consent, given personally or by their representatives.

"IV. That the people of these colonies are not, and from their local circumstances cannot be, represented in the House of Commons in Great Britain.

"V. That the only representatives of the people of these colonies are persons chosen therein by themselves, and that no taxes ever have been or can be constitutionally imposed on them but by their respective legislatures.

"VI. That all supplies to the Crown being free gifts of the people, it is unreasonable and inconsistent with the principles and spirit of the British Constitution, for the people of Great Britain to grant to his Majesty the property of the Colonists.

"VII. That trial by jury is the inherent and invaluable right of every British Subject in these Colonies.

"VIII. That the late act of Parliament, entitled 'An Act for granting and applying certain stamp duties, and other duties in the British Colonies and plantations in America, etc.,' by imposing taxes on the inhabitants of these Colonies, and the said act, and several other acts, by extending the jurisdiction of the Court of Admiralty beyond its ancient limits, have a manifest tendency to subvert the rights and liberties of the colonists.

"IX. That the duties imposed by several late acts of Parliament, from the peculiar Circumstances of these Colonies, will be extremely burthensome and grievous, and from the scarcity of specie the payment of them is absolutely impracticable.

"X. That as the profits of the trade of these Colonies ultimately centre in Great Britain to pay for the manufactures which they are obliged to take from thence, they eventually contribute very largely to all supplies granted there to the Crown.

"XI. That the restrictions imposed by several late acts of Parliament on the trade of these Colonies will render them unable to purchase the manufactures of Great Britain.

"XII. That the increase, prosperity, and happiness of these Colonies depend on the full and free enjoyment of their rights and liberties, and an intercourse with Great Britain, mutually affectionate and advantageous.

"XIII. That it is the right of the British subjects in these Colonies to petition the King, or either house of Parliament.

"Lastly, that it is the indispensable duty of these Colonies to the best of sovereigns, to the mother country, and to themselves, to endeavour by a loyal and dutiful address to his Majesty, and humble applications to both houses of Parliament, to procure the repeal of the act for granting and applying certain stamp duties, of all clauses of any other acts of Parliament, whereby the jurisdiction of the Admiralty is extended as aforesaid, and of the other late acts for the restriction of American commerce."

Similar resolves were passed in many of the Colonial Assem-

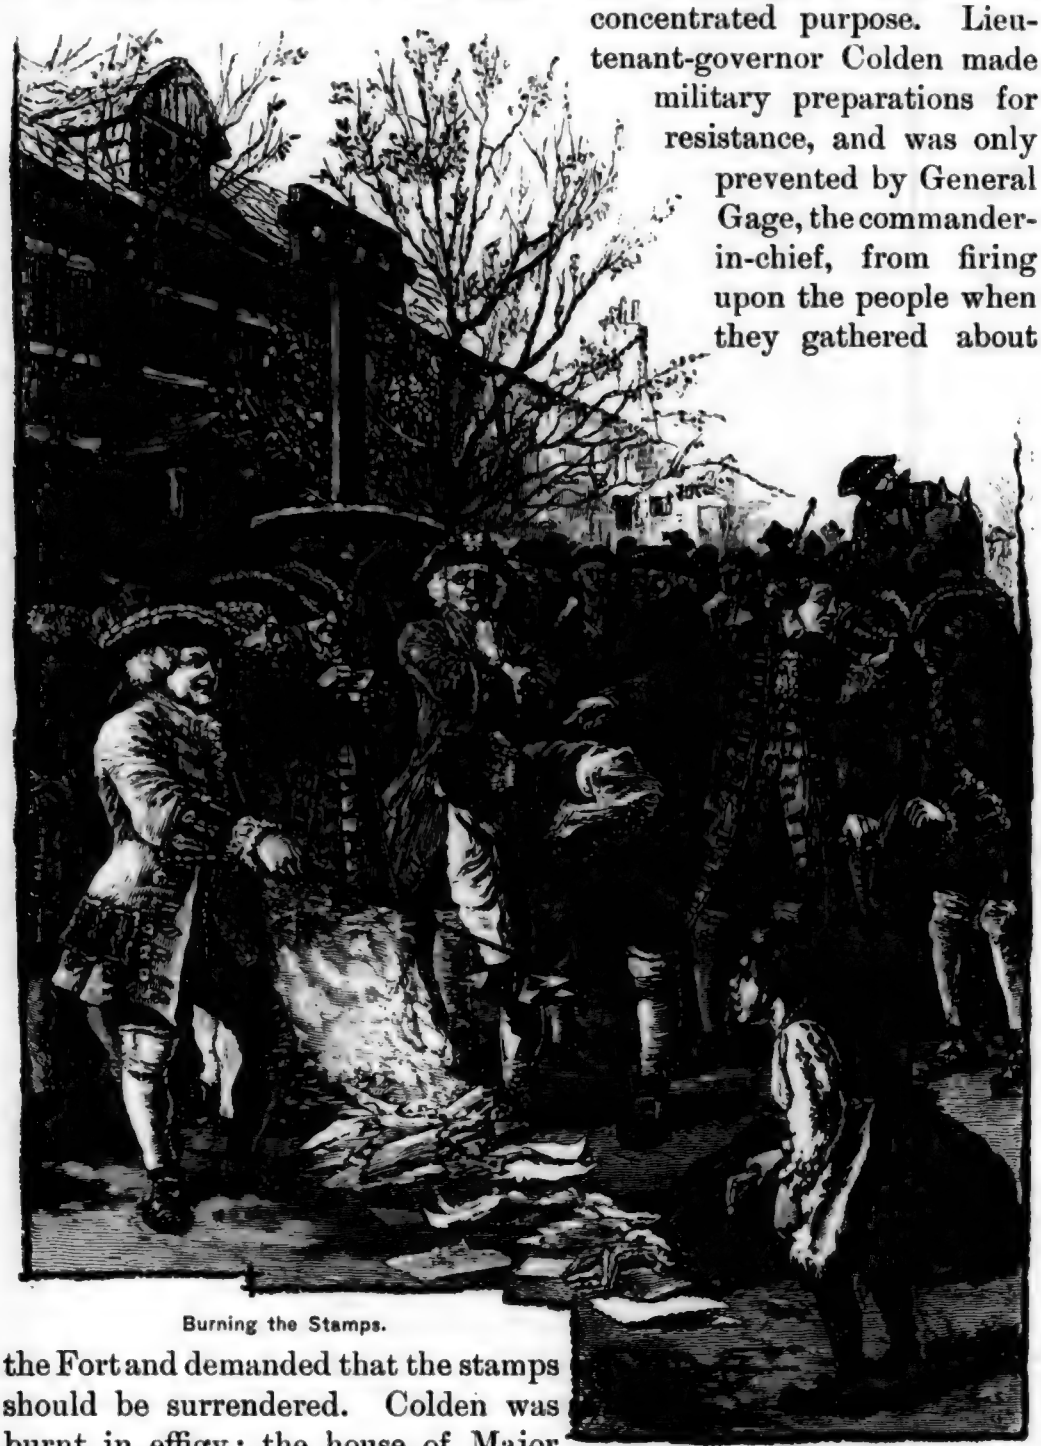
blies, Virginia taking the lead in a series which encouraged all the others.

Among the measures already taken in the colonies to resent the proposal of taxation, were agreements by which the associates bound themselves not to import English goods, and orders that had gone forward were countermanded. Retail traders agreed not to buy and sell such goods if they were brought into the country; and in New York a fair was opened for the exhibition and the encouragement of domestic manufactures. It was agreed not to put on mourning apparel, as the required stuffs were English. That the growth of wool might be encouraged, it was determined that lambs should not be used as food. The royal Governors, in that delusion which ruled them through the whole, spoke with contempt of these compacts. But they were so powerful as to govern the whole course of the year's trade, and were sufficient to appall some of the largest manufacturing towns in England. Manchester first appears in the parliamentary history as a place of importance at this crisis, when the petition of her manufacturers asserts that nine tenths of their workmen are unemployed.

Measures of opposition.

It was soon found that it would be impossible to enforce the use of stamped paper, though the refusal suspended the whole business of the country. Mr. Oliver, the agent for its distribution in Massachusetts, was compelled to resign, and afterward required by a mob to renew his resignation in public. His windows were broken and his house entered, in the violence of the transaction. Gaining courage by the quiet with which this outrage was received, the mob attacked the house of his brother-in-law, Lieutenant-governor Hutchinson, which was entered, and everything in it thrown into the street and destroyed or carried away.[1] The local authorities called out the militia, and offered rewards for the arrest of the ringleaders. But when some persons were arrested, another mob released them.

Popular hostility to the stamp-distributors.



Mobs in Boston.

In other colonies, violent measures or peaceable agreements were resorted to with the same result. Except among those holding office under the Crown, there was but one feeling. The newspapers — whose influence then was less through editorial comment upon public affairs, and more in letters from private citizens — led public opinion in warm appeals to patriotism, as well as in dispassionate essays upon the rights of the people. In New York, an association called the Sons of Liberty[2] took upon itself the direction of the opposition.

[1] The estimate of the damage was £2,500, which may be taken as the value of the furniture and other property in one of the most elegant establishments in Boston, at that time.

[2] When the Stamp Act was passing through Parliament, Charles Townshend spoke of

Similar associations were formed in other provinces, and a committee of correspondence gave to that opposition the strength of mutual and concentrated purpose. Lieutenant-governor Colden made military preparations for resistance, and was only prevented by General Gage, the commander-in-chief, from firing upon the people when they gathered about

Burning the Stamps.

the Fort and demanded that the stamps should be surrendered. Colden was burnt in effigy; the house of Major James was sacked, and its contents completely destroyed. He had made himself peculiarly obnoxious by declaring that "he would cram

the colonies as planted by the care of England. It was then that Colonel Barré broke out in that brilliant and indignant defence of the colonies, where in the French War he had

the stamps down their throats with the end of his sword;" that "if they attempted to rise he would drive them all out of the town, for a pack of rascals, with four and twenty men." Colden was at length compelled, by the popular excitement and violence, to pledge himself not to use the stamps, and to deposit them with the city Government for safe-keeping. When a vessel arrived in the harbor of New York with stamps on board for use in Connecticut, the vessel was boarded, the packages seized, taken on shore, and a bonfire made of them. In Philadelphia, the stamp-distributor, one Hughes, made haste publicly to resign his office when informed that his rather tardy deliberation would be aided by a visit from the Sons of Liberty. In Maryland, the distributor, Hood, was burnt in effigy, and when he fled to New York, a deputation from the "Sons" visited him at Flushing, demanded and received a formal resignation of his office, and an oath that he would not resume it. In every province, the stamp-distributor was compelled to resign his office. In New Hampshire, the commission of that officer was carried in procession upon the point of a sword; the newspaper of Portsmouth came out in mourning, and an effigy of the Goddess of Liberty was carried to an open grave. In South Carolina, the Stamp Act was publicly burnt, while the bells of Charleston tolled, and the flags on the ships in the harbor were hung at half-mast.

The English government.

The Constitution of England was by no means yet adjusted on its present basis, or on what were then called "constitutional principles." George III. had steadily carried forward his notions of a possible royal prerogative, such as his predecessors, George I. and George II., had been content to yield. The Earl of Bute, the favorite of the young King's mother, and the head of his household when he was a prince, had indeed ceased to rule; but the popular indignation suspected, however unjustly, that his influence still controlled the government when Grenville was crowded out of power before the year closed, chiefly from the feeling that he was Bute's tool and appointed successor. Under the powerful patronage of the Duke

served as a soldier. "They planted by your care!" he exclaimed. "No, your oppressions planted them in America. . . . . They nourished up by your indulgence! They grew by your neglect of them. As soon as you began to care about them, that care was exercised in sending persons to rule them in one department and another, who were perhaps the deputies of deputies to some member of this House, sent to spy out their liberties, to misrepresent their actions, and to prey upon them; men whose behaviour on many occasions has caused the blood of those *sons of liberty* to recoil within them." The speech was reported by Jared Ingersoll, the agent of Connecticut, and was probably widely and gratefully read in America before the Sons of Liberty in New York had formed their association and given it a name. "I am happy to hear of your success the American day," wrote the Earl of Shelburne to Barré. "It must give your friends in America the greatest pleasure." — Fitzmaurice's *Life of Shelburne*. Mr. J. Hammond Trumbull has shown that the phrase "sons of liberty" had been used many years before in Connecticut. But it had then been applied to freedom from ecclesiastical rather than political tyranny.

of Cumberland, a new cabinet, which was really independent of the Earl of Bute, came into being, headed by the Marquis of Rockingham. This Rockingham ministry was so much engaged in home politics, and in securing its own existence, that when it became necessary to call Parliament together, in December, 1765, it had come to no understanding on its course regarding America; the King's speech simply referring to the importance of the news received from there. Grenville, enraged by this news, moved an amendment to the address, full of indignation. The Ministers were not yet reëlected to Parliament, and, with some difficulty, Grenville, in deference to them, withdrew his motion. But after the recess the storm came.

Strange to say, however, even in the recess, the Ministry could not agree on their course. Nor had they agreed when the necessity of action was forced upon them. Then ensued one of the most dramatic scenes that Parliament ever witnessed, and the debate of January, 1766, which is one of the most memorable in history.

William Pitt.

It was a year since William Pitt had appeared in the House. The formal debate on the address to the King came on. A young member, whom the world did not know, but who has since given us the most vital history of this whole business, — Edmund Burke, — made his maiden speech. Pitt rose immediately after him, the whole House eager to hear the voice of the oracle. He began by congratulating Parliament and Burke's friends on the value of the acquisition of such a member, and then went on to speak doubtfully, even sarcastically, of the Ministry. At last he came to speak of America: "When the resolution was taken in the House to tax America, I was ill in bed. If I could have endured to be carried in my bed, so great was my agitation of mind for the consequences, I would have solicited some kind hand to have laid me down on this floor to have borne my testimony against it. . . . . Since I cannot depend upon health for any future day, I will now say thus much, that in my opinion this kingdom has no right to lay a tax upon the colonies. . . . . Taxation is no part of the governing or legislative power. At the same time, on any real point of legislation, I believe the authority of Parliament to be fixed as the Polar Star, fixed for the reciprocal benefit of the mother country and her infant colonies. They are the subjects of this kingdom, equally entitled with yourselves to all the natural rights of mankind, and the peculiar privileges of Englishmen, and equally bound by its laws. The Americans are the sons, not the bastards, of England." [1]

Pitt's defence of America.

[1] It was in this speech that Pitt made his celebrated prophecy that the "rotten part of the Constitution" — by which he meant the "rotten borough" system — would not continue a century.

At the close of this speech a long pause ensued. Then General Conway rose, — the leader of the Ministry in the House. He was one of the few men who had voted against the Stamp Act. He said he agreed with almost every word which Pitt had uttered, and he believed the Ministers did; and he disclaimed distinctly the charge which Pitt had made in the speech, that the Earl of Bute still had an influence in the royal councils.

George Grenville, of course, could not bear silently such attacks on his policy. He defended the Stamp Act ably. He said the origin of the American hatred to it was to be found in the factions of the House. When he ceased speaking, Pitt rose to answer him, though to speak twice was forbidden by the rules. But the House cried, "Go on!" and Pitt went on. "The gentleman tells us America is obstinate, America is almost in open rebellion. Sir, I rejoice that America has resisted! Three millions of people so dead to all the feelings of liberty as voluntarily to submit to be slaves, would have been fit instruments to make slaves of all the rest." These words, perhaps, more than any others in those celebrated addresses, endeared Pitt to the Americans. It would be hard to find other words more widely repeated, even by school-boys in their declamations, for more than a hundred years.

Edmund Burke.

The address to the King determined nothing. But Pitt's speeches fixed the minds of the wavering ministers. He had given them a policy, and they were sure it would be sustained by the House. In compliance with his ideas, they brought in a bill repealing the Stamp Act, and another declaring the supreme power of Parliament over the colonies. They also laid on the table large extracts from the American correspondence. The House heard at its bar witnesses acquainted with the subject, among others, Dr. Franklin.[1] This examination closed with these questions and answers: —

The results.

[1] The full report of the examination, all alive with Franklin's wisdom and wit, is in Sparks's *Franklin*, vol. iv., p. 192, and in earlier editions of Franklin's *Works*.

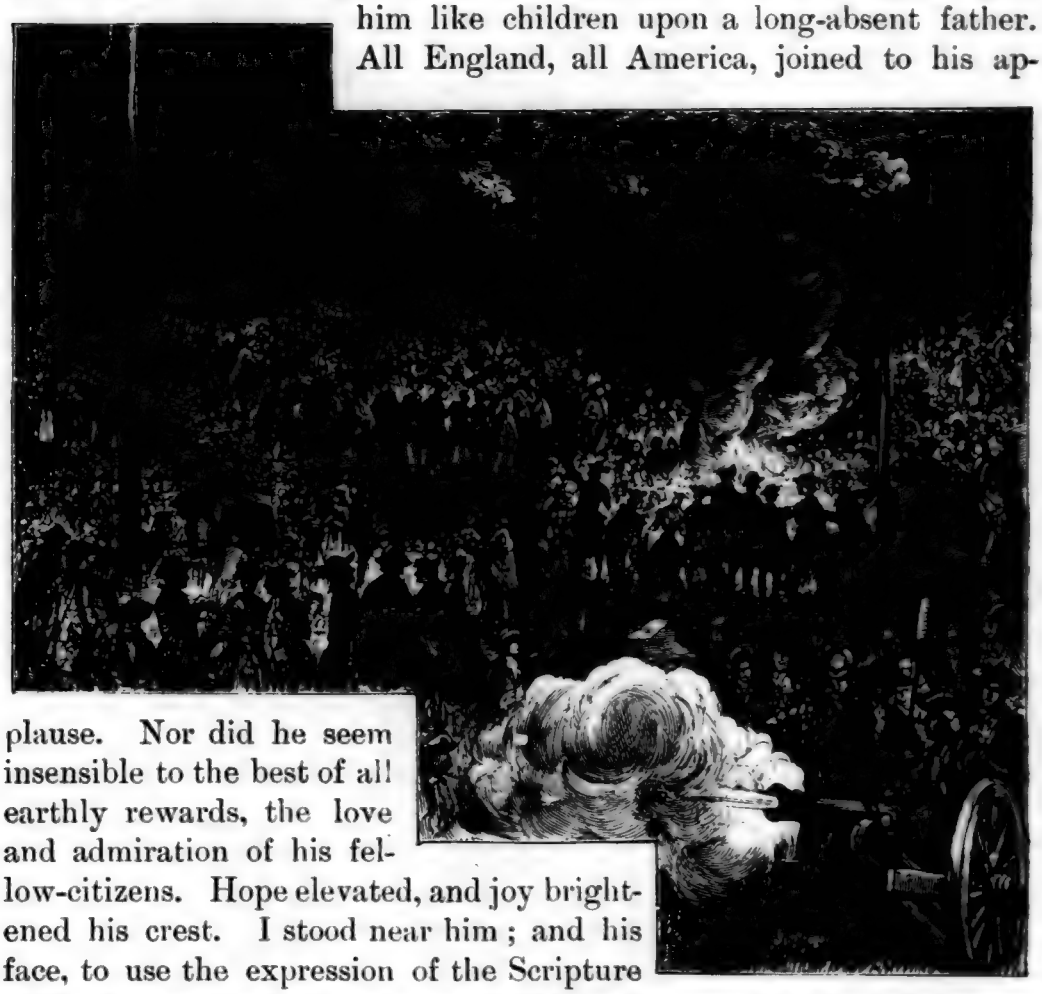
"*Q.* What used to be the pride of Americans?

"*A.* To indulge in the fashions and manufactures of Great Britain.

"*Q.* What is now their pride?

"*A.* To wear their old clothes over again."

If the final result of Pitt's eloquence, of Conway's conviction, of Franklin's wit and wisdom, and the apparent wish of the majority of the House, seems to us a confused medley, we are no worse off than they were who participated in it. Pitt wrote to his wife, confidentially, on the 11th of February, "The whole of things is inexplicable." Lord Chesterfield wrote to his son the same day, "Perhaps you expect from me a particular account of the present state of affairs. If you do, you will be disappointed, for no man living knows what it is." In truth, the ministers were disappointed in their effort to state, in resolutions, the doctrines which Pitt had laid down. The Stamp Act could be repealed; but the law officers would not consent to any statement of his favorite doctrine that the right to legislate and the right to tax were distinct. Lord Camden understood, and maintained the distinction. But Lord Mansfield ridiculed it, and, when the bill was to be drawn, he would not hear of it. Pitt and Camden both said that taxation and legislation were separate. Pitt's statement had been, "that we may bind their trade, confine their manufacture, and exercise any power, except only that of taking their money from their pockets without their own consent." But the Declaratory Act, as drawn by the law advisers of the Crown, instead of saying this, said that the power of Parliament was supreme over the colonies, and extended to all cases whatsoever. It always happens that a body like Parliament prefers the larger definition of its own authority, and Pitt writes to his wife, in the same letter which has been cited, "We debated long on various resolutions relating to America, and finally ended in a good deal of agreement." It seemed to him, as to all men eager for a solution of the immediate difficulty, that the repeal of the Stamp Act was the great practical object.



Conflict of opinions among English statesmen.

Meanwhile the Ministry were embarrassed on another side. They were embarrassed, as those who dealt with George III. often were, by finding they had misconceived his wishes. Before the debate was over, the leaders in the House found they were speaking and voting against "the King's friends." But this misunderstanding was explained, and, at the moment, wrought them no mischief.

General Conway brought in the resolution for the repeal of the Stamp Act on the 17th of February, 1766. After another remarkable debate in March, in which Grenville and Pitt both spoke, the vote in its favor was 275 to 167. Describing this

Repeal of the Stamp Act.

occasion, eight years after, Burke said: "I remember, Sir, with a melancholy pleasure, the situation of the honorable gentleman (General Conway) who made the motion for the repeal; when the whole trading interest of this Empire, crammed into your lobbies, with a trembling and anxious expectation, waited, almost to a winter's return of light, their fate from your resolutions. When at length you had determined in their favor, and your doors, thrown open, showed them the figure of their deliverer, in the well-earned triumph of his important victory, from the whole of that grave multitude there arose an involuntary burst of gratitude and transport. They jumped upon him like children upon a long-absent father. All England, all America, joined to his applause. Nor did he seem insensible to the best of all earthly rewards, the love and admiration of his fellow-citizens. Hope elevated, and joy brightened his crest. I stood near him; and his face, to use the expression of the Scripture of the first martyr, 'his face was as if it had been the face of an angel.' . . . . I did hope that that day's danger and honor would have been a bond to hold us all together forever. But, alas! that, with other pleasing visions, is long since vanished."

Liberty-Pole Festival.

The joy described with so much spirit by Burke, extended itself through all the mercantile and manufacturing towns in England. In America it was unbounded. The people had hoped; but the news, when it came, was more than they had dared

Joy at the repeal.

to hope for. General Conway, who had been the consistent friend of the colonies, accompanied the repealing act by a conciliatory letter, and, for the moment, it seemed as if the bone of contention was out of the way and a new era had come in. Full-length portraits of Conway and of Barré were ordered to be hung up in Faneuil Hall in Boston. The Assembly of Virginia voted to erect a statue of George III.; and a similar honor to Pitt was proposed in Maryland. But nowhere was the enthusiasm greater than in New York. The inhabitants petitioned for, and the Assembly decreed, the erection of statues both of the King and of Pitt;[1] on the King's birthday, which occurred not long after the news of the repeal of the Stamp Act was received, the people assembled in the Fields (now City Hall Park) and with rejoicings and festivities set up a Liberty Pole, at the foot of which the King's health was drunk in hogsheads of punch.

But it was a perishable monument of the restoration of peace and harmony. Before the summer was over, in only a little more than two months from the time of its erection, the Pole was levelled to the ground by the soldiers of the Fort. Thenceforward it became for several years a rallying-point of contention between the soldiers and the people. It was repeatedly cut down, or blown up with gunpowder, and as often replaced at once by a new one; and in these contests, where hard blows and sometimes serious wounds were given and taken, the spirit of resistance was kept alive and active.

[1] The statues were not finished for four years. In August, 1770, that of George III., which was of lead, was set up in the Bowling Green, and that of Pitt, in marble, at the corner of Wall and Smith (now William) Streets.

CHAPTER XIV.

END OF COLONIAL RULE.

MEASURES FOLLOWING THE REPEAL OF THE STAMP ACT. — IGNORANCE OF AMERICA IN ENGLAND. — QUARTERING TROOPS IN BOSTON. — CONSEQUENT ILL-FEELING. — IMPRESSMENT AND RESISTANCE OF SEAMEN. — QUARRELS BETWEEN CITIZENS AND SOLDIERS. — THE BOSTON MASSACRE. — REMOVAL OF THE MILITARY. — "SAM. ADAMS'S REGIMENTS." — TRIAL AND ACQUITTAL OF CAPTAIN PRESTON. — VERDICT AGAINST TWO SOLDIERS. — EFFORTS OF THE DUKE OF GRAFTON AT RECONCILIATION. — CONDUCT OF THE EARL OF HILLSBOROUGH. — LORD NORTH'S MINISTRY. — THE TEA TAX. — THE WHATELY LETTERS. — FRANKLIN INSULTED BY WEDDERBURN. — ARRIVAL OF THE TEA SHIPS IN AMERICA. — DISPOSITION OF THE TEA IN VARIOUS PLACES. — BOSTON PORT BILL. — GAGE APPOINTED GOVERNOR OF MASSACHUSETTS.

THE repeal of the Stamp Act was, after all, only a concession for the sake of present expediency, not an acknowledgment of an exclusive and inherent right in the colonial subjects to tax themselves. It was accompanied by a Declaratory Act asserting the power of Parliament over the colonies "in all cases whatsoever;" which might well arouse, as Lord Shelburne afterward wrote to Pitt it did, "an unfortunate jealousy and distrust of the English Government throughout the Colonies." The Mutiny Act, also, not long before, had been extended to America, and one of its provisions was, that the Colonial Assemblies should provide quarters, with "fire, candles, vinegar, salt, bedding, utensils for cooking, beer or cider, and rum," for the support of troops. Parliament, moreover, accompanied the repeal of the obnoxious act by a resolution recommending that the Assemblies of the several provinces should compensate all those who had suffered loss the year before in the stamp riots. That the Sugar Act should still remain the law, without modification, would have been enough to keep alive distrust of the home government; but when, to the negation of any essential change of policy, there was added so much positive proof that the policy was unchanged, there was quite sufficient reason for the most jealous watchfulness on the part of the Americans.

Assertion of power over the colonies by Parliament.

The Mutiny Act.

Meanwhile the Rockingham Ministry was dissolved, and, though Pitt accepted the Privy Seal, the changes in the Cabinet indicated

that a spirit of aggression rather than of conciliation would rule in the affairs of the colonies. Pitt, moreover, to the surprise of all England, and, indeed, of all Europe, chose to go into the House of Lords as the Earl of Chatham, at the sacrifice of his influence as well as of his popularity. That mysterious illness of his — which has been a cause of so much speculation, which was believed by many to be akin to madness, by others the exaggeration of peculiar eccentricity, and, in our time, perhaps, would be covered under the more charitable and comprehensive term of nervous prostration — was now at its height. Whatever it was, it led him, unfortunately both for England and America, into almost complete isolation, leaving Charles Townshend free from all restraint. He had accepted office under Pitt, while opposed to his policy in regard to the affairs of the colonies. He had acceded to the repeal of the Stamp Act, only because it was inexpedient to attempt to enforce it. Military garrisons, he now insisted, should be kept up in the large colonial towns, to be supported by colonial taxation; a colonial revenue must be exacted; and he ridiculed the distinction between internal and external taxes. This distinction was one at first strenuously insisted upon by the Americans; but had Townshend, who died in the autumn of 1767, lived a little longer, he would have seen how completely his own measures changed their opinions on this point. Taxation of the colonies was to be resisted, let it take what form it would, if only the purpose was plainly seen that taxation was intended.

Changes in the English Cabinet.

Ascendency of Townshend.

The intrigues and strife of parties, and the determination of the landed interest in England to lighten its own burden, favored Townshend's polity. It was proposed to reduce the land-tax of four shillings in the pound to three shillings, and Townshend was quite willing to see the defeat of his own party on this question, as it enabled him to insist upon making up the deficiency in the revenue by colonial taxation. But the colonies were of one mind; they would submit to no infringement upon their rights by Parliament, though, as events ordered, it was upon New York and Massachusetts that the duty devolved of taking the lead in defence of those rights.

When Sir Henry Moore, the Governor of New York, sent a message in June, 1768, to the Assembly, requiring them to make provision for troops, then on their way to that colony, in accordance with the Act of Parliament, the Assembly refused. They were willing to bear a proportionate share in the support of troops on the march through the province, as they had always done, and of their own free will. But the quartering of soldiers in the colony at the colony's expense, as this act provided, was the imposition

Refusal of New York to support troops.

of a tax without their consent. In the spring, Parliament ordered that the legislative functions of New York should be suspended till the law was complied with. In the debate on this measure, Pownall, formerly Governor of Massachusetts, but now a member of Parliament, was exceedingly frank in his animadversions upon the conduct of the House. It had seen fit to assume that New York alone had revolted against this assumption of power. "Believe me," said Mr. Pownall, — whose experience and sound judgment should have commended his words to those men who ought by this time to have begun to see that they were attempting to ride a storm and guide a whirlwind, — "Believe me, there is not a province, a colony, or a plantation that will submit to a tax thus imposed, more than New York will."

Other colonies, where like requisitions were made for the support of troops, were careful, in granting them, to avoid seeming to do so in obedience to the act. Sympathy with New York, as the target of ministerial displeasure, extended to them all, and that deepened to indignation when the Mutiny Act was extended for another year, and it was determined to impose port duties on wines, oil, and fruit, if shipped direct from Spain and Portugal, and upon glass, paper, lead, colors, and tea. The revenue to be raised from these duties was to be at the disposal of the Crown, and to be used for the support of the civil officers of the colonies.

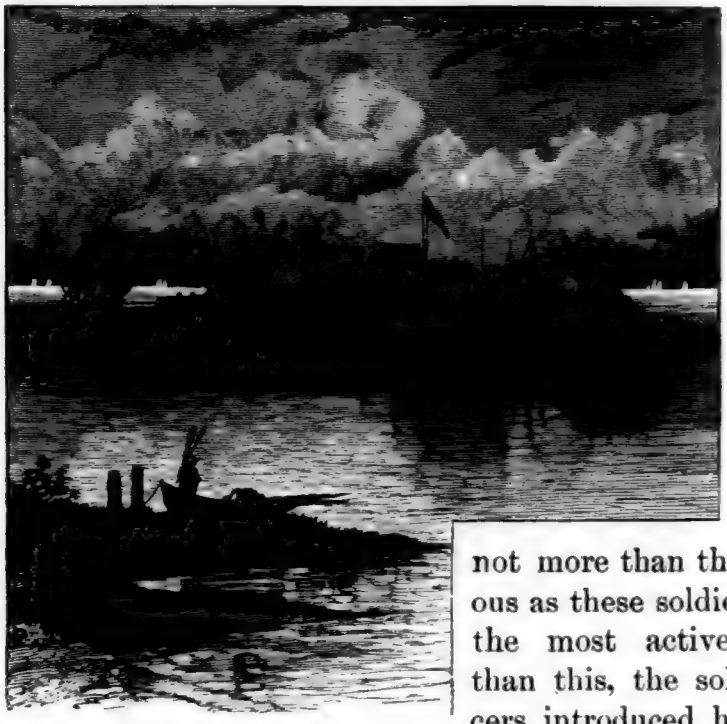
Sustained by the other colonies.

This was justly considered a blow at the very root of their constitutional rights. The one thing above all others which the colonists had never lost sight of, and had never ceased to contend for, — as the history of the colonial period shows, — was, to provide for the necessities of government in their own way, and to keep those to whom the affairs of government were intrusted, dependent upon the Colonial Assemblies. In this emergency, the General Court of Massachusetts addressed a circular letter to the Assemblies of all the other colonies, suggesting that they should unite in supplications to the King for relief.

The acts of Parliament, they said in this letter, "imposing duties on the people of this province, with the sole and express purpose of raising a revenue, are infringements of their natural and constitutional rights; because, as they are not represented in the British Parliament, his Majesty's Commons in Britain by those acts grant their property without their consent." And they submitted it to the consideration of their countrymen, "Whether any people can be said to enjoy any degree of freedom, if the Crown, in addition to his undoubted authority for constituting a Governor, should appoint him such a stipend as it shall judge proper, without

Circular Letter of Massachusetts.

the consent of the people, and at their expence; and whether, while the judges of the land, and other civil officers, hold not their commissions during good behavior, their having salaries appointed for them by the Crown, independant of the people, hath not a tendency to subvert the principles of equity, and endanger the happiness and security of the subject." With one accord the other colonies united in hearty approbation of this letter. But when it reached England, the Earl of Hillsborough, who had succeeded Shelburne as Secretary of State for the Colonies, wrote to Governor Bernard of Massachusetts to order the General Court "to rescind the resolution which gave birth to the letter, and to declare their disapprobation of and dissent to that rash and hasty proceeding;" and if they refused, the Governor was to dissolve the Court. The other colonies were ordered to take no notice of the letter, and were also threatened with dissolution of their Assemblies in case of disobedience.



English ignorance of America.

It is a remarkable evidence of the utter ignorance that prevailed in England of American affairs and American character, that Hillsborough could have sent such a message to a body whose leading men, when measured with the worthiest of the public men of England, were in every sense their peers, and in some sense their superiors. The General Court replied with great dignity to the minister's insolent demand, and by a vote of ninety-five to seventeen declined to comply with it. In truth, no other result was probable, or hardly possible. The older colonies had been essentially self-governed for a century and a half, and were virtually independent. Almost all of the inhabitants, except in Georgia, were born upon the soil. The circumstances of their lives had created habits of thought as well as methods of living, and no "Be it enacted," pronounced three thousand miles away, could stand if brought in conflict with this native self-reliance and inborn belief in their own rights. To ministers in England it seemed that to dissolve an Assembly was a final and decisive step. In Boston it only showed the people that the time had come for town meetings. An appeal from Faneuil Hall was responded to by every town in the province, and committees of correspondence and of safety laid deep and strong the foundations of a new state. It was easy to impose taxes on imports by bills in Parliament, and to appoint revenue officers for their due collection. If not quite so easy to do, it was more to the purpose when done, to determine neither to order nor to receive importations. If the Ministry supposed that the colonists were to be overawed by the presence of troops, they misjudged the circumstances and character of the people in this as in everything else. Their appeals had been to the clemency of a King to whom they avowed the most loyal allegiance;

to the justice and reason of ministers who, they were slow to believe, intended to take from them the rights they had always maintained, and the loss of which would reduce them to political slavery. If the final arbitration must be by force of arms, they would be as ready for that as they had been to meet all other questions; but they were reluctant to admit that the necessity for such arbitration could ever arise.

When, therefore, under the King's new system of government, four regiments of soldiers from the Crown establishment were quartered in the town of Boston, every prejudice of that community was shocked; every man felt that this was an insult to the good fame of the town; and every man, whatever his station, asked himself what these soldiers were doing, and what they were there for.[1] The answer was clear enough, that they were doing nothing. The King was paying them for doing nothing, in a little town in which the whole population of able-bodied men, not more than three times as numerous as these soldiers, were engaged in the most active industry. Worse than this, the soldiers and their officers introduced habits in the last degree exasperating in a Puritan town. The army of England at that time was recruited from the lowest dregs of the English population. And here, by way of bravado, four regiments were introduced in the midst of a community where men had not been used to see a professional soldier once in a generation, and where public morals, and the outward forms of society, had been pushed by the leaders of the government to the very verge of asceticism. Had any enemy of King George counselled him as to the best method by which he could alienate his subjects here, such an enemy

The quartering of troops.

Castle William.

[1] Ten years after, when the Count Rochambeau commanded the French army in America, he was asked in Connecticut, to his great amusement, "What he did when he was at home?"

could not have suggested a plan more ingenious than that of quartering a considerable body of troops in Boston. To quarter so many troops in a provincial town of England would, perhaps, have been thought a favor. The habits of society, the gayety, and the other stimulants to intercourse and trade, had long since blotted out in England the old prejudice against a standing army. But all the larger colonies had been formed while that prejudice still existed. All the old political writers of England, on whom the colonists greatly relied, regarded any standing army as an instrument of tyranny. And, as has been said, the experience of all their history had shown that in such states as theirs, at least, no standing army was necessary for order or tranquillity.

Castle William.

Up to the year 1767, the presence of English troops was unknown in New England, excepting in time of war; and even then, such troops were moved as soon as possible to the frontier. In the spring of 1768, in the midst of bitter irritation between the Governor and the Massachusetts Assembly, the newly-appointed Commissioners of the Customs had been compelled to remove to Castle William, about three miles below Boston, in the harbor, where the garrison then consisted of a detail from the militia of the neighborhood. The Governor was so far dissatisfied with this garrison, that he requested General Gage, the English Commander-in-chief at New York, to order one or two regiments of the King's troops from Halifax to hold the fort. He also moved three vessels of war down the harbor so as to cover it. Before his orders could be executed, the government in England, of their own movement, had anticipated them and sent their orders for quartering troops in the town. Early in September, an officer arrived to prepare their quarters. His errand was at once known, and the popular indignation was shown by the immediate provision of a tar-barrel, which was hauled up by night into the frame, long empty, of the beacon which gave its name to Beacon Hill,— the highest of the three hills of Boston. In preparation for such a purpose, the selectmen of the town had repaired the beacon. It may be doubted whether this beacon had been used since it summoned the people of the country to the overthrow of Andros.[1] It had been established in the very earliest days of the colony.

The Beacon.

Popular indignation in Boston. The beacon.

The town meeting of Boston sent a committee to the Governor,

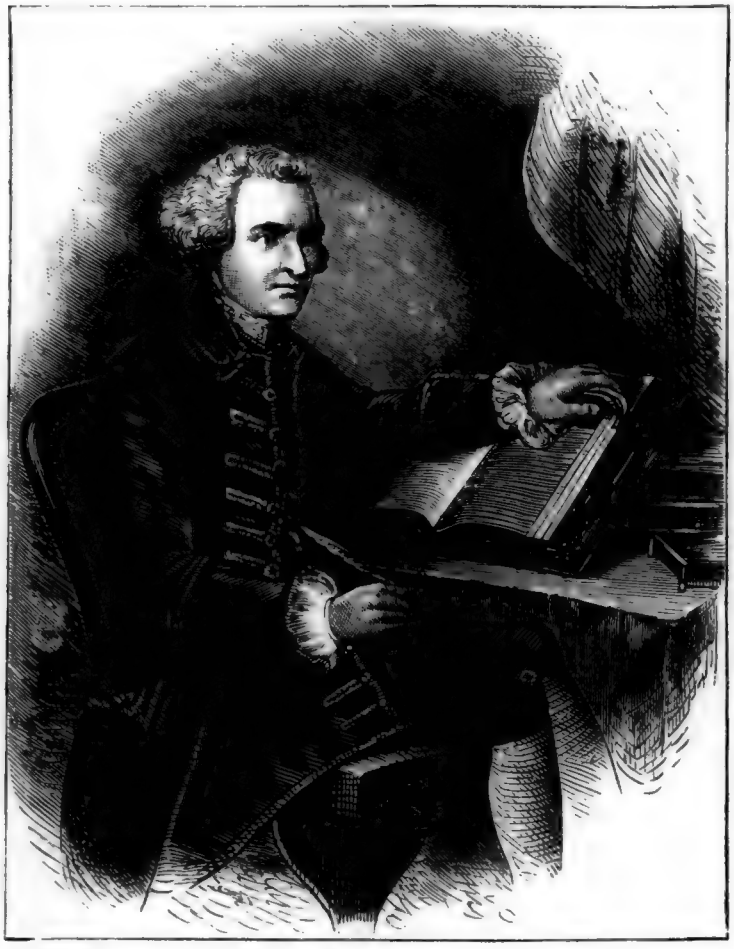
[1] See vol. ii., p. 393.

[From an Old Print.]

asking him to issue precepts for a General Assembly, to take measures for the preservation of their civil rights and privileges. The Governor refused, and the committee of the town of Boston proceeded, on its own warrant, to summon an Assembly for the purpose named. The town meeting then voted that every inhabitant should be requested to provide himself with fire-arms for sudden danger in case of a war with France. As no war was probable, the design of this vote was evident. Meanwhile the Council declined to provide barracks for the troops in Boston. They said there were barracks for a thousand men at Castle William, and that these would accommodate all the troops expected from Halifax. The act of Parliament requiring them to prepare quarters for troops had provided that where barracks already existed, they should be used.

In the midst of this irritation the Convention met, and addressed the Governor. They asked him to convene the General Assembly. The Governor refused to receive their petition, but addressed a paper to them admonishing them instantly to separate. They remained in session nine days. Their moderation seems to have disappointed everybody, of both parties. The troops finally arrived off the harbor on the 28th of September, the Convention adjourned on the 29th, and on the 1st of October the troops landed. Even the regiment which was intended for the castle was brought up to the town. One regiment encamped on the Common, and the other was quartered in Faneuil Hall and the Town House. The local authorities still refused to provide barracks, and the commanding officer hired quarters for them and purchased supplies at the charge of the Crown. The Irish regiments in addition arrived on the 10th of November, and were quartered in a similar way. A fleet of eight men-of-war, with an aggregate of more than a hundred and eighty guns, was anchored off the town.

Troops sent to Boston.



The justification made by the home government for sending a garrison to Boston was the news of a riot on the 8th of July. A schooner, laden with molasses, had been seized for violation of the customs. Thirty men entered her at night, confined the keepers, and carried off the cargo. The selectmen restored the molasses, but Governor Bernard, in reporting the matter to the government, said, with a sneer, "We are not without a government, only it is in the hands of the people of the town." This occurrence, and a similar riot in which some wines were landed from the sloop *Liberty*, belonging to John Hancock, seem to have given the motive to the English administration for severer measures than they had attempted before. A large garrison once in the town, there occasionally broke out the annoyances which might be expected after such circum-

Riots the pretext.

stances of irritation. So soon as the General Court met, in May, it proved that the result of this irritation was a stronger majority against the Governor than before. A committee was at once appointed to ask for the removal of the troops. The Governor answered that he had no authority over them. The General Court replied that it was only owing to exaggerated reports that the troops had been sent. They said there had been no disturbances which bore any proportion to similar tumults in the best regulated cities of Europe. Any disturbances here were far from being carried to that atrocious and alarming length to which riotous assemblies had been carried in Great Britain, "at the very gates of the palace, and even in the royal presence." They refused to proceed to business while surrounded with soldiers. Governor Bernard met this refusal by removing the General Court to Cambridge, where was no garrison; and the House proceeded to business there, under a protest. On the 27th, they voted a petition to the King for Governor Bernard's removal, who, as it happened, had the mortification of communicating to them the next day the King's orders that he should return to England to lay before him the state of the province. He had received these orders as early as April. The General Court asked to see the King's order, and it was laid before them. The Court replied that they "cheerfully acquiesced in the command of their sovereign for his return to Great Britain, and the order for a true statement of the

Removal of the troops demanded.

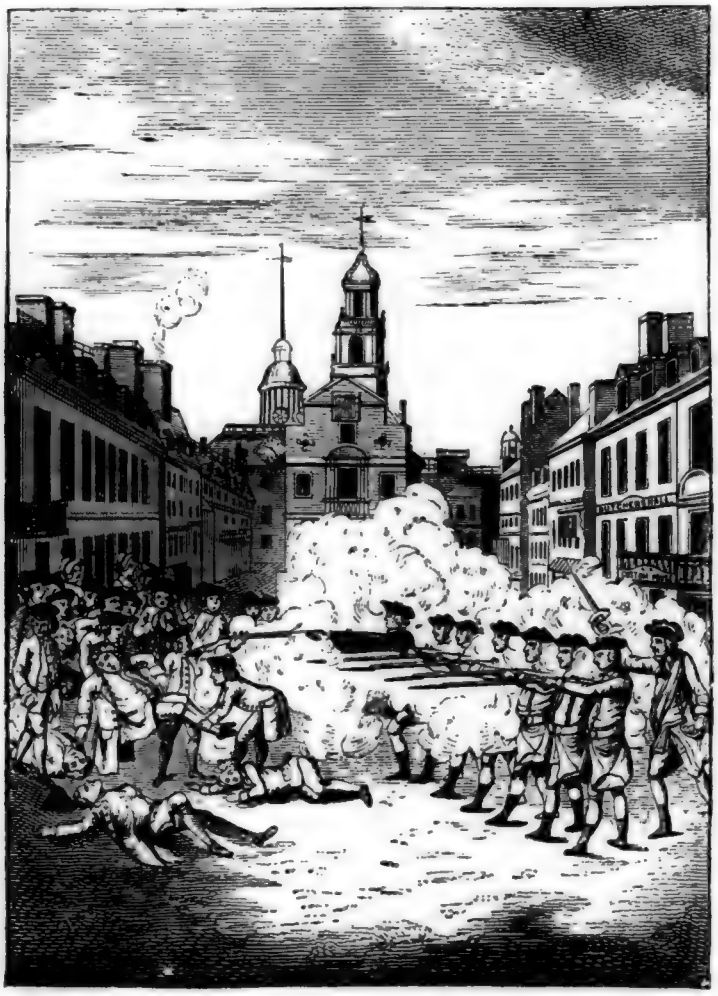
affairs of the province gave them peculiar satisfaction." On the departure of Bernard, Hutchinson, the Chief Justice of the Province, a gentleman of old New England blood, became acting Governor.

Other sources of irritation.

Such are, perhaps, the more important external signs of constant irritation which appear on the public records after more than a century. But, as a matter of course, the occasions of personal and private irritation, occurring almost with every hour, did more to alienate the people from the Crown than any formal passages, however bitter. Such were the daily parade of regiments, and their military instruction in the heart of the town, — duels between officers, and between officers and citizens, — the ridicule with which a body of English officers would regard the antiquated and provincial customs of the little sea-port, — and, worst of all, the quarrels, more and more frequent, between ignorant and brutal privates and the people of the lowest class of the town, equally ignorant and equally brutal. Of the population of Boston, which would not count more than four thousand able-bodied men, a large portion were seafaring men, with the habits of adventure and violence which are not unusual with sailors in all countries. Under such conditions, altercations constantly took place, of which the local annals are full. One of the most exasperating was the impressment by the officers of the *Rose* man-of-war of some seamen from a Marblehead brig. The seamen resisted, defied the English officer in command, and killed him. On the trial of the guilty person, he was acquitted by the Admiralty Court, which was wholly in the King's interest, on the ground that he acted in self-defence. It also proved that the statute which gave the right of impressment specially excepted the American coast from its execution.

Attempted impressments.



Such altercations and bitterness culminated, after a year and a half, in an occurrence which at the time received the exaggerated name of the "Boston Massacre," a name which it has never lost. In the experience of places always accustomed to quarrels between soldiers and civilians, this transaction would have been considered trifling. Its importance in this instance is due to the fact that it brought to a crisis a long series of annoyances in a community wholly unused to a garrison.

The Boston Massacre.

On the 3d of March, 1770, by mutual agreement, a party of soldiers and rope-makers had an encounter with clubs, near midnight, and several men on each side were badly wounded. The next night, a renewal of the fight was prevented with some difficulty. On the evening of the 5th of March, two young men undertook to pass a sentinel at the foot of Cornhill,[1] without answering

[1] The name "Cornhill" then applied to a part of what is now Washington Street.

his challenge. A struggle ensued, in which some of the soldiers from the neighboring barracks turned out, one armed with a pair of tongs and another with a shovel, and the offending citizen was driven back through the alley-way which he had attempted to pass. This encounter, trifling in itself, was sufficient to call out the soldiers in defence of the sentry, and the people of the neighborhood as well.

Boston Massacre. — From an Engraving by Paul Revere.

The assembly of people was, of course, much the larger. The officers succeeded in drawing the soldiers into the barracks; but the mob was now large enough to turn its attention to another sentinel, who stood not far off, in front of the Custom House.[1] A boy pointed him out as a soldier who had lately knocked him down, and some twenty young men attacked him with missiles. The man loaded his gun, and tried to retire within the building, but, finding the door locked, called for the main guard, whose station was within hearing. The officer in command sent a sergeant with six men to his relief, and also sent

When that name gradually absorbed the names of the short streets which run from south to north through Boston, the name of "Cornhill" lapsed. It was taken up and used again for the street which now bears it. As it happens, the altercation named in the text was at the foot of each Cornhill. It was in a narrow alley which passed from what was then the end of Washington Street, to Brattle Square. The opening of what is now called "the new Washington Street" swept away all local monuments of that spot, which is now a part of the great thoroughfare.

[1] In State Street, then King Street, where the building stands now occupied by the Union and State Banks.

a messenger for Captain Preston, the officer of the day, who was at an entertainment in Concert Hall.

Meanwhile an immense mob was gathering, perhaps with the intention on the part of their leaders of attacking the main guard. But if this were so, that intention was diverted, when they saw this wretched little file in front of the Custom House. The bells had been set ringing, as if for fire, and the crowd constantly increased. The soldiers had found time to charge their pieces without orders. They were joined by Captain Preston, with six more men. By way of defence, they only presented their bayonets, falling back in a curved line in front of the Custom House. Their caution is shown, from the fact that there was time to send to Concert Hall for Preston, their commander, and for him to come down to the main guard and join them. He knew perfectly well, and the mob knew, that, by English law, his men must not fire without the order of a civil magistrate. Preston seems to have behaved with moderation and judgment to the last. The mob challenged the soldiers to fire. "Come on, you bloody-backs!" "Come on, you lobster-backs!" Such allusions to the red coat were, for ten years, favorite epithets of derision. "Fire if you dare!" "Damn you, why don't you fire?" At last a soldier received a severe blow from a club. He stepped aside a little, levelled his piece, and fired. Immediately after, seven or eight more of the men fired, and the mob fled. Three men lay dead on the ground, two others were mortally wounded, and six slightly.

The drums beat to arms, the Twenty-ninth formed in King Street, and an immense concourse of people also assembled, among whom were some of the most distinguished citizens. Governor Hutchinson addressed the people from the balcony of the State House. He promised that a full investigation should be made in the morning, and the crowds retired. A citizens' guard of a hundred men took charge of the streets, and peace was restored. Before daybreak, Preston had surrendered himself for trial, and was committed to jail, and the soldiers who had fired upon the people were committed also.

With the morning, the selectmen of Boston waited upon the Governor and Council. They said that, unless the troops were removed from the town, terrible consequences must be expected. A town meeting was called, which convened at once. It sent a committee of fifteen to demand the removal of troops; but the Governor replied that he had no power to remove them. He said the troops were under the command of General Gage at New York, but that Colonel Dalrymple was ready to withdraw the Twenty-ninth Regiment to the Castle, that being the regiment whose soldiers had had fights with the rope-makers, and had fired upon the people. The

Removal of troops again demanded.

committee reported this answer to the town meeting at the Old South Church, and the meeting voted it unsatisfactory. A smaller committee was sent to say that nothing would satisfy the meeting but a total and immediate removal of all the troops. Samuel Adams was the chairman. Hutchinson, having consulted Colonel Dalrymple in a whisper, said aloud that one of the regiments should be sent away. Adams replied with unhesitating promptness, "If the Lieutenant-governor or Colonel Dalrymple, or both together, have authority to remove one regiment, they have authority to remove two; and nothing short of the total evacuation of the town by all the regular troops will satisfy the public mind and preserve the peace of the province."[1]

Samuel Adams.

The Governor gave way. He was ridiculed in England for his compliance, and the colonists considered it a triumph. But there is no doubt that he had to give way; and his compliance postponed the outbreak of the war five years. A promise was given, and the first orders for the removal of the troops were issued. Some of the officers were very indignant, and expresses were sent to General Gage, in the hope that he would recall the orders. Another town meeting was called to quicken the movement. On application to Dalrymple, the Twenty-ninth Regiment was removed, and the next day the Fourteenth. Both were afterwards called by Lord North "Sam Adams's Regiments." The final removal took place on the 10th and 11th of March.

"Sam Adams's Regiments."

From this time until the arrival of Gage in 1774, no troops were quartered in Boston. The mistake had been made, however. To a people not yet unwilling to recognize the authority of the Crown, the worst symbol of that authority was foolishly displayed in a most exasperating way.[2]

[1] Governor Hutchinson says this remark was made to Colonel Dalrymple. But it is clear that all present heard it.

[2] In all the tumults of ten years before the war, there appear to have been seven lives lost. One was the English officer of the *Rose*. The others were Attucks, a half-breed

Preston, the officer in command on the night of the "Massacre," was tried for murder. He was defended by Josiah Quincy and John Adams, lawyers of the highest reputation among the patriots, and was acquitted. The soldiers were also acquitted, excepting two, who were found guilty of manslaughter, and, by the inhuman law of that time, were sentenced to be branded in the hand. Hutchinson, the Governor, excuses himself for permitting this sentence to be executed, because the remission would have had a tendency to irritate the people, and, "being of little consequence to the prisoners, it was thought most advisable not to interfere."

Captain Preston's trial.

The history of America, however, was not to be decided on American soil. The fickle and wayward behavior of successive English ministries — behavior which could not be called a policy — swayed the course of events more than any decisions made in America. While the Duke of Grafton supposed that he directed affairs in England, as the head of King George's Cabinet, a Cabinet meeting was called on the first of May, 1769. Grafton urged on this occasion the remission of all the American duties; but in opposition to his opinion and to that of Camden, Granby, Conway, and Hooke, tea was still retained as a subject of taxation. The Cabinet agreed, however, that the circular to the Colonial Governors should "contain words as kind and lenient as could be proposed by some of us, with encouraging expressions."[1] These were distasteful to other members, among whom was Hillsborough, the Secretary for the Colonies. When, therefore, Hillsborough drew up the instructions, which we now have, all these "encouraging expressions," whatever they were, disappeared. There is nothing conciliatory in the despatch, excepting the statement that his Majesty's present administration had at no time intended to lay any further taxes on America, and that the duties on glass, paper, and colors are to be remitted. The Duke of Grafton says that Hillsborough not only garbled the minute in the Council Records, but accompanied it with a circular letter, which Grafton terms "unfortunate and unwarrantable, calculated to do all mischief, while our real minute might have paved the way to some good." In his manuscript Memoirs, he distinctly charges that Hillsborough made these changes at the instance of the King.

Remission of duties.

It is one of the curious questions of history how far such a remission of all duties as the Duke of Grafton proposed, if made at this early period, might have affected the subsequent course of events.

Indian negro, Carr an Irishman, and three Americans, Gray, Caldwell, and Maverick, killed in the Boston Massacre, and a German boy, Snyder, killed by a soldier a short time before.

[1] These are the Duke's words.

On the other hand, this is certain, that where the administration of a nation was thus the prey of jealousies and intrigues, — when the responsible minister was thus foiled by the "King's friends," — no policy which deserves that name was possible. Indeed, he best reads the history of America, for that period which proved so critical, who understands that, on this side the water, her affairs were directed with substantial unanimity by thoughtful men not unused to govern, who had earned the confidence of the great majority of their countrymen, and who, for all the years of this crisis, were never without a specific plan to which they gave unbroken attention. The same reader must understand that, in England, American affairs were administered by men quite ignorant of the country with which they dealt, — jealous of each other, and mixed up in every sort of personal intrigue, — taking office or leaving it according to the event of certain local controversies, and all the time liable to be thwarted by a King who was very lukewarm in his love of constitutional government, and always hoping for accessions to his personal power. Let this reader remember also that an ocean three thousand miles wide separated the two countries; that all the disadvantages of this separation accrued to England, and all the advantage to America. He will then understand that, in the impending controversy, England, though she had an army, a navy, and an organized government, stood no real chance of subduing the United Colonies. Seven million people in England, indifferent to the subject, ignorant as to the real matters of controversy, and as to the place where it was carried on, contended, at every disadvantage excepting those of numbers and wealth, with three million people, substantially united, who maintained institutions to which they had always been accustomed, in the country to which they were born.

The King's speech.

The King met Parliament rather earlier than usual at the beginning of 1770. Even in England, the opening of the royal speech amused people, so inadequate did the etiquette of the occasion seem to be to the requisitions of an empire. At a moment when a rupture with France was imminent, when Hyder Ali was in the flush of his success in India, and when America was waiting, eager for a decision as to the policy which was to govern her, — the King began by saying, "My Lords and Gentlemen, it is with much concern that I find myself obliged to open the session of Parliament with acquainting you that the distemper among horned cattle has lately broke out in this kingdom."[1] Neither House was in any

[1] Junius, whose central passion was hatred of the Duke of Grafton, says: "Instead of the firmness and decision of a King, you gave us nothing but the misery of a ruined grazier."

mood to be satisfied with talk about diseases of cattle. Lord Chatham himself moved an amendment to the Address, promising attention to the nation's discontent, — discontent arising from the ejection of Wilkes from the House of Commons. After Chatham's speech, Lord Camden rose from the woolsack, and in so many words said he had been trammelled too long "by his Majesty, — I beg pardon, — by his Ministers." Camden, Conway, and Granby at once withdrew from the Cabinet. With them vanished the last real hope of any policy conciliatory to America. The Duke of Grafton resigned on the 28th of January, and Lord North became Prime Minister. The "King's friends" had triumphed, and their laurels, such as they were, are in the history of the next twelve years. Little credit is it to Lord North, that he personally disapproved of much of the policy to which for those twelve years he lent himself; that it was the King's policy, and not his. No English nobleman should have found himself long in any such false position. It is his excuse that he knew already the nature of the King's malady, which was still a secret to all but a very few.

Debate on the Royal Address.

Lord North.

As Lord North appeared at the time, and, indeed, as he has been represented in history, he has shown few of the traits which we associate with the hero of tragedy. A commonplace man, with a certain knack at affairs, who had the absolute confidence of a foolish King, and who used that confidence till he lost half that King's empire, — this is what appears at first, and it may be said to be the true verdict of history regarding him. But a tragic poet might go further, and, by introducing us into the secrets of his distresses and his decisions, might show that poor Lord North's position was one of the most pathetic in history. His world was indeed "out of joint," nor was it for such as he to "set it right." Whenever he proposed to abandon the enterprise, — as it is easy to say he should have done, — this poor, half-witted King, was ready with the appeal, "If you leave me, where shall I go?" And the helpless Minister, without the possi-

Lord North.

bility of advising with any human being, had to consider what would come to England, if, in the sudden shock of his resignation, his King should go mad, as he had every reason to suppose he would. Such a position would be tragic, indeed, if one of the really great men of history were placed in it. It is perhaps more tragic, certainly more pathetic, when such questions are to be solved by the unadvised wisdom and the uninstructed conscience of a man second-rate in everything. And such a man was Lord North.

The student of American history, reading the interesting record of the three years with which Lord North's administration began, searches with curious interest for whatever beginnings he may find of the policy which made the United States an independent nation. He follows thus the history of John Wilkes, of the prosecution of the printers and the beginning of reported debates; he studies the letters of Junius; he reads of the birth of the East Indian Empire of England; he follows the outbreak about the Falkland Islands; he is involved in the tragedy of the Queen of Denmark, and in the matrimonial alliances of the King's brothers. But these events and these scandals, while they intensely excite the people of Great Britain, seem to have no concern with the fortunes of America. On the other hand, the fortunes of America, through those years, seem to have no interest for the people or the statesmen of England. The votes on American affairs are taken in houses not full, and the views of the Ministry are always sustained by very strong majorities.

Attempt to repeal the duty on tea.

In the session of 1770, an effort was made to repeal the tea duty. But Lord North carried it by a majority of seventy-two. Dr. Franklin thought the House would have agreed to the motion but for what he called "lying letters," which asserted that the non-importation agreements were no longer favored in America, and that the zeal of the patriots was chilled. Two years afterwards Franklin won a personal triumph, and the colonies a substantial one, in the removal of Lord Hillsborough from the post of Colonial Secretary. The reader has seen that he was not friendly to America, in the trial of strength between the Duke of Grafton with his friends and Lord North with the King's friends. As time passed, Franklin brought forward his plan for a company for the settlement of Illinois, and secured the interest of three members of the Privy Council. But when the petition was referred to the Board of Trade, Hillsborough reported against it. He even took the ground that this would be a place of refuge for offenders, and would draw away too many people from Great Britain. Franklin replied in detail. When the petition came before the Privy Council, they granted it, setting aside Lord Hillsborough's report. Hillsborough resigned, thinking, perhaps, that

his resignation would not be accepted. But his colleagues were glad to get rid of him. Lord Dartmouth, who was really a friend of the colonies, succeeded him. Dr. Franklin thought, and had reason to think, that such an incident and such an appointment were good omens for the colonies. Governor Hutchinson notes that the government even proposed to withdraw the fleet from Boston to Halifax, which had been formerly the naval station. Other signs seemed favorable. "A general state of quiescence," wrote Arthur Lee, "seems to prevail over the whole empire, Boston only excepted."[1] But these hopes were illusive. At the same time a negotiation was in progress which, as the event has proved, made vain all such omens of peace. True, America seemed better satisfied. The removal of the regiments from Boston had been followed by the tranquillity which had been promised. But any hope of a permanent good understanding, or of a gradual forgetfulness of the causes of issues, was swept away at once by a blunder of Lord North's. This belongs to the poor tricks which James the First used to honor by the name of "king-craft," and it resulted in the dismemberment of the empire.

Hillsborough succeeded by Dartmouth, as Secretary.

For better or for worse, the Crown of England was allied to the East India Company, which even then was important, and which afterwards became imperial. This Company, at the end of a series of bad years, of which the misfortunes were due in part to the refusal of the Americans to import tea from England, found itself burdened with 17,000,000 pounds of tea in its English storehouses. It was necessary for the Government of the nation to save the company from bankruptcy by lending it a million and a half of money. The proposal was therefore matured, that the Company might export to America as much tea as it wished, and receive back, as drawback, the tax of sixpence a pound which the teas had to pay into the English exchequer. The teas would then have to pay in America only threepence a pound, the one remaining tax left, after eight years of dissension.

East India Company.

Lord North probably thought that in this way he should please two parties not easy to please. He served the East India Company, and he seemed to grant to the Americans what they wanted, a virtual suspension of the Navigation Act, so far as teas were concerned. For this plan he obtained the permission of Parliament. The wiser directors of the East India Company distrusted the gift. They knew men better than Lord North. They begged to be permitted to pay to the exchequer the sixpence duty in England, and to land the teas free in America. But this Lord North refused, probably at the King's

[1] To Reed, February 18, 1773.

direction. "There must be one tax," said the poor King, "to keep up the right." Lord North, therefore, with fatal resolution, held to the principle involved. He confessed that the whole revenue obtained would be, at the best, but twelve thousand pounds. The East India Company consented at last to the scheme, and, as the summer passed, freighted several ships for America, on their own account, consigning them to merchants in the different sea-ports. Information as to these consignments began to arrive in America in September.

The duty on tea retained.

Franklin's hopes of peace from Lord Dartmouth's appointment, or whatever other cause, were rudely dispelled by another incident, of which the germ showed itself in this same year, 1773. Confidential as his relations were with many members of Parliament and of the Government, it was mentioned to him one day, apparently as no secret, that the Government had been guided, in quartering the troops in Boston and in its other severe measures, by the advice of Americans born, — men of character and position. Franklin said he did not believe this. To satisfy him, twelve letters were brought him, written by Hutchinson, the Governor, and Oliver, the Lieutenant-governor of Massachusetts, both natives of that province. These letters confirmed to the full the statement which had been made to him. They proposed the introduction of troops, and one of them proposed the establishment of a "patrician order." In one letter, which was particularly outspoken, Hutchinson said there must be an abridgment of what are called "English liberties." He said he doubted whether it was possible that the people of a colony should enjoy all the liberty of the parent state.

The Hutchinson Advice Letters.

Franklin obtained permission to send the originals of the letters to America, on condition that they should not be copied or printed, and sent them in his official letter, as Agent of the House of Assembly, to the chairman of their Committee of Correspondence. They might, he said, be read to that committee and a few other gentlemen. So soon as they arrived in Boston, they awakened a storm of indignation against Hutchinson. He had been affecting a conciliatory part. In the midst of the contest between him and the Assembly, — which was eager that the colony should pay his salary in accordance with the ancient usage, — he had affected to be, not indeed a champion of the extreme views, but a mediator between the colonies and the Crown. Here came evidence that in all such affectation he was a liar. The colonists were wounded by a man who should have been their friend. A Governor of their own religion, of their own blood, born in their chief town, and educated among them, had turned against them.

Sent to Boston by Franklin.

BENJAMIN FRANKLIN.

(After the portrait by Duplessis in the Boston Public Library.)

Echoes of the storm which rose in Boston soon resounded in London. A duel between Mr. John Temple and Mr. Whately, brother of the gentleman to whom these letters were addressed, made the matter one of universal interest. The Privy Council itself was so far moved that it took up the petition of the Massachusetts Assembly for the removal of Hutchinson and Oliver, — a petition which, under ordinary circumstances, would have been left to sleep. There followed a most exciting meeting of that great body of state, — a body which in our time acts only on occasions of mere form. It was the fullest meeting of the Council which Edmund Burke remembered. Everybody of note was there. The petition was read, with the resolutions of the Assembly, and the letters on which those resolutions were founded. John Dunning, afterward Lord Ashburton, supported the petition as counsel, and supported it temperately and ably. Then followed what was called at the time a "bull-baiting." Wedderburn, a lawyer whom Lord North's favor had hurried forward, and who was afterward Lord Chancellor, under the title of Lord Loughborough, spoke, as Solicitor-general, in opposition to the petition. He spoke for three hours, — largely in violent personal attack on Dr. Franklin, who of course was present. He charged Franklin with stealing the letters of Hutchinson and Oliver, and said that men would hide their papers from him in future. In a classical allusion, he called him "a man of three letters," by which the Romans meant a thief, and charged him with intriguing to make himself Hutchinson's successor. His triumph was complete. "No speech was so much applauded," says Hutchinson, "since those of Cicero against Anthony." The Council pronounced the petition of the House of Representatives of Massachusetts groundless and scandalous. In the method which the Council took to do this, it had insulted the great American who was the admiration of half England and of all Continental Europe. The scene excited public criticism everywhere. The wit of Wedderburn's address was highly praised; but the dignity of Franklin's manner made him new friends.[1] Afterward, William Pitt the younger, in the House of Commons, alluded to this scene in the "Cockpit."[2] He bade the House recollect how the future Chancellor of England had called the future plenipo-

The Temple-Whately duel.

Wedderburn insults Franklin.

[1] On the interview in the Council Chamber, Horace Walpole wrote this epigram: —

"Sarcastic Sawney, swollen with spite and prate,
On silent Franklin poured his venal hate:
The calm philosopher, without reply,
Withdrew, and gave his country liberty."

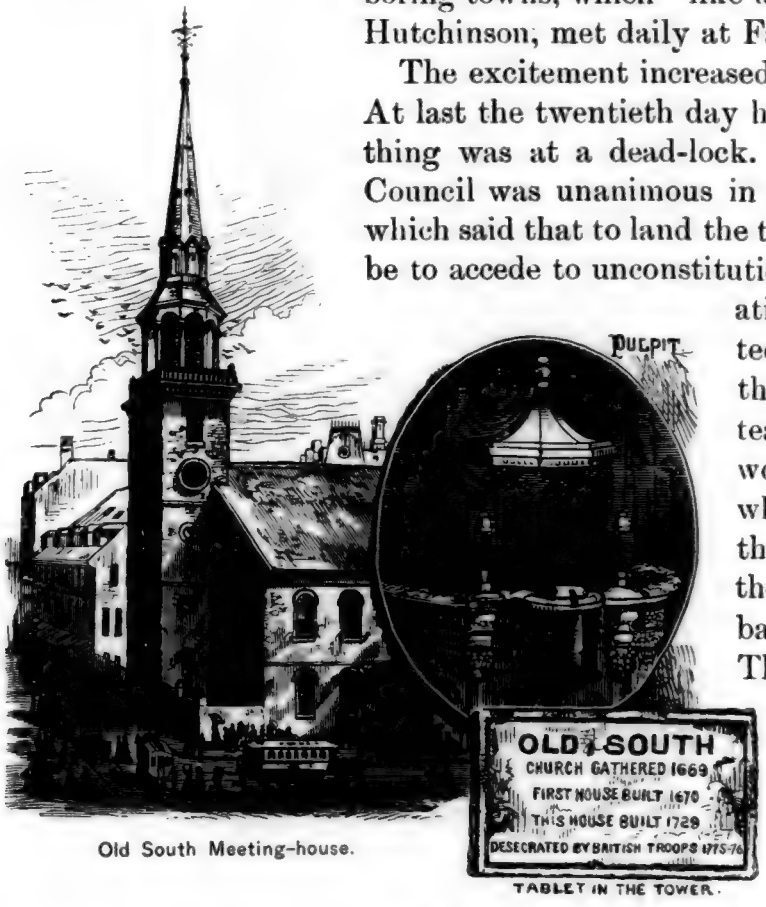
[2] The Cockpit and Tennis Court. These two appendages to the palace at Whitehall had been built by Henry the Eighth, close to St. James's Park. The Treasury now occupies the site of the Cockpit, and the Privy Council Office the site of the Tennis Court.

tentiary of the United States "a hoary-headed traitor," and how, as they walked away, men were ready to toss up their hats and clap their hands for joy, as if they had obtained a triumph. "Alas, sir, we paid a pretty dear price for that triumph afterwards." What they paid is shadowed in Wedderburn's own speech: "How will it hereafter sound in the annals of the present reign, that all America, the fruit of so many years of settlement by this country, the fruit of so much blood and treasure, was lost to the Crown of Great Britain in the reign of George the Third?"

This incident took place on the 29th of January, 1774. It was, in the last degree, an outrage upon Franklin, but was not in itself singularly important, for the result arrived at could have been easily predicted. It became, however, a visible, or dramatic exhibition of the conflict, which had thus far been somewhat concealed in despatches or debates. But this conflict had already passed such limits. The England which applauded the speech of Wedderburn as nothing had been applauded since Cicero, was waked now by a sudden shock, — to feel that the real contest was not a "bull-baiting" in "the cockpit," as the hall of the Privy Council was aptly called. It was to be on another continent and on a larger scale.

On the 27th of January arrived in England the first news of the reception of the vessels which had been sent out with the East India Company's tea. The people of America understood very well who made this great consignment. Although the patriots had winked at trifling private imports from England, so that, in certain cases, men had paid the duty, they did not therefore close their eyes when the Government of England, by the agency of the East India Company, invited them to give way on the matter of principle. The offer of a drawback for the Company's benefit and a consequent reduction of the price, was only an insult to such men, as Lord North might have known it would be. The Committees of Correspondence provided for the occasion long before the teas arrived. They must be sent back. In most instances they were. But in Boston Hutchinson refused to give a permit for the return of the ships, acting with that happy obstinacy about trifles which distinguished all his administration. The tea was at the wharf, and the town meeting of Boston was called to consider the crisis.

Arrival of the tea ships.



The *Dartmouth*, the first of the tea vessels, arrived on the 28th of November. A town meeting was called the next day, and because Faneuil Hall was not large enough it adjourned to the Old South Meeting-house, which was so often used for such purposes, that it gained the name from an English Governor of being the "seed-bed of rebellion." In twenty days from the arrival of the first ship the Collector would make a formal demand for duties.

In the town meeting Samuel Adams himself moved the action, which, as chairman of the Committee of Correspondence, he had suggested to the other colonies, "that the tea should not be landed, that it should be sent back in the same bottom, to the place from which it came, at all events; and that no duty should be paid on it." This resolution passed unanimously, and the owner and master were directed at their peril neither to enter the tea at the custom-house, nor suffer it to be landed. A watch was set on the ship, and six post-riders were appointed to notify the country towns of any effort to land it by force.

While negotiations were going forward between the Committee of the town and the consignees, two more tea ships arrived. By direction of the Committee, they were anchored near the *Dartmouth*, that one guard might be enough for all. This Committee, which took the whole direction of the controversy on the part of the people, was made up of the Committees of Correspondence of Boston and from neighboring towns, which "like a little senate," said Hutchinson, met daily at Faneuil Hall.

The excitement increased from day to day. At last the twentieth day had come. Everything was at a dead-lock. The Governor's Council was unanimous in accepting a report which said that to land the tea would be to accede to unconstitutional taxation. The Committee would not permit the landing of the tea. The Governor would not give a pass which should enable the ship to go by the Castle on her way back to London. The Admiral had placed ships of war to guard the channels, that no vessel without a pass should go to sea. The meeting of the people was held again at the Old South, which was crowded. It was no longer a town meeting. A citizen of Weston, Jonathan Williams, was chosen moderator, as if to show that the coun-

Not allowed to be landed.

Old South Meeting-house.

try and the town were together. When it had been kept waiting all day, a messenger came from the Governor's country seat on Milton Hill, at a quarter before six, announcing his refusal to grant a pass. Samuel Adams said, "This meeting can do nothing more to save the country." There was a moment of silence. A voice in the gallery cried, "Hurrah for Griffin's wharf." The meeting instantly dissolved, and the immense throng proceeded to the point where the ships lay. Two bodies of young men, whose faces were blackened, and who were otherwise so disguised that they should not be known, were all ready for the exigency.

A public meeting.

Passing to the shore, at the wharf they took possession of the ships. They bade the captain and crew furnish hoisting-tackle, and they obeyed. The chests were lifted on deck and split open, and the tea poured into the water. The great majority of the men of Boston, standing on the shore, watched the business, as, through the moonlight of a winter's night, the chests were emptied into the silent bay. The business was conducted without noise or disorder. When every box was destroyed, the working party withdrew their sentinels, and the town was at peace. It was well nigh dawn.

The tea thrown overboard.

Hutchinson's Country Seat.

It was evident that the most careful preparation had been made by the leaders for the crisis. It was equally clear that their orders were well obeyed. Even in the traditions of Boston, not more than two or three names can be certainly given of those who made up the working party. All the town saw the act. But not more than fifty, at the most, joined in the work. They kept their secret, which had probably the sanction of an oath. It is believed that a list of the actors was preserved for more than half a century, but this list probably exists no longer.[1]

[1] So well was this great secret kept, that, with two or three exceptions, it is certain that

Attempts were made by some of the spectators to carry off small portions of the tea, but probably with little success. The descendants of one of the party on board the vessel long preserved as a sacred relic — perhaps still preserve — a few leaves which their ancestor found in his shoes on returning home. A heavy bank of the tea leaves was thrown up on the Dorchester shore. One Captain O'Connor, it is related, filled his capacious pockets, but was seized as he jumped from the vessel, and left the skirts of his coat in the hands of the person who attempted to stop him. O'Connor was a well known resident of Charlestown, and his coat-tail was the next day nailed to the whipping-post in that town, — a ludicrous but effective penalty for his want of patriotism.[1]

How earnest and wide-spread the feeling was on this subject, is shown by the public records in other places besides Boston. In Frederick County, Md., in Norfolk, Va., in Piscataqua, N. H., and in other places, petty dealers who had clandestinely received a few pounds were haled before public committees and forced to confess their misdeed and deliver up the tea for destruction. At Stamford, Conn., in June, 1775, one Sylvanus Whitney appeared before the Committee of Observation, and confessed that he had been "guilty of buying and selling Bohea tea, since the first of March last past, whereby I have been guilty of a breach of the Association entered into by the Continental Congress; and sensible of my misconduct, do, in this publick manner, confess my crime, and humbly request the favor of the publick to overlook this my transgression." "Whereupon," says the official record, "the committee passed sentence against him, agreeable to the direction of the Continental Congress. His punishment being greater than he was able to bear, he requested the liberty to advertise himself, and offering to deliver up the unfortunate tea to be burnt, the committee were of the opinion that it would satisfy the publick, who are requested to accept of the following concession as a satisfaction for his crime." In the evening the tea was hung upon a gallows erected for the purpose, in the presence of a great crowd of citizens, and finally a large bonfire was built under it, "as it was thought dangerous to let the said tea hang all night, for fear of an invasion from our tea-lovers."[2]

A meeting of citizens in New York compelled the consignees to decline receiving the cargo sent thither, and when the ship arrived, a

if a man's descendants say "he was certainly on the tea-party, for he always said so," that man was not of the working party, but was only a bystander. If on the other hand a person who was questioned in old age declined to say whether he was of that party, there is a possibility that he was.

vigilance committee took possession of her, and after some days she sailed again for England with all her tea on board. The captain was inclined to be stubborn; but after being escorted to the town, he was convinced that any attempt to land his cargo would only insure its destruction. Another ship had brought a few chests as a private venture, and when the fact was discovered, a mob threw them into the river. The ship sent to Philadelphia was stopped before she reached the city, and when her captain heard what had happened to the cargoes in Boston harbor, he wisely

Disposition of tea in other places.

Captain O'Connor's Coat-skirts nailed to the Whipping-post.

turned her prow toward home. The tea sent to Charleston was landed, but, purposely perhaps, was stored in damp cellars, and in a short time was found to be useless.

Intelligence from Boston reached England at the moment when Wedderburn was uttering his new philippics. The Government, which had seriously entertained the project of withdrawing the fleet, heard of this act of defiance in the harbor where that fleet lay. The King was prompt in taking up the quarrel. On the 7th of March a royal message was sent to Parliament with the principal documents received from America. On the 14th of the same month Lord North brought in the measure which proved, in the event, to be the

The Boston Port Bill.

declaration of war, — which is generally known as the Boston Port Bill.[1] This bill, by way of punishing Boston as the hot-bed of rebellion, provided that after the 18th of June, no persons should load or unload any ship in that harbor. The customs and commerce, it was hoped, would be transferred to Salem. Another measure, called "the Massachusetts Government Bill," revised the charter. The Council was to be appointed by the Crown, and the magistrates by the Governor. A third bill provided for the trial in England of persons engaged in the late disturbances, and a fourth provided for the government of Quebec. All these bills were opposed by the most liberal members, who were regarded as the friends of America, and Pownal and Johnston, who had been Royal Governors, and generally voted with the ministry, spoke against the Port Bill. Pownal said boldly that, in Hutchinson's case, he would have called on the troops without the consent of the Council, — for Hutchinson had excused himself by the Council's backwardness. He had withdrawn some companies from Castle William and posted them in neighboring towns, — not, however, in Boston. But the truth there was, that "Sam Adams's regiments" were nothing as against the array, not of a mob, but of an organized force which the Committees could have brought against them. It is in Johnston's speech on this occasion, that the statement occurs, — for which he doubtless had good warrant: "If you ask an American who is his master, he will tell you he has none, — nor any Governor but Jesus Christ." The bills all passed by large majorities. The Quebec bill was opposed with most energy. It has proved in a hundred years the source of great difficulties in the civilization of Canada.

Massachusetts Government Bill.

These acts were received in the colonies with every token of disgust and rage. The people of the sea-port towns of Massachusetts were eager to show that they would not profit by the losses of Boston. The people of other colonies were eager to show that they were ready to go as far as Massachusetts. The Port Bill was printed with black lines about it, as if it described a tragedy, and with the title, "A barbarous, cruel, bloody, and inhuman murder." On the back of one of the editions was printed a private letter from London, without a name, which contained these words: "I can assure you that the commander has private orders not to fight unless they can prove you to be aggressors, — nay, they have orders not to commence hostilities without orders."

[1] It is not the only instance where a law generally resisted has retained the title of a "Bill," as if it had never passed from that embryo condition to become an "act." Thus the Fugitive Slave Law, which was law for many years in America, is still sometimes called the "Fugitive Slave Bill."

The sympathy of the other colonies had been promised in advance.

Action of the Virginia Assembly.

The Virginia Assembly, in March, 1773, had formed a colonial Committee of Correspondence, and had invited all the Assemblies "on the continent" to join them. Printed copies of their resolution were sent by the Massachusetts Committee of Correspondence to every town in their province. Connecticut, Rhode Island, and New Hampshire joined in the appointment of legislative committees, and a second Continental Congress was proposed. Curiously it happened, that, at the moment when the English Ministry dismissed Franklin from his place as Postmaster-general, the colonists were planning a post-office of their own.

The Port Bill provided that the trade of Boston might be recovered on proper apology, and, in particular, if the tea were paid for. But a meeting of the towns around Boston, held in Faneuil Hall, urged that no attention should be given to this offer; they prepared to join their suffering brethren of Boston in every measure for relief. They drew a circular letter proposing general cessation of trade with England. Other colonies resolved to assist the people of Boston. "Don't pay for an ounce of the damned tea!" is the pointed phrase with which Christopher Gadsden accompanied a generous contribution from South Carolina.

Had Lord North advised diligently as to the measures best fitted to unite the colonies, he could not have done better than he did. To carry out those measures in Boston, he appointed General Thomas Gage Governor in Hutchinson's place. After a very short passage of twenty-four days only, Gage arrived, immediately after the news of the passage of the bill, which would close the harbor on the first of June.

Gage appointed Governor of Massachusetts.

A Profile View of the Heights of Charlestown.

CHAPTER XV.

BEGINNING OF THE WAR.

Loyalty of the Americans to the Crown. — Outbreak of Hostilities. — Colonel Leslie's March to Salem. — The Anniversary of the Massacre. — Altercations with the Troops. — Excursion to Jamaica Plain. — The Committee of Safety. — Colonel Smith's March to Lexington. — Signal Lights in North Church Belfry. — The First Shot. — Concord and Concord Bridge. — The Fight at Lexington. — The English Retreat. — Lord Percy and his Reënforcement. — The Siege begins. — Arrival of more Troops from England. — Skirmishes in Boston Harbor. — Bunker Hill fortified by the Americans. — The Battle. — Results of the Battle.

A century after the outbreak of the war which parted the United States from any political dependence on England, the recurrence of the anniversary of every battle of that war was enthusiastically celebrated by the people of every place concerned. Tradition yielded its doubtful authority; contemporary records gave up from the dead their living testimony; and orators and poets became historians, to make real the finest details of the past to the imagination of the children's children of the actors. In such eager study of every detail of history, it is certain that the springs of movement and the precise facts are better known to us than they were to those who were enveloped in the dust and smoke of action. The time has come when the history of those days can be written with near approach to accuracy.

When the year 1775 opened, it found the colonies exasperated to the last degree by the persistent efforts to subject them to the arbitrary rule of the King. Unwilling to give up the traditions of loyalty by which, for two generations, the House of Brunswick had been regarded as the apostles, not to say martyrs, of Liberty, the popular writers and orators in America charged the violations of their rights and customs, not on the King, but on the Ministry of the time. They were undoubtedly sincere in this use of language. The unpopular acts were spoken of as the "Ministerial Acts," and the army which was sent to enforce them was the "Ministerial Army." The revelations of a century have proved that this loyal effort to palliate the conduct of George III. was

Affairs at the beginning of 1775.

all wrong. He was the centre of the whole scheme of American taxation. In a certain wrong-headedness which was perhaps the first symptom of his insanity, he imagined that in the colonies, at least, he might play the part of an absolute monarch. The satire of another generation has called him at this period a "Brummagem Louis XIV.," and that phrase perhaps sufficiently describes his relations to American history.[1]

A conflict inevitable.

In this aspect of affairs, with a little English army stationed at Boston, and a handful of royal troops at other capital towns in the colonies, it was a question of time only, a question even of days and hours, when the bolt should fall. And, since it has proved that a new empire was born on the day of the first open collision between the colonists and the authorities of the Crown, every place in America which can present any claim to that honor has urged it eagerly at the bar of history.

First hostile meeting at Salem, Mass.

It is thus that the people of Salem, in Massachusetts, on every fit occasion, are proud to remind their countrymen that on Sunday, the 26th of February, 1775, they met the English troops in arms, and met them successfully. Nay, more, it seems certain that, when an English infantry soldier used his bayonet against a Salem boatman, the first blood of the Revolution was shed there. But, fortunately or unfortunately, as the reader may judge, the royal commander withdrew his troops without battle; and the very success of the preparations of the people of Salem and Essex County, the very promptness with which the Essex regiment under Timothy Pickering stood to its arms that day, has deprived Salem, in the mind of the American people, of the honor of beginning the American Revolution.

At the request of some friends of the royal government in Marshfield, Plymouth County, Massachusetts, General Gage had sent a small detachment to that town, to protect them from insult. This detachment had landed there, and had taken up its quarters without resistance from the people. It was, perhaps, because he was encouraged by this slight success that Gage struck next at Salem. He had heard there were some cannon there. He sent out Colonel Leslie, with a de-

[1] A passage in a speech of Dunning, afterwards Lord Ashburton, denouncing Lord North's bill for the government of Massachusetts Bay, intimates a feminine influence in the Crown counsels. "When I talk of the Minister, I mean to speak with all due respect to the noble Lord, though I do not consider him as the immediate actor of all this. I know not the age, the person, *or the sex;* but, that I may not be wrong, I will use the language of Acts of Parliament, which I imagine will comprehend, and will say, he, she, or they, — to that person or persons alone do I mean to address myself." — Speech in House of Commons, May 2, 1774. The allusion is to the King's mother. Walpole speaks of "that cool dissimulation in which he had been so well initiated by his mother, and which comprehended almost the whole of what she taught him."

tachment, to seize them, on Sunday, February 26, 1775. The party landed at Marblehead in the morning, while the people were at meeting, and set out by land for Salem. The news had been sent from Marblehead before them, and the Salem people were not surprised. The detachment marched through the town of Salem; but when they reached the "North Bridge," they found the drawbridge up, and the commander was then told by the assembled people that really this was a private way, and that neither Colonel Leslie nor any one else could use it without the owner's permission. Colonel Leslie seems to have recognized that they had the law on

Leslie's expedition.

Salem Bridge.

their side, but in answer he appropriated two scows or "gondolas," [1] and began to embark his men. On this, the owners of the scows leaped into them with the soldiers, and began to scuttle the boats. Here Colonel Leslie's respect for private right gave way, and the owners were expelled with bayonet-thrusts. This was the first bloodshed of the Revolution.[2]

At Salem Bridge.

But Leslie did not follow up this advantage. One of the Salem ministers, Rev. Thomas Barnard, had proposed a compromise, which he accepted. The bridge was lowered, and the troops marched over, and fifty yards beyond. Then the Colonel shook hands with the min-

[1] "Gondola," the Italian word, was in use in English literature as early as Spenser's time. "Scow" is a local phrase in New England for a large flat-bottomed boat, generally towed from place to place, or propelled across shallow water by poles. "Gondola," pronounced "gundalo," is still familiarly used in New England, as a synonym for "scow," by people who never heard of Venice.

[2] But before this a man had been hanged in the Hampshire Grants, now Vermont, for resisting the Crown authority.

ister, and marched his command back over the bridge. As he left Salem, the Danvers company of minute-men, the "flank company" of the Essex regiment, arrived. But their services were not needed. Colonel Leslie continued his retreat to Marblehead and Boston without seizing the cannon he was sent for.

Warren's oration.

On the 5th of March, Dr. Warren delivered the fifth annual oration on the Boston Massacre, in that town. It was his second oration on this subject. The church was crowded with people of both parties. Even the steps of the pulpit were covered with British officers. So dense was the crowd, that Warren and his friends entered the church by a ladder through the pulpit window. There was no disturbance while the orator spoke. The oration was pointed and vehement, but always carefully avoided anything which could be called treason. This passage hints to the gentlemen around him what Warren and his friends were learning: "Even the sending troops to put these acts in execution is not without advantages to us. The exactness and beauty of their discipline inspire our youth with ardor in the pursuit of military knowledge. Charles the Invincible taught Peter the Great the art of war. The battle of Pultowa convinced Charles of the proficiency Peter had made." He said, as had been said before, that he and his friends were not seeking independence. But there were men in that house who were. "But if these pacifick measures are ineffectual," he said, "and it appears that the only way to safety is through fields of blood, I know you will not turn your faces from your foes, but will undauntedly press forward until tyranny is trodden under foot, and you have fixed your adored Goddess Liberty fast by a Brunswick's side on the American Throne."

George III. and Liberty, on an American throne, seated side by side, like William and Mary, probably made their last appearance then, even in prophecy. The oration ends with these words: "Having redeemed your country, and secured the blessing to future generations, who, fired by your example, shall emulate your virtues, and learn from you the heavenly art of making millions happy with heart-felt joy, with transports all your own, you cry, *The glorious work is done!* Then drop the mantle to some young *Elisha*, and take your seats with kindred spirits in your native skies."

As Warren spoke, an officer of the Welsh Fusileers, who sat on the pulpit stairs, drew from his pocket a handful of bullets and held them out in his hand for the rest to see. Warren dropped a white handkerchief over them.

The theme of the orators on all these occasions was the danger to liberty and order when standing armies are quartered in towns.

With the return of the garrison to Boston, the necessity of this lesson returned. That King George quartered soldiers among the people, became one of the indignant complaints of the Declaration of Inde-

Warren's Oration.

pendence. Only a week after Warren's address, appeared an illustration of the danger he described.

A man named Ditson, from Billerica, had bargained with a soldier for a gun. As soon as he had paid his money he was seized by half-a-

dozen of the soldier's comrades for breach of the act against trading with soldiers. They kept him locked up all night, and the next morning the officers condemned him without a hearing, to be tarred and feathered. The soldiers were only too glad to execute this punishment, and then paraded him through the streets with a placard inscribed "American Liberty, or a Specimen of Democracy."

Arrest of Ditson.

The Billerica selectmen remonstrated to General Gage, in a paper which ends with ominous words: "May it please your Excellency, we must tell you we are determined, if the innocent inhabitants of our country towns must be interrupted by soldiers in their lawful intercourse with the town of Boston, and treated with the most brutish ferocity, we shall hereafter use a different style from that of petition and complaint."

There is something of real pathos in such protests from the government of little country towns, which, but for the result, would seem ridiculous. That in "town meeting" a town which had not fifty voters, should vote money to buy powder and flints with which to make war against a King who, within fifteen years, had humbled the French monarchy, seemed absurd. But the history is full of such declarations. And when the selectmen of Billerica sent their warning to that King's Lieutenant-general in America, the illustration of what they meant was at hand.

To try the country, and at once to display his little army and to exercise it after a winter cramped in quarters, General Gage sent out on the 30th of March, a large body of troops on what was called "an excursion." Earl Percy, afterwards Duke of Northumberland, then a young officer of high rank in Gage's army, commanded the party, which consisted of five regiments. "It marched to Jamaica Plain, a village about four miles south of Boston, then crossed the country to Dorchester, a town nearer the sea, and so returned to Boston, after a march of about ten miles. The season was early, and it was said that the gardens and fields of the farmers were unnecessarily injured by the soldiers.

Gage's excursions.

It was to check just such "excursions" that the "Committee of Safety," since celebrated, had been created by the Provincial Congress of Massachusetts as early as February 9 of this year. This committee, consisting of five men, was a permanent executive. Its "business and duty" were, to "alarm, muster, and cause to be assembled with the utmost expedition, and completely armed, accoutred, and supplied, such and so many of the militia of the province as they shall judge necessary, and at such place and places as they shall judge proper." Such levy was to be made when

The Committee of Safety.

the committee should think an attempt was made by force to carry out the "Boston Port Bill." The committee did not judge that such an occasion was presented by Percy's "excursion" to Jamaica Plain. It had no military objective. "It marched without baggage and without artillery," says Warren in a letter written at the time. "But," he adds, "had they attempted to destroy any magazines, or to abuse the people, not a man of them would have returned to Boston."

The Provincial Congress of Massachusetts had been collecting at several points such stores, both of arms and of provisions, as their means permitted. One of the most indignant outbursts in the English Parliament, the year before, was in ridicule of the audacity with which the General Court of Massachusetts had sent for the royal approval a bill for the purchase of twelve brass cannon. Many stores had since been purchased without King George's approval. The towns kept theirs in their own magazines; those which belonged to the province were at Concord and Worcester, the county towns of Middlesex and Worcester counties. Concord is about twenty miles northwest of Boston. General Gage first sent two officers in disguise to reconnoitre each of these places and the routes to them,[1] and on Tuesday evening, the 18th of April, he sent a detachment of about eight hundred men to seize and destroy the guns, munitions, and stores at Concord. To insure a surprise, his troops were to march at night. Under the command of Colonel Smith, they left Boston in the boats of the squadron at the water edge of the Common,[2] landed at Lechmere's Point, now East Cambridge, and marched across the salt marshes, so as to strike the road to Menotomy, or West Cambridge. The night was clear and frosty.

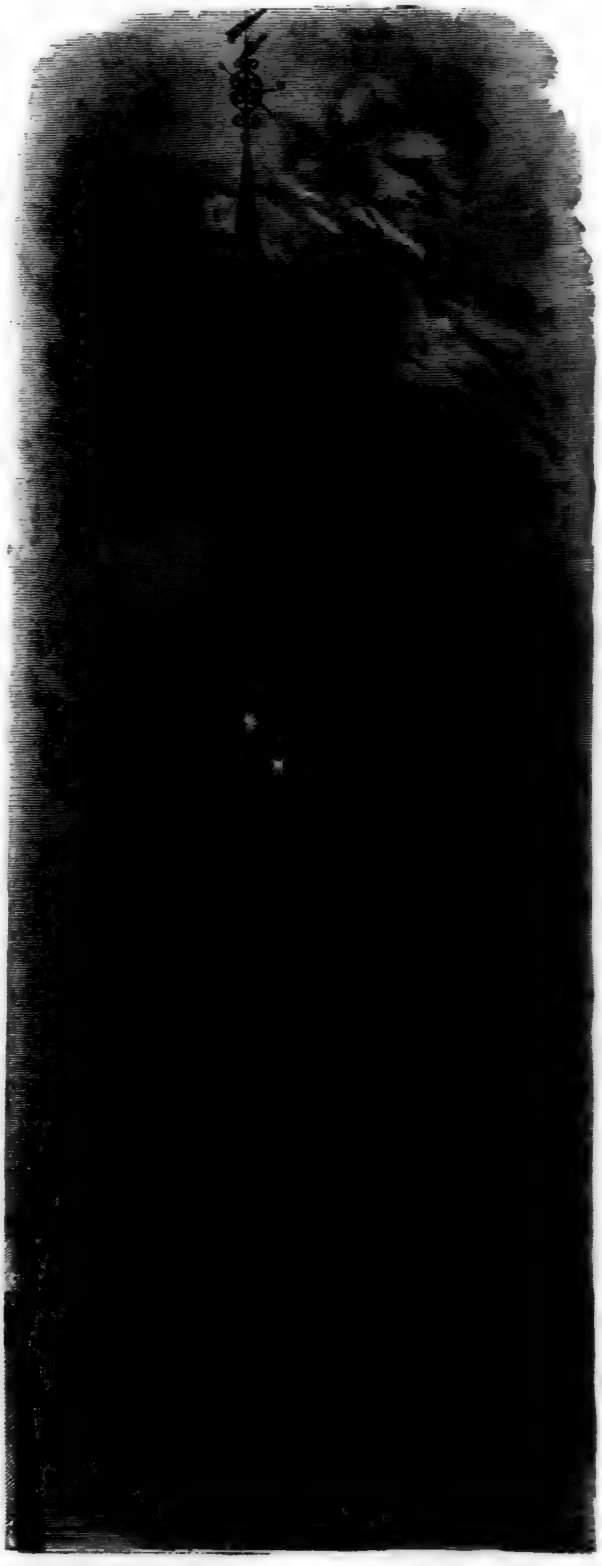
Gage's expedition to Concord.

Meanwhile the country was alarmed, and the patriot leaders in Boston were well informed of every step taken by the General and his troops.

Legend and poetry have illustrated every minute of that night; but no imagination can make incidents more dramatic than the precise facts as they come out in their purity, after all the tests of the sternest examination. Dr. Warren had returned to Boston from a meeting of the Provincial Congress at Concord. It was as early as the 16th, when Gage gave warning of his plans, by launching the boats of the transports, which had been laid up all winter. On Sunday, the 16th, Warren sent Paul Revere from Boston to Lexington, to tell Hancock and Adams that the boats were launched. Paul Revere

[1] It was not a hundred years, since Worcester had received that name in direct insult to Andros, in memory of the Worcester where the son of the King of England fled for his life before the army of Cromwell.

[2] Near what is now Park Square.



was a coppersmith and engraver. He was one of thirty "North End" mechanics who through the winter had made it their business to patrol the streets of Boston at night, in order to note every movement of the English troops. Revere took his message to Hancock, and returned through Charlestown. At Charlestown, on the night of the 16th, he agreed with "Colonel Conant and other gentlemen that if the British went out by water, we would show two lanthorns in the North Church steeple, — and if by land one, as a signal." Returning to Boston, he reported his arrangements to Warren.

On Monday and Tuesday General Gage did nothing; but the two Committees — of Safety and Supplies — were preparing for him at Concord. They passed more than twenty votes relating to the removal and disposition of cannon, ammunition, and stores. Tuesday evening Warren discovered in Boston that the troops were to move at once. He sent in great haste for Revere, and begged him to set off for Lexington. This he did, first calling — as his own narrative relates — "upon a friend," and desiring him to hang out the two signal lanterns from the tower of North Church.[1] He took his coat and boots for his ride, and, in his boat, which was in readiness, was rowed over by his men to Charlestown. When he came into the little town, he found that Colonel Conant and others had already seen his signals. Here he met also Richard Devens, who had just returned from a meeting of the Committee of Safety, and who told him he had met ten British officers riding towards Lexington from Cambridge. These were a party who had dined at Cambridge, in the futile hope that by disposing themselves on the road to Lexington after night-fall, they might cut off all news of the advance.

Revere found a good horse in Charlestown, he says; the night was pleasant, and at eleven o'clock he started on the eventful ride which, in Longfellow's version of it, has made him immortal. The moon was already up. He had scarcely left Charlestown, and was passing "where Mark was hung in chains," when two English officers on horseback tried to take him. But Revere and his horse were too quick for them. In Medford he waked the captain of the minute-men. From Medford to Lexington he alarmed almost every household. He came to Lexington about midnight, and gave his news to Hancock and

[1] "I left Dr. Warren, called upon a friend, and desired him to make the signals," is Revere's statement (*Mass. Hist. Soc. Coll.*, vol. v.). Who the "friend" was is a disputed point, on which there is no evidence except family tradition. The descendants of Robert Newman claim that he, who was the sexton of Christ Church, at Revere's request made the signals. The descendants of John Pulling declare that he was the intimate friend of Revere, and that it has been handed down in their family from generation to generation that it was he with whom Revere had an agreement to hang out the lanterns. It is not even certain which of the North churches was used, though that learned body, the mayor and aldermen of Boston, have decided that it was Christ Church.

Adams, who were at Rev. Mr. Clarke's house. Here he was joined by William Dawes, whom Warren had sent out by land, over Boston Neck. And after a little stay with Dawes and Dr. Prescott, "a high son of liberty," he started for Concord between one and two in the morning. Prescott, who was thus preordained to take the torch when it fell from the hand of the first messenger, had lingered thus late, on that critical night, with his sweetheart, a young lady of Lexington, whom he afterward married. The three rode on together toward Concord. On the way, while Dawes and Prescott stopped to alarm a house, Revere was surrounded by four English officers. Prescott escaped, and reached Concord with the news. Revere was taken prisoner, and carried back by the English officers and the other six of their party to Lexington, where he arrived a little before the column of whose movements he had given information.

Signal Lanterns in North Church Belfry.

The Provincial Committee of Safety had adjourned from Concord to Menotomy.[1] On the sudden arrival of the troops, in the middle of the night, they were awakened, and, without dressing, ran into the

[1] Afterwards West Cambridge, now Arlington.

fields to escape. These were Orne, Lee, Gray, and Heath. Dr. Warren, the fifth member of the committee, was in Boston, watching what passed there. He remained till about seven in the morning, when he left Boston, forever, as it proved, with the words: "They have begun it; that, either party can do; and we 'll end it; that, only one can do."

Colonel Smith, as has been seen, had made every effort to arrest any person who could alarm the country, but had wholly failed. Conscious of his failure, he sent back for a reënforcement. Gage received his message at five o'clock. He had anticipated it, and at four o'clock had ordered out the first brigade, under Lord Percy. But by a series of those petty blunders and delays which befall armies unused to war, it was nine o'clock before this brigade was ready in Tremont Street, in Boston. The boats could not be used, because they were at Cambridge, and Percy marched by the circuitous land route through Roxbury and Brookline. Smith, meanwhile, pushed forward six companies of his light infantry with a body of marines, under Major Pitcairn, of the Marine Corps, directing him at the earliest moment to take possession of the bridges over the Concord River at Concord. This was a military precaution against attack from the militia north or west of that little stream. On Major Pitcairn, therefore, and his immediate command, was thrown the responsibility, which soon proved so critical, of the outbreak of the war.

Pitcairn at Lexington.

The sun had not yet risen when Pitcairn, hurrying on his men, approached Lexington Common. This was a little green in front of the meeting-house. Obedient to the alarm, the Lexington minute-men had formed some time before. They had sent scouts down the silent road, who had returned saying there was no enemy, so slow had been Smith's progress. On this announcement the men had withdrawn into the meeting-house and other houses around the green. At a second alarm they paraded again. They were under the command of John Parker, a veteran of the French war. As the column under Pitcairn approached, each party could observe the numbers of the other. Parker saw that his command was wholly outnumbered, and directed his men to retire. Pitcairn, at the same moment, rushed forward, with the words, which were long after repeated in every household, —

"Disperse! rebels, disperse!"

On each side there was the most eager wish that the responsibility of the first shot should be thrown upon the other party. The Continental Congress had indicated this wish earnestly. The Provincial Congress, anxious to conform to its directions, had cautioned the town committees to use the utmost forbearance. On the other side there

was equal caution. General Gage went to the verge of pusillanimity, in directing his officers not to assume the offensive. Colonel Leslie had been ridiculed, not in print only, but in song and talk, for retiring without a struggle at Salem, and yet he had simply obeyed Gage's instructions.

Each party, in a word, wanted to show that the other struck first. And it has long been one of the mooted questions of this great struggle, whether the English or the Americans fired the first shot. Major Pitcairn, in command on the one side, and Captain John Parker, who commanded on the other, declared that their orders were strict, that no man should fire till he was fired upon. But that somebody fired, a war of seven long years was the evidence.

Lexington Green.

Sifting to the very bottom the testimony which has accumulated on both sides, it seems that the witnesses, who spoke with caution, all spoke the truth. Pitcairn probably gave no order to fire, — even commanded his men not to fire, as he always said. It is admitted on all hands that at the last moment he struck his sword or staff down, as a signal to them to forbear firing. Parker ordered his men to disperse, and not to fire, — very properly declining to attack with seventy men, not even in array, a column of six companies of royal infantry. But Pitcairn also says he saw a "flash in the pan" on the other side. What happened was probably this: One of Parker's men, without order, drew trigger, and his gun missed fire. The

The first shot.

powder flashed in the pan. Some English soldiers, without order also, considered this to be, as it certainly was, a sufficient signal that war had begun, and fired some irregular shots in return. These shots hurt no one; but a general discharge from the English line followed, in which many of the Lexington party were killed and wounded. They then returned the fire, and the war was begun.

Had the unknown Protesilaus lived, the flash of whose disobedient musket, in the gray of the morning, precipitated at that moment the certain storm, he would afterward have told the story. It was not a moment to be forgotten, nor to be ashamed of. It must be that he was one of the seven men who were found by their wretched wives and mothers dead on Lexington Common, after the English column had passed by.[1]

It is true, then, that the Americans did not fire first. It is also true that one unknown Lexington soldier tried to fire and failed. It is true that the English commander and his men did not mean to fire first. It is also true, that as events were ordered, they fired the first shot, and took the first lives lost in the war. In the return fire of Parker's men, one English soldier was killed, and one or two wounded. Of Parker's little force one fourth were killed or wounded by one volley.

The English troops fired another volley, in triumph, on the Common, and pressed on to Concord. As has been already said, Colonel Smith knew that the country was alarmed, and had sent back for reënforcements. From Lexington to Concord, as they marched, is about eight miles, by a road which, as they must have noticed then, could be easily obstructed by an adverse force. It was still early morning, and they arrived at Concord without further interruption. They had already made what a prudent officer would consider a good day's march, and had been without sleep through the night. The General's intention must have been that they should take position for that day and the next night, at least, at Concord.

The march from Lexington to Concord.

But the whole country was now alarmed, and the towns showed what they meant when they defied King George. The arrangements made by the committees of correspondence and the Provincial Congress, to carry information of any emergency, worked wonderfully well. To this hour there are traditions in northern Middlesex and Worcester counties of the "man on the white horse," who passed through before daybreak, to say that the English had left Boston, and

[1] Ten men more were wounded, — seventeen in all, out of seventy, disabled by one volley. This fact is a sufficient evidence that their military array was not considerably broken, and that the firing was at very close range. Such a proportion of loss would be remarkable at the end of a battle.

that the war had begun. Nay, it would not be hard to find those who have heard that this message came before mortal horse could have reached the spot where it was heard, and that no man can tell who this fatal messenger was, or whither he went. Without supposing that any Castor or Pollux of the eighteenth century brought the fatal tidings, it is certain that they advanced with a celerity till then unknown. The reader has been told that Colonel Smith had notified General Gage that he should need reënforcements. This was before four o'clock in the morning. But long before the tardy forms of the officials in Boston had sent off Percy's brigade to him, the minute-men of the colony, for thirty miles around, had been summoned by the prompt prevision of the patriot authorities, and were on the march.

Thus the Concord minute-men had formed, and some of their neighbors from Lincoln, the next town, had joined them before Pitcairn and Colonel Smith arrived there. Some of the companies marched down the road toward Lexington, far enough to see that they were quite outnumbered, and then withdrew. They formed on a bold hill eighty rods behind the village. Here Barrett, their Colonel, joined them. He had been engaged, under personal and secret orders from the Provincial Congress, in concealing musket-balls and removing provisions which the colony had collected there. These were beef, flour, molasses, rum, and candles. Barrett found that he was outnumbered, and withdrew his whole force across the Concord River, where he held them watching the English column in their native village. Colonel Smith, the English commander, attended to the duty assigned him. He broke off the trunnions of three new cannon, which Barrett had not been able to remove; he destroyed some wooden spoons and trenchers, and other articles in the humble commissariat provided for the army which his march of that day was calling into the field. But this did not last long. Shots at the North Bridge told all men, if any man had doubted before, that war had begun.

The fight at Concord Bridge.

The Concord and Lincoln companies, on the hill above the North Bridge, were joined by different companies of minute-men from the towns of northern Middlesex. They could see smoke, which showed that the English were firing houses or goods. The court-house was in flames. They could see at the bridge three companies of English troops, who were under an officer named Laurie. It was when these men began to take up the bridge that the little army of militia acted.

The Lincoln minute-men volunteered to clear the bridge. Captain Davis, of Acton, made the remark, now a proverb, "There is not a man in my company that is afraid." Colonel Barrett commanded the

column to pass the bridge without firing; but, if fired upon, to return the fire. The New England passion for law appears in the language of his order. "It is the King's highway, and we have a right to march on it if we march to Boston. Forward, march!" They marched to the quickest air their fifes could play — the "White Cockade."

Laurie, who commanded the detachment of English, recrossed the bridge. Major Barrett, in command of the attacking party, hurried upon it. When they were within a short distance, the English fired three distinct volleys, and Davis and Hosmer were killed. The Concord minister, Mr. Emerson, was nearer to the English than either of

Concord Bridge.

them, on the Concord side of the river. He wrote in his diary that night that he "was very uneasy till the fire was returned." When Davis and Hosmer fell, the militia returned the fire. The English retreated. The minute-men crossed the bridge, and some of them ascended the bold hill where the Concord men had formed in the morning. Another party of English, with Parsons in command, returning from Colonel Barrett's house, crossed the bridge from the northern side, and were allowed to join the main force undisturbed.

In this encounter at the bridge, the American militia first attacked the King's troops. The English lost here one soldier killed and several wounded. Colonel Smith now abandoned any idea of posting himself at Concord. As soon as he could collect proper carriages to

carry his wounded, he started on his return. Meanwhile, from every quarter, the minute-men were pouring down. They did not know what was the true "objective." But they meant to be in time, and they were in time. The whole country between Boston and Concord was aroused. The Provincials, knowing every inch of it, chose their own best places to attack the King's troops. So soon as these had passed, their unseen enemies would take some cross-road and attack again. "They are trained to protect themselves behind stone walls," writes General Gage. "They seemed to drop from the skies," says an English soldier. Smith and his men, after their hard march of nearly thirty miles, came back to Lexington exhausted. Smith himself was wounded. They had marched from Concord, nearly eight miles, in two hours.

The retreat.

"A number of our officers were wounded," says Bernicre, an English eye-witness, "so that we began to run rather than retreat in order. The whole behaved with amazing bravery, but little order."

A little beyond Lexington Common, at about three o'clock, Smith and his hard-pressed party, as they approached Boston, met the reenforcement under Lord Percy, so long desired. Lord Percy had moved at nine in the morning, in a direction almost directly opposite that of Lexington, because he was obliged to leave Boston by land. It was remembered afterwards, that as he passed through Roxbury, his bands played "Yankee Doodle," and that a prophetic boy insulted him by crying out, "You march to Yankee Doodle; you will come back to Chevy Chase." This allusion to the "woful hunting" so celebrated in literature in the history of his house, appeared again and again in the pasquinades of the time. At Cambridge he had to cross Charles River, and the Committee of Safety, or Colonel Heath, one of their number, had directed that the planks should be taken from the bridge. Percy was thus still further detained. As soon as possible he pressed forward with his troops, leaving the train of stores to follow when the bridge should be more firmly repaired. The officer in command of this convoy lost his way, and to the inquiries he made in Cambridge, such false answers were given that with only scant military escort, he fell into the hands of some West Cambridge "exempts," led with intelligence and success by a negro soldier who had served in the French war.

Percy's column.

Lord Percy, without his train, pressed on in time, as has been said, to meet Smith just below Lexington, about two or three o'clock. His field-pieces are always spoken of as awing the militia. The exhausted columns rested a while, "the men's tongues hanging from their mouths, like dogs;" such was the tradition repeated for generations. The united force then took up the march

The return to Boston.

to Boston, and met with the same resistance everywhere, from a force constantly increasing. At last, as the sun was going down, the head of the column crossed Charlestown Neck. Beacon Hill, in Boston, was covered with people, watching for their return, and, as it darkened, one could see thence the musket-flashes on the road from Cambridge to Charlestown. Percy had to use his field-pieces again. At West Cambridge, Dr. Warren, while exposing himself to the enemy's fire, had the pin on his earlock shot away. By this time Colonel Heath, of the Committee of Safety, was in some sort commanding. The English had just reached Bunker Hill in Charlestown, when one of Colonel Pickering's aids rode up to Heath with the news that the Essex regiment was just behind him, on the road from Salem. The Danvers company had marched direct to Menotomy; the rest of the regiment had gone straight to Charlestown. But Heath thought it too late for any further offensive operations. The English posted sentries on their side of Charlestown Neck; Heath placed his sentries on the other side, and ordered the militia to lie on their arms at Cambridge.

The results.

The loss of the English in the march and retreat was reported by Gage as sixty-five killed, one hundred and seventy-eight wounded, and twenty-six missing, a very large loss from a force of eighteen hundred men. The loss of the Americans was forty-nine killed, thirty-six wounded, and five missing.[1]

The gathering of the American militia.

All that night the march of the minute-men from every town in Massachusetts, from Rhode Island, from Connecticut, and from New Hampshire, kept the country towns awake. Before morning on the 20th, before Gage's tired troops were ferried back from Charlestown to their barracks, an American army was at Cambridge. The intelligence had flown over the land, that the English troops had fired on the Lexington militia, and with it had gone the news that the column had been driven back to Boston. The story grew as it went from province to province. By the time it came into western Connecticut, it took a form which was carried by express to New York, and was there relied upon as in some sort an official narrative. In that form the New York Committee of Safety despatched it southward, and so it sped to Charleston, S. C., rousing a country. No fiery cross ever stirred a nation to more eager enthusiasm. That despatch is therefore worth copying now, — although, in literal fact, every material statement in it was untrue. It was in these words: —

[1] These figures are taken from Gage's return, and from Phinney's *History*.

THE RETREAT FROM CONCORD.

"WALLINGFORD [Conn.], Monday 24th, 1775.

"DEAR SIR: Colonel *Wadsworth* was over in this place most of yesterday, and has ordered twenty men out of each Company in his Regiment, some of which had already set off, and others go this morning. He brings accounts, which came to him authenticated, from *Thursday* in the afternoon. The King's troops being reënforced a second time, and joined, as I suppose, from what I can learn, by the party who were intercepted by Colonel *Gardner*, were then encamped on *Winter* Hill, and were surrounded by twenty thousand of our men who were intrenching. Colonel *Gardner's* ambush proved fatal to Lord *Percy*, and another General Officer, who were killed on the spot the first fire. To counterbalance this good news, the story is, that our first man in command (who he is I know not) is also killed. It seems they have lost many men on both sides; Colonel *Wadsworth* had the account in a letter from *Hartford*. The Country beyond here are all gone, and we expect it will be impossible to procure horses for our wagons, as they have and will, in every place, employ themselves all their horses. In this place they send a horse for every sixth man, and are pressing them for that purpose. I know of no way, but you must immediately send a couple of stout, able horses, who may overtake us at *Hartford* possibly, where we must return Mrs. *Noyes's*, and *Meloy's* if he holds out so far. Remember the horses must be had at any rate. Lockwood's letter.

"I am in the greatest haste, your entire friend and humble servant,

"JAMES LOCKWOOD.

"N. B. Colonel *Gardner* took nine prisoners, and twelve clubbed their firelocks and came over to our party. Colonel *Gardner's* party consisted of seven hundred men, and the Regulars one thousand eight hundred, instead of one thousand two hundred, as we heard before. They have sent a vessel up *Mystick* River, as far as *Temple's* farm, which is about half a mile from *Winter* Hill. These accounts being true, all the King's forces, except four or five hundred, must be encamped on *Winter* Hill." [1]

This curious mixture of the account of personal need for horses and of the outbreak of a civil war, is hardly intelligible when compared with the facts. History has not known better than James Lockwood who was "the first man in command" on the American side. The rumor of his death probably rose from the death of Captain Davis, of Acton, in the attack on Concord Bridge. The account of Percy's being intercepted at Winter Hill is an instance where the wish was father to the thought. For a generation after, Colonel Pickering was

[1] Preserved at Charleston, S. C. Published in Marshall's *Remembrancer*.

blamed unjustly, because he did not effect this consummation with the Essex regiment.[1]

The siege of Boston.

With the twentieth of April, therefore, the "Siege of Boston" began. The patriots had studied, through the whole winter, a plan for withdrawing all the inhabitants from Boston, which Gage, naturally enough, had resented. But, with the shock of battle, the departure of the inhabitants came of course; and, eventually, when Gage found he was really besieged on the land side, he did not oppose it.

As the minute-men arrived, they were posted in that part of Charlestown (now Somerville) which is outside Charlestown Neck, in Cambridge, and in Roxbury. Works were thrown up on Charles River and on the salt marshes, to prevent any movement of English troops by boats. The only egress from the city by land was over Boston Neck, by which Percy had marched out. This passage was commanded completely by a strong fort on the highland above the Roxbury Meeting-house.[2] General Artemas Ward, of Shrewsbury, was the senior officer in command of the Massachusetts troops, and a deference was yielded to him by Spencer, of Connecticut, Greene, of Rhode Island, and Folsom, of New Hampshire. These were the senior officers of the contingents from those colonies. But his orders to them take the form of requests. And his own commission as General and Commander-in-chief of the Massachusetts troops was not given him till the 20th of May. The works which have been alluded to were planned, and well planned, by Henry Knox, a young Boston bookseller, who had interested himself in military studies, and by Gridley, who had served in the French War. During all this period, there was a wretched deficiency of powder in the stores of this suddenly enlisted army. The Provincial Congress, in fear of a bold attack by Gage, which very probably would have resulted in their defeat, made provision for securing their records and stores, such as they were, in case of the necessity of a retreat.

General Artemas Ward.

The exodus from Boston.

As early as the 26th of April,[3] a letter from Dr. Warren to Gage proposed that the people of Boston be allowed to leave the town. Gage agreed, but said their arms must be given up; and on the 27th a great number of arms were deposited at Faneuil Hall. The military habit of the time appears in the fact that there was almost one weapon for every grown man. At first, Gage

Had hammered stone for life in Concord jail." — LOWELL.

[2] Now a little ornamental square, in which is the stand-pipe of the Boston Water Works. The "Meeting-house" was that made famous by the ministry for half a century of Eliot, "the Apostle to the Indians." See vol. i., p. 539.

[3] Not the 20th, as printed by mistake in Force's *Archives*.

allowed the inhabitants to depart on the condition that only thirty wagons should leave the town daily. But so large a number left that the Tories in Boston, remembering the patriot plans of the last winter, took alarm, and compelled Gage to rescind his permission. On the day of the expedition to Concord, almost two hundred Tories were enrolled under General Ruggles, of Hardwick, said to be the best soldier in the colonies.[1] Fearing that, unless the inhabitants should remain in the town, it would be burned by the American army, they told Gage that they would leave the town themselves if the emigration were not stopped, and he was obliged to yield.

The Provincial Congress, immediately after the events of Lexington and Concord, prepared an account of the battles, confirmed by depositions from the principal actors. These they entrusted to Captain John Derby, of Salem, with the order to sail to some convenient port of Ireland and thence to hasten to London, and deliver his papers to the agent. With these orders Captain Derby started, and outsailed every other vessel on the way. Captain Brown, in the *Sukey*, with Gage's despatches, had sailed before him; but Captain Derby reached London eleven days before any other news arrived. This early announcement of the outbreak, which naturally enough took the view most favorable to the patriots, produced an immediate effect in England, such as the government deprecated. The impression, of course, gained ground every day that they had news which they dared not publish.

News of the outbreak sent to England.

General Gage.

On the 8th of May, so distinct a rumor was circulated at Cambridge that Gage intended to march out, that the minutemen of the towns near Boston were called into service. Gage had another opportunity to see how large was the reserve force at the service of his enemy. On the 13th, Israel Putnam — who, when the news of the fight at Lexington and Concord reached him, left his plough in the field at Pomfret, Conn., mounted

Movements in and around Boston.

[1] The same who had presided at the first Continental Congress, ten years before.

his horse, and the next morning was in Concord — marched a little army of two thousand three hundred men from Cambridge to Charlestown Neck, and through Charlestown to the ferry there. Had any permanent works on Bunker Hill been intended by Ward and the American officers, that was the better time, before Gage was reënforced. On the 27th, a skirmish, in which Putnam led, took place at Hog Island, northeast of Boston, in the harbor. Besides the sheep and cattle which were the object of the raid, the English lost a sloop, twelve swivels, and several men. An exaggerated account of the exploit gave to it at the south the character of a battle; and it was to this affair that Putnam owed a certain prominence at the time, which helped in securing the rank given him in the Continental army a few weeks afterward.

Several skirmishes of this character, which generally resulted to the advantage of the Americans, gave confidence to the new levies, and showed that they held the English at disadvantage. They were the result of an order of the Committee of Safety, passed on the 14th, that such live stock should be removed from the islands, and they prepared the way for the action at Bunker Hill. Gage did not seem to understand how soon he should need the provisions thus taken from him. In two of these affairs alone, thirteen hundred sheep, which he might have used, were lost.

Arrival of Howe, Clinton, and Burgoyne.

On the 25th of May, Generals Howe, Clinton, and Burgoyne arrived with large reënforcements. As they entered the harbor, they hailed a tender bound to Newport, and asked the news. When told that Boston was surrounded by ten thousand men in arms, they asked how large was the English force, and were told it was five thousand men. "Ten thousand peasants keep five thousand king's troops shut up! Let us get in, and we 'll soon find elbow-room." The story was circulated everywhere, and the nick-name "Elbow-room" was applied to Burgoyne all through the war, never with more sting, of course, than at the period of his own reverses.

The English plans. Strategic importance of Charlestown

The highest hill on the peninsula of Charlestown commands the northern part of Boston and the northern part of Boston harbor. The hills on the southeast of Boston, now part of South Boston, but then called Dorchester Heights, on Dorchester Neck, command the southern part of Boston and all the harbor. Of course both parties saw the evident necessity of immediately occupying both Charlestown and Dorchester Heights. General Burgoyne, in a letter to Lord Stanley, says it was absolutely necessary that the English should occupy these heights, and that it was thought best to begin with Dorchester. He says he has never

differed from Clinton and Howe, and they, with General Gage, formed the plan. The troops under Howe were to land on the point of Dorchester Neck now known as City Point, Clinton's in the centre, while Burgoyne cannonaded from Boston Neck, if necessary, to keep clear the line of approach from the American forces in Roxbury. These operations were to take place on Sunday, June 18. The Provincial Congress and General Ward knew all this in advance, as appears from their Report made to the Congress at Philadelphia.[1]

"*June* 20, 1775.

"We think it an indisputable duty to inform you that reënforcements from Ireland, both of horse and foot, being arrived (the numbers unknown), and having intelligence that General Gage was about to take possession of the advantageous posts in Charlestown and on Dorchester Heights, the Committee of Safety advised that our troops should prepossess them, if possible."

Artemas Ward.

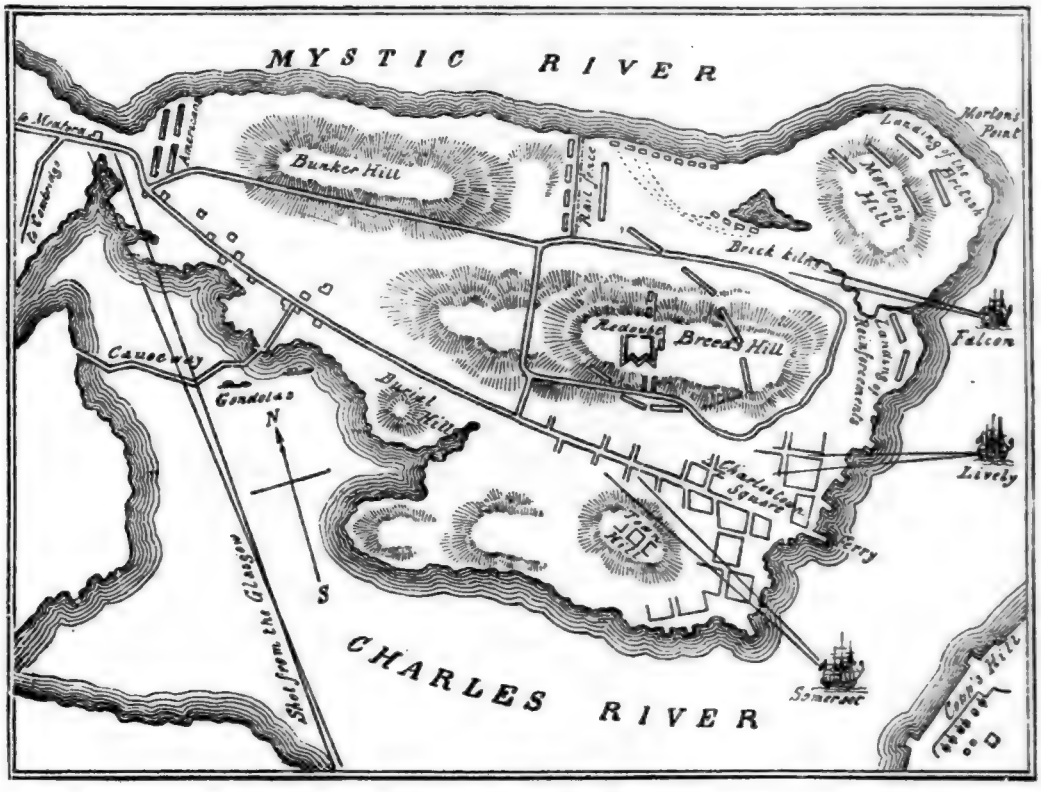
It must be remembered that in this disturbed state of affairs the Committee of Safety was the only executive of the insurgents. This report to the Continental Congress is made simply for their information. Under an order of the Committee of Safety, General Ward formed a detachment to take possession of the hill above Charlestown. It was made up of Prescott's, Frye's, and Bridge's regiments, under Colonel Prescott, and a party of Connecticut men drafted from several companies under Captain Thomas Knowlton, of General Putnam's regiment. They were ordered to furnish themselves with packs, blankets, intrenching implements, and provisions for twenty-four

Measures taken by the Americans.

[1] Major Wemyss, who served under Gage, has left in his manuscript papers the following frank notice of this general, which probably contains an explanation of the way in which news leaked out from his counsels. "Lieut.-General Gage, a commander-in-chief of moderate abilities, but altogether deficient in military knowledge. Timid and undecided in every emergency, he was very unfit to command at a time of resistance and approaching rebellion to the mother country. He was governed by his wife, a handsome American; her brothers and relations held all the staff appointments in the army, and were, with less abilities, as weak characters as himself. To the great joy of the army, he went to England soon after the disastrous attack at Bunker Hill" Mrs. Gage was a daughter of Stephen Kemble, of New York.

hours. Colonel Gridley's company of artillery, with two guns, made part of the command. The expedition started from Cambridge at nine o'clock on the evening before the 17th, crossed Charlestown Neck, and reached Bunker Hill, the highest point of Charlestown, about ten. From the English battery on Copp's Hill to Bunker Hill is about one mile; from Beacon Hill, in Boston, to Bunker Hill is nearly a mile and a half. At that time Beacon Hill was one hundred and thirty-eight feet above sea-level; Bunker Hill was one hundred and ten, and Copp's Hill about sixty feet. If the object of fortifying Bunker Hill was to command the harbor, a redoubt there would hardly carry out the design, because a spur projecting southward from the hill, making an eminence of about sixty-two feet above the sea, rose between the top of Bunker Hill and the sea, and would protect the shipping to some extent. On the other hand, if the design was merely to keep the English from seizing the heights, both Bunker and the southern eminence, afterwards called Breed's Hill,[1] should be fortified at the same time. If the Provincials had contented themselves with fortifying the higher part of Bunker Hill only, the English troops might have formed under cover of the lower hill; or their commanders might have intrenched themselves on the south side of that hill, where they could not be reached by firing from Bunker Hill, from any guns in use at that time.

Bunker Hill.



When the American officers found themselves on the crest of Bunker Hill, about ten in the evening, Prescott called the field-officers around him, and showed them his orders. They deliberated for a long time as to whether it would be more advisable to fortify the top of Bunker Hill, or take the lower eminence from which they could with greater ease harass the English fleet. After some time it was determined to proceed to the lower hill, half a mile nearer to Boston, and take post there. General Putnam, who was present, strongly advocated intrenching the upper hill as well as the lower one. The Committee of Safety, after the event, said that fortifying a point so near Boston was a mistake. But it is justified by the highest military authority, for the reasons which we have given. Colonel Gridley, the engineer officer, insisted on some decision being made without further loss of time, and when it was resolved to fortify the lower hill, he marked out the lines of a redoubt there. This re-

The fortification of Bunker Hill.

[1] The height on which the battle was fought had no distinctive name before that time, but was known as pastures belonging to different men, Breed being one of them. After the battle the hill was called Breed's Hill; but as the detachment was sent to put up fortifications on Bunker Hill, that designation clung to the fight. Hence the confusion of names which puzzles every reader out of Massachusetts. Though many insist upon calling the hill on which the tall monument stands, to commemorate the battle, Breed's Hill, the monument itself is called Bunker Hill Monument.

doubt was skilfully planned. It measured eight rods on its longest side, which fronted Charlestown. The other two sides were not quite so long. The side toward Bunker Hill was lower. A breastwork extended for about a hundred yards to the north, and stopped at a marshy place at the north side of the hill. This work was begun at midnight and continued till nearly eleven o'clock on the morning of Saturday, when the intrenching-tools were sent back to General Putnam, that he might use them to throw up fortifications on Bunker Hill strong enough to hold that height as well as the other.

It was a clear moonlight night. But so quiet was the working

Plan of Bunker Hill.

party, that it attracted no attention till morning. It was after daybreak when Linzee, the commander of the *Lively* frigate, which lay in the stream opposite where the navy-yard now is, saw the new fortification and opened fire upon it, waking the town to the bold enterprise of the night.

It was the morning of St. Botolph's day, the festival day of the saint from whom Boston derives its name.

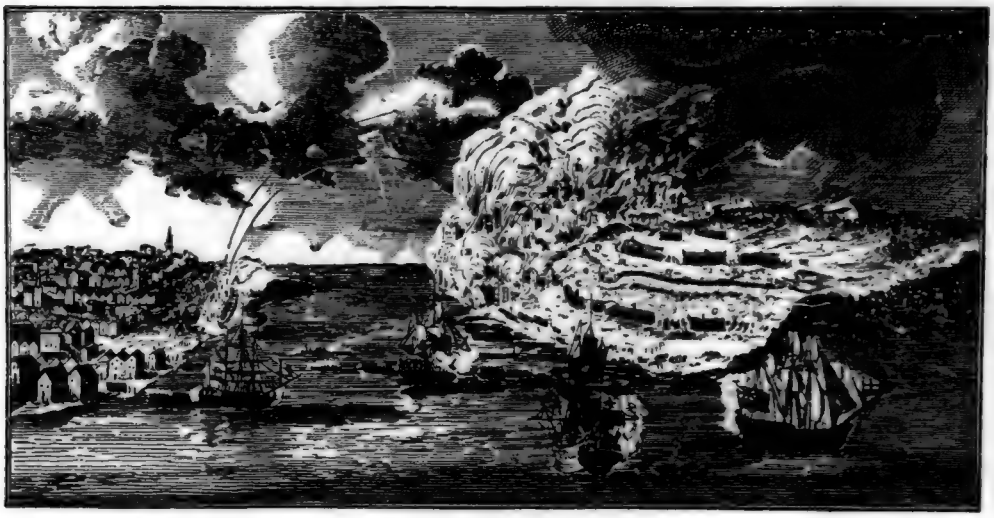
Colonel Gridley returned Linzee's fire from his field-pieces, and the fire from the ship was soon suspended by Gage's order. He was roused from his repose, and on conference with his officers determined to attack the works before they could be strengthened.

The English and American accounts of the battle which followed, differed, at the time, as if two scenes had been described. The best English account published in London, when the news arrived there, was General Burgoyne's, in a letter to Lord Stanley.[1] He says that, seeing that the enemy had fortified the heights of Charlestown during the night, the English generals thought it necessary to attack that side instead of seizing Dorchester Heights, as it had been proposed to do on the next day. General Howe, and under him General Pigot, with about two thousand men, landed at Moulton's Point (where the navy-yard now is) and advanced up Bunker Hill where the strength of the enemy lay. "Howe's disposition was exceedingly soldier-like." As the first force advanced up the hill, "they met a thousand impediments from strong fences, and were also injured by a musketry-fire from Charlestown." Howe sent back to Burgoyne on Copp's Hill, in Boston, to set Charlestown on fire, which was instantly done by a number of red-hot shot from the batteries which afterward, together with the shipping, kept up a vigorous fire upon the heights. In this published letter, Burgoyne owns that Howe's left was staggered, and that reënforcements were sent. They remained upon the beach, however, not knowing where to march. Immediately General Clinton, without waiting for orders, crossed in a boat to command them, and arrived in time to be of service.

The Battle of Bunker Hill.

Burgoyne's account.

Burgoyne closes his letter by saying: "The day ended with glory, and the success was most important, considering the ascendency it gave the regular troops; but the loss was uncommon in officers, for the numbers engaged."



On the other hand, the Committee of Safety published an account by Rev. Peter Thacher, who saw from the eastern side of Mystic River, what could be seen by a spectator there. This was sent to Arthur Lee, and others, in London, as a correction of the report made by General Gage in a circular letter to the governors of the other colonies.

The American account.

This account says in substance, that about noon several barges approached Charlestown and landed on the beach westward of the American works. The troops formed upon landing, and waited till a second detachment arrived from Boston, when they took up their march to the redoubt. They moved slowly, with large flanking parties. At this instant, smoke and flames arose from Charlestown, which had been set on fire by the enemy, either that the smoke might cover their attack, or to dislodge one or two regiments of provincials which had been placed in the town. But the wind, shifting suddenly, blew away the smoke.

[1] The letter already referred to p. 396.

Meanwhile, according to this account, the Americans, within their intrenchments, waiting impatiently for the enemy, reserved their fire until they were within ten or twelve rods, and then delivered a terrible discharge of small arms. The enemy faltered, stood still a minute, and then ran with great precipitation towards their boats, some even seeking refuge in the boats themselves. Here, the spectators on the opposite shore could see the officers run down to them and urge the men forward with passionate gestures, even goading them on with their swords. As soon as they had rallied, they marched up towards the intrenchments, apparently with great reluctance. Again the Americans waited until they were within six or seven rods, and then fired, and again put the regular troops to flight.

Bunker Hill Battle.

From a Contemporary Print, entitled "View of the Attack on Bunker's Hill, with the Burning of Charlestown, June 17th, 1775."

The officers, making greater exertions than ever, once more urged on the men to a third assault. This time they brought cannon to bear upon the breastwork, raking it from one end to the other, so that the provincials retired within their redoubt. The "ministerial army" now made a great effort. The ships and batteries redoubled their fire, the officers increased their exertions, and the redoubt was attacked on three sides at once. The breastwork outside the fort had been abandoned; the ammunition of the provincials was exhausted, and there were but very few bayonets. Not until the redoubt was half filled with the British was the word given to retire. The retreat must have been cut off, however, had not the flanking party, whose place it was to attack the rear of the fort, met with a body of provincials, who kept them from advancing farther than the

beach. These two parties fought with the utmost vigor, and not until the provincials saw that the main body had left the hill, did they retire. Such is the official account as published by the Committee of Safety.

There is no doubt that Thacher's statement that there were three attacks is correct, although neither Gage in his despatches, nor Burgoyne, says anything about them.

Howe's flank movement.

While Pigot with the left wing was attacking the main body of the Americans, General Howe, with the right, marched along the Mystic River, to try to turn the American flank on its left. Against him Colonel Prescott had sent Captain Knowlton with his Connecticut men, and two field-pieces. Knowlton had taken his place behind a fence on the southern slope of Bunker Hill proper, extending northeasterly toward the water. This fence, which was made of stones, with rails of wood above, he strengthened by a parallel line of fence, filling the spaces between with new-mown grass. While he was doing this, reënforcements of New Hampshire troops under Stark arrived.

On the firmness of this body of men on the American left, eventually depended the retreat of the whole party. As Howe advanced, Colonel Callender opened fire on him with his field-pieces, which were between the redoubt and the fence. Knowlton's men at the rail fence held their fire until the enemy were within fifteen rods. When they did fire, the English retreated, terribly cut up, at about the same time that Pigot was repulsed before the redoubt.

In the second attack, Howe's guns were charged with grape. Through the whole action they had no proper balls.[1] They moved up on a road running between the redoubt and the rail fence nearly as far as the breastwork. The design was, to rake the redoubt. This time, also, Howe was on the right of his attack before Stark and Knowlton. At the rail fence and at the redoubt the Americans held their fire till even a shorter distance intervened.

In both cases the English broke and retreated. It was at this period of the action that Clinton arrived from Boston with reënforcements, as narrated by Burgoyne. The havoc at the attack thus made by Howe in person was even more terrible than that at the redoubt; the annals of war have, perhaps, no parallel to it. One light com-

[1] Thanks to the "dotage of an officer of high rank, who spends all his time with the school-master's daughters." This is the verdict of an English writer of the day. The officer was General Cleaveland, "who was enamored of the beautiful daughter of Master Lovell," and in order to gain favor with her had given her young brother an appointment in the ordnance department, for which he was not fitted. The beauty of the lady has been handed down to later generations by transmission more sure than that of verbal tradition.

pany of the Fifty-second Regiment had every man killed or wounded. Howe himself bore a charmed life, but every officer of his staff was killed or wounded. It was to the accuracy of the marksmen, whether at the redoubt or at the fence, that the terrible carnage of the day was due, and around these volleys have clustered the most frequent traditions of the fight. The efforts made by American officers who had been under fire before, to restrain the eagerness of young troops, are recollected in a hundred stories. "Fire low," "Aim at the handsome coats," "Aim at the waistbands." And there is no boy in America who does not believe that Putnam and Prescott bade their men wait, till "they could see the whites of the eyes" of the English. This order was probably familiar to the officers, who had studied with eagerness the memoirs then fresh of the wars of Frederick. It was recorded that Prince Charles, when he cut through the Austrian army in retiring from Jägendorf, gave this order to his infantry: "Silent, till you see the whites of their eyes." This was on the 22d of May, 1745. And this order, so successful that day, was remembered twelve years after at the battle of Prague, when the general Prussian order was, "By push of bayonets, — no firing till you see the whites of their eyes."

In the third attack the English artillery gained their position and drove the defenders of the breastwork into the fort. Most of the Americans had now only one round of ammunition, and few had more than three. But Prescott bade them hold their fire, and they did so until the enemy were within twenty yards. The English, taught by experience, did not attack in platoons, but were drawn up in column. The column wavered under the fire, but the men rushed on with the bayonet; and Clinton's and Pigot's men, on the south and east, reached the walls. At Prescott's order, those who had no bayonets retired to the rear of the redoubt, for their ammunition was all gone. The men in the front rank, as they scaled the walls, were all shot down. But these were the last shots, and as the English leaped over the parapet, Prescott unwillingly gave his order to retreat. His retreat was covered, as Thacher's account explains, by the firmness with which Stark and Knowlton held the rail fence. The gap between the breastwork and the rail fence had been enfiladed by Howe's artillery. The whole action had lasted about two hours of a hot summer afternoon. The English once in the redoubt had little spirit to follow the enemy. On the other hand, General Putnam, at the other work, on the crest of Bunker Hill, found it impossible to hold the retreating parties there.

The American retreat.

As the party in the redoubt left it, General Warren, as he is that day called for the first time, was killed. He had been, till this mo-

ment, the efficient leader of the popular movements in Massachusetts since Samuel Adams had left for the Congress in Philadelphia. He drew out the popular enthusiasm as no other leader had done. He had shown eloquence, energy, and wisdom. He was brave — so brave as to throw away his life. But the records of the Committee of Safety, and his own letters, show that he knew how to be prudent. Only three days before the battle he had been made a major-general by the Provincial Congress, to hold command second to Ward. His commission had not been issued, and on the day of the battle he served as a volunteer. But his presence alone, when he arrived at the redoubt late in the day, was everything to the exhausted men there. His death was regarded as a national calamity.

Joseph Warren.

Colonel Prescott, who from first to last had commanded the movement, and who ordered the retreat, escaped unhurt. But he was enraged that he was obliged to leave the ground which he had so well maintained. When he returned to headquarters, he offered to take both sets of works again, if he might only have fifteen hundred men. But General Ward very wisely refused. Prescott could probably have done what he promised; but there was no military object worth the attempt.

Through that day, and afterwards, it was suggested that Ward might have reënforced the working-party more efficiently than he did. But the criticism is unjust. It was impossible that Ward could believe that his enemy would attack the works in front and on the eastern flank only. It was entirely in Gage's power to cut off the Bunker Hill party from their base by landing a party on Charlestown Neck, under the protection of the men-of-war. He did use the fire of the ships to enfilade the Neck, and materially to retard all movement in each direction. He also kept up, all day, a heavy fire on Boston Neck from his works. General Ward had every reason to suppose that the British leaders would thus attempt to divide his army, instead of taking the resolution

Ward's action reviewed.

which proved so nearly fatal to them, of attacking Prescott's works in front. General Ward knew, also, what he would not tell, even to save his reputation, that on the day of the battle he had, for the use of his whole army, only sixty-three half-barrels of powder (sixty-nine hundred pounds), hardly half a pound for every soldier in his command. General Ward had been overruled, as the event has proved, wisely, in the council which ordered the fortification of Bunker Hill. He had himself opposed this measure, as Warren had done, which had been ordered by the Committee of Safety in opposition to them. He now decided, and decided rightly, not to risk more than a reënforcement comparatively small in the attempt to hold the hill. As it was, he had men enough there, could he only have supplied them more fully with ammunition. Prescott even reported that with bayonets he should have successfully resisted the final charge of the English left; and at his instance two thousand spears were at once made for the army. But all the bayonets in the world would not have protected Prescott's men after the gap between the redoubt and Knowlton had been passed by the English. That gap was already covered by Howe's field-pieces when Prescott ordered the retreat. A fair review of the day shows that that retreat was ordered at the proper moment, not too late and not a moment too early.

The losses by the battle.

The loss of the Americans in this battle was one hundred and fifty killed, two hundred and seventy wounded, and thirty taken prisoners. Gage's return of his loss was two hundred and twenty-four killed, and eight hundred and thirty wounded. According to his own statement of the English engaged — about two thousand men, — this was more than half the attacking force. But the British force was, in fact, somewhat larger than that estimate. Of his total loss of one thousand and fifty-four, one hundred and fifty-seven were officers. In some parts of the field the havoc was without precedent. Howe is said to have exclaimed, "They may talk of their Mindens and their Fontenoys, but there was no such fire there!" The remark is true, whether Howe made it or not. And it is certain that the impression made upon Howe and Clinton on that day, governed their lead of the British armies for the next seven years. They were wary of leading troops against intrenched men.

At the moment, and for many years after, the memory of Bunker Hill carried with it, in the minds of New Englanders, especially of those in the army, a bitter feeling of annoyance, as if "some one had blundered;" as if a victory well earned had become a disgraceful defeat. The implication was freely made that some American officers misbehaved, an implication never sustained by evidence. Courts-

martial were held, to try some of the most seriously accused. Colonel Callender was degraded from his command, for inadequately serving the wretched artillery. But in seven years of faithful service afterwards, this misused gentleman amply retrieved his reputation. From the recent publication of Burgoyne's letters, we now know that the English officers thought their privates misbehaved.[1] This was never publicly intimated at the time, either in published dispatches, or by courts of inquiry or courts-martial. The charge of cowardice made by officers hot under disappointment, does not need to be challenged by men proud of the English reputation for bravery. It will be remembered that the English privates were, in general, as new to actual war as their enemies. The critic who reads that one company of the Fifty-second Regiment had every man killed or wounded in the battle, will not ask many questions as to the bravery of the survivors.

As time has passed, and both sides of the picture have been opened to examination, it has become certain that that battle was the decisive battle of the war. From that moment the English generals understood that they were contending with soldiers.[2] From that moment the Home Government had really no permanent policy but in offers of conciliation, — more and more liberal till they granted the whole. From that moment there was no possibility of a return to a colonial position. And though more than seven years of battle followed before the last serious conflict, this battle of the beginning, the most bloody of all, and the most sharply contested, has proved to be, also, the most critical.

[1] Burgoyne to Lord Rochford. He says there is a melancholy reason for the disparity of the loss of officers, — that not only were they left unsupported by their men in the attack, but that "all the wounds of the officers were not received from the enemy." He begs Rochford that this shall not pass "even in a whisper" to any but the King. He says he trembles as he writes.

[2] "The men in all the corps having twice felt the enemy to be more formidable than they expected, it will require some training under such Generals as Howe and Clinton, before they can prudently be intrusted in many exploits against such odds." — Burgoyne to Rochford.

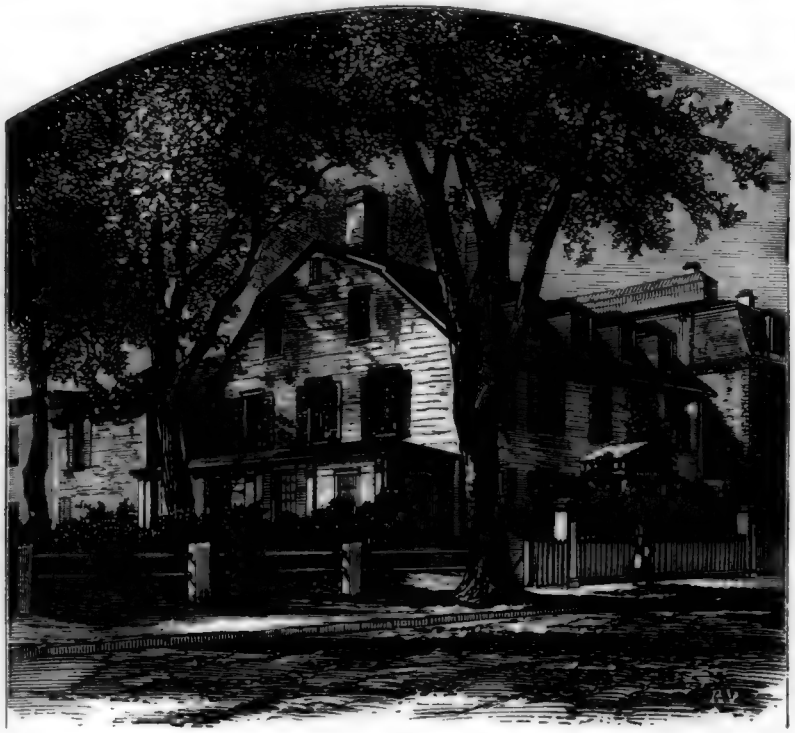
CHAPTER XVI.

THE SIEGE OF BOSTON.

WASHINGTON APPOINTED COMMANDER-IN-CHIEF. — MAJOR-GENERALS COMMISSIONED BY CONGRESS. — WASHINGTON'S ARRIVAL AT CAMBRIDGE. — SCARCITY OF POWDER. — WEAKNESS OF THE ARMY. — RELATIVE POSITIONS OF THE CONTENDING FORCES. — RECALL OF GAGE. — CONDITION OF BOSTON. — PROPOSED INTERVIEW BETWEEN BURGOYNE AND LEE. — MEASURES FOR SUPPLIES OF AMMUNITION. — NAVAL PREPARATIONS. — MISREPRESENTATIONS OF THE CAUSE OF THE AMERICANS IN EUROPE. — BURNING OF FALMOUTH IN MAINE. — CAPTURE OF AN ENGLISH VESSEL WITH SUPPLIES. — TREACHERY OF DR. BENJAMIN CHURCH. — HOWE'S DIFFICULTIES AND PROPOSALS TO THE MINISTRY. — CONGRESS SUGGESTS THE DESTRUCTION OF BOSTON. — DORCHESTER HEIGHTS FORTIFIED. — THE TOWN COMMANDED BY THE AMERICANS. — EVACUATED BY THE BRITISH. — THE AMERICAN ARMY TAKES POSSESSION.

ON that hot Saturday in June, while the battle was fought at Bunker Hill, the Continental Congress at Philadelphia, all unconscious of what was passing, unanimously appointed George Washington, of Virginia, to be General and Commander-in-chief of the armies raised for the maintenance of American Liberty. They appointed Artemas Ward, of Massachusetts, his First Major-general, Gates, of Virginia, his Adjutant-general, with the rank of Brigadier-general, and Charles Lee, an English half-pay officer, the Second Major-general. Two days afterward, Schuyler and Putnam were also appointed Major-generals.[1]

Washington appointed Commander-in-chief.



Appointments of Major-generals.

The nomination of Washington had been pressed upon Congress by the leaders of opinion in Massachusetts, and by no man more than by Warren himself, till this moment the popular leader of Massachu-

[1] The following is the list of the appointments made by the Continental Congress in June: —

George Washington, Esq., General and Commander-in-chief of all the forces raised or to be raised for the defence of American Liberty; Artemas Ward, Esq., First Major-general; Charles Lee, Esq., Second Major-general; Philip Schuyler, Esq., Third Major-general; Israel Putnam, Esq., Fourth Major-general; Seth Pomeroy, Esq., First Brigadier-general; Richard Montgomery, Esq., Second Brigadier-general; David Wooster, Esq., Third Brigadier-general; William Heath, Esq., Fourth Brigadier-general; Joseph Spencer, Esq., Fifth Brigadier-general; John Thomas, Esq., Sixth Brigadier-general; John Sullivan, Esq., Seventh Brigadier-general; Nathanael Greene, Esq., Eighth Brigadier-general; Horatio Gates, Esq., Adjutant-general, with the rank of Brigadier-general.

setts. On the day, and perhaps at the hour, when the direction of the war passed from his hands, his great successor was appointed. The nomination of Ward,[1] who was actually in command, as the second general, was almost a matter of course. The other appointments of this day, those of Gates and Lee, were suggested by the natural feeling that the great deficiency of the national army would be military skill. Here were two Englishmen, who had attained a certain rank in the English army. They never hesitated about proclaiming their own merits. And the appointments had at the moment the advantage that they gave no preëminence to one colony over another. They were well received by the people; but, in the end, both appointments proved signally unfortunate, and intensified the national dislike of everything English.

House of the President of Harvard College. — Washington's first Cambridge Headquarters.

Washington and Gates proceeded almost immediately to Cambridge. At New York they met the news of the battle of Bunker Hill. A well authenticated anecdote says that Washington expressed his joy at learning that the American soldiers had stood as firmly as they did. But he was still six days from the army, and the danger that the English officers might follow up their success was imminent. He, his aid, Mifflin, and his military secretary, Joseph Reed, with General Lee, travelled together. The eagerness of the towns through which they passed to receive the little party with honor, somewhat delayed their progress. But on Sunday noon, the

Washington starts for Cambridge.

[1] It is one of the most pathetic bits of satire in American history, that the name of the first commander of the Continental army should now be remembered by nine people in ten, only as that of an imagined humorist, — half philosopher, half showman. Even the misspelling "Artemus" of the showman will be found in Judge Marshall's reference to the Major-general.

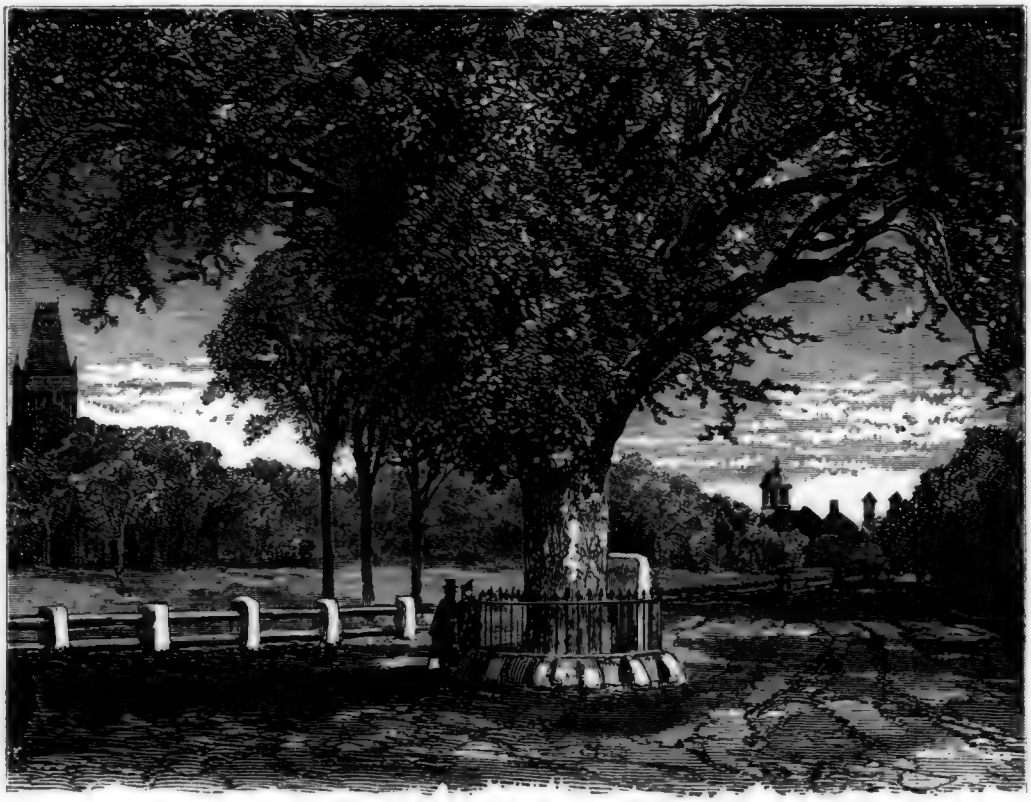
2d of July,[1] they arrived at Cambridge, where they were received for a few days in the house of Langdon, the president of the college. On the 4th of July, with appropriate ceremony, his commission was read in the presence of a detachment of the army, and of the Provincial Congress of Massachusetts, and he assumed the command. Nothing is more interesting than the careful deference with which, all along, he treated the local authority, such as it was, and, on the other hand, the equal deference with which the Provincial Congress of Massachusetts regarded his wishes. They had carried on their affairs without any chief long enough to feel the need of one in war. He was too wise to trespass, in the least, on an authority which was so freely conceded. He was somewhat disappointed at the lack of military precision which he found in the army that had been called into existence in a little more than two months, and was greatly alarmed at the deficient supply of what came to be called in correspondence "a necessary article." By this circumlocution men tried to conceal the fact that powder hardly existed in the thirteen States in sufficient quantity for the use of one general action.[2] Even the material for manufacture could not be obtained in large quantities. Thus the apothecaries' shops in New York were searched for saltpetre, and, in the correspondence of the leaders of the time, the discovery of a hundred pounds of that article is spoken of as if it were indeed a priceless treasure.

His arrival and assumption of the command.

Condition of the army and its supplies.

The three other appointments made on the day with Washington's were not unfavorably received in the army; but the selection of officers afterward made was not such as altogether to satisfy either him or the officers of highest rank who were actually in the field. In addition to his other difficulties, Washington had the care of persuading officers whom he wanted to remain in service, and of inducing Congress to revise their estimate of others. He appointed Joseph Trumbull, of Connecticut, Commissary-general, and named John Trumbull one of his aids. He afterwards recommended Henry Knox to the command of the artillery. After-experience indicated the profound wisdom of these appointments. In one word, it may be said that Washington instantly acquired the enthusiastic

Later appointments of officers.



[1] Not the 3d, as by an oversight Washington himself said in the letter usually cited.

[2] At the battle of Buena Vista, in the Mexican war, 300,000 rounds of ammunition for musketry were used by the American army, and 3,750 pounds of powder by the cannon. This is a consumption of four tons for the battle, in which 5,000 Americans engaged 20,000 Mexicans. Colonel Baylor, of the American army, finds on observation of the war of the Rebellion, that the average use of a cannon in position is forty-two rounds a day, for a battle. The amount of powder is about one quarter the weight of the ball, in artillery. Washington's stock on the 3d of August was 9,937 lbs., a little less than five tons.

love of New England, though the men of New England were supposed to be so widely unlike his own Virginians; and that love he never lost.

Numbers of the opposing forces.

For many weeks, all military men in the American army lived in expectation, — it would be fair to say in dread, — of an attack from the English lines. A return of the number of the army, which Washington obtained in the week after he arrived, showed a total of sixteen thousand seven hundred and sev-

Washington Elm, Cambridge.[1]

enty-one New Englanders,[2] of whom nearly two thousand were sick, furloughed, or absent on duty. A council of the American generals, held on the 9th, determined that at least twenty-two thousand men were needed to defend the lines. Their estimate of the force of the English, including their sailors and marines, was eleven thousand five hundred, which has proved to be correct. The English generals could make their choice of Charlestown Neck, or Boston Neck, for a place of egress, if they chose to attack the American lines. These extremi-

[1] This tree, under which Washington's commission was read to the army, is still standing.

[2] From Massachusetts, 11,689; from Connecticut, 2,333; from Rhode Island, 1,085; from New Hampshire, 1,664.

ties of what may be called the American right and left wing, are many miles from each other, by circuitous routes, — separated also by Charles River, over which the Americans had but one poor bridge. It was clear, therefore, that in any attack the American army might be outnumbered. Washington had, however, the resource — of which he availed himself when he needed — of calling in the minute-men from the neighboring towns, who were always ready for duty, and moved with a promptness worthy of their name.[1]

Their relative positions.

But the English generals made no movement, not even a menace. The truth was, their loss at Bunker Hill had been more severe than the Americans at first suspected. As has been seen, it had affected the morale of their men, and made the commanding officers much more cautious. In the heat of the summer the wounded fared ill. The report from England, of the way in which the news of Lexington and Concord was received, was not encouraging to men in command. Gage was removed from his bed of thorns, and recalled to England by a despatch of August 2d. He was virtually disgraced, and no other command was ever offered to him. The command of the army was given to Howe, and was retained by him for three years, when he in turn was removed. The departure of Gage from Boston, in October, was regarded by the patriots as in some sort a victory. "Through this pane of glass," wrote Josiah Quincy, with a diamond, on his window, "I saw Gen. Gage sail out of the harbor of Boston."

Gage removed: Howe in command of Boston.

The government were certainly justified in removing Gage. They never had any reason for appointing him, but that he had served in America, and that he had an American wife. General Burgoyne charges on this handsome wife the unintentional communication of all Gage's secrets to the enemy.

Boston suffered also, all through the summer, from the lack of fresh provisions. In August, Gage was willing enough to renew the arrangements which he had quashed before, and to permit the egress of the inhabitants. They were sent out, day after day, by way of Winnisimet, and on their arrival, became, in many instances, a charge on the generous charity of the people of the country towns. While the population diminished, death was as frequent as it had ever been in the most populous days of Boston. A well informed native of the city says that the reënforcements received by

Second exodus from the city.

[1] This recourse was so considerable, that Hilliard d'Auberteuil, a French author of matchless absurdity, coolly doubles Washington's force in his statements, saying, simply, that one half was not kept in the field, but was occupied in cultivating the land! He thus gives Washington, what perhaps he would have been glad to have, an army of 60,000. In similar style he gives Howe 50,000 in Boston.

the army, before September, had not made up the losses caused by battle and disease.

Such were the reasons, so far as we can state them, why the English officers in command did not move upon Washington's army at the terrible period when it had not powder enough even for a few hours' fighting. The news of Gage's recall was received early in September. In the despatches then sent, Lord Dartmouth, Secretary for the Colonies, distinctly intimated that it would be better to make no further inroads into the country. He suggested that it would be better to leave Boston altogether, and take post at New York. If this were impossible, he asked if the army could not be divided between the ports of Halifax and Quebec.

Plans suggested in England.

To this despatch Howe replied, on the 2d of October, that nothing could be gained, except reputation, by a march into the interior. He considered that New York should be taken and held; that the "foundation of the war should be laid" by having troops in force there, large magazines and stores, and the whole well fortified and secured. He says that as Castle William in Boston Harbor is of no use to him, he had destroyed the shore battery, and mined the fort so as to destroy it when Boston should be evacuated. He also advised the seizing of the island of Rhode Island. Nothing is now said of merely reducing a rebellion. It is the "foundation of war" which is to be laid. Nor is a word now said about punishing Boston for its factious persistency, or reducing New England, as an example to the rest. The drift of the letter is, that it will be better to operate where there is less opposition. In truth, New England, by her unyielding firmness in the

General Howe.

beginning of the war, earned for herself the exemption, almost complete, from its presence, which she enjoyed for the last six years before the peace. The pressure of an enemy's army was to be chiefly felt in those very regions which the Crown officers thought at first least infected by the contagion of rebellion.

Proposed interview between Burgoyne and Lee.

Soon after General Lee arrived at the American camp, from Virginia, General Burgoyne, who had served with him in the English army, wrote him a long letter from Boston, such as he was fond of writing. He proposed an interview at an inn on "Boston Neck,"[1] with the hope of bringing about some adjustment of grievances. He did not misapprehend his man. They were men of much the same type, — conceited and arrogant, with little skill in words, but thinking they had much, and with far less skill in arms than in words. Lee sent Burgoyne's letter to the Provincial Congress of Massachusetts, and asked their instructions, saying, at the same time, that he should wish some American gentlemen to accompany him to the interview. The Congress consented, and appointed Elbridge Gerry to accompany Lee; but the language of their reply to him was so cool that he abandoned the project.

The collection of ammunition.

All through this period of apparent quiet, the utmost efforts were made in every quarter, by the American authorities, to provide powder, lead, flints, clothing, tents, and other material for a campaign. Even the smallest quantity of powder or of saltpetre was begged for. General Cooke, of Rhode Island, Governor Trumbull, of Connecticut, Robert Livingston, of New York, and Franklin, now acting on the Committee of Safety in Philadelphia, appear prominent among those most active. Livingston established a powder-mill, and did it so secretly that the English agent who had charge of the government stock of saltpetre was in ignorance of its existence till a bold raid on his stores emptied them, and taught him its value. The Committee of Safety in Georgia got hold of a supply of powder intended for the Florida Indians. A bold push into the Gulf of Mexico brought back a hundred barrels from a trading vessel there. An attack on Bermuda brought off a considerable quantity from that island. Far away, in Orleans, in Louisiana, Oliver Pollock, an American citizen, was making arrangements to send the precious commodity up to Pittsburg by the river. So soon as the English cruisers were withdrawn in the autumn, Governor Cooke sent a fast sailing vessel of eighty tons to Bordeaux, to purchase powder on the account "of the Continent." By this proud name, which should never have been given up, was the new nation

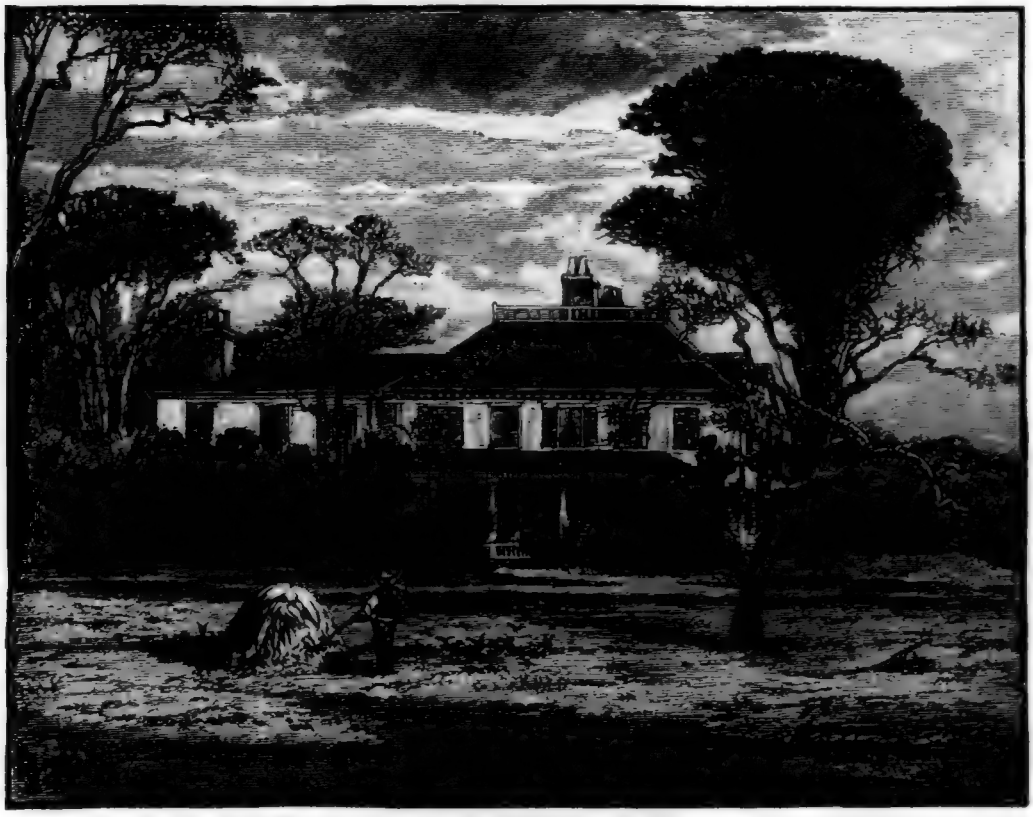
[1] The inn was the "George." It was burned before the evacuation, but reappeared as the "George Washington."

beginning to call itself. Lead was obtained from the mines of Connecticut, which had been little worked in times of peace.

The germ of an American navy.

Meanwhile, and partly in connection with this terrible necessity, a little navy was coming into existence. As early as the 5th of May the people of New Bedford and Dartmouth, in Buzzard's Bay, southwest of Cape Cod, indignant at the incursions of the *Falcon*, one of the British sloops of war, fitted out a vessel with which they attacked and recaptured one of her prizes, with fifteen prisoners, in the harbor where she had taken refuge in Martha's Vineyard. This was the first naval victory of the war.

On the 12th of June a plan was formed in Machias, in Maine, for taking the *Margaretta*, an armed sloop in the service of the Crown, then lying at that port. This scheme was carried out with success; the *Margaretta*, another King's sloop, and a sloop that was loading with lumber under her protection, being taken. Her captain and one of her crew were killed, and five wounded. The armament of the *Margaretta* was then transferred to another vessel, which was placed under the command of Jeremiah O'Brien. He was soon afterwards made marine captain by the Provincial Congress of Massachusetts, and sent to intercept vessels bringing supplies to the troops in Boston. Many other affairs similar to that in which the *Margaretta* was captured took place on various parts of the coast. So soon as Washington's attention was called to the possibility of cutting off the supply vessels of the English, as they entered Massachusetts Bay, he commissioned officers in command of vessels, to take such supplies.[1] Their instructions were to avoid fighting, even if they were of equal force with their enemy, — the object being to seize supplies. The Massachusetts Provincial Congress at once legalized such captures. Washington supplied armaments and money from the Continental treasury, and, with little delay, six small vessels were commissioned, — the *Lynch*, *Franklin*, *Lee*, *Warren*, *Washington*, and *Harrison*. Rhode Island had at sea a vessel under Whipple, who went as far as Bermuda, where he found the inhabitants friendly to the American cause, but terrified by Gage's threats of vengeance for the loss of the powder stored there. Connecticut had a small vessel in service also.



A petty war on sheep and oxen on the coasts was kept up by the smaller British vessels, that Boston might be provisioned. Yet Gage hardly brought in more animals by such raids, — which embittered all the seaboard against him, — than he had permitted the Americans to carry off from under his own eyes in Boston Bay. So severe was the destitution of his troops that on the 4th

Destitution at Boston.

[1] The first of these commissions dated September 2, 1775.

of September, after the royal cruisers had brought in more than a thousand sheep and oxen, the cattle brought, at a public sale in Boston, prices ranging from fifteen to thirty-four pounds, and the sheep thirty shillings and upward.[1]

While the English army was thus confined, and reduced by sickness, the forces under Washington were steadily enlarging. Recruiting officers were bringing up the numbers of the regiments more nearly to the complement, and furloughs were granted more charily.

The Craigie House, Washington's Headquarters at Cambridge.

A return of August 19th shows a total on paper of 19,060, — an increase of 2,390, in six weeks since Washington took the command. Among the recruits were several companies of riflemen from Virginia, — one of them under the command of Captain Daniel Morgan, who at the news of the battle of Bunker Hill had started on the long march to Boston. These skilful marksmen, who, while rapidly advancing, could hit a target of seven inches at a distance of two hundred and fifty yards, were posted along the lines and were especially dreaded by the enemy. But the American army, as well as the

[1] A camp song of the period asks : —

"And what have you got, by all your designing,
But a town without dinner to sit down and dine in ?"

English, suffered from sickness. Thus, at the end of August, more than a quarter of the Connecticut contingent were returned as sick and unfit for active service.

Washington pushes on his works.

With the first moment of relief from the terrible lack of powder, Washington displayed that spirit of enterprise which was an essential trait of his character. He advanced his works on his extreme left by fortifying Ploughed Hill; though he supposed this might bring on an action, as the fortifying of Bunker Hill had done. The enemy did not move, however. Indeed, their only victory of the summer was an extraordinary paper victory. In two issues of the "Public Advertiser" in London, full detailed accounts were published of an attack led by General Howe in person, on the rebel works in Roxbury. These works were stormed and taken, and Generals Putnam and Lee were made prisoners, with twenty-five hundred of inferior rank. The English loss in this wholly fictitious victory was one hundred and fifty killed. For all this detail there was not the slightest foundation. Later intelligence, of course, showed that the readers of London had been imposed upon. It is but one of many such stories, which we must pass without mention, although they engaged public attention in their day, and had their share in influencing the opinion of the world. On the Continent such fictions were not so easily exposed as in England. Their circulation resulted in the most extraordinary notions of the contest, — absurd to any well-informed person, but not the less received because absurd. Such notions and the fictions from which they are formed, are not yet wholly eradicated from the popular impressions of Europe.[1]

English attack on Falmouth.

Until October, the English naval force, under Admiral Graves, had made no attack upon any point on the coast, except for the seizing of sheep or oxen for the army. But in that month, Graves, having consulted with Gage, before he left, sent the *Canceau*, Captain Mowatt, and an armed transport, the *Cat*, with two other vessels, to destroy Cape Ann (by which Gloucester is meant) and Falmouth, now Portland, in Maine. In Howe's despatch to the ministry, describing the result, he seems to wish to throw the responsibility upon Graves. The only excuse offered for burning the towns is, that they were distinguished for their opposition to Government.

The selectmen of Falmouth speak of the affair as Captain Mow-

[1] No more ridiculous illustrations of such exaggerations can be found than in Hilliard d'Auberteuil's Essays, already alluded to. Under the pen of this well-meaning writer, the forests of America, being as old as she is, furnish no wood young enough for the building of large ships! Charles Lee appears as the orator whose eloquence created the Revolution, which he then passed to Washington's more prudent hand.

att's personal retaliation on them, because he had been seized by some provincial troops soon after the battle of Lexington. He had been released at that time, but the town had refused to give up their guns or to send away the troops. Notice had afterwards been sent to Falmouth, that unless they permitted Captain Coulson, who had a ship there, to sail for England, their town should be "beat about their ears." This threat was accomplished by burning it on the 17th of October. Captain Mowatt offered at the last to spare it if the town would give up their cannons, small arms, and ammunition. But this was refused. One hundred and fifty houses were burned,[1] with all the churches and other public buildings.

This attack on an open town which offered and could offer no resistance, was the real declaration of war by England against America. Up to this time there had been a lingering notion among the Americans that the army in Boston was the objective, and that war existed only in Boston Bay. The royal commanders, not unnaturally, did not choose to be confined by any such understanding. Finding no enemy in arms anywhere else, they had nothing to attack but defenceless towns. General Greene says, in a letter from Cambridge of this date, "we are at loggerheads here, but at other places only sparring." The conflagration at Falmouth showed the country that war was war, — lawless and cruel. The correspondence and journals of the time all show that in this event a step and a long step was taken. So much further was reconciliation put out of the question.

Beginning of a navy.

The destruction of Falmouth proved the imperative necessity of measures to meet the enemy on the sea as well as on the land. Connecticut and Rhode Island had been peculiarly exposed, during the autumn, to incursions from the enemy. It was the sufferings of their people, probably, that moved the delegates of the latter province in Congress to suggest the formation of a navy, of which Esek Hopkins was appointed commodore. The frigate *Rose*, under the command of Captain Wallace, was, with a number of other vessels, stationed along the southern coast of New England, and their depredations upon the people were for months unceasing. Newport was seriously threatened in October, and many of her people fled with their household property to the surrounding country in the midst of a violent storm. Wallace consented to spare the town only on condition of being supplied with fresh provisions. Bristol fared even worse, for the town was bombarded, and many houses destroyed. At Jamestown, on the island of Conanicut, opposite Newport, a force landed in December, burnt houses and barns, plundered the people, and carried off all their live stock. Governor Cooke called out all the

[1] Howe, in his despatch to England, says five hundred.

minute men of the province, and asked of the commander-in-chief that a regiment of the line might be sent for its protection. The request was complied with, though it came at that critical moment when Washington was reorganizing the army around Boston, and not long after the troops from Connecticut, whose term of enlistment had expired, were in a state of mutiny. General Lee was sent to Newport at the head of eight hundred men.[1] He so disposed them as to give protection to the inhabitants in that neighborhood; and he suppressed with a strong hand those among the Tories who encouraged the enemy and gave information which made the depredations upon their neighbors easy, and at the same time insured their own protection.

The equipment of the little fleet of the New England colonies was slow, and its operations were insignificant, till, late in November, by a fortunate stroke, Manly, in the *Lee*, took the brigantine *Nancy*, bound from London, with military stores, which were most acceptable. "Two thousand muskets," "one hundred and five thousand flints," "sixty reams of cartridge-paper," thirty-one tons of musket-shot," "three thousand round-shot for 12-pounders, four thousand for 6-pounders." Such were some of the heads of the invoice of her stores as it opened before the delighted eyes of the general officers and their hard-pressed chief of engineers, who not long before had prepared a list, not dissimilar, of the necessities of the army. For the rest, the naval service was not yet organized. Washington says, bitterly, in a private letter, in November, "Our privateersmen go on at the old rate, — mutinying if they cannot do as they please." Such has proved to be the habit of privateersmen in most wars.

[1] Lee exacted an oath from the Tories, which Washington sent to Hancock as "a specimen of his abilities in that way." This "iron-clad" oath, Arnold (*History of Rhode Island*) gives in full, as follows: —

"I, John Bours, here, in the presence of Almighty God, as I hope for ease, honor, and comfort in this world, and happiness in the world to come, most earnestly, devoutly, and religiously swear, neither directly nor indirectly to assist the wicked instruments of ministerial tyranny and villany, commonly called the King's troops and navy, by furnishing them with provisions or refreshments of any kind, unless authorized by the Continental Congress or the Legislature, as at present established in this particular colony of Rhode Island. I do also swear by the same tremendous and Almighty God, that I will neither directly nor indirectly convey any intelligence, nor give any advice to the aforesaid enemies so described, and that I pledge myself, if I should, by any accident, get the knowledge of such treason, to inform immediately the Committee of Safety. And as it is justly allowed, that when the sacred rights and liberties of a nation are invaded, neutrality is not less base and criminal than open and avowed hostility, I do further swear and pledge myself, as I hope for eternal salvation, that I will, whenever called upon by the voice of the Continental Congress, or that of the Legislature of this particular colony, under their authority, take arms and subject myself to military discipline in defence of the common rights and liberties of America. So help me God. Sworn at Newport, December 25, 1775.

"JOHN BOURSE."

The attention and anxiety of the army, and of the Continental Congress, as well as the Congress of Massachusetts, were excited in the autumn by the discovery that Dr. Benjamin Church, a member of the House in Massachusetts, was communicating secretly with his brother-in-law in Boston. Church had been a prominent patriot, the friend of Warren and of the other Boston leaders. On the discovery of a letter in cipher from him to his brother-in-law, he was arrested. The letter was deciphered, and proved to contain accounts of the force of the Americans, with disparaging allusions to their commanders. Church was expelled from the Massachusetts Assembly. In his defence he said the letter was written not long after the battle at Bunker Hill. "Was there a man," he said, "who regarded his country, who would not then have sacrificed his life to obtain a tolerable accommodation?" He called attention to his exaggeration of the resources of the American army, and affected to have carried on the correspondence in the true interest of the country. But it was clear enough that his conception of that interest was not that of men who were now committed to open war. The Continental Congress took his case as their own, and put him in close confinement.[1]

Church's treachery.

The Continental Congress was still urging an attack upon Boston, "to break up the nest there," as Washington says. He held a council of general officers on the 18th of October, to consider the subject. They decided unanimously that such an attack was impracticable. Meanwhile the army itself was near its end. The enlistments did not hold the men, except in a few instances, beyond the close of the year. A committee, consisting of Franklin, Lynch, and Harrison, came from Philadelphia to Cambridge, to make the best arrangements for its renewal. But this renewal was attended with endless care and anxiety for all parties concerned. The original idea, to make an army in which there should be no regard to colonial lines, proved impracticable. Even if the officers assented, the men would not enlist unless they knew who was to command them. The abolition of the old colonial systems, which gave small regiments in some colonies and large ones in others, made another difficulty. A general order for the enlistment of the new army was issued as early as October 22d, but on the 28th of November only 3,500 men had enlisted on "the new establishment," as it was called. The change enabled the generals to drop officers of the lower grades, who had in any way forfeited confidence, and in the end it greatly improved the condition of the army. Yet to disband one

Condition of the army. Enlistments.

[1] He remained in prison for some months, and was then permitted to sail for the West Indies. The vessel in which he took passage was never heard of afterward.

army and recruit another in the face of an enemy, was, as Washington often said, a matter for the most serious anxiety. Changes, however, were absolutely necessary, and a great point was gained when, by the first of the year, the rëorganization was complete, though the army was reduced in numbers.

The American Flag.

"The day [January 2, 1776] which gave being to the new army," Washington wrote to Reed, "but before the proclamation came to hand, we had hoisted the Union Flag, in compliment to the *United Colonies*." It happened that the King's speech had just been received in Boston, and copies of it were sent out to the American camp. The raising of this flag, and the discharge of thirteen guns that saluted it, were, not unnaturally, supposed by the British officers to be a token of rejoicing at the King's speech; for the flag itself, though it contained the thirteen stripes emblematic of the thirteen colonies, still retained the union of the British standard, the Crosses of St. George and St. Andrew. The Americans, when they learned of the misunderstanding of the English, indignantly made a bonfire of the royal speech, and it was in allusion to this incident that Washington wrote to Reed the words we have just quoted.

Union Flag.

Previous to this time there had been no national flags. "Union Flags," as they were called, were sometimes used, but they were simply the British Standard, with the legend, "Liberty and Property," or "Liberty and Union," inscribed upon the field. It is not certain that there was any American flag displayed at the battle of Bunker Hill, though tradition says that one floated over Prescott's redoubt emblazoned with the words "Come if you Dare!"[1] A month after the battle, however, when the Declaration of the Continental Congress, setting forth the causes and necessity of taking up arms, was publicly read in the camp on Prospect Hill, a red flag, sent from Connecticut to General Putnam, was raised, on which were inscribed the words, "*Qui transtulit, sustinet*,"[2] and "An Appeal to Heaven." The flag of Massachusetts was white, with a pine tree in the centre, also bearing the motto, "An Appeal to Heaven," words taken from the closing paragraph of the "Address of the Provincial Congress of Massachusetts to their brethren in Great

Pine Tree Flag.

[1] Frothingham's *History of the Siege of Boston*.

[2] This is the motto of Connecticut.

Britain." This flag was on all the floating batteries, was borne by New Hampshire as well as Massachusetts regiments, and was suggested in October by Reed as the flag of all naval vessels. A blue flag with a white crescent was raised over the fortifications in South Carolina the same year, and the first naval flag was yellow, with a rattlesnake in the act of striking, and beneath, the motto, "Don't tread on me!" But the first recognized Continental standard was that alluded to by Washington in his letter to Reed, as raised in the camp around Boston on the 2d of January, 1776. This was superseded by a resolution of Congress, on the 14th of June, 1777, declaring "that the flag of the thirteen United Colonies be thirteen stripes, alternate red and white, and the union be thirteen stars, white in a blue field, representing a new constellation." With the addition of stars, this has continued to be the national standard.

Rattlesnake Flag.

But General Howe, shut up in Boston, was in a condition even more critical than that which gave Washington so much anxiety. It was easy enough to say in England that he had command of the sea. But, in truth, the naval force was crippled, or the officers said it was, for want of seamen; and Howe writes earnestly that more may be sent out. So weak was it, that he could not even provision his little army from the raids on the shores of a continent which his vessels should have commanded for a thousand miles. There was also a serious misunderstanding between Howe and Admiral Graves. Provisions of every kind, not only salt meats and flour, but corn, butter, potatoes, and eggs, were shipped to Howe from England and Ireland, sometimes, alas! to fall into the hands of the insignificant American cruisers in Boston Bay. Even live oxen, sheep, and hogs were sent from England in great numbers. But the vessels met bad weather at the outset. An exaggerated account, published in English journals at the time, says the English channel was covered with the bodies of sheep which had been thrown overboard. It is now known that not one animal from this extraordinary shipment ever arrived in Boston. That the Government made it, was a concession that their cause was desperate. How could they expect to regain a continent on which a little army of ten thousand men could not find enough provisions to keep them alive?

Howe's condition.

At this period public opinion continued to declare itself in England by the generous offerings of private subscriptions, either to solace the army by national sympathy, or to rebuke the Government by charities to those whom it was oppressing. "The King's friends," through all England, were not satisfied with

English aid to Howe's forces.

addresses formally presented, and subscribed liberally for comforts to be sent to the soldiers and sailors in Boston. On the other hand, when the news of the repulse at Lexington was received in England, friends of America placed one hundred pounds in Franklin's hands for the widows and orphans of the men killed by the troops that day. Afterwards, even to the end of the war, money was thus raised by subscription for American prisoners.

General Howe found difficulty even in providing barracks for his troops for the winter season. In summer many of them were encamped on Boston Common and on Bunker Hill. On the 26th of November, he wrote a despatch to Lord Dartmouth, explaining that he must winter in Boston, because he had not transports sufficient to move the force, as Dartmouth had suggested. For this purpose, he supposed that 35,000 tons of shipping were needed, and the whole force at his command was not 26,000 tons. Unwillingly, therefore, he stayed through the winter. He pulled down one meeting-house for fuel. He even mined coal in Cape Breton for the use of his army in Boston. As late as the 27th of November, some of his regiments were still under canvas. At this period he sent out to the Americans three hundred more of their countrymen, mostly women and children. These were provided for in Hampshire County, in western Massachusetts.

Amusements of the Boston garrison.

To amuse the officers and men, theatrical entertainments, almost for the first time in Puritan Boston, were given in Faneuil Hall. Up to this time General Burgoyne's reputation had been that of a man of letters rather than a soldier. Indeed, his military fame rested on a success in Portugal which, according to modern notions of war, can scarcely be called a skirmish. For the present purpose Burgoyne wrote a little play called "The Siege of Boston." While the play went on, a sergeant rushed upon the scenes, and announced that the Yankees were on Bunker Hill. The audience laughed, regarding the announcement as a part of the performance. But in a moment more the officers were ordered by General Howe to repair to their posts, and the audience broke up in the utmost confusion and alarm. One of Knowlton's Connecticut companies, by a bold raid, had crossed the Neck and had fired the bakery of the English contingent at Charlestown. In the midst of the severities of the campaign and the summer, Howe reports, with just pride, that he had lost but thirty-three men by desertion, in seven months after the battle of Lexington.[1] Burgoyne gave up his literary and

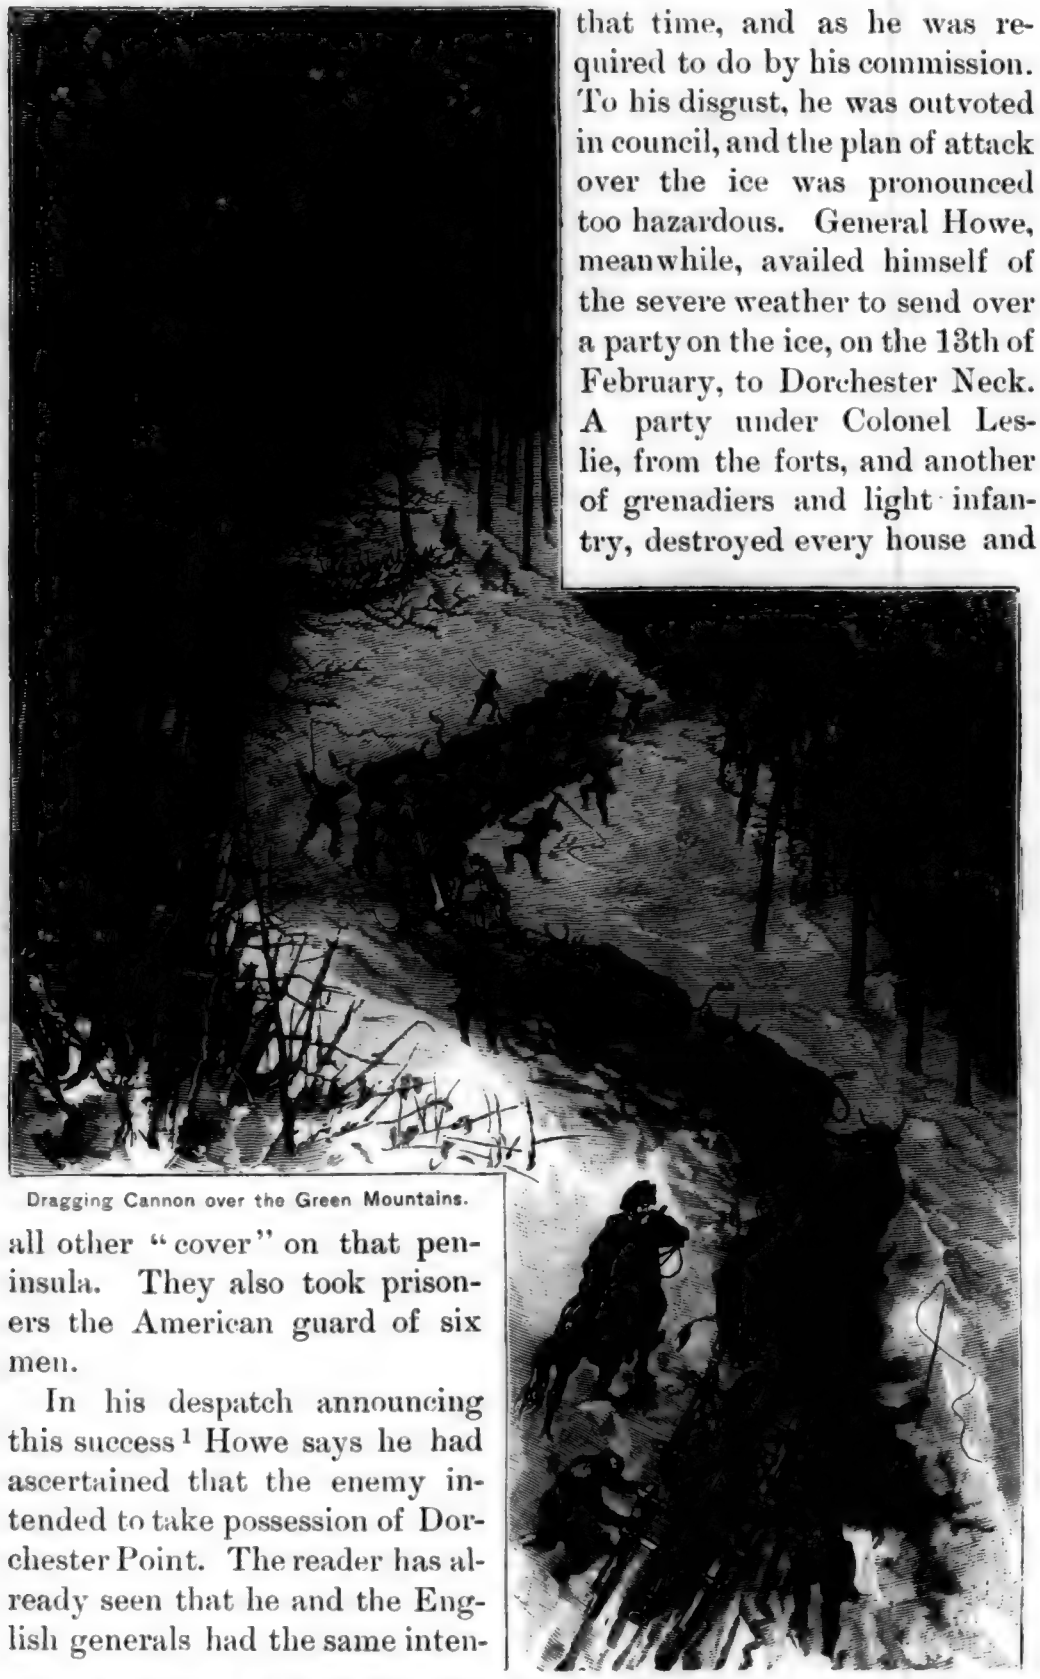
[1] This report gives a good test of the accuracy of our materials for history. It would not be difficult, from the American reports, to say at what dates most of these men deserted. Indeed, we have the accounts which many of them brought in. At a later period the desertions from the English force weakened it sorely.

military duties for the moment, and returned to England at the end of November. He had been six months in Boston, and had not yet made "elbow-room."

German mercenaries for the English army.

In a despatch of this date, General Howe confirms the ministry in a plan they had already determined on, for raising mercenaries in Hanover and Hesse. He says that the only recruits they can send from Great Britain will be men of the worst kind. Six or seven thousand will be needed, "who will be Irish Roman Catholics, certain to desert if put to hard work, and, from their ignorance of arms, not entitled to the smallest confidence as soldiers." To obviate this difficulty, he suggests incorporating with each English regiment one hundred trained soldiers from Hanover or from Hesse. Such were the reasons for Howe's inactivity during the critical period when Washington was renewing his army. The loss of the storeship *Nancy* brought another source of anxiety, which hung on him for three months more.

Suggestions for an attack on Boston



On the 3d of December, in a letter to Lord Dartmouth, he says: "The brigantine *Nancy* has been taken with four thousand stand of arms.[1] The circumstance is unfortunate, as it puts in the enemy's hands the means of setting the town on fire, as the vessel contains carcasses and other materials of like nature." Howe wrote as a soldier, and contemplated such a mode of attack as it might have been his duty to pursue under like circumstances. Had Washington acted only as a soldier, he would very probably have fired the town. The policy of doing so was openly considered in the American councils. On the 22d of December, the Continental Congress resolved, "That if General Washington and his council of war should be of opinion that a successful attack may be made on the troops in Boston, he do it in any manner he may think expedient, notwithstanding the town and property in it may be destroyed." In communicating this resolve, President Hancock wrote: "You will notice the resolution relative to an attack upon Boston. This passed after a most serious debate in a committee of the whole house, and the execution was referred to you. May God crown your attempt with success. I most heartily wish it, though individually I may be the greatest sufferer."

Dorchester Neck laid waste.

But Washington's intention was to cross on the ice, so soon as the Charles River, and what was known as the "Back Bay,"[2] should freeze. In most winters, this bay, at least, was frozen over. But this winter proved unusually mild, and no such opportunity offered itself until the middle of February. Washington then called a council of war, as was the fashion in all armies at

[1] An over-statement, as the reader has seen.

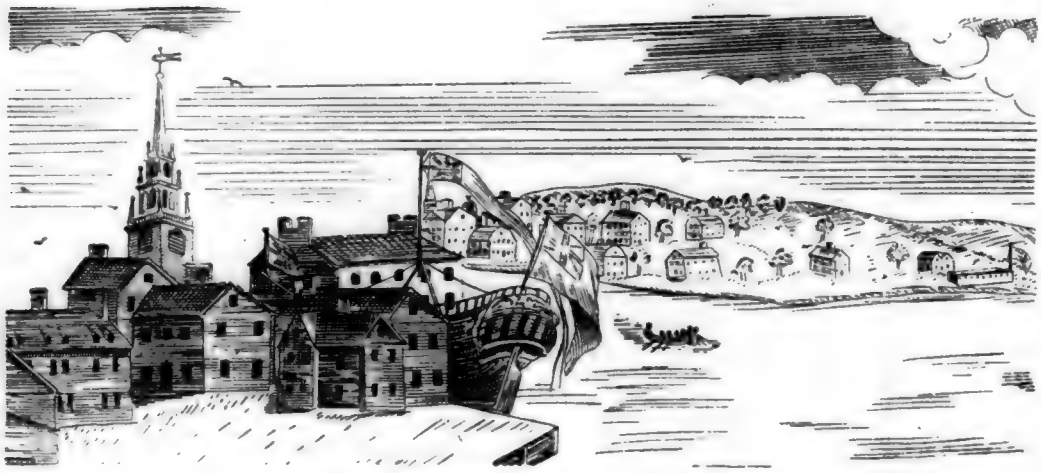
[2] Now covered with streets and houses.

Dragging Cannon over the Green Mountains.

that time, and as he was required to do by his commission. To his disgust, he was outvoted in council, and the plan of attack over the ice was pronounced too hazardous. General Howe, meanwhile, availed himself of the severe weather to send over a party on the ice, on the 13th of February, to Dorchester Neck. A party under Colonel Leslie, from the forts, and another of grenadiers and light infantry, destroyed every house and all other "cover" on that peninsula. They also took prisoners the American guard of six men.

In his despatch announcing this success[1] Howe says he had ascertained that the enemy intended to take possession of Dorchester Point. The reader has already seen that he and the English generals had the same inten-

[1] In all instances, we quote from Howe's manuscript despatches, now preserved in the English State Paper Office. Only a part of them have been printed in full.



tion as early as June of the preceding year. Why they did not seize these heights, after they were reënforced, it is difficult to say. Washington had refrained, not simply for want of powder, but from lack of heavy artillery. This lack was now supplied by the capture of the *Nancy* and the arrival of a train — brought as never cannon had been brought before — from Ticonderoga. So soon as the snows of winter served, the heavy guns needed for the American lines were brought, under the admirable direction of Henry Knox, now at the head of the artillery, on forty-two sleds, drawn by long teams of oxen, through the passes and over the ridges of the Green Mountains, and down through the hill country of New England, over roads which never bore a cannon before and have never borne one since. Their arrival at Cambridge was welcomed with enthusiasm. Had Howe only known it, with that arrival his easy winter was ended.

The American movement on Dorchester Heights.

Washington asked the Provincial Congress of Massachusetts to call out the militia of the neighborhood, and this was immediately done. Ten regiments of soldierly men came in at once, and so far reënforced his army. Ward, who commanded at Roxbury, was intrusted with the oversight of the movement upon Dorchester Heights, and the immediate direction of it was intrusted to John Thomas, also of Massachusetts, one of the brigadier-generals, an officer whose early death, before this year was ended, was a serious loss to the American cause. The earth was frozen hard, so that such works as were thrown up on a summer's night at Bunker Hill were impossible. Fascines were collected, and what the military language of that day called "chandeliers," which were a kind of foundation for fascines.

On the night of Saturday, the 2d of March, 1776, a vigorous cannonade was begun from the American works to the north of Boston, and it was maintained through the nights of the 3d and 4th, to divert the attention of the English. At the least, the noise of the cannonade might overpower the sound made by Thomas's long train as it passed over frozen ground. As soon as this firing began on Monday evening, he moved from Roxbury with twelve hundred men, and took possession, without discovery, of the higher hill, that farthest from Boston, which at that time commanded Nook's Hill, nearer to the town. Four hundred yoke of oxen drew the materials for the works, and this train passed unnoticed by the English sentries, hardly a mile away on Boston Neck. When Thomas was fairly intrenched, a heavy reënforcement joined him. The movement corresponded precisely to what the movement on Bunker Hill would have been had the party intrenched the higher summit there. The men worked with energy, and by morning a respectable defence and battery were constructed,

wholly to the surprise of the English officers. The work was planned, as was that so well tested at Bunker Hill, by the veteran Gridley, who had the assistance of Colonel Putnam. Howe was astonished. He wrote to the minister that this must have been the work of twelve thousand men. One of his officers said the suddenness of the whole recalled the wonderful eastern stories of enchantment and invisible agency. Howe knew, of course, and the Admiral immediately notified him, that the fleet could not remain in safety under the fire of these guns. That evening, Howe sent three thousand men, under Lord Percy, to Castle William, which is on an island about a mile from the extreme point of Dorchester Neck, most distant from the town.

North End of Boston. From an Old Print.

Washington's plans.

Percy's instructions were, to attack the newly-built works on their eastward or southern side, where it must have been supposed that they were not so strong as in front. But a violent storm that night and the next morning broke up his plan of attack, and that day was lost. Washington, of course, expected such an attack. He relied on Thomas and his party to repel it, from works which were much stronger than those on Bunker Hill. While it engaged the enemy, Putnam was to attack the town on the western side, where Greene's and Sullivan's brigades of four thousand men were in readiness. Greene was to have landed with his men near the ground now occupied by the gardens of the Massachusetts Hospital. Sullivan was to land a little farther south, — not far north of the present line of Beacon Street. Had they succeeded, they would have moved south on the English works at Boston Neck, to admit the American troops at Roxbury. Three floating batteries were prepared, which should move in advance of the troops, and clear the ground for their landing.

We shall never know what would have been the success of this bold plan, — bold enough to redeem Washington from the imputation, sometimes thrown at him, of excessive caution. He thought well of it. His officers thought well of it. The men were in high spirits and well led. The 5th of March, when he supposed it would be executed, was the anniversary of the Boston Massacre. Only a year before Warren had told Knox and others of those men in the Old South Meeting-house, of the dangers of standing armies. Only a year ago he had painted that touching picture of George and Liberty seated together on an American throne. Everything had happened since that commemoration!

But the English did not move on the new works, which with every hour's delay grew stronger. Washington now prepared to extend them, and to seize Nook's Hill, closer to Boston, — immediately opposite it, indeed. To continue the comparison with the other peninsula, Nook's Hill was for Dorchester Neck what Breed's Farm, the site of Prescott's redoubt, was for Bunker Hill. On the night of the 9th he would have intrenched that hill. But on the 8th a flag of truce from Howe appeared, with a note from the selectmen of Boston, giving information that General Howe was determined to leave Boston with the army under his command. They said that he had assured them he would not destroy the town unless his troops were molested in their embarkation. They said their fears were quieted with regard to General Howe's intentions; and they begged "that they might have some assurance that so dreadful a calamity might not be brought on by any measures from without."

Howe was not unwilling to adopt this indirect way of communication with his enemy, for which he had no lack of precedents in the etiquette of the wars of Frederick. Washington would not receive the message, which was not, indeed, addressed to him. But it answered every purpose, and without other official communication on either side, Howe was permitted to embark his forces without molestation. He had abandoned the plan of assaulting Thomas's works, and had determined to evacuate Boston.

Howe evacuates Boston.

On the nights of the 9th, 10th, and 11th, Washington continued the bombardment, and the enemy replied. But these were the last movements of offence or of defence. All Saturday night the explosions were heard, by which Howe destroyed the property he could not take away. On the morning of Sunday, the 17th of March, he sailed with his whole army, hastened, as it appeared, by the work on Nook's Hill, which Washington had at last fortified. It was just three months since he had notified the English minister that he had not transports sufficient for more than two thirds of his force. Not a vessel had

joined him in the interval. But under the spur of necessity the navy and the transports proved sufficient. General Putnam immediately marched into Charlestown, and took the English fort on Bunker Hill, which was held by two wooden sentries. General Ward sent a party from Roxbury across the Neck, and the siege of Boston was ended.

Entry of the Americans.

The selectmen notified Ward that the small-pox was in the city, and advised that those of the army not "protected" should not enter. But on Monday the great body of the army marched in. The returns of Howe's force, on the day he left, show that he had in all eight thousand nine hundred and six officers and men. They sailed in seventy-eight ships and transports. With him he took about eleven hundred loyalists, either old residents of Boston or others who had come into the town from the country to escape the persecutions of their neighbors. Many of these never returned to their native land. A large number of them settled in Nova Scotia, and were a valuable addition to the population of that colony.[1]

The larger part of Howe's squadron proceeded directly to Halifax. The naval ships loitered in the outer harbor of Boston, and elsewhere in Massachusetts Bay, to give notice to vessels from England, that they might not fall into the hands of the American army. But "the continent," from Canada to Florida, was freed from the royal army. Less than one year of vigorous assertion of the rights under which they had lived from the beginning, had, for the moment, given such an answer to the repressive measures of the English Crown. The joy was universal. The handful of residents left in Boston received the army as liberators. Washington entered the town with ceremony which is still remembered in tradition. The long street by which he came, yielded in time its historical names to his. "The Neck," which was the local name of the Isthmus, "Orange Street," which commemorated the Liberator of England, "Newbury Street," which told the tale of Charles's disgrace, "Marlborough Street," named in honor of the conqueror of Blenheim, and "Corn Hill," which fondly recalled memories of London, — all these names gave way, that "Washington Street" might remind the town of him who freed it from the first army of strangers that ever stood within its borders. Congress ordered a gold medal struck, to be presented to him. It is the first in the numismatic history of independent America, and bears the proud motto, "HOSTIBUS PRIMO FUGATIS."[2]

"As I passed through the town," — wrote one who entered it the day after the evacuation,[3] — "it gave me much pain of mind to see the

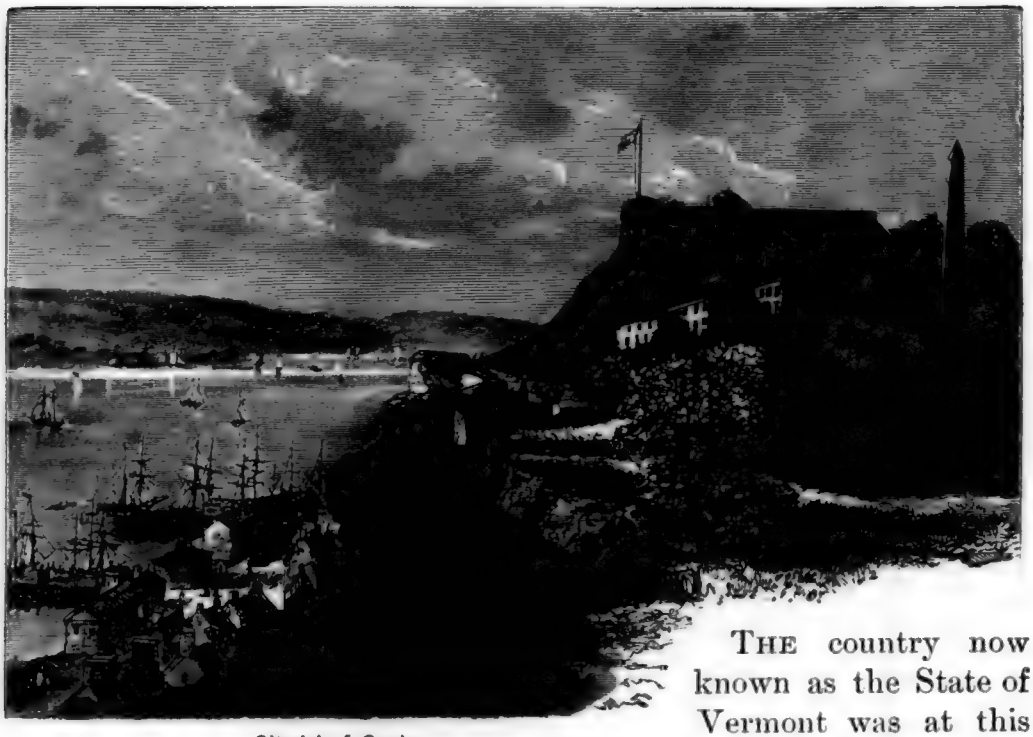
[2] The original medal, in the fortunes of an expiring family, and afterward of civil war, came into the possession of the Massachusetts Historical Society.

[3] Diary of Ezekiel Price, published in *Proceedings of Mass. Hist. Soc.*, November, 1863

havoc, waste, and destruction of those houses, fences, and trees in the town, occasioned by those sons of Belial, who have near a year past had the possession." The Old South Church had been used as a riding-school for the soldiers; the West Church and the church in Hollis Street, at the South End, had been used as barracks; the Old North had been taken down and used as fire-wood, — in revenge, it was said, of the signal lanterns hung in its belfry on the eve of the movement on Concord. Faneuil Hall had been made a play-house. But the wonder is that there had not been more destruction of private and of public property, when it is remembered that this town, beleaguered for nine months, was in possession of the enemy. If Howe made use of public buildings, and permitted the destruction of some old buildings for fuel, let it be said that he used all his authority to restrain wanton destruction and robbery. There was much of it in the last week of British possession, but he threatened death to the perpetrators.



Washington's Medal.

It had been known ever since October, that English expeditions were proposed to seize Hudson River and New York. To arrange the resistance to these, General Lee had been stationed at New York, and extensive works of fortification had been planned. Now, when Howe left Boston, Washington believed that New York was the destination of his fleet and army. He immediately sent forward General Heath with the whole body of riflemen and five battalions, and General Sullivan with six battalions, to meet this expected invasion. General Putnam was ordered to New York to take command, and to carry out, so far as he thought advisable, Lee's plans of defence, till the Commander-in-chief should arrive and assume the direction of affairs.

Citadel of Quebec.

THE country now known as the State of Vermont was at this time a wilderness, just beginning to be occupied, and was the scene of intercolonial strife.

The Vermont dispute.

"The Grants" was the popular name for a tract first settled by emigrants from New Hampshire, who held the title to their lands under grant of the Governor of that State. But New

York claimed a prior right to the territory as far east as the Connecticut River. In 1749, the township of Bennington, the first in the territory, was granted under a patent from Governor Benning Wentworth, of New Hampshire; and although New York remonstrated, successive grants continued to be made until 1764, when an appeal to the Crown brought the decision that the Connecticut River, north of the Massachusetts line, was the boundary between New York and New Hampshire. It would have made little difference to the settlers in this new country, who had come not only from New Hampshire, but from the western districts of Massachusetts and Connecticut, under which colony they held title to their land, but the New York government, under this decree of the Crown, began to grant new patents covering the property already occupied and improved, and requiring fees and other charges to secure New York titles. The colonists, almost without exception, resisted these claims, and a warm conflict followed. The colonists were without regular government; they had no town, for it was not till after 1780 that Bennington had even a country store. There were no wagon-roads, and scarcely even foot-paths through the wilderness; but blazed trees marked the thin lines of routes that were afterward to become highways. At first the action of the New York government was resisted in the courts of Albany, and that proving of no avail, the colonists in the Grants formed a league for mutual protection, and received the officers of the Crown, who came with writs of possession, in a manner that was termed rebellious by the authorities, and self-defensive by the mountaineers. Under the name of Green Mountain Boys, they held a rude military organization, and resistance to the processes of law was so far formal and combined that a price was set on the heads of the leaders, and they were treated as outlaws.

Condition of the country.

The Green Mountain Boys.

The nearest military posts were Ticonderoga and Crown Point. From the former, especially, officers of the Crown came with their demands to the farms that lay scattered on the slopes of the Green Mountains, and the fort was looked upon as the gateway to the Grants from New York. At this time (1775), it was falling out of repair, and was garrisoned by about fifty men, but contained a considerable supply of military stores. It held at once the outlook toward Canada and the nearest approach to the unruly people of the Grants. To western New England it was the best known fortified post, and the one most identified with the frontier life, while in the East it had a wide fame through its recent history. To this point, therefore, many eyes were turned when the difficulties with Great Britain began to reach open warfare. The Green Moun-

Importance of Ticonderoga.

tain Boys, by a succession of individual encounters, had become accustomed to the idea of fighting, and there were no such restraints upon them as held back the people of more conservative and law-abiding sections. The first tidings of war found them eager to act on the offensive, especially toward the point which represented to them the only British tyranny they had known.

John Brown's mission to Canada.

In the winter of 1775, John Brown, of Pittsfield, a lawyer and an ardent patriot, who was in the counsels of the Boston committee, made a journey through the Grants to Canada, to discover the temper of the Canadians towards the British Government, and to secure, if possible, assurances of organized aid for the other colonies. In his letter from Montreal to the Committee of Correspondence in Boston, — Adams and Warren, — dated March 29, 1775, he informs them that he has established a channel of communication through the New Hampshire Grants, which may be depended upon, and adds: "One thing I must mention, to be kept a profound secret. The Fort at *Ticonderoga* must be seized as soon as possible, should hostilities be committed by the King's troops. The people on *New Hampshire Grants* have engaged to do this business, and, in my opinion, they are the most proper persons for this job." It does not appear that the Massachusetts Committee took, at the time, any steps to accomplish this object. But when the news of Lexington was spread abroad, both Massachusetts and Connecticut were alive with volunteers hurrying to the camp at Cambridge, while delegates to the Congress, about to assemble at Philadelphia, were passing through the country, consulting with patriots on the road. In Connecticut and western Massachusetts, the first thought was at once of Ticonderoga; its stores were coveted, and its undefended condition was known.

Effect of the Battle of Lexington.

Colonel Parsons, of Connecticut, was on his way from Oxford to Hartford, when he fell in with Captain Benedict Arnold, who was hurrying from New Haven over the same road to Watertown. Captain Arnold's intention was to obtain a commission from the Provincial Congress at Watertown, that he might raise a company for the capture of Ticonderoga. Parsons reached Hartford on the morning of the 27th of April, immediately consulted with five other gentlemen, communicating to them Arnold's information, and proposed that they should at once take secret measures for an expedition against the fort. Procuring £300 from the treasury on their own responsibility, they sent off two men, — Romans, who had been an engineer in the British service, and Noah Phelps, of Simsbury, on their way to the Grants, apparently, for no positive information exists on this point, — with instructions to put means in the hands of

Action of Parsons and Arnold.

the Green Mountain Boys to carry out their plans.[1] On Friday, the 28th, Captain Edward Mott, arriving in Hartford, saw Leffingwell, one of the gentlemen who had engaged with Parsons. In answer to inquiries respecting affairs at Boston, he said that the great lack of military stores could be best remedied by a sudden attack upon Ticonderoga. Leffingwell, consulting with Parsons and Silas Deane, determined that Mott should take five or six men with him, overtake Romans and Phelps, and act in concert with them; his instructions being to proceed at once to the Grants, and there enlist men for the expedition.

Designs on Ticonderoga.

Mott overtook Romans and Phelps at Salisbury on the 30th, and the party, consisting now of sixteen men, held on together northward. At Sheffield they sent two men, Halsey and Stephens, to Albany, to discover the temper of the people there, and proceeded to Pittsfield, which they reached on the first day of May. Here they lodged at Colonel Easton's, and fell in with John Brown. Their instructions had been to keep their own counsel, and not to enlist men until they reached the Grants; but Brown, who knew the country well, and was already a prominent patriot, at once won their confidence, and, with Easton, strenuously advised them to raise a portion of their forces in the more closely-settled country in which they then were. Both Easton and Brown joined them, and the former assisted Mott in enlisting men in Williamstown and Jericho, now Hancock. At Bennington there was a rendezvous, and two men — Hickok and Phelps — made an excursion to Ticonderoga to get exact information of the condition of the fort. Phelps, disguising himself, entered the fort as a countryman who desired to be shaved, and, while hunting for the barber, asked questions and kept his eyes open, playing the part of an ignorant rustic. Men were sent out on all the roads leading to the lake, to intercept passers and prevent knowledge of the movement reaching the fort, and the whole company was instructed to meet at Castleton for a final rendezvous. Here Allen, with his Green Mountain Boys, was ready for the attack, and the command of the principal body of troops was given to him. On the 8th of May the final plans were laid. Allen, with one hundred and forty men, was to go to the lake by way of Shore-

Ethan Allen.

[1] Romans and Phelps's expedition became at once merged in Mott's, whose course is clearly laid down; but in Bernard Romans's account with the Colony of Connecticut for moneys expended in the capture of Ticonderoga, there is this item: "*Paid Heman Allen going express after Ethan Allen,* 120 *miles,* £2. 16*s.*" (*Rec. Papers*, vol. iii. p. 26.) Heman Allen was a brother of Ethan, living in Salisbury, Conn., and Ethan's acknowledged leadership of the Green Mountain Boys indicates that Romans's first business was to send with despatch to the leader of the forces that were relied upon to take Ticonderoga. Something, moreover, of the nature of these first orders may be inferred from the subsequent orders given to Mott.

ham, opposite Ticonderoga. Thirty men, under Captain Herrick, were to advance to Skenesborough and capture Major Skene and his party, and then drop down the lake to join Allen, carrying boats from Skenesborough to assist in transporting the troops.

Allen had gone forward to Shoreham on the 8th, and the party under orders for Skenesborough was in readiness, when suddenly an officer appeared through the woods, attended by a servant, and hurrying to the camp. It was Benedict Arnold, who had remained in Cambridge and Watertown only long enough to lay his plans before the Committee and to receive a commission as "colonel and commander-in chief over a body of men not exceeding four hundred," to be enlisted for the reduction of Ticonderoga. He had set out at once for western Massachusetts to raise men for his command, and there learning that a party from Connecticut had just been over the same ground, he left a few officers to enlist troops, and made all haste to Castleton. Presenting himself before Mott and Easton, he announced the action of the Massachusetts Committee, and asserted his right to command the forces. They showed him their plans and took him into their counsels, but he declared they had no proper orders, and insisted upon his own superior rank and commission. The movement on their part was indeed voluntary, appointed by a self-elected committee in Connecticut, and associated with an outlaw military organization. Arnold's claim was strong, if the Massachusetts Committee had legal authority, with the right to punish for contumacy; but then Mott and Easton had the men whom they had engaged, and had promised they should be commanded by their own officers. They refused to surrender the command to Arnold. He was not to be put down, but the next morning set off to overtake and supersede Allen.

Arnold overtakes Allen's expedition

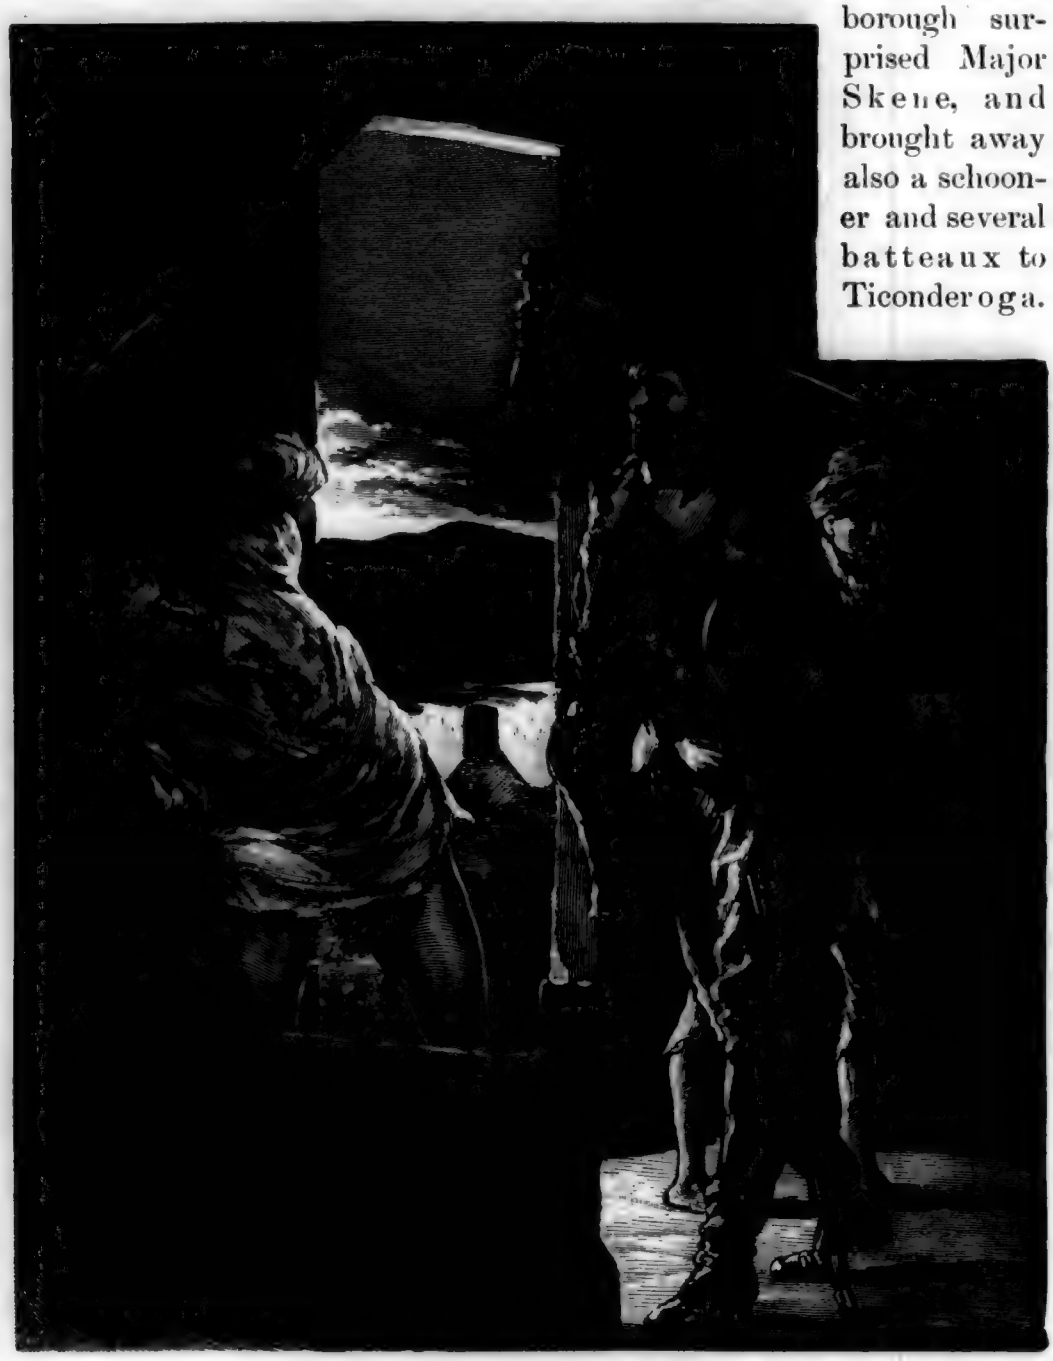
And claims the command.

He came up with Allen apparently some time before nightfall of the same day, when the advance party was at Hand's Cove, on the eastern shore of the lake, preparing to cross. Here he found himself in the midst of men making ready for action. With them he took part in the crossing of the lake, which, owing to the difficulty of procuring boats, was not wholly effected when day broke on the morning of the 10th of May. Allen was impatient of delay, and fearful lest if they waited for the entire body to cross they should lose the golden opportunity of surprising the fort, he addressed his men, eighty-three in number, telling them of the hazard of the enterprise, and calling for volunteers to follow him in an immediate attack. Not one of the men drew back. A lad living near by, familiar with the approaches, was their guide, and Allen gave the word to advance. Arnold again stepped forward and claimed the command. He was a reckless, daring

man, and the adventure exactly suited his nature, but it was an adventure where he must lead and not follow. Allen, having his own men behind him, was no less courageous and was naturally enraged at this interference. He was for putting Arnold under guard; but one of his friends, seeing the peril of the enterprise, if the dispute continued, proposed that the two men should march side by side. The compromise was accepted, and the column advanced quickly to the wicket-gate. A sentry posted there snapped his fusee, but it missed fire, and as Allen rushed upon him, he retreated with a shout through the covered way within the fort. The assailing party followed at his heels, Allen and Arnold vying in the race for leadership. The fort was surprised, and the victory was already won without a blow, as the Green Mountain Boys set up a shout on the parade facing the barracks.

Surprise of the fort.

It was so early that the garrison was still asleep. Allen forced one of the sentries to show him the commanding officer's quarters, and standing at the entrance he called on Captain Delaplace to come forth and surrender his garrison. The Captain sprang out of bed, and, half dressed, made his appearance at the door: "By what authority?" he said. "In the name of the great Jehovah and the Continental Congress!"[1] was Allen's answer. Delaplace, seeing the uncouth figure before him, was ready to dispute the commission; but Allen, with his sword, was an unequal disputant. The commander yielded, and ordered his men to be paraded without arms. The surrender threw into the hands of the Green Mountain Boys one captain, one lieutenant, and forty-eight subalterns and privates, exclusive of women and children, all of whom were sent to Hartford. The capture of stores and military material included a hundred and twenty pieces of cannon.[2] The first surrender of the British was on the day of meeting of the second Continental Congress.



While these events were occurring in the fort, Colonel Seth Warner

[1] This swaggering demand rests upon Allen's own narrative, and has been called in question by those who, looking closely, perceive that Allen was a disbeliever in Jehovah as having anything to do with American affairs, and that the Congress, though called, had not actually assembled. It is quite possible that Allen has glorified himself somewhat; but the phrase was possible to him, for, though a vain, he was a genuinely brave man.

[2] The authorities for the movement against Ticonderoga are chiefly to be found in Captain Mott's Journal, with illustrative documents, published in *Conn. Hist. Soc. Coll.*, vol. i., pp. 163–188, Ethan Allen's narrative of the capture of Ticonderoga, and the correspondence and newspaper reports collected in the appendix to Hon. L. E. Chittenden's address before the Vermont Historical Society, October 2, 1872, published by the society. See, also, Governor Hiland Hall's paper, read before the same society, October 19, 1869, and other contributions to the controversy by B. F. De Costa in *The Galaxy* magazine for December, 1868, Prof. George W. Benedict, in the *Burlington Free Press*, and J. Hammond Trumbull, in the *Hartford Courant*.

was bringing the rear guard across the lake, and was immediately despatched with about one hundred men to take possession of Crown Point, which was garrisoned only by a sergeant and twelve men. The capture was effected without difficulty, and a hundred cannon were secured. The party sent to Skenesborough surprised Major Skene, and brought away also a schooner and several batteaux to Ticonderoga.

Capture of Crown Point and Skenesborough.

Allen capturing Delaplace.

An armed force was now in possession of these two strongholds, with considerable material of war and transports. The quarrel for

command was at once renewed by Arnold. He wrote letters stating his grievances to the Massachusetts committee; but Allen was the accepted leader of the men, and Massachusetts, upon an understanding of the situation, complimented Arnold, but referred him for orders to Connecticut, since that colony had actually planned the expedition. Connecticut was in no mind to prefer Arnold to Allen.

Meanwhile, the operations went on, and Arnold and Allen carried on a species of off-hand freebooting together, for Arnold's audacity, and a knowledge in certain directions superior to Allen's, made him a useful ally. There was a sloop-of-war lying at St. John's, and it was proposed to take the schooner and batteaux already captured, get possession of the sloop, and make a descent upon the garrison. This done, Lake Champlain would be entirely in the hands of the patriots. Arnold, as the better seaman, was placed in charge of the schooner, while Allen followed with the batteaux. On the evening of the 17th of May, Arnold, being within thirty miles of St. John's, and becalmed, took to the batteaux, reached the sloop in the night, surprised it, captured a few men, and hastened back to Ticonderoga, without possessing himself of the place, since he learned that reënforcements were on the way from Montreal. On his return, he met Allen a little below, who undertook to form an ambuscade and intercept the reënforcements; but his men were fatigued, and when in the morning they were attacked by a superior force, they retreated to the batteaux and returned to Ticonderoga with a trifling loss in prisoners.

Minor operations.

Allen urged vehemently the immediate use of Lake Champlain as a basis of operations against Canada; but it was a month before the importance of the position was clearly seen, and meanwhile the Continental Congress, fearful lest these operations should bring them into difficulty, were half disposed to avoid responsibility, and required a complete inventory of the captured stores to be taken, against a possible restoration of them to Great Britain in event of an adjustment of the differences. Arnold, unable to accept a second place in any command, took up his quarters at Crown Point, where he was left to himself by Allen and Easton. When a committee arrived from Massachusetts to settle the disputes which had arisen, he instigated his few followers to mutiny, and threatened a withdrawal of the vessels which he controlled to St. John's, for the purpose of delivering them and his command to the enemy, if he could not carry out his own plans. Colonel Hinman, with a thousand men, had been appointed by Connecticut to take possession of Ticonderoga, and the difficulty was finally settled by the resignation of Arnold on June 24.

Timidity of Congress.

Arnold's persistence.

When it became known to Congress that General Carleton, Governor of Canada, was fortifying St. John's, building boats, and preparing to re-occupy Crown Point and Ticonderoga, a resolution was adopted (June 27) instructing General Schuyler to repair without delay to Ticonderoga, and "if he found it practicable, and it would not be disagreeable to the Canadians, immediately to take possession of St. John's and Montreal, and pursue any other measures in Canada which might have a tendency to promote the peace and security of these colonies." The attitude of the Canadians towards the belligerents was one of great uncertainty. Governor Carleton thought the gentlemen, the clergy, and most of the bourgeois faithful to the King; but he was scarcely able to raise a company of militia, although large bounties of land were offered to volunteers. Schuyler, on his part, found it hard to secure any trustworthy intelligence from Montreal and Quebec. There were sympathizers with the American party in each place, and a committee of correspondence at Montreal; but exact information as to the active coöperation which might be expected from the people was not easily to be had. The general impression was, that the common people would at least maintain a neutrality, and, in event of the success of the Americans, would range themselves on their side. The attitude of the Indian tribes gave still greater anxiety. The powerful influence exerted by Sir William Johnson over the New York Indians had, after his death (1774), passed into the hands of his son-in-law and nephew, Guy Johnson, now Indian Agent, and his son, Sir John Johnson, both of whom were bitter Tories. At first covertly, afterward openly, they estranged the Indians of the Mohawk Valley from the Americans, and brought about an active alliance with the authorities in Canada. Schuyler sent Ethan Allen and Major John Brown into the country lying between Lake Champlain and Montreal, to discover the true condition of affairs there, and if possible to persuade the Canadians and the Indians of that country to ally themselves with the Americans.

The invasion of Canada proposed.

The Indian element.

Meanwhile volunteers came in slowly, and the absence of any controlling authority not only caused a conflict between the Provincial and Continental Congresses, but rendered the soldiers insubordinate and quarrelsome. Supplies and ammunition came slowly and irregularly, so that it was the middle of August before Schuyler was in any degree prepared to move his troops. At this time Major Brown returned and reported that there were seven hundred regular troops in Canada, three hundred of whom were at St. John's, and that Sir John Johnson was at Montreal with three hundred Tories and some Indians, endeavoring to persuade the Caughnawagas to take up the hatchet

for the King. In a few days came intelligence that Carleton was about to move up the lake to attack Ticonderoga.

Expedition down Lake Champlain

At length the expedition of about twelve hundred men, which had waited for a favorable wind, sailed down the lake. The whole force fell short of two thousand. Schuyler's chief subordinate officer was General Richard Montgomery, an Irishman, who had been in the British service, and was with Amherst in the campaign of 1759 when Wolfe captured Quebec, but had subsequently settled in New York and married into the Livingston family. He was a tall, handsome, spirited man, who drew to himself the admiration of the soldiers and the confidence of his fellow-officers. Upon him the command shortly fell; for Schuyler, disabled by illness, was compelled to return to Ticonderoga by the middle of September, before any very positive advance had been made.

Richard Montgomery.

Richard Montgomery.

At the Isle aux Noïx a boom was thrown across the channel to prevent the passage of the enemy's sloop-of-war, and an armed camp was formed. One or two skirmishes occurred, in which the insubordination and cowardice of the soldiers almost completely disheartened Montgomery. "I am," he writes to his wife, "so exceedingly out of spirits and so chagrined with the behavior of the troops, that I most heartily repent having undertaken to lead them . . . . Such a set of pusillanimous wretches never were collected. Could I, with decency, leave the army in its present situation, I would not serve an hour longer. . . . . We were so unfortunate as to have some Canadians witnesses of our disgrace. What they will think of the *brave Bostonians*, I know not."[1] Montgomery proceeded to invest St. John's, while Schuyler, remaining at Albany, used his utmost exertions to forward men and supplies.

The siege, which lasted nearly two months, was a severe test of the raw, undisciplined troops. Sickness prevailed, and homesickness was

[1] *Biographical Notes concerning General Richard Montgomery, together with hitherto unpublished Letters.* By L. L. H. 1876. p. 11. "Bostonians" was a term frequently applied to the American forces.

almost as potent, while the insubordination was so great that it was even a matter of policy at times to submit important movements to the vote of the rank and file. The independence and self-assertion of the soldiers showed itself in other ways. Ethan Allen, on his way to Montgomery's camp, with about eighty Canadians whom he had enlisted, fell in with Major Brown at the head of two hundred Americans and Canadians. Brown, who was almost as much of a free lance as Allen, proposed that they should make a sudden attack with their united party on Montreal, where he declared there were not more than thirty men in garrison, and where the townspeople were largely American in their sympathies. Allen eagerly accepted the proposition. The plan was, to cross the St. Lawrence with their respective forces above and below the city in the night, and at daybreak, upon a given signal, to make a simultaneous attack. The night was blustering, and the passage of the river dangerous and tedious; but by early dawn all of Allen's band stood upon the shore, waiting anxiously for the huzzas from Brown's party. They waited in vain. Brown had failed to keep his agreement, and Allen's forces, too weak to effect the surprise of the city alone, were set upon by the garrison, and, after a brave defence, in which some forty of the Americans fell, were overpowered and made prisoners. Allen was among them, and was sent to England.

Siege of St. John's.

Abortive attack on Montreal.

This affair was not approved by Montgomery, though not unknown to him; but he was still powerless to exercise that complete control over his ill-assorted troops which was essential to military discipline and success.

But an expedition against the fort at Chambly was more successful. The fort was taken with the aid of some of the inhabitants of the district, and its large stores of ammunition and provisions were of material aid to the army encamped under the walls of St. John's. Carleton made an effort to relieve the garrison there, but was repulsed, and at length, on the 2d of November, Major Preston, in command at St. John's, hearing of Carleton's repulse, and seeing no chance of relief, surrendered the fort and led out his troops, already in peril of starvation. Nearly five hundred regular troops, the greater part of the British army in Canada, thus fell into the hands of the Americans.

Expedition to Fort Chambly.

Surrender of St. John's.

The road was now open to Montreal, and Montgomery, advancing to Sorel, ordered a detachment to cross the St. Lawrence. He posted his forces to prevent any communication between Montreal and Quebec, and established batteries upon both banks of the river. Carleton was in the town, but he was surrounded

Montgomery captures Montreal.

by a timid and half-hearted populace, who were chiefly fearful lest their property should be destroyed. He left them to their fate, taking the little garrison with him, and on the 13th of November Montgomery marched into the town.

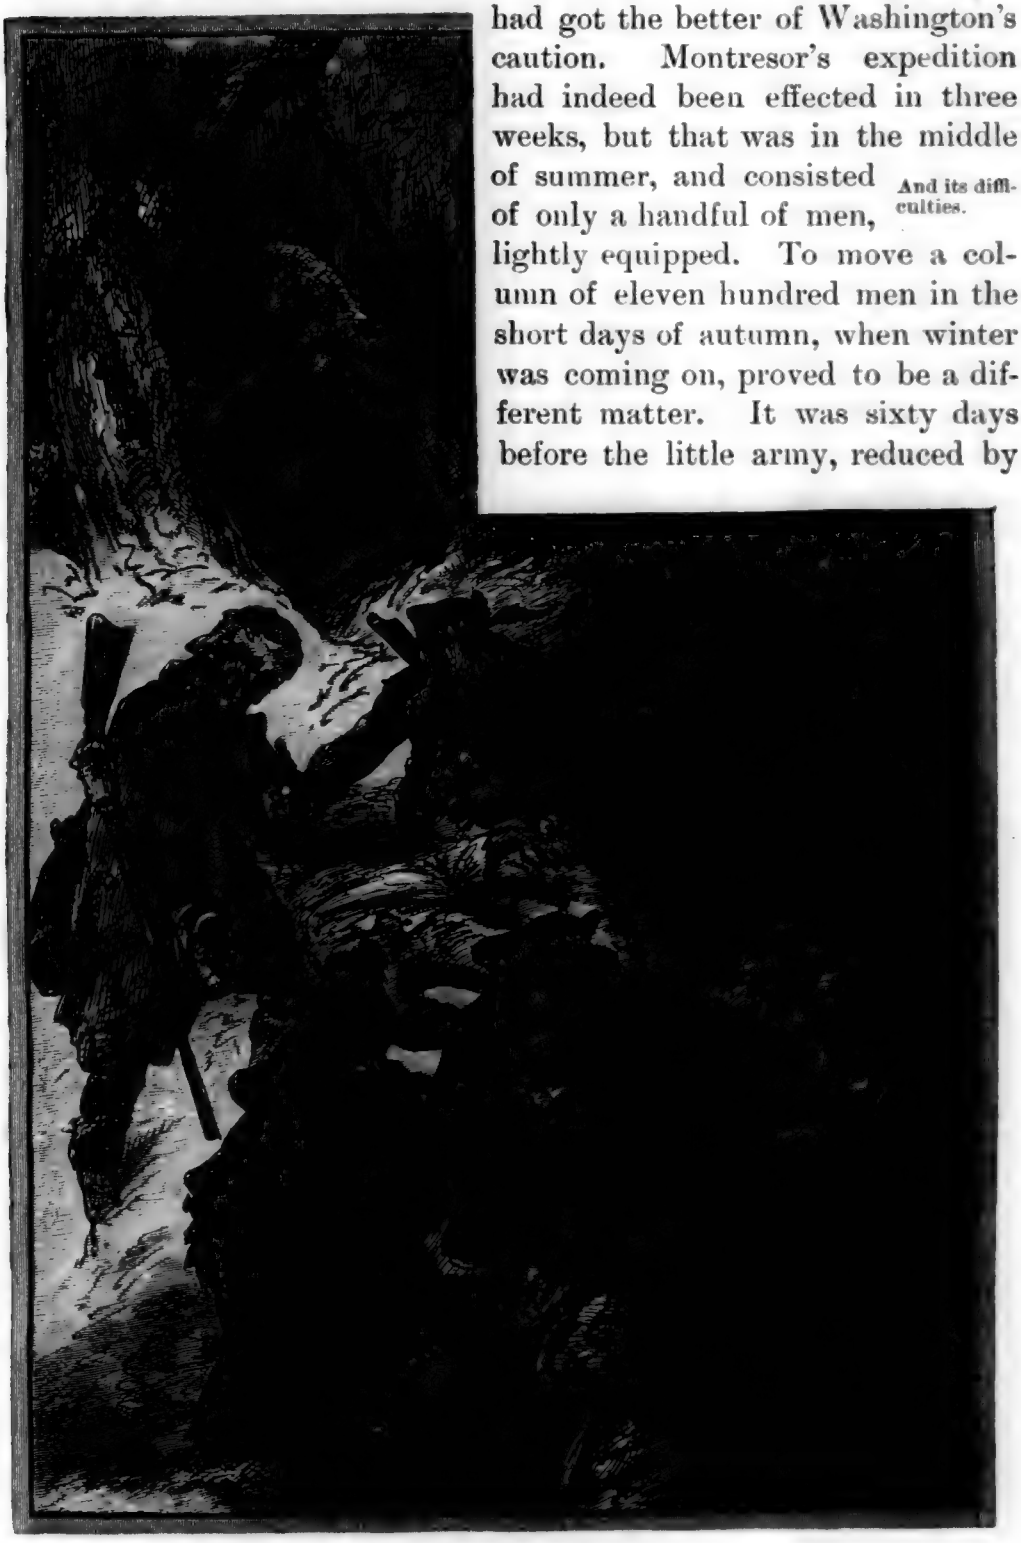
Expedition to Canada through Maine.

While these events were in progress, a supporting column had set out for Canada by another route, almost simultaneously with Montgomery's departure from Ticonderoga, and had fought its way against natural obstacles more serious than the forts which lay in Montgomery's path. While Schuyler was perfecting his plans for the northern campaign, he heard rumors that a portion of the British fleet had left Boston for the St. Lawrence. He wrote to General Washington for information, and was assured that no such movement had taken place. Whether or not Schuyler's letter started the project in Washington's mind, Washington wrote again, five days after the assurance had been given, outlining an expedition which was to ascend the Kennebec River, cross the highlands that divide it from the Chaudiére, and descend that stream to where it enters the St. Lawrence, nearly opposite Quebec. Such a movement he conceived would have one of two results. Either it would recall Carleton from the defence of Montreal, and so facilitate Schuyler's plans, or it would find Quebec unprepared, and the division, uniting with Schuyler's forces, could at once take that place and complete the conquest of Canada. The design was in all probability suggested to Washington by Benedict Arnold, into whose hands had fallen the journal of Colonel Montresor, an officer of engineers in the British service, who, fifteen years earlier, had conducted an exploring expedition from Quebec into the interior of Maine, covering a portion of the route. At any rate, Arnold was selected to take command of a detachment numbering about 1,100 men, drawn from the army about Boston. From the nature of the country they were to traverse, it was impossible to carry field-pieces, but it was hoped that the two rivers would afford a water highway most of the distance for the transportation of

Map of Arnold's Route

Arnold in command.

men and provisions. The order to draft the men was given on the 1st of September, and a week later the troops set out across the country to Newburyport, where they were to be transported to the mouth of the Kennebec. On the 14th, Washington addressed a letter to Arnold, with specific instructions, in which he enforced the necessity of so conducting the expedition as to respect religiously the neutrality of the Canadians, and to win them if possible to the American cause. Property was to be held sacred; religious scruples were to be tenderly considered; and death was to be the penalty for any injury to person or property of Canadian or Indian. A handbill, written by Washington, was printed for distribution amongst the Canadians, setting forth the friendliness felt by the Americans for them, and declaring that the armies sent into the country were to protect, not to injure them. They were earnestly solicited to join the cause of liberty, and to take advantage of the presence of the armies on their soil to rise against the tyranny of the British.



His instructions.

From the letters and papers of the day it is evident that great importance was attached to the movements in Canada. That country had been the scene of conflict within the memory of the men who were now throwing off the authority which then they fought to extend. The splendid river St. Lawrence, with the rocky fortress of Quebec, and the fertile lands that stretched to Montreal, appealed to their imagination, and the frontiersmen who had penetrated the northern forests knew that no natural boundary separated them from the vast country beyond. The fortified places which once had been centres of French trade were now threatening posts of the British enemy, and every interest suggested the necessity of possessing them. Yet the people of Canada had little in common with the colonists, and their prevailing religion was distrusted and hated by the Americans. Great caution and address, therefore, were used in making the invasion of Canada an act of hostility only to the British government, and one of emancipation to her people. Nor were the chances of war despicable. There was only one weak battalion of British troops in all Canada, and there was good evidence that the people, where they were not openly sympathetic and ready, were at least entirely indifferent to the continuation of British rule. Schuyler's army was moving, and Arnold's detachment, which reached Fort Western, — the present Augusta, on the Kennebec, — the 23d of September, was expected to be twenty days making its march of about two hundred miles. Indeed, there was some solicitude lest Arnold's army, reaching Quebec long in advance of Schuyler's, should be in danger of repulse for want of support.

Supposed importance of the movement,

It would seem almost as if Arnold's enthusiastic and fiery temper had got the better of Washington's caution. Montresor's expedition had indeed been effected in three weeks, but that was in the middle of summer, and consisted of only a handful of men, lightly equipped. To move a column of eleven hundred men in the short days of autumn, when winter was coming on, proved to be a different matter. It was sixty days before the little army, reduced by

And its difficulties.

Arnold's March.

that time about one half, reached the St. Lawrence. They left the last white family at Norridgewock, on October 3, and were nearly a

month making their way to the headwaters of the Chaudiére. Their batteaux were swamped in the rocky, boiling river; they sank to their waists in vast bogs; they were forced to make wearisome portages, and to cross and recross the same ground, to carry their loads; they lost their way: "this was the third day," writes a surgeon of the party, "we had been in search of the Chaudiére, who were only seven computed miles distant the 28th. Nor were we possessed of any certainty that our course would bring us either to the lake or river, not knowing the point it lay from where we started. However, we came to a resolution to continue it. In this state of uncertainty we wandered through hideous swamps and mountainous precipices, with the conjoint addition of cold, wet, and hunger, not to mention our fatigue, — with the terrible apprehension of fainting in the desert."[1] Their provisions failed them, so that they ate dogs, candles, shaving-soap, pomatum, and lip-salve, and boiled their moccasons in hopes of extracting some glutinous nourishment from them. They fought like beasts for succulent roots which they discovered and grubbed from the sand; great numbers fell sick and were left behind; some perished by the way, and Colonel Enos, with the whole rear division, amounting to a third of the force, when near the Canada line, being instructed by Arnold to provide for the return of the sick, called a council of his officers, in which it was resolved to return in a body to the coast, lest their provisions should utterly give out. Enos was court-martialled for his desertion of Arnold, and though acquitted, never regained his standing. Arnold himself pushed forward, after reaching the Chaudiére, to send back cattle and other supplies to his famished followers. When the men received them, they fell upon them like wolves, and gorged themselves so that many sickened and some died.[2]

Canada reached.

On the 4th of November the straggling band reached the first house in Canada. It was a month since they had left the last house in Maine. Their progress now was comparatively easy, and it was perhaps owing to the exhausted condition of the men that the last thirty miles occupied ten days. Yet that delay may be regarded as causing the failure of the expedition. On the 5th of November, when Arnold, with a portion of his army, was at St. Mary's, thirty miles from Quebec, a vessel from Newfoundland reached that place, carrying a hundred men, chiefly carpenters. They found

Quebec reenforced.

[1] *Senter's Journal*, p. 21.

[2] The details of this march, which long left its frightful memory in the minds of men, are preserved in several narratives of members of the expedition, chiefly those of John Joseph Henry (Albany, 1877); Joseph Ware, in *N. E. Hist. and Gen. Reg.*, April, 1852; Isaac Senter, *Bulletin of Penn. Hist. Soc.*, 1846; Return J. Meigs, *Mass. Hist. Soc. Coll.*, vol. ii., 2d series; James Melvin, *Franklin Club*, Philadelphia.

not a single soldier, we are told, in the city,[1] but immediately set to work repairing the defences and making platforms for the cannon. On the 12th Colonel Maclean arrived with a hundred and seventy men, enough to make a protracted defence. The next day Arnold brought his forces to the opposite bank of the river. It was intended that the expedition should surprise the town, and Washington had urged Arnold to use great precaution to prevent news being carried by sea from the Kennebec; but Arnold himself had unfortunately given intelligence of his movements, by a letter sent on the 13th of October to General Schuyler, which was intrusted to an Indian, who proved faithless. While at St. Mary's Arnold opened communication with General Montgomery, and the junction of the two armies now became a matter of the liveliest concern.

Arnold arrives before the city,

On the evening of the 13th of November, just as Montgomery had entered Montreal, Arnold began, under cover of darkness, to transport his troops across the St. Lawrence, and again at daybreak the sentinels on the walls of Quebec looked out upon an army on the Plains of Abraham. Arnold had followed precisely the path which Wolfe had taken, and, as Wolfe had done, offered battle with three fourths of his entire force, — five hundred and fifty men. But Lieutenant-governor Cramahé, in command, having perhaps Montcalm's misfortune in mind, did not accept the challenge. Moreover, Arnold's hope was, that the appearance of an American army would be a signal for a revolt within the city, and that the apprehension of it would be a check upon the commander of the town. The Americans shouted triumphantly, but the walls of Quebec did not fall flat, though some of the people within responded. A few harmless shots were fired, and a formal demand was made for surrender. Arnold had neither the means to make a breach in the walls, nor the force to storm them, and he could only invest the place. But his own position was perilous. Carleton had escaped from Montreal, and was on his way to Quebec. The garrison had been reënforced, and Arnold learned that he was shortly to be attacked. Accordingly, he soon broke camp and withdrew to Point aux Trembles to await Montgomery. Montgomery arrived on the 1st of December and assumed command. On the 5th the army, now three thousand men, with six field-pieces and five light mortars, encamped before Quebec.

Occupies the Heights of Abraham,

But retreats.

The ground was frozen to the depth of many feet, and buried deep in snow. To construct earthworks was practically impossible; gabions and fascines, therefore, were set up and filled with snow, over which

[1] Allen's account of Arnold's expedition, in *Maine Hist. Soc. Coll.*, i. 403.

water was poured and an ice-battery formed, glittering and formidable to the eye, but in reality brittle and easily destroyed. At the first cannonading from the walls it broke in pieces. Three weeks wore by, during which Montgomery begged for reënforcements, but Schuyler was powerless to raise them; the men were growing exceedingly restless and mutinous, and there was no sign of any weakening of the town. At Christmas an immediate attack was decided upon, to take place the first stormy night. One column, led by Arnold, was to advance by the low ground between the St. Charles and the Heights of Abraham, and penetrate the lower town at a point where a gate communicated with the upper town, unprotected by any ditch or drawbridge. Another column, led by Montgomery, was to advance between the St. Lawrence and the rocky heights of Cape Diamond, push into the lower town, and take advantage there of an easy communication with the upper town. It was expected that once in possession of the lower town, the merchants within the city would compel Carleton to give up the place to prevent further destruction of property. Aaron Burr, eager to take a conspicuous part in the attack, headed a forlorn hope which was to scale the Cape Diamond bastion, and he drilled his men and prepared his ladders with great care.

The night of the 30th of December, chosen for the assault, was, as the assailants hoped it would be, dark and stormy. While Colonel Livingston and Major Brown made a feint on the upper town to distract the garrison, Montgomery and Arnold were to advance upon the points selected for assault. Montgomery's column, taking the road along the river bank, made its way over blocks of ice and through the heavy drifts of snow, till it reached the first barricades under Cape Diamond. These were passed without difficulty; but beyond was a block-house, pierced for muskets, and defended by two small field-pieces. The enemy had fled after the first ineffectual fire; but as Montgomery advanced at the head of his men, exhorting them to follow, with the words, "Push on, brave boys, Quebec is ours!" a shot from the block-house struck and killed him instantly. His aid, Captain Cheeseman, Captain M'Pherson, and two privates were killed by the same discharge; the advance was checked, and then fell back in confusion and flight.

Arnold's division, almost at the same moment, had advanced in single file, along a narrow path between the precipice and the shore of St. Charles Bay, the men covering their guns under their coats from the driving storm. The town was now awake; bells were ringing; an uproar of confusion filled the air, from the rapid firing from batteries and barricades. The darkness and the storm favored the assailants, who pushed on rapidly past isolated houses to the Palace

Gate. At the first barricade Arnold was wounded and carried to the rear. The command devolved upon Captain Daniel Morgan, who, at the head of his Virginia riflemen, scaled the barricade with ladders, Morgan himself being the first to mount. As his head appeared above the palisades a discharge knocked him down, the powder burn-

Attack on Quebec. — Death of Montgomery.

ing his face, one ball passing through his hat and another through his hair at the side of his head. He mounted again, calling to his men to follow, and the barricade was carried, and the enemy driven to the houses on both sides of the narrow streets. In these the fight continued, at intervals, for hours, and had Morgan's men been properly seconded, the town might have been taken. But no reënforcements came. The advance party were cooped up between the two barricades,

where they made a desperate but unequal fight, seeking in their turn protection in the houses. From the Palace Gate a sortie had been made, and Captain Dearborn, with a column of two hundred men, had been taken prisoner. Morgan tried to cut his way back. He had lost probably not less than sixty men — among them Captain Hendricks of the Pennsylvania riflemen, Humphreys, Morgan's first lieutenant, and Lieutenant Cooper of Connecticut. The men were discouraged; further resistance was seen to be futile, and the whole party, four hundred and twenty-six in number, surrendered. The remainder of Arnold's party, who were in the rear as a reserve, retreated to camp.[1]

The victorious Englishmen found the body of Montgomery and gave it a soldier's burial within the city. Forty-two years afterwards it was removed to New York with distinguished honors, and placed beneath a monument in front of St. Paul's Church. As the boat bearing it passed slowly down the Hudson, the aged widow sat alone upon the porch of her house at Rhinebeck, watching the mournful pageant.[2]

The command of the wrecked army fell now upon Arnold, who mustered his forces and disposed them for a blockade, hoping meanwhile that Schuyler, to whom he dispatched a messenger, would reënforce the little army. Schuyler earnestly besought Congress to send forward troops, and in the course of the winter about 3,000 were sent to his relief. Carleton made no attempt to drive Arnold away. He could not afford to risk the chances of a battle, and he knew that when spring opened he should receive help from England. The Canadians continued their neutrality, and though a few engaged on either side, so that families were divided against one another, there was a general loss of confidence in the American cause. Congress

[1] Major-general Sir James Carmichael Smyth, in his *Precis of the Wars in Canada*, characterizes the enterprise as soldier-like, but thinks Montgomery should have reversed his plan, making the real assaults upon the points which were selected for the feint, and false attacks only on the lower town. "There was no necessity upon the present occasion to move, with narrow columns, into confined streets and lanes, to become masters of the lower town; having subsequently the upper town, separated from the lower town by a line-wall with flanks in it, to acquire. It would surely have been better policy to have assaulted the upper town at once, and to have endeavored to escalade, at the same moment, several of the bastions. . . . . In endeavoring to penetrate by the lower town, he required to be successful in two operations. Had he determined to assault the upper town, he would only have had to have escaladed a wall of eighteen feet high, and the place was his." — p. 116.

[2] "At length," she wrote, "they came by, with all that remained of a beloved husband, who left me in the bloom of manhood, a perfect being. Alas! how did he return? However gratifying to my heart, yet to my feelings every pang I felt was renewed. The pomp with which it was conducted added to my woe; when the steamboat passed with slow and solemn movement, stopping before my house, the troops under arms, the dead march from the muffled drum, the mournful music, the splendid coffin canopied with crape and crowned with plumes, you may conceive my anguish. I cannot describe it." — *Biographical Notes concerning General Richard Montgomery*, p. 129.
